ABSTRACT

Managing electronic trash (or "e-waste") offers both opportunities and challenges in the modern era. There are excellent opportunities for recycling and recovering valuable resources via good management as electronic devices and technology use grow. Lowering the demand for new materials and increasing employment possibilities in the recycling and waste management sectors can result in cost savings. But controlling e-waste can be difficult. Due to the toxic compounds, including lead and mercury, that are present in electronic gadgets, the immense amount of electronic consumption has the potential to overwhelm the waste management infrastructure that is already in place, causing environmental degradation. Adequate regulatory frameworks and efficient e-waste policy enforcement are essential to addressing the issues related to e-waste management. This study explored the potential and barriers to promoting sustainable practices to analyze the economic aspects of managing e-waste.

1. INTRODUCTION

Electronic waste (e-waste), which results from the use of electronic and electrical gadgets, has become a major global issue. Due mostly to the poisonous chemicals and hazardous materials found in e-waste,

this issue poses a risk to both human health and the environment. Additionally, an excellent motivation for recovery initiatives is the possibility of financial benefit from the recovery of valuable materials, particularly precious metals inherent in e-waste. Even with environmental regulations in place, a simulation predicts that industrialized countries would see the greatest growth in the manufacturing of electrical and electronic equipment. The entire mass flow of Waste Electrical and Electronic Equipment (WEEE) (Azevedo, L. P. et al. 2019) increases by a factor of 2.7–4.0 even within an environmental regulatory framework, but a factor of 3.1–7.0 is projected in the absence of regulation. The quick economic growth of the sector, the short product lifecycle of electronic equipment, and the recent development of a wide range of electronics-related items are all significant causes (Bazargan, A., et al. 2012). There is a lot of growth in the production of electronic and electrical devices and there are many industries set up globally to produce these devices. E-waste is classified based on the origin and intended use of electronic items. E-waste includes a wide range of electronic devices, including telecommunications and information technology equipment, sizable home appliances, automated dispensers, lighting systems, medical equipment, monitoring tools, consumer electronics, and even items like electronic tools, electrical tools, sports equipment, toys, mobile phones, and computers. New models are frequently developed with faster mechanical speeds, simplifying duties even further. However, the practice of replacing older versions with newer ones generates a substantial amount of e-waste, which causes serious environmental and health issues. For this reason, e-waste management is required (Shahabuddin, M., et al.2023). With an annual e-waste production of around two million tonnes that is increasing at an alarming pace of 30%, India faces a huge challenge. Unfortunately, due to insufficient infrastructure management and a lack of collection centers, along with the absence of a structured incentive system for both makers and recyclers, a startling 95% of e-waste ends up in the unregulated sector for disposal. Consumer awareness of the critical importance of safe e-waste disposal remains depressingly low, and the lack of appealing incentives restricts involvement in recycling efforts (Sheoran, M., & Das Gupta, D. 2023). On the other hand, several studies have evaluated how much e-waste is produced in the Netherlands according to ten categories included in the European WEEE Directive. These evaluations have been based on certain technologies, such as but not limited to liquid crystal display (LCD) and cathode ray tube (CRT) devices, as well as several other electrical products, including monitoring equipment, televisions (TVs), laptops, and mobile phones. Several other studies have concentrated on analyzing e-waste generation specifically from electrical equipment, such as TVs, refrigerators, and personal computers (Ismail, H., and Hanafiah, M. M. 2020). The negative consequences of e-waste on people and ecosystems are of the utmost importance in South Asian countries that are undergoing rapid economic development, lifestyle changes, and sociotechnical transformations. Contrary to popular belief, these nations frequently lack effective waste management systems. Consider Bangladesh, where only 20% to 30% of the 3.2 million tonnes of e-waste produced each year is recycled, with the balance being dumped in landfills. This huge variation emphasizes how urgently these areas require comprehensive e-waste management solutions (Hossain, M. S. et al., 2015).

India ranks third worldwide in e-waste production, following China and the United States. The volume of e-waste has surged dramatically, escalating from 700,000 tonnes in FY18 to 1.6 million tonnes in FY22. The e-waste management sector in India is predominantly characterized by unregulated and informal entities (https://www.businesstoday.in/magazine/deep-dive/story/will-indias-bet-on-new-policy-to-tackle-e-waste-pay-off-385530-202
3-06-14). Increased production of electronic waste is closely related to increased demand for electronic products in India. Experts in the field estimate that the nation sells 6.5 million washing machines, 148

IP Address: 223.231.178.10

million cell phones, 14 million refrigerators, 19 million audio gadgets, and over 17 million TVs each year. Additionally, these figures keep rising every year.

The chapter's first section examines the potential financial rewards of using sustainable e-waste management strategies, including job creation, resource recovery, and reduced environmental impact. By comprehending these economic variables, policymakers and businesses may create efficient plans to lessen the negative effects of e-waste and make use of its potential to stimulate economic growth. The benefits of applying circular economy principles to e-waste management are covered in this chapter. By converting from a linear "take-make-dispose" strategy to a circular one, which encourages product repair, refurbishing, and recycling, a framework that is sustainable and profitable can be built. It also covered the challenges associated with e-waste management. These include a lack of infrastructure and technology to handle e-waste efficiently, a lack of education among consumers and businesses about ethical e-waste disposal, and the prevalence of illegal e-waste dumping in underdeveloped countries. To address these difficulties, governments, corporations, and civil society organizations must collaborate, and money must be set aside for research and development. To address India's e-waste management challenges, a systematic approach is required. E-waste management and disposal must be done with attention and responsibility since they may contain potentially hazardous components that, if handled improperly, are bad for the environment and human health.

1.1. What Happens If We Ignore E-Waste?

More than a thousand different substances make up e-waste, which can also be divided into metals and non-metals. For instance, if we consider a single laptop, it is a composition of plastic, glass, non-metals, and metals and it holds for a very negligible quantity and we can easily ignore them but from the period 1994 to 2003, 500 million PC disposals were weighing about 2,872,000 tonnes of plastic, 718, 000 tonnes of lead, 1363 tonnes of cadmium, and 287 tonnes of mercury. Table 1 illustrates the metal content in a typical desktop computer. Mobile phone disposal is another illustration; over a billion of them are created worldwide each year. These cell phones and computers typically hold 3% of the world's gold, 2.5% of its silver, and 12% of its palladium. Additionally, these gadgets use 15% of the annual cobalt produced, mostly as a component of Li-ion batteries. So, we cannot ignore E-waste because it contains many important components in great quantities which will help us to regenerate the products again and again (Bazargan, A., et al.2012).

The recycling of e-waste is a valuable endeavor as it encompasses a diverse array of materials such as metals, glass, and plastics. Referencing Table 2 provides a comprehensive breakdown of the constituent components of e-waste. Nevertheless, only an inadequate 17.4% of the global e-waste is successfully collected and recycled, primarily owing to the intricate nature of the collection and recycling processes. E-waste recycling poses a formidable challenge due to the heterogeneous composition of metals with varying physicochemical properties, including the presence of hazardous halogen compounds. Inadequate disposal of substances containing these perilous compounds can instigate environmental peril. Consequently, implementing proper waste management techniques and ensuring the safe disposal of e-waste has assumed global significance. This is essential for mitigating human health risks and preventing environmental degradation, which can transpire because of indiscriminate landfilling practices.

Table 1. Metal content in a typical desktop computer

Metal	Content%
Aluminium	14.17
Cadmium	0.0094
Copper	7
Chromium	0.0063
Gold	0.0016
Iron	20.47
Lead	6
Nickel	0.8503
Mercury	0.0022
Silver	0.0189
Zinc	2.024
Others	52.12

Table 2. A typical description of the components that compose e-waste (Source: Shahabuddin, M., et al.2023)

Materials	Composition [%]
Printed circuit boards	1.71
Cables	1.97
Metals	60.19
Screens	11.87
Metal-plastic mixture	4.97
Pollutants	2.7
plastics	15.21
Others	1.38

1.2. Impacts of E-Waste on Human Health and Environment

One of the greatest difficulties facing the world in the twenty-first century is the management of e-waste, which poses major risks to both the environment and human health. The production of electronic goods involves the usage of heavy metals, such as polycyclic aromatic hydrocarbons (PAHs), which are extremely hazardous to the environment and are created while burning e-waste at low temperatures. In addition, burning plastic in e-waste releases 100 times more dioxins than burning residential waste does. Aquatic organisms are poisoned by the chemical cocktail produced as leachate by the Toxicity Characteristic Leaching Procedure (TCLP) from various electrical products. Even if we can recover 95% of the useful materials from computers through recycling, recycling processes have a significant negative impact on the environment, necessitating the development of new technology. (Gaidajis, G., et al., 2010).

Exposure to e-waste can have several extreme effects on human health, so it needs to be adequately managed. Back discomfort, red, itchy eyes, and other work-related ailments were more frequent, according to comparative cross-sectional research of e-waste workers and onlookers. Residents of e-waste locations are exposed to large levels of persistent pollutants, and it has been discovered that these hazardous substances significantly affect the hormonal and neonatal growth of such populations. E-waste burning generates toxins that can irritate the eyes and cause asthma and respiratory problems. Lead exposure increases the probability of periodontitis and other mouth problems in preschool children living in e-waste zones. Other possible health effects of informal recycling and disposal include harm to organs, aberrant reproductive growth, immunotoxicity, and genotoxicity (Ghulam, S. T., & Abushammala, H. 2023)

1.3. Contribution of Developed Countries Towards E-Waste

Governments of industrialized nations have set up new environmental policies and guidelines to address the issue of excessive e-waste generation to reduce the amount of WEEE produced. The extended producer responsibility (EPR) practice (Turaga, R. M. R. et al. 2019), supported by the Organisation for Economic Co-operation and Development (OECD), is one strategy for getting manufacturers to recycle their products when they reach the end of their useful lives. The Restrictions of Hazardous Compounds Directive (RoHS), which limits the use of specific hazardous compounds in electrical and electronic equipment, was recently adopted by the European Union. The six substances are polybrominated biphenyls (PBB), polybrominated diphenyl ethers (PBDEs), hexavalent chromium, lead, mercury, and cadmium (Bazargan, A., et al.2012). The business sector, which includes government agencies, businesses both large and small, offices of multinational corporations, and other similar organizations, is where the majority of computer usage and, consequently, the creation of e-waste originate. This sector is responsible for 78% of the current installed PCs. For the remaining 22%, additional sources include individual houses, foreign embassies, PC manufacturing plants, PC stores, secondary markets for used PCs, and the importation of electronic garbage from other countries (Pinto, V. N. 2008).

Based on extensive data gathered from nationwide sales and the prescribed average lifespan of electrical and electronic equipment (EEE) as stipulated by the E-waste Management Rules, 2016, India recorded an estimated generation of approximately 13,46,496.31 tonnes and 16,01,155.36 tonnes of e-waste during the financial years 2020-21 and 2021-22, respectively (https://legalitysimplified.com/2023/07/24/cpcb-estimates-e-waste-generation-in-india-and-ministry-introduces-new-rules-for-better-management/#:~:text=According%20to%20the%20data%20collected,and%202021%2D22%2C%20respectively). The Ministry has revised the previous regulatory framework in an innovative effort to raise the bar for e-waste management standards and promote environmental sustainability. As a result, a wide range of actions have been implemented. The newly passed E-Waste (Management) Rules, 2022 took effect in November 2022 and began to be fully implemented on April 1, 2023. The EPR framework for recycling e-waste is introduced by these standards, which were carefully constructed to ensure the ecologically responsible management of e-waste. All makers, producers, refurbishers, and recyclers must register on a specific website created by the Central Pollution Control Board (CPCB) by the EPR regulations. Emphasizing the promotion of a Circular Economy, the new rules underscore the importance of scientific recycling and the proper disposal of e-waste as fundamental principles guiding responsible e-waste management.

The Union Ministry of Environment, Forest and Climate Change has recently unveiled the preliminary notification for forthcoming electronic waste management regulations (https://www.dhyeyaias.

IP Address: 223.231.178.10

com/current-affairs/daily-current-affairs/e-waste-roadmap-2023-for-india). These regulations substantially impact consumer goods manufacturers and electronic goods producers. They are now obliged to ensure that a minimum of 60% of their electronic waste is gathered and processed by the year 2023, with progressive targets of 70% and 80% for 2024 and 2025, respectively. To validate their compliance, they will be issued EPR certificates, which document the quantity of e-waste a company has responsibly collected and processed each year. This system permits organizations to trade surplus EPR certificates, aiding one another in fulfilling their obligations. Under these regulations, companies will be required to register on an online platform, where they must delineate their yearly production and e-waste collection objectives. Oversight and coordination of EPR certificate trading will be managed by the CPCB, which will also monitor compliance with the stipulated targets. Failure to meet these annual targets will entail financial penalties or what is referred to as "environmental compensation." However, the precise quantum of these penalties is not detailed in the current draft. Furthermore, these regulations include provisions for safeguarding the health and well-being of laborers employed in the dismantling and recycling operations associated with e-waste, recognizing the critical importance of worker safety in this sector.

In February 2003, the European Union (EU) implemented legislation aimed at limiting the use of hazardous substances in electrical and electronic equipment (Directive 2002/95/EC) and encouraging the collection and recycling of these devices (Directive 2002/96/EC). These regulations outline the establishment of collection programs where consumers can return their used electronic equipment without incurring any fees. The primary goal of these programs is to promote increased recycling and the potential for reuse of these products. Significant efforts to address similar issues have been undertaken in various regions worldwide, including California, Norway, China, South Korea, and Japan, with substantial initiatives on the RoHS. Numerous other countries, such as Australia, New Zealand, Thailand, Malaysia, Taiwan, Canada, and Brazil, are actively contemplating similar measures.

1.4. Methods of Disposal

Disposal of e-waste should be done appropriately, or else it results in hazardous effects on the environment and human health. Figure 1 illustrates the methods of disposal of E-waste. Different methods of disposal are in use (Annamalai, J. 2015).

1.4.1. Land Fill

This method is bad for the environment because it can contaminate the soil, and underground water, or release toxic acids that are hazardous to the environment. The waste is piled up in a heap and then covered with other domestic waste, including solid and other degradable waste. And rivers, animals, and people can all be affected by the contaminated water. E-waste is the source of almost 70% of the heavy metals found in landfills. Additionally, electronic garbage should not be disposed of using this approach.

1.4.2. Incineration

This technique involves burning the produced e-waste in a controlled setting and an open area. Another technique employed occasionally is pyrolysis, which involves heating the substance in the absence of

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

oxygen to separate the constituent parts into fumes, oils, and salts. One benefit of this process is that it decreases the amount of waste produced and makes use of the energy contained in the combustible materials found therein. It also contributes to global warming and emits toxic chemicals into the environment, which are just a few of its many drawbacks. It is also not a proper method of trash disposal, much like landfills.

1.4.3. Reuse

Using the product in its entirety or the spare parts, with or without modifications, is the goal of this strategy. This could be used by desktop computers, mobile phones, and other devices. This method reduces the quantity of e-waste created even if it is not a direct disposal option. The things should preferably be reused compared to the previous two, as it will ultimately lower the demand for electronic devices and the generation of electronic waste by a certain amount.

1.4.4. Recycle

Recycling electronic waste, or the management of e-waste, allows for the recovery of all the components, their regeneration, and reuse, eliminating the need for additional mining to obtain metals and non-metals. E-waste recycling Despite the ideology's seeming intelligence, recycling e-waste is a highly challenging operation because it contains numerous harmful components. If e-waste recycling techniques including open burning, metal acid stripping, acid baths (Naik, S., & Eswari, J. S. 2022), and incineration are not properly disposed of, they can yield compounds like heavy metals, furans, and dioxins that constitute harm to the environment.

Figure 1. Methods of disposal of e-waste

2. OPPORTUNITIES

As the volume of electronic waste (e-waste) continues to increase across the world, there are significant opportunities for businesses, organizations, and individuals to contribute to sustainable e-waste management. Let's explore some of these opportunities:

2.1. Resource Recovery

E-waste contains valuable components that can be recovered and reused, including metals, polymers, and precious metals. We can recover these resources by putting in place effective recycling procedures, which will cut down on the demand for new materials and encourage a circular economy.

2.1.1. Prospects Are Essential to Resource Recovery

Interwoven into the very fabric of e-waste management lies the core potential epitomized by resource recovery. Electronic devices, encompassing smartphones to laptops, encapsulate a complex fusion of precious metals like gold, silver, and palladium, intermingled with copper, plastics, and the elusive rare earth elements. When these devices reach the end of their useful life, they frequently become useless, leading to the growing e-waste problem. However, strategic management methodologies can unearth, rejuvenate, and repurpose these discarded electronic fragments, effectively reducing the demand for fresh raw materials.

The following are the resource recovery methods for the extraction of copper from printed circuit boards (Hsu E. et al., 2019):

i. **Pre-treatment: Size Reduction and Separation:** Before extracting valuable metals like copper from printed circuit boards (PCBs), the e-waste is subjected to pre-treatment processes. Size reduction involves shredding the PCBs into smaller pieces, making them easier to handle and process. Separation techniques are then employed to isolate the different factions within the PCBs.
ii. **Separation of Non-Metallic Fractions:** In this stage, the non-metallic fractions are separated from the PCBs to concentrate the valuable materials. Physical and chemical techniques are used for this purpose.
iii. **Physical Techniques:** Labor-intensive but effective, workers manually dismantle PCBs to segregate non-metallic components from valuable parts like copper. Magnets are used to extract ferromagnetic materials, separating them from the non-metallic fraction. Shredding: PCBs are shredded further, breaking them into even smaller pieces for better separation. Different materials have varying densities. By utilizing processes like air classification or hydrocyclones, the PCB components can be separated based on their density differences.
iv. **Chemical Techniques:** In the Pyrolysis technique (Naik, S., & Eswari, J. S. 2022), PCBs are subjected to high temperatures without oxygen. This breaks down the organic materials and leaves behind the metal-rich fraction. Utilizing supercritical fluids or solvents can selectively dissolve certain components, leaving behind the metals for further extraction.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

2.1.2. Separation and Recovery of Metals

Once the non-metallic fractions are separated, the focus shifts to extracting valuable metals like copper from the PCBs. Pyrometallurgical methods involve high-temperature processes to extract metals. In the case of copper extraction, smelting the metal-rich fraction at high temperatures can separate copper from other materials. Hydrometallurgical methods use liquid solutions to leach out metals. In copper extraction, the metal-rich fraction is subjected to chemical leaching, where acidic or alkaline solutions are used to dissolve the copper. The resulting solution, called a leachate, contains copper ions that can be further processed to recover the copper metal. In the context of e-waste management, these resource recovery methods play a vital role in extracting valuable materials like copper from printed circuit boards. These techniques not only help mitigate the environmental impact of e-waste but also contribute to conserving valuable resources and reducing the need for mining new raw materials.

2.1.3. Mitigating Ecological Footprints

E-waste, often inappropriately disposed of, disseminates a cocktail of hazardous substances, including lead, mercury, and flame-retardant compounds, perpetuating contamination of soils, water bodies, and the very air we breathe. The astute retrieval of valuable resources from forsaken devices assuages the urgency for fresh material extraction, inevitably diminishing the call for ecologically detrimental extraction methodologies. In this vein, ecosystems experience respite, and the carbon footprint typically associated with mining and manufacturing witnesses a notable decline.

2.2. Job Creation

To collect, disassemble, and recycle e-waste, professional labor is required. As a result, it can create job opportunities and aid in the expansion of the recycling and waste management industries' economies. The mounting tide of e-waste offers a unique avenue for job creation, spanning various stages of the waste management process. From collection and sorting to refurbishment and recycling, e-waste management demands a diverse range of skills and expertise. The proper dismantling, sorting, and processing of electronic components require technicians with specialized knowledge, creating a demand for skilled labor (So, W. W. M., et al. 2019).

2.2.1. Collection and Sorting

The initial step in effective e-waste management involves collecting discarded electronic devices from consumers, businesses, and disposal centers. This process necessitates a workforce skilled in logistics, transportation, and inventory management. Additionally, the sorting of e-waste into categories for recycling, repair, or proper disposal requires manual dexterity and awareness of different electronic components (Awasthi, A. K. et al. 2023).

2.2.2. Refurbishment and Repair

Many discarded electronic devices still possess functional components that can be refurbished and repurposed. Skilled technicians proficient in diagnosing and repairing electronic malfunctions are integral to

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

this process. By refurbishing and extending the lifespan of devices, these technicians contribute to reducing electronic waste while also making technology more accessible to individuals with limited resources.

2.2.3. Recycling and Recovery

Recovering valuable materials from e-waste, such as precious metals and rare earth elements, requires specialized expertise. Technicians skilled in advanced recycling techniques are needed to extract these valuable resources without causing harm to the environment. These professionals play a vital role in reducing the need for environmentally damaging raw material extraction.

2.2.4. Data Cleaning and Security

With the proliferation of personal and sensitive data on electronic devices, ensuring data privacy and security during the recycling process is of paramount importance. Experts in data sanitization and cybersecurity are essential to prevent identity theft and privacy breaches.

2.3. Environmental Protection

By managing e-waste properly, dangerous components are kept out of the soil and water, protecting the environment and fragile ecosystems from harm. One of the most prominent opportunities in e-waste management is the preservation and restoration of fragile ecosystems. The improper disposal of electronic devices, laden with hazardous substances like lead, mercury, and flame retardants, poses a grave threat to soil, water, and air quality. The sheer volume of e-waste generated exacerbates this challenge. However, through effective e-waste management practices, these toxins can be safely contained and extracted, preventing their seepage into the environment, and protecting both human health and biodiversity.

2.3.1. Reducing Resource Depletion

E-waste management offers a tangible opportunity to curb the rampant depletion of natural resources. Electronic devices rely on a myriad of materials, many of which are non-renewable and extracted through environmentally damaging processes. By recycling and recovering valuable components from discarded devices, e-waste management directly reduces the demand for new raw materials, mitigating the ecological impact of mining, refining, and processing. This, in turn, contributes to the conservation of ecosystems and promotes a more sustainable approach to resource utilization.

2.3.2. Mitigating Carbon Footprints

The environmentally conscious management of e-waste aligns with global efforts to mitigate carbon footprints and combat climate change. Traditional methods of electronic waste disposal, such as landfilling or incineration, release greenhouse gases and contribute to global warming. Opting for sustainable practices, such as recycling and refurbishing, reduces the release of harmful emissions and conserves energy that would otherwise be expended in the manufacturing of new electronic devices. This process is inherently linked to the reduction of carbon dioxide emissions, contributing to international climate goals.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

2.3.3. Promoting Circular Economy

Embracing a circular economy model is a powerful opportunity embedded within e-waste management. Unlike the linear "take-make-dispose" approach, a circular economy emphasizes the continual use, repair, and recycling of products. E-waste management can facilitate this transition by promoting the repair and refurbishment of electronic devices, extending their lifespan, and reducing the need for constant replacements. This not only conserves resources but also fosters a culture of sustainable consumption, wherein products are valued for their longevity rather than their disposability (Cesaro et al. 2018).

2.3.4. Creating an Ecologically Conscious Society

Perhaps one of the most profound opportunities lies in the transformation of societal attitudes towards consumption and waste. E-waste management offers a platform to educate consumers about the environmental impact of their choices. As individuals become more informed about responsible disposal methods and the significance of recycling, they are empowered to make greener decisions. This shift in consumer behavior can permeate into other aspects of their lives, contributing to a broader culture of sustainability and environmental stewardship. (So, W. W. M., et al.2019).

2.4. Technological Advancements

E-waste treatment is in greater demand, which has led to innovation in recycling and recovery methods, resulting in more effective and sustainable practices. In the realm of waste management, traditional methods have often proven inadequate in addressing the mounting challenges posed by electronic waste (e-waste). However, recent technological advancements offer promising opportunities to revolutionize e-waste management practices.

The implementation of a deposit return system (Sheoran, M., & Das Gupta, D. 2023), in which customers are responsible for paying a refundable charge at the time of product purchase, constitutes a proactive strategy. The fee should be calculated to consider the costs associated with managing e-waste while giving customers an incentive to return used goods. The incorporation of Radio Frequency Identification (RFID) tags is essential for ensuring thorough product tracking. When a product is safely delivered to designated recycling facilities or recyclers, the tags activate at the point of sale and remain active until then. At that point, the consumer can get their deposit fee back. Government subsidies for producers and recyclers might further energize the entire process. We may use mobile phones as a model to illustrate this strategy, including suggested deposit fees and the accompanying cost structure.

3. CHALLENGES

The E-waste problem is of global concern because of the nature of the production and disposal of waste in a globalized world. To detoxify contaminated environments, make them safe for human occupancy and consumption, and safeguard the health of the ecosystems that sustain life, requires the development of creative and affordable solutions.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

3.1. Rapid E-Waste Growth

The increasing use of electronic devices results in a significant surge in e-waste generation. This overwhelming increase strains existing waste management infrastructure and poses challenges for appropriate disposal and recycling.

3.1.1. Inadequate Global E-Waste Infrastructure

There has been significant growth in the production of electronic garbage around the world, yet there is a lack of infrastructure, such as recycling facilities, to handle these massive volumes of e-waste. The yearly e-waste created is very minimally handled by these recycling facilities. Therefore, the government should prioritize financing for recycling facilities to reduce e-waste. Additionally, because of ineffective cooperation with e-waste collectors, the current recycling centers manage e-waste below their capacity.

For instance, just 17.4% of the estimated 53.6 million metric tonnes of e-waste produced worldwide in 2020 was formally collected and recycled. Governments must fund the expansion of recycling facilities and provide incentives for private sector involvement. For instance, the E-Waste Recycling Act of Japan created a framework for shared responsibility involving producers, merchants, and consumers, which improved recycling rates to over 40% (Pramila, S., et. al., 2012).

3.1.2. Constraints in Formal E-Waste Recycling

Due to a lack of appropriately qualified e-waste managers or workers who can apply cutting-edge recycling procedures, most methods used are mechanical disassembly and manual sorting. These provide challenges for recycling e-waste. While a few emerging companies are engaged in metal extraction from e-waste, their processing capacity is restricted. As a result, a notable portion of formal sector e-waste is exported to countries with advanced metal extraction infrastructure. Conversely, informal practices such as open-air incineration and acid leaching are rampant, causing environmental contamination and health risks (Rautela, R. et al. 2021).

3.2. Hazardous Components

If not properly handled and disposed of, dangerous compounds included in e-waste, such as lead, mercury, and flame retardants, can pose health concerns.

3.2.1. Environmental Contamination

Environmental contamination emphasizes different potential pollutants of air, water, and soil because of inefficient disposal behaviors of e-waste and due to the presence of different chemical compounds like mercury, sulfur, cadmium, and lead. The dangerous nature of these chemical compounds causes environmental effects that include the death of animals, and slower growth, and development in animals because of improper e-waste management. These toxic chemical substances and persistent organic pollutants (POP) will contaminate the environment through the ecological food chain. The Agbogbloshie e-waste dumpsite in Ghana has gained notoriety as one of the world's largest e-waste processing areas, with reports of severe environmental contamination and health issues among the local population.

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

3.2.2. Health Risks

Different health risks can be encountered due to the use of different Americium, sulfur, and Brominated Flame Retardants (BFRs) (Avis, W. 2021). Some hazardous components, such as heavy metals, can persist in the environment for a long time. Exposure to these hazardous materials can lead to various health problems, such as respiratory issues and cancers, E-waste contains nickel (Ni), which is a carcinogen, an asthma trigger, a lung irritant, and a skin irritant. Through the air, it penetrates the surroundings. Skin irritation, hair loss, heart and lung damage, and fertility issues are all brought on by antimony (Sb). Arsenic is carcinogenic and causes skin and lung cancer in humans, while polyvinyl chloride (PVC) harms animal kidneys and is soluble in water. The effects of bioaccumulation on human health, liver damage, particularly in pregnant and nursing women, are caused by Polychlorinated Biphenyls (Leung, A. O. W. 2019), BFRs, and other chemical components that are present in the food chain.

A notable example is Guiyu in China, where extensive e-waste processing has led to alarming rates of lead poisoning among residents. This underscores the urgent need to address the health impacts on vulnerable populations (Pramila, S., et. al., 2012).

3.2.3. Air and Water Pollution

Improper disposal methods such as incineration or dumping in landfills can release hazardous chemicals into the air and water. Burning e-waste can release toxic fumes and pollutants, contributing to air pollution. When hazardous materials reach water bodies, they can contaminate water sources, affecting aquatic life and potentially entering the human water supply.

Landfills can lead to the leaching into the groundwater, contaminating drinking water. The cadmium from one mobile phone battery is enough to pollute 600 m^3 of water.

Most of the e-waste is led to (sanitary) landfill sites. E-waste can liberate heavy metals that are enclosed in plastic-covered electronic circuits if it is burned before being disposed of in landfills. Even though these heavy metals may not be accessible after washing out, burning can release them into the air, which contributes to air pollution and could have an impact on human health (Gaidajis, G. et al., 2010).

3.3. Data Security

Sensitive commercial or private data are frequently found in e-waste. To avoid breaches of data and identity theft, it is essential to ensure data sanitization and destruction during recycling. As the digital era advances, the issue of data security in e-waste management becomes increasingly critical. The challenges outlined earlier highlight the intricate web of concerns that must be navigated to ensure the responsible disposal of electronic devices without compromising sensitive information.

3.3.1. Data Breaches

When electronic gadgets like laptops, mobile phones, and other computing devices are disposed of improperly, data breaches occur. When we fail to properly delete the data from the device, insecure data erasing also results in data breaches, which cause financial theft.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

For instance, a 2019 study by the University of Hertfordshire found that almost 40% of used electronic equipment included personally identifiable information (PII) from the owners before them. This worrying statistic emphasizes how exposed abandoned devices are to data leakage risks.

3.3.2. Identity Theft

Electronic devices like smartphones, laptops, and tablets may contain personal identification information. When these devices are not properly disposed of, the data or sensitive information, such as banking information, and passwords, might be accessed by unauthorized individuals who get into possession of discarded devices. Most people use these devices to store sensitive data, including passwords and bank credentials.

Credit card numbers, names, addresses, usernames, passwords, business and personal information, tax information, and more were among the PII that were recovered. Tablets were alarmingly discovered to have the largest quantity of recoverable PII, at 50%, while mobile phones had the least, at 13%. Additionally, 44% of hard discs had PII. 40% of the devices in total produced PII.

3.3.3. Data Resale and Black Market

Discarded electronics with intact data can end up in the second-hand market, The existence of a second-hand market for electronics introduces another layer of risk. Devices with intact data can be sold, potentially exposing sensitive information to malicious actors. Recent cases have demonstrated the presence of personal data on devices purchased from online marketplaces, highlighting the pressing need for improved data sanitization practices.

3.4. Global Trade Dynamics

E-waste is constantly exported from developed countries to developing ones, posing risks to the environment and public health in such countries. Collaboration across borders and strict rules are needed to solve this problem. E-waste generated by several nations is transferred to other locations for “disposal” in massive quantities. An abrupt rise in illegal trades has been brought on by the rising transboundary movements of e-waste between industrialized and poor countries. E-waste imports and exports are governed by laws and regulations in a variety of nations across the world.

The trading of e-waste is prohibited if these laws are violated with the intent to commit a crime or for purposes of economic, political, or social gain. The necessity to lower service import and export fees on e-waste or to obtain financial advantage may be the driving force behind this illegal trade in e-waste. Trash producers, trash gatherers, waste management firms, waste treatment specialists, shipping firms, and shipping agents are among the groups involved in such transactions.

These trades are conducted between various nations, either interregional or intraregional, and both types of trade are illegal. One of the nations producing a significant amount of e-waste is Bangladesh, which also buys wealthy nations’ e-waste for disposal. The traders effectively employ the garbage’s precious components to create other useful products while extracting high prices from both developed and developing nations to dispose of their electronic waste. In contrast to this trade, Bangladesh neither lacks the necessary legal authorizations to exchange and dispose of this e-waste nor the proper locations for doing so. As a result, the transaction is prohibited. Similar unlawful trade is visible in China, which

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

imports e-waste from the European Union (EU) and uses this garbage to regenerate useful electronic products. It has been shown that Italy participates in these criminal activities by smuggling e-waste over international borders. Amounts of illegal trash were seen being transported from Germany to the Czech Republic, according to the authorities.

Poor e-waste management leads to these unlawful trades, which allow smugglers, brokers, and criminals a method to satisfy consumer expectations for inexpensive e-waste disposal. In addition, they remove parts from waste and sell them to other businesses so they can reuse them, which is a big source of income for them. When such unlawful trades become obvious, it is necessary to thoroughly analyze these trade lines and determine how they are moving throughout the world. The detection of such illegal trades, the marking of the trade route, and the investigation of what, how, how much, and where the transaction is being conducted all fall under the purview of forensics. Additionally, stringent legislation must be put in place, and proper import and export customs checks must be carried out. (Bisschop, L. 2012).

3.5. Lack of Awareness

Inappropriate e-waste disposal has negative effects on the environment and human health, which many people are unaware of. It is crucial to increase the public's awareness of ethical e-waste management. The lack of awareness surrounding data security risks in e-waste disposal exacerbates the problem. Many individuals and organizations remain unaware of the potential consequences of improper disposal. Raising awareness through educational campaigns for consumers and businesses can play a pivotal role in mitigating this challenge.

In GCC nations, there is an absence of knowledge on data security and privacy in e-waste products. Most people think that once data is deleted, it cannot be recovered. Because disclosing personal information has a cultural influence, consumers of the GCC are especially sensitive to privacy issues. The authors contend that adequate steps will be taken by homes to properly dispose of data if the public is aware of privacy issues. Institutions in the GCC region frequently give or sell outdated computers without properly removing their hard discs and memory components. To determine the awareness of and disposal practices for electronic devices carrying sensitive personal data, more research is required. To preserve data security and prevent illegal recovery during recycling, certain steps should be performed (Alghazo, J., & Ouda, O. K., 2016).

There are two ways to comprehend a lack of awareness.

i. While Buying Products
ii. While E-waste management
    i. While Buying Electronic Products:

Customers for their benefit do buy these products more and more. Customers are just told the speed and battery power and all about the product, but no one insists them about what they are made how they will affect the environment, whether it is good to use them, whether recycling is possible, what happens to human health and environment if we rely on them. So, no customer cannot get to know the consequences and no industry takes care to explain to people the consequences. It's everyone with their benefit and people should also be known about these so that people can get to know proper methods of disposal after using them.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

3.6 While E-Waste Management

The people who are present at the sites of recycling industries and the people who are working at the recycling sites do not know the consequences of toxic elements released from the process of e-waste recycling, they work for their offspring without any proper guidance on safety measures. This promotes a negative way with a huge impact on workers' health and their surrounding environment, and they also don't even know that they are affecting their children indirectly these toxic elements enter their bodies and their food (Heacock, M. et al. 2016). This awareness should be provided by their respective recycling industries, and they must take care of them by suggesting all the safety precautions and creating awareness of the toxic elements released how they enter their bodies, and which element harms and which elements do not harm them. Also, they should provide clear hygienic suggestions like taking a bath and washing their hands, required after going home and meeting their children.

Even though the recycling methods are beneficial they harm us. Industries should be aware of new methods which cause less environmental harm. These two examples demonstrate the need for increased education on these topics. They will be able to make wiser purchases and understand how to properly dispose of outdated technology as a result. Information must be shared widely for people to act more responsibly and effectively. (Bazargan, A., et al., 2012).

4. SWOT

SWOT analysis is a well-known technique for assessing and managing strategic goals. SWOT stands for Strengths, Weaknesses, Opportunities, and Threats. Opportunities and risks are external, whereas advantages and drawbacks are internal. SWOT analysis is a strategic planning tool that is used to examine both internal and external aspects that may have an impact on an initiative, organization, or effort. A SWOT analysis (Sheoran, M., & Das Gupta, D. 2023) of the electronic waste (e-waste) issue in India demonstrates several essential aspects as described in Table 3.

Table 3. E-waste in India: SWOT analysis

S	**STRENGTH**	i. The rapidly developing consumer electronics market in India represents economic prosperity and technological advancement. ii. For effective e-waste treatment and recycling, India has a significant labor force that is technically skilled. iii. By adopting laws and policies like the E-Waste (Management and Handling) Rules of 2011, India has made progress.
W	**WEAKNESS**	i. The risks to the environment and public health associated with incorrect e-waste disposal are still unknown to customers as well as companies. ii. Efficient e-waste management in India is hindered by problems with insufficient recycling facilities and waste collection methods.
O	**OPPORTUNITIES**	i. India has the chance to create a sustainable e-waste management ecosystem because it transitioned to a circular economy that places a strong emphasis on recycling and reuse. ii. Technologies for recycling e-waste have the potential to be innovative, attract investment, and produce green employment possibilities.
T	**THREATS**	i. E-waste poses serious environmental hazards, such as soil and water contamination and harm to ecosystems, when it is improperly disposed of or recycled in an unregulated manner. ii. For people involved in informal recycling as well as communities living close to disposal sites, exposure to dangerous elements in e-waste can have serious health consequences.

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

5. CONCLUSION

A systematic strategy is necessary to address India's e-waste management issues. The goal of this approach should be to combine both large and small organized and unorganized sector units into a single value chain. The fact that e-waste contains potentially dangerous materials that are harmful to the environment and human health when handled improperly, it is crucial to use caution and take responsibility in its management and disposal. Significant opportunities for resource recovery, job generation, and environmental protection have been provided by e-waste management. To achieve sustainable and effective e-waste management practices, it is essential to address the issues linked to rapid e-waste growth, hazardous components, data security, global trade dynamics, and lack of knowledge. We can make use of the opportunities and overcome the obstacles to build a greener, more sustainable future by using responsible and innovative strategies.

A circular economy, a framework designed to reduce negative environmental effects and maximize resource use, might be developed if elements from e-waste are effectively recovered. The importance of recycling and properly disposing of e-waste can be greatly increased by utilizing artificial intelligence-driven promotional efforts, which will also encourage responsible consumer behavior. Artificial intelligence has the potential to greatly improve productivity, mitigate negative environmental effects, and promote sustainable practices when it comes to managing e-waste. Critical difficulties related to e-waste and its management are highlighted by the current review of the literature. It is a useful tool for decision-makers and stakeholders involved in recycling since it provides insightful information, a thorough SWOT analysis, and a summary of India's regulatory procedures. Stakeholders may skilfully negotiate problems, exploit opportunities, and create strategies that are in line with the goals of sustainable waste management by assessing their strengths, weaknesses, opportunities, and threats. In summary, the proper management of e-waste has the potential to lead to positive effects including the recovery of resources, the creation of jobs, and the development of a circular economy. However, there are many obstacles to overcome in the development of infrastructure, the management of hazardous substances, the creation of effective collection systems, and the adoption of strong regulatory frameworks. E-waste management must address these concerns through investments, innovation, and cooperative efforts among stakeholders if the environmental and financial benefits are to be attained.

ABSTRACT

The problem of e-waste generation is increasing day by day in India and worldwide. This rise in e-waste poses damage to public health and the environment as a whole. Toxic substances and poor disposal of e-waste significantly affects plant and animal lives. When it comes to e-waste generation, India is the fastest growing country when it comes to electronics use. Various policy measures and initiatives have been introduced over the past decades in India related to e-waste management. It is still a source of distress and unsolved matter. Sustainable development needs a lot of effort and well-organized e-waste management can be possible only with a systematic waste collection system, accurate estimations, and early forecasting. This chapter presents existing e-waste scenarios in India that are posing significant challenges to meet sustainable development goals and highlights some of the sustainable ways to reduce e-waste. This chapter serves as a basis for awareness and knowledge about the potential harms of e-waste to human health and the environment to promote glsustainabilitynable.

INTRODUCTION

The "electrical or electronic equipment (EEE)" turns "Waste electrical or electronic equipment (WEEE)" when it is thrown or discarded inappropriately or without any recycling approach (Borthakur & Singh, 2012). There has been a steep rise in demand and manufacturing of electronics items due to the huge consumption pattern (Borthakur & Singh, 2012). Hence, it becomes important to promote sustainable consumption of those goods. It goes without saying that e-waste consists of toxic elements which may pose an ill effect on both environment and public health (Chandra, 2015). It becomes vital to avoid the unwanted use of EEE to make lives easier for current and next generations and protect the planet as a whole.

There is a need to switch to the modern approach of a circular economy from a typical linear economy in order to protect the environment (Stefansdotter et al., 2016). In a linear economy, a product is produced and thrown away after its final use. In a circular economy, once a product is used, it is recycled. There are significant economic benefits of a circular economy for electrical and electronic industries. It is possible to reduce consumer cost by 7% to 14% by 2030 and 2040, respectively, with a circular business model (Morlet, 2018). It is also seen that non-functional items are wrongly classified as "used items" and sent to third world countries of Asia and Africa with a license to export surplus items for refurbishment or reuse (Ananno et al., 2021).

There is a need to implement 4 Rs of recycling – (1) Reuse – Reusing items to maximum possible extent; (2) Reduce – Cutting down waste by avoiding excessive use of equipment; (3) Recycle – New products can be made of e-waste; and (4) Recovery – Valuable resources can be restored from e-waste (Stone, 2020). With technological advancements and changing scenarios, recovery is very important. There are three design-specific principles which reportedly serve as a basis of the circular economy - (1) Circulation of supplies and goods at highest value; (2) Reducing waste to control pollution; and (3) Recovery (Morlet, 2018).

Because of constant technological improvements and upgrades, new and latest devices and electronics have become the center of attraction for young consumers. This urge of being relevant to latest technological advancements and social validation is creating a mountain of e-waste. The 4Rs are much needed to reduce the impact of e-waste and manage the same to save the environment. Proper e-waste reuse and recycling can save the environment by keeping a lot of valuable metals like Gold, Silver, Cerium, Gadolinium, and Palladium into landfill as they can be reused for making other electronic items (Sethurajan et al., 2019; Anand, 2022).

If everyone switches to energy-saving lights, it is possible to save up to US$120 billion every year and it can take the natural resources of over 3 planets to maintain the existing lifestyle of 9.6 billion people on earth by 2050 (UNEP, 2022). There is a 38% rise in e-waste from 2010 to 2019, according to Goal-12 of "Sustainable Development Goals (SDG) Report 2020", which titles "sustainable consumption and production patterns" (Guterres, 2020). It is among the most important reasons to look closely at sustainable development goals for governments in both developing and developed countries (CPCB, 2021). However, sustainability is more than the responsibility of any organization or the government as everyone should play their role in adopting sustainable activities in daily life.

Every year, the "weight of e-waste generated every year in the world is similar to the weight of five thousand Eiffel Towers (Parajuly et al., 2019). In 2019-20 alone, 1,014,961 tons of e-waste will be generated in India, i.e., 32% more than the amount of e-waste generated in 2018-19. In 2018 and 2019, only 3.6 percent and 10 percent of wastes were collected, respectively (CPCB, 2021). These numbers are so

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

huge to create concern for landfill for the planet. There have been significant advancements of e-products and technological improvements over the past century. Over 50,000 tons of e-waste is generated every month in India alone. It is not shocking that e-waste is being generated at a rapid rise of 23.7% every year since the past decade.

Being the third largest producer of e-waste in the world, India needs to be responsible to come up with proper strategies for e-waste management (Namo eWaste, 2022). Delhi is the second state after Maharashtra in e-waste generation (Pendharkar, 2018). With 3230 kilotons of e-waste generated every year, India is one of top 3 countries following China and the US with 10,129 and 6918 kilotons of e-waste, respectively. However, China and the US also have significantly higher recycling rates, i.e., 16% and 15%, respectively, while India recycles only 1% of e-waste every year which is alarming (Ruiz, 2022). When it comes to ranking of 180 countries at the "Environmental Performance Index (EPI)", India stands at the bottom.

In India, consumers aggressively replace their digital devices with every new launch due to shortened life cycle of products and latest innovations, causing a pile of e-waste (Jayaraman et al., 2019). In 2019, 2.4 kg of e-waste per capita will be generated in India (UNITAR, 2020) (Figure 1). In 20 states, there are only 51 e-waste collection points in India. In Assam, Andhra Pradesh, Gujarat, Chhattisgarh, and other 20 states in India, there are only 400 e-waste dismantlers and recyclers. However, these licensed recyclers and dismantlers can process 1,068,542.72 tons of e-waste annually (Ministry of Environment, Forest, and Climate Change, 2022). This recycling capacity is still underused as the informal sector still handles most of scrap and waste materials (Forti et al., 2020). There are Non-Governmental Organizations (NGOs) which act as a channel among waste collectors but "original equipment manufacturers (OEMs)" are still pressured to pick and recycle their products. Informal sector recycles 95% of consumer electronics in India (Ruiz, 2020; Singhal et al., 2019).

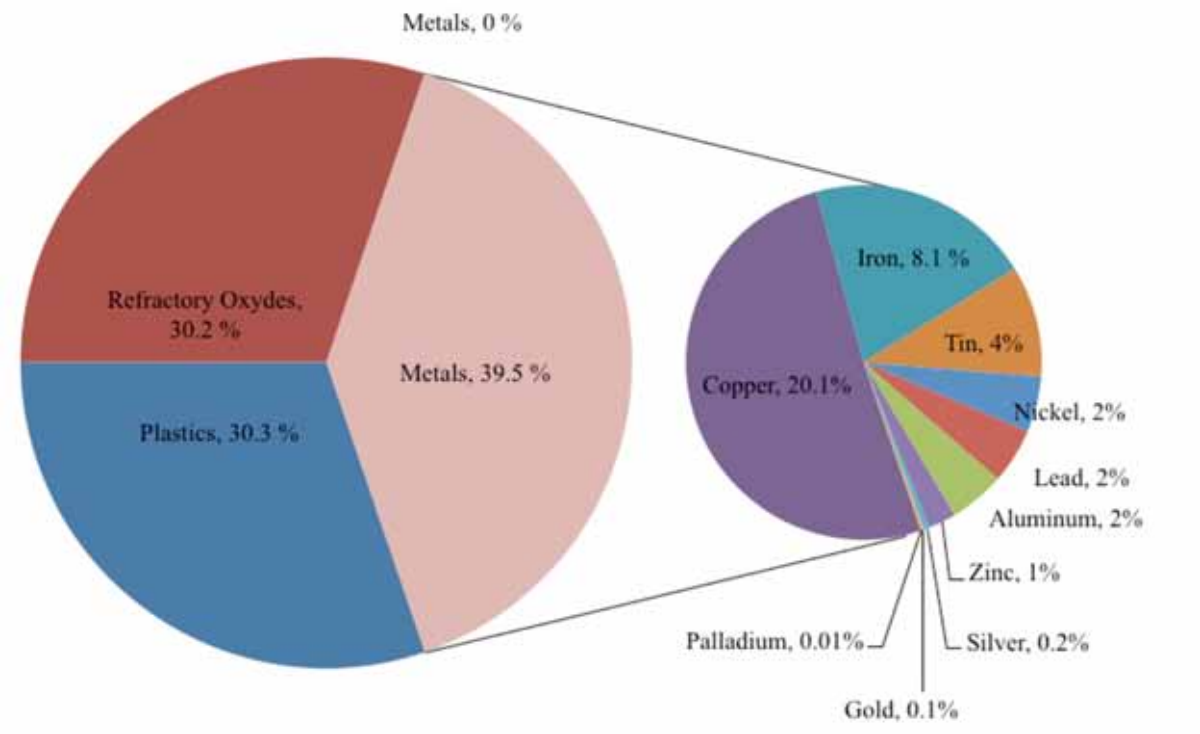
E-waste management has become a global concern which could jeopardize the environment in different ways. India has a rise in consumer durables and their demands being one of the fastest growing countries worldwide (Reynolds, 2021). India is one of the top countries in e-waste generation with a huge growth rate. However, South Asian countries have finally started to recognize the value of proper e-waste management. India is the only country with e-waste laws in Southern Asia. Only licensed recyclers and dismantlers can collect e-waste because of a law which was enacted in 2011. According to a survey report by Kandel (2022), several heavy metals are found in e-waste like Zn, Pb, Hg, Cr, Cd, etc. Bagwan (2023) predicted that the average capacity of dismantling/recycling e-waste is going to be 163563.15 MT by 2030, reaching over 248 recyclers. It highlights the scope for entrepreneurship in e-waste recycling with expansion of 7.23% a year on average (Bagwan, 2023). According to a survey conducted by Ananno et al. (2021), factors like monthly income, environmental awareness, and education level of consumers affect their willingness to process e-waste. According to them, e-waste recycling can be improved by environmental awareness and educating public on the benefits of e-waste recycling and making the process more convenient.

Types and Components of E-Waste



There are thousands of hazardous and non-hazardous components used in e-waste (UNEP, 2006). Technological advancement is so rapid that every new electrical and electronic item replaces current models or makes some electronic items obsolete, non-functioning, and useless soon enough to generate a lot of e-waste. There are generally two types of e-waste as per their physical composition (Hossain et al., 2015) (Figure 2).

Figure 2. Types of e-wastes as per their physical composition

Figure 3. Chemical components in e-waste
Source: Sodhi & Reimer (2001)

Electrical wastes consist of household and refrigeration appliances like bulbs, cables, dryers, washing machines, vacuum cleaners, AC, water heaters, coffee machines, irons, and toasters. Electronic wastes include monitors, TVs, CD players, DVDs, VCRs, routers, radio, GPS devices, calculators, smartphones, cameras, tablets, laptops, etc. Over 60% of total e-wastes include gold, iron, copper, and aluminum and out of which, 2.7% are toxic pollutants, heavy metals, and chemical compounds (Widmer et al, 2005). E-wastes usually include plastics, metals, and refractory oxides (Sum, 1991) (Figure 3). Plastic e-wastes include polyesters, polycarbonates, polypropylene, and polyethylene; metal scrap includes iron, tin, and copper; and major oxides include silica, alumina, potassium, barium titanate, aluminum silicates, and magnesium.

Some of the components can be reused when it comes to assemble new products while others are cut to metals to be reused in different applications like flatware, construction, etc. Some of the wide range of components used are fiberglass, epoxy resins, PVC, PCBs, lead, thermosetting plastics, silicon, copper, carbon, beryllium, aluminum, and iron. Some of the small amounts of elements found in e-waste are mercury, cadmium, and thallium (Muszyńska et al., 2015). Some of the components found in traces are americium, arsenic, antimony, barium, boron, bismuth, europium, cobalt, germanium, gallium, indium, gold, manganese, lithium, niobium, platinum, palladium, selenium, tantalum, etc. (Hieronymi et al., 2012). Tin and lead are widely used in almost all electronics as solder and copper as circuit board tracks and as wire. Table 1 and 2 list some of the toxic and non-toxic components of e-waste and their use.

Table 1. Toxic components of e-waste and their use

Components	Electric Appliances for Use	Harmful Effects	Source
Lead	Solder, batteries, CRT monitor, and some PVC formulations.	Behavioral disturbance, impaired cognitive function, ADHD, and lower IQ	Chen et al. (2011)
Americium	Smoke alarms as radioactive source	Carcinogenic	Silva et al. (2012)
Mercury	Various applications including fluorescent tubes, backlights in monitors, tilt switches (thermostats and doorbells)	Dermatitis, sensory impairment, muscle weakness, and memory loss. In-utero exposure leads to fetal deficits in attention, motor function, and verbal areas	Chen et al. (2011)
Sulfur	Lead-acid batteries	Kidney damage, liver damage, throat and eye irritation. It can release sulfur dioxide and form sulfuric acid when open in the environment.	Chen et al. (2011)
Cadmium	Light-sensitive resistors, nickel-cadmium rechargeable batteries, and aviation and marine alloys.	Inhalation can cause severe lung and kidney damage.	Sharma et al. (2015)
PVC	Found widely in electronics as insulator in cables	Over time, it can become pollutant and pose health problems for humans and animals. Its exposure can cause developmental and reproductive health effects	Nnorom & Osibanjo (2008); Jonkers et al. (2016)

Table 2. Non-toxic components used in e-waste

Component	Usage
Copper	ICs, component leads, and copper wire
Aluminum	ICs, capacitors, and almost all electronic items consuming at least few watts of energy
Gold	Widely used in digital devices as connector plating
Germanium	Transistors used in 1950s or 60s
Lithium	Rechargeable lithium-ion batteries used in smartphones, tablets, wireless headphones, EVs, pacemakers, digital cameras, laptops, smart watches, power banks, UPS, alarm systems, and any other digital device used today.
Silicon	ICs, glass, transistors, and circuit boards
Nickel	Nickel-cadmium batteries
Tin	Solder
Zinc	Steel part plating

Sustainable E-Waste Reduction

There is a significant impact of e-waste on the environment, especially when there is a rise in use of digital devices. According to research conducted by a top IoT and mobile device management provider SOTI (2022), at least 7 out of 10 IT leaders are replacing devices hastily and 41.6% of them replaced wearables, mobile phones, and handheld devices for a newer model. Companies are making changes in their IT departments to control corporate e-waste and bring green digital solutions to reduce the ill effects of IT operations on the environment. According to Shash Anand, VP of SOTI (Product Strategy), the lifespan of a device starts with knowledge of leadership. The longer the lifespan of a device, the fewer hardware replacements would be required.

Extreme environmental impact, toxicity, and financial recovery from e-waste have made it important to recover metal from e-waste. Using e-waste can possibly be a secondary source of base and valuable metals (Otto et al., 2018). Precious metals which are over 10 times purer than rich ore content have been the most important reason to extract valuable metal from e-waste. Table 3 lists the existing international prices of valuable metals. Hence, in order to reduce e-waste, it becomes highly important to extract valuable metals like Copper, Aluminum, Gold, Lead, Germanium, Palladium, Platinum, etc. from e-waste. Recycling can ensure utmost recovery and profitability and least environmental impact.

Various developed and developing countries have laws and regulations for e-waste management as described in (Figure 4). Each country has their e-waste management process which is described in Table 4). Developed countries have taken various initiatives like extended producer responsibility (EPR)" to deal with the issue of e-waste. According to EPR, the manufacturer needs to take the product back after its final use. This policy is mainly aimed to reduce over-exploitation of natural resources and waste. Figure 5 illustrates the process of converting e-waste into energy through a general e-waste management system.

It is observed that e-waste is separated into plastic and metal parts with mechanism/gravity separation method. Various noble metals like aluminum, iron, copper, gold, silver, etc. can be recovered by disposing of other e-waste parts. It is possible to recycle plastic parts and transform them into plastic bottles or energy through gasification, pyrolysis, and incineration (Figure 5). Plastic part of e-waste can be fueled with pyrolysis (Jayaraman et al., 2019). Pyrolysis of e-waste plastic can produce up to 51 to 71% of oil at the temperature of 430 to 460 degrees Celsius. In addition, incineration can also help generate energy or heat.

E-waste management should also be accompanied with deposit-refund schemes like "advance disposal fee (ADF)" and "advance recycling fee (ARF)". The sale of e-waste is usually taxed by ARF to cover

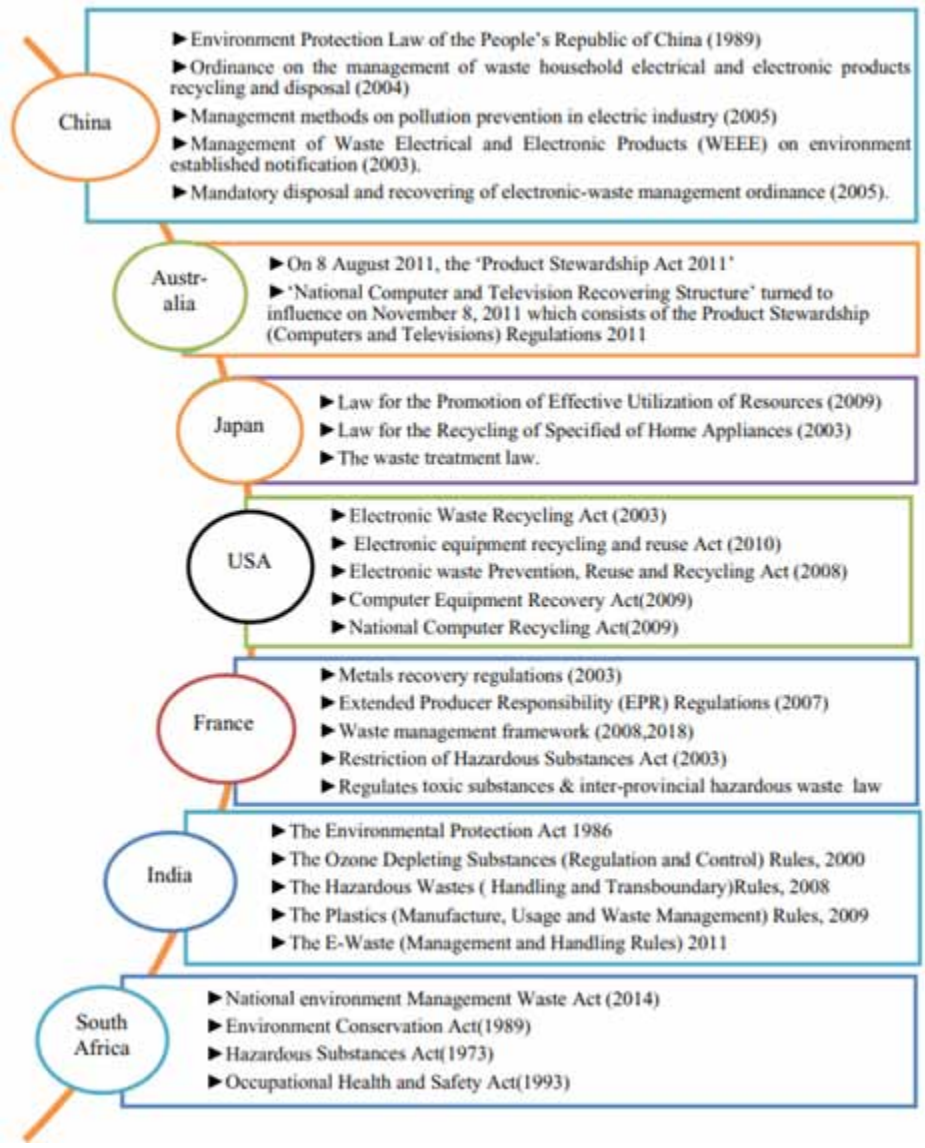

Table 3. Existing international prices of valuable metals (in USD)

Valuable Metals in E-Waste	Prices (in USD)
Gold	1306.10
Palladium	989.80
Platinum	916.65
Silver	16.59
Copper	3.06
Rhodium	2240

recycling costs and ADF consists of funds to bear the cost of disposal. ARF can be calculated on per unit of item sold on the basis of weight (Zarei et al., 2018).

CONCLUSION

In order to keep electronic and electrical equipment at their highest value all the time in the long term, it is high time to switch to a circular economy for all developed and developing countries. The problem of e-waste is rising significantly and e-waste management is getting even worse due to poor strategies

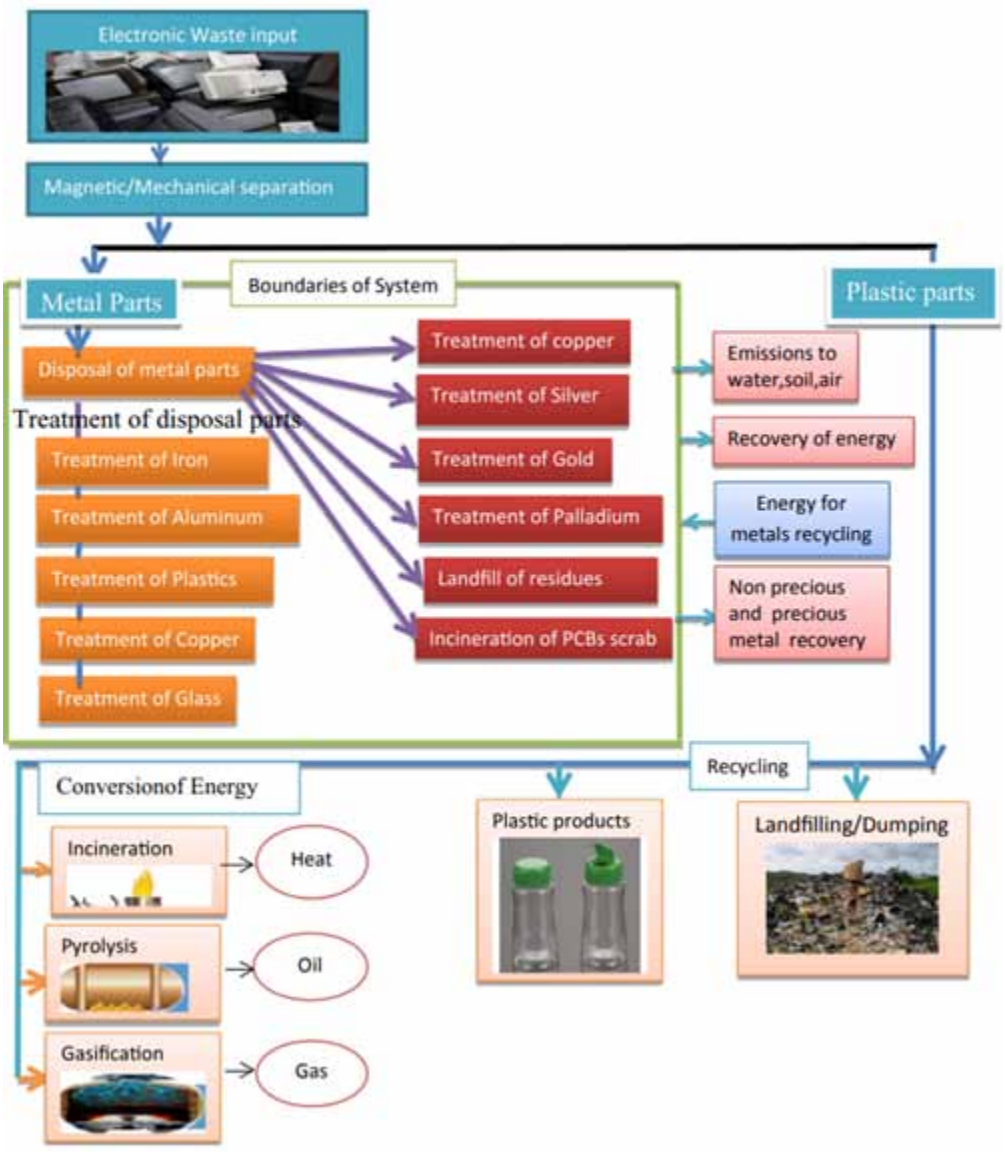
Table 4. E-waste management procedures followed in various countries



Countries	E-Waste Management Process	References
India	(1) Informal recycling with crude techniques for valuable metal recovery (2) Repair and refurbishment of used EEE (3) Sending recyclable parts to respective recyclers (4) Techniques approved by Central Pollution Control Board implemented by formal recyclers (5) Dismantling (6) Segregation (7) Disposal	Ghosh et al. (2016)
US	(1) Incineration and landfill (2) Recycling (3) Transport, collection, sorting, and dismantling (4) separation of chemical and mechanical materials (5) EPR	Lee et al. (2018)
China	(1) Waste reduction and prevention (2) Association between mechanical dismantling and formal recycling (3) Informal recycling with open burning, leaching acid, or other backyard techniques to retrieve valuable metals (4) Reuse (5) Incineration (6) Selling recyclable parts to recyclers (7) Repairing and refurbishment of used EEE	Ghosh et al. (2016)
EU	(1) Redesigning EEE (2) E-waste collection (3) Treatment of e-waste metals (4) Valuable metals recovery	Ghosh et al. (2016)
UK	(1) Metal recovery (2) Reuse (3) Segregation, dismantling, and shredding (4) “Life Cycle Assessment (LCA)”	Ongondo et al. (2011)
Brazil	(1) Formal recycling with comminuting and dismantling (2) Targeted refining and recycling (3) Physical and mechanical isolation	Mourshed et al. (2017)

without formal collection, recycling, and segregation. Eventually, it is affecting the environment and posing harm to the natural ecosystem and public health. There is a lack of efficiency and segmentation in existing e-waste management practices in India. A proper regulatory framework is needed to take concrete actions to reduce the harmful effects of e-waste. At the same time, social awareness is really important about the value of recycling and saving the environment. These practices can secure the environment in a sustainable way and curb the ill effects of increasing e-waste.

Several studies have observed an extreme lack of waste which is managed out of a huge pile of e-waste. Hence, all stakeholders should collaborate to spread awareness about the perils of e-waste and keep them together to deal with this environmental concern. It can help countries worldwide to manage e-waste in a sustainable manner in the long term. This chapter would help policymakers, decision-makers, and corporate leaders to play a vital role in building sustainable behavior among young consumers. Marketers can consider this chapter and make strategies with both environment and profitability in mind to make a win-win for both consumers and companies. Government can formulate plans with environmental sustainability in mind and readers can understand the value of e-waste management in daily lives. All in all, awareness is important to address the problem of e-waste as most people don’t have any idea about this burning issue in developing countries.

Chapter 10
Extended Producer Responsibility (EPR) and E-Waste Management:
A Roadmap for Entrepreneurs

ABSTRACT

Electronic trash (e-waste) creation has increased exponentially as a result of the widespread use of electronic devices and the quick rate of technical development, posing a serious environmental concern. Extended producer responsibility (EPR) has become a crucial tactic for addressing the negative social and environmental effects of e-waste. This chapter provides entrepreneurs with a detailed roadmap for navigating the challenges of EPR adoption in e-waste management. For entrepreneurs, the application of extended producer responsibility in the management of e-waste poses both a difficulty and an opportunity. By embracing the EPR precepts and following the recommended roadmap, entrepreneurs may significantly minimize the environmental impact of e-waste, promote resource conservation, and create a more sustainable future.

1. INTRODUCTION

Ecosystems, human health, and resource sustainability are seriously threatened by the incorrect management and disposal of e-waste. Extended producer responsibility (EPR) is a political strategy that places the onus of responsible e-waste disposal on manufacturers and producers rather than on consumers and local governments (Khetriwal, Kraeuchi, & Widmer, 2009). This article offers a succinct summary

of the essential elements of EPR and proposes a roadmap that gives entrepreneurs the knowledge and techniques they need to put good e-waste management practices into reality.

EPR requires producers to take responsibility for the whole lifespan of their products, including disposal. The management of e-waste is a crucial topic that has attracted a lot of attention recently. E-waste creation has increased dramatically as a result of the expanding usage of electronic gadgets and the quickening rate of technical innovation. E-waste improperly disposed of has the potential to seriously harm the environment and human health. In this situation, EPR has shown to be a useful tool for managing e-waste by directing it to approved recyclers and dismantlers for safe handling and disposal (Arya & Kumar, 2020). This article provides a comprehensive guide that gives insights into the concept of EPR and its implementation in e-waste management. The article gives company owners a road map for implementing EPR ideas into their daily operations in order to embrace sustainable business practices. It covers a range of EPR-related topics, including as its history, the legal system, and difficulties with implementation. The article offers examples of effective EPR implementation in many nations, making it a useful tool for businesspeople, legislators, and scholars.

EPR may help enterprises in a number of ways in addition to the advantages already discussed. Entrepreneurs can use it to comply with environmental laws and lessen their environmental impact. Entrepreneurs may improve their brand reputation and image among customers who are becoming more environmentally sensitive by using sustainable business practices (Khan, Hussain & Sampene, 2023). EPR can also open up new economic avenues by encouraging the development of cutting-edge recycling technology and establishing new markets for recovered goods. EPR may help brands by facilitating the development of a circular economy, creating additional money, increasing your customer base, promoting sustainability or environmental friendliness, and lowering the amount of garbage that ends up in landfills (Marks, Miller & Vassanadumrongdee, 2023).

2. EXTENDED PRODUCER RESPONSIBILITY (EPR)

Extended Producer Responsibility (EPR) is a political strategy intended to encourage the responsible handling and disposal of goods and the trash they generate. It transfers control of a product's lifetime, including its end-of-life disposal, from the consumer or municipality to the manufacturer and producer of that product (Mayanti & Helo, 2023). E-waste management, or e-waste, is the process of applying EPR concepts to electronic trash, which includes discarded electronic equipment and gadgets (Kaur, Kaur & Kaur, 2023). The key components of EPR are as elaborated in the following sub-sections.

2.1. Legal Framework and Regulations

Entrepreneurs need to be aware of their jurisdictions' e-waste management legal requirements and regulatory frameworks. Avoiding fines and promoting sustainable activities depend on adherence to these requirements. The framework mandates that producers, manufacturers, and brand owners recover the plastic trash produced as a result of their products under extended producer responsibility (Gupta & Dash, 2023). The garbage producers are required to reduce the production of plastic trash by source segregation and to turn it over to local organizations. The manufacturer, importer, or brand owner must participate in EPR framework implementation initiatives other than data collecting (Pani & Pathak, 2021).

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

2.2. Product Design and Lifecycle

EPR can be improved if eco-design and circular economy ideas are applied from the beginning of the product's lifecycle. Entrepreneurs should use tactics that make it easier to disassemble a product and retrieve its parts once it has reached the end of its useful life (Dissanayake & Weerasinghe, 2021). The lifespan and environmental effect of a product are greatly influenced by its design. The design of the product should make it simple to disassemble, repair, and recycle.

The Extended Producer Responsibility (EPR) framework requires manufacturers to provide items that are easily recyclable and favorable to the environment. In accordance with the EPR framework, producers must also collect the plastic trash that their goods create. The garbage producers are required to reduce the production of plastic trash by source segregation and to turn it over to local organizations (Fiksel, Sanjay & Raman, 2021). The manufacturer, importer, or brand owner must participate in EPR framework implementation initiatives other than data collecting.

2.3. Collection Infrastructure

For electronic waste to be collected, an effective collection network must be set up. To provide consumers with simple and ethical disposal options, business owners should work with approved collection stations, merchants, and trash management organizations (Kurniawan, Othman, Hwang & Gikas, 2022).

For Extended Producer Responsibility (EPR) to be successfully implemented, the collecting infrastructure is essential. It entails establishing efficient systems and infrastructure for gathering, classifying, and recycling product and packaging trash (Ramasubramanian, Tan, Chellappan, & Ramakrishna, 2023). Consumers should be able to easily access and use the infrastructure. It promotes customer engagement in recycling initiatives by facilitating access to collection programs.

2.4. Logistics and Transportation

For the safe movement of e-waste from collection locations to recycling facilities, effective transportation and logistics are essential. Entrepreneurs must streamline transportation routes, reduce pollutants, and guarantee adherence to safety regulations (Kumar & Jha, 2019).

Moving goods and packaging from consumers to recycling facilities or other suitable disposal locations is part of Extended Producer Responsibility's (EPR) logistics and transportation component (Ahlers, Hemkhaus, Hibler & Hannak, 2021). To collect, move, and deliver waste materials to the specified facilities, effective transportation networks and systems must be established. In order to reduce greenhouse gas emissions, maximize fuel economy, and minimize environmental effect, the transportation process should be planned (Kazancoglu, Ozbiltekin-Pala, & Ozkan-Ozen, 2021).

2.5. Recycling and Resource Recovery

To extract valuable resources from e-waste, entrepreneurs should collaborate with accredited recycling facilities that are outfitted with cutting-edge technology. By reusing recovered materials, proper recycling not only lessens its negative environmental effects but also promotes the circular economy (Purchase, Al Zulayq, O'Brien, Kowalewski, Berenjian, Tarighaleslami, & Seifan, 2021).

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Extended Producer Responsibility (EPR)'s recycling and resource recovery component focuses on the effective management of waste materials produced by goods and packaging. It entails applying technology and methods to recycle, reuse, or repurpose waste products to recover valuable resources. Reduced trash creation, resource conservation, and environmental impact are the objectives (Pouikli, 2020).

2.6. Consumer Awareness and Education

It is crucial to inform customers on appropriate disposal practices, the value of recycling, and the risks associated with incorrect e-waste handling. In order to increase awareness and encourage ethical consumer behavior, entrepreneurs may play a critical role (Islam, Huda, Baumber, Shumon, Zaman, Ali & Sahajwalla, 2021).

With regards to Extended Producer Responsibility (EPR), a number of organizations and projects concentrate on raising consumer awareness and educating them. As an illustration, many industries have put into effect an EPR plan that addresses the collecting and reprocessing of plastic packaging waste on a brand-neutral basis throughout important markets (Kiehn & Weller Vojkovic, 2018). Additionally, they educate their workforce about trash management through volunteerism initiatives and training for sanitation and garbage staff. As part of its EPR activities, researchers place a strong emphasis on the necessity of educating consumers about responsible consumption and disposal.

3. ENTREPRENEURIAL ROADMAP

Outlining the procedures and methods that company owners or entrepreneurs might use to create and succeed in this industry is a necessary step in developing an entrepreneurial roadmap for Extended Producer Responsibility (EPR) in e-waste management. The handling of e-waste has both enormous commercial and environmental potential (Appolloni, D'Adamo, Gastaldi, Santibanez-Gonzalez, & Settembre-Blundo, 2021). The key components of the entrepreneurial roadmap for EPR are as follows:

3.1. Research and Regulatory Compliance

Entrepreneurs have to thoroughly investigate the EPR laws that apply to their sector and locality. Understanding statutory requirements, registration procedures, and reporting duties is necessary for this (Gui, Atasu, Ergun & Toktay, 2013).

EPR policies encourage companies to take environmental considerations into account when developing their goods with the goal of moving responsibility upstream and away from municipalities. Instead of focusing on a single link in the chain, this strategy aims to include environmental factors throughout the whole supply chain (Nnorom & Osibanjo, 2008).

3.2 Collaborative Partnerships

Entrepreneurs should establish partnerships with many stakeholders, including waste management firms, recycling facilities, governmental bodies, and consumer advocacy groups. These collaborations make e-waste collection, transportation, and recycling more effective (Camilleri, 2022).

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

In order to successfully execute Extended Producer Responsibility (EPR) initiatives, collaborative relationships are essential. EPR's objectives—reducing environmental impact, increasing recycling and responsible product design, and moving the financial burden of waste management from taxpayers to producers—must be accomplished via collaboration amongst a variety of stakeholders. Creating a sustainable and efficient framework for managing products throughout their lifecycles requires collaborative relationships in EPR. EPR initiatives can achieve their economic and environmental goals while putting as little stress as possible on the environment and taxpayers by bringing together producers, governmental organizations, consumers, and other stakeholders (Pouikli, 2020).

3.3 Product Design Innovation

Products with a less environmental impact may be produced by using sustainable design concepts that promote recyclability, simplicity of disassembly, and material efficiency. Innovation in product design is crucial to the execution of Extended Producer Responsibility (EPR) initiatives. Innovative product designs with a positive environmental impact can also increase recycling and promote EPR objectives (Maitre-Ekern, 2021). To achieve the goals of EPR, these design ideas and concepts must be incorporated into the product development process. Producers may reduce the environmental effect of their goods and enable their responsible management throughout their lifespan, eventually lessening the burden on society and the environment, by designing products with sustainability, recyclability, and resource efficiency in mind (Giovanardi, Konstantinou, Pollo, & Klein, 2023).

3.4 Collection Network Establishment

Consumers may conveniently dispose of their electronic trash thanks to the development of an accessible and extensive collection network. Entrepreneurs want also look into collaborations with merchants, community centers, and e-waste collecting activities. Producers are required to manage their goods throughout their full lifespan, including the collection and recycling of waste products, under the terms of the EPR. EPR goals, such as waste reduction, resource recovery, and environmental preservation, are efficiently realized with the help of a well-designed collection network. The success of EPR programs depends on a well-run collection network since it guarantees that items are handled correctly at the end of their lives. It advances sustainability, lowers waste, saves resources, and lessens the environmental impact of products—all key objectives of EPR. The collecting network needs cooperation from manufacturers, governments, waste management companies, and consumers to be efficient and successful (Rizzi, Bartolozzi, Borghini & Frey, 2013).

3.5. Technological Integration

Utilizing digital tools may simplify e-waste collection scheduling, tracking, and consumer communication. Examples of these tools include mobile applications and web platforms. The successful implementation of Extended Producer Responsibility (EPR) initiatives depends critically on technological integration. The efficacy, efficiency, and openness of EPR projects may all be considerably improved by technology. EPR initiatives may become more effective, transparent, and responsive to environmental and economic goals by adopting these technology advancements. The improved capabilities that technology offers in

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

controlling the lifetime of items and lessening their environmental effect may benefit producers, consumers, governmental organizations, and waste management organizations (Zhao, Peng, Elahi & Wan, 2021).

3.6. Public Awareness Campaigns

Entrepreneurs may start educational campaigns to spread the word about ethical e-waste management and the value of EPR using social media, workshops, and neighbourhood activities. Campaigns to raise public awareness are crucial elements of Extended Producer Responsibility (EPR) initiatives. These initiatives aim to inform and involve the general public in the value of responsible consumption, recycling, and appropriate disposal of goods subject to EPR legislation. Public awareness initiatives that are successful may encourage a sense of shared responsibility among customers while also advancing the environmental and sustainability aims of EPR (Vishwakarma, Kumar, Arya, Tembhare, Dutta & Kumar, 2022). In order to garner public support, promote responsible consumption and disposal habits, and eventually accomplish the program's environmental and sustainability goals, public awareness campaigns are essential in EPR initiatives. EPR initiatives can be successful in lowering waste, preserving resources, and decreasing their environmental footprint by encouraging a culture of responsibility and environmental care among customers.

4. CONCLUSION

The implementation of Extended Producer Responsibility in e-waste management presents both a challenge and an opportunity for entrepreneurs. Entrepreneurs may considerably help reduce the environmental effect of e-waste, promote resource conservation, and develop a more sustainable future by adopting the EPR tenets and adhering to the suggested roadmap.

To sum up, Extended Producer Responsibility (EPR) is an essential and dynamic legislative framework created to handle the expanding issues surrounding the management of e-waste and advance environmentally friendly practices in the electronics sector. Manufacturers and producers now bear full responsibility for the whole lifespan of electronic items, from design and manufacturing through end-of-life disposal (Turaga, Bhaskar, Sinha, Hinchliffe, Hemkhaus, Arora & Sharma, 2019). This strategy strives to lessen the risks to the environment and human health brought on by electronic trash while promoting eco-friendly product design and ethical disposal techniques.

Our environment, health, and resources are seriously threatened by e-waste, a problem that is spreading quickly around the globe. Electronics are being thrown away at an alarming rate due to the prevalence of these gadgets and their short lifespans, and many of them are exported to nations that are ill-prepared to manage the toxic compounds they contain or are improperly disposed at the end (Kitila & Woldemikael, 2021).

EPR requires producers to bear the cost of handling the end-of-life of their products, which encourages the creation of more robust and readily recyclable electronic items. It promotes the development of effective systems for garbage collection and recycling, ensuring that e-waste is handled in an ecologically friendly way. EPR encourages producers to develop electronics with longer lifespans, simple-to-repair components, and eco-friendly materials. EPR also stimulates innovation in product design. Public awareness initiatives that inform customers about ethical e-waste disposal and the advantages of recycling are frequently included in EPR programs. The global adoption of EPR and the harmonization of standards

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

can aid in addressing the global aspects of e-waste management and stop the export of e-waste to developing nations (Xavier, Ottoni & Lepawsky, 2021).

However, cooperation between governments, industry stakeholders, consumers, and the larger society is essential to the success of EPR and e-waste management. In order to guarantee that manufacturers uphold their duties and customers engage in recycling programs, effective legislation, monitoring, and enforcement are essential. Additionally, technical advancements that streamline collection and recycling procedures include product monitoring and internet platforms (Kumar, Singh, Gupta, & Madaan, 2020).

EPR is a glimmer of hope for a more sustainable and ethical way to handling e-waste in a society that is becoming more and more dependent on electronics (Dawson, 2019). EPR advocates a transition toward a circular economy, where resources are saved and waste is reduced, in addition to mitigating environmental harm by making manufacturers responsible for the items they release onto the market. In the area of managing e-waste, EPR provides a potential road towards a more sustainable future as we continue to watch the quick development of technology.

ABSTRACT

This chapter delves into the global e-waste challenge, emphasizing health risks and equity issues. Positioned within the book's theme, it justifies the relevance of IoT-driven solutions for addressing e-waste's social impacts. The discussion navigates through health risks and disparities in developing nations. IoT-enabled e-waste monitoring is explored, detailing how sensors create real-time databases for precise tracking. Analysis of IoT data assesses health risks, identifies contamination hotspots, and facilitates equitable resource allocation. The chapter highlights IoT's role in tailored awareness campaigns, particularly for underserved populations, and underscores its impact on policy development and enforcement. The conclusion summarizes vital insights, emphasizing the imperative of awareness, regulation, responsible recycling, and global collaboration in tackling e-waste's societal repercussions. This chapter serves as a crucial resource for policymakers, practitioners, and researchers engaged in the effective management of e-waste's social consequences.

1. INTRODUCTION

1.1 Background and Rationale

The exponential growth of electronic waste (e-waste) has emerged as a pressing global concern, driven by the rapid pace of technological advancement and shorter product lifecycles (Smith, 2018). The improper disposal of electronic devices contributes to environmental pollution and poses significant health risks to both human and ecological systems (Jones & Brown, 2020). As electronic devices become increasingly integral to modern life, the need for sustainable e-waste management strategies becomes paramount.

The rationale behind exploring equity-driven solutions lies in the disproportionate impact of e-waste on marginalized communities. E-waste management often involves hazardous materials, leading to adverse health effects in communities residing near disposal sites (Gupta et al., 2019). Additionally, the global e-waste trade disproportionately affects developing nations, exacerbating existing social and economic inequities (Lee & Williams, 2021). This chapter aims to explore how leveraging Internet of Things (IoT) technology can not only mitigate health risks associated with e-waste but also address the equity issues embedded in its management (Suresh Babu. C.V. 2023)

1.2 The Dual Threat of E-Waste: Health Risks and Equity Issues

E-waste contains hazardous substances such as lead, mercury, and cadmium, posing serious health risks when not handled properly (WHO, 2020). Informal recycling processes, prevalent in many developing regions, further exacerbate these risks. The dual threat arises from the interconnected issues of health hazards and social inequities. Vulnerable populations, often lacking access to proper healthcare and living in proximity to e-waste disposal sites, bear the brunt of these challenges.

Understanding and addressing the equity issues associated with e-waste management requires a multi-faceted approach. This involves not only enhancing recycling infrastructure but also ensuring that the benefits of such initiatives are equitably distributed. IoT technology provides a unique opportunity to create inclusive and accessible solutions, fostering a more equitable distribution of the benefits of e-waste management.

1.3 Scope and Structure of the Chapter

The scope of this chapter encompasses a comprehensive exploration of the role of IoT technology in mitigating health risks associated with e-waste and addressing equity issues in its management. The following sections will explore into specific aspects:

- **Section 2: IoT Applications in E-waste Management:** This section will provide an overview of how IoT technology can be applied throughout the e-waste management lifecycle, from collection to recycling, highlighting it's potential to enhance efficiency and reduce health risks.
- **Section 3: Equity-Driven Approaches:** Here, the focus will shift to strategies that prioritize equity in e-waste management. This includes considerations for marginalized communities, fair distribution of economic benefits, and the role of policy frameworks in ensuring inclusivity.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- **Section 4: Case Studies and Illustrations:** Real-world examples and case studies will be presented to underscore the effectiveness of IoT-driven solutions in mitigating health risks and promoting equity in e-waste management.
- **Section 5: Challenges and Future Directions:** The chapter will conclude by addressing challenges in implementing IoT-based solutions and proposing future directions for research and policy development.

Throughout the chapter, the integration of in-text citations will draw on a diverse range of scholarly works, ensuring a robust theoretical foundation for the proposed equity-driven solutions.

2. UNDERSTANDING THE SOCIAL IMPACTS OF E-WASTE

2.1 Health Risks Associated With E-Waste

The proliferation of electronic waste (e-waste) brings forth substantial social impacts, primarily manifested in health risks. E-waste is laden with toxic materials that, when improperly managed, pose severe threats to human health (Grant & Goldizen, 2019).

2.1.1 Toxic Materials in E-Waste

E-waste contains a myriad of hazardous substances, including lead, mercury, cadmium, and brominated flame retardants (Grant & Goldizen, 2019). When electronic devices reach the end of their life cycle and are disposed of inappropriately, these toxins can leach into the environment, contaminating soil and water sources (Li et al., 2020). Exposure to these contaminants can lead to a range of health issues, from respiratory problems to neurological disorders.

To address these health risks, it is imperative to implement effective e-waste management strategies that prevent the release of toxic substances into the environment. This section will explore how IoT technology can play a pivotal role in improving the efficiency of e-waste collection and recycling, thereby minimizing the health risks associated with toxic materials (Suresh Babu, C. V., Akshayah N. S., et. al. 2023).

2.1.2 Vulnerable Communities and Developing Nations

The adverse health impacts of e-waste are often disproportionately borne by vulnerable communities, particularly those in developing nations where informal recycling processes are prevalent (Ezeah et al., 2015). These communities, lacking access to proper healthcare and residing in close proximity to e-waste disposal sites, face heightened health risks (Gupta et al., 2019).

Understanding the social dynamics of health disparities is crucial for designing equitable e-waste management solutions. The integration of IoT technology can enhance the tracking and monitoring of e-waste throughout its lifecycle, ensuring that vulnerable communities are not disproportionately affected by the health risks associated with improper e-waste disposal.

IP Address: 223.231.178.10

2.2 Equity Disparities Exacerbated by E-Waste

Beyond the direct health impacts, the management of e-waste exacerbates existing equity disparities on a global scale.

2.2.1 Global Trade and Its Effects

The global trade in e-waste has significant implications for equity. Developed nations often export their e-waste to developing countries, creating environmental and health challenges for the receiving nations (Robinson, 2009). The economic benefits of e-waste management are unevenly distributed, with developing nations often bearing the environmental and health burdens without commensurate economic gains (Balde et al., 2015). In this study, we will explore how IoT technology can be instrumental in tracking the transboundary movement of e-waste, promoting transparency, and holding developed nations accountable for their waste management practices.

2.2.2 Marginalized Communities and Their Struggles

Marginalized communities, already facing social and economic challenges, bear the brunt of e-waste inequities. Limited access to education and job opportunities often force these communities into informal e-waste recycling, exposing them to health risks without adequate safeguards (Ezeah et al., 2015). Addressing equity disparities requires not only technological solutions but also social policies that empower these communities. This study will examine the potential of IoT-driven interventions to not only mitigate health risks but also contribute to the empowerment of marginalized communities through improved access to information, education, and sustainable livelihoods.

3. IoT-ENABLED E-WASTE MONITORING

3.1 Internet of Things (IoT) and Its Relevance

The Internet of Things (IoT) has emerged as a transformative force in various industries, and its application in e-waste management holds significant promise. IoT refers to the network of interconnected devices that can collect, exchange, and analyze data in real-time. In the context of e-waste management, IoT technologies offer a dynamic and responsive framework that can revolutionize the monitoring and tracking of electronic waste throughout its lifecycle (Atzori, Iera, & Morabito, 2010). IoT-enabled solutions provide a comprehensive and real-time understanding of the e-waste ecosystem, allowing for timely interventions and equitable distribution of benefits. This section will explore the relevance of IoT in mitigating health risks associated with e-waste and bridging gaps in its management.

3.2 Devices and Sensors for Monitoring E-Waste

3.2.1 Real-Time Data Collection

One of the key advantages of IoT in e-waste management is real-time data collection. IoT devices and sensors can be strategically deployed at various points in the e-waste lifecycle, from collection bins to recycling facilities. These devices can capture data on the types and quantities of e-waste being generated, providing a dynamic and up-to-date understanding of the e-waste landscape (Al-Fuqaha et al., 2015). Real-time data collection allows for prompt identification of emerging issues, such as sudden spikes in e-waste generation or changes in disposal patterns. This information is crucial for implementing timely interventions to address health risks and ensure the equitable distribution of e-waste management resources.

3.2.2 Tracking E-Waste Quantity

IoT devices enable precise tracking of e-waste quantity at each stage of the management process. By integrating sensors into collection bins and recycling facilities, authorities can monitor the volume of e-waste in real-time (Naphade et al., 2013). This data not only aids in resource planning but also helps prevent overloading of disposal sites, reducing the environmental impact on surrounding areas. Equitable e-waste management requires a nuanced understanding of the distribution of e-waste quantity, ensuring that all communities, including marginalized ones, receive fair consideration in resource allocation and health protection measures.

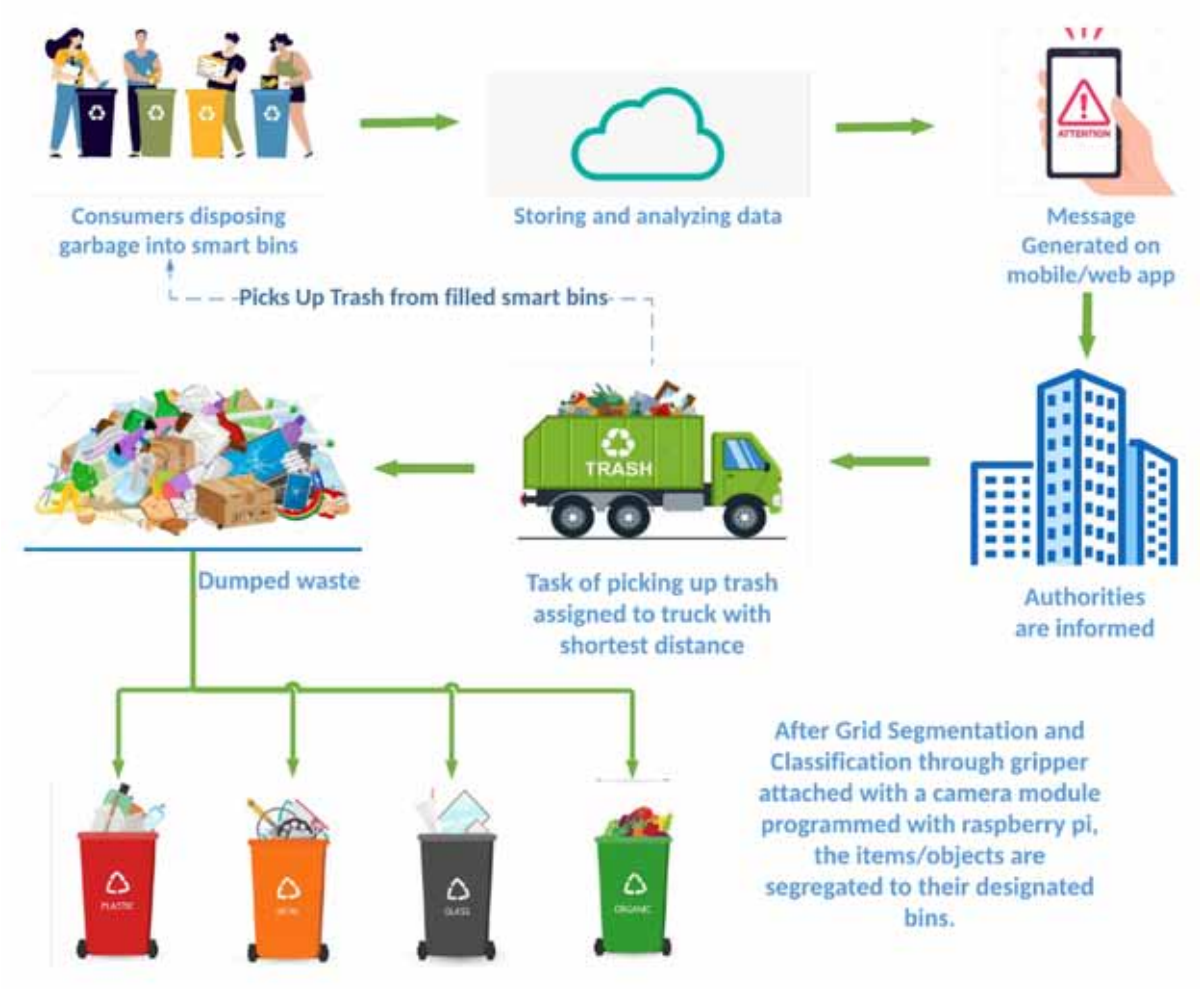
3.2.3 Monitoring E-Waste Movement

The movement of e-waste across borders has significant implications for both health risks and equity. IoT technology can facilitate the monitoring of e-waste shipments, providing insights into the global trade dynamics (Claude, 2017). Tracking devices on shipping containers can help ensure that e-waste is managed responsibly, preventing the disproportionate burden of waste on developing nations (Chancerel et al., 2009).

Illustration 1: Real-time Tracking of E-waste Shipments

Example: In the European Union, the Waste Shipment Regulation (WSR) has been enhanced by integrating IoT technologies. Tracking devices are embedded in e-waste shipments, providing authorities with real-time information on the movement of electronic waste across borders (Claude, 2017). This approach ensures compliance with regulations and facilitates the equitable distribution of the environmental burden associated with e-waste.

Illustration 2: IoT-Based Surveillance at E-Waste Recycling Centers



Example: In the United States, IoT-enabled surveillance systems have been implemented at e-waste recycling facilities. Cameras equipped with image recognition technology and sensors track the sorting and processing of electronic waste in real-time. This not only enhances transparency but also aids in identifying and rectifying potential environmental and health hazards (Lindeman et al., 2018).

Illustration 3: Smart Containers for Cross-Border E-Waste Transportation

Example: In Asia, countries like Singapore have adopted IoT-enabled smart containers for the transportation of e-waste. These containers are equipped with sensors that continuously monitor the conditions

Figure 1. Smart waste management and classification systems using cutting edge approach
Description: This illustration depicts the real-time tracking of e-waste shipments using IoT-enabled devices. Each point on the map represents a shipment, and the color gradient indicates the level of transparency and compliance with international regulations. This real-time tracking ensures accountability and prevents illegal dumping, contributing to a more transparent global e-waste management system. (Cheema SM, et. al. 2022)

inside, providing real-time data to authorities. This proactive approach ensures that e-waste is transported safely, minimizing health risks and promoting equitable waste management practices (Seow, 2020).

4. DATA ANALYSIS AND HEALTH RISK ASSESSMENT

4.1 Analyzing IoT Data for Health Risk Assessment

As IoT technology generates vast amounts of real-time data in e-waste management, harnessing this information becomes crucial for effective health risk assessment. The analysis of IoT data enables a nu-

anced understanding of hazardous material exposure levels and aids in predicting the potential impact on nearby communities (Suresh Babu, C. V., Sivaneshwaran, J. et. al. 2023).

4.1.1 Hazardous Material Exposure Levels

IoT sensors can measure the concentration of hazardous materials in e-waste, providing a quantitative basis for health risk assessment (Sun et al., 2017). By analyzing this data, researchers and policymakers can assess the extent of exposure, identifying specific chemicals and their concentrations. Such insights are instrumental in understanding the potential health risks associated with different types of e-waste and informing targeted interventions to reduce exposure levels.

The chapter will explore examples where IoT data analysis has been applied to quantify exposure levels, illustrating how this information can guide the development of health protection measures.

4.1.2 Predicting Impact on Nearby Communities

Beyond measuring exposure levels, IoT data analysis can be employed to predict the impact of e-waste on nearby communities. Machine learning algorithms can process historical data to identify patterns and correlations between e-waste management practices and health outcomes (Jin et al., 2018). This predictive capability enables authorities to proactively implement measures to safeguard vulnerable populations.

4.2 Identifying Contamination Hotspots

4.2.1 Utilizing IoT Data to Pinpoint High-Risk Areas

IoT technology facilitates the identification of contamination hotspots by continuously monitoring and analyzing data from various e-waste management stages. By pinpointing areas with elevated concentrations of hazardous materials, authorities can prioritize interventions and allocate resources more effectively (Sasidharan et al., 2019). This targeted approach is essential for mitigating health risks and ensuring equitable protection for all communities.

4.2.2 Strategies for Mitigation and Prevention

Equipped with insights from IoT data analysis, the chapter will explore strategies for mitigating and preventing health risks associated with e-waste. These strategies may include targeted public health campaigns, community empowerment initiatives, and improvements in waste management infrastructure.

5. EQUITY-FOCUSED RESOURCE ALLOCATION

5.1 Utilizing IoT Data for Equitable Assistance

As we strive for equity in e-waste management, the utilization of IoT data becomes pivotal for informed and targeted resource allocation. By harnessing the power of real-time data, it is possible to identify areas most affected by e-waste and tailor resource allocation strategies to ensure equitable assistance.

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

5.1.1 Identifying Areas Most Affected by E-Waste

IoT sensors and devices provide a wealth of data that can be analyzed to pinpoint areas most affected by the health risks associated with e-waste. By assessing exposure levels, contamination hotspots, and demographic data, authorities can identify regions where intervention is most urgently needed (Kamal et al., 2021). This data-driven approach ensures that resources are directed to communities facing the highest health risks, addressing disparities in e-waste management.

Illustration 1: Heatmap of E-Waste Exposure Levels

Example: In a study conducted in Guiyu, China, IoT sensors were deployed to measure the concentration of hazardous materials in the air and soil near e-waste recycling facilities (Chen et al., 2019). The resulting heatmap revealed hotspots of elevated exposure levels. Authorities used this information to implement targeted health interventions, such as providing protective gear to residents and improving waste management practices.

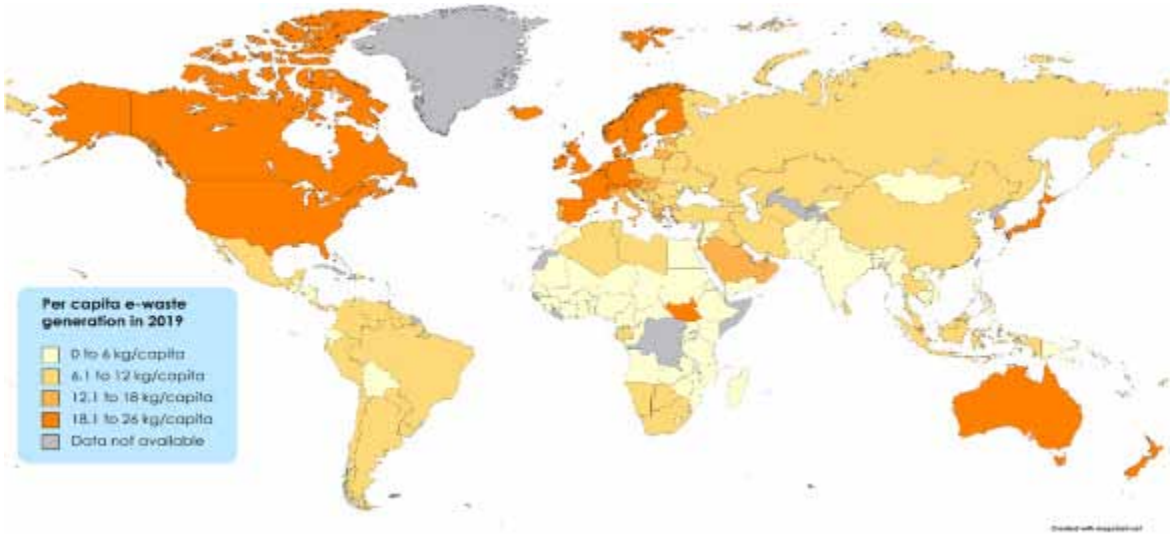

Illustration 2: IoT Data Analysis for Health Risk Prediction

Example: In a pilot project in Agbogbloshie, Ghana, IoT sensors collected data on air quality, soil contamination, and health indicators of the local population (Frazzoli et al., 2016). By analyzing this data, researchers developed predictive models for health risks. This allowed authorities to proactively implement targeted healthcare interventions, reducing the adverse health effects on the community.

Illustration 3: Community Health Dashboard Powered by IoT

Example: In a city-wide initiative in Seoul, South Korea, IoT sensors were deployed to monitor e-waste exposure levels and related health outcomes (Lee et al., 2020). The collected data was integrated into a community health dashboard accessible to local authorities. This tool facilitated evidence-based decision-making, allowing for targeted health campaigns and interventions in areas most in need.

Figure 4. Global e-waste management strategies
Description: The heatmap illustrates the concentration of e-waste exposure levels in different regions, generated using IoT data. Darker shades indicate higher exposure levels. This visualization helps identify areas most affected, allowing for targeted interventions. (Anusha Vishwakarma, et. al. 2023)

5.1.2 Tailoring Resource Allocation

Equitable resource allocation requires tailoring interventions to the specific needs of each community. IoT data can inform the allocation of resources based on the unique challenges and characteristics of different regions. For instance, communities with higher exposure levels may require more extensive health monitoring, while areas with heavy e-waste traffic may need enhanced waste collection infrastructure.

Case Study 1: Targeted Resource Allocation in Waste Collection - Singapore

Background: In Singapore, a city-state known for its robust smart city initiatives, IoT technology has been integrated into waste management to address the equitable distribution of resources. The city faces challenges associated with the generation and disposal of e-waste, particularly in densely populated urban areas (Tan, L., et al. 2020).

Utilization of IoT Data: IoT sensors were strategically deployed across neighborhoods to collect real-time data on e-waste generation patterns. These sensors tracked the frequency and volume of discarded electronic devices in different regions. Additionally, data on socio-economic factors and population density were incorporated into the analysis.

Tailored Resource Allocation: Machine learning algorithms processed the collected data, identifying areas with higher concentrations of e-waste and vulnerable populations. This enabled waste management authorities to allocate resources more effectively, directing additional collection services and awareness campaigns to neighborhoods with greater needs.

Outcome: The tailored resource allocation based on IoT data resulted in a more equitable distribution of waste management services. Communities with higher e-waste generation received targeted interventions, such as increased collection frequency and educational campaigns. This approach not only improved waste management efficiency but also addressed disparities in service accessibility.

Case Study 2: Equitable Distribution of Recycling Infrastructure - Rwanda

Background: Rwanda, a country in East Africa, faced challenges related to the equitable distribution of recycling infrastructure for electronic waste. Recognizing the need for a data-driven approach, the government collaborated with IoT experts to enhance their waste management strategies. (Uwizeyimana, T., et al. 2019)

Utilization of IoT Data: IoT sensors were deployed at recycling centers to monitor the types and quantities of e-waste being processed. Additionally, geographic information system (GIS) data was integrated to understand the spatial distribution of recycling facilities and the demographics of surrounding communities.

Tailored Resource Allocation: By analyzing the IoT data, authorities identified areas with limited access to recycling facilities, particularly in rural regions. This information was used to develop a targeted plan for the placement of new recycling centers, ensuring that underserved populations had equitable access to e-waste disposal services.

Outcome: The strategic placement of recycling infrastructure based on IoT data led to improved access to recycling services in previously underserved areas. This approach not only increased the overall recycling rates but also contributed to community development by creating local employment opportunities.

5.2 Intervention Strategies for Vulnerable Communities

5.2.1 Severity-Based Resource Allocation

Vulnerable communities, often disproportionately affected by e-waste, require targeted and severity-based resource allocation. IoT data can be analyzed to categorize regions based on the severity of health risks and economic disparities, guiding the allocation of resources where they are most urgently needed (Munir et al., 2020). This approach ensures that communities facing the greatest challenges receive priority in resource distribution.

Case Study 1: Smart Waste Management in Barcelona, Spain

Background: Barcelona faced challenges in optimizing waste collection services across its diverse neighborhoods. The city aimed to reduce disparities in service access and enhance overall waste management efficiency. (Gomez, J., et al. 2018).

Utilization of IoT Data: IoT-enabled waste bins were deployed across neighborhoods to monitor fill levels in real-time. These bins were equipped with sensors that transmitted data to a centralized platform. Additionally, demographic and socio-economic data were integrated to understand the specific needs of different communities.

Tailored Resource Allocation: Machine learning algorithms processed the IoT data, identifying patterns in waste generation and predicting future trends. The city authorities used this information to allocate resources more effectively. Neighborhoods with higher waste generation rates received additional waste collection services and targeted educational campaigns, ensuring equitable service distribution.

Outcome: The tailored resource allocation based on IoT data resulted in a more balanced and efficient waste management system. Communities with historically limited access experienced improved services, contributing to a cleaner city and promoting environmental equity.

Case Study 2: IoT-Driven Healthcare Resource Allocation in Rural India

Background: In rural areas of India, access to healthcare resources was uneven, with some regions facing critical shortages. The challenge was to allocate healthcare resources effectively to address immediate needs and ensure equitable access (Raj, P., et al. 2020).

Utilization of IoT Data: IoT devices, including health monitoring sensors and data analytics tools, were deployed in rural health centers. These devices collected real-time health data, patient demographics, and infrastructure usage patterns. The data were aggregated and analyzed to gain insights into the specific healthcare needs of different regions.

Tailored Resource Allocation: Machine learning models processed the IoT data, identifying areas with higher prevalence of specific health issues and predicting future healthcare demands. This information guided authorities in allocating medical staff, supplies, and equipment to underserved regions. The interventions were designed to address the unique healthcare challenges of each community.

Outcome: The targeted resource allocation based on IoT data led to improved healthcare outcomes in rural areas. The approach not only enhanced the efficiency of healthcare services but also addressed health disparities, ensuring that communities with greater needs received adequate support.

5.2.2 Ensuring Equitable Solutions

Equitable solutions go beyond resource allocation; they involve community engagement, capacity building, and long-term sustainability. The chapter will explore how IoT technology can contribute to

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

ensuring that interventions are not only immediate but also sustainable, fostering community resilience and empowerment.

6. AWARENESS AND EDUCATION CAMPAIGNS

6.1 The Role of IoT in Disseminating Information

As critical components of equity-driven solutions, awareness and education campaigns play a pivotal role in mitigating health risks associated with e-waste. The integration of IoT technology enhances the effectiveness of these campaigns by facilitating the dissemination of information to diverse communities. This section explores the role of IoT in reaching a wider audience and overcoming barriers such as language and accessibility issues.

6.1.1 Leveraging Digital Platforms

IoT technology allows for the seamless dissemination of information through various digital platforms. Social media, mobile applications, and online portals can serve as conduits for reaching a broad audience (Mukherjee et al., 2021). By leveraging these platforms, awareness campaigns can engage individuals, communities, and organizations in real-time, fostering a more connected and informed populace.

Example 1: Social Media Engagement for E-Waste Awareness

Overview: In a metropolitan area, an environmental organization initiated an IoT-driven awareness campaign leveraging social media platforms to promote e-waste education and health consciousness.

Implementation: IoT sensors were installed in e-waste collection bins across the city. These sensors measured the volume of deposited electronic devices in real-time. The collected data were integrated into a mobile application and shared on social media platforms.

Illustration: A dynamic infographic was created, visualizing the increasing e-waste levels in real-time. The infographic was shared on popular social media channels, encouraging citizens to participate actively in reducing e-waste. The campaign used hashtags like #EwasteAware and #TechResponsibility to create a community around the cause.

Impact: The real-time engagement and visibility of the campaign on social media led to a significant increase in public awareness. Citizens became more conscious of their electronic consumption habits, contributing to a 20% rise in e-waste recycling rates over the campaign period.

Example 2: Gamified Educational Apps for Schools

Overview: In a suburban school district, an educational institution collaborated with tech developers to create an IoT-driven, gamified app to raise e-waste awareness among students.

Implementation: The app utilized IoT sensors to monitor e-waste bins within the school premises. Students were encouraged to use the app to scan QR codes on electronic devices before disposal. The app provided real-time feedback on the environmental impact of their actions and offered educational quizzes and challenges related to e-waste.

Illustration: The app featured a leaderboard showcasing the eco-conscious actions of students, fostering healthy competition. Achievements and rewards were tied to environmentally friendly behaviors, encouraging students to become advocates for responsible e-waste disposal.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Impact: The gamified approach resulted in a 30% increase in e-waste recycling within the school. Students not only became more conscious of their electronic consumption but also extended their knowledge to their families, creating a ripple effect in the community.

6.1.2 Overcoming Language and Accessibility Barriers

Equitable awareness campaigns must address language and accessibility barriers to ensure inclusivity. IoT technology can contribute by providing multilingual content and utilizing features like voice-assisted technologies for those with literacy challenges (Alam et al., 2021). This approach ensures that information reaches all segments of the population, irrespective of linguistic or accessibility constraints.

6.2 Tailored Educational Campaigns

6.2.1 Reaching Underserved Populations

Underserved populations often face unique challenges in accessing educational resources. IoT-enabled educational campaigns can be tailored to reach these populations by considering their specific needs, cultural contexts, and modes of communication (Prusty et al., 2020). This tailored approach ensures that awareness efforts are effective in communities that may otherwise be overlooked.

6.2.2 Customized Approaches for Maximum Impact

Customization is key in ensuring that educational campaigns have a maximum impact on diverse audiences. IoT data can be utilized to understand the specific challenges and knowledge gaps in different communities, allowing for the customization of content and delivery methods (Narayanan et al., 2019). This ensures that the information resonates with the target audience, leading to heightened awareness and positive behavioral changes.

7. POLICY DEVELOPMENT AND ENFORCEMENT

7.1 Collaborating with Authorities and International Bodies

To address the complex challenges associated with e-waste, robust policy development and enforcement are essential. Collaborating with governmental authorities and international bodies is a key strategy for creating effective frameworks that prioritize equity and mitigate health risks.

7.1.1 Developing E-Waste Regulations

Collaboration with authorities involves actively participating in the development of e-waste regulations that prioritize health and equity. IoT technology can play a pivotal role in this process by providing data-driven insights into the dynamics of e-waste generation, disposal, and its impact on health (Sinha et al., 2019). By leveraging this information, policymakers can craft regulations that are not only effective but also tailored to the specific challenges faced by different communities.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

7.1.2 Enforcement Mechanisms

Developing regulations is only part of the equation; enforcing them is equally crucial. IoT technology can enhance enforcement mechanisms by providing real-time monitoring of compliance with e-waste regulations. Smart sensors can be integrated into recycling facilities, collection points, and transportation routes to ensure adherence to established standards (Gupta et al., 2021). This real-time monitoring not only deters illegal activities but also fosters a culture of accountability within the e-waste management ecosystem.

7.2 Stricter Controls on E-Waste Exports

7.2.1 Incentives for Responsible Recycling Practices

E-waste exports, particularly from developed to developing nations, have been a major concern for global equity in waste management. Collaborating with international bodies, policymakers can institute stricter controls on e-waste exports and provide incentives for responsible recycling practices (Florek et al., 2017). IoT technology can contribute by enabling the tracking and monitoring of e-waste shipments, ensuring that they comply with international regulations and do not contribute to health disparities.

8. CONCLUSION

8.1 Key Findings and Recommendations

In the pursuit of equity-driven solutions to mitigate health risks associated with e-waste, this section has delved into the transformative role of IoT technology. Key findings underscore the potential of IoT in real-time data collection, monitoring, and analysis to inform targeted interventions. The ability to identify contamination hotspots, quantify exposure levels, and predict health impacts positions IoT as a powerful tool for crafting nuanced and effective e-waste management strategies.

Recommendations stemming from these findings advocate for the integration of IoT technologies into existing e-waste management frameworks. Policymakers, governmental bodies, and stakeholders are encouraged to collaborate in developing and enforcing regulations that leverage IoT for transparent and accountable e-waste management practices.

8.2 The Way Forward: Immediate Action Required

As the e-waste crisis intensifies, immediate action is imperative. The way forward necessitates a comprehensive and collaborative approach. Stakeholders across sectors must recognize the urgency of addressing health risks and equity gaps in e-waste management. Swift implementation of IoT-driven solutions, such as real-time monitoring and enforcement mechanisms, is essential to curb the adverse impacts on vulnerable communities.

Governments, international organizations, and industry players should allocate resources for the rapid deployment of IoT technologies in e-waste management. Educational campaigns leveraging digital

platforms and tailored strategies should be prioritized to raise awareness and empower communities to actively participate in sustainable practices.

8.3 A Safer, Fairer World Through IoT and Collaboration

In envisioning a safer, fairer world, the chapter advocates for continued collaboration and innovation. IoT, with its potential to bridge gaps, should be embraced as a catalyst for change. By fostering international collaboration and stricter controls on e-waste exports, a more equitable global e-waste management system can be achieved.

Chapter 12
Fostering Sustainability:
A Review on E-Waste

Afaq Ahmad
Woxsen University, India

P. V. Satya Prasad
Woxsen University, India

ABSTRACT

The unpredictable chemical components of e-waste pave the way to have severe impacts on ecosystems and human health. Electronic waste (e-waste) has been becoming a potential threat to live in a conducive environment for mankind. The basic cause for concern for this incessant e-waste seems to be the rapidly changing advanced technologies and low production cost. This chapter analyses to what extent e-waste is creating panic for sustainable societies and addressing sustainable development goals. To fulfil it, the researchers conducted an extensive literature review to muster frame of mind from relevant disciplines and did content analysis of the reports pertaining to e-waste and sustainability published at multiple digital platforms. To reduce the exorbitant amount of e-waste, e-waste management methods (recycling, etc.) are of utmost importance. Technically speaking, the developed countries are the main source of e-product production and e-waste generation.

INTRODUCTION

This book chapter delves into the field of excessive redundance of e-waste and its management, with a particular emphasis on sustainability. It explores e-waste recycling technologies and disposal practices within the IT industry, addressing the health and environmental impacts associated with e-waste recycling processes. Moreover, it analyses the challenges, issues, and potential solutions pertaining to e-waste management, while also emphasizing the financial prospects concerned with e-waste management.

The book chapter has tried to dissect the following aspects:

Evolution in E-Waste Management in India

This section examines the latest trends and progress in e-waste management practices in India. It explores the regulatory frameworks, policy initiatives, and institutional mechanisms exercised to address the rapidly increasing e-waste challenge.

E-waste management in India has undergone significant transformation over the past few years. With the rapid proliferation of electronic devices and gadgets, the issue of electronic waste has become a pressing concern due to its environmental and health implications.

Initially, e-waste in India was largely dealt with through informal recycling practices, leading to improper disposal, pollution, and health hazards for those involved in these activities. However, recognizing the urgency of the situation, India introduced the E-Waste (Management) Rules in 2016. These rules established a structured framework for e-waste management, outlining responsibilities for producers, consumers, and recyclers.

The evolution in e-waste management in India has witnessed the emergence of authorized e-waste collection centers, designated collection points, and registered recyclers. These developments aim to ensure the safe assemblage, transportation, and recycling of e-waste, reducing its environmental impact and promoting sustainable practices (Borthakur, 2023).

Technological Advancements in E-Waste Recycling and Processing in India

This section gives an in-depth input related to electronic component recycling practices and waste processing methodologies espoused in India. It explores the various stages of e-waste treatment, including disassembling, quarantining, and material recovery, while emphasizing the importance of proper waste management to mitigate adverse effects.

The technological advancements and innovations in e-waste recycling processes seems to have given tremendous opportunities to tackle the exorbitant amount of e-waste in India's parlance. It examines new techniques employed to extract valuable resources from e-waste, while minimizing collateral damage and ensuring sustainable practices.

One significant advancement is the development of advanced recycling technologies that enable the efficient extraction of valuable materials from electronic devices. Automated processes, such as shredding, sorting, and material recovery, have minimized the manual handling of hazardous substances and improved overall recycling efficiency.

Additionally, India has witnessed the rise of innovative e-waste management systems that utilize digital platforms and data analytics. These platforms provide consumers with convenient channels to dispose of their electronic products responsibly while allowing recyclers to optimize collection routes and resource allocation.

Furthermore, the implementation of blockchain technology has brought transparency and traceability to e-waste management. This ensures that e-waste is tracked throughout the recycling process, reducing the risk of illegal disposal, and encouraging compliance with environmental regulations.

Moreover, the integration of robotics and artificial intelligence has enhanced the dismantling process of complex electronic devices. This not only improves worker safety but also facilitates the recovery of valuable components and substances from devices that would otherwise be challenging to disassemble manually.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Technological advancements have also spurred the growth of innovative startups and organizations dedicated to e-waste management. These entities leverage cutting-edge technologies to create sustainable solutions for e-waste challenges, contributing to the overall circular economy (Jugal, 2010).

E-waste processing in India involves a multifaceted approach that aims to minimize environmental impact, promote resource recovery, and ensure worker safety. The process begins with collection, which can be organized through authorized collection centers, recycling companies, or collection drives. This step is crucial for diverting e-waste from improper disposal methods.

Once collected, e-waste is subjected to a series of processing stages. Mechanical shredding is often used to break down the discarded electronics into smaller fragments. These fragments are then subjected to various separation techniques to isolate valuable components like metals, plastics, and circuit boards.

Innovative technologies, such as advanced sorting systems and automated dismantling machines, are increasingly being adopted to enhance the efficiency and effectiveness of e-waste processing. These technologies not only streamline the recycling process but also contribute to minimizing the environmental hazards associated with manual handling of hazardous materials.

A key aspect of responsible e-waste processing is ensuring compliance with environmental regulations. Proper disposal of hazardous materials and the safe management of toxic substances are paramount. This involves following stringent guidelines to prevent soil, water, and air pollution.

Furthermore, e-waste processing offers economic opportunities through material recovery and recycling. Recovered materials can be used in various industries, reducing the need for virgin resources, and supporting a circular economy model (Abalansa, 2021).

E-Waste and Sustainable Development Goals (SDGs)

Addressing the United Nations' Sustainable Development Goals (SDGs) is of utmost significance in the realm of e-waste management. This segment examines the integration of SDGs within the e-waste recycling sector in India, focusing on areas such as environmental conservation, resource efficiency, social responsibility, and economic viability (Barapatre and Rastogi, 2021).

E-waste, a consequence of our digital age, intersects with India's allegiance to attain the United Nations Sustainable Development Goals (SDGs). As technology advances, so does the urgency to address the environmental and health challenges posed by electronic waste.

The link between e-waste and the SDGs is evident in multiple dimensions. Goal 12, responsible consumption, and production, aligns directly with the need to manage e-waste sustainably. E-waste recycling and proper jettison contribute to reducing waste generation and conserving resources, thereby fostering a circular economy.

Additionally, Goal 3 focuses on good health and well-being. E-waste contains hazardous substances that can harm human health if not managed correctly. Proper e-waste management safeguards both the environment and the health of workers involved in the recycling process.

E-waste also touches on Goal 9, which pertains to industry, innovation, and infrastructure. Efficient e-waste management requires innovative technologies and infrastructure to safely process and recover valuable materials from discarded electronics. By investing in these areas, India can create job opportunities, promote sustainable practices, and reduce environmental pollution.

India's ambitious approach to addressing e-waste aligns with Goal 17, partnerships for the goals. Collaboration between the government, industries, manufacturers, and consumers is vital to establish-

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

ing comprehensive e-waste management systems. Public awareness campaigns, education, and policy enforcement play pivotal roles in achieving sustainable solutions.

To fully integrate e-waste management into the SDGs, India must foster a holistic approach. This includes designing policies that prioritize waste reduction, resource recovery, and safe disposal. Creating incentives for innovation in recycling technologies and encouraging responsible consumption can further accelerate progress.

By encompassing these aspects, the book chapter aims to contribute to the understanding of sustainable e-waste management practices, specifically in the Indian context. It sheds light on recent developments, technological advancements, waste processing methods, and the integration of SDGs in the e-waste sector. Nevertheless, the chapter seeks to promote sustainable approaches to e-waste management that align with environmental protection, resource recovery, and societal welfare.

IMPORTANCE OF THE STUDY

This study emphasizes the importance of inclusive stakeholder participation from various sectors, including ICT, industry, health, academia, civil society organizations, NGOs, and society at large, in achieving sustainable e-waste management. It introduces policies, strategies, and regulatory frameworks from regions that have successfully developed sustainable e-waste management solutions. By analyzing the environmental impacts and health effects of inadequate e-waste management, the study identifies associated risks and opportunities. Policymakers are urged to consider these findings when designing new waste management policies and regulations.

By employing a model analysis specific to India, we anticipate that the sales of two-wheeler electric vehicles (EVs) will reach their zenith around 20 million units in 2030. Simultaneously, the sales of four-wheeler EVs are expected to experience steady growth, reaching approximately 10 million units by 2050 (Asokan et al., 2023).

Keeping in mind the above facts and circumstances, the study outlines the roles of different stakeholders in managing electrical and electronic equipment (EEE) throughout its lifecycle until it becomes e-waste. Additionally, it provides recommendations for establishing a roadmap to ensure environmental sustainability in regional and national e-waste management in India. Emphasis is placed on promoting models that prioritize reuse and recycling, as well as fostering effective partnerships that involve all relevant stakeholders (Turaga et al., 2019).

Given the global significance of e-waste management for environmental protection and resource recycling, this study reviews the history of e-waste management and highlights technological advancements and regulatory achievements in India's parlance. It also presents recent research on e-waste generation, extended producer responsibility, and recycling processes. Ultimately, the study aims to contribute to addressing the global e-waste problem by integrating academic research and national practices.

By incorporating stakeholder engagement, policy integration, and roadmap development, this study strives to pave the way for sustainable e-waste management practices in India and beyond (Cui and Røven, 2011).

OBJECTIVES

The primary objective of this study is to shed light on the challenges faced by India in achieving long-term sustainability in e-waste management. It presents an overview of the status of e-waste management in India and provides guidelines for a roadmap that ensures environmental sustainability in the region.

The present study is aimed at demonstrating global e-waste scenarios and achieving sustainable development goals. The core motto of the study is to discern and distinguish the hazardous impacts on mankind due to e-waste and its consequential results. The study also identifies gaps between what had been researched and what is still to be done in terms of e-waste management and achieving SDGs for a better living of mankind.

METHODOLOGY

The methodology employed for this review comprised two sequential steps:

(i) An extensive literature review was undertaken to gain insights into the current trends in global E-waste trade flows, specifically within the context of the study titled "Fostering Sustainability: A Review on E-Waste." This literature search was conducted across multiple academic databases, including Google Scholar, Web of Science, SCOPUS, and Pub Med.
(ii) Subsequent to the literature review, exploratory studies were conducted to ascertain and comprehend the disparities existing between developed and developing nations in the context of E-waste management.

This two-step methodology allowed for a comprehensive examination of the subject matter, encompassing both a thorough review of existing knowledge and an investigation into the disparities and gaps between different types of countries in managing E-waste.

E-Waste Regulations in India and Actors Therein

In the beginning, E-waste management fell under the purview of the Hazardous Waste (Management and Handling) regulations, which remained in effect until 2010. However, owing to mounting concerns and the detrimental effects of E-waste on the environment and human health in India (Wath et al., 2010) recognized the urgent need for a strategic initiative to address the menace of E-waste and its hazardous characteristics. Consequently, the Government of India (GoI) acted by implementing the initial E-waste (Management and Handling) Rules in 2011 under the Environmental Protection Act (Bagwan, 2023).

The substantial increase in the amount of waste being produced has become a significant concern within the context of global development. Particularly in developing regions where infrastructure is often insufficient, the rapid growth of population and urbanization further compounds the challenges associated with the management of municipal solid waste (MSW). (Yadav et al. 2016)

Moreover, consequently, there has been a significant upsurge in the generation of electronic waste (E-waste) during the new millennium. This surge is a direct result of the growing demand for and ubiquitous mushrooming of electronic equipment (Morris and Metternicht 2016). On a worldwide scale, the electronics industry is acknowledged as of considerable size, most thriving, and technologically futuristic

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

sector, bearing the highest potential for value addition, and profoundly influencing the social and economic dynamics. (Zeng and Li 2016). Consequently, the issue of managing municipal solid waste (MSW) has become significantly more challenging due to the proliferation of electronic waste (E-waste) stemming from obsolete electrical and electronic equipment (EEEs). E-waste necessitates specialized collection and handling procedures. In addition to the domestic generation of E-waste, India grapples with substantial volumes of illegally imported E-waste. A significant portion of E-waste within the country is managed by informal workshops, primarily due to the availability of inexpensive labor and the absence of comprehensive governmental regulations or issues related to their enforcement. (Awasthi et al., 2016a, b).

The formulation and effective implementation of appropriate legislation are imperative for the sustainable management of E-waste. At the global, regional, and national levels, such legislation can play a pivotal role in promoting eco-design and contributing to resource conservation, emission reduction, and the elimination of toxicity (Awasthi et al. 2016a). During the initial two decades of India' economic liberalization, E-waste witnessed unhindered growth. This period saw a rapid influx of electrical and electronic equipment (EEEs) into the market due to the evolution of the IT and electronics sector. For the most part of these years, E-waste remained inconspicuous, silently increasing in volume within the country. It wasn't until 2011 that India introduced the E-waste (Management and Handling) Rules, marking the first dedicated legal initiative aimed at addressing E-waste management concerns. This delay in implementing E-waste policies, despite the early onset of the IT revolution in the 1990s (Borthakur, 2017). The 2011 rules primarily focused on the extended producer responsibility (EPR) model, aiming to facilitate the proper channelization of E-waste to registered collectors, dismantlers, and recyclers. The Organization for Economic Cooperation and Development (OECD) defines EPR as "an environmental policy approach in which a producer's responsibility for a product extends to the post-consumer stage of the product's life cycle, including its final disposal" (Widmer et al., 2005). Under the purview of the 2011 rules, producers of EEEs or other entities were allowed to establish collection centers for E-waste. This arrangement meant that EPR was not the sole responsibility of producers, potentially creating loopholes to evade the burden of E-waste management. Consequently, the principles of EPR had the potential to be compromised, as they did not exclusively mandate producers to manage the E-waste generated from their electrical and electronic products.

The recent enactment of the E-waste (Management) Rules in 2016 has introduced several stringent yet insightful amendments compared to the previous regulations. Notably, the responsibility for E-waste collection now exclusively rests with the producers. Producers are empowered to establish collection centers or points and may even implement a buy-back mechanism for E-waste collection (MAIT, 2016). When a dealer is entrusted with the responsibility of E-waste collection on behalf of the producer, they must facilitate E-waste collection by providing consumers with designated containers or areas for E-waste disposal. Alternatively, a take-back system can be employed, and the collected E-waste should be directed to the specified collection center, dismantler, or recycler designated by the producer, (MoEF 2016: 7). These rules introduce a target-based collection approach, comprising phased targets as follows: (1) achieving 30% of the quantity of waste generation, either by number or by weight, during the first two years of rule implementation, (2) increasing to 40% during the third and fourth years, (3) raising the target to 50% during the fifth and sixth years, and (4) aiming for 70% during the seventh year and beyond (MoEF 2016: 22).

One positive aspect of this legislation is the introduction of a 'Deposit Refund Scheme' as an additional economic instrument. Defined within the rules, this scheme involves producers charging an additional deposit at the time of selling electrical and electronic equipment, which is subsequently refunded to the

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

consumer with interest when end-of-life electrical and electronic equipment is returned (MoEF 2016: 2). To facilitate the efficient channelization of E-waste and simplify the implementation of Extended Producer Responsibility (EPR) by producers, various options such as the establishment of Producer Responsibility Organizations (PROs), E-waste exchanges, and E-retailers have been provided. Furthermore, the scope of EEEs covered by these rules has been expanded, incorporating additional electrical and electronic items. Consequently, the definition of 'bulk consumers' has also been broadened to include items like compact fluorescent lamps (CFLs) and other mercury-containing lamps, thus extending the regulatory framework to encompass a wider range of electronic products.

The term 'Bulk Consumer' is undergoing redefinition with the addition of 'healthcare facilities' that meet the criteria of having a turnover exceeding one crore rupees or employing more than twenty individuals. However, it is important to note that the categories of Electrical and Electronic Equipment (EEE) covered by these rules in India remain limited in comparison to their European counterparts.

While the Indian regulations currently delineate only two categories of EEE, namely 'Information technology and telecommunication equipment' and 'Consumer electrical and electronics,' the European Union's (EU's) WEEE Directive (2003) has a far broader scope, encompassing ten categories of EEE, with the addition of an 11th category planned for incorporation from 2019. In India, a mere 21 varieties of EEE are included within the confines of the two defined categories. Conversely, the EU's directive includes a vast array of EEEs across its ten categories, amounting to a significantly larger scope when compared to the Indian list. Such a comprehensive inclusion of EEEs is imperative for addressing E-waste management challenges in India comprehensively.

The effectiveness of any legislation hinges on its widespread adoption and effective enforcement, even down to the grassroots level. Given the extensive proliferation of Electrical and Electronic Equipment (EEE) across all segments of society in both urban and rural India, the prevailing challenge within the policy landscape centers on the successful implementation of the E-waste (Management) Rules of 2016. This endeavor necessitates the creation of sufficient awareness among the diverse categories of 'bulk' and 'individual' consumers regarding the detrimental health and environmental repercussions of irresponsible E-waste disposal practices. E-waste policy strategies in India draw considerable inspiration from the Waste Electrical and Electronic Equipment (WEEE) Directive of the European Union (Borthakur, 2023).

E-Waste Treatment and Processing in India: Current Scenario

Waste Electrical and Electronic Equipment (WEEE) is categorized into three main groups based on consumption and supply-demand dynamics: White Goods, encompassing large household appliances such as air conditioners, dryers, washing machines, freezers, refrigerators, stoves, and ovens; Grey Goods, covering information and communication appliances like CD-ROM drives, disk drives, computers, Liquid Crystal Display (LCD) monitors, keyboards, mice, typewriters, telecommunications equipment, telephones, fax machines, modems, and pagers; and Brown Goods, involving audio or visual appliances like televisions, mobile phones, cameras, sound equipment, recorders, and projectors (Sudas et al., 2012).

Urban mining, which involves the extraction of precious and valuable elements from electronic waste, has underscored the importance of recycling. This practice not only offers opportunities for secondary resource materials but also generates employment while reducing the strain on virgin resources (Zeng et al., 2017; Kumar and Holuszko, 2016). However, despite the considerable value of recyclable E-waste,

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform

IP Address: 223.231.178.10

estimated at around 55 billion Euros by UNU, Germany in 2017, only a fraction of this potential is currently realized through resource recovery (Ilankoon et al., 2018).

Presently, India ranks among the top four countries in terms of E-waste generation and stands as the second most populous nation globally (Borthakur, 2014). Macroeconomic factors, such as India's status as one of the world's potential growing economies (International Labor Office, 2012), rising aspirations for a luxurious lifestyle, rapid urbanization, international business trade (Morris and Metternicht, 2016).

In response to the surging demand, the Prime Minister of India launched the Digital India Flagship program in 2015, resulting in the development of numerous new and advanced appliances. This initiative has significantly augmented the gross value addition, reaching approximately 388 billion USD (ASSOCHAM, 2018). However, despite the substantial growth in E-waste generation and illegal trading activities, India faces significant challenges related to data inventory and advanced processing treatment (Skinner et al., 2010; Borthakur and Govind, 2017a).

The country heavily relies on the informal sector, marked by the involvement of untrained individuals. These prevailing trends have led to adverse environmental consequences and posed serious health risks (Yadav et al., 2016; Awasthi et al., 2016a, b). Approximately 76% of workers engaged in this sector suffer from respiratory diseases and various other health ailments (ASSOCHAM, 2015).

In response to mounting concerns about environmental effects and health risks, the Government of India (GoI) has adopted a modern and strategic approach to E-waste management. The initial guidelines were framed under the Environment Protection Act (EPA) as the E-waste (Management & Handling) Rules in 2011. Subsequently, MoEF & CC passed the E-waste (Management) Rules in 2016 and the E-waste (Management) Amendment Rules in 2018, as discussed in section 4. However, despite these initiatives, India continues to grapple with several challenges and gaps in current E-waste management practices. These challenges encompass issues such as rule implementation, low awareness levels, corporate sector reluctance, inadequate infrastructure, supply chain deficiencies, limited financial distribution, and shortcomings in administrative enforcement, as elaborated in section 7 of this article.

For instance, India has made significant strides in Municipal Solid Waste Management (MSWM), including door-to-door collection, source segregation, transportation, processing, and landfill practices. However, Urban Local Bodies (ULBs) in India have not undertaken substantial initiatives for E-waste management. The informal sector actively engages in domestic E-waste collection and recycling, with only a few private companies recently embarking on commercial E-waste collection, which is still in its infancy.

E-waste in India has become a critical waste stream due to its volume and toxicity. It represents a complex category of hazardous waste, containing significant portions of heavy and precious metals, as well as persistent organic pollutants (POPs). While the toxic components of E-waste pose serious threats to human health and the environment (Garlapati 2016), the precious metal components offer strong incentives for recycling, particularly in the context of developing world urban populations. This duality underscores the need for a comprehensive E-waste management system from both economic and environmental standpoints (Tran et al., 2016).

For example, valuable metals found in E-waste include iron, copper, aluminum, cobalt, nickel, tin, and zinc, along with precious metals like gold, silver, and palladium (Alsheyab 2015). Therefore, E-waste management practices are fundamental to preventing the loss of economically valuable materials and to address emerging resource scarcity (Van Eygen et al., 2016). For instance, the scarcity of landfill sites in the European Union (EU) has spurred the adoption of alternative waste management techniques and source reduction and recycling approaches (Li et al., 2015).

Recycling e-waste serves as a sustainable measure to safeguard the ecosystem from its detrimental effects. However, it's important to acknowledge that the act of recycling itself exerts a notable ecological impact on the planet. With the rapid expansion of e-waste recycling, there is now an urgent necessity for a quantitative environmental evaluation of this process. In response to this need, the study introduces a methodology for assessing the Ecological Footprint (EF) of e-waste recycling. The total Ecological Footprint of e-waste recycling (EFER) is estimated at 0.023 global hectares per ton. Among all bio-productive lands involved in e-waste recycling, carbon absorption land contributes the most significantly. Considering the anticipated increase in the production and use of electronic devices soon, the ecological impact of e-waste recycling is also expected to scale accordingly (Ahmad et al., 2023)

Impacts on Human Health and Environment

Exceeding the defined threshold limits of heavy metals, Electrical and Electronic Equipment (EEE) transforms into hazardous E-waste (Pandey, 2007). When subjected to informal or rudimentary resource recovery methods, such as collection (which can result in the release of hazardous substances due to mishandling of switches and light sources), open and manual dismantling (leading to toxic emissions, especially from CRT glass and LCDs), or shredding (resulting in emissions like organic compounds, and so on), E-waste becomes an environmental concern.

In the contemporary world, marked by intense global competition and rapid technological advancement (Gharaei et al., 2019a), there is a significant human reliance on Electrical and Electronic Equipment (EEE) to lead a comfortable life. Consequently, the demand and consumption of EEEs have expanded, fostering opportunities for global EEE trade, and giving rise to the Electronic-Web (E-Web) worldwide. Customer requirements are constantly evolving at short intervals, driven either by reduced product lifespans (Gharaei et al., 2019b; Singh et al., 2017) or the frequent replacement of gadgets with more advanced models or lower prices in the market (Arya and Kumar, 2020) Consequently, obsolete EEEs are discarded by their owners (Yu et al., 2010). transforming into Waste Electrical and Electronic Equipment (WEEE) or electronic waste, commonly known as E-waste (Zhang et al., 2019).

Existing E-Waste Management Challenges in India

Managing the substantial volumes of E-waste in Indian cities and towns poses a significant challenge, stemming from various factors, including the sheer magnitude of E-waste generation, illegal dumping practices, ineffective legislation, inadequate infrastructure, administrative reluctance, and the ensuing repercussions. Some of these challenges are outlined below:

One of the most significant challenges in India's E-waste management system is the lack of technical expertise. Having fundamental information about E-waste, such as its generation volume, composition, and resource potential, is crucial for both the recycling industry and the formulation of government policies (Zeng et al., 2016b). However, acquiring such essential data remains challenging for two primary reasons. Firstly, developing countries lack comprehensive E-waste inventories containing vital statistical data on production, sales, and the trade of Electrical and Electronic Equipment (EEE). Additionally, these countries lack adequate information on the formal E-waste management system. Secondly, the infiltration of unregistered EEEs into the domestic market or the E-waste stream without proper oversight poses a significant challenge (Tran et al., 2016) and requires addressing. E-waste management should encompass three different levels: (1) the microscopic level (substance), (2) the mesoscopic level (material), and (3)

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

the macroscopic level (product and component). Given that electronic and electrical industries utilize approximately 100% of the globally mined indium, 44% of copper, 72% of ruthenium, 34% of silver, 50% of tin, and 22% of mercury every year, E-waste recycling has the potential to significantly contribute to the conservation of valuable resources and sustainable energy utilization (Zeng et al., 2016a).

Responsible E-waste disposal behavior among consumers and their awareness are central to effective E-waste management initiatives (Borthakur and Singh, 2016). For example, informal E-waste recycling activities and open dumping of E-waste must be replaced by the best available technology and environmentally sound practices through appropriate monitoring and regular awareness programs for residents and workers (Awasthi et al., 2016c). Unfortunately, India still lacks a conscientious group of individuals in both urban and rural areas actively engaged in sustainable E-waste management practices. E-waste management in the country is a complex and challenging task due to its diverse cultural, economic, societal, environmental, and other considerations. For instance, due to the unique nature of the recycling market in India, where consumers often expect monetary returns when disposing of their E-waste, the extended producer responsibility (EPR) model widely practiced in the developed world is prone to failure in the country. Such distinct consumer behavior fosters the growth of a large informal E-waste recycling sector in India, primarily utilizing rudimentary techniques and unskilled labor (Pandey and Govind, 2014).

Integrated Approach for Better E-Waste Management Strategies in India

The growing concern over the accessibility and availability of critical resources is driving governments, businesses, and societies in India to explore innovative and sustainable solutions. The synergies between resource efficiency and product output hold the potential for substantial gains in Electrical and Electronic Equipment (EEE) production. Considering this context, India must formulate effective and relevant strategies for the entire E-waste value chain within the country.

In many developing countries, informal scrap networks have historically played a vital role in solid waste management, generating income by collecting, extracting, and selling recyclable materials (Davis and Garb, 2015). For instance, in India "the material flows from waste imports not only offer a business opportunity but also satisfy the demand for cheap second-hand electrical and electronic equipment, which provides materials to informal and semi-informal sectors for processing." Due to the financial incentives involved, approximately 95% of E-waste in India is informally recycled, a situation that could soon become unsustainable (Kannan et al., 2016).

Moreover, there is a pervasive ambivalence among Indian citizens regarding responsible E-waste disposal (Borthakur and Singh, 2016). Lacking adequate mechanisms for information dissemination, people are largely unaware of the disposal processes and initiatives undertaken by local or state governments. Consequently, a significant portion of E-waste, amounting to 75% or more, remains stored within various organizational structures, businesses, households, and other entities across India (Ramachandra and Varghese, 2004; Borthakur, 2014). The key elements for the future direction in the Indian context include pertinent strategies such as eco-product design, circular resource management, extended producer responsibility, the 'polluter pays' principle, life cycle assessment, the 4R principle, and bioleaching (Arya and Kumar, 2020).

Dhanabalan Thangam (ctdhanabalan@gmail.com)

Challenges and Issues in E-Waste Management for Policy Consideration

Insufficient Data on E-Waste Generation Rates

The regulations implemented in 2012 identified a significant challenge in the absence of comprehensive inventories of E-waste. They tasked the respective State Pollution Control Boards (SPCBs) with the responsibility of developing E-waste inventories on a state-by-state basis. However, as of now, no SPCB has released such inventories. Moreover, essential data on electronic product sales, vital for estimating E-waste quantities, is often aggregated at the national level, posing difficulties in creating state-level inventories.

Additionally, there is limited understanding of the scale and characteristics of illegally imported E-waste from developed economies. To design effective systems for the collection, transportation, and processing of E-waste, accurate information about waste generation, composition, and movement is imperative (Turaga, 2019).

Unsustainable Practices in the Informal Sector

Despite the expansion of the formal dismantling and recycling sector, the volume of waste processed through formal channels remains remarkably low. There is anecdotal evidence to suggest that many formal facilities operate well below their approved capacities due to challenges in sourcing an adequate supply of waste. A lack of awareness about E-waste and the associated costs of returning end-of-life equipment to formal collection centers have contributed to a decreased willingness among households and institutions to participate in the formal sector.

In contrast, the informal sector, with its convenience for household collection and even modest financial incentives, appears more attractive to consumers, widening the gap between the informal and formal sectors. While the informal E-waste sector offers livelihood opportunities to millions, often from marginalized communities, its waste management practices carry significant environmental and health risks (Dutta and Goel, 2021).

Addressing this ethical dilemma is essential for the sustainable advancement of E-waste management.

Market Challenges for End-of-Life Products

The private sector's active participation in establishing formal E-waste management systems, including Producer Responsibility Organizations (PROs), is impeded by challenges in sourcing adequate E-waste quantities necessary to achieve economies of scale. The adoption of efficient recycling technologies for E-waste often demands significant upfront capital investments, causing private entities to hesitate when faced with uncertainty about E-waste supply. Information barriers further disrupt market dynamics. A lack of knowledge about cost-effective recycling technologies, coupled with limited consumer awareness due to the absence of reliable E-waste management information, hampers the functioning of the market.

To foster improved E-waste markets beyond existing regulations, it may be imperative for public policy to assume a more substantial role in facilitating these advancements (Murthy and Ramakrishna, 2022).

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Inadequate Regulatory Framework and Enforcement

The 2012 regulations introduced a mandatory take-back system for producers, but it lacked accompanying collection targets. This structure provided minimal incentives for producers to take responsibility, resulting in limited improvements in E-waste management practices. The 2016 amendments addressed this issue by specifying progressive and stricter collection targets. However, the regulatory framework places a substantial burden on already under-equipped regulatory agencies.

These agencies are responsible for reviewing Producer Responsibility Plans (EPR) submitted by producers, granting authorizations, and enforcing EPR plan provisions. Additionally, the regulations establish detailed standards and processes for various entities, including collectors, dismantlers, recyclers, and bulk consumers, further stretching the capacities of regulatory agencies.

A persistent challenge in India's environmental regulation enforcement, including E-waste management, has been regulatory capture by interest groups that benefit from weak enforcement, transparency gaps, and a reluctance to publicly disclose compliance information. This poses a significant public policy challenge for the future of E-waste management in the country (Saha et al., 2021).

Establishing a Robust E-Waste Management Framework

To foster an effective E-waste management system, continuous assessment of the efficacy of E-waste regulations and the implementation of necessary regulatory adjustments may require governmental intervention to unite various stakeholders in the process. Below are several steps to consider for advancement:

Incorporating the Informal Sector

It is essential to explicitly recognize the informal sector as a pivotal participant in any future E-waste framework, like the approach outlined in the 2016 Municipal Solid Waste Rules. Addressing issues related to the informal sector's practices concerning E-waste requires a comprehensive understanding of this sector, including its motivations and challenges.

To begin addressing these concerns, it is imperative to engage with informal sector workers and groups in a manner that respects their livelihoods, fosters trust, and builds shared awareness of the problems and potential solutions. The government should establish a platform to facilitate consultations among a diverse range of stakeholders. This group should encompass informal sector laborers, NGOs collaborating with the informal sector, third-party private entities such as PROs, and registered recyclers and manufacturers.

These forums could be set up under the Ministry of Environment, Forest, and Climate Change (MoEFCC) at the national level and within the State Departments of Environment at the state level. The primary objective is to foster collaborative partnerships across sectors while defining clear roles and responsibilities for each stakeholder (Wilson et al., 2006).

Policy Instruments Under Extended Producer Responsibility (EPR)

Reevaluating the policy instruments within the Extended Producer Responsibility (EPR) approach has become imperative. Given the strengths of the informal sector in managing collection logistics, a mandatory take-back system with fixed collection targets may not be the most suitable tool. Producer responsibility can take on various forms beyond mandatory take-back.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Economic mechanisms like advanced recycling fees (ARF) or advanced disposal fees (ADF) imposed on each product unit sold in the market could relieve producers of physical collection responsibility. The generated revenues could be allocated in several ways, including:

a) Subsidizing consumers to encourage them to deposit their E-waste at designated centers.
b) Directly funding recyclers or Producer Responsibility Organizations (PROs).
c) Supporting informal sector workers through training, skill development, or enhancing social security.

Decisions concerning these mechanisms should be made within the consultative framework advocated in the previous point concerning the informal sector. Determining the appropriate fee presents a key challenge but should ideally align with the marginal external cost associated with end-of-life equipment. While assessing such external costs can be complex, the fee should be set at a level that supports robust and environmentally sound E-waste processing and disposal. A substantial fee can also incentivize changes in product design for environmental sustainability, which aligns with the primary objective of the global EPR approach.

Over time, the fee structure could be linked to factors such as ease of dismantling, recyclability, and the environmental impact of materials used in the equipment. Additionally, the policy framework should emphasize indigenous technology development or technology transfer to promote the widespread adoption of environmentally friendly E-waste recycling technologies (Turaga, 2019).

Regulatory Enforcement

Transitioning to economic instruments like Advanced Disposal Fees (ADF) would alleviate the regulatory burden, as producers would no longer require extensive oversight. By leveraging existing expertise in tax collection, redirecting ADF revenue from electronic products into a dedicated fund should be feasible. State Pollution Control Boards (SPCBs) and the Central Pollution Control Board (CPCB) would retain their responsibility for monitoring and ensuring compliance with standards for collection centers, dismantlers, recyclers, and Producer Responsibility Organizations (PROs).

The Ministry of Environment, Forest, and Climate Change (MoEFCC) should ensure transparency in regulatory actions related to E-waste. This encompasses authorizations and their associated conditions, inspection data for registered facilities, and the compliance status of inspected facilities—all of which should be made publicly accessible for scrutiny. While some SPCBs already provide some of this information on their websites, these practices should be standardized nationwide as part of the regulatory framework.

Maintaining an up-to-date, publicly available inventory of E-waste quantities by district, categorized by E-waste type (e.g., computers, mobiles, appliances), waste composition, and flow would play a pivotal role in enforcement efforts (ESCAP, 2023).

E-Waste Imports

Considering the existing regulations prohibiting E-waste imports for final disposal but allowing imports for reuse and recycling, it is crucial to contemplate a comprehensive ban on all imports, akin to China's recent measures. Integrating import data with the E-waste inventory is essential for accurate E-waste estimates.

Public Awareness

The current E-waste regulations mandate producers to provide information on the impacts of E-waste, proper disposal practices, and related topics on their websites. They are also required to conduct awareness campaigns at regular intervals. Although many producers have complied with these requirements on their websites, evidence suggests that awareness levels, even among bulk consumers, remain low. Implementing stricter guidelines and regulations for producers regarding the frequency and mode of these awareness campaigns could enhance the situation. Alternatively, producers could be obligated to conduct these campaigns through grassroots-level organizations engaged in E-waste activities. The government, on its part, should contemplate integrating E-waste awareness campaigns with other waste streams like batteries and municipal solid waste. Research into effective messaging techniques and the evaluation of information campaigns should also fall within the government's purview. These awareness initiatives should aim not only to promote safe E-waste handling but also to reduce electronic product consumption in the long run.

Promoting Indigenous Technology Development and Access in E-Waste Management

E-waste encompasses various components, including structural metals, plastics, and valuable parts like PCBs, li-ion batteries, and rare earth materials such as niobium magnets and phosphors, among others. In India, smelters primarily handle a portion of this waste, focusing on recovered structural components. High-value components, especially PCBs, which necessitate advanced technology for processing, are often exported to foreign smelters. These exports come with substantial costs associated with logistics, shipping charges, and significant revenue losses due to high refining expenses.

Fortunately, India has developed indigenous technologies that adhere to environmental norms, specifically designed for processing PCBs with a capacity of 100 kg per shift. These technologies have been pioneered by the Ministry of Electronics and Information Technology (MeitY) and further cost-effective processes for recovering precious metals from PCBs have been established by the Council of Scientific and Industrial Research (CSIR) labs. These innovative technologies offer low-cost solutions that are particularly well-suited for the informal sector.

Adopting these indigenous technologies not only has the potential to generate employment and create safer livelihoods but also plays a crucial role in safeguarding the environment (Turaga, 2019).

Enhancing Skills for Sustainable E-Waste Management

The vibrant informal sector can be harnessed as a valuable resource for effective e-waste management. Currently, it is estimated that the informal sector handles up to 90 percent of e-waste. Unfortunately, this sector employs unscientific and rudimentary methods, particularly in the extraction of precious metals, leading to environmental degradation and jeopardizing the health of the workers involved. To address this challenge, it is crucial to implement programmes aimed at enhancing skills and building the capacity of the informal sector. These programmes should focus on dismantling and segregating various types of e-waste (Wilson, 2006).

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Training and Skill Enhancement

One of the key objectives is to provide training and enhance the skill set of informal sector workers, equipping them with a comprehensive understanding of sound environmental, safety, and health practices. By doing so, we can foster the adoption of environmentally friendly e-waste recycling practices within this sector.

Empowering the informal sector through skill development is a pivotal step in promoting sustainable and environmentally responsible e-waste management.

Fostering Collaboration Between Formal and Informal E-Waste Sectors

The informal sector is comprised of an extensive network of unauthorized collectors, segregators, dismantlers, and intermediaries, providing livelihoods for a substantial portion of both rural and urban populations. Integrating the informal sector's activities into mainstream e-waste management necessitates a harmonious synergy between the formal and informal sectors. This integration can be achieved by recognizing informal operators as cooperative entities and supporting them financially through government programs aimed at skill enhancement, capacity building, and the cultivation of awareness regarding safety, health, and environmental practices.

Establishment of Eco Parks for Integration

To facilitate this integration, the establishment of eco parks can be envisioned. These eco parks would serve as hubs for the convergence of formal and informal e-waste management activities. They would streamline the flow of materials from their origins to recycling centers, strategically located at designated sites. This approach offers several advantages, including optimized material availability for efficient operations, enhanced recovery yields using appropriate tools and technologies, and rigorous environmental protection measures.

Government Support

Initial financial support for these eco parks can be provided by the central government to acquire essential capital equipment. Simultaneously, the state government could contribute by offering land, subsidized utilities such as power and water, and facilitating local approvals. By concentrating informal operators within designated eco parks, their activities can be effectively monitored for regulatory compliance.

Collaborative Optimization

Ultimately, the collaboration between the formal and informal sectors within these eco parks would foster an environment of cooperation, enabling them to jointly optimize their business operations and revenue generation. This innovative approach seeks to create a sustainable e-waste management ecosystem that minimizes environmental impact and maximizes resource recovery.

The objective is to attain cost-effective recycling technologies while concurrently reducing landfill usage and achieving zero emissions to the air, land, and water. The recovery of valuable materials, in-

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

cluding precious metals and reusable plastics, would not only contribute to environmental sustainability but also ensure that the recycling business remains economically profitable.

Emerging Technologies

The rapid growth in computer hardware production has raised significant concerns regarding the proper disposal of electronic waste (E-waste) generated by the Information and Communication Technology (ICT) sector. The manufacturing sector has witnessed a significant transformation with the introduction of a groundbreaking concept known as the "micro factory," first proposed by the Mechanical Engineer Laboratory (MEL) in Japan back in 1990. A micro factory is a compact manufacturing facility capable of producing small-scale products, resulting in substantial resource savings, including space, energy, materials, and time. Due to their diminutive size, micro factories necessitate full automation, incorporating automated machine tools, assembly systems, quality inspection systems, material feed systems, waste elimination systems, and more. A similar concept can be adapted for processing waste materials, encompassing collection, segregation, dismantling, recycling, and material recovery. Implementing technological solutions at these designated sites would ensure efficient e-waste management in an environmentally friendly manner. It's crucial to ensure that micro factories have access to the necessary volume of materials to maintain economic viability. These micro factories can be strategically located near waste stockpiles. Addressing greenhouse gas emissions during the operation of such facilities may require substantial investments, which could pose challenges for small entrepreneurs. However, cost-effective logistics may help mitigate emissions. Micro factories have the potential to create a significant number of jobs, enhance livelihoods, and facilitate the recycling of secondary resources. This effort would play a vital role in helping the country achieve its Sustainable Development Goals (SDGs), promote a circular economy, and ignite discussions about resource efficiency (Vishwakarma et al., 2022).

It is important to note that not all types of waste can be processed locally, as some waste materials are hazardous in nature and require specialized technical expertise for proper management.

Furthermore, technologies that have been developed and demonstrated at an industrial scale by Indian research and development organizations for recycling PCBs, plastics, lithium-ion batteries, and rare earth metal recovery should be made accessible to entrepreneurs in the formal sector. However, it is essential to recognize that a certain scale is necessary to effectively manage processes involving advanced technology.

Government's Role in E-Waste Management

The government plays a pivotal role in the development, promotion, sustainability, and regulation of cost-effective technologies aimed at resolving the issue of e-waste management, ultimately providing a comprehensive end-to-end recycling solution for the nation. The integration of the formal and informal sectors necessitates initial financial support from the government until self-sufficiency is attained.

The Micro factory Innovation

The introduction of micro factories by the University of New South Wales (UNSW) holds the promise of transforming the manufacturing sector, offering a triple-bottom-line benefit comprising sustainability, job creation, and significant economic revenue. India's extensive network of informal e-waste recyclers

Dhanabalan Thangam (ctdhanabalan@gmail.com)

presents both an opportunity and a considerable challenge. While these informal operators excel at e-waste collection, it is crucial to address environmental concerns and the loss of valuable secondary materials, including precious metals (Purchase et al., 2020).

Empowering these informal workers with the necessary skills and cost-effective technology can help transition them into an organized workforce, converting these informal units into dynamic secondary raw materials industries. These transformed units can function as sustainable micro factories for local e-waste processing, ensuring environmental safeguards and reducing the costs associated with transporting waste to large processing facilities. This initiative would stimulate local employment and foster the emergence of various hubs dedicated to generating secondary raw materials.

India's formalized commodity market enables secondary materials to compete effectively with primary ones, enhancing their utilization as equivalent substitutes for primary materials. This aligns with the goals of the Make in India mission initiated by the Government of India and contributes to the objectives of the Swachh Bharat Mission.

However, one of the primary challenges lies in regulation, as e-waste recycling in the informal sector is a lucrative business. The introduction of micro factories has the potential to disrupt the industry, benefiting larger, formalized recyclers with access to advanced technology. Informal operators transitioning into formal entities may lose access to precious metals recovered through recycling. It is important to note that the current informal practices have detrimental effects on human health and the environment (Turaga et al., 2019).

The urbanization trend has been a prominent factor in the escalation of E-waste production. In the year 2000, the urban population stood at 27.67%, which grew to 38.03% in 2018, and is projected to reach nearly 42% by 2025. With this population expansion, the volume of E-waste is also set to increase, posing a concerning situation (Rajput and Nigam, 2021).

CONCLUSION AND DISCUSSION

During the initial years of economic liberalization and the IT revolution in India, there was a substantial surge in E-waste generation. This trend has continued, particularly over the past decade. Today, managing E-waste presents a significant challenge, especially in major Indian cities. One such city, Bangalore, India's largest IT hub and a rapidly emerging urban center, exemplifies this issue. Bangalore contributes significantly to the domestic generation of E-waste, driven by the presence of IT and electronics companies, the banking sector, and educational institutions within the city. Consequently, the city plays a prominent role as a bulk E-waste producer in the country. Furthermore, with an impressive literacy rate of approximately 88%, the proliferation of Electrical and Electronic Equipment (EEE) in Bangalore's households is likely higher than in many other Indian cities. Consequently, Bangalore ranks third among Indian cities in terms of E-waste generation, as reported by the government (Borthakur and Govind, 2017).

Accurate and consistent estimation of E-waste generation is vital for investors and policymakers alike. However, many regions in India still lack precise data on E-waste, and the methodologies employed for estimation are often inadequate. The governing bodies in India also face challenges in maintaining comprehensive records of EEE production and sales, which are essential for estimating E-waste quantities effectively. Additionally, there is a need for well-defined waste management services, including efficient E-waste collection through organized systems.

Nevertheless, the study underscores the pressing necessity for India to prioritize E-waste management, integrating it into their agendas and championing supportive policies. Several critical considerations must guide this process:

Firstly, fostering coordination among various stakeholders is imperative. Alignment between environmental priorities and the interests of the Information and Communication Technology (ICT) sector is vital.

Secondly, the development of intricate governance structures is essential for overseeing E-waste projects across the entire value chain. This involves establishing robust leadership, delineating responsibilities, and encouraging active involvement from the private sector.

Thirdly, the enhancement of technological capabilities and the implementation of traceability systems are of paramount importance. These measures serve to protect human health and ensure environmental sustainability at all stages of E-waste management.

Lastly, a comprehensive financial assessment should be conducted to evaluate the costs and benefits of E-waste management programs. This assessment should consider both environmental concerns and potential opportunities such as job creation and the development of innovative technologies.

Drawing from the study's findings, several key steps have been identified to achieve sustainable E-waste management in India:

1. Identification of E-waste sources and patterns of generation.
2. Conducting comprehensive regional analyses to tailor strategies.
3. Adopting a holistic approach encompassing the entire lifecycle of Electrical and Electronic Equipment (EEE).
4. Enhancing technological infrastructure to facilitate efficient E-waste management.

Furthermore, the study underscores the importance of developing a coordinated roadmap that engages all stakeholders, including the ICT sector, environmental and health sectors, and local E-waste managers. This collective effort should be supported by the implementation of technological tools, the establishment of appropriate regulatory frameworks, the cultivation of sustainable business models, and adherence to international technical standards.

In summation, this study underscores India's urgent need to address E-waste management and offers valuable insights into the steps required to establish sustainable practices. By addressing the identified issues and implementing the suggested measures, India can pave the way toward effective E-waste management that safeguards the environment, human health, and economic viability (Wath et al., 2010).

Chapter 13
From Waste to Wealth: Global Perspectives on Effective Management of Electronic Equipment Waste Towards Sustainable Development Goals (SDGs)

Sharuti Choudhary
Woxsen University, India

ABSTRACT

The exponential surge in global e-waste has emerged as a critical social, ecosystem, and public health matter. Within this chapter, the authors delve into the multifaceted economic, social, educational, legal, and technological challenges entwined with electronic equipment waste management. It accentuates the imperativeness of devising effective strategies to overcome these hurdles. Insufficient management practices culminate in the emission of perilous substances, thus exacerbating pollution levels and health risks. Numerous nations have adopted regulations and policies to govern the people and proper disposal of electronic equipment waste. In this chapter, the authors explore the utmost significance of managing electronic equipment waste in connection with the Sustainable Development Goals (SDGs). The discourse encompasses exemplary practices and strategies. Conclusively, this chapter emphasizes the paramount importance of robust policies and continuous innovation in achieving sustainable electronic equipment waste management and making valuable contributions towards the realization of the SDGs.

INTRODUCTION

The amount of e-waste, which includes abandoned electrical equipment and electronic devices, has been increasing globally at alarming rates due to quick advancement and low cost of electronic devices (Chen et al. 2015a). According to many research, this hazardous e- waste is one of the fastest-growing waste streams in the world (Lambert et al. 2015). Electronic equipment waste mainly refers to the disposal of electronic equipment, including smartphones, televisions, Pc's, and other similar equipment (Huang et al.

Table 1. Category-wise e waste

Contribution of e-waste based on the different categories.

Category	Examples	Contribution of e-waste in the year 2019 (million metric tons)
Small equipment	Irons, Toasters, Luminaires, Radio sets, Microwave oven, Ventilation equipment, Vacuum cleaners, Clocks and Watches, Digital cameras, Electric kettles, Video cameras	17.4
Large equipment	Large medical devices, Large monitoring and control instruments, Photovoltaic panels, Cookers, Electric stoves, Large computer mainframes, Large printing machines, Washing machines, Clothes dryers, Dish washing machines	13.1
Monitors and screen	Televisions, LED/LCD, Monitors, Tablets, E-Book readers, Laptops	6.7
Temperature exchange equipment	Heat pumps, Freezers, Air-conditioners, Refrigerators	10.8
Lamps	CFL, Fluorescent lamps, Pressure sodium lamps, Metal halide lamps, LED lamps	0.9
Small IT and telecom equipment	Mobile phones, Printers, Routers, Personal computers, Telephones, GPS and navigation equipment	4.7

2014). Table 1 depicts the item-wise e-waste (Forti et al., 2018). These devices are considered electronic waste when they reach their expiry or are no longer desired or needed. The global increase in electronic equipment waste can be attributed to the rapid proliferation of electronic devices and their shorter lifespan, which represents an important 21 percent increase over the last five years (Chen et al. 2015b).

In 2016, an astonishing 44.8 million metric tons of electronic waste were produced across the world. Further, Data also depicts the toxic items growth by 3 to 5 percent annually (European Parliament Briefing, 2015). In the year 2019, the Global electronic waste generation was approximately 54 million tonnes in which only 17% has been managed and rest 83% not accounted (Forti et al., 2020). As per the Global Electronic Equipment Waste Monitor 2020 statistics report "the prediction is, by 2030 this will touch approximately 75 million tonnes (Statista, 2023). However, It is shocking to see that only approximately 18% of the world's electronic waste has been properly disposed of in an environmentally friendly way.

There are multiple reasons behind this growth. Among them, one is an average lifetime of Electronic products. Previous research has revealed a worrying trend: the average life expectancy of the latest computer has slowed considerably. In 1992, these electronic miracles boasted an average lifetime of 4.5 years. However, by 2005, this number had fallen to about two years, and this trend seems to persist (Widmer et al., 2005). This reduced lifespan leads to a significant increase in the number of computers that need to be disposed of or, in some cases, exported to developing countries.

Adding to this concern is the fact that the longevity of central processing units (CPUs) has also witnessed a decline. Back in 1997, CPUs could be expected to function optimally for a span of 4 to 6 years (Shamim et al., 2015). Fast forward to 2015, and this duration had further shrunk to a range of 2 to 3 years (Yazici and Deveci, 2013). According to a comprehensive report, the annual influx of obsolete computers, monitors, and televisions in the United States alone surpasses a staggering 130 million, and this number is on an upward trajectory (Bushehri, 2010). To put this into perspective, the period between 1997 and 2007 saw an eye-opening 500 million computers rendered obsolete within the United States. Notably, Japan was not far behind, with a tally of 610 million discarded computers by the close of December 2010.

Table 2. Country-wise e-waste production

Global and selected country e-waste production in 2014 and 2016. Source: The global e-waste monitor 2017 (Baldé et al., 2017); StEP, e-waste world map (StEP, 2018).

Country/Region	Per capita production (kg)	Total e-waste production (million tonnes)
World (2014 data)	5.9	41.8
World (2016 data)	6.1	44.7
World (2021 estimated)	6.8	52.2
United Kingdom	23.5	1.50
USA	22.1	7
Germany	21.7	1.77
Hong Kong	21.5	0.16
Canada	20.4	0.72
Australia	20.1	0.46
Singapore	19.6	0.11
European Union	18.7	9.50
Taiwan	18.6	0.44
Japan	17.3	2.20
South Korea	15.9	0.80
Malaysia	7.6	0.23
Brazil	7.0	1.40
Argentina	7.0	0.29
South Africa	6.6	0.35
China	4.4	6.00
Sri Lanka	4.2	0.09
India	1.3	1.60
Nigeria	1.3	0.22
Zambia	0.9	0.01

Similar alarming circumstances exist in China, As per the study of Hicks (2005), In 2003 annually an average of five million new PCs and approximately ten million new TVs have been purchased by the public. Studies show approx 1.2 million tonnes of e-waste are produced annually as a result of this enormous consumption of electronics; the main sources of this trash are imports from other countries, the production of electronic equipment, and the assembly of home appliances and information technology products (Rucevska et al.,2015). It is also plausible to assume that many other nations are producing a similar amount of e-waste.

In particular, the global problem of electronic equipment waste is caused by the high-tech adoption and consumption of developed and developing countries such as the US, Japan, Norway, China, India, and the United Kingdom (Song et al., 2014). The e-waste country-wise is displayed in Table 2.

Economic, Social, Educational, Legal, and Technological Challenges in E-Waste Management

Inadequate management of electronic equipment waste presents substantial risks to both humanity and the environment, with particularly profound implications for human health (Bhaskar et al., 2018). The problem of e-waste disposal has become a pressing concern. This concern is supported by an array of well-documented case studies, primarily originating from China (Zhao et al., 2008). These studies emphasize the immediate need for enhanced protocols in handling and disposing of electronic waste to protect both mankind and the environment from the detrimental consequences of e-waste mismanagement (Huo et al., 2007).

The inappropriate disposal and management of electronic waste result in the release of hazardous substances into the environment. These substances, including lead, mercury, cadmium, and brominated flame retardants, exert adverse effects on the environment (Wang et al., 2009b). These toxic elements have the capability to contaminate soil, water sources, and the atmosphere, consequently exacerbating pollution levels and contributing to ecosystem degradation (Chan et al., 2007; Chen et al., 2015b).

Exposure to pollutants stemming from electronic equipment waste can lead to severe health problems in both human and animal populations (Bald et al.,2015). Such health issues encompass respiratory problems, reproductive disorders, neurological damage, and an elevated risk of cancer (Qu et al., 2007). Reports substantiate the peril posed by the toxicity of e-waste to human health, encompassing both enduring and acute conditions, evolving into a significant societal concern (Zheng et al., 2008).

This concern finds support in a multitude of case studies from various regions, including China (Wang et al., 2009), Japan (Zhao et al., 2008), India (Ha et al., 2009), Korea (Eguchi et al., 2012), and Ghana (Asante et al., 2012). These comprehensive studies vividly illustrate the gravity of the issue, emphasizing the critical necessity for implementing measures to mitigate the health risks associated with e-waste. Economic Challenges: A foremost economic hurdle in Electronic equipment waste management stems from the high costs associated with collection, recycling, and proper disposal. Electronic equipment waste comprises complex materials that necessitate specialized technologies and processes for safe handling (Xing et al., 2009; Chan et al., 2007). The economic practicability of Electronic equipment waste management initiatives can prove challenging, particularly in developing nations with limited financial resources and infrastructure (Shittu et al., 2021; Qu et al., 2007; Xing et al., 2009).

- Social Challenges: Social challenges arise because of a lack of awareness and misconceptions surrounding Electronic equipment waste management. Many individuals remain unaware of the social, ecological and health hazards linked to inappropriate Electronic equipment waste disposal. Additionally, societal behaviors that prioritize acquiring new electronic devices over repair or refurbishment contribute to the burgeoning Electronic equipment waste crisis. Addressing prevailing social attitudes and fostering behavioral changes are pivotal to the effectiveness of Electronic equipment waste management efforts (Borthakur et al., 2018; Mudali et al.,2021).
- Technological Challenges: Rapid technological advancements result in shorter product lifecycles and a growing diversity of electronic devices. Effectively managing various types of Electronic equipment waste necessitates advanced recycling technologies capable of handling diverse materials and components. Technological challenges include the development of efficient and cost-effective recycling processes that can keep pace with evolving electronic devices and their intricate compositions (Wong et al.,2007a; Lu et al., 2015)
- Lack of Awareness and Education on Electronic equipment waste Management: One major hindrance to effective Electronic equipment waste management is the limited awareness and education surrounding the subject matter. Both consumers and producers often possess limited knowledge concerning the environmental impact and appropriate disposal practices for Electronic equipment waste. It is crucial to promote public awareness regarding the repercussions of incorrect Electronic equipment waste disposal, the significance of recycling, and the accessibility of collection systems. By enhancing awareness, we can encourage responsible consumer practices and cultivate a culture that prioritizes appropriate Electronic equipment waste management (Puckett and Smith, 2002; Rucevska et al., 2015).

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- Policy and Regulatory Gaps: IT has been seen over a period of time that challenges in Electronic equipment waste management emerge due to lack of comprehensive legislation and enforcement mechanisms. In certain regions, inadequate policies or inconsistent implementation create loopholes in Electronic equipment waste management systems. Effective policies should encompass the entire Electronic equipment waste lifecycle, spanning from production to disposal, and ensure diligent monitoring and enforcement to curb illegal disposal practices and encourage responsible recycling. (Robinson, 2009; Basel Convention, 2018b)
- Illegal Electronic equipment waste Trade and Dumping: In global level, Illegal trade and dumping of Electronic equipment waste present significant challenges to sustainable Electronic equipment waste management. In many instances, it has been experienced that Electronic equipment waste is unlawfully exported to developing nations with lenient regulations, resulting in hazardous and environmentally detrimental recycling practices. This illicit trade circumvents proper disposal processes and contributes to pollution and health risks in the recipient countries (Abalansa et al., 2021).
- Strengthening international cooperation, implementing stricter regulations, and enhancing monitoring systems are vital in combatting illegal Electronic equipment waste trade and dumping. The economic and social challenges related to Electronic equipment waste management, including issues of awareness and policy gaps, highlight the urgency for collective action to overcome these obstacles and effectively pursue the Sustainable Development Goals (SDGs) (Patil, R. A., & Ramakrishna, S.,2020).

Recognizing the pressing urgency for effective management of electronic waste, many countries have implemented rules and regulations and framed policies aimed at controlling Electronic equipment waste generation, promoting recycling practices, and ensuring environmentally sound disposal. For instance, the European Union initiative in waste management. The enactment of the Waste Electrical and Electronic Equipment (WEEE) Directive (Pan, X. et al., 2022) has established guidelines for the collection, recycling, and recovery of electronic waste. In the United States, the Resource Conservation and Recovery Act (RCRA) incorporates Electronic equipment waste within its framework for managing hazardous waste (Ali et. al., 2023). Many research reports depict the concern of several developing nations relating to both societal and human health issues that have garnered recognition. Notably, Various Asian nations countries like India, and China, have recently introduced amendments to their legislation aimed at addressing e-waste management and its imports (Widmer et al., 2005). Additionally, the developed and developing countries together proactively ventured into employing advanced technologies for the safe disposal of e-waste (US Government Accountability Office, 2008; Widmer et al., 2005). Furthermore, on the international front, collaborative initiatives such as the Basel Convention and the Stockholm Convention are working diligently to regulate the cross-border transport and appropriate disposal of hazardous waste, with a specific focus on electronic equipment waste (Wingfield, S., & Lim, M., 2022). These collective efforts signify a growing awareness of the e-waste issue and the commitment to finding sustainable solutions on a global scale.

Sustainable Development Goals (SDGs) and Their Relevance to E-Waste Management

The SDGs comprising 17 global objectives endorsed by the United Nations, serve as a comprehensive framework to address diverse social, economic, and environmental challenges on a global scale, with the ultimate aim of fostering sustainable development worldwide. These goals direct a roadmap for countries and companies to work together towards a more equitable, prosperous, and environmentally conscious future. Among these goals, "SDG 12- Responsible Consumption and Production" is closely focused on management of electronic waste. By effectively handling Electronic equipment waste, we can actively contribute toward the control of environmental pollution, the resources preservation, the promotion of sustainable consumption patterns, and the cultivation of a Resource-efficient economy. In the same line, SDG 12.5, in particular, emphasizes the other aspects such as reduction in waste generation through reuse, recycling, reduction, and prevention methods. The management of Electronic equipment waste is intricately linked to this target, as it involves the advocacy of sustainable practices and the mitigation of the environmental impact caused by discarded electronic devices (AlQattan, N et al., 2018). Furthermore, on global platform Electronic equipment waste management is crucial role to facilitate the Resource-efficient economy transition, which strives to prolong the lifespan of products and materials through mechanisms such as recycling, repair, and remanufacturing (Bhaskar, K., & Kumar, B., 2019). By adopting principles of the Resource-efficient economy, nations can effectively address Electronic equipment waste challenges while simultaneously advancing their SDG's.

Studies proved that electronic equipment waste management plays a pivotal role in advancing sustainable development across multiple dimensions:

- Environmental Sustainability: Proper Electronic equipment waste management significantly reduces environmental pollution and the reduction of natural assets. Through the implementation of recycling and recovery processes, valuable materials can be extracted, reducing the demand for raw material extraction and promoting resource conservation. Moreover, this strategy minimizes the secretion of harmful substances into the environment, mitigating ecosystem contamination and preserving biodiversity.
- Social Well-being: Effective Electronic equipment waste management serves to protect human health and foster a safe living environment. By preventing toxic substances excessive exposure, communities can experience improved well-being and reduced health risks. Additionally, Electronic equipment waste management initiatives have the potential to raise awareness and educate individuals, empowering them to make responsible choices regarding the electronic waste proper disposal and consumption.
- Economic Development: Better management of Electronic equipment waste lead to economic opportunities through resource recovery. The extraction of valuable materials from Electronic equipment waste substances not only reduces the environmental burden but also generates economic value. The recycling and refurbishment of electronic devices can create employment opportunities, support local industries, and contribute to sustainable economic growth.

The implementation of effective Electronic equipment waste management strategies is of utmost importance for several reasons. Firstly, Electronic equipment waste confines valuable materials that can be extracted from the products and recycled for further purposes, thereby reducing the demand of

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

raw materials and minimizing resource depletion. Secondly, proper management practices help prevent environmental pollution and the associated health risks. Lastly, the mentioned practices is also aligned with other UN SDG goals which cover smart cities and responsible consumption. The implementation of efficient Electronic equipment waste management strategies may guide to decrease the negative impacts of Electronic equipment waste and increase the sustainable bright future.

GLOBAL ELECTRONIC EQUIPMENT WASTE MANAGEMENT STRATEGIES

Electronic equipment waste legislations and policies vary across different regions worldwide. In Asia, countries including Singapore, China, India, Korea, and Japan have acknowledged the urgency of efficient Electronic equipment waste management and executed legislation, taking inspiration from the European Union's directives. The Americas, with notable contributors such as the United States, Japan Canada, Germany Brazil, and Mexico, generate substantial volumes of Electronic equipment waste; however, legislative inconsistencies persist, and illicit practices continue to undermine progress. Europe, on the other hand, has established comprehensive Electronic equipment waste management regulations through directives like the Waste Shipment Regulation, RoHS Directive, and WEEE Directive, championing the principles of Resource-efficient economy and extended producer responsibility. Africa faces distinct challenges in Electronic equipment waste management due to limited regulation and the predominance of informal collectors and recyclers, while Oceania, spearheaded by Australia, has made significant headway in Electronic equipment waste management through legislative frameworks and product stewardship initiatives.

Numerous countries and regions have championed commendable electronic equipment waste management initiatives, providing successful models for sustainable electronic equipment waste handling(Kim et al., 2001). Apart from this improved energy efficient Air Conditioning units (Prek, 2004) play a critical role in reducing the e-waste. Other studies also support new advance products like cloth washer machines (Park et al., 2006), and electronic gadgets (Muñoz et al., 2009) have created a countable reduction in e-wate. Research proves Life Cycle Assessment tool has shown to be a powerful means of identifying potential environmental impacts.

Numerous studies have shown how widely used Life Cycle Assessment is in e-waste management. This adaptable tool offers a number of advantages in supporting e-waste management. Numerous research has demonstrated that life cycle assessment calculates the environmental effects of material consumption during the eco-design and development of products.

In order to help with more informed decisions regarding the disposal of electronic waste, further life cycle assessment also evaluates the economic and environmental aspects of electronic device end-of-life disposal. Table 3 demonstrate the application of various tool across different countries.

In addition to life cycle assessments, multi-criterion analyses are used for environmental challenges, including electronic waste management, to create alternative strategies for electronic waste management (Queiruga et al., 2008). Although it is limited to the treatment of electronic waste, MCA is widely used for the treatment of solid waste and hazardous waste. In addition, some countries use material movement analysis (MFA) techniques to manage and monitor electronic waste movements. The study of e-waste creation is another application of MFA technology. Another important tool is the extension of producer responsibility (EPR). The leading e-waste management EPR programs are concentrated in rich countries

MFA	E-waste quantities	Generation	Chile	Steubing et al. (2010)
MCA	Decision making for optimisation of product disassembly	Environment and economic	United State	Hula et al. (2003)
MCA	Decision making for e-waste management	Environment, economic and social	Cyprus	Rousis et al. (2008)
MCA	Decision making for the location of e-waste recycling plants	Economic, infrastructural and legal	Spain	Queiruga et al. (2008)

Table 4. E-waste management approaches towards the EPR

E-waste management approaches to EPR.

Country	Policy	Target	References
The Netherlands	– Take back (large household appliances and IT equipment)	Recycling rate 45–75% by weight	Tojo (2001)
United Kingdom	– Take back (electronic appliances)	Recycle and recovery 50–80%	Gottberg et al. (2006) and Mayers et al. (2005)
Germany	– Take back (electronic appliances)	–	Roller and Furhr (2008)
Switzerland	– Take back (electronic appliances) – Disposal ban in landfill – Advance recycling fees	–	Khetriwal et al. (2009), Nnorom and Osibanjo (2008), and Widmer et al. (2005)
Japan	– Take back (four large household appliances: TV sets, refrigerators, air conditioners and washing machines) – Product re-design (lead free solders and bromine free printed circuit boards)	Recycling rate 50–60% by weight	Nnorom and Osibanjo (2008) and Tojo (2001)
United States	– Take back household appliances in some states, such as Maine (take back only televisions and computer monitors)	–	Sachs (2006) and Wagner (2009)
Canada	– Take back household appliance in some provinces, including Alberta and Ontario – Develop advanced EPR program	–	McKerlie et al. (2006)
India	– Feasibility study	–	Manomaivibool (2009)
Thailand	– Developing legal framework	Collection and recycling	Manomaivibool and Vassanadumrongdee (2011)

like the United States (Balde and al., 2015). In the same league countries such as Canada, US, Switzerland, India, Japan Korea, and the European Union show trust in LCA and MCA tools.

In addition to life cycle assessment, multi-crime analysis (MCA) was used to solve environmental problems, including the management of electronic waste, and to create alternative strategies for the management of electronic waste (Queiruga, 2008). Table 4 shows the different EPRs in each country.

In addition to that World Organisation for Economic Cooperation and Development supports e waste management initiatives and helps nations to improve the guidance manuals to promote acceptable electronic waste management practices globally (OECD, 2001).

		Spain	Queiruga et al. (2008)
		United State	Hula et al. (2003)
EPR	– Solves e-waste problems in national scale – Enforce producers based on polluter-pays principal	Canada	McKerlie et al. (2006)
		Germany	Roller and Furhr (2008)
		Japan	Nnorom and Osibanjo (2008) and Tojo (2001)
		India	Manomaivibool (2009)
		Switzerland	Khetriwal et al. (2009), Nnorom and Osibanjo (2008) and Widmer et al. (2005)
		Thailand	Manomaivibool and Vassanadumrongdee (2011)
		The Netherlands	Tojo (2001)
		United Kingdom	Gottberg et al. (2006) and Mayers et al. (2005)
		United States	Sachs (2006) and Wagner (2009)

Though there are many tools available, in our study we focus on the mainly four major tools such as EPR, LCA, MFA, MCA and suggest the best practices followed across the nations to manage the e-waste.

As shown in Table 5 each tool has special qualities and benefits when used for e-waste management.

In addition to above tools, Norway, for instance, has emerged as a frontrunner in Electronic equipment waste management, attaining high collection rates and emphasizing resource recovery. The country's well-established deposit-refund system has contributed to an impressive collection rate of approximately 80% for electronic waste. Norway's approach aligns seamlessly with SDG goals, promoting responsible consumption and production while curbing waste generation. Similarly, Japan has made remarkable progress in Electronic equipment waste management, harnessing advanced recycling technologies and conducting extensive public awareness campaigns. Leveraging a sophisticated recycling infrastructure, Japan has achieved a recycling rate of over 90%, facilitating the extraction of valuable materials from Electronic equipment waste products. Japan's initiatives strongly resonate with SDG 12, particularly in terms of promoting responsible consumption and reducing environmental footprints. In a similar line, Switzerland has launched a highly successful Technological waste management system that is based on latest EPR policy. The country boasts impressive collection rates and has established streamlined recycling processes. Switzerland's EPR model holds manufacturers accountable for managing the entire lifecycle of their products, harmonizing with SDG 12 and fostering sustainable production and consumption patterns. Table 6 represent the various international initiative for e-waste management.

Table 6. Various policies and initiative for e-waste management

International legislation and initiatives on e-waste management.

Legislation and initiatives	Key features
The Basel Convention[1]	Reduction of hazardous waste generation and the promotion of sustainable handling techniques at the place of disposal The restriction of trans-boundary movements of hazardous wastes Form legislative frameworks where trans-boundary movements are permissible
The European Union's WEEE Directive[2]	Free take-back schemes for consumers Reduce WEEE to landfills through collection and recovery targets WEEE to be collected separately from other wastes Stimulate 'eco-design' – product design that reduces WEEE and increases its ease of recovery Producer responsibility for end of life treatment of their products
StEP (Solving the E-waste Problem)[3]	Research and piloting on e-waste treatment Strategy and goal-setting to eliminate the e-waste problem Training and development on e-waste issues Establish communication and awareness among members and throughout the industry
G-8 3Rs Initiative[4]	Promoting 3Rs: Reduce, Reuse, Recycle Building a "sound-material-cycle society"
National Strategy for Electronics Stewardship (NSES), USA[5]	Improve design of electronic products The Federal government leads by example Enhance the handling and management of used or discarded electronic equipment in the USA Reduce harm caused by used or discarded electronic equipment in developing countries
GeSI (Global e-Sustainability Initiative)[6]	Bring together ICT companies, industry associations and non-governmental organisations One of the key focus area is e-waste Achieving sustainable objectives and manage risks associated with ICT through innovative technology
IETC (International Environmental Technology Centre)[7] – UNEP	Application of environmentally sound technologies (ESTS) in developing countries and countries in transition on waste management

Other Best Practices and Strategies for Digital Devices Waste Management

Recycling and recovery technologies assume a crucial role in effective Electronic equipment waste management. These technologies strive to extract valuable materials from discarded electronic devices, curtail waste generation, and minimize environmental impacts. Key facets of recycling and recovery technologies include:

- Segregation and Sorting: Electronic equipment waste is initially segregated and sorted into distinct categories based on material types, facilitating the identification of components amenable to recycling or recovery.
- Dismantling and Disassembly: Electronic devices undergo dismantling processes to access individual components and separate them for subsequent processing. The disassembly techniques employed vary depending on the complexity of the devices.
- Material Recovery: Recycling processes involve the various valuable materials, such as gold etc. and plastics from Electronic equipment waste. Techniques such as shredding, smelting, and hydrometallurgical methods are employed to retrieve these materials.
- Proper Disposal of Non-Recyclable Components: Certain components of Electronic equipment waste may be deemed non-recyclable owing to their composition or technological constraints. Environmentally responsible disposal methods, such as secure landfilling or controlled incineration, are implemented to manage these non-recyclable components effectively.
- Achieving effective Electronic equipment waste management necessitates collaboration among various stakeholders, including governments, manufacturers, recyclers, consumers, and civil so-

IP Address: 223.231.178.10

ciety. The following key aspects of stakeholder engagement and collaboration contribute to the success of Electronic equipment waste management endeavors.

- Government Policy and Implementation: Governments play a pivotal role in formulating and implementing policies and regulations related to Electronic equipment waste management. Collaboration between policymakers, industry representatives, and environmental experts is essential to ensure the development of effective and enforceable regulations that address the complexities of Electronic equipment waste challenges.
- Public-Private Partnerships: Collaboration between public and private entities fosters the exchange of knowledge, resources, and expertise, leading to mutually beneficial outcomes. Public-private partnerships can significantly enhance Electronic equipment waste collection systems, recycling infrastructure, and awareness campaigns, thus promoting sustainable Electronic equipment waste management practices.
- Consumer Engagement: Educating and engaging consumers are crucial components of promoting responsible Electronic equipment waste management practices. Awareness campaigns, consumer incentives, and the establishment of easily accessible collection points are effective means of encouraging consumer participation in recycling and proper disposal, ensuring their active involvement in sustainable Electronic equipment waste management efforts.

To address the key challenges we can work collaboratively and achieve sustainable Electronic equipment waste management, protect the planet, and preserve our finite natural resources. Better e waste management practices across the globe navigate the complex landscape of Digital waste management, mitigate the adverse effects, and forge a path toward a better future backed up by a Resource-efficient economy.

INDIA ACTION TOWARDS E-WASTE MANAGEMENT

By enacting the Electronic Equipment Waste (Management) Rules, 2016, the Indian government has made tremendous progress in addressing the problem of electronic equipment waste, or "e-waste." These laws provide a thorough framework for the appropriate handling, disposal, and collection of e-waste throughout the nation. They impose particular obligations on recyclers, producers, and large consumers to guarantee the ethical handling of e-waste(Huo et al., 2007).

In addition to regulatory measures, India has also embraced technology-driven solutions for e-waste management. Robust online platforms have been established to facilitate the exchange and recycling of electronic equipment waste. These platforms serve as a bridge between consumers, producers, and recyclers, effectively streamlining the management and directed flow of e-waste to authorized recycling facilities.

Furthermore, The various awareness campaigns and initiatives aimed at educating the public about e-waste management launched by Indian government and companies. These initiatives emphasize the significance of recycling, responsible disposal, and the various health, social, and environmental impacts associated with improper handling of electronic equipment waste. The collaborative efforts between the public and private sectors have led to the establishment of collection centers, recycling facilities, and capacity-building programs that effectively address the e-waste challenge.

An additional strategy involves harnessing technology to extend the lifespan of electronic products. This approach shifts the focus towards maximizing usage and minimizing premature disposal. Collaboration with e-commerce platforms enables the collection and direct routing of discarded electrical and electronic equipment (EEE) to authorized recyclers, ensuring proper handling and reducing the prevalence of informal or unauthorized recycling practices.

Moreover, functioning electronic equipment discarded by consumers who seek the latest versions can be collected, refurbished, and redistributed to underprivileged communities, promoting a more sustainable approach to product lifecycle management.

It's crucial to recognize that effective e-waste management is not only an environmental concern but also aligns with Sustainable Development Goals (SDGs). Achieving these goals necessitates ongoing efforts, collaboration, and innovation from all stakeholders, including governments, manufacturers, consumers, and recycling industries. These initiatives can also be seamlessly integrated into corporate social responsibility (CSR) efforts within various industries. By implementing these strategies and aligning them with the SDGs, India and other nations can effectively manage e-waste, minimize environmental impact, safeguard public health, and contribute to a more sustainable and responsible future.

Future Recommendations

To advance electronic equipment waste management and align it with the Sustainable Development Goals (SDGs), the following policy recommendations are of paramount importance:

- Comprehensive Legislation: Governments should proactively devise and enforce comprehensive legislation that spans the entire life cycle of electronic equipment waste. These regulations should encompass diverse facets, including robust collection systems, stringent recycling standards, restrictions on hazardous substances, and the implementation of extended producer responsibility (EPR) programs. Such measures are essential in fostering responsible electronic equipment waste management practices.
- International Collaboration: Given the global nature of the electronic equipment waste problem, enhanced international cooperation is indispensable. Nations must collaborate to harmonize their electronic equipment waste management policies. By sharing best practices and strategies to combat illegal electronic equipment waste trade and dumping, the international community can more effectively address this issue. Moreover, facilitating technology transfer and capacity-building initiatives in developing nations is crucial.
- Public Awareness Campaigns: Governments, NGO's, and industry stakeholders, should launch extensive public awareness campaigns. These campaigns should aim to educate the public about the multifaceted impacts of electronic equipment waste, including environmental, social, and health consequences. Furthermore, they should underscore the significance of responsible disposal practices and the importance of recycling. Raising awareness is instrumental in fostering a culture of responsible electronic equipment waste management and prompting behavioral change.
- Educational Initiatives:Integrating electronic equipment waste management education into school curricula and vocational training programs is pivotal. By imparting knowledge about the adverse effects of improper electronic equipment waste disposal, recycling methods, and the promotion of sustainable consumption patterns, educational initiatives empower future generations to confront the electronic equipment waste challenge.

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- Producer Responsibility: Governments should establish clear guidelines and regulations regarding extended producer responsibility (EPR) for electronic device manufacturers. This approach serves as an incentive for eco-design, encourages product durability, and promotes the development of more sustainable electronic products.
- Voluntary Initiatives and Partnerships: Collaboration among industry associations, businesses, and civil society organizations can lead to the creation of voluntary initiatives that advocate responsible electronic equipment waste management. These initiatives can emphasize the sharing of best practices, the implementation of sustainable supply chains, support for recycling and recovery efforts, and contributions to funding research and innovation in electronic equipment waste management.
- Circular Design and Material Innovation: Encouraging research and innovation in circular design and the development of eco-friendly materials can result in more sustainable electronic devices. Products designed with considerations for repair, upgradability, and recyclability can extend their lifespan and minimize waste generation.
- Advanced Recycling Technologies: Continuous research into advanced recycling technologies is imperative for enhancing the efficiency and effectiveness of electronic equipment waste recycling processes. Innovative methods for recovering valuable materials, such as rare metals and critical minerals, can contribute to resource conservation and reduce the environmental impact associated with electronic equipment waste recycling.

CONCLUSION

Electronic equipment waste management aligns with various SDGs that focus on responsible consumption and production patterns. By promoting extended producer responsibility (EPR), eco-design, and sustainable supply chains, electronic equipment waste management encourages the adoption of Resource-efficient economy principles, resource efficiency, and waste reduction. Strong policies and regulations are essential for creating an enabling environment for effective electronic equipment waste management. Governments should collaborate with industry stakeholders, civil society organizations, and the public to develop comprehensive legislation, enforce regulations, and raise awareness. Stakeholder engagement facilitates knowledge-sharing, innovation, and the development of replicable models. Continuous research and innovation are necessary to address emerging challenges and improve electronic equipment waste management practices. This includes developing advanced recycling technologies, exploring sustainable materials and design strategies, and enhancing monitoring and tracking systems for proper disposal and traceability of electronic equipment waste. By implementing these strategies, raising awareness, engaging stakeholders, and fostering innovation, societies can transition towards sustainable electronic equipment waste management and make significant contributions to the SDGs. It is imperative that governments, businesses, communities, and individuals work together to create a future where electronic equipment waste is effectively accomplished, resources are conserved, and the environment and human well-being are safeguarded.

ABSTRACT

Nanotechnology is one of the most relevant technical factors that have applications in different types of industrial sectors, and it seems to have a consistent scope of technical innovation that focuses on technical derivation with sustainable outcomes. In this study, the perception of nanotechnology and its prominent usage with potential outcomes in different industrial activities has been derived. In addition to this, the study has also reflected on the advantages along with some of the negative factors that come with nanotechnology and its integration. The study helps to evaluate the perception of understanding nanotechnology along with the purpose of evaluating the correlation between the social specifications and commercial attributes.

INTRODUCTION

The perception of nanotechnology is eventually regarded as the branch of science that helps to focus on the purpose of producing design along with the derivation of structural factors that helps to evaluate systems by manipulating the atoms and molecules. The process of manipulation incorporated in nanotechnology is more derived at a nanoscale level. Nanotechnology is often regarded as a small solution to different and big problems that help to derive the perception of producing nanoparticles that can be of great use

in different industrial sectors (Kirtane *et al.* 2021). Nanotechnology is heavily used in different types of industrial activities and it is extremely beneficial in terms of improving the manufacturing process and it supports the development and infrastructure revaluation of the production process. This helps to make the use of nanotechnology highly prominent in different industrial areas such as the engineering sector, medical sector, food industry, Information technology and communication sector, electricity industry and so on. The specification of nanotechnology is the branch that helps to manipulate the structure of the molecules related to different materials that have a revolutionary application with positive outcomes that makes the purpose of various industrial

activities and infrastructural factors even more sustainable (Sahoo *et al.* 2021). It is important to specify that the economic group and consistent competition easily achieved with nanotechnology in different

ways seem to have a positive impact. It is important to realise that nanotechnology comes at a cost of certain negative attributes that are also important to evaluate in the fields where it is typically used.

LITERATURE REVIEW

The prominent use of quantum nanoscience is one of the theoretical factors that has typically been incorporated in deriving man of science development and its technical specifications that help to focus on the quantum mechanism and the use of the coherent quantum effects that helps to focus nanostructure development. In addition to this, the nanotechnology theory is also specific with the conceptualisation of bottom-up and top-down approaches that helps to focus on nano-objects and their construction which is eventually helpful for deriving the purpose of nanotechnology (Heinrich *et al.* 2021). Therefore, it can be easily derived that the quantum science theory is one of the prominent theories that are incorporated in the field of nanotechnology that helps to understand its mechanism and approach of deriving the quantum development that helps to understand the purpose of using nanotechnology as a whole (Shen and Dierking, 2019). Nanotechnology also focuses on the approach of engineering specifications that helps to derive structurization, production process and designing of attributes that help to focus on atom manipulation at the nanoscale level.

BENEFITS

The worldwide market of nanotechnology is one of the major markets that seem to have prominent aspects and consistent commercial usage. It is important to specify that there are some consistent advantages that come with nanotechnology. It has been found that the use of nanotechnology has consistently changed the electronic goods and their development which is creating more opportunities for commercialisation and human access with sustainable outcomes (Weiss *et al.* 2020). Nanotechnology is one of those technical frameworks that is constantly being used in the medical field work and the healthcare sector is heavily facilitated by the potential uses of nanotechnology. Nanotechnology is making benefits for the medical industry as it is affecting the process of diagnosis and medication evaluation following a treatment process that remains extremely beneficial for focusing on patient care specifications. Nanotechnology in the medical field is also helping to eliminate the trial and error method in terms of drug prescription to the patients which is making healthcare services even more sustainable and accurate (Zhou *et al.* 2020). Nanotechnology has even more advantages as it helps to focus on the feasibility to

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

cure different types of illnesses to a great extent as it incorporates various equipment and tools that are specific for diagnostic procedures.

The engineering and the manufacturing industry is considering the framework of nanotechnology which is eventually extremely beneficial in terms of producing nano-products that are more resilient and powerful and along with that their equivalent to other non-nanotechnology products. Nanotechnology has made a favourable transformation and manufacturing process in a great way that is developing sustainable products (Larsson *et al.* 2019). Coming to the field associated with energy production it has been observed that nanotechnology is one of the most prominent techniques that has been extremely beneficial in terms of developing energy technologies that are more sufficient and sustainable with long term usage. Therefore the energy production along with the conceptualization of nanotechnology has typically increased the scope of energy saving technology and their development which can be easily availed by humans along with the approach of increasing an ability which is more sufficient in terms of deriving economic sustainability as well (Ghiasi *et al.* 2021). Nanotechnology makes the approach of energy storage in the devices even more sustainable which helps to specify effective operation. In the field of computing and electronics, the potential use of nanotechnology has helped to transform the electronic industry in such a way that it is creating more changes and possibilities that makes computing and electronic service highly sustainable (Babatunde *et al.* 2019). These are some of the prominent advantages that come with nanotechnology in different fields and industries.

DISADVANTAGES

The conceptualization of nanotechnology seems to have considerable disadvantages that are important to understand in order to specify its application. During the process of evaluating nanotechnology the production of nanoparticles is usually taken into consideration and this is eventually affecting the pollution level in barren rent which has increased majorly because of the nanoparticle. These nanoparticles are coming from various drugs and pharmaceutical activities following engineering works and the atomic bomb development process which is evaluated as a major environmental concern (Porcari *et al.* 2019). The implementation of nanotechnology is evaluated in such a manner that its technical factors are eventually reducing the use of human labour which is eventually creating complications in terms of deriving employment opportunities for individuals leading to a major economic imbalance that remains impactful. In most of the health care attributes and treatment related services nanoparticles or nanotechnology are consistently being used which is eventually creating the scope of inhaling nanoparticles by humans. This is eventually creating the white suitability of nanoparticles which is eventually reflecting a slow impact on the human host which is one of the most complicated factors that comes with the incorporation of nanotechnology that has serious health implications. It has also been observed that nanotechnology is one of the most risky and highly dangerous technologies that lead to major consequences if it is not handled accurately. In addition to this it is more costly which is making various medical processes, engineering activities and environmental factors more expensive and the average man is unable to access such technology for their own benefit (Sportelli *et al.* 2020). The perception of nanotechnology is also creating weapons that are highly dangerous and can be easily accessed by the common man which is typically going to have a social complication and can lead to susceptible human error that seems to be extremely negative for the environment.

METHODOLOGY

Statement of Problem

There have been several resources that helped to understand the positive factors that come with nanotechnology and its incorporation in different sectors and industrial frameworks. There have been notable prominent changes that have helped to increase the sustainability of various industries that have optimised for nanotechnology and its comprehensive usage. However, it is important to specify that the research additionally needs to focus on the practical and comprehensive negative factors that come with nanotechnology and the way it is seriously having an impact on social and commercial specification (Shang *et al.* 2019). More essentially it is important to evaluate that the study needs to understand the ethical concerns as well that come with the implementation of nanotechnology which is eventually reflecting various complications that come with the incorporation of nanotechnology in various industrial activities. The main agenda of this study is to synthesise the factual impact of nanotechnology and its integration in different fields that helps to focus on both the positive and negative factors along with the ethical attributes that are associated with it.

RESEARCH QUESTIONS

In association with the selected study, there are some prominent research questions that must be answered and are mentioned below.

- What are the main specifications that help to perceive the conceptualization of nanotechnology and the way it can be utilised for future growth and development in different industrial frameworks?
- What are the factors that potentially influence the application of nanotechnology evaluated services and make them more sustainable?
- How effectively is it important to utilise the perception of nanotechnology and its technical factors that will help to reduce the complications of environmental aspects and focus on the ethical value and its maintenance as well?
- Why is it important to use nanotechnology in the field of healthcare and derived by medical approaches along with a diagnosis of diseases and providing relevant treatment?
- What are the positive factors that come with the evaluation of nanotechnology in different industrial activities and make it more optimal for deriving sustainable outcomes?
- What are the different factors that seem to be extremely impactful in terms of deriving nanotechnology in various industrial activities and reducing its capability of acceptance due to ethical concerns?
- What are the social and ethical concerns that are associated with the functionality and integration of nanotechnology in different sectors and industrial factors?

RESEARCH OBJECTIVES

The following are the objectives that are associated with this study.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- To specify the prominent factors those are associated with the perception of nanotechnology and its performance manifestation.
- To evaluate the considerable advantages those come with the incorporation of nanotechnology in the different industrial activities specially.
- To recognise the concerning areas that are influencing the negative factors those are associated with the perception of nanotechnology in different industrial frameworks.
- To understand the ethical issues that come with the integration of nanotechnology and the way it is affecting the environment is sustainability in several aspects facilitating its after effects as well.
- The aim of the study is to investigate the conventional factors that facilitate nanotechnology and focus on the prominent concerns that will help to reduce the concerns of nanotechnology and use it significantly without any restrictions in different industrial activities.
- The focus of the study is to evaluate the purpose of understanding nanotechnology in the field of biomedical aspects.

RESEARCH METHODOLOGY

The perception of research methodology helps to deal with the prominent techniques and tools that have been typically integrated with the selected study. In association with this study the incorporation of both the qualitative research methodology along with the quantitative research methodology can be easily used that would help to focus on the derivation of nanotechnology (Strijker *et al.* 2020). The incorporation of qualitative research methodology will help to focus on the secondary resources that have already been established and have authentic information that is associated with them that would help to understand the perception of nanotechnology. The quantitative research methodology will help to focus on the evaluation of statistical analysis along with data evaluation and this will help to focus on the primary data collection process related to nanotechnology and its specification in different (Taherdoost, 2022). The combination of both the methodology has been selected reflecting on a mixed methodological approach that will help to specify the paper.

HYPOTHESIS

The following is the hypothesis that is relevant to the study:

- Nanotechnology has prominent advantages in different production processes and manufacturing aspects in various engineering and electricity industries which are going to enhance performances. This is the first hypothesis of the study.
- The second hypothesis of the study is that nanotechnology can immediately change the perception of industrial activities and make it more relevant to the sustainable outcomes that it comes with them.
- The final hypothesis associated with this study helps to specify the understanding of nanotechnology and its possibilities that will make the biomedical industry even more sustainable and effective with their approaches by considering the environment to consequences at the same time.

SCOPE AND LIMITATIONS

In association with the chosen study, it is important to specify that the subject matter of this paper helps to focus on the scope of the varied uses of nanotechnology in different fields and industrial activities. The effectiveness of understanding nanotechnology along with the negative factors is also important and remains an important part of the selected research and its scope that helps to focus on the evaluation of relevant information that helps to understand the conceptualization of nanotechnology and its application in specifications (Chauhan *et al.* 2020).

Through the study, it has been observed that the different aspects related to nanotechnology have been used for understanding the conceptualization of this technology. However, the study does not account for the perception of the negative consequences in a given manner that would have helped to focus on both the positive and negative factors in a sustainable manner which is eventually becoming a limitation related to this time (Martinelli *et al.* 2020). This has also been reflected in terms of accessing nanotechnology in specific fields and its application process which is also a major gap.

DISCUSSION

Nanotechnology in the Field of Engineering

In the field of engineering nanotechnology is one of the most prominent technical factors that is important and it is used for the purpose of manipulation related to the nanomaterials. The technical conceptualisation of nanotechnology is useful in terms of converting vital materials and structures into manipulated nanomaterials and this branch of engineering was eventually specified as NanoEngineering. Especially when it comes to the industrial commercialisation process nanotechnology is more specified with the approach of deriving the procedural activity that helps to manifest with the composition and derivation that supports modification and diversification of molecular factors (Singh *et al.* 2019). The most primary reason that helps to derive nanotechnology in the field of engineering is that it helps to enhance the overall quality of materials and it eventually helps to reduce various issues in terms of material diversification as it makes it more efficient and sustainable. There are different attributes that are associated with the field of engineering and have various subsections. The purpose of deriving nanotechnology has helped to focus on the development of materials that are more sustainable and self-repairing and have self-cleaning properties in them.

Nanotechnology in the field of engineering is typically used for Information technology engineering and mechanical activities along with other engineering facilities that help to derive the conceptualization of product consumption and diversification process in the most sustainable manner. Moreover in the field of electricity derivation nanotechnology is also used as it helps to focus on the internal engineering required for electronic specifications and helps to put outputs that are more conductive and strong for electrical usage. In addition to this, it is predicted that in the field of engineering and its different sections, nanotechnology is eventually regarded as the prominent feature that helps to enhance supportive developments in the field of engineering. The department of civil engineering heavily uses nanotechnology and it focuses on the scope of sustaining the structural and production and development in civil developments (Abdussalam-Mohammed, 2019). More essentially it can be evaluated that

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

the importance of nanotechnology has increased massively as there are consistent developments that are taking in its approach which is eventually making the integration of this technology in the field of engineering even more compulsory. These are some of the prominent factors that are associated with nanotechnology and engineering.

Biomedicine Industry Using Nanotechnology

The prominent specifications that are associated with nanotechnology are a useful branch of technology that helps to manipulate the structural evaluation of molecular materials which eventually helps to change the properties of a substance that helps to integrate revolutionary applications in different arenas. In the field of biomedicine, nanotechnology helps to focus on the improvement of various diagnosis processes and insurance for the treatment of different types of neurodegenerative diseases and specifically for cancer treatment it is used. Moreover, the nanotechnologies that are typically used for deriving nanoparticles seem to have a consistent impact in terms of improving the pharmaceutical products that are used for medicinal purposes (Wu *et al.* 2021). More essentially the combination of biomedical technology is more specific with biology and nanotechnology incorporation that helps to focus on innovative technology that is beneficial for the improvement of biological processes by considering the nanoscale that helps to enhance the medical practices and eventually, it specifies the different types of biomaterials with accurate measurement evaluation. Moreover, the perception of increasing therapeutic development and focusing on a stable approach to deriving sustainable medical Services is heavily facilitated by the application of nanotechnology that helps to focus on biomedical development.

The perception of deriving micro-scalability is made possible by integrating biotechnology and this helps to focus on different types of diseases such as neurological diseases, cancer, different types of chronic diseases and various other viral and common diseases that can be easily reduced. Therefore it can be easily derived that the application of nanotechnology is more constructive and it helps to focus on the consistent scope of development using technical specifications that possibly focuses on the evaluation of accurate treatment. Especially when it comes to the field of diagnostics, nanotechnology is helpful in terms of focusing on the nano scaling purpose that eventually helps to derive nanomedicine specification which is also a part of nanotechnology (Javed *et al.* 2020). This is eventually specific that nanotechnology is also helpful in deriving drug delivery and this plays an important role in terms of the delivery of drugs for the improvement of pharmaceutical development which is eventually one of the core parts associated with the biomedicine industry. These are some of the prominent aspects that are associated with the industry of biomedical factors to that of nanotechnology.

Industrial Use of Nanotechnology

The industrial specifications of nanotechnology are regarded as one of the most influencing techniques that have helped to specify in different types of technology such as the electricity industry, engineering industry, medical sector and many more. It is important to understand that the perception of utilising nanotechnology is more specific and it is important to focus on certain factors that help to ensure that nanotechnology is used in a sustainable manner (Mandeep and Shukla, 2020). The perception of nanotechnology is typically used in different types of industries and it is majorly evaluated in different types

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

of industrial work functions and this makes the purpose of deriving various opportunities that supports the consistent scope of evaluation and production process that is more composite in nature. When it comes to the industry of food and cosmetics nanotechnology is one of the acute technical factors that has helped to specify on the approach of food processing and packaging (Garcia-Segura *et al.* 2020). Nanotechnology has helped to enhance the bioavailability of different types of nutrients and helps to preserve the food in a sustainable way that can be easily consumed by individuals once the food has been processed accordingly. Therefore it can be easily evaluated that biotechnology is eventually creating more sustainable opportunities for the food sector that helps to focus on the development of food and derive the mechanical consistency which is eventually creating the scope of improving the food production and its quality maintenance as well.

In the industry of cosmetics and skin care, biotechnology is heavily used as it helps to focus on the drug related derivation and also helps to derive some medicinal attributes which help to develop the cosmetics and evaluate its production process accordingly. This is eventually one of the most core factors that help to focus on the advantages of integrated nanotechnology in different types of industrial works that helps to focus on the conceptualization of biodegradability along with compatibility of various types of nanomaterials that has a prominent impact on commercial usage. This technology has a prominent aspect and is constantly being used for biotechnology purposes and eventually helps to focus on the development of various medication opportunities as well (Sim and Wong, 2021). More specifically in most of the industry activities nanotechnology acts as a modification process that helps to the right manner of structuralisation and focuses on the derivation of functional compounds that is highly required for establishing industrial activities in different types of industries specifically. The textile industry is also consistently using nanotechnology that helps to derive their activities and operational areas.

Nanotechnology and Environmental Science

Environmental science is one of the four industrial activities where the perception of nanotechnology is consistently being used and it is one of the most influential factors that helps to stabilise environmental activities. More essential the impact of nanotechnology is typically used in the field of environmental science and development to focus on the purpose that helps to reduce the generation of pollution and eventually derive the manufacturing process in such a manner that will help to generate sustainable opportunities that support environmental development (Zhang *et al.* 2019). It is important to realise that there are various factors that facilitate the scope of driving nanotechnology. However, in the field of environmental science nanotechnology is typically used for deriving the scope of sustainability and eventually, it helps to understand the devastated nature of the ecosystem based on which prominent factors can be derived that will help to support environmental sustainability at its best. Nanotechnology also helps to focus on electricity generation in a sustainable way which is also a prominent environmental issue that can be easily reduced if used consistently (Gupta, 2020). The positive factors that help to focus on the development of recycling and maintaining the ecological balance can be easily optimised by considering nanotechnology evaluation that helps to derive nanoparticles that are more sustainable for environmental treatment and development.

It is important to specify that there are positive factors that come with nanotechnology on environmental science and ecological factors but there are some prominent negative aspects that come with nanotechnology. It has been observed that nanotechnology can have numerous impacts in terms of producing toxicity

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

because of the nanoparticles that are produced during the process of nanotechnology. Nanoparticles and their exposure to the environment eventually reduce the sustainable derivation of the ecological factors which is eventually producing more toxic materials (Zhang *et al.* 2021). It has also been observed that the particles that are evaluated from nanotechnology have certain complications in terms of deriving their recycling ability and the perception of sustainability which is eventually making the society have prominent concerns that come with the incorporation of nanotechnology in various industrial activities.

CONFLICT OF INTEREST

While discussing the different aspects that are associated with the perception of nanotechnology and its impact on different industrial activities, a prominent conflict of interest can occur if the research is eventually creating certain economical aspects or considering personal attributes that are eventually addressing nanotechnology. The scope of neutralisation in association with the chosen topic of the study can eventually come at a point of biasness which is eventually one of the critical conflicts of interest that eventually needs complications in terms of establishing the outcome of the study (Gottardo *et al.* 2021). In addition to this another significant conflict of interest is associated with the lack of transparency maintenance with the financial factors and other social activities that are associated with nanotechnology and its specification in different types of industries. However, it is important to focus on the neutral approach of the research that will help to focus on the derivation of nanotechnology without addressing biases.

CONCLUSION AND RESULTS

On the conclusion of the selected study it can be easily derived that there are some prominent advantages and the consistent use of nanotechnology in different fields seems to have both benefits and negative impact that needs to be evaluated in the commercial and social context. Nanotechnology is one of the most valuable factors that has predominantly been used in different types of industrial activities that have helped to improve the sustainability of those industries and their operation and activities that has made it more strategic and well oriented with the outcomes specifications (Kumhar, 2020). However, there are some after effects that are associated with the nanotechnology evaluation which is eventually regarded as highly complex and it can lead to various consequences which must be taken into consideration before the implementation of nanotechnology.

The research helps to indicate that there are some prominent advantages that come with nanotechnology and it is heavily used in different types of fields that make it more sustainable for the scope of social development that supports commercialisation. Nanotechnology has used technical attributes that make things more effective and focuses on the durability and strong evaluation that has benefits for various industrial activities. These are the main factors that have been evaluated in this study and it helps to understand the responsibilities along with the social, commercial and ethical factors that help to coordinate the understanding of nanotechnology in different types of fields (Sridhar *et al.* 2021). More essentially the study has helped to support that nanotechnology is becoming one of the most powerful technical factors that is eventually having various changes in the environment and industrial specifications focusing on the scope of sustainability.

Chapter 15
Opportunities and Challenges in Solar Photovoltaic Waste Management

Bhanu Prakash Saripalli

ABSTRACT

With the current global overexploitation and depletion of coal resources, it has become necessary to shift toward renewable energy sources to fulfil the world's energy requirements. Among these alternatives, solar energy stands out as the most promising solution. The sun, known for its life-enhancing properties, showers the Earth with an abundant amount of energy. In the case of India, for instance, the country receives an impressive 5000 trillion kWh of energy annually, with a substantial portion of the nation enjoying daily solar radiation ranging from 4 to 7 kWh per square meter. India has demonstrated worthy expertise in harnessing solar energy. Following coal extraction, solar energy developed as the most dependable and widespread energy source capable of meeting the world's energy demands. The study addresses the essential facts of solar waste management as it currently exists in India in addition to the challenges related to managerial policy. Waste management will improve as solar panel installations expand.

1. INTRODUCTION

Solar energy has emerged as a prominent solution to provide for the rising energy needs of expanding populations. Solar photovoltaic technology efficiently converts solar energy into electricity, contributing

to climate change mitigation. While the progress and adoption of solar photovoltaics have positively impacted energy system decarbonization, it is crucial to address the proper disposal of end-of-life solar panels to prevent potential toxic waste concerns. As solar installations continue to expand globally, there is a growing emphasis on effectively managing the end-of-life phase of solar PV panels. These panels house valuable metals like silicon, silver, and copper, which can be salvaged and reused, thus lessening the need for new raw materials. This trend aligns with the principles of a circular economy, where materials are recycled and repurposed, minimizing waste. Moreover, the domain of solar PV waste management carries the potential to generate employment opportunities, spanning roles in collection, recycling, and component reclamation. The ultimate concern is environmental protection. Currently, India is projected to generate around 200,000 tonnes of solar photovoltaic waste by 2030, and this figure is anticipated to escalate to 1.8 million tonnes by 2050. Globally, solar waste might surge to an estimated 60 million tonnes by that time. To curb the adverse impact of ongoing expansion, solar waste has been newly classified under waste electrical and electronic equipment, aiming to mitigate its potential repercussions (Rathore, N., & Panwar, N. L., 2022). India has only recently started using solar panels; therefore, the nation now has little waste building up. However, predictions show that the amount of this waste is expected to increase dramatically, ranging from 4.4 to 7.5 million tonnes by the year 2050. Despite India's well-developed infrastructure for recycling electronic waste, there are currently no explicit standards for the end-of-life handling of solar PV panels. Instead, the General Waste Law's guidelines for waste management apply to how their waste is handled (Majewski, P., et al., 2021). Sufficient disposal and recycling processes are imperative to prevent the release of hazardous substances, such as cadmium and lead, inherent in solar panels, into the ecosystem. Establishing a robust recycling infrastructure remains a significant hurdle in various regions, delaying the efficient handling of accelerating waste volumes. Due to the hazardous elements present, careful management and disposal techniques are required to avert environmental contamination. A lack of uniform regulatory frameworks and policies for PV waste management across differing jurisdictions complicates the recycling endeavor. The intricate composition of solar panels, incorporating diverse materials, necessitates innovative technologies to effectively extract and segregate components. The economic feasibility of recycling hinges on factors like recycling costs versus the value of the reclaimed materials. There exists a notable gap in awareness and education among consumers and industries regarding the significance of proper PV waste management, which has led to improper disposal practices. Despite their impressive 25–30-year lifespan of producing clean energy, the improper handling of end-of-life solar photovoltaic modules can pose environmental risks. This concern becomes more critical as the global utilization of photovoltaics expands rapidly, contributing substantial clean energy.

India will face significant challenges in the future when it comes to handling the management and disposal of solar PV waste. This area has been neglected for a long time and is known for its informal, unscientific approach, necessitating immediate attention (Sheoran, Sharma, and Kumar, 2020). The implementation of an online PV waste monitoring system, whether in the early phases or during the end-of-life phase, could be helpful in easing these worries. A system like this would make it easier to track discarded modules extensively, giving regulatory agencies and other stakeholders the information, they need to create useful policies and procedures. Solar PV waste is still substantially excluded from these rules, despite India having adopted the E-waste Management Rules of 2016 (CPCB 2018), which significantly differ from the 2011 version by including the idea of extended producer responsibility (EPR). This raises questions regarding the likelihood of improper disposal, including the use of open dumping grounds or unregulated landfills (EU 2021). The appropriate handling of PV waste is hampered by the

lack of incentives, legal frameworks, and awareness of the value of extractable components and their corresponding environmental effects.

Only 10% of all solar PV waste is now recycled globally, which is concerning and indicates a serious lack of operational infrastructure availability (Lunardi et al. 2018). The management of PV waste is a critical matter as the solar industry expands exponentially, which is made worse by the lack of effective legal and regulatory frameworks. Solar technology clearly has a positive impact on the environment, but if adequate disposal procedures are not in place when it reaches the end of its useful life, this impact could become negative. Open dumping of solar panels could result in serious environmental pollution if done improperly. Heavy metals including lead, tin, and cadmium are included in these panels, which is a cause for concern. The waste is harmful because of the presence of these heavy metals. For instance, a typical polycrystalline PV cell has a hazardous material content of 0.15 g/W. This would amount to about 62.26 tonnes of hazardous materials for an expected 33,205.36 tonnes of PV cell waste (Tasnim, S. S., et al. 2022). The environment and public health are at risk since this hazardous waste has the potential to contaminate not only soil but also groundwater and surface water.

1.1 Solar PV Technologies

Solar PV technology can be categorized into three generations: first, second, and third. Crystalline silicon (c-Si) wafer-based cells, which are readily accessible on the consumer market, make up the first generation. The second generation comprises a few thin-film technologies, such as single-junction Gallium Arsenide (GaAs) cells, amorphous Silicon (a-Si) cells, Copper indium gallium di-selenide (CIGS) cells, and Cadmium telluride (CdTe) cells. Because they are produced in large quantities and have several applications, these two generations currently dominate the solar PV market. With a remarkable 93% production capacity, c-Si cells outperform other second-generation technologies, with 24% of that capacity attributable to mono-crystalline and 69% to multi-crystalline technologies. Amorphous silicon and cadmium telluride make up 3% and 2.5%, respectively, of the entire manufacturing of thin films, while copper indium gallium di-selenide makes up less than 2% (Shubbak, M. H. 2019). The third generation of PV technologies, which is geared towards industrialization, is still in the research stage. Multijunction cells, Dye-Sensitized Solar Cells (DSSC), Perovskite Solar Cells (PSC), and Organic Solar Cells (OPV) are among the promising technologies in this area. Future solar PV applications may benefit from these developments, although they have not yet been commercialized due to ongoing research and development activities (Oteng, D., Zuo, J., & Sharifi, E., 2022). Solar PV panels have an average lifespan, therefore if left untreated, those put between 1980 and 1990 are currently in their end-of-life phase. This issue is anticipated to get worse over time. This emphasises the requirement for researching workable strategies for controlling solar panels towards the end of their useful lives. Understanding the construction of solar panels is a vital first step when thinking about recycling them. Although silicon-based and thin-film-based PV panels are the two main varieties based on material composition, the dominance of silicon-based panels—which account for over 95% of the PV market—shifts the primary focus towards the recycling of crystalline silicon-based PV panels (Majewski, P., et al., 2021). Among photovoltaic technologies, silicon modules are the most prevalent. Unfortunately, these modules have demonstrated limited economic viability for recycling due to challenges like material mixture, separation difficulties, and low material value. As a result, the recycling cost is often not offset (Deng, R., et al., 2019). Mono- or poly-crystalline silicon makes up the majority (> 80%) of the installed panels' predominant composition. In addition to silicon, these panels also contain glass, copper, aluminium, tin, and silver.

1.2 End-of-Life (EoL) of PV

Naturally, the production of electrical energy decreases as the efficiency of PV panels ages. The efficiency gradually drops until it reaches a minimum of around 14%, at which point the photovoltaic unit is no longer able to pay its running expenses and eventually reaches the end of its useful life. According to reports from the National Renewable Energy Laboratory (NREL), a cell typically loses 0.5% of its energy annually. After around 25 years of use, the efficiency of the unit approaches a limit where it can no longer be used, which causes the PV units to stop working and become waste. The reduction in efficiency is greatest during the first year, where it typically averages around 2.5%, and then it gradually gets smaller as time goes on. This annual efficiency decline is a result of several variables, including exposure to ultraviolet rays, different weather patterns, dust buildup, probable failures, and poor ability (Jordan, D. C., & Kurtz, S. R., 2013).

Figure 1 illustrates the Impact of India's solar production process on the environment. Waste from solar modules can be categorized based on its economic value, recyclability, and environmental impact. Due to the incorporation of potentially hazardous components during manufacturing and the lack of suitable recycling facilities, managing module waste is a considerable difficulty. The solar industry needs to adopt a thorough closed-loop life-cycle management plan if it wants to back up its promises to be a source of green energy. This strategy is necessary to address important issues including the effects of module production on the environment and the recycling of end-of-life modules.

1.3 PV Waste

Solar PV modules invariably reach their end-of-life stage and need to be replaced because all technologies have a finite lifespan. The average usable life of these PV modules is 30 years. PV installations are growing quickly, and as a result, more modules will eventually reach the end of their useful lives. This will result in a corresponding increase in waste. A report from the International Renewable Energy Agency (IRENA) and the International Energy Agency Photovoltaic Power Systems Programme (IEA PVPS) Task12 in 2016 predicted that the cumulative global waste from PV modules would be between 1.7 and 8.0 million tonnes by 2030 and 60 to 78 million tonnes by 2050. Electrical and electronic garbage, or "e-waste," produced a record-breaking 41.8 million metric tonnes annually in 2014. Comparatively, during the same year, the annual global buildup of PV panel waste was 1,000 times smaller. According to predictions, by 2050, the annual growth in PV panel waste might approach 10% of the remarkable worldwide e-waste surge witnessed in 2014 (Weckend, S., Wade, A., & Heath, G. A. 2016).

China, a world leader in the production and use of PV modules, is predicted to gather approximately 3.5 million tonnes of garbage from malfunctioning PV modules by 2030. According to research, carbon steel will make up the majority of PV waste, amounting to about 1.45 million tonnes, followed by glass, amounting to 1.1 million tonnes, and smaller amounts of plastic, aluminium, copper, silicon, and silver. These figures provide a serious environmental concern, too, as there aren't many recycling facilities that can adequately handle PV waste. About 70% of PV modules are made of recyclable glass, and 30% are made of various recyclable metals like silver, copper, and aluminium. However, to properly extract these invaluable metals, suitable dismantling and recycling techniques are required. In addition to having value economically, recycling these metal elements helps manage PV waste in a way that is environmentally sustainable overall (Ghaleb Al-Aqqad, A. O., & Menyhart, J., 2023).

Figure 2. End-of-life solar PV waste for the world's top five nations by 2050

	2020	2025	2030	2035	2040	2045	2050
Japan	0.07	0.3	1.9	2.9	3.5	5.4	7.5
US	0.03	0.3	0.5	2	4	6.4	10
China	0.4	0.9	2	3.6	7.4	12.5	20

Figure 2 illustrates the End-of-life Solar PV waste for the world's top five nations by 2050. Cumulative PV waste volume data taken from source IRENA 2016 (Weckend, S., Wade, A., & Heath, G. A. 2016). According to this analysis, 0.4 tonnes of China PV panel waste will have accumulated by the year 2020. The forecasts show a sharp increase to between 0.9 and 2.0 million tonnes by 2030, then a sharp increase to 12.5-20 million tonnes by 2050. The government and PV producers are paying more attention to PV panel recycling because of the PV industry's fast growth in China. As a result, China established its own national framework for managing PV panel waste. China, the US, and Japan are likely to be the top three waste originators, followed by India and Germany.

2. OPPORTUNITIES

2.1 Resource Recovery

Solar PV panels contain valuable components including silicon, metals, and glass that can be removed and used to make new circuit boards or for other purposes. Reducing the need for new resources can save money and benefit the environment by properly adopting recycling and material recovery techniques. The field of recycling is currently dominated by mechanical, chemical, and thermal processes. Delamination of the sheets is followed by separation of the integrated parts and refinement to extract the metals. The experimental stage of these approaches is still ongoing, nevertheless. Solar waste recycling is still in its early stages on a worldwide scale. It is necessary to develop a variety of business models on an economic level to support the commercialization of recycling. Only a small handful of economically viable technologies have been able to make a significant impact on recycling business models. Mechanical, thermal, chemical, or a combination of these techniques are the main methods for controlling solar waste. Due to its cost-effectiveness, the mechanical approach is preferred in the modern environment. However, because silicon is extracted in powder form with significant contamination from mechanical grinding, this approach does not allow for the valorization of silicon (Cerchier, P. et al., 2022). The integrity of silicon is also seriously threatened by pure chemical processes, primarily because of ethylene/vinyl acetate copolymer (EVA) swelling. The most promising method for recovering and reusing silicon is the use of thermo-chemical treatment. The polymeric portion is burned during this novel process, which was tested on a small scale prior to industrialization in 2019. To achieve effective recovery and reintegration of the silicon component, this is supplemented by careful material separation and chemical treatment of the silicon cells.

The recyclable components used in PV panels and their composition are outlined in Table 1 (Source Xu, Y. et al., 2018). Front covers, electrical circuit connections for solar cells, a protective envelope made up of two encapsulant layers, and a rear cover (which can be a back sheet or tempered glass) make up the five main components of the widely used c-Si technology. In the context of c-Si technology, glass, and aluminium together account for about 80% of the total weight. Lead, copper, and tin are included in the remaining portion (Rathore, N., & Panwar, N. L., 2022). The present-day handling of c-Si and CdTe PV modules results in a minor portion (<5%) of the overall environmental impacts associated with residential rooftop PV systems. Among the impact categories, PV module recycling has the most significant contribution to climate change due to factors like transport, electricity supply, and waste disposal. Recycling processes for extracting glass, metals, and semiconductor materials from PV modules

Silver bar line	Ag 0.03
Polycrystalline silicon chips	Si 3.10
Adhesive sealant	10%
Glass	54.72
Tinned wire	Cu 0.45
Background	Plastic 17.09

have lower environmental impacts compared to the extraction, refinement, and supply of these materials from primary resources (Garvin Heath, 2019).

Various recycling methods for crystalline silicon PV waste were analysed in a study by Ardente and colleagues (Ardente, F., et al. 2019), from a life cycle perspective. The analysis compared the environmental advantages of recovering secondary raw materials with the life cycle effects of recycling in several scenarios. According to the analysis, typical or "base-case" recycling techniques were inefficient and occasionally fell short of statutory goals. On the other hand, recycling procedures with a high level of efficiency showed the ability to not only satisfy legal requirements but also recover priceless high-grade resources like silicon, glass, and silver. These priceless components, which are frequently lost in base-case recycling, could be successfully recovered using more efficient methods.

2.1.1 Approaches to Recycling Solar Panels

Within a solar energy system, solar panels are the basic power producing devices that can operate on their own. An aluminium alloy frame, tempered glass, an energy storage device, EVA, and a rear panel are all included in a standard panel. The recovery of silicon and the recycling of precious metals have been the main areas of inquiry for most solar-panel recycling studies. The article by Deng, Chang, Ouyang, and Chong (2019) provides a comprehensive review of the technological and economic aspects of recycling silicon PV modules. The study explores the recycling methods, techniques, and processes used for silicon PV module waste. It analyzes the environmental impact, resource recovery, and cost-effectiveness of different recycling approaches (Deng, R., et al., 2019). Author Fernández L. (Fernández, L. et al. 2011) describes the possibility of using leftover solar cell residue (SCR) from PV panels to make building materials. This novel strategy attempts to cut costs while also providing carbon dioxide (CO_2) cement, helping to reduce the waste PV systems produce in the process. Furthermore, the conversion of calcium aluminate cement (CAC) is avoided by including silicon cell waste as an active ingredient. Solar PV waste management could undergo a revolution thanks to artificial intelligence (AI), which will increase productivity, accuracy, and sustainability. Robots and machines with AI capabilities can automatically sort the various materials found in scrap panels. Metals, glass, polymers, and other components can be identified and separated, expediting the recycling process, and increasing recovery rates. With discarded panels, AI can find valuable minerals like rare metals. Techniques based on AI can be applied to improve the collection and recycling of waste (Fang, B. et al. 2023). AI can increase the effectiveness of exploiting these resources by optimizing the recovery process, obviating the necessity for mining, and

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

minimizing the environmental impact. Throughout their lifespan, solar panels may be monitored for health and performance using AI-powered sensors. This data can be used to anticipate when panels are getting close to the end of their useful lives, enabling prompt replacement and recycling.

There are now three different methods for dealing with used solar panels: component restoration, module disassembly, and silicon and other precious materials extraction from the components.

2.1.1.1 Component Repair

The component replacement does not include component separation or material recycling but strives to renew systems and prevent electrical breakdowns within board clusters. To examine junction box flaws and increase the power output of old solar panels, (Lin et al. 2011) used two distinct ways to assemble and disassemble. However, these methods are only effective when the outer layer encapsulation film and exterior junction box show signs of deterioration. Greater complexity in the methods is necessary when components age.

2.1.1.2 Module Separation

Material segregation is not included in physical separation, which also includes the mechanical segmentation of cracked panels. Author Dong (Dong 2009) investigated a method that involved disassembling solar panels and separating parts according to their physical and chemical characteristics, structural makeup, and materials. Thermal treatment was determined to be the most efficient option after considering the advantages and disadvantages of the three disposal methods for solar panels (manual disassembly, use of organic solvents, and thermal treatment). The process of processing crystalline silicon involves three distinct steps. To start with, a sodium hydroxide solution is used to remove the aluminum electrodes that are situated at the back of the panels. Saltpeter solution is used to retrieve the silver positive grid line. “Anti-reflective coatings on high purity polysilicon are removed from its surface using a hydrogen fluoride (HF) solution to recover and recycle the material. ‘ Due to the presence of antireflection film coatings and panel electrodes, converting crystalline silicon panels into pure silicon wafers necessitates several chemical etchings. Upon removal of the metal layer, reflector stripping, and doped junction preparation, chemical etching is followed by refinement, washing-up (“cleaning”), dehydration, and refinery.

2.1.1.3 Removal of Silicon and Rare Metals From Components

Metals and silicon that are of high value can be recycled from solar panels. There have been several studies conducted on the recycling of thin film solar panels (Berger et al. 2010). A study was carried out by Fernandez (Fernandez et al. 2011) to investigate the recycling of silicon panels in combination with cement in a thermal insulation system. A chemical process that involved acids, alkali solvents, and organic solvents was employed to dissolve or remove the EVA film. In their study on recycling thin film solar panels, Berger (Berger et al. 2010) examined wet mechanical methods such as grinding and flotation, as well as dry Mechanical techniques like vacuum blasting, including CdTe and CIGS recycling.

2.2 Job Creation

A wide range of employment opportunities that result from various stages of the waste management process are fostered by the field of solar PV waste management. These options cover a wide range of

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

activities, including collecting and categorization, recycling, research, creative problem-solving, and policy development. The growth of solar industry jobs and the management of PV waste involves a broad range of duties, including collection, recycling, research, the creation of policies, instruction, and innovation (Weckend, S., Wade, A., & Heath, G. A. 2016). In addition to addressing the environmental issues raised by PV waste, the growth of this industry also promotes economic development by creating job opportunities at various points throughout the value chain. The first step in managing PV waste entails gathering wasted panels and organizing them according to the material type, condition, and possibility of recovery. A team experienced in logistics, transportation, and skilled sorting techniques is needed for this stage. Roles include transportation specialists, sorting operatives, and employees at collection centers. The need for skilled technicians who can handle PV panels and carry out disassembly processes is increasing as panels are disassembled to recover important components. The relevance of professional personnel following environmental and safety guidelines is emphasized by the need to ensure the safe and contamination-free disposal of hazardous substances. Recycling plants require a qualified team with knowledge of various material extraction procedures. Experts in mechanical processing, chemical separation, and metallurgy are essential to successfully recovering priceless components from scrap panels, including metals, silicon, and glass. Researchers and innovators are needed to advance recycling technology, develop novel material extraction techniques, and investigate sustainable utilisation pathways. For more efficient and sustainable management of PV waste, this field needs scientists, engineers, and researchers who can create and test cutting-edge approaches.

2.3 Circular Economy

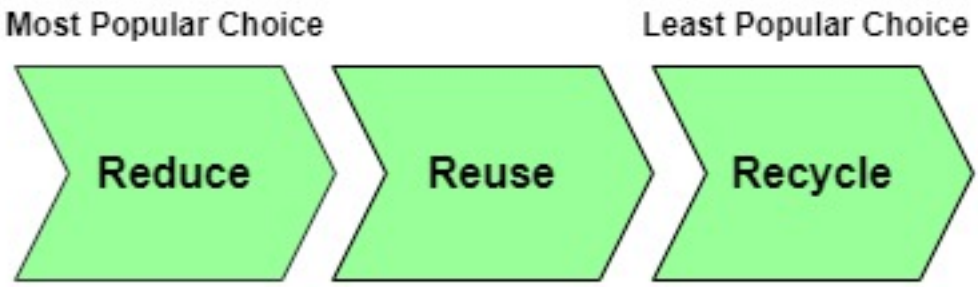
The circular economy (CE) is based on the idea that by taking practical steps, creating clever products, and using novel business models, it is possible to increase the lifespan of electrical and electronic equipment while reducing their constant creation (Naik, S., & Eswari, J. S. 2022). The effectiveness of these operations is hampered by a few issues, including inadequate collection systems, inferior technology, a lack of training in the unorganised sector, and financial limitations. The circular economy's fundamental belief promotes the development of clean, renewable, and sustainable technologies. Encouraging recycling and optimising product materials, entails developing strategies, policies, and developmental frameworks with the goal of minimising waste and maximising the usability and value of products. Implementing effective waste management strategies for solar PV panels aligns with the principles of a circular economy, where materials are utilized for as long as possible. By recycling and reusing components of PV panels, the materials cycle can be closed, minimizing waste generation, and promoting sustainability. The notion of a circular economy, particularly when applied to the context of solar PV waste, embodies the concept of maximizing the utility of resources and materials while minimizing waste, environmental pollution, and the necessity for new resources. Rather than adhering to the conventional linear model of "take-make-dispose," the circular economy strives to establish a self-sustaining system where materials and products undergo continuous cycles of reuse, refurbishment, remanufacturing, and recycling. This comprehensive strategy ultimately alleviates the pressure on natural resources and mitigates the adverse ecological consequences associated with waste generation.

In many developing nations, the domain of recycling, refurbishing, and remanufacturing (RRR) within the solar panel industry is categorized as small and medium-sized enterprises (SMEs). The pivot from a conventional 'take-make waste' business approach to the progressive 'reduce-reuse-recycle' model serves as the driving force behind circular economy (CE) initiatives, particularly in the wake of

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

substantial environmental challenges. In this transformative journey, SMEs emerge as pivotal players (Gautam A. et al., 2022).

The focal point of CE efforts is currently centered on end-of-life waste concerns, encompassing enhancements in waste collection, improved recycling methodologies, and the repurposing of materials and items that would otherwise be discarded. This study underscores the viability and profitability of SMEs adopting a circular economy-rooted model for the reuse and recycling of EoL solar PV waste within the context of a developing nation. SMEs are now progressively occupying crucial roles in domains like product restoration, disassembly, and remanufacturing. These smaller enterprises are proving the practicality of business models based on reuse, remanufacturing, and recycling. The overarching goal is the elimination of waste and the elongation of product lifespans. For the efficient management of solar PV resources, strategic placement of RRR SMEs becomes imperative. This localization is designed to ensure the optimal recovery of critical and rare earth metals contained within electronic waste. Raw resources are processed to make products, which are subsequently transported to consumers and eventually disposed to waste at the end of the cycle. This is a common linear economic model in India. A circular economy model, on the other hand, aims to convert waste streams through diverse processes into essential raw resources. This creates an ongoing closed-loop cycle that successfully reintegrates waste into the supply chain for materials.



From a larger perspective, the idea of a circular economy can be considered a crucial part of sustainable development, aligning with several of the Sustainable Development Goals (SDGs) of the United Nations. Among these targets, SDG 12 stands out as being especially relevant because it emphasises responsible consumption and production. About 10 of the seventeen SDGs are relevant in the context of improving the effective recycling of PV modules. This suggests that attaining sustainability within a framework for the recycling of PV modules has positive effects that extend far beyond the limitations of this industry. Such accomplishments might encourage other sectors to follow accordingly, making the PV industry an example in advancing more extensive sustainable practises (Farrell, C. C et al. 2020).

An organized approach to handling solar waste has a great deal of promise to benefit the environment and advance the idea of a circular economy. As a result, recycled materials will be used instead of new ones in manufacturing. The following section explores possible waste mitigation techniques in the context of India (Sharma, A. et al., 2023). The "reduce, reuse, and recycle" concept in solar PV waste management follows the principles of sustainable waste management and resource conservation. Here's how it applies to solar PV waste:

- **Reduce:** This idea emphasizes reducing waste formation in the first place. Reducing waste in solar PV entails designing and manufacturing panels and components to have the least possible negative environmental impact while having the longest possible lifespan. This can entail utilizing stronger and more long-lasting materials, optimizing production procedures to cut waste, and creating panels that are simple to disassemble and repair.
- **Reuse:** Finding new uses for parts or materials that are still useful is the process of recycling. This can entail refurbishing and fixing solar PV panels with minor problems so they can be used once again. For instance, even if a solar panel has lost a little amount of efficiency, it may still be used in off-grid systems or other situations where 100% efficiency is not required.
- **Recycle:** Recycling is the process of disassembling components and panels that have been discarded and utilizing those parts again to make new items. Recycling in the context of solar PV would entail removing valuable components from the panels, including silicon, metals (such as

IP Address: 223.231.178.10

Figure 3. Indian waste management strategies

silver, copper, and aluminum), and even rare elements like indium and gallium. New solar panels or other items can then be produced using these materials.

Figure 3 demonstrates the Indian waste management strategies. Solar PV waste management can lessen its negative environmental effects while also conserving precious resources and lowering the need for new raw materials. This idea is consistent with the overall goal of developing a circular economy, in which goods and resources are used and reused repeatedly while reducing waste and enhancing long-term environmental health. Recycling plays a significant role in efficient e-waste management. Recycling has the potential to significantly reduce the number of dangerous materials in the environment and conserve energy from priceless natural resources when done properly. Local governments must play a crucial part in promoting and supporting recycling activities. The effectiveness of these initiatives depends on raising awareness and educating the community at the same time (Naik, S., & Eswari, J. S. 2022).

3 CHALLENGES

3.1 Limited Infrastructure

One major issue that requires immediate action is India's inadequate infrastructure for managing solar PV waste (Sharma, A. et al., 2023). The challenge of managing end-of-life solar PV waste becomes more pressing as the nation quickly adopts solar energy to satisfy its renewable energy targets. However, the infrastructure needed to treat this waste is still in its infancy, creating difficulties like Insufficient Recycling Facilities, Lack of Awareness, Technological Challenges, Regulatory Frameworks, and Economic Viability. The following are the solutions to address these difficulties:

i. Consumers, producers, and the public can all benefit from public awareness efforts that highlight the value of good PV waste management and its effects on the environment.
ii. Investments by the public and private sectors in the development of recycling facilities, collection locations, and research into cutting-edge recycling technology are crucial.
iii. Creating and enforcing legislation expressly for managing solar PV waste can provide the sector a clear direction and promote ethical behaviour.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

iv. Collaborations with nations that have sophisticated recycling techniques can aid in the transfer of knowledge and technology to effectively handle PV waste.
v. Governments, businesses, recycling businesses, and research institutions can collaborate to coordinate resources and create efficient PV waste management infrastructure.

The current infrastructure for managing solar PV waste may be inadequate or underdeveloped in many regions. Adequate investment and development in collection, transportation, and recycling facilities are required to ensure proper disposal and recycling procedures. With the correct plans in place, India can overcome the difficulties presented by its inadequate infrastructure for managing solar PV waste and build a sustainable method of treating solar panels that are approaching the end of life.

3.2 Hazardous Materials

Materials having potential threats to the environment and human health due to their poisonous, corrosive, combustible, or other harmful characteristics fall under the category of hazardous substances in the context of PV waste. Solar PV panels are essential for producing clean energy; however, they can include some dangerous elements, mostly during production and in particular component parts. As solar panels get closer to the end of their useful lives, careful handling of these dangerous materials becomes necessary to prevent negative effects on both human health and the ecosystem. All different kinds of PV panels primarily consist of aluminium and glass. Indium and germanium are rare metals, with indium being more common than in the world of amorphous silicon. However, there is inadequate regulation over the disposal of materials like cadmium, lead, and polymer. As a result, these compounds have the potential to have a negative impact on both human health and the environment. For instance, authors (Ramos-Ruiz et al. 2017) stated that Cadmium telluride (CdTe) can cause significant lung inflammation and fibrosis when improperly controlled. Both the causes and effects of lead leaching are concerning. Loss of biodiversity can come from this due to reduced development and decreased reproduction rates in both plants and animals. Furthermore, it can result in a variety of health problems, compromising important processes like renal function as well as the immunological and brain systems (Leccisi, E. et al. 2016). CdTe panels are one type of thin-film solar panel that contains this significant heavy metal, which has the potential to be hazardous to both the environment and human health. Cadmium that is not properly handled may contaminate the soil and water, endangering both human health and ecosystems.

When these panels are retired or damaged, proper handling and disposal procedures are essential to prevent cadmium contamination. Lead is inherently hazardous and has the potential to severely impact people's health. When lead is exposed to the environment, it can seep into the soil and water, causing pollution (Xu, Y. et al. 2108). Hazardous waste may enter the environment if end-of-life solar panels are not properly disposed of. By the end of 2017, there were over 400 GW of installed PV capacity worldwide. By the year 2050, this number is expected to increase to almost 4500 GW. Given that solar panels typically last 25 years, it is predicted that by 2030, EoL solar PV waste will account for anywhere between 4% and 14% of total generation capacity, rising to an overwhelming 80% (or nearly 78 million tonnes) by 2050. As a result, in the decades to come, disposing of PV panels will likely become a substantial environmental issue (Chowdhury, M. S. et al. 2020). It's important to note that during the conversion from silicon, about 80% of the raw silicon is lost, which is relevant to the manufacture of crystalline silicon. In addition, silicon tetrachloride, a highly poisonous contaminant, is produced during this process. In addition, solar panels caused the release of nitrogen trifluoride (NF_3), a substance that has a greenhouse

effect that is more than 17,000 times stronger than CO_2 for more than a century. Due to their extremely poisonous characteristics, lead (Pb) and cadmium (Cd) in solar panels raise environmental issues. Nickel (Ni) exposure, among other toxic metals, can have serious health effects, including cancer and damage to organs like the kidneys, liver, lungs, and brain. Furthermore, connected to harmful effects on the respiratory, prostate, and blood systems are these hazardous substances. Additionally, their presence has been linked to death in both humans and wildlife as well as problems with reproduction, behavioural problems, and mortality. Extended Producer Responsibility (EPR), also known as Product Stewardship, is a policy strategy that addresses e-waste issues during these worries. According to this policy, product manufacturers must continue to be accountable for their goods during the post-consumer stage of the product lifecycle, which is in line with the rules established by the Organisation for Economic Cooperation and Development (Bajagain, R. et al. 2020).

Figure 4 illustrates the Photovoltaic panel waste categories and the impact they have on the environment (Data from Source Suresh S et al. 2019). PV panels' back sheets and encapsulants are made of polymer parts made of fluorinated and cross-linked polymers. Unfortunately, these materials can't be recycled effectively. When these polymers are burned, they release toxic fumes and other harmful compounds that are harmful to your health. The ecology may suffer serious harm if incorrect disposal takes place.

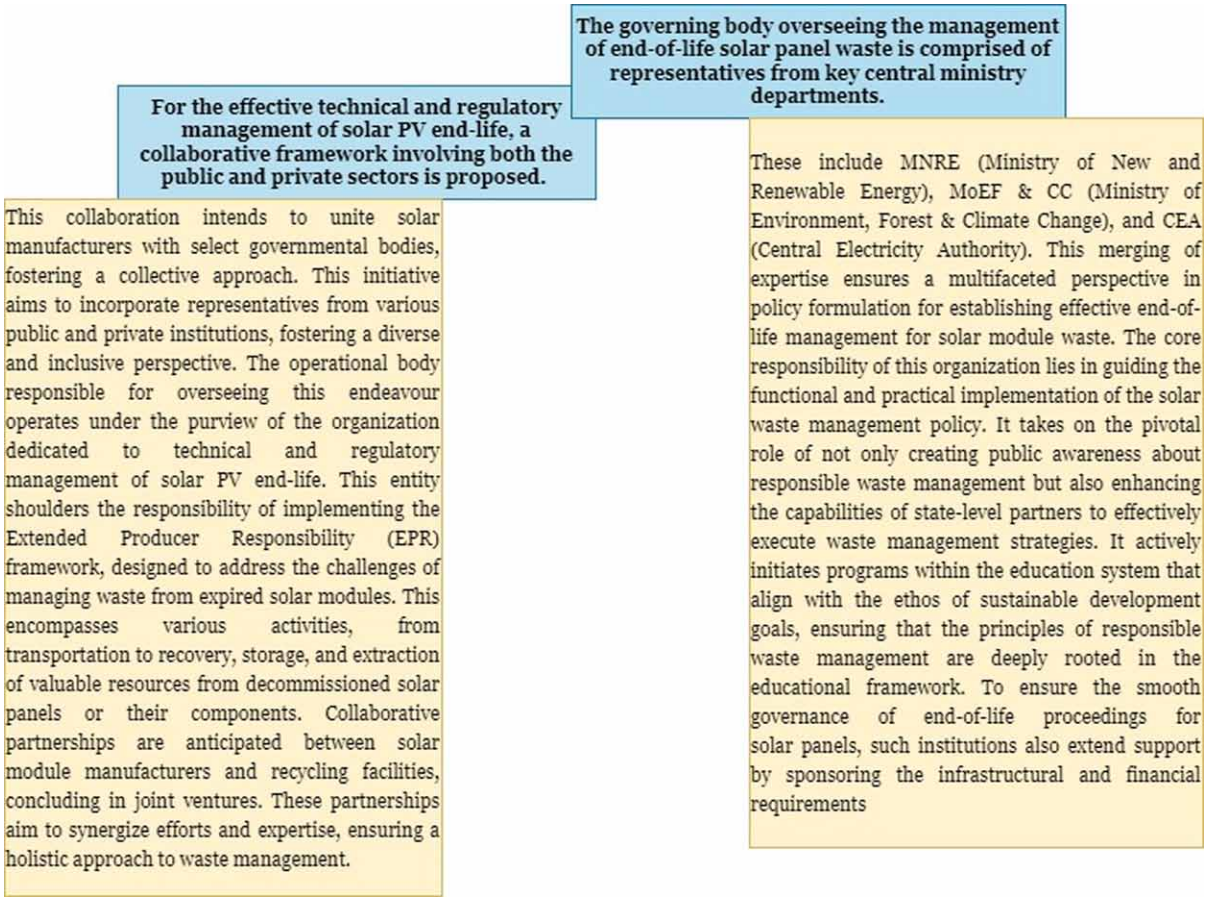
3.3 End-of-Life Collection

End-of-life collection for solar PV waste entails the systematic collecting, transport, and organization of retired or discarded PV panels as they approach the end of their functional lifespan. The amount of PV waste produced is increasing along with the utilization of solar energy. To avoid causing environmental harm and to maximize the recovery of priceless resources, this calls for precise management. This procedure is crucial for ensuring responsible disposal, effective recycling, and the reduction of negative effects related to improper treatment of PV waste. The process of end-of-life collection for solar PV waste is a pivotal stage in the lifecycle of PV panels. By constructing robust collection networks, heightening awareness, incentivizing responsible disposal, and fostering cooperation, the industry can ensure that retired PV panels are accomplished in a manner that is both ecologically sustainable and resource efficient. Proper end-of-life collection stands as a cornerstone on the path toward realizing a circular economy within the solar energy sector. After collection, the precise sorting and segregation of PV panels based on their material type, condition, and potential for recovery are crucial. This step streamlines subsequent recycling procedures, ensuring that materials are effectively extracted and reprocessed. The following are the two types of PV waste recycling technologies (Suresh S, Singhvi S, and Rustagi V. 2019):

3.3.1 Conventional Recycling Technologies

To separate laminated structures inside standard c-Si modules, traditional glass and metal recyclers frequently use mechanical techniques all over the world. This procedure includes a series of steps like the human or automated extraction of copper from junction boxes and aluminium from module frames. The next processes involve separating the glass and polymer fractions using crushers, sieves, magnets, eddy-current devices, and inductive and optical sorters. Following extraction, the metal fraction is sent to metal recyclers for smelting. Glass particles, however, are still mixed in with metal, silicon, and polymer shards. The glass becomes of inferior quality because of this mixing, making it unfit for use in the production of new modules. Instead, the construction industry uses this degraded glass to produce

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10



low-value glass fibre. Approximately 70–80% of the raw materials in a c-Si module can be recovered by weight using this traditional recycling method. Glass is the main component here, followed by aluminium and copper. High-value metals like silver and solar-grade silicon, as well as environmentally hazardous substances like lead and polymers, are noticeably absent from this procedure.

3.3.2 Advanced Recycling Technologies

Many materials, including glass, aluminium, copper, silicon, silver, lead, and tin, are recovered using a combination of mechanical, thermal, and chemical processes in advanced or specialised PV recycling. The 8–10% weight of the polymer fraction that cannot be recovered must be disposed of in a landfill or burned.

Governments and industry stakeholders can stimulate end-of-life collection through mechanisms like extended producer responsibility programs. EPR programs hold manufacturers accountable for the appropriate disposal and recycling of their products, motivating them to establish efficient collection and recycling systems (Sheoran M. et al., 2022). Figure 5 describes the associations to tackle the Solar PV End-of-Life Issues in the Indian framework.

Figure 5. Associations to address solar PV end-of-life issues

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

3.4 Regulatory Frameworks

When it comes to the recovery, transportation, recycling, and proper disposal of PV panels at the end of their useful lives, regulatory procedures controlling the management of waste from solar PV systems in India include a complicated framework. These frameworks are essential for promising the responsible and sustainable disposal of PV waste in India due to the country's rapid expansion of solar energy usage. It is apparent that the Indian context and the WEEE directives are important. A strong policy and regulatory framework for the nation can be created using the European Union's directives. The WEEE guidelines and the 2016 Indian E-waste handling standards both share the Extended Producer Responsibility (EPR) principle, which is the framework's central principle. This EPR-driven strategy focuses on consumer-centered electronic waste management and mandates that producers oversee the full product lifecycle. The integration of Indian and European rules demonstrates a shared commitment to environmentally responsible disposal of waste. It's interesting to note that both the EU and India view solar panels from the perspective of "one product, one equipment". The perspective contributed to certain waste management policies to exclude photovoltaic (PV) component systems. This strategic choice not only demonstrates compliance with EU rules (EU 2021) but also captures the core of circularity in solar panel waste management. Setting up a take-back mechanism, which is the duty of manufacturers, is essential to this circular approach. This method demands a planned sequence of tasks involving solar module recycling, collecting, storage, recovery, and disintegration (Sheoran, M. et al., 2022). The following is the analysis of India's regulatory procedures regarding solar PV waste:

i. India's environmental laws serve as the foundation for managing PV waste. Under the guidelines of the Environment Protection Act of 1986, the 2016 Hazardous and Other Wastes (Management and Transboundary Movement) Rules were formed, and they include requirements for the environmentally responsible management of hazardous waste, including the hazardous components included in PV panels.
ii. Due to their electronic components, PV panels fall within the 2016 E-Waste (handling) Rules' comprehensive legal framework for the handling of electronic waste. These regulations define standards for the collection, transportation, recycling, and disposal of electronic waste and include Extended Producer Responsibility clauses that hold producers accountable for the collection and appropriate management of end-of-life items. EPR plays a significant role in India's regulatory strategy for handling PV waste.
iii. Principles for the advancement of solar energy in India are outlined in the Jawaharlal Nehru National Solar Mission (JNNSM), also referred to as the National Solar Mission. The importance of proper PV waste management, including the development of infrastructure for collection and recycling, is emphasized by these recommendations.
iv. PV panel manufacturers are responsible for adhering to all legal guidelines for end-of-life management. This entails creating procedures for recycling, constructing systems for collecting, and making sure that hazardous waste is disposed of safely.
v. The Central Pollution Control Board (CPCB 2018), which operates under the auspices of the Ministry of Environment, Forestry, and Climate Change, issues directives for the management of PV waste. Technical standards for the secure handling, gathering, transferring, and recycling of PV panels are included in these suggestions.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

vi. The Indian regulatory environment supports research and development related to PV waste management. To efficiently manage PV waste, this entails developing cutting-edge recycling processes and sustainable practises.
vii. Regulations emphasize public education and knowledge of the importance of sustainable PV waste management. These frameworks also stimulate the improvement of stakeholder capabilities in the collection, transportation, and recycling of PV waste.

Globally, a significant percentage of solar manufacturing companies are now in the position of handling end-of-life solar waste, mostly through the adoption of frameworks for extended producer responsibility. As a result, industrialized countries are adopting more sophisticated solar panel technology less frequently. A robust regulatory framework focused on the management of end-of-life solar waste must be established concurrently. Except for the European Union, solar PV waste disposal lacks comprehensive regulation across other significant countries as highlighted in the International Journal of Environmental Science and Technology. Instead, for the management of solar PV waste, these countries primarily use non-regulatory solutions. A concise overview of developments in key global regions is presented in Table 2 (Komoto, K. et al. 2018, Sharma, A. et al., 2023). As seen in Table 2, different countries implement varied regulatory strategies.

It's interesting to note that the European Union primarily uses non-regulatory techniques to control end-of-life solar waste. Particularly, through mandates like WEEE, nations like Italy, Germany, and the UK have accepted the principles of Extended Producer Responsibility. The 2012/19/UE directive served as the first WEEE directive adopted by the European Union. This important initiative has created a solid foundation for encouraging resource utilization through recycling techniques. As a result, the casual disposal of waste in areas with ecological risks has significantly decreased. The recovery, collection, and recycling of solar panels are the main areas of concentration, serving as the cornerstone of a more environmentally friendly approach to the management of solar waste at its end-of-life stage.

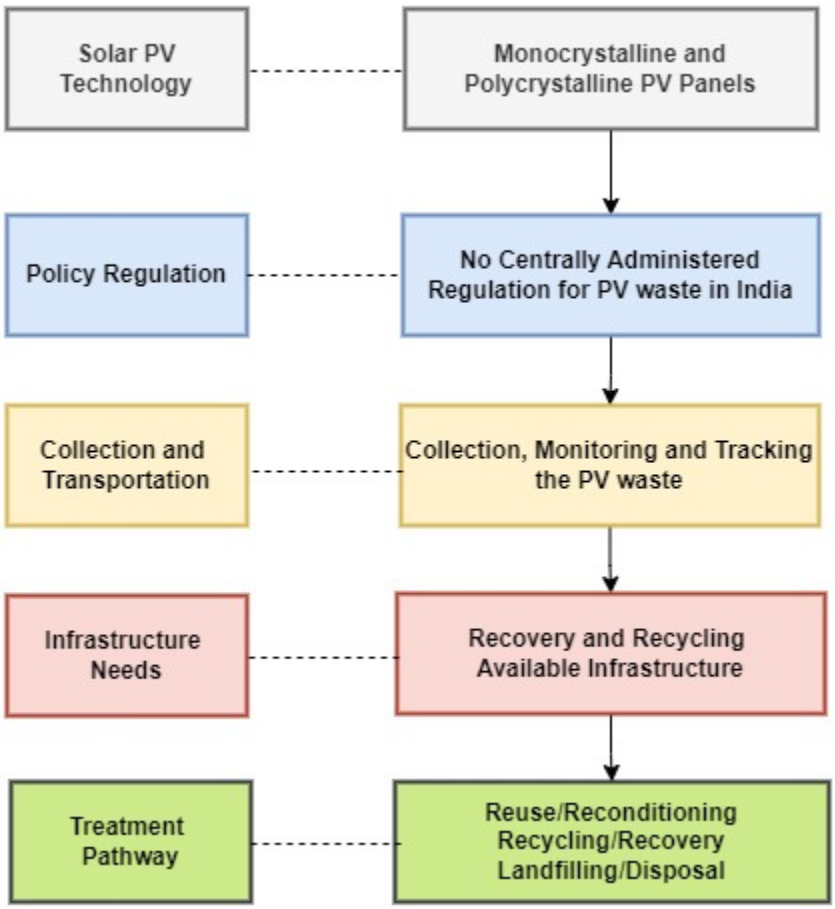

Table 2. National and worldwide scenarios for waste management

S. No.	Different Nations	Policy on Recycling Solar PV
1	India	Since there is no centrally administered regulation in India, only standard waste regulations that apply to household electronics are used to handle PV waste.
2	United States of America	Since there are no specific federal laws or regulations, only general waste laws are now in effect; however, several states, like California and Washington, are drafting their own regulations or legislation for the use and recycling of PV modules.
3	European Union	In 2003 the WEEE (Waste Electric and Electronic Equipment) directive of the European Union did not mention PV waste. The modification to WEEE involves the management of PV modules by EoL, and as per the latest WEEE directive, PV manufacturers will bear the main responsibility for collecting, handling, and treating PV waste regardless of where the production facility is situated. Nevertheless, there are legal provisions in place that limit this liability.
4	China	At the moment, neither a federal law nor a method of disposal exists, but the National High-tech R&D program's research on PV recycling and safe disposal has made recommendations for formulating guidelines for handling PV waste issues.
5	Japan	The nation is still formulating policies for recycling PV. However, there has been significant advancement in the research and testing of technology for the recycling of PV panels.

Dhanabalan Thangam (ctdhanabalan@gmail.com)

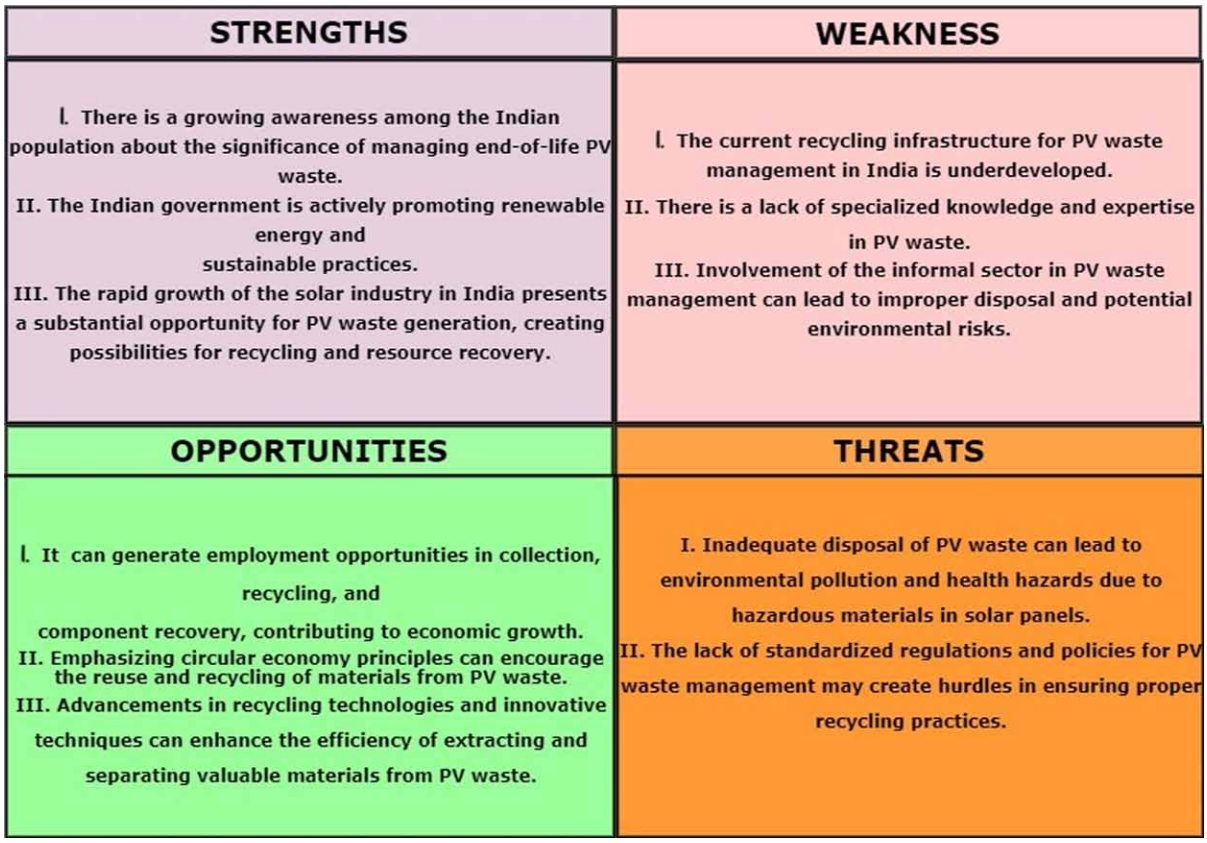
A thorough structure is needed to give stakeholders in solar PV waste management explicit instructions to increase resource efficiency. Figure 6 illustrates the theoretical structure of waste management systems for PV panels. The framework should address possibilities for recycling, export, and landfill disposal, as well as how to handle solar panels that are already in place (Oteng, D. et al. 2022). The current lack of tracking of PV waste both within and outside of the State borders emphasizes the necessity for better monitoring and management. Understanding the infrastructure and recycling needs is essential for sustainable waste management. Although certain States provide incentives for investigators and recyclers to create cutting-edge recycling technology, the majority of PV waste still goes to landfills in various States.

Figure 6. Theoretical structure: Waste management scheme for solar PV system



4 SWOT Analysis

SWOT analysis is a well-known technique utilized to assess and manage strategic objectives. The acronym SWOT refers to Strengths, Weaknesses, Opportunities, and Threats. While advantages and disadvantages are internal, opportunities and risks are external. SWOT analysis is a strategic planning method that is used to evaluate both internal and external elements that may have an impact on an initiative, organiza-

Figure 7. Management of end-of-life PV waste in India: SWOT evaluation

tion, or effort. SWOT analysis provides a thorough grasp of the internal and external landscape, acting as a compass to direct solar PV waste management solutions. The creation of a strategic plan demands the precise identification and utilization of all available resources, as well as an effective approach to dealing with potential weaknesses (Ghaleb Al-Aqqad, A. O., & Menyhart, J. 2023, Tasnim, S. S., et al. 2022). The SWOT analysis is utilized in PV waste management, as demonstrated in Figure 7. All available opportunities can be fully capitalized with the use of existing strengths.

CONCLUSION

PV waste is expected to increase significantly in the next years due to the explosive growth of solar panel installations. The immense volume of this upcoming waste surge presents an enormous challenge for proper management. If the problem of solar waste disposal is not properly resolved, it could have disastrous effects on the ecosystem. A problem in hazardous waste management might develop during the disposal of used PV materials. PV panel components could potentially contaminate the environment and present safety risks by dissolving into the soil and groundwater. There are still some barriers in the way of recycling solar PV modules, despite advancements. Comprehensive material recovery, process effectiveness, and financial viability are challenges. As a result, both during recycling and during the initial manufacturing of PVs, the recycling process continues to be complex, energy-intensive, and frequently requires the use of harmful

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

materials. It is necessary to significantly increase the amount of money allocated to projects related to solar waste, such as PV recycling, strategic planning, and monitoring. To prevent renewable energy initiatives from unintentionally burdening future generations with waste accumulation, end-of-life (EoL) solutions must be developed. A circular economy, a framework that minimises potential environmental effects and maximises resource use, has the potential to be sparked by the effective recovery of EoL PV materials. Artificial intelligence driven marketing efforts can educate the public about the value of recycling and properly disposing of solar PV waste, which promotes ethical consumer behaviour. The use of Artificial intelligence in solar PV waste management has the potential to improve productivity dramatically, lessen the negative effects on the environment, and encourage sustainable practices throughout the whole lifecycle of solar panels. The current study of the literature highlights important problems with solar PV waste and its handling, providing policymakers and recycling stakeholders with useful information, SWOT analysis, and India's regulatory procedures. Stakeholders may successfully go through problems, exploit opportunities, and create strategies that are in line with goals for sustainable waste management by recognizing their strengths, weaknesses, opportunities, and threats. In summary, resource recovery, employment creation, and the advancement of a circular economy are all possible outcomes of solar PV waste management. However, there are difficulties in developing infrastructure, managing hazardous chemicals, setting up efficient collecting systems, and putting regulatory frameworks in place. Maximizing the environmental and financial advantages of solar PV waste management requires tackling these issues through investment, innovation, and stakeholder cooperation.

ABSTRACT

This study aims to examine strategies and approaches that are designed to reduce the production of electronic waste. The primary methodologies encompass the development of electronic goods with enhanced durability and repairability, the facilitation of consumer education and awareness, the implementation of circular economy initiatives such as refurbishing and remanufacturing, the establishment of take-back and recycling programs, and the enactment of legislative and policy measures. These methods collectively contribute to the reduction of electronic waste by prolonging the lifespan of products, fostering responsible consumption, advocating for reuse and recycling, and establishing a regulatory framework that supports these efforts. Through the implementation of these strategies, it is possible to mitigate the environmental consequences associated with electronic waste, thereby fostering a more sustainable and resource-efficient electronic industry.

INTRODUCTION

Electronic garbage, or e-waste, is a global problem caused by the disposal of obsolete electronics. This category includes cellphones, laptops, desktops, tablets, refrigerators, washing machines, TVs, and more. E-waste generation has increased due to the rapid spread of electronic gadgets in modern society, their short lifespan, and frequent replacement, making it a major environmental and health issue. E-waste contains a huge variety of materials. Material types include valuable and harmful. Circuit boards, connections, and cables contain valuable materials like gold, silver, copper, and palladium. E-waste also contains glass from screens, monitors, cathode ray tubes and polymers from casings, wires, and insulation (Bakhiyi et al., 2018; Bhat & Patil, 2014). The dangers of e-waste are also serious. Electronics often include lead, mercury, cadmium, and flame retardants. These materials represent serious environmental and health dangers if not appropriately managed and disposed of. Incineration or landfilling e-waste can release dangerous compounds into the soil and water, damaging ecosystems and perhaps entering the food chain. E-waste management is difficult. The massive amount of electronics discarded each year strains waste management systems. Due to rapid technological improvement, electronic gadgets are frequently upgraded and replaced, increasing e-waste. Consumers typically choose new models, leaving behind functioning but outdated equipment. Health concerns are also associated with e-waste handling and disposal, especially in informal recycling industries in underdeveloped nations. When dismantling and processing e-waste, workers may be exposed to harmful chemicals, causing respiratory, skin, and neurological concerns. Managing e-waste requires recycling and responsible disposal. Recycling e-waste recovers valuable materials while protecting the environment. Recycling is complicated and requires specialized equipment and knowledge. E-waste must be recycled safely and ethically to protect workers and the environment (Ahmad et al., 2021; Davis & Wolski, 2009).

E-waste laws differ by country. Certain regions have extended producer responsibility (EPR) programs that require manufacturers and importers to properly dispose and recycle. Others have e-waste collection and recycling infrastructure to help people safely dispose of electronics. Electronic waste (e-waste) has become a global issue due to its numerous and detrimental environmental effects. E-waste includes smartphones, laptops, TVs, and refrigerators that have reached the end of their lifespan. These devices are crucial in modern civilization, but improper disposal and mismanagement have caused a variety of environmental issues that require immediate attention. E-waste contains hazardous compounds and heavy metals as lead, mercury, cadmium, brominated flame retardants, and polyvinyl chloride(Gupta, 2011). When improperly handled and disposed of, these toxic substances can permeate soil and water systems, causing environmental damage. Lead, which is found in CRT monitors and lead-acid batteries, pollutes groundwater, altering aquatic ecosystems and harming aquatic life. Informal e-waste recycling sometimes involves cremation, which releases dangerous chemicals. Dioxins and furans, which are highly poisonous to humans, are produced during electronic component combustion. These pollutants cause air pollution and harm human health. High levels of these pollutants can cause respiratory issues, cardiovascular illness, and cancer, highlighting their health risks. Poor landfill disposal of electronic waste can pollute soil owing to device degradation. The toxic components in electronic waste (e-waste) leak into the soil, affecting soil quality and plant health. The introduction of contaminants can disrupt ecosystems, harming insects, and microorganisms, which are essential for nutrient cycling. Cadmium and mercury can enter groundwater and surface water through inappropriate electronic device disposal. Pollutants then enter rivers, lakes, and oceans, endangering aquatic ecosystems and animals. Water pollution alters food webs, endangering aquatic organisms. This contamination may also threaten human communities that

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

depend on these water bodies for food, agriculture, and healthy drinking water. Rare earth elements, precious metals (gold, silver), and base metals (copper) are essential to the electronics manufacturing sector, which drives the global economy. Discarding electronics improperly wastes valuable resources. Due to the growing need for new electronics, mining and extraction have degraded habitats, eroded soil, and polluted water (V. Kumar et al., 2011; Roy et al., 2022; Wath et al., 2010).

Electronics manufacturing and disposal need a lot of energy. Electronic waste recycling and incineration take a lot of energy. Early disposal of electronics wastes energy used in their production. Recycling procedures that use a lot of energy may unintentionally harm the environment. For several reasons, efficient electronic waste management is crucial given the above concerns. Ecosystems are its primary responsibility, protecting biodiversity and decreasing air, land, and water pollution. Responsible electronic waste management reduces hazardous chemicals and heavy metals that affect the environment and humans. By making precious materials easier to retrieve, this method reduces the need for resource-intensive mining and extraction, preserving scarce resources. It reduces greenhouse gas emissions from incineration and energy-intensive gadget production. It also safeguards the physical and emotional health of those who manage and dispose of electronic garbage (e-waste), particularly those in informal recycling sectors, who are more at risk. Finally, e-waste laws encourage proper disposal to reduce environmental damage. Additionally, these policies aim to hold producers accountable for their products' whole lifecycle. For environmental and public health reasons, these criteria must be followed. E-waste is a global issue that countries are addressing. The idea that inappropriate electronic device disposal can harm the environment and health drives these initiatives. Some significant regional approaches:

Opinion Mining on E-Wastage From Various Countries

European Union: The EU has a comprehensive e-waste reduction and management policy. The Waste Electrical and Electronic Equipment (WEEE) Directive, which requires manufacturers, importers, and retailers to dispose of electronics responsibly, is its foundation. This directive promotes the recyclability and lifetime of electronic gadgets through eco-design. The EU promotes recycling and resource recovery. It has collection and recycling stations in member states to properly dispose of e-waste. Additionally, the Restriction of Hazardous compounds (RoHS) Directive bans hazardous compounds in electronic equipment, protecting the environment. The EU uses law, eco-design, recycling infrastructure, and public awareness to reduce e-waste's environmental impact and maximize resource efficiency (Lee & Na, 2010).

United States: E-waste reduction in the US is mostly addressed at the state level, resulting in fragmented legislation and efforts. Several jurisdictions require manufacturers to develop e-waste recycling programs or participate in Extended Producer Responsibility (EPR) efforts to recycle and properly dispose of their electronics. The Federal Electronics Challenge and other federal initiatives promote appropriate electronic asset management throughout federal departments. Many charities and recycling organizations gather and recycle electronic waste. The above efforts show electronic waste reduction progress. To ensure nationwide e-waste treatment, a comprehensive federal policy is needed (Kang & Schoenung, 2005).

Japan: Japan has successfully reduced e-waste by prioritizing collection, recycling, and resource recovery. E-waste management in the country includes mandatory recycling of some electronics. An Extended Producer Responsibility (EPR) framework requires producers to collect and recycle their products, creating an effective product take-back and recycling system. This policy has increased electronic garbage recycling in Japan, where advanced recycling methods extract valuable materials. Public

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

awareness efforts and eco-labeling encourage responsible garbage disposal and sustainable consumer choices. Japan's e-waste reduction efforts demonstrate its environmental and resource efficiency (Lee & Na, 2010).

India: India's comprehensive e-waste policy includes government actions, public awareness campaigns, and sustainable practices . The E-Waste (Management) Rules require producers, importers, and dealers to sustainably manage e-waste. Through the Extended Producer obligation (EPR) framework, environmentally friendly product design is promoted. The nation offers many e-waste collection facilities to help consumers and businesses safely dispose of electronic debris. Public awareness campaigns have also been created to warn about the environmental and health risks of unlawful disposal and encourage appropriate recycling. India is integrating the informal e-waste sector into the formal management system to promote safer practices and fund recycling technology research. By exchanging best practices and sustainable solutions, international collaboration helps India's efforts. Finally, India's holistic approach to electronic waste's environmental and health impacts is commendable (V. Kumar et al., 2011; Wath et al., 2010).

China: China has taken significant steps to reduce and manage electronic waste. Electronics manufacturers must take responsibility for their goods' whole life cycle, including disposal, under the Extended Producer Responsibility (EPR) framework. This encourages eco-friendly product design and recycling. China also provides subsidies for recycling and disposing of electronic waste. Manufacturers fund these funds, encouraging responsible product design and management. To ensure environmental and safety compliance, government regulation and supervision of e-waste recycling companies has increased. The above projects demonstrate China's commitment to reducing electronic waste's environmental and health impacts and promoting sustainable electronics practices (Ignatuschtschenko, 2018; Lee & Na, 2010).

Australia: Australia has implemented several e-waste prevention schemes. The National Television and Computer Recycling Scheme (NTCRS) made electronic device trash collection facilities more accessible. Producers and importers must collect and recycle electronic waste under this system. The shipment of electronic waste (e-waste) to poorer nations has been limited by government regulations to reduce improper disposal. Electronic waste disposal is stressed in public awareness and education activities. Australia is improving its recycling infrastructure to recover valuable elements from electronic devices. These efforts demonstrate the nation's commitment to reducing electronic waste and promoting sustainable electronic practices (Cucchiella et al., 2015; Janani et al., 2023; Xavier et al., 2021).

These examples show that governments are using extended producer responsibility, tough legislation, and recycling programs to limit e-waste's environmental and health implications. Combating the growing global problem of electronic waste requires global action. Electronic waste reduction is essential to reduce environmental and health implications. Different methods are used to reduce e-waste and promote sustainable management. Manufacturers should build electronics with longevity and repairability in mind. Easy-to-repair and upgrade products last longer and require fewer replacements. Extended Producer Responsibility (EPR) programs, which provide producers control over electronic product lifecycle management, are another key technique. This implies producers must collect, recycle, and safely dispose of their products after use. EPR promotes green product design and disposal. Consumer education and awareness initiatives also help people understand the environmental and health risks of inappropriate e-waste disposal. These activities encourage consumers to return outdated electronics through authorized channels for recycling and responsible disposal.

To make recycling and disposal easy, governments and electronics manufacturers often offer take-back and recycling programs. These programs recover valuable resources, decreasing resource-intensive mining

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform

IP Address: 223.231.178.10

and extraction. Worldwide, e-waste management laws set requirements for safe disposal, recycling, and environmental responsibility. These requirements must be followed to reduce e-waste's environmental and health implications. E-waste recycling efficiency is being improved by researching and developing new recycling technologies like robotic sorting and sustainable materials recovery. These e-waste reduction approaches are reducing the environmental and health implications of e-waste while preserving resources.

LITERATURE REVIEW

Electronic garbage, also referred to as e-waste, is experiencing rapid growth and has emerged as a significant waste stream on a global scale. This escalating issue presents a range of substantial concerns pertaining to both the environment and human health. Electronic garbage, commonly referred to as e-waste, encompasses a diverse array of perilous substances, including lead, mercury, cadmium, and arsenic. These hazardous compounds have the potential to permeate the soil and water, polluting the environment and presenting a significant threat to human well-being. The incineration of e-waste and the manufacturing of new electronic equipment can also have an impact on climate change. There exist various sustainable approaches and frameworks for mitigating the environmental consequences associated with electronic trash (e-waste) that can be effectively implemented. The methodologies and concepts discussed in this study can be classified into three primary domains, namely reduction, reuse, and recycling (Dasgupta et al., 2017; V. Kumar et al., 2011; Olla & Toth, 2010; Roy et al., 2022).

Reduction: Reduced waste is key to e-waste management. These initiatives promote proper use, repair, and disposal of discarded electronics to minimize environmental effects. Buying fewer electronics is one of the best strategies to reduce e-waste. This technique promotes buying electronics when needed. Before buying something new, people should see if an old item will do. Choosing robust, repairable gadgets is key. Long-lasting, easy-to-maintain electronics reduce e-waste by decreasing replacements. Repairing electronics is key to minimizing e-waste. Repairing electronics is greener than tossing them away. Electronics repair Online and library resources are available to DIYers. Repair shops for electronics are accessible. Electrical waste can be reduced and money saved by enabling electronic repair. Electronic waste management needs proper disposal of broken or outdated devices. Give electronics to charities or sell them to consumers and businesses to reuse. Recycling useless electronics is moral. Many local and online electronic waste recycling programs recycle components safely. Users can join e-waste recycling schemes from several electronics manufacturers. Using and disposing of electronics responsibly reduces e-waste's environmental impact (Hossain et al., 2015; Misra et al., 2021).

Recycling: Recycling is a good way to reduce electronic waste. Recycling electronic garbage saves precious components from landfills and incinerators. E-waste contains gold, silver, copper, and aluminum. Recycling electrical waste lets these components be used to make new products. This conserves natural resources and reduces manufacturing's environmental impact. Recycling e-waste reduces pollution. The combustion of electronic waste releases harmful pollutants. E-waste recycling prevents toxic pollution. Electronic waste recycling has many methods. A nearby e-waste recycling center or drop-off location can properly dispose of e-waste. Some electronics manufacturers and retailers offer mail-back initiatives to recycle e-waste. Recycling electronic garbage (e-waste) is crucial. Some e-waste contains lead, mercury, and cadmium. To protect people and the environment, these materials must be properly handled and disposed of (Chen et al., 2021; Kang & Schoenung, 2005; Nnorom & Osibanjo, 2008).

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Reuse: Reusing electronics reduces electronic waste. Electronic devices can be reused by using them yourself or giving them to others. Electronics can be reused in many ways. Examples are given:

1. Optimal electronics maintenance is essential. This will increase their durability. Repair and maintain electronic gadgets that break. Internet and library resources provide complete electronic repair education. Repair shops can be found locally.
2. Donate electronics to charities. Electronic gadgets are accepted by many philanthropic groups, including schools, hospitals, and homeless shelters. Sell electronics to consumers and businesses. If your electrical gadgets are in good condition, you can sell them to consumers or businesses.
3. Electronics have many uses. An old laptop can be used as a media center or digital photo frame.
4. Reusing electronics reduces electronic waste's environmental impact and saves money. It extends the lifespan of electronic devices and reduces their manufacturing.

Recycling electronics offers several benefits beyond reducing trash. The environmental impact of electrical gadget production has decreased significantly. Recycling helps us meet our resource needs sustainably by saving important natural resources. Electronic recycling also reduces harmful substances in the environment, increasing environmental quality. This technological invention preserves energy and reduces greenhouse gas emissions, helping to mitigate climate change. Electronic device recycling is vital to environmental preservation and global sustainability (Pariatamby & Victor, 2013; Xavier et al., 2021).

METHODS

Electronic waste reduction is essential to reduce environmental and health implications. Different methods are used to reduce e-waste and promote sustainable management. Manufacturers should build electronics with longevity and repairability in mind. Easy-to-repair and upgrade products last longer and require fewer replacements. Extended Producer Responsibility (EPR) programs, which provide producers control over electronic product lifecycle management, are another key technique. This implies producers must collect, recycle, and safely dispose of their products after use. EPR promotes green product design and disposal. Consumer education and awareness initiatives also help people understand the environmental and health risks of inappropriate e-waste disposal. These activities encourage consumers to return outdated electronics through authorized channels for recycling and responsible disposal. To make recycling and disposal easy, governments and electronics manufacturers often offer take-back and recycling programs. These programs recover valuable resources, decreasing resource-intensive mining and extraction. Worldwide, e-waste management laws set requirements for safe disposal, recycling, and environmental responsibility. These requirements must be followed to reduce e-waste's environmental and health implications. E-waste recycling efficiency is being improved by researching and developing new recycling technologies like robotic sorting and sustainable materials recovery. These e-waste reduction approaches are reducing the environmental and health implications of e-waste while preserving resources (Chatterjee, 2012; Fytili & Zabaniotou, 2008).

Design for Durability and Repairability

Durable and repairable electronics reduce e-waste by prolonging their lives and reducing premature disposal. These concepts are gaining hold in India as consumers and authorities recognize the environmental and economic benefits of durable, repairable products. Modular design is important for durability. Electronic products are becoming more modular, allowing users to replace or update individual parts. Instead of replacing the complete phone, smartphones with modular battery packs or camera modules let consumers change individual sections. E-waste is reduced, consumers save money, and resources are conserved. Standardization is crucial to repairability design. Electronic equipment producers in India are being encouraged to use standardized components and connectors. Standardization makes suitable replacement parts easily available, simplifying repair. Repair specialists may easily obtain standardized components, making gadget repairs cheaper and easier for consumers, reducing the incentive to abandon them prematurely. Repair documentation access is also crucial. India wants manufacturers to give consumers and repair technicians repair manuals and schematics. This encourages DIY electronics repair by empowering people to mend them. Consumers can avoid discarding repairable gadgets by having repair information readily available, reducing e-waste. For optimal repairability, spare parts must be available. Indian initiatives are lobbying for legislation requiring manufacturers to keep spare parts on hand after a product is retired. This dedication to spare parts availability ensures that users and repair professionals can get genuine replacement parts, lowering the probability of devices being rejected due to part shortages (Das et al., 2021; A. Kumar & Dixit, 2018).

India is advancing "right to repair" laws to support these initiatives. Manufacturers would have to provide diagnostic and repair information, tools, and parts to consumers and independent repair shops under such laws. E-waste reduction is supported by this legislative framework, which allows consumers to make educated decisions about fixing rather than replacing their equipment. Consumer awareness is crucial to implementing design for durability and repairability in India. Education and advocacy efforts are educating people about their rights to repair their electronics and the environmental benefits of doing so. By raising awareness, consumers can understand the consequences of their choices and the benefits of repair over replacement. India is making progress in e-waste reduction through design for durability and repairability. Through modular design, standardization, repair documentation, spare parts availability, "right to repair" legislation, and consumer awareness programs, the government may reduce e-waste and encourage sustainable electronic device usage. These efforts improve the environment, save consumers money, and conserve resources.

Consumer Education and Awareness

Increasing public awareness to reduce technological waste and promote sustainable products requires a multifaceted approach. Education and information campaigns are vital. These efforts should use television, radio, social media, and community workshops to educate people about e-waste's environmental impact and the benefits of sustainable alternatives. Public awareness efforts should teach correct electronic garbage disposal, recycling, and ecologically friendly buying habits. Integrating e-waste and sustainability into schooling is crucial. By teaching youngsters about proper gadget use, recycling, and the environmental impact of electronic trash, we can instill sustainable values early on. Educational institutions can promote environmental stewardship by recycling e-waste and promoting sustainability. Electronic equipment eco-labeling and certifications influence consumers to choose sustainable options. These labels indicate a

product's energy efficiency, recyclability, and environmental impact. These labels can be mandated by the government to give consumers easy access to information that affects their purchases. Successful agreements with electronics stores allow for extensive information transmission to a diverse audience. Retailers can educate customers on recycling, take-back, and energy-efficient products. Discounts and trade-in programs can help recycle obsolete equipment safely. Community workshops, seminars and e-waste recycling initiatives raise awareness. We empower individuals to take grassroots activities by engaging community members in sustainability efforts and providing easily available information. Digital tools like websites and smartphone apps make it easy to find e-waste recycling facilities, green product reviews, and sustainable lifestyle advice. Access to nearby recycling centers and valuable resources are key to encouraging public responsibility. Government regulations are crucial for e-waste management and sustainable product marketing. Promoting strict laws that hold manufacturers accountable for recycling and eco-design can alter the business. Penalties for non-compliance may encourage businesses to adopt sustainable practices. Governments, NGOs, corporations, and educational institutions collaborate to promote awareness campaigns and sustainable products. Multi-stakeholder alliances can combine resources and talents to create impactful awareness campaigns.

Tax benefits or incentivized systems may encourage people to buy eco-friendly products or recycle e-waste. Positive reinforcement can greatly boost sustainable decisions. Ultimately, public advocacy and active engagement in electronic waste mitigation efforts are essential. Environmental activists, NGOs, and concerned citizens who promote responsible electronics use and sustainability should be supported and recognized. Their goal is to promote environmental awareness (Bhat & Patil, 2014; Garlapati, 2016; Li & Achal, 2020; Whitman & Mattord, 2021).

Circular Economy Initiatives

The implementation of circular economy initiatives holds significant significance in the mitigation of electronic waste and the advancement of sustainable practices in the management of electronic waste. The primary objective of these endeavors is to cultivate a heightened sense of responsibility and promote an ecologically viable approach across the whole lifecycle of electronic products. One notable initiative concerns the use of product reuse and refurbishment practices. Rather than engaging in the disposal of obsolete electronic devices, organizations and organizations possess the alternative to collect such goods, rectify any operational issues, and refurbish them in order to prolong their lifespan. This activity not only leads to a decrease in electronic waste but also provides economically viable options for consumers. Remanufacturing is a prominent technique that holds substantial importance within the context of the circular economy. This process goes beyond simple refurbishment and involves the systematic dismantling of electronic devices, followed by their reassembly to attain a state that is equivalent to that of newly manufactured items. Remanufactured products often come with warranty protection and can serve as an environmentally sustainable alternative to newly manufactured devices. Extending the longevity of electronic products is a critical approach within the context of the circular economy. There exists a widely accepted suggestion for manufacturers to give precedence to the integration of durability, modularity, and repairability in their product designs. This concept facilitates the active involvement of consumers in the upkeep and improvement of their equipment, hence reducing the need for frequent replacements. Take-back and recycling activities are of utmost importance in the successful execution of circular economy endeavors. Manufacturers and merchants employ strategies that facilitate consumer participation in the process of returning their obsolete electronic equipment for the goal of environmentally

Dhanabalan Thangam (ctdhanabalan@gmail.com)

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

responsible recycling and disposal. This method ensures the acquisition and subsequent exploitation of significant resources, hence diminishing the requirement for new raw materials. Moreover, the enactment and enforcement of legislation and regulations play a crucial role in strengthening and maintaining the fundamental concepts and practices of the circular economy. Governments enact legislation to establish regulations pertaining to the management of electronic waste, establish specific criteria for recycling, and promote the adoption of suitable practices for disposal. It is imperative to adhere to these guidelines to mitigate the environmental and health consequences linked to electronic waste.

The integration of circular economy initiatives assumes a pivotal role in promoting a more sustainable and conscientious approach to the management of electronic waste. The primary objective of these schemes is to effectively preserve resources and mitigate the environmental consequences linked to electronic devices (Ignatuschtschenko, 2018).

Take-Back and Recycling Programs

Take-back activities bolster global efforts to reduce electronic waste and promote sustainable electronics. Manufacturers and retailers often lead these initiatives to encourage consumers to return their old devices for recycling and disposal. This discussion examines how take-back programs promote a more sustainable electronics sector. The safe and correct disposal of old electronics is the main goal of take-back programs. These initiatives divert electronic waste from landfills and informal recycling sectors, which pose serious environmental and health risks, by providing consumers with easy ways to return their old devices. Conversely, returned gadgets are recycled at responsible facilities to extract useful components and dispose of dangerous chemicals. Take-back programs also support circular economy principles of resource efficiency and waste reduction. Electronics manufacturers and dealers are realizing the value of salvaging parts from old devices. These programs collect and reuse metals, polymers, and rare earth materials for new electronics. This conserves finite resources and reduces mining and extraction environmental impacts. Discounts on future purchases and trade-in programs are used to encourage consumer participation in take-back activities. Encouragement to dispose of electronic waste responsibly promotes a culture of sustainability and responsible consumption. Regulatory laws in several countries require electronics makers to create take-back schemes and meet recycling and recovery goals. These guidelines hold electronic device makers accountable for their products' entire life cycle, encouraging them to incorporate recycling and sustainability into their design processes.

Take-back programs steer electronic waste away from ecologically hazardous disposal techniques, promote resource efficiency, and encourage ethical consumer behavior. Electronic waste management systems must be developed and improved as the electronics industry grows. Electronic waste management programs must be expanded and improved to be more sustainable and ecologically friendly.

Legislative and Policy Measures

Laws and policies help manage electronic trash (e-waste) by providing a framework for addressing its environmental and social impacts. From manufacturing to disposal, the above actions have been designed to promote responsible electronic device use. Extended Producer Responsibility (EPR) projects are crucial. EPR states that electronics manufacturers must efficiently manage and fund the retrieval, recycling, and correct disposal of their gadgets when they have reached the end of their functional lifespan. The transfer of duty from customers and local governments to producers encourages manufacturers to incor-

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

porate sustainability into product designs. Extension Producer Responsibility (EPR) projects encourage environmentally friendly product design and provide financial incentives for manufacturers to decrease e-waste. Several countries have also banned harmful chemicals in electronics. The European Union's Restriction of Hazardous compounds (RoHS) directive restricts the use of some hazardous compounds in electronic products. This reduces harmful materials in consumer electronics. These rules emphasize environmental protection and promote the use of less harmful products.

The WEEE guidelines are essential to sustainable electronics management. Common across the EU, the above directives set high electronic waste collection and recycling targets. Companies must provide collection and recycling infrastructure for their products to control electronic waste and recover valuable materials. Governments encourage manufacturers to create energy-efficient devices that last a long time to promote sustainability. Implementing these standards reduces the environmental impact of electronic items and consumer energy costs, fostering a sustainable and energy-efficient society. Product labelling and certification procedures also help shoppers choose sustainable products. Energy Star designation helps consumers choose energy-efficient electronics. These labels empower consumers to make educated purchases, promote green technologies, and reward manufacturers for sustainable product development. Many regions have adopted eco-design guidelines that define electrical products' environmental impact. Standards consider energy efficiency, material use, and recyclability. Government rules encourage producers to make products with higher environmental and social sustainability.

Thus, legislative and policy actions are crucial to electronics sustainability. These institutions' regulatory structure promotes environmentally sensitive sector practices through a variety of ways. Responsible disposal and recycling rules and sustainable electronic equipment design requirements are included. To reduce the environmental and social impacts of electronic waste and promote a sustainable electronics sector, several initiatives are needed.

RESEARCH AND DEVELOPMENT MODELS

Durable Design Model

The durable design model revolutionizes electronic device design, development, and production. This approach prioritizes the design of durable, long-lasting, and easy-to-maintain electrical equipment. Durable design challenges consumer electronics' disposability culture. In this culture, purposeful design reduces product lifespan, encouraging frequent replacements. The durable design concept involves developing electrical equipment to withstand physical deterioration, environmental factors, and time. Material selection, building, and product testing are all part of this process. Manufacturers prioritize high-quality components, materials, and finishes that withstand degradation, corrosion, and physical damage. In various conditions, products are tested for durability and endurance. This architecture emphasizes modularity. Electronic devices are designed for easy disassembly and replacement. If a battery or screen fails, you can replace them independently, extending the device's lifespan. This method improves repairability and reduces electronic waste by allowing customers and professionals to fix flaws without discarding the device.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

The robust design approach also encourages interoperability with prior generations and software support for older devices. Manufacturers provide software upgrades and security patches for long periods, ensuring ageing equipment's functioning and security. This method reduces electronic waste by prolonging device lifespans and promotes sustainable and conscientious electronic product management. The durable design paradigm could transform consumer electronics. Sustainability and resource preservation are promoted by this strategy, which reduces the need for new electrical devices and raw materials. It also lets consumers make eco-friendly purchases by buying products designed for long-term use and repair. The durable design concept improves brand reputation, consumer loyalty, and environmental sustainability, although producers may face initial challenges. The durable design model is a compelling way to alter the electronic sector and reduce the environmental impact of e-waste due to society's rising emphasis on sustainability and responsible consumption.

Circular Economy Model

The circular economy model represents a transformative approach to the production, consumption, and disposal of electronic goods, aiming to reduce electronic waste (e-waste) and foster sustainability throughout the product lifecycle. Unlike the traditional linear economy, where products are manufactured, used, and discarded, the circular economy model promotes a closed-loop system where resources are conserved, and waste is minimized. At the heart of the circular economy model is the concept of product longevity and reusability. Electronics are designed with durability in mind, allowing them to have longer lifespans and remain functional over time. Manufacturers prioritize robust construction and modular designs that facilitate easy repair and component replacement. This approach discourages the disposability of electronic devices and encourages consumers to keep their products in use for extended periods. Refurbishing and remanufacturing are key components of the circular economy model. Instead of discarding used electronic devices, they are collected, inspected, and, if necessary, repaired or upgraded to meet current performance standards. Refurbished electronics are then reintroduced to the market, extending their useful life and reducing the demand for new products. This not only reduces e-waste but also conserves valuable resources and energy that would have been used to manufacture new devices. Take-back and recycling programs play a crucial role in the circular economy model. Manufacturers and retailers often establish collection systems where consumers can return their old electronics for proper recycling and disposal. This ensures that valuable materials, such as precious metals and plastics, are recovered and reused in the manufacturing of new products. By closing the materials loop, the circular economy model reduces the need for resource-intensive mining and extraction. Furthermore, the circular economy model fosters innovation in sustainable materials and eco-friendly manufacturing processes. It encourages the use of recycled and recyclable materials, reducing the environmental footprint of electronic products. Manufacturers are incentivized to adopt eco-design principles, emphasizing resource efficiency and waste reduction throughout the product's life.

In essence, the circular economy model represents a holistic and sustainable approach to electronic product management. It not only reduces e-waste and conserves resources but also aligns with the principles of responsible consumption and environmental stewardship. As consumers and industries increasingly recognize the importance of sustainability, the circular economy model emerges as a powerful strategy to address the challenges posed by e-waste and create a more resilient and eco-conscious electronic industry.

Eco-Legislation Model

Sustainable electronics management requires legislative and regulatory frameworks to ensure ecologically acceptable practices throughout the lifecycle of electronic devices. By requiring producers, users, and other parties to comply with legislation, criteria, and suggestions, this project aims to reduce the environmental impact of electronic rubbish (e-waste). Product design that prioritizes durability, repairability, and recyclability underpins the Eco-Legislation Model. Legal requirements often require electrical equipment manufacturers to incorporate eco-design concepts. Use of sustainable materials, minimization of harmful substances, and guarantee of repairable and upgradeable equipment are included. This regulation promotes long-lasting electronics, reducing the need for replacement and electrical waste. The approach also promotes Extended Producer duty (EPR) frameworks, which shift environmental duty for electronic product management from customers to manufacturers. Under the Extended Producer Responsibility (EPR) principle, manufacturers must efficiently manage their products' end-of-life disposal. This involves product collection, recycling, and safe disposal. This technique emphasizes eco-friendly product design and recycling. The Eco-Legislation Model emphasizes consumer knowledge. Legal requirements often require producers and sellers to disclose the environmental impacts of their electronic purchases. Transparency lets people choose eco-friendly products. Educating and labelling consumers helps reduce e-waste. Recycling and waste laws support the model. Many nations have e-waste recycling laws that require manufacturers to collect and dispose of old electronics in a sustainable manner. These schemes help recover valuable materials and safely dispose of hazardous substances, lowering the environmental effect of improper electronic waste disposal.

DISCUSSIONS

The examination of strategies and methodologies aimed at mitigating electronic waste in a sustainable fashion assumes a pivotal role in addressing the urgent environmental concerns linked to e-waste. As we engage in contemplation of the future, it becomes apparent that the topic being discussed holds considerable importance and presents a promising opportunity for innovative concepts and beneficial transformations. Within the realm of scientific advancements, the forthcoming progress in materials science, electronics, and production techniques presents a compelling prospect. Researchers will conduct an inquiry into novel materials that are ecologically friendly, with the aim of enhancing the durability and maintainability of electronic gadgets. The potential to revolutionize the repairability of products is present by using emerging technologies, such as 3D printing. This technology empowers users to fabricate replacement components within the comfort of their own residences. The expected progression of consumer-centric methodologies is foreseen, placing significant focus on enhancing education and awareness initiatives. The advent of artificial intelligence and data analytics can provide customized recommendations and important insights on sustainable consumption practices, hence improving their accessibility for individuals. The incorporation of interactive platforms and virtual reality experiences holds promise in making a substantial contribution to consumer education on the tangible environmental impacts linked to their decision-making.

The subject of circular economy innovations, encompassing the practices of refurbishing and remanufacturing, holds substantial potential for future breakthroughs. The primary focus of research endeavors is anticipated to revolve around the improvement of these procedures through the implementation of

automation and advanced diagnostic techniques. Circular business models, namely those that revolve on the notion of product-as-a-service, whereby individuals compensate for the usage of electronics rather than possessing them outright, possess the capacity to attain substantial appeal and widespread adoption. Given the global magnitude of the issue, it is imperative to underscore the importance of international collaboration in addressing the formidable problem posed by electronic waste (e-waste). Possible future attempts may involve the adoption of comprehensive global standards that regulate the sustainable design of electronic items and the management of electronic waste. The potential for fostering collaborative research projects among nations and organizations to yield creative solutions with positive global societal benefits is substantial. The domain of policy and legislation is anticipated to experience simultaneous modifications in tandem with the dynamic landscape of electronic waste. There is an expectation that governments would enact increasingly stringent legislation mandating businesses to adhere to sustainable product design principles and promote responsible recycling practices. Economic incentives and taxation policies can be employed as instruments to foster environmentally conscious decision-making. The anticipated effect of incorporating data analytics and Internet of Things (IoT) technologies is poised to be substantial in mitigating the issue of electronic waste, as it facilitates data-driven decision-making processes. The dissemination of current information pertaining to the life cycles, consumption patterns, and rates of recycling for electronic items will have a significant impact on decision-making processes in various fields, including consumer decision-making and policy interventions. The application of predictive analytics is anticipated to enable the detection of emerging patterns and opportunities for strategic intervention.

CONCLUSION

Electronic garbage (e-waste) is a global issue in the digital era. Rapid technological advancement and consumer electronics' pervasiveness have led to an increasing flood of discarded devices, posing environmental and health risks. To address this growing challenge, sustainable e-waste reduction models are needed. E-waste output and impact are reduced by a variety of methods in this comprehensive study. Designing durable and repairable electronics is a key method. We can greatly minimize obsolescence and e-waste by encouraging manufacturers to provide gadgets that last longer and are easy to fix or upgrade. Consumer education and awareness are also crucial because knowledgeable consumers recycle responsibly and embrace eco-friendly practices. Circular economy activities like refurbishing and remanufacturing extend product lifecycles and reduce waste. Sustainable e-waste management requires strong take-back and recycling programs and legislative and policy changes. These technologies and models could revolutionize e-waste reduction, creating a more sustainable and resource-efficient electronic industry that protects the environment and public health.

ABSTRACT

E-waste, which is generated rapidly owing to technological advancements in information technology, has led to a significant rise in the utilization of electronic devices such as laptops, mobile phones, headphones, and tablets. As these devices become outdated and less useful, they contribute to the growing volume of electronic waste and pose significant threats to the environment and human health. To mitigate the negative impacts of increasing global electronic waste (e-waste), it is crucial to implement proper e-waste management. However, these approaches require substantial labour and resources and are not considered perfect solutions. Fortunately, technological progress has provided new opportunities for more efficient e-waste management. Many countries are now exploring advanced methods, such as the internet of things (IoT) and artificial intelligence (AI), to manage e-waste. However, they face various challenges when implementing these technologies. This study aimed to portray the current situation, emerging trends, and future of smart e-waste management.

INTRODUCTION

Electronic devices that are no longer in use, at the end of their lifespans, or damaged are referred to as e-waste. These include everyday items, such as computers, TVs, printers, and battery cells. Despite technological advancements leading to frequent upgrades, the longevity of electronic products is compromised by the presence of toxic substances, such as Polychlorinated Nickel Biphenyls (PCBs), lithium, cobalt, cadmium, lead, and copper. As a result, all Electronic and Electrical Parts (EEPs) eventually become unusable, resulting in e-waste (StEP Solving the E-Waste Problem - StEP Initiative, n.d.). E-waste, also known as technical waste or EEP waste, represents a specific category of discarded electronic and electrical components (Ganguly, 2014). The global accumulation of E-waste or Waste Electrical and Electronic Equipment (WEEE) is estimated to reach 30-50 million tons annually (Cucchiella et al., 2015). Although WEEE has significant recycling value, many of these items also contain hazardous substances that must be separated from the regular waste stream (Oguchi et al., 2011).

The responsibility for collecting and transporting waste materials or airborne particles from the streets falls on either municipal workers or private organizations. This responsibility includes the handling of waste from commercial, industrial, and residential sources. Waste is subsequently moved to the next phase of waste management for processing. During this process, waste is divided into many categories according to its qualities, such as recyclability, biodegradability, and non-degradability. Waste management is crucial for pollution reduction and ecosystem preservation; hence, its importance in environmental protection cannot be emphasized. Furthermore, it is an essential step in preventing threats to public health, as poor waste management may contaminate water and encourage the spread of pests that spread the illness. Waste management also promotes employment opportunities and local economic growth from the perspective of the economy.

The E-waste domain also serves as a platform for business ventures focused on extracting precious metals and harnessing energy through biochemical methods. Therefore, the identification, retrieval, and appropriate recycling of e-waste are important steps for a sustainable future. The growing problem of illegal e-waste exportation to developing nations to reduce recycling expenses is a significant concern in terms of self-sufficiency.

The disposal of e-waste in landfills is not advised because of its hazardous nature. Toxic substances and metal-containing components such as halogenated flame retardants in the nonmetal section are commonly present in e-waste. If it is dumped in a landfill, there's a chance that long-term metal leaching will occur. Leachates from this type of disposal could contain dangerous metals and other compounds that exceed permissible thresholds in the soil and water, endangering both human health and the ecosystem. This emphasizes the significance of appropriately handling this type of solid waste, which has been the focus of investigation and analysis in the study of solid waste management.

In the past few years, dedicated treatment and recovery facilities have emerged in certain countries established by politicians, policymakers, recyclers, producers, and other stakeholders. These facilities are specifically designed to gather and process e-waste from owners, ensuring that the waste is handled appropriately according to the specific needs of each case.

AI and other advanced technologies are widely used in various domains such as education and healthcare, and are relatively new in the environmental domain. Addressing environmental pollution effectively involves implementing an advanced waste management system that utilizes Deep Learning (DL), the Internet of Things (IoT), and Machine Learning (ML). This integrated approach can offer real-time waste information and optimize waste collection routes, ultimately reducing costs and time. Current

waste management systems face challenges such as inefficient scheduling, where waste collectors lack awareness of collection needs and drop-off locations. By harnessing these technologies, it is possible to classify waste, predict its volume, and identify the most suitable disposal methods, thereby assisting policymakers in making informed decisions. E-waste management in developing nations requires more comprehensive strategies than that in developed countries to align with Sustainable Development Goals (SDGs).

MOTIVATION

The motivation for this book chapter on sustainable e-waste management can be drawn from the increasing attention given to the sustainable management of electronic waste. As the world continues to grapple with the challenges of e-waste generation and disposal, there is a growing need to understand the present situation, emerging solutions, and future trends in e-waste management. This is evident from the global efforts to develop sustainable production, consumption, and disposal patterns for electrical and electronic equipment, as well as the significant gap between the generation of e-waste and its proper collection and recycling. The hazards caused by improper handling of e-wastes and the limited implementation and enforcement of e-waste policies and regulations further underscore the importance of addressing this issue. Therefore, the book chapter can serve as a valuable resource for understanding the complexities of e-waste management and exploring potential solutions to ensure a sustainable and circular economy.

UNITED NATIONS SUSTAINABLE GOALS AND E-WASTE

The sudden increase in E-waste levels and the use of illegal and hazardous methods for handling it, such as dumping it openly in landfills or extracting precious metals through incineration, present a huge risk to both human health as well as the environment. This hinders progress toward achieving Sustainable Development Goals (SDGs) (*Greenpeace - Where Does E-Waste End Up? - English Version*, n.d.).

E-waste management is closely linked to several SDGs including:

SDG 3: Ensuring well-being and good health.
SDG 6: Promoting clean sanitation and water.
SDG 8: Fostering economic growth and decent work.
SDG 11: Building communities and sustainable cities.
SDG 12: Encouraging responsible production and consumption.
SDG 14: Protecting life below water.

In essence, addressing E-waste issues is essential for the environment as well as human health and for advancing the broader goals of sustainable development.

The rising demand for raw materials in the Electronics and Electrical Equipment (EEE) manufacturing industry is closely related to the Sustainable Development Goal (SDG) 12, particularly its indicator of the origin and domestic utilization of raw materials (Ahirwar & Tripathi, 2021). To track the growth of E-waste more accurately, a specific SDG indicator has been established, which is of significant concern because of its potential hazards and residual value. This indicator has been incorporated into the design

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

plan for the SDG indicator 12.5.1, which measures the national recycling rate and amount of material recycled. The importance of addressing E-waste is further emphasized in SDG indicator 12.4.2, which focuses on waste treatment, generation of hazardous waste, and waste management, categorized by treatment type. These indicators and targets were clearly defined as well as measured according to guidelines developed for monitoring purposes, with the ultimate goal of achieving these objectives over 15 years.

DIFFERENT TYPES OF E-WASTE

Multiple sources contribute to the generation of E-waste in the environment. These may include automobile industries, our households, the medical sector, IT industries, and other electrical and electronic materials, as depicted in Figure 1.

Figure 1. Different categories of e-waste

PROBLEMS ASSOCIATED WITH E-WASTE MANAGEMENT

In urban areas, the management of waste produced presents a significant challenge, especially when it comes to E-waste in developing countries. In India, there is a substantial workforce dedicated to handling waste, including waste collectors, scrap dealers, and recyclers, certain groups within the waste disposal system, such as unrecognized garbage collectors, are particularly impacted (María Fernández-González et al., 2020). These unacknowledged individuals make up the largest informal sector in the country. However, there are some problems when it comes to E-waste management.

Dhanabalan Thangam (ctdhanabalan@gmail.com)

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

1. **Less Awareness of E-waste Management:** Many individuals lack awareness of the environmental pollution caused by inefficient waste management and collection. With the rapid digitization experienced in recent decades, the challenge of managing the increasing volume of E-waste has become even more daunting. In developing countries, there is often a lack of knowledge on the various categories of waste, leading to improper mixing of E-waste with other types of waste or inadequate disposal methods.

   To address this issue and draw attention to the importance of sanitation and garbage segregation in every city, it is crucial to raise awareness among the public. This can be achieved through the organization of workshops, the use of slogans, and the implementation of social media campaigns. By spreading awareness among the community, there is a potential for a positive change in E-waste management.
2. **Improper Classification of E-waste:** Improper disposal and categorization of E-waste can pose significant dangers, impacting not only the well-being of humans and animals but also hindering plant growth due to the presence of various chemical elements and metals. The only effective remedy lies in appropriately categorizing, disposing of, and treating E-waste ("Handbook of Environmental Materials Management," 2019).
3. **Gap in Implementing Technical Solution and Public-Private Partnership:** There's a notable gap when it comes to putting technical solutions into action, particularly in the realm of effective E-waste management. Innovative technologies like IoT, ML, DL, and other cutting-edge solutions are crucial in establishing an efficient E-waste management system. Some of these new technologies have the potential to excel in this field (Anh Khoa et al., 2020). To address this gap, it's imperative to establish a partnership between the public and private sectors. This collaboration is necessary to implement such systems and bridge the current divide caused by factors like a lack of technical expertise and resources.

Effects of E-Waste on the Human Health and Environment

Improperly managed E-waste can lead to severe consequences for both human and environmental well-being. These negative effects include chronic health issues for people and environmental degradation, including air, water, and soil pollution (Amankwah-Amoah, 2016).

Effects on Human Health

Improper management, inadequate recycling, and processing methods for E-waste can have life-threatening consequences for human health (Orlins & Guan, 2016). Hazardous materials released from e-waste might enter the body through ingestion, dermal contact, or inhalation, posing significant risks (Awasthi et al., 2018). Workers involved in E-waste handling or recycling are particularly vulnerable to direct occupational exposure owing to a lack of proper safety measures. Identifying E-waste exposure is complex because of the diverse sources of exposure, various routes of entry, individual characteristics (such as age, sex, immune status, and body weight), and various exposure durations (Alabi & Bakare, 2017).

Metals can enter the human body via inhalation, dermal contact, or ingestion. Ingestion involves the consumption of water and food contaminated with E-waste (Zheng et al., 2013). It is the main route of exposure to heavy metals in the human body, which accounts for approximately 90% of cases (Weera-

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

sundara et al., 2020). Additionally, heavy metals can accumulate in plant tissues from contaminated air, soil, and water sources (Singh et al., 2010).

The consumption of food items grown in heavy-metal-contaminated soil is a significant factor responsible for the increased concentrations of heavy metals in animal-based products. Various studies conducted worldwide have reported that this metal exposure leads to several human disorders, such as the nervous system, cardiovascular system, urinary system, blood, kidneys, liver, learning ability, urine-related, and cancer (Yan et al., 2013). Considering possible health hazards, local authorities and government agencies need to carry out comprehensive studies to assess exposure and evaluate risks in areas where E-waste processing and recycling operations are conducted.

Effects on Environment

Improper disposal of E-waste results in significant environmental contamination, affecting water, soil, air, and various organisms. The disposal sites and recycling facilities have been pinpointed as the origins of heavy metal and particulate matter emissions into the environment. Materials released from E-waste can be broadly divided into two types: hazardous and non-hazardous materials. These waste releases pose serious risks to the environment and can lead to long-term ecological damage if not properly managed.

Both categories of pollutants emanating from E-waste can have detrimental effects on human health and the environment if their concentrations exceed the allowable thresholds(Saini et al., 2023) . These hazardous substances, when introduced into the environment, get entangled in different processes like food contamination, bioaccumulation, and extensive exposure within ecological systems. This, in turn, leads to substantial and far-reaching risks. Hence, it is imperative to tackle and regulate the discharge of these harmful substances to mitigate their influence on both human and environmental welfare (Pradhan et al., 2014).

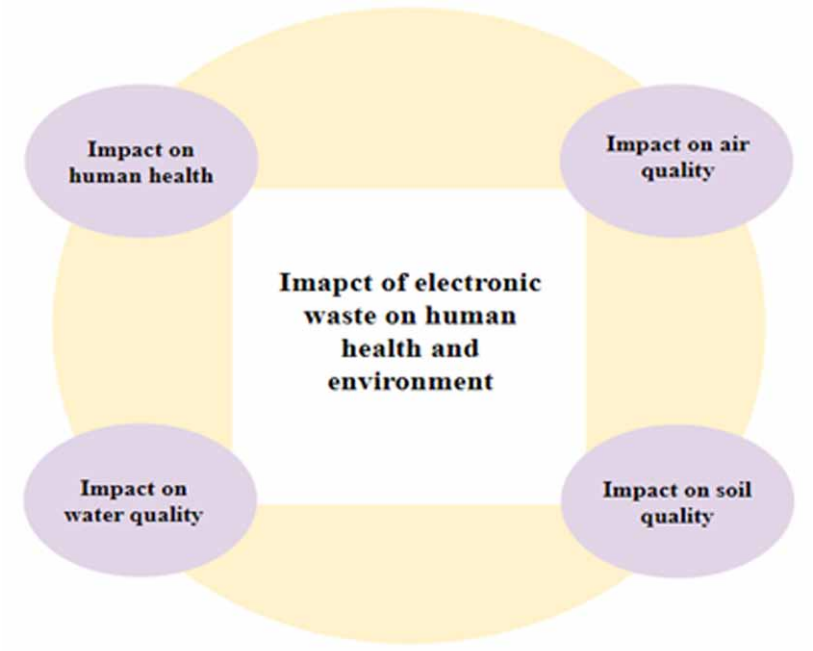
Improper disposal and processing of E-waste have multifaceted consequences, extending beyond local environmental damage and human health risks. Due to the large volumes of carbon dioxide that these practices release into the atmosphere, they also contribute to climate change and global warming.

Effects on Air Quality

E-waste contaminants are released in the air in the form of dust or fumes, posing risks to human health through ingestion, inhalation, and skin absorption. In the processing and recycling of E-waste, several hazardous primary contaminants like Hg, Pb, Cd, and PCBs, as well as secondary toxicants such as PAHs, difurans, and dioxins are produced and released into the environment. The presence of these contaminants depends on the specific type and method of recycling employed.

These metals remain suspended as particulate matter in the air and get deposited on open water resources and the soil surface. As a result, they can accumulate in aquatic life, soil, and plants, leading to serious health consequences when humans consume contaminated water or food products (Sthiannopkao & Wong, 2013). Therefore, it is important to adopt safe and environmentally responsible E-waste recycling practices to reduce the production of these harmful substances and protect both humans and the environment.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10



Effects on Water Quality

E-waste contaminants find their way into the aquatic environment through leaching and dispersal processes, originating from the dumping of EEE in industries and other activities related to E-waste. Water resources located near various E-waste disposal facilities and recycling fail to meet the established water quality standards concerning parameters like total dissolved solids, hardness, pH, chlorides, and conductivity (Dharini et al., 2017).

Effects on Soil Quality

The rapid escalation of human activities results in the discharge of contaminants that are hazardous into the soil, which further leads to pollution of farmland soil (Zhang et al., 2015). Waste recycling plants are identified as significant contributors to soil contamination, primarily due to the release of elevated concentrations of various metals and pollutants. These harmful toxins, including heavy metals, can be readily absorbed by plant roots, and taken to different parts of the plant, such as the leaves, and fruits. Consequently, soil contaminated with E-waste is recognized as a major reason for crop and vegetable contamination.

Figure 2. Impacts of e-waste

E-WASTE MANAGEMENT USING ADVANCED TECHNOLOGIES

Artificial intelligence (AI)-based approaches enable machines to replicate human capabilities such as learning from examples, recognizing patterns in data, and making decisions based on those patterns. AI is widely used across the globe to assist individuals in making informed decisions because it can process vast amounts of data much faster than humans. AI plays a crucial role in helping humans tackle various challenges such as waste detection, space debris management, and sustainability efforts. Its rapid rise to prominence is owing to its previously unimaginable applications (Dawar et al., 2023). For instance, AI has been employed by companies such as Xcel Energy to accurately forecast energy consumption trends and optimize their systems for enhanced efficiency, even in industries traditionally associated with coal and emissions. Moreover, AI is used to address a wide array of environmental engineering issues, including water and wastewater treatment, air pollution reduction, soil contamination, municipal waste management planning, and remediation.

The implementation of AI plays a significant role in optimizing the routes for garbage trucks for waste collection. This was achieved by identifying the locations of waste management facilities, predicting trends in waste generation, and simulating the processes involved in converting waste. Precise predictions regarding the quality of E-waste enable the effective gathering, treatment, and disposal of waste (Dhir et al., 2021). Numerous studies have explored the potential of AI for managing E-waste. In this context, the primary applications of AI and ML techniques are segregation and forecasting in E-waste management.

IoT is being adopted across various industries to reduce energy consumption and carbon emissions. In this century, the proliferation of Internet-connected devices has rapidly increased. According to predictions from the statistics service Gardiner and Statista, the number of devices connected is expected to reach 30 billion by 2020 (Pardini et al., 2019). IoT involves the integration of physical or virtual devices with the Internet, enabling functions such as detection, data gathering, storage, and processing. In this context, IoT offers highly interconnected and efficient network applications. Combining IoT with cloud computing allows E-waste management to be automated and streamlined, providing a mechanized approach to handling electronic waste (Sharma et al., 2021).

Advanced ML and DL technologies have been utilized to gather and analyze E-waste data, contributing significantly to smart-city waste management. By applying these techniques, waste analysis, determination of waste bin sizes, waste collection truck selection, and waste material analysis become more accessible, providing valuable information for effective decision-making. These intelligent methods are highly effective in waste identification and categorization and facilitate more informed and efficient steps for waste handling.

RECENT STUDIES RELATED TO E-WASTE MANAGEMENT USING ADVANCED TECHNOLOGIES

A specific article or research paper is regarded as a document or a review unit. The databases of Google Scholar, Wiley, Scopus, Elsevier, IEEE, Springer, and Web of Science are used to obtain all the documents. These are the best libraries of peer-reviewed works from throughout the world in several fields that authors frequently use for SLR. Numerous studies related to EWM, ML, and DL were found in the initial search. Numerous articles that used the traditional model (such as the statistical model) in EWM were also among the top searches. This retrieved over 550 documents between 2019 and 2023 from the

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

online search databases. Subsequently, a structured query of the results of searches using inclusion and exclusion criteria collects pertinent literature and limits the amount of literature suited.

To ensure the accuracy, dependability, and relevance of the literature, a manual inspection was performed. Exclusion and inclusion criteria were established to make the scrutiny procedure simple, controllable, and impartial. Publication accessibility, document language, type, and subject/title were among these classifications. Subsequently, the relevance of each document that had been chosen during the search and data collection procedures was examined. The first screening included an English-language, fully accessible journal, or conference research. Additionally, their titles and subjects were examined to assess and select the best research.

E-waste management challenges stem from skill gaps, infrastructure issues, and financial constraints. The toxic effects on health and the environment underscore the need for a holistic approach, including regulatory frameworks, education, safe conditions, and sustainable practices. Bridging formal and informal sectors can foster sustainability, job creation, and economic growth, aligning with global development goals. The approach presented in (Rautela et al., 2021) benefits both developed and developing countries.

In (Ahirwar et al., n.d.; Ahirwar & Tripathi, 2021; Akram et al., 2019; Jangre et al., 2022; Srivastav et al., 2023; Tunali et al., 2021; Xu et al., 2023), studies have underscored the urgency of sustainable E-waste management, advocating for strategic interventions across various aspects of its life cycle. The surge in E-waste demands effective recycling while considering its environmental impact. To address toxic releases during recycling, a holistic approach involving product design, recycling rates, and reduced hazardous emissions is vital. E-waste trends, processes, and health implications are covered, suggesting strategies like regulations, informal sector support, and sustainable techniques (bioleaching, biosorption). Integrating recycling in device design can ensure safe management.

Despite E-waste's toxic content, management policies are insufficient. Categories and pollutants such as metals and plastics were highlighted, underscoring their air, water, and soil impact. Global management demands regulations, education, and 3R practices. Collaboration among governments, industries, and citizens is vital to curbing E-waste through responsible buying, innovation, and reuse.

Aiming to prioritize barriers in E-waste management, (Jangre et al., 2022) employed Fuzzy Decision-Making and Interpretive Structural Modeling, identifying awareness, policy gaps, and public insensitivity as main obstacles. Fuzzy logic aids policymakers by revealing interconnections for informed decisions. Technological advancement leads to increasing E-waste, raising environmental risks. (Srivastav et al., 2023) advocated for sustainable strategies, including recycling, circular economy, and policies.

Aligning with sustainable development goals minimizes harm. (Xu et al., 2023) delved into E-waste's rise due to gadget demand, emphasizing its harmful disposal effects. Approaches like secondary resource use, 3Rs, urban mining, and green electronics were suggested. Regulatory policies, producer responsibility, and international cooperation are crucial. Green tech and monitoring enhance formal E-waste management. (Tunali et al., 2021) examines heavy, precious, and rare earth metals in E-waste components. Digestion methods' comparison revealed major components like Cu, Fe, Zn, and precious metals. Recovery techniques are encouraged, addressing metal-specific methods like U.S.EPA.3050B for certain metals and MMDM for others. The study advances E-waste composition understanding and suggests focusing on metal recovery.

Studies (S. C. Chakraborty et al., 2022; Dixit et al., 2022; Dutta et al., 2023; Liu et al., 2023; Marimuthu et al., 2022; Moheb-Alizadeh et al., 2023; Nande et al., 2023; Seif et al., 2023) showcased the critical proposed international frameworks, regulations, and innovative techniques to manage E-waste effectively, reduce environmental impacts, and promote sustainable practices across industries and sectors.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Addressing the global issue of E-waste requires collective efforts. (Liu et al., 2023) suggested adding E-waste to the Basel Convention, creating global management associations, and enforcing strict product standards. Extended Producer Responsibility (EPR) and safe recycling practices are crucial, along with monitoring pollutants. The goal was green E-waste recycling via advanced separation techniques, emphasizing international collaboration, strong regulations, and responsible actions across all sectors.

E-waste's environmental impact has led to an increased focus on end-of-life electronic product recycling. (Moheb-Alizadeh et al., 2023) introduced two models, user-optimum and system-optimum, to analyze the ecological and economic effects of take-back legislation. These models assess impacts during different stages of E-waste's life cycle, particularly transportation from residences to collection sites. Results highlighted transportation as a major cost and emissions contributor, suggesting the need for efficient algorithms to address this challenge.

The surge in WEEE demand due to renewable energy tech has led to shorter lifespans and disposal challenges. (Seif et al., 2023) discussed how governments, scientists, and international bodies strive to recycle WEEE for valuable materials. E-waste management policies promote material recovery to meet sustainability goals. Hydrometallurgy techniques for materials extraction from circuit boards and batteries are discussed. The transition to renewable energy and energy efficiency relies on technology, education, and material innovation. Recovered materials could catalyze eco-friendly energy processes, and future research should target material retrieval for broader renewable applications.

Improper disposal of E-waste harms the health and environment. (Dutta et al., 2023) explored metal recovery methods—pyrometallurgy, hydrometallurgy, metallurgy—each with its limitations. It offers insights into these processes, their advantages, and their limits. It also emphasizes the importance of the circular economy and socio-economic aspects of sustainable E-waste management, benefiting students, researchers, industry, and policymakers.

Industries that produce harmful by-products and waste contribute to pollution. (Nande et al., 2023) discussed how technological progress, seen in evolving gadgets and electronics, brings comfort but also generates E-waste. Disposing of such waste is a global challenge. This chapter explored various waste types, emphasizing industrial and E-waste's detrimental effects and disposal methods. It also addressed the balance between development and environmental impact.

(Marimuthu et al., 2022) discussed the utilization of PCB fibers from E-waste in concrete to improve durability, reduce waste, and enhance properties. Adding 1-3% fibers to M40-grade concrete increases strength and rebound hammer tests align with compressive strength. Recycling E-waste in construction manages waste and prevents environmental issues.

Hydrometallurgy is effective but challenging due to E-waste complexity. Innovative methods like phytochemical adsorption and bio-adsorbents offer sustainable gold retrieval from E-waste. Rising E-waste generation threatens the environment with toxic metals like lead (Pb) and mercury (Hg). (S. C. Chakraborty et al., 2022) Highlighted the impact, sources, and the need for proper management of E-waste. Combining biological, physical, and chemical methods offers effective remediation.

(Dixit et al., 2022) explored using certified recycled E-waste as a substitute for coarse aggregates in concrete. Replacing 7-10% of coarse aggregates with E-waste maintains compressive strength. This eco-friendly approach could mitigate the negative environmental impacts of E-waste disposal. (Singh et al., n.d.) emphasized the need for a shift in the electronics industry toward sustainable practices. It covers waste PCB management evolution, eco-friendly materials, and resource-efficient manufacturing.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

The goal was to reduce waste through improved materials, processing, and circular-economy strategies. Green electronics, alternative materials, and rigorous testing can transform the industry, despite economic and regulatory challenges.

(Almulhim, 2022; Asibey et al., 2022; M. Chakraborty et al., 2022; Ismail & Hanafiah, 2021; Moyen Massa & Archodoulaki, 2023; Nuwematsiko et al., 2021a; Xu et al., 2021a)collectively underscore the global urgency to address E-waste challenges through sustainable practices, policy changes, and enhanced awareness. The issues raised span across various nations and regions, revealing the intricate interplay between environmental, social, and economic factors in effective E-waste management. Addressing these concerns requires collaborative efforts, education, technological innovation, and stringent regulations to mitigate the adverse impacts on both human health and the environment. Inadequate waste management practices in developing nations lead to environmental pollution and health concerns.

(M. Chakraborty et al., 2022)focused on E-waste management in Africa, addressing generation, treatment, recycling, and metal recovery. Stakeholder roles, sustainable design, and awareness campaigns are discussed. Given low-income lifestyles in African populations, awareness campaigns through education, media, and workshops are vital. Improved governance and eco-design could create green jobs and combat pollution. Strict global E-waste regulation led by an entity like UNEP is recommended for enhanced transparency, awareness, and proper management worldwide. Despite being illegal, the export of used European Electric and Electronic Equipment (UEEE) to Nigeria raised sustainability, circularity, and fairness concerns.

(Moyen Massa & Archodoulaki, 2023) involved 523 respondents in Saudi Arabia and revealed a lack of awareness among 70.1%, yet 88.35% expressed willingness to be a part of proper E-waste management after education. Limited recycling options and awareness have led to the treatment of E-waste as regular waste. Practical management approaches were suggested to raise public knowledge and align with sustainability goals, including Saudi Vision 2030, emphasizing community interventions and education for effective E-waste management.

(Almulhim, 2022) in Kampala assessed consumer knowledge and practices, revealing that 67.7% had poor E-waste management knowledge, but 79.1% had positive perceptions. Consumer suggestions ranged from burning to general waste disposal. Urgent awareness campaigns led by relevant authorities were deemed necessary to bridge the knowledge gap, emphasizing proper handling, legislation, and disposal practices. The environmental effectiveness of E-waste management strategies in Southeast Asian countries like Malaysia was evaluated, focusing on infrastructure and practicality.

In (Nuwematsiko et al., 2021b), four options were assessed: direct incineration with energy recovery, landfill disposal, materials recovery with energy recovery, and materials recovery without energy recovery. Surprisingly, direct incineration with energy recovery emerged as the optimal choice, challenging initial expectations and previous studies.

(Ismail & Hanafiah, 2021) investigated informal E-waste activities in the state of Kumasi in Ghana, identifying political, spatial, economic, and socio-cultural, factors as influencers. Poverty, financial gain, landlessness, and peer influence were found to drive engagement. Recommendations included policy changes to foster stable socio-economic conditions for sustainable and inclusive development.

E-waste, a rapidly growing waste stream globally, has posed challenges for China, a major processor, as highlighted in (Asibey et al., 2022). The study examined barriers to sustainable E-waste management in a major Chinese province, offering an integrated planning approach. This structured approach was seen as contributing to managing E-waste barriers effectively and achieving sustainable practices,

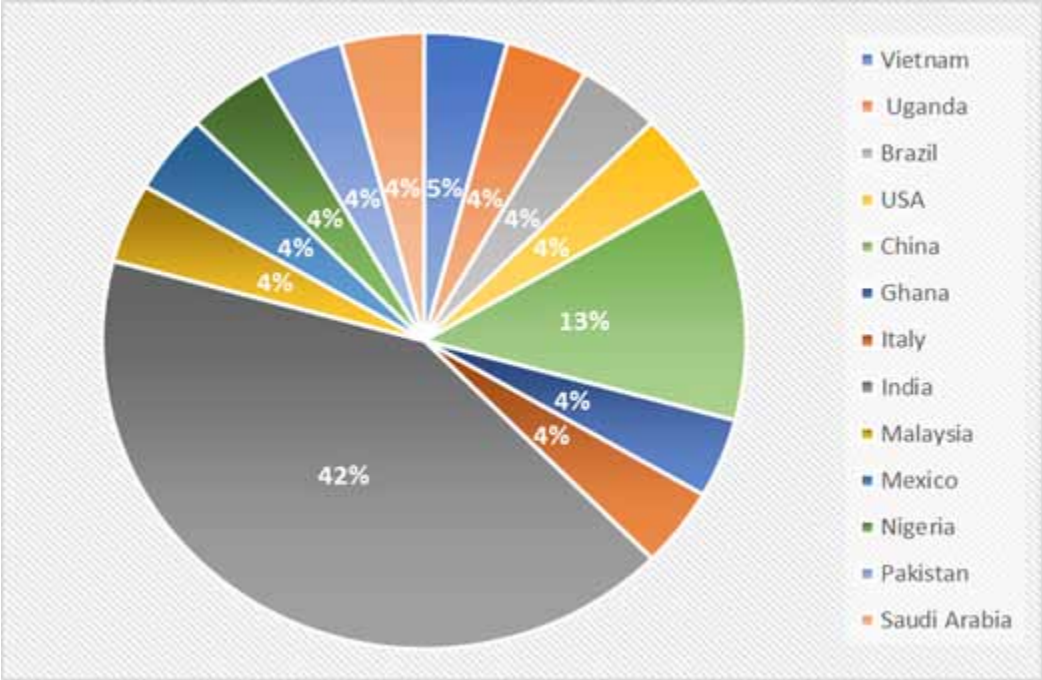
Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

providing a valuable methodological contribution to multi-criteria evaluation research. E-waste, often sent to developing nations like China for disposal, has posed severe environmental and health hazards.

(Xu et al., 2021b) has highlighted the urgent need for controlled contamination sources, eco-friendly remedies, and efficient E-waste management practices to safeguard public health as well as the environment while addressing the challenges informal E-waste sectors face. Ho Chi Minh City, a vital urban area in Vietnam, faced a growing E-waste challenge.

Studies (Arya & Kumar, 2020; Asokan et al., 2023; Awasthi et al., 2022; Borthakur, 2023; Li & Achal, 2020; Panchal et al., 2021; Shreyas Madhav et al., 2022; Vijayan et al., 2023; Wath et al., 2011) depicted the challenges India had faced in E-waste and battery waste management. The rapid pace of technological advancement and EV adoption has necessitated coordinated efforts, innovative solutions, and policy adjustments to achieve sustainable waste management practices. Collaborative approaches between formal and informal sectors, coupled with enhanced awareness and efficient collection methods, have been essential to mitigate the unfavorable environmental as well as health impacts of E-waste.

In India, the rapid growth of Electric Vehicle (EV) adoption has been accompanied by a concerning lag in battery waste management, as predicted by (Li & Achal, 2020). Significant EV sales by 2030 and 2050, with lead-acid and lithium-ion battery waste posing challenges, had been projected. An EPR system and waste crime tracking had been deemed crucial for worker and community safety. The global surge in E-waste, exacerbated by the COVID-19 pandemic, has posed governance complexities, particularly in countries like India.



The E-waste policies influenced by The EU's WEEE directive implemented by India have been analyzed in (Asokan et al., 2023). The study advocated for a collaborative approach between informal and formal sectors to achieve sustainable E-waste governance, tailoring policy transfer to local contexts. Amid the technological revolution, India produced 3.2 million tons of E-waste in the year 2020.

(Borthakur, 2023) had introduced a novel solution: a mobile robot using transfer learning to identify and segregate E-waste. The system was attached to garbage trucks, enhancing collection efficiency while reducing costs. (Shreyas Madhav et al., 2022) had identified hazardous substances in E-waste, emphasizing the need for eco-design in electronic manufacturing and responsible recycling practices to mitigate environmental issues. Within the circular economy framework, E-waste had been seen as holding potential as an urban mine for valuable materials.

(Awasthi et al., 2022) had estimated India's E-waste generation, assessed embedded materials, and evaluated their economic recovery potential. Strategies like eco-design, EPR, circular resource management, and bioleaching have been proposed for a sustainable E-waste value chain. The challenge regarding E-waste has lain in its dual nature as a source of valuable metals and a potential toxic threat. (Panchal et al., 2021) proposed strategies for India, incorporating informal recyclers transparently, improving waste collection systems, and promoting eco-friendly technologies. (Arya & Kumar, 2020) had highlighted the need for advanced treatment systems, public-private partnerships, and investment in modern facilities to combat outdated recycling methods in India. Motives and outcomes of E-waste recycling intentions have been explored using methods like the Theory of Planned Behavior (TPB). (Wath et al., 2011) had established a model investigating attitude, norms, and control's impact on recycling intention and behavior. The insights had the potential to drive awareness campaigns by local governments to encourage 'green behavior'. The electronics industry's rapid growth has led to a sudden increase in E-waste production(Vijayan et al., 2023).

Figure 3. Countries considered in the literature

OPEN CHALLENGES IN E-WASTE MANAGEMENT

The growing production of E-waste and the need for sustainable disposal methods are likely to be the main trends in E-waste management in the future. The key difficulties and trends are as follows:

1. Growing volume: Even greater amounts of E-waste will be produced because of the widespread use of electronic gadgets and their accelerating rate of obsolescence. This amount of waste will be difficult to manage without proper management techniques.
2. Shift towards Circular Economy: More emphasis will be placed on the transition to a circular economy, where goods and resources are recycled, upgraded, and reused. E-waste management will increasingly emphasize extending the life of electronic components and equipment.
3. Awareness and innovative recycling techniques: The demand for products that are simpler to repair, upgrade, and recycle may increase as consumers become more environmentally concerned. This may be due to changes in consumer behavior and product design. Technological developments in recycling, such as better ways to extract valuable elements from E-waste, will continue. These developments may lessen the consequences of E-waste disposal on the environment lessened by these developments.
4. Use of Advanced Techniques and Eco-design Principles: While lot of scope in the usage of AI-based techniques, other techniques such as IOT and Cloud may also be used in management and disposal. In addition, manufacturers can use eco-design concepts to make items that have less impact on the environment and are simpler to recycle and dispose of properly.

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

5. Global Collaborations: International cooperation will become more crucial as E-waste becomes a widespread problem, especially in developing and large nations. Effectively tackling this issue will be made possible through the cross-border sharing of best practices, technologies, and resources.

FUTURISTIC STRATEGIES FOR E-WASTE

The rapid advancement of technology is driven by growing consumer demands, leading to a significant increase in E-waste worldwide. It often contains dangerous substances like cadmium, lead, polybrominated diphenyl esters, mercury, and more. The improper handling and escalating production of E-waste pose significant environmental as well as health risks. Consequently, it is essential to prioritize the development of safe E-waste management practices. Additionally, these efforts can be linked to the principles of a circular economy, aiming to maximize resource utilization by recycling and reusing waste materials.

Extraction of Precious Metals from E-Waste

It can potentially serve as a medium of revenue for individuals and industries. To illustrate, in Bangalore, India, an annual E-waste generation of approximately 18,000 metric tons is observed. This E-waste contains valuable materials like platinum, gold, silver, aluminum, copper, and rare earth metals, which can later be recycled and reused. Moreover, there is room to explore new economic opportunities stemming from these elements.

Recycling of E-Waste

Similar to other types of waste, certain components of E-waste, like capacitors, plastics, and circuit boards, can undergo recycling processes. Incineration of E-waste can also be a medium to produce energy, particularly through the pyrolysis of the plastic components. Thermo-chemical methods for generating energy from waste materials have garnered global interest, not only for energy production but also for waste recycling. Furthermore, the recovered materials from E-waste can be used to create new materials, aligning with the initial or the very first goal of recycling, which is to obtain valuable resources while mitigating environmental and health risks. Additionally, recycling efforts can create various opportunities for society, including employment and business prospects.

Microrecycling Concept for Recycling E-Waste

Extracting metals from E-waste presents a lucrative business opportunity for private companies. However, the transportation of large quantities of such waste can be costly. A solution to this challenge is the establishment of micro-recycling units, which can be set up in smaller areas, approximately 50 square meters, at a relatively low cost. The idea behind micro-recycling is to employ small-scale facilities to collect and sort E-waste items from nearby areas. This methodology contributes to cost savings in transportation, minimizes raw material use, preserves fossil fuels, and improves environmental outcomes. It also results in the production of value-added recycled materials for future utilization.

Creation of Efficient E-Waste Management Policies

Policies that have been introduced and successfully worked have consistently proven to be a powerful instrument for achieving success in various fields. Using India as an example, despite its position as a major producer of electronic devices, e-waste management had difficulties in the early phases due to the lack of adequate policies. Nevertheless, the Indian Ministry of Environment, Forest and Climate Change (MoEFCC) has introduced guidelines to improve E-waste management.

Indian policymakers have introduced several waste management regulations and guidelines spanning from 1989 to 2016. The first set of rules for handling E-waste was formulated in 2009, followed by the issuance of E-waste rules in 2011, which also included regulations for plastic waste. In India, the policies related to E-waste management are currently underdeveloped and need significant revision to ensure the safety of both the environment as well as human health. Updated policies are urgently needed, though, because of the increasing amount of E-waste being produced.

Usage of Advanced Technologies

The effectiveness, sustainability, and safety of the E-waste management process can be considerably increased by utilizing AI, robotics, and IoT technologies. Due to the rising quantity of electronic trash generated globally, which poses threats to the environment as well as human health, E-waste management is a crucial issue. Here are a few applications for this technology:

1. **E-Waste Identification and Sorting:** AI-based techniques can be used to automatically identify and categorize electronic waste items from images or video feeds. This can help in sorting and classifying E-waste items more accurately and quickly. Also, Robots equipped with computer vision systems can efficiently sort E-waste items based on their category and material composition. They can be programmed to pick and place items into different bins or conveyor belts for further processing.
2. **Inventory Management:** To keep track of the fill levels in electronic trash collection bins and containers, IoT sensors can be installed. This data can be used to optimize collection routes, reduce unnecessary pickups, and ensure timely E-waste collection.
3. **Recycling Process:** Robots can be used to disassemble electronic devices efficiently and safely, separating reusable components from hazardous materials. They can also help in removing valuable materials like precious metals from old devices. Further AI-based ML algorithms can optimize the recycling process by predicting the most efficient way to recover valuable materials while minimizing waste. This can lead to higher recycling rates and reduced environmental impact.
4. **E-Waste Awareness and Education:** Virtual assistants and AI-driven chatbots can be used to provide information and guidance to consumers and businesses on proper E-waste disposal practices. They can answer queries and raise awareness of the importance of recycling electronic trash, especially in public places like railway stations, malls, and colleges.

Integrating these advanced technologies into E-waste management can improve recycling rates, reduce environmental harm, increase worker safety, and create a more sustainable approach to handling electronic waste. These technologies enable smarter, data-driven decision-making throughout the E-waste lifecycle, from collection and sorting to recycling and disposal.

CONCLUSION

One of the world's most difficult issues is the management of e-waste. E-wastes such as PCs, mobile phones, laptops, and TVs are disposed of unscientifically in landfills and open dumps, creating problems for the environment and public health. With E-waste generation rapidly becoming a significant aspect of solid waste management, coupled with the scarcity of mineral resources and their growing consumption rates, efficient e-waste collection has become crucial, particularly in urban areas. While certain countries, such as Japan, have adopted sustainable household e-waste management practices such as EPR schemes, the full implementation of such approaches is still lacking in many developing countries.

The primary objective of EPR is to inspire companies to seamlessly integrate waste management into every phase of their product manufacturing processes, while simultaneously increasing public awareness. EPR strategies have been proven to significantly reduce waste associated with consumer products and enhance their recyclability. Furthermore, EPR plays a crucial role in improving e-waste management by minimizing the generation of excessive waste, reducing the consumption of raw materials during manufacturing, and including sustainability costs in product pricing.

E-waste can contain radioactive substances, which pose a threat to plant growth and tissues. Soils containing radioactive elements can also disrupt the ability of plants to absorb nutrients. Effective E-waste management faces various challenges including irresponsible consumption, inadequate infrastructure, and financial constraints. However, implementing good practices can mitigate these issues, such as inspiring and involving society, promoting behavioral changes, providing sufficient funds and incentives, establishing proper e-waste management facilities, and embracing eco-friendly approaches.

To address these challenges, advanced computational tools, such as the IoT, and AI, play a crucial role. By leveraging these techniques, improved E-waste management practices can be developed. In the future, multi-disciplinary research can be conducted using knowledge and techniques from different domains to develop integrated solutions for making the process economically feasible and contributing to achieving various sustainable development goals.

KEY TERMS AND DEFINITIONS

Artificial Intelligence: The theory governing the development of computer systems that can perform tasks that normally require human intelligence, such as visual perception, speech recognition, decision-making, and translation between languages.

Deep Learning: A part of a broader family of machine learning methods based on learning data representations.

E-Waste: It refers to discarded electronic devices, including computers, smartphones, and appliances, that have reached the end of their usable life. Improper disposal of e-waste can lead to environmental pollution and health hazards due to the presence of hazardous materials.

IoT: It refers to the concept of designing and developing artificial intelligence systems in a way that allows humans to understand and interpret the decisions and reasoning behind the AI's outputs.

Machine Learning: A field of artificial intelligence that uses statistical techniques to give computer systems the ability to learn.

Sustainable Development: Sustainable development is a concept and an approach that seeks to balance economic, environmental, and social considerations to achieve long-term well-being for current and future generations.

Chapter 18
Technological Advancements in E-Waste Management and Resource Recovery

Jayaditya Reddy Yeruva
Woxsen University, India

Adip Krishna Guduru
Woxsen University, India

Bhanu Prakash Saripalli
Woxsen University, India

ABSTRACT

As the world digitizes rapidly, there has been an exponential surge in the generation of electronic waste (e-waste), and it poses a grave threat to our planet due to its hazardous components, improper disposal methods, and the sheer volume being generated. Adding to the problem, e-waste recycling is highly complex and tedious, making it difficult to keep up with the pace of generation as well as leading to wastage of various precious metals. The solution involves using advanced technology to develop and optimise a multi-step resource recovery system. This chapter emphasizes the importance of engineers in tackling e-waste and how cutting edge technology can have a significant positive impact on society without necessarily requiring on-site involvement. The research aims to explore innovative strategies and technologies which will play a vital role in revolutionizing e-waste management, with AI-driven diagnostics, repair guidance, component identification, and value assessment being the future of efficient, effective, and sustainable e-waste recycling.

INTRODUCTION

As the world digitizes rapidly, there has been an exponential surge in the generation of electronic waste (E-Waste), and it poses a grave threat to our planet due to its hazardous components, improper disposal

methods, and the sheer volume being generated. Adding to the problem, e-waste recycling is highly complex and tedious, making it difficult to keep up with the pace of generation as well as leading to wastage of various precious metals.

The solution involves using advanced technology to develop and optimise a multi-step resource recovery system. This chapter emphasizes the importance of engineers in tackling e-waste and how cutting edge technology can have a significant positive impact on society without necessarily requiring on-site involvement. Two AI-based software utilising computer vision and deep learning algorithms are involved in the recovery process:

1. Identification of the different components present in a printed circuit board along with their physical health status to calculate recyclability.
2. Accurate assessment of the value of a printed circuit board by analysis of its composition and precious metals present.

The research aims to explore innovative strategies for making genuine factory parts more affordable and accessible, thus encouraging smartphone repair and prolonging their useful lifespan. Artificial intelligence will play a vital role in revolutionizing e-waste management, with Al-driven diagnostics, repair guidance, component identification, and value assessment, being the future of efficient, effective, and sustainable e-waste recycling.

The Problem at Hand

The rise in popularity of electronic devices brings with it an escalating global concern: the surge of electronic waste (e-waste), especially pronounced in nations like India. The burden posed by e-waste is significant due to its harmful components, inadequate disposal strategies and overwhelming quantities being produced. Statistics further attest to the severity of this predicament. For instance, during 2019 alone, India stood as Earth's third highest producer of e-waste at roughly 3.2 million metric tons—with a mere tenth successfully recycled or properly disposed of. Regrettably, most end up strewn across landfills or processed through unofficial and perilous deconstruction methods (World Economic Forum, 2017).

The perils related to improper handling are highlighted via real-world occurrences; informal recycling endeavors within locations such as Ghana and Guiyu from China expose laborers to lethal elements without adequate protection—resulting in polluting soil & and water resources detrimentally affecting local ecological systems and communities alike (Chinese Academy of Sciences, 2018). Exactly so occurs also within Seelampur-Delhi, a region synonymous with unregulated e-waste recycling has impacted residents' health adversely with increased concentrations of heavy metals found throughout air, soil and even water bodies.

Concerns mount when coupled with lackluster awareness about correctly disposing of E-waste considered signs show large sectors oblivious regarding potential risks associated with the importance of maintaining responsible recycling habits. Therefore hordes continue to pile unwanted electronics onto landfill sites which invariably leads to loops dangerous pollution resource exhaustion.

Addressing this complex situation requires adopting all-encompassing sustainable action plans which include initiating educational outreach programs, spearheading policy change procedures, promoting infrastructure growth besides encouraging mindful consumer production behaviors. Roll-out responsibilities would mean setting up operative collection points and reengineering existing technologies used

IP Address: 223.231.178.10

until now ensuring manufacturers develop easily recyclable designs designed essential. As these coordinated efforts persist we ensure better environmental control safeguard well-being meanwhile nurturing a circular economy around utilization.

What Is E-Waste Recycling?

In the current digital age, the rapid development of technology has caused a commensurate rise in the production of electronic trash (e-waste). E-waste recycling has become a vital part of sustainable waste management techniques in order to reduce the environmental and health risks connected with incorrect disposal. In order to promote a circular economy and lessen the environmental effect of electronic equipment, this part focuses on the procedure and importance of recycling e-waste.

Current Recycling Process

The safe and effective recovery of valuable elements from e-waste requires a number of clearly defined stages. Usually, the procedure entails:

1. **Collection and Transportation**: Appropriate methods for gathering abandoned electronic devices have been created. To make it easier to collect e-waste from homes, businesses, and authorized drop-off locations, cooperation between manufacturers, recycling enterprises, and governmental organizations is essential.
2. **Disassembly and Sorting**: After being gathered, the electronic trash is meticulously disassembled by professional specialists. In this stage, hazardous components, such batteries and circuit boards, are separated for specialist treatment. E-waste is categorized based on material composition and recyclable status with the use of cutting-edge technology and automated sorting systems.
3. **Processing and Material Recovery**: The e-waste is treated using a variety of methods in order to recover valuable materials after sorting. The e-waste is broken down into tiny bits by mechanical shredding, and precious metals may be extracted more easily via smelting and hydrometallurgical processes. Chemical processes ensure the purity and quality of the recovered materials by further refining them.
4. **Refining and Reintroduction**: In order to purge impurities and improve their recycling potential, the extracted materials, including priceless metals like copper, gold, and silver, go through refining operations. The industrial supply chain may then include these materials once again, eliminating the need for virgin resources and lowering the environmental effect.

Importance of E-Waste Recycling

Recycling e-waste is essential to sustainable waste management since it has several positive environmental and financial effects. Significant points include:

1. Resource Conservation: By recovering metals and materials that may be used again in industrial processes, e-waste recycling protects scarce resources. This lessens the requirement for raw material extraction, which often includes harmful environmental practices and energy-intensive methods.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

2. Environmental Protection: Effective e-waste recycling prevents harmful compounds from entering landfills and damaging ecosystems, such lead, mercury, and brominated flame retardants. Recycling aids in the preservation of natural resources and the reduction of climate change by reducing environmental pollution.
3. E-waste recycling offers economic prospects by generating work in the collection, disassembly, sorting, and processing of e-waste. Additionally, it promotes the development of a circular economy in which resources are recycled in order to increase their usefulness and decrease waste production.
4. Compliance with Regulations: Recycling of e-waste adheres to legal frameworks put in place by national and international organizations to address the ethical management of e-waste. Recycling facilities assure correct handling, treatment, and disposal of hazardous components by adhering to certain rules.

E-waste recycling is essential for reducing the negative environmental effects of electronic gadgets and improving environmentally friendly trash disposal methods. We can build a more sustainable future where e-waste is responsibly recycled, resources are conserved, and the negative effects of improper disposal are reduced by putting in place efficient collection systems, investing in cutting-edge recycling technologies, and raising awareness among consumers, manufacturers, and policymakers (World Economic Forum, 2017).

LITERATURE REVIEW AND BACKGROUND INFORMATION

The section that follows offers a summary of the literature and background data on e-waste management, covering significant research results, international efforts, and contemporary practices:

E-Waste Generation Trends

E-waste is a global issue that is becoming worse. Around 53.6 million metric tons of e-waste were produced globally in 2019, with a 21% annual increase rate over the previous five years (World Economic Forum, 2017). As technology becomes more available and inexpensive, increasing consumption and reducing product lifecycles, this tendency is anticipated to continue.

Primary Causes of Generation

- People are purchasing more electronic devices as technology becomes more accessible and inexpensive, expanding the market for electronic goods. As a result, there is an increasing supply of outdated electronic items that are ultimately thrown away.
- Electronic items are becoming more complicated and containing more harmful components, which results in a shorter lifetime. This leads to their reduced lifetime and increases the difficulty and cost of recycling them.
- Lack of knowledge on e-waste's effects on the environment and human health: Many individuals are not aware of e-waste's effects on the environment and human health. This results in incorrect e-waste disposal, which may have detrimental effects on both human health and the environment.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Effects on the Environment and Health

Hazardous compounds including lead, mercury, cadmium, and flame retardants are found in e-waste. If not handled appropriately, these compounds may pose serious dangers to both human health and the environment. These chemicals may be released into the environment by improper disposal methods including open burning and landfill disposal. This may contaminate the air, water, and soil and have a negative impact on human health by increasing the risk of cancer, developmental disabilities, and respiratory issues. Additionally, there may be health dangers associated with the informal recycling of e-waste. Informal recyclers often disassemble e-waste by hand, which exposes them to potentially dangerous materials. Serious health issues including cancer, skin conditions, and respiratory disorders may result from this.

E-Waste Management Techniques in Use Today

Different nations and areas have different methods for managing e-waste. The infrastructural and legal frameworks are often more advanced in developed countries, which results in greater rates of formal recycling. Contrarily, underdeveloped nations often have difficulties handling e-waste as a result of few resources, insufficient laws, and the proliferation of illegal recycling methods. Disassembling and processing e-waste in an ecologically friendly and safe way is required for formal recycling of e-waste. This may aid in the recovery of priceless materials and assist stop the environmental discharge of dangerous compounds. On the other side, informal recycling of e-waste is often done in a risky and uncontrolled way. Hazardous compounds may be exposed to the environment and personnel as a result (Kuehr & Wang, 2015).

International Programs and Rules

Several international efforts and legislation have been created to combat the expanding e-waste issue. E-waste transboundary movement will be regulated under the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal, which also intends to encourage ecologically responsible management. In addition, a number of nations have put in place Extended Producer Responsibility (EPR) frameworks that oblige manufacturers to manage the end-of-life of their goods. EPR frameworks may aid in boosting formal recycling rates and lowering the quantity of e-waste incinerated or disposed of in landfills (Kuehr & Wang, 2015).

TECHNOLOGICAL ADVANCEMENTS

General Overview of Current Technologies Used

Figure 1 shows a simplified illustration of the stages required in gathering, preparing, analyzing, and visualizing data, as well as applying machine learning to learn from the data and generate predictions. The mentioned techniques will be used in the execution of different applications of e-waste management technologies (International Telecommunications Union, 2019; Kumar et al., 2021a).

Figure 1. Overview of current technologies

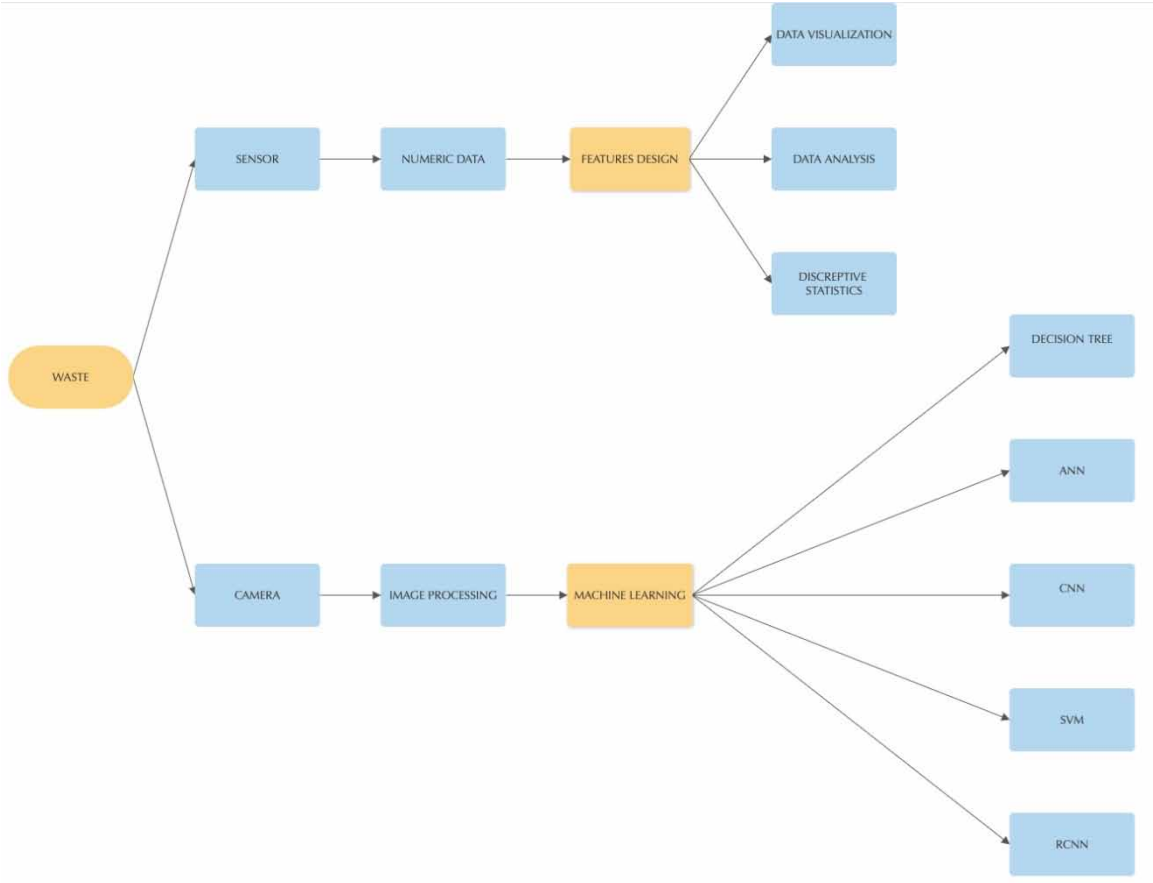

Image Classification to Distinguish E-Waste

Image classification is a method for recognizing and categorizing various items in photographs. AI may be used to construct photo classification algorithms that can be trained on vast amounts of pictures from electronic waste. Once trained, these models may be used to automatically recognize and categorize different e-waste components in photos. This makes it feasible for e-waste to be automatically separated into several sorts, including plastics, metals, and electronics. This could assist to boost the efficiency and speed of the process while lowering the amount of human work necessary to sort the rubbish.

The development of robotic sorting equipment powered by AI is one example of how picture classification is being utilized to enhance e-waste management. Robotic sorting systems employ cameras and image classification algorithms powered by AI to recognize and categorize various sorts of waste. This information may subsequently be used to classify the waste into numerous classes. Robotic sorting machines that apply artificial intelligence (AI) may be used, for instance, to separate e-waste into categories like plastics, metals, and electronics. As a consequence, the recovery of key components from e-waste may be boosted in terms of accuracy and efficiency.

Systems for classifying photos using AI frequently employ machine learning methods. Machine learning algorithms used for e-waste sorting are taught using a huge dataset of e-waste images. The computer

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

system picks up on specific components in the photos, like plastics, metals, and electronics. After being taught, the machine learning system may be used to categorize current images of e-waste. The program first collects attributes from the picture to perform this. Features are elements of the picture that may be exploited to locate particular items within it. The algorithm utilizes the characteristics it has just obtained to categorise the picture and compares the picture's properties to the training dataset's feature set. Following that, the algorithm puts the picture in the class that most closely reflects the attributes of the photos in the training dataset (Liu et al., 2022).

For categorization of photos, numerous machine learning approaches may be utilized, including:

- CNNs (convolutional neural networks): CNNs are machine learning algorithms that are used for classification by pulling characteristics out of pictures and applying those features to categorize the images.
- Support Vector Machines (SVMs): SVMs are a form of machine learning approach that may be applied to a number of tasks, such as classification and regression.
- Random Forests: A form of machine learning approach, random forests may be used for a number of tasks, such as classification and regression. Building a lot of decision trees, then averaging their estimates, is how random forests function.

Identification of E-Waste Through Object Detection

Object detection is a technique for finding particular components in photographs. AI may be used to construct object identification models that can be trained on vast photobanks of e-waste. Once trained, these models may be used to automatically identify particular things in e-waste pictures. With the usage of this, harmful e-waste such as batteries, circuit boards, and capacitors may be detected. These objects may be handled or disposed of appropriately when they are isolated from other e-waste using this information.

One example of how object recognition is being used to enhance e-waste management is the development of AI-powered e-waste screening machines. By combining cameras and AI-powered object identification algorithms, e-waste screening devices may be applied to check for the presence of harmful compounds in e-waste. Using this information, it may later be chosen how to treat and dispose of the e-waste. For instance, if toxic compounds are identified in e-waste, they may be processed separately from other e-waste or appropriately disposed of.

Object detection systems powered by AI generally employ a two-stage technique. Making a list of probable sites for the shot is the first step. The next step is to categorize each potential area to evaluate if it includes a relevant item. The item identification system generally utilizes a deep learning model to offer a list of possible locations. A form of machine learning technology called deep learning models may uncover complicated patterns from data. The deep learning model is trained on a huge dataset of photos of e-waste in the instance of e-waste identification. The model acquires the capacity to discern between numerous things in the photos, including capacitors, circuit boards, and batteries.

The object identification system utilizes a classifier to categorize each candidate area after the deep learning model has created a collection of candidate regions. A machine learning approach known as a classifier may be used to separate data into multiple groups. The classifier is trained to identify candidate sites as either having an item of interest or not having an item of interest in the instance of e-waste identification (Kumar et al., 2021b).

Machine learning approaches that could be utilized for object detection include:

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- RPNs (Region Proposal Networks) are a form of machine learning technology that may be used to discover prospective photo locations.
- Faster R-CNN (region-based convolutional neural networks): Faster R-CNN is a form of machine learning technology that may be applied to both the classification and identification of objects. To recognize and categorize objects in pictures, quicker R-CNN combines an RPN with a classifier.
- Single Shot MultiBox Detector (SSD) is a machine learning approach that may be applied to both the detection and categorization of items. SSD can create and identify candidate areas in a single step because it is a one-stage object detector.

Prediction of Hazardous Materials for Handling E-Waste

A technique called hazardous materials prediction may be used to forecast the existence of toxic compounds in e-waste. Using massive datasets of e-waste samples with known hazardous materials composition, AI may be applied to develop hazardous materials prediction models.

These models may be used to predict the presence of hazardous components in fresh e-waste samples once they have been trained. This may assist guarantee that e-waste is handled and disposed of responsibly, preserving both the environment and human health. The advent of AI-powered e-waste screening systems is one example of how hazardous materials prediction is being applied to assist e-waste management. E-waste screening devices may be used to check for the presence of hazardous materials by employing sensors and AI-powered hazardous materials prediction algorithms.The treatment and disposal of the e-waste may later be determined upon utilizing this information. For instance, if toxic compounds are identified in e-waste, it may be segregated from other e-waste and processed or disposed of securely.

Machine learning methods are commonly utilized in hazardous materials prediction systems powered by AI. A sort of artificial intelligence that can learn from data are machine learning algorithms. The machine learning algorithm is trained on a large dataset of e-waste samples with known hazardous materials composition in the case of hazardous materials prediction.The system develops the capacity to recognize data patterns linked with the presence of harmful compounds.

After being taught, the machine learning system may be used to anticipate the occurrence of dangerous compounds in fresh e-waste samples. The program first obtains characteristics from the sample of e-waste in order to perform this. The e-waste sample features characteristics that may be utilized to predict the presence of hazardous compounds.

The algorithm takes use of the attributes after they have been gathered to anticipate the occurrence of dangerous components in the e-waste sample. The qualities of the training dataset's e-waste samples are compared to the characteristics of the e-waste sample in the algorithm. The e-waste sample is then allocated to the class that best matches the features of the e-waste samples in the training dataset.

The technique known as Gradient Boosting Machines (GBMs) may be utilized to produce this prediction. A form of machine learning approach called GBMs may be applied to a range of tasks, such as classification and regression. GBMs function by developing a sequence of weak learners, merging them, and producing a strong learner (Tiwari et al., 2020).

Process Improvement for Recycling E-Waste

AI may be applied to design new, more effective, and efficient recycling procedures. AI may be applied, for instance, to create inventive solutions for recycling lithium-ion batteries. This may be accomplished

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

by utilizing AI to simulate different recycling processes and determine the most feasible and effective techniques.

AI may be used to design techniques for enhancing the purity of recycled materials, which would increase the quality of e-waste recycling. AI may be used, for instance, to design ways for purging contaminants from recovered polymers. This may be done by employing AI to find and design unique separation approaches. Reduce the environmental effect of recycling: Artificial intelligence (AI) may be used to create solutions for minimizing the energy and water use involved with recycling. AI may be utilized, for instance, to boost the efficiency of recycling procedures. This may be done by employing AI to continually monitor and manage recycling efforts.

Reinforcement learning is one approach that AI may utilize to discover innovative ideas for recycling e-waste. Through trial and error, reinforcement learning, a subset of machine learning, enables agents to learn how to act in a given environment.

The agent in the instance of recycling e-waste may be a robot that is learning how to divide e-waste into numerous categories. The agent would begin by interacting with its surroundings at random. The agent would gain incentives as it interacted with the environment for activities that helped it accomplish its goals, such as classifying recyclable electronic waste. Additionally, the agent would be punished for behaviors like inappropriately classifying e-waste, which had the undesired impact.The agent would gradually learn to engage in behaviors that result in the desired outcome and abstain from acts that result in the unwanted one. This procedure would run on until the agent could properly classify e-waste into the relevant categories.

Using deep learning is another method AI may be utilized to enhance e-waste recycling. Artificial neural networks are used in deep learning, a sort of machine learning, to learn from data. Artificial neural networks are designed after how the human brain functions and is structured.

Building computer vision models that can detect and categorize items in photos may make use of deep learning. These models may be used to construct AI-powered e-waste sorting systems that can classify e-waste automatically into multiple types (Wang et al., 2021).

PCB Value Assessment

One of the most significant parts of managing e-waste is estimating the value of PCBs by calculating their metal content. The procedure's steps are as follows:

1. **Gathering of Samples:** A wide variety of PCB samples representing diverse electrical devices and manufacturing standards were obtained. The examination of the quantity and distribution of precious metals was based on these samples.
2. **Analysis of the metal content:** To test the concentration of precious metals contained in the PCBs, including copper, gold, silver, platinum, and others, X-ray fluorescence (XRF) spectroscopy and inductively coupled plasma mass spectrometry (ICP-MS) were applied.
3. **Calibration and Standardization:** Calibration standards were employed to establish a relationship between the measured signals and the actual metal concentrations. Standardization processes were adopted in order to assure measurement accuracy and repeatability.
4. **Data Evaluation:** The obtained metal concentration data were examined to assess the value of the PCBs based on the amount and kinds of precious metals present. It was crucial to correlate the measurements with the current metals market values in order to assess the board's worth.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

5. **Reporting and Visualization:** Reports or visual representations that comprised the findings of the metal content study and PCB valuation were prepared to give a clear appraisal of the board's worth based on the precious metals it contains.
6. **Validation and Quality Control:** Quality control measures, such as sample duplicates, validated reference materials, and periodic equipment calibration checks, were employed in order to assure the reliability and accuracy of the metal content analysis.

In conclusion, the approach for constructing AI software to analyze printed circuit boards involved data collecting, AI model construction, training, validation, testing, and the establishment of a compatibility database for reuse.

Additionally, the approach applied to assess the value of PCBs comprised sample collection, metal content analysis, data processing, and reporting. These methodologies offer the framework for the design of AI-driven systems that can analyze and optimize printed circuit board reuse and value assessment in the context of e-waste management.

ECONOMIC AND SOCIAL IMPLICATIONS

Creating Jobs

E-waste management and resource recovery technological improvements have the potential to generate employment in a variety of ways. For instance, modern e-waste recycling and remanufacturing processes need the creation and upkeep of specialized machinery. The need for personnel in the engineering, manufacturing, and maintenance industries may rise as a result.

Additionally, the expansion of the e-waste recycling and remanufacturing businesses may result in the development of new positions in fields like customer service, logistics, and transportation.

Pollution Reduction and Enhanced Public Health

By limiting the discharge of harmful elements from e-waste into the environment, technological advances in e-waste management and resource recovery may contribute to a decrease in pollution and an improvement in public health.

To recover valuable metals from e-waste, for instance, innovative e-waste recycling methods may be employed without the use of dangerous chemicals. This may lessen water and air pollution.

Additionally, dangerous elements from e-waste may be securely disposed of using innovative e-waste treatment technology. This may aid in defending against the negative effects of exposure to these elements on human health.

Enhanced Access to Low-Cost Electronics

The availability of recycled and remanufactured goods may be increased because of technological developments in e-waste management and resource recovery. For instance, modern e-waste remanufacturing technologies may be utilized to create high-quality recycled electronic items that, in terms of performance and dependability, are on par with new products. Additionally, as the e-waste recycling

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

and remanufacturing sectors expand, costs for recycled and remanufactured electronic items may fall as a result of increasing competition.

Promotion of Social Justice

By lessening the adverse consequences of e-waste on disadvantaged populations, technological advances in e-waste management and resource recovery may aid in the promotion of social justice. For instance, the pollution brought on by e-waste recycling plants often has a disproportionately negative impact on vulnerable areas. These populations may be shielded from the negative consequences of exposure to dangerous chemicals with the use of new e-waste recycling technologies that decrease pollution. Additionally, individuals in underprivileged areas may have access to new employment possibilities in the recycling and remanufacturing of e-waste.

Reduced Waste Disposal Costs

The cost of garbage disposal for companies and governments may be decreased with the aid of technological improvements in e-waste management and resource recovery.

For instance, new technology for recycling e-waste may be employed to turn it into useful resources like metals and polymers. This may lessen the quantity of electronic trash that has to be burned or dumped in landfills. Additionally, the amount of e-waste that has to be carried and disposed of may be decreased by using innovative e-waste management technology. This may lower garbage disposal costs even further.

Recycled and Remanufactured Products: New Markets

Resource recovery and e-waste management technological advances may open up new markets for recycled and remanufactured goods. For instance, modern e-waste remanufacturing technologies may be utilized to create high-quality recycled electronic items that, in terms of performance and dependability, are on par with new products. This may open up a new market for individuals and companies to purchase recycled electrical devices. The demand for recycled materials from other sectors may also rise as a result of the expansion of the e-waste recycling and remanufacturing businesses. For instance, recycled plastic from e-waste may be utilized to create brand-new items like furnishings, clothes, and construction supplies.

Conservation of Natural Resources

By lowering the need to mine new raw materials, technological developments in resource recovery and e-waste management may aid in the preservation of natural resources. For instance, valuable elements like metals and polymers may be extracted from e-waste using innovative e-waste recycling technology.

Without having to mine fresh raw materials from the ground, these resources may subsequently be utilized to make new goods. In addition, less e-waste may be dumped in landfills with the help of modern e-waste management technology. Groundwater contamination and greenhouse gas emissions are risks associated with landfills. The environment may be protected by innovative e-waste management systems by lowering the quantity of e-waste that is dumped in landfills.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Accelerated Economic Growth

E-waste management innovations and resource recovery technologies may contribute to tax income and economic development. For instance, the expansion of the recycling and remanufacturing sectors for e-waste might result in more jobs and more tax income for the government. As well as opening up new markets for enterprises, the development of novel e-waste management and resource recovery technologies may spur economic growth (World Bank, 2020).

WHAT DOES THAT MEAN FOR US?

We now face both possibilities and problems in the field of managing e-waste as a result of the data and future scopes that have been explored. Inadequate recycling rates, poor disposal methods, and worrying rates of e-waste creation are all highlighted by the statistics, on the one hand. Along with serious threats to the environment and public health, this also results in the waste of priceless resources.

The possibilities for the future, however, provide opportunities for improvement. Potential legislative and regulatory changes may result in stronger rules and better governance for the handling of e-waste. Campaigns for awareness and education may encourage people and organizations to act responsibly and dispose of and recycle e-waste in the right ways. Collaborations within the sector and the development of sustainable recycling infrastructure may result in more ethical and effective business practices. technological innovations, like AI software, may improve e-waste component identification, evaluation, and value, increasing the effectiveness of recycling and resource recovery. Additionally, the idea of a circular economy provides a framework for converting e-waste into a useful resource and lowering dependency on raw materials. This idea is reinforced by statistics on valuable components and metals.

It takes coordinated efforts by governments, companies, organizations, and people to take full use of these possibilities. To solve the issues raised by e-waste and create a more sustainable future, collaboration, innovation, and a change to sustainable habits are required. We may work toward efficient e-waste management, environmental preservation, and the development of a circular economy that benefits both society and the environment by taking action based on the facts and future scopes.

CONCLUSION

The paper emphasizes the serious problem of e-waste and its harmful impacts on the environment, human health, and resource depletion in its conclusion. The report emphasizes the critical need for efficient e-waste management by highlighting the worrisome pace of e-waste creation, incorrect disposal practices, and inadequate recycling efforts.

The results also provide chances for innovative fixes that take use of technological improvements and support sustainable behaviors. The use of AI software in e-waste management provides exciting characteristics that have the potential to completely transform the sector. AI software may make it easier to refurbish and repair cell phones, prolonging their useful lives and minimizing electronic waste, by recognizing various components from e-waste and giving a compatibility list for reuse.

Additionally, using AI software to evaluate printed circuit boards (PCBs) offers two beneficial characteristics. In order to promote the circular economy and reduce waste, the program can first identify

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

different components from e-waste and present a list of appropriate devices where they may be reused. Second, by precisely estimating the value of the board by counting the quantity of precious metals in PCBs, the program promotes fair trade practices and ensures that intermediaries are not kept in the dark about the real value of PCBs.

It is essential to make research and development investments, work together with industry partners, and encourage the wider use of these technical characteristics if we are to fully realize their potential. Additionally, addressing unfair trade practices and improving the effectiveness of e-waste management may be accomplished by educating intermediaries about the importance of PCBs and encouraging the availability of affordable factory components for smartphone repairs.

In order to implement comprehensive e-waste management policies, it is crucial for governments, businesses, and people to collaborate. To do this, strong legislation and regulations must be put in place, as well as awareness campaigns, infrastructure for sustainable recycling, collaborations, and acceptance of technical breakthroughs.

By doing this, we can reduce the negative effects of e-waste on the environment, safeguard public health, save precious resources, and pave the path for a more sustainable future.

In conclusion, a multifaceted strategy that incorporates legislative initiatives, public education campaigns, infrastructural improvement, and technical innovation is needed for successful management of e-waste. By using these tactics, we can lessen the negative consequences of e-waste, encourage responsible consumption and production, and aim to create a society that is more ecologically friendly and sustainable.

ABSTRACT

In response to the rise of electronic trash on a worldwide scale, numerous new solutions have emerged. To recover valuable elements from electronic trash, many recycling processes have been developed, including mechanical, chemical, and biological methods. The use of artificial intelligence and machine learning algorithms in automated sorting systems has increased the operational efficacy of e-waste recycling dramatically. Urban mining has gained popularity as a potential method of obtaining precious metals from technological trash. Furthermore, the implementation of extended producer obligation (EPR) rules imposes obligation on producers for the correct management and disposal of their products. These technology advances collectively lead to more sustainable and effective electronic waste management, decreasing environmental impact and aiding the recovery of valuable materials.

INTRODUCTION

The term "e-waste" refers to a wide range of electronic and electrical equipment that has been discarded, including commonly used devices such as smartphones and laptops, as well as less noticeable household appliances like refrigerators and washing machines (Oswald & Reller, 2011). The 21st century has experienced an unprecedented proliferation of technology, resulting in the integration of electronic devices as an inseparable component of contemporary existence. Technology has significantly transformed various aspects of our lives, including communication, work, and daily living, through the utilization of microchips in smartphones and the operation of large-scale data centers that support the digital era. Nevertheless, the rapid and exponential proliferation of electronic devices in both production and consumption has concurrently engendered a significant and urgent global concern, commonly referred to as electronic waste or e-waste. These technological devices, previously lauded for their groundbreaking features and practicality, ultimately reach the conclusion of their operational cycle, necessitating their proper disposal. The increasing global demand for electronics has led to the emergence of a complex and multifaceted issue regarding the management of electronic waste(Tesfaye et al., 2017). This issue extends beyond environmental considerations and encompasses broader implications for health, economy, and society.

The exponential increase in electronic waste poses a significant and complex global issue, influenced by various factors that highlight the contradictory nature of technological advancement. Based on the findings of the Global E-waste Monitor 2020, it was determined that the global production of electronic waste (e-waste) amounted to approximately 53.6 million metric tons in the year 2019. It is projected that this volume will increase by 21% to reach 74.7 million metric tons by the year 2030 (Yu et al., 2010), provided that current trends continue. The current surge of electronic waste presents a multitude of significant challenges that require urgent attention and creative resolutions.

Figure 1. Global e-waste forecasting statistics

Primarily, the ecological ramifications of electronic waste are profoundly concerning. Electronic devices contain a combination of potentially harmful substances, such as lead, mercury, cadmium, and brominated flame retardants. Improper disposal of these toxic substances can result in their infiltration into the soil and water, thereby causing contamination of ecosystems and presenting a significant risk to both human and environmental well-being. The cumulative effect of electronic waste on the planet's intricate ecological equilibrium is a matter of significant apprehension.

In addition to its environmental consequences, the depletion of valuable resources represents another urgent concern. Electronic devices serve as valuable repositories of valuable resources, encompassing rare earth elements, gold, and silver. The conventional extraction methods employed for these materials result in the depletion of finite resources, contribute to environmental degradation, and frequently involve unethical mining practices. Electronic waste (e-waste) serves as an unexplored source of secondary raw materials (Tansel, 2017). Inadequate disposal of e-waste results in the squandering of valuable resources that have the potential to be recycled and reused. This, in turn, alleviates the strain on primary resource extraction. Moreover, the pervasive presence of informal recycling practices in numerous regions across the globe poses a significant risk to the health and well-being of workers and nearby communities involved in the dismantling and recycling of electronic waste. The act of inhaling toxic fumes, being exposed to hazardous chemicals, and handling electronic components without sufficient protective measures can result in various health complications, such as respiratory ailments, neurological disorders, and potentially cancerous conditions. The detrimental impact on human well-being caused by electronic waste serves as a poignant reminder of the pressing necessity for the implementation of responsible management strategies. In addition to the environmental and health aspects, data security emerges as a crucial concern. Electronic devices that have been discarded frequently contain data of a sensitive nature, including personal, corporate, and government information. Insufficient protocols for data erasure or disposal may lead to instances of data breaches, identity theft, and corporate espionage. The inadequate management of devices that store data can result in significant ramifications, jeopardizing privacy, and security on a broad scope. The absence of standardized regulations and enforcement mechanisms across various regions and countries presents a substantial obstacle to the efficient management of electronic waste. The lack of standardization in electronic waste (e-waste) policies and practices poses a significant obstacle to the effective coordination of global initiatives aimed at addressing this issue in a comprehensive and consistent manner (Bhat & Patil, 2014).

Given the complex nature of these challenges, finding effective solutions to the e-waste crisis necessitates the implementation of innovative approaches that go beyond traditional waste management methods. Technological advancements in the field of e-waste management assume a prominent role in addressing the challenges posed by electronic waste, presenting potential solutions to alleviate its impacts (Breivik et al., 2014). The present study focuses on the examination of technological advancements in the field of electronic waste (e-waste) management. Technological advancements have emerged as a promising solution in the field of electronic waste management, providing a comprehensive approach to tackle the environmental, economic, and social aspects associated with this issue. These innovations span across various disciplines, including robotics, artificial intelligence, blockchain technology, and circular economy models. As the examination of e-waste management unfolds, it becomes evident that technological advancements have emerged as significant catalysts for transformative shifts. An area of notable progress pertains to the automation of e-waste collection and sorting. The conventional approaches to the collection and sorting of electronic waste (e-waste) are frequently characterized by labor-intensive procedures, protracted time requirements, and susceptibility to errors. To address these constraints,

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

sophisticated robotic systems and cameras powered by artificial intelligence have been implemented to effectively classify and organize electronic waste items according to their specific type and constituent elements. These technologies have the dual effect of expediting the collection process and improving precision, thereby safeguarding the retention of valuable materials during the sorting phase. In addition to this, the notion of electronic waste automated teller machines (E-Waste ATMs) has surfaced in certain areas. These novel machines enable individuals to engage in the act of depositing their obsolete electronic devices for the purpose of recycling, in return for receiving rewards or monetary incentives. This approach not only optimizes the procedure of electronic waste disposal but also promotes responsible recycling practices by offering tangible incentives to consumers (Van Yken et al., 2021).

Blockchain technology has become increasingly prominent in the domain of e-waste tracking and traceability. The utilization of blockchain technology, known for its attributes of transparency and immutability, is employed to establish a comprehensive and unchangeable log of electronic waste transactions. The blockchain ledger facilitates the monitoring and documentation of the entire lifecycle of electronic waste (e-waste) items, commencing from their initial collection and concluding with their recycling or disposal. This system guarantees a high level of transparency and accountability throughout each stage of the process. Furthermore, the adoption of QR codes and RFID tags has become increasingly prevalent, allowing for the assignment of distinctive identifiers to electronic devices. These identifiers greatly enhance the ability to monitor and trace devices throughout their entire lifespan (Forti et al., 2020). These technologies not only facilitate responsible disposal practices, but also offer consumers and regulators the ability to authenticate and validate the genuineness and legality of e-waste management procedures.

There has been notable advancement in the field of e-waste recycling, particularly in the realm of urban mining, which aims to extract value from discarded electronics. Conventional mining practices are characterized by their high resource consumption and adverse environmental impacts. In contrast, urban mining focuses on the retrieval of valuable metals and materials from electronic waste. Advancements in recycling methodologies have facilitated the secure and effective retrieval of precious metals, rare earth elements, and other valuable resources from electronic components. Moreover, sophisticated chemical methodologies are currently being utilized to extract and reclaim valuable substances from electronic waste. These processes not only mitigate the environmental consequences of resource extraction but also foster a more circular economy through the reuse of recovered materials. Circular economy models have emerged as a prominent approach for addressing the issue of electronic waste (e-waste) at its origin. The Product-as-a-Service (PaaS) (Forti et al., 2020; Sulaiman Zangina et al., 2023) model represents an innovative approach in which manufacturers investigate novel business models that redirect the focus from product ownership to product utilization. In the context of Platform as a Service (PaaS), consumers engage in subscription-based models to access and utilize products and services, as opposed to acquiring them through outright purchases. This transition provides manufacturers with an incentive to prioritize the design of products that possess qualities such as durability, repairability, and recyclability. Consequently, this approach effectively mitigates the production of electronic waste and fosters the notion of prolonging a product's lifespan. Similarly, there has been a global increase in the adoption of Extended Producer Responsibility (EPR) programs. The Extended Producer Responsibility (EPR) framework imposes responsibility on manufacturers for the complete life cycle of their products, encompassing activities such as product collection, recycling, and proper disposal. This approach incentivizes manufacturers to incorporate sustainability considerations into the design of their products, as they are accountable for the management of their products' end-of-life phase. The emergence of e-waste recycling robots represents a significant innovation within the recycling sector. Robotic systems are specifically

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

designed for the purpose of disassembling and recycling electronic waste, thereby providing enhanced levels of efficiency, precision, and safety in comparison to manual procedures. The utilization of these robotic systems enables the efficient execution of complex operations, including the extraction of intricate components and the disposal of hazardous materials. Consequently, the recycling process is optimized, leading to a decrease in the potential risks associated with human exposure to harmful substances.

In the contemporary era characterized by the widespread use of mobile technology, the significance of e-waste tracking applications has witnessed a notable surge. These mobile applications enable consumers to conveniently find nearby e-waste drop-off locations, educate themselves about responsible disposal practices, and potentially receive incentives or rewards for recycling their outdated electronic devices. These applications serve to connect individuals with the e-waste recycling ecosystem, thereby enhancing the accessibility and convenience of responsible disposal practices. The significance of data wiping and secure disposal holds immense value within the realm of electronic waste management. To safeguard sensitive information stored on electronic devices, the field of data security has seen the development of sophisticated data wiping software and hardware solutions. These advancements aim to effectively erase data in a secure manner prior to recycling or disposal. These tools are crucial not only in ensuring the protection of data privacy but also in mitigating the risks of data breaches and identity theft. To simultaneously tackle the issue of waste and meet energy demands, certain pioneering technologies endeavor to transform electronic waste into energy utilizing methods such as incineration or pyrolysis. These methodologies not only mitigate the quantity of electronic waste but also produce sustainable energy, thereby contributing to a more environmentally conscious approach to waste management.

Community-based recycling models have recently emerged as viable grassroots solutions to address the issue of electronic waste. Efforts such as repair cafes and community e-waste collection centers serve to advance the principles of local, sustainable recycling and repair of electronic devices. These initiatives led by the community promote a collective sense of accountability and environmental guardianship, highlighting the significance of community-level practices such as minimizing, repurposing, and recycling electronic devices. The topic of global collaboration and standards is of significant importance in the academic discourse. It encompasses the exploration of how individuals and organizations from different parts of the world come together to work towards common goals and objectives.

The imperative of international collaboration and the establishment of shared standards is crucial in light of the worldwide scope of the electronic waste (e-waste) issue. The harmonization of e-waste management practices and regulations across borders necessitates collaborative endeavors involving governments, industries, and non-governmental organizations. The implementation of universal standards can effectively promote the adherence to responsible recycling practices on a global scale, thereby facilitating a comprehensive approach to addressing the e-waste problem. The administration of electronic waste finds itself at a pivotal moment in the course of human history. The rapid increase in electronic consumption and disposal necessitates the development of novel approaches that effectively tackle the complex issues associated with electronic waste, encompassing environmental and health risks, resource depletion, and data security vulnerabilities. The emergence of technological advancements in the field of e-waste management presents a promising prospect, as it provides a holistic strategy to address and minimize the environmental consequences of electronic waste. In the exploration of e-waste management, an examination of these advancements will elucidate the transformative impact they have on our strategies for handling electronic waste, thereby facilitating the progression towards a future characterized by enhanced sustainability and accountability (Ahirwar & Tripathi, 2021; Li & Achal, 2020).

LITERATURE REVIEW

Adverse Effects of E-Waste on Human Life and Environment

Electronic garbage (e-waste) contains heavy metals, persistent organic pollutants (POPs), and flame retardants, which pose long-term environmental risks. Pollution from formal and informal e-waste processing is high. Pollutants from these processes affect air, dust, soil, and water. These pollutants can enter the food chain and harm living things. Geochemical cycles and biological processes promote pollution buildup, movement, and transformation, creating long-term environmental hazards that can harm ecosystems and humans (Ahirwar & Tripathi, 2021; Bakhiyi et al., 2018). Health concerns from informal e-waste recycling are high for women and children. Food consumption, inhalation, and direct contact with polluted soil, dust, and skin can expose people to e-waste. This exposure can also cause respiratory and neurological troubles, tremors, pneumonia, and even death. Dioxins, furans, PCBs, and lead emitted during e-waste processing can cause cancer, nerve damage, and developmental difficulties in children. Dismantling and treatment workers risk occupational exposure, which can cause asthma, skin illnesses, neuritis, eye irritation, and gastrointestinal issues. E-waste recycling particles can cause inflammation, oxidative stress, and DNA damage, worsening health risks. E-waste releases toxic compounds, causing various environmental consequences. E-waste processing releases dioxins and other halogenated polymers that might cause cancer. E-waste exposure raises blood lead levels, which impair the neurological, circulatory, and renal systems and disrupt children's neurodevelopment. Microbial activities can convert inorganic mercury in e-waste into methylmercury, threatening the brain system. E-waste chromium compounds can damage DNA and cause asthma. Freon, used in air conditioners, can damage the ozone layer, worsening the greenhouse impact. Dioxins can be released through landfilling or illegally burning brominated flame retardants and chlorinated polymers. Due to its hazardous components and complex management, e-waste poses serious environmental and health risks. The threats to vulnerable populations, such as e-waste sector workers and neighboring communities, can affect future generations. Addressing the global environmental and health issues caused by e-waste requires managing and minimizing these risks (Frazzoli et al., 2010; Heacock et al., 2018).

Data Security and Cyber Crimes

The inadequate disposal of electronic equipment and their subsequent entry into the illegal e-waste market is a significant issue of concern, especially because it may lead to the exposure of sensitive data. Nevertheless, the existing body of studies pertaining to the magnitude of this matter is quite constrained. There are numerous examples that effectively illustrate the ease with which data can be extracted from secondary electronic and e-waste markets. A substantial amount of this data belongs to the categories of Personally Identifiable Information (PII) and Sensitive Personal Information (SPI), which are particularly coveted by individuals involved in cybercriminal activities. In a notable case study conducted by Simson Garfinkel at the Massachusetts Institute of Technology (MIT) in 2003 (Jan et al., 2022; Whitman & Mattord, 2021), an investigation was carried out to acquire a total of 158 hard drives through several channels. These sources included computer stores, small enterprises, thrift stores, and online auction platforms. The researchers made a significant finding that a considerable proportion of these discs still had retrievable data, even in instances when files had been erased, rewritten, or reformatted. The dataset

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform

IP Address: 223.231.178.10

included personal information, corporate data, credit card numbers, emails, and other types of sensitive data, highlighting the inherent risks associated with insufficient practices for disposing of data.

In 2009, the University of Vancouver conducted a significant case study that provided insights into the e-waste disposal sites in Ghana and revealed the widespread presence of hard drives being traded in local second-hand electronics markets. A significant proportion of these storage devices contained confidential financial information, including credit card numbers, bank account details, internet transaction logs, personal photographs, electronic mail correspondence, and even classified U.S. government agreements. These disclosures not only elicited apprehensions over personal privacy but also presented possible risks to the security of the nation. The prevalence of sensitive information being discovered in e-waste and second-hand markets is supported by a multitude of anecdotal reports. These examples involve the retrieval of military records, employment applications, medical history documents, tax information, and credit card details from previously owned computers and hard drives. Despite having been reported for over two decades, this issue continues to persist, emphasizing the urgent requirement for further extensive research, increased awareness, and strong data disposal processes to protect sensitive information from unauthorized access.

TRADITIONAL METHODS OF THE E-WASTE MANAGEMENT

Recycling

The section discusses the global management of electronic waste (e-waste) and its processing and recycling, focusing on metal recovery and non-metal component use. Manufacturers, importers, and distributors in Europe must manage electronic waste recycling and disposal costs under the WEEE and RoHS Directives (Daft, 2021; Feldman et al., 2016).

[1] Government-regulated recycling and processing systems have emerged, culminating in 500 EU e-waste treatment companies. Municipalities, recyclers, non-profits, and industry associations recycle e-waste in the US. Various governments have passed individual e-waste management laws to promote recycling and reduce landfill disposal.

[2] E-waste management in Japan has improved from collecting non-metal components to uniform treatment. This advancement has led to a solid industry chain for e-waste collection, transportation, and processing. Recycling and resource recovery have increased significantly.

[3] China's extended producer responsibility scheme and waste electrical appliance disposal fund encourage producers to pay for recycling and processing. This has increased the competitiveness of waste electrical appliance processing enterprises.

[4] Electronic waste disposal involves secure dismantling, component separation and enrichment, material regeneration, energy recovery, and pollutant treatment. These methods ensure the safe treatment and recycling of electronic trash, which may include harmful elements.

[5] E-waste recycling is being addressed in India through regulatory measures and infrastructural development. The nation's E-Waste (Management and Handling) Rules require producers to collect and recycle their electronic gadgets after use. India has established collection centers and authorized recyclers to manage e-waste. Additionally, e-waste campaigns and projects have been launched to educate individuals and organizations on correct disposal. The above initiatives show

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

India's commitment to sustainable electronic trash management and addressing its environmental and health risks.

[6] Electronic garbage recycling relies on metal recycling, which includes mechanical, physical, pyrometallurgy, hydrometallurgy, and bio-metallurgy methods. Each method has pros and cons, and their synergy is often used to maximize metal recovery.

[7] Electronic waste contains polymers, glass, and rubber, which can be recycled. Non-metallic materials are recycled using different methods depending on their properties and goals. Mechanical regeneration, modified regeneration, and energy recovery are examples.

Incineration

Incineration is a waste management technique characterized by the deliberate combustion of solid waste items at exceptionally elevated temperatures within specialized facilities referred to as incinerators. This approach is utilized to decrease the quantity of garbage, alleviate its ecological consequences, and harness energy from the process of combustion. Incinerators function within a temperature range of approximately 700 to 1,200 degrees Celsius, facilitating the efficient transformation of both organic and inorganic waste into ash, gases, and thermal energy. It is worth mentioning that incineration has the capability to produce electricity or heat, thereby making a valuable contribution to sustainable energy production via a process commonly referred to as waste-to-energy (WtE) (Chatterjee, 2012; Khaliq et al., 2014). Despite the potential advantages of volume reduction and energy recovery, incineration is also accompanied by environmental considerations pertaining to emissions, including dioxins and heavy metals. Consequently, the implementation of rigorous pollution control systems and compliance with regulatory standards becomes imperative. The meticulous sorting of garbage and the careful choice of appropriate waste streams are crucial factors in the effective and responsible execution of incineration as a strategy for waste management.

Landfills and Exports

Solid garbage is often dumped in landfills to control and contain it, reducing environmental contamination. Liners and monitoring systems are carefully designed into landfills to prevent chemical leakage into soil and groundwater. Garbage is compacted and covered with soil to reduce Oduors, pests, and land restoration. Landfilling is a practical waste management approach, although it emits methane and may harm ecosystems. Recycling, composting, and trash reduction are prioritized in modern waste management to reduce landfill use. Municipal solid waste is mostly produced by the US, China, and India (P. Kumar, 2012), with socioeconomic levels affecting garbage composition. Waste management methods include recycling, incineration, waste-to-energy conversion, composting, and landfill disposal. As ecological reactors, landfills alter waste material. Liner, soil cover, leachate collection, gas recovery, and flaring are essential to landfill sustainability. This study examines how landfill conditions affect gas and leachate production, focusing on bioreactor landfills as a future waste management option. This review covers waste volume reduction, resource recovery, waste valorization, environmental protection, and urban development site reclamation. This discussion covers landfill categorization, engineering, operations, mechanics, and landfill mining. Common waste management methods include landfilling to contain garbage and reduce environmental contamination. The US, China, and India generate the most garbage, with waste composition varying by socioeconomic status. Landfilling is one waste management option.

IP Address: 223.231.178.10

Complex processes occur in specific regions with this strategy. Sustainable landfilling requires liners, soil cover, leachate collection, and gas recovery. Bioreactor landfills can improve waste stabilization. Our study covers waste reduction, resource recovery, valorization, environmental protection, and site reclamation. This discussion covers landfill classifications, engineering principles, operational processes, mechanisms, and landfill mining.

Transporting abandoned electronics (e-waste) to developing nations has received interest. The scale of this challenge is hard to assess without a quantitative understanding of the amounts involved. This research aims to monitor the global transportation of electronic waste (e-waste) by consolidating and restricting current assessments of the amount of e-waste produced domestically in each country (MGEN), exported from OECD countries (MEXP), and imported from non-OECD countries. This study uses 2005 as the reference year and provides uncertainty ranges for all estimates. The estimation of MGEN, based on a global aggregate of 35,000 kt (with a range of 20,000–50,000 kt) according to a nation's GDP, matches independent assessments for specific countries. China, India, and five West African nations, the main beneficiaries of OECD e-waste exports, may have imported 5,000 kt (range: 3,600 to 7,300 kt) annually. This import volume accounts for 23% (with a range of 17% to 34%) of OECD domestic e-waste. Application of 23% to MGEN estimates MEXP for each OECD nation. MGEN (domestic e-waste production), MIMP (import), MEXP (export), and MNET (net e-waste flow) can be used to investigate and depict global e-waste generation and movement from OECD to non-OECD nations. Although there are still uncertainties, seven non-OECD nations' import predictions often match or exceed OECD export projections.

Manufacturer Take-Back Programs and Collection of Materials

India, like many other developed and developing nations, uses extended producer responsibility (EPR) for e-waste management under its E-waste (Management and Handling) Rules, 2011. Under these guidelines, producers must set up e-waste collecting centers and finance and organize an environmentally friendly management system. We analyze India's Rules' application in Ahmedabad, western India, in this post. Our case study uses interviews with regulated business entities, regulatory bodies enforcing the Rules, informal trash collectors and handlers, and publicly available implementation statistics. After the Rules were implemented, formal waste processing capacity increased, although only 5% to 15% of garbage generated is likely processed in formal facilities. The EPR requirement obliges businesses to comply with a few inexpensive rules, but the collection and recycling system has made it difficult for consumers to dump e-waste in formal centers. Our findings suggest that Indian EPR regulation should include deposit-refund systems and go beyond take-back obligations. In EPR laws, developing countries must carefully choose and create instruments. Collecting and categorizing abandoned electronic devices is a crucial step in managing electronic waste. The main goal is to recover valuable materials and components while minimizing environmental damage. This process entails setting up recycling centers, drop-off locations, and electronic waste disposal events(Brough & Jouhara, 2020; Khoshnevisan et al., 2021). E-waste collection aims to correctly process electrical gadgets to avoid landfill dumping. E-waste is categorized into metals, plastics, circuit boards, and batteries. Separating is essential for optimal recycling and recovery. Extraction of precious metals, copper, and polymers reduces the need for virgin resources and their environmental impact. Responsible e-waste collection also prevents inappropriate disposal, which can release harmful substances into the environment and harm humans and ecosystems. E-waste material and component collection helps conserve resources, reduce pollution, and handle electronic trash sustainably.

E-WASTE MINIMIZATION METHODS

The integration of advanced technology in the field of electronic waste (e-waste) management has brought forth a new era characterized by enhanced efficiency and sustainability. The proficient handling of electronic trash, which is an escalating global issue, relies on using the capabilities of artificial intelligence (AI), machine learning (ML), virtual reality (VR), blockchain, augmented reality (AR), the Internet of Things (IoT), and robotics. These revolutionary technologies operate in conjunction to fundamentally transform the processes involved in the management, recycling, and repurposing of electronic waste. Through the implementation of strategies aimed at increasing recycling rates, reducing environmental impacts, and promoting responsible disposal practices, this comprehensive approach lays the foundation for a future in e-waste management that is characterized by sustainability and effective utilization of resources. This investigation examines the various ways in which these advancements are transforming the domain of electronic waste management.

Artificial Intelligence (AI) for Sorting and Quality Control

The proper management of municipal solid waste relies heavily on the efficient classification of garbage, making it a crucial aspect. In this regard, the integration of robots presents a viable approach for enhancing the waste management process. Nevertheless, the implementation of robotic systems in such intricate settings requires sophisticated visual and operational functionalities due to the complex and unpredictable characteristics of industrial waste categorization. Current scholarly investigations have been focused on enhancing the precision and effectiveness of automated garbage sorting machines. This endeavor has propelled progress in sensor technology and waste recognition cameras, alongside the creation of intricate artificial intelligence (AI) algorithms. One potentially effective strategy entails the utilization of hyperspectral pictures for the purpose of identifying specific regions of significance within waste streams. Drawing on previous research, (Esmaeilian et al., 2018)have demonstrated the integration of simultaneous localization and mapping (SLAM) technology and instance segmentation methods into robots. This advancement enables these robots to effectively navigate complex field settings and independently gather construction and demolition waste. The utilization of deep learning methods, such as instance segmentation, enables robots to accurately perceive the boundaries of objects depicted in photos, hence enhancing their ability to recognize construction and demolition trash (Widmer et al., 2005). Within this context, numerous enterprises are currently leading the way in the adoption and application of artificial intelligence (AI)-based technologies for the sorting of electronic garbage (e-waste). Each of these organizations employs distinct methodologies and approaches that set them apart from one another. One example of a company utilizing advanced technology for efficient identification and segregation of various e-waste items is TOMRA, a prominent player in the worldwide sorting solutions industry. TOMRA utilizes state-of-the-art high-resolution cameras and machine learning algorithms in its operations. Zen Robotics use robotic devices that are equipped with artificial intelligence (AI) and sensors in order to identify and selectively retrieve recyclable materials from trash streams. The Bühler Group provides artificial intelligence (AI)-based sorting systems that aim to improve the retrieval of resources from electronic waste (e-waste), thereby making a substantial contribution to the concept of a circular economy. trash Robotics is a company that specializes in the development and implementation

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

of robotic systems designed for trash sorting purposes, with a specific focus on electronic waste. These systems are equipped with artificial intelligence vision systems, which enable accurate identification and recognition of various materials (Fytili & Zabaniotou, 2008; Koul et al., 2022).

The use of robots specifically engineered for the purpose of sorting rubbish exhibits considerable promise in augmenting the efficiency of waste management processes, diminishing expenditures on labor, and raising the precision of waste classification. However, there are ongoing questions over the feasibility of waste-sorting robots, principally attributed to their elevated expenses in terms of installation and maintenance when compared to conventional waste-sorting techniques. Nevertheless, current research efforts are mostly directed towards investigating cost-efficient strategies for the development of such robots. This involves studying the utilization of less expensive materials and designing adaptive systems that may be employed in various operational environments. Furthermore, continuous endeavors are being made to improve the design of robot structures, enhance sensor technologies, optimize waste categorization algorithms, and advance the capabilities of robotic arms. These efforts aim to augment the overall efficacy and efficiency of robots in waste management tasks. Waste-sorting robots remain a topic of significant interest and have considerable potential for practical implementation in forthcoming real-world scenarios.

Machine Learning for Predictive Analysis

Machine learning is essential to transforming e-waste management since it solves the complex problems of the growing disposal of electronic devices. Electronic waste management can be improved by integrating data analysis, predictive modelling, and automation with cutting-edge technology. Collection, sorting, recycling, and sustainable strategy development are examples. This comprehensive study will examine how machine learning affects electronic waste management and provide insights into major organizations' strategies, focusing scientific and statistical features. Machine learning improves e-waste management through predictive analytics. This technology uses powerful algorithms to assess past data to predict electronic garbage development trends. Machine learning models can anticipate using consumer electronics sales, technology obsolescence, and product life cycles. These models help authorities and organizations plan electronic waste management. Data-driven methods optimize resource, employee, and recycling infrastructure distribution, reducing waste and improving collection and recycling. Classifying e-waste is another important part of its management. A major issue is the variety of electronic devices and components. Apple and Samsung are leading the way in using machine intelligence to solve this problem. These firms use machine learning methods to train models on enormous datasets of electronic components to automatically categorize and sort e-waste. Machine learning algorithms can distinguish cellphones, laptops, and circuit boards from other electronic waste using computer vision and sensor data. Recycling facilities are much more efficient with this capacity. This automation system improves sorting efficiency and material retrieval, contributing to sustainable e-waste treatment. Dell and HP rely on machine learning models to forecast demand for recovered electronic debris. To make intelligent manufacturing decisions, these models use market trends, economic factors, and customer behaviors. Machine learning algorithms reveal the quantities and types of recycled materials needed to meet market demand by analyzing prior market data (Al-Obaidi et al., 2022; Esmaeilian et al., 2018). Data-driven methods allow these firms to maximize recycled materials, reducing waste and complying with sustainability aims.

Machine learning helps identify and prevent e-waste fraud. Waste management companies like the one above use machine learning algorithms to detect and analyze electronic waste management process irregularities. This study analyses transportation routes, recycling facility methods, and waste disposal locations using algorithms. Machine learning-based fraud detection systems detect violations of compliance norms and laws to protect the e-waste recycling process. These technologies deter illegal e-waste dumping and misreporting. It is evident that many prominent organizations are adopting machine learning in e-waste management, however exact data is confidential. Machine learning algorithms have improved e-waste management efficiency, accuracy, and sustainability, according to these companies. Data-driven solutions can reduce environmental and health risks from improper electronic waste disposal, optimize resource use, and actively recycle and dispose of electronic equipment. Machine learning offers effective solutions for addressing the intricate issues associated with electronic waste management. The integration of data analysis, process automation, and predictive modelling enhances the efficiency of e-waste collection, sorting, and recycling. Although the exact deployment figures inside enterprises are not publicly released, several well-known companies have included machine learning in their projects for managing electronic trash. These organizations utilize data-driven approaches to reduce waste, promote sustainability, and advocate for appropriate disposal of electronic trash. The utilization of machine learning offers a viable and environmentally conscious approach to tackle the challenges associated with e-waste management, highlighting its increasing importance.

IoT's Smart Bins

IoT-connected smart bins address the growing problem of electronic waste (e-waste). IoT-powered e-waste bins are a pioneering use of technology. These clever bins include advanced sensors and networking capabilities. These characteristics streamline abandoned electronics collection and disposal. Electronics often contain hazardous and recyclable materials. Smart bins that use IoT require specialized sensors. The sensors are designed to measure electronic garbage factors such fill levels, temperature, humidity, and chemical composition. Fill-level sensors can properly measure electronic garbage in a container. Real-time fill level data is crucial for trash management and recycling operations. This data helps them optimize collection schedules, reducing unnecessary trips and carbon emissions. Data is sent instantly over Wi-Fi or cellular networks to a centralized management system or cloud computing platform. Connectivity enables continuous e-waste container monitoring and analysis. Processing this data often requires advanced data analytics and machine learning. The algorithms can predict when a smart bin would reach its maximum capacity based on past data, usage trends, and weather. This optimizes collection routes and resource allocation (Dhanwani et al., 2021; Guo et al., 2021). In addition to fill-level monitoring, IoT-enabled intelligent bins for electronic waste management often include picture recognition. The above technology may identify and classify electronic waste in designated containers. This technology helps classify and organize electronic trash and identify unapproved or hazardous substances, assuring safety and waste disposal compliance. These intelligent receptacles may also improve e-waste disposal traceability and accountability. E-waste may be tagged with RFID or QR codes during disposal. Tagging allows for complete tracking of each item from disposal to recycling or proper disposal. The e-waste management process becomes more transparent and accountable with this practice. GPS technology in IoT-enabled intelligent garbage containers is another benefit. GPS-equipped waste collection vehicles can obtain real-time e-waste bin locations and fill levels. This allows optimized collecting paths. Results include shorter collection times, lower fuel use, and improved e-waste management system efficiency.

IoT-enabled intelligent receptacles for electronic waste management provide a novel way to solve the problems of proper disposal. Modern sensors, wireless connectivity, data analytics, and image recognition enable real-time monitoring, efficient collection, and proper disposal of e-waste in these bins. Intelligent bins that provide accurate information about e-waste loading and composition help manage e-waste more sustainably and ecologically. These smart bins also increase electronic waste management safety and regulatory compliance.

RFID Technology Applications

RFID technology is a powerful tool for optimizing e-waste management by tracking, monitoring, and managing electronic trash throughout its lifecycle. RFID tags, readers, and a central database enable unique identification and effective data management of e-waste objects. RFID tags underpin this technology. At collection or disposal, these tags are attached to electronic equipment or components. They have a microchip and antenna, with passive, active, and semi-passive tags. Most e-waste management tags are passive RFID tags that use radio waves from RFID scanners to activate the microchip and communicate data. Active tags with power sources have a longer range than semi-passive tags. RFID tags are attached to e-waste objects to start RFID implementation. These tags provide item identification, manufacturer information, disposal date, and other important e-waste tracking data. The e-waste management system strategically places RFID readers at collection, recycling, and transfer stations. Radio waves from RFID readers trigger RFID tags on adjacent e-waste. After activation, RFID tags send their data to the reader, which sends it to a central database. The central database stores all RFID-generated data, enabling real-time visibility and full e-waste management insights. This database allows continuous tracking of tagged e-waste's location, processing, and disposal. RFID technology automates data acquisition, decreasing laborious record-keeping and inaccuracies (Condemi et al., 2019; Dhanwani et al., 2021; Esmaeilian et al., 2018; Guo et al., 2021).

RFID technology improves e-waste management in several ways. It greatly increases transparency and accountability throughout the disposal and recycling workflow, assuring environmental compliance and proper e-waste handling. RFID devices help identify and track dangerous items in e-waste, reducing health and environmental risks. RFID systems also optimize inventory management by giving real-time e-waste availability for recycling or refurbishing, reducing waste and optimizing resources. Ultimately, RFID technology improves e-waste management efficiency and accountability. E-waste is tracked from disposal to recycling or responsible disposal using RFID tags, readers, and a central database. RFID technology improves e-waste management transparency, safety, compliance, data-driven decision-making, and resource optimization.

Augmented Reality (AR) and Virtual Reality (VR)

VR and AR technologies are being used in e-waste management to streamline procedures, increase worker training, and boost recycling efficiency. These immersive technologies solve electronic waste issues using VR or AR. These are useful for e-waste management training and teaching. VR simulations allow staff to practice e-waste processing, sorting, and recycling in a safe, controlled environment. This method is useful for teaching personnel to recognize and handle dangerous electronic trash. However, AR can overlay digital data over workers' vision to provide real-time instruction and information. E-waste technicians can use AR-enabled equipment like smart glasses to obtain instructions, access reference

Dhanabalan Thangam (ctdhanabalan@gmail.com)

materials, and validate safety protocols. Tracking and monitoring e-waste materials is another VR/AR use. RFID and GPS technologies combined with VR and AR systems offer real-time tracking and visualization of e-waste during disposal and recycling. Using AR devices, workers may scan RFID-tagged e-waste and instantaneously retrieve its origin, composition, and disposal requirements. This information ensures accurate sorting and disposal, reducing handling errors. VR and AR help design e-waste recycling facilities efficiently. Before construction, facility designers can generate VR prototypes and test layouts and workflows. This improves facility layout, equipment location, and workflow. AR can also guide workers through complex procedures in facilities, enhancing productivity and minimizing errors. In e-waste management, VR and AR are used for public awareness and education. These technologies can educate the public about appropriate e-waste disposal through immersive, interactive experiences. VR experiences can replicate the environmental impact of inappropriate disposal, while AR apps can provide real-time information about nearby e-waste collection and recycling centers to encourage recycling. E-waste data can also be visualized using VR and AR in data analytics platforms. Making data analysis more accessible and interactive helps decision-makers allocate resources, monitor compliance, and plan sustainability. Finally, VR and AR technologies provide intriguing prospects for improving numerous elements of e-waste management. They offer immersive training, real-time tracking, facility design optimization, public involvement, and data visualization. As these technologies evolve, they may make e-waste management more efficient, transparent, and sustainable (Das et al., 2021; Połomka et al., 2020; Yaqoob et al., 2023).

CURRENTLY AVAILABLE PRODUCTS

Tomra Autosort

Food sorting improves quality and safety by removing faults, unwanted objects, and undesired fractions from fruits, vegetables, nuts, and more. It efficiently sorts plastic types in recycling plants, improving recycling. Clear PET bottles can be sorted from colored ones and HDPE from LDPE, optimizing material recovery.

The AUTOSORT sorts ferrous and non-ferrous metals, which is important in recycling centers where aluminum cans must be separated from steel cans or copper wire from brass wire. Diamonds from gravel and gold from quartz are easily separated by the machine in mineral sorting, especially in mining. With throughput rates of 100 tons per hour and purity rates exceeding 99%, the TOMRA AUTOSORT is outstanding. It comes in many sizes and configurations to meet customer needs and operates continuously in harsh industrial conditions. Over 8,000 clients in 100 countries trust TOMRA AUTOSORT. It has recovered over 100 million tons of materials since its debut, helping reduce waste and recover resources. The TOMRA AUTOSORT improves product quality, throughput, operational costs, and sustainability. Its automation speeds up production and removes faults and foreign materials, improving product quality. Labor reduction reduces costs, and material recovery promotes sustainability, waste reduction, and the circular economy. This is a diverse and powerful sorting system that may improve product quality, operational efficiency, cost, and sustainability across industries (Bünger, 2021; Das et al., 2021; Patel et al., 2018; Połomka et al., 2020).

Predix Asset Insights

GE Digital's cloud-based asset management platform Predix Asset Insights analyses industrial sensor and device data using AI and ML. This system forecasts asset performance and maintenance needs to reduce operational interruptions, maximize asset utilization, and extend equipment lifespan. This technology could improve e-waste management. Predix Asset Insights predicts asset failures, a major benefit. This technology can foresee electrical device failures, allowing companies to schedule preventative maintenance. This method reduces unexpected inoperability, increasing the lifespan of electronic devices and reducing electronic waste. The program also optimizes maintenance schedules well. Predix Asset Insights helps enterprises optimize maintenance schedules by predicting asset repair scheduling and type. The optimization technique minimizes maintenance costs and enhances e-waste management efficiency by allocating resources more efficiently. In improving asset utilization, Predix Asset Insights excels. Finding underutilized equipment assets in an organization's fleet does this. This technology can detect malfunctioning machines or components in e-waste recycling. Organizations can reduce e-waste by eliminating or reassigning underused assets, reducing the need for new equipment. Practical examples demonstrate Predix Asset Insights' impact on e-waste management. Electronic manufacturers use software to predict component failures, enabling preventative maintenance and extending part lifespans. Waste management firms streamline e-waste processing equipment maintenance schedules to decrease costs and boost efficiency. The software's ability to identify underutilized assets in fleets helps e-waste recycling companies save unnecessary equipment purchases and e-waste generation (Patel et al., 2018; Sharan, 2002). Predix Asset Insights improves electronic waste management efficiency and effectiveness. AI and ML help companies predict asset performance and maintenance. They can reduce downtime, improve asset utilization, and extend equipment lifespan with these capabilities. Thus, these practices promote sustainable e-waste management.

Smartbins

Smart bins revolutionize e-waste management in an innovative and effective way. These containers can identify and sort e-waste like batteries, cell phones, computers, and TVs using sensors and AI. This innovative technology improves e-waste recycling accuracy and efficiency, reducing landfill trash. Smart bins can also collect data on e-waste types and volumes, helping to improve management policies and programs. A major benefit of smart bins in e-waste management is improved recycling. These bins make e-waste recycling easier, encouraging more people to recycle. Additionally, increased engagement can significantly reduce e-waste's environmental impact. E-waste contains lead, mercury, and cadmium, which can harm the environment if incorrectly disposed of operating efficiency is improved with smart bins. By automating sorting, they free up staff time for other important duties like e-waste collection and transportation. Smart bins also decrease manual labor in sorting and recycling, lowering e-waste management costs. Several global examples show how smart bins manage e-waste. The "Bin-e," developed by Clean Robotics in the US, can recognize and sort over 20 e-waste categories. These smart bins are in New York, San Francisco, and Los Angeles (Mart\'\inez et al., 2014; PR & Narula, 2018). Waste cycle's "e-waste bin," used in UK schools and businesses, can recognize and sort more than 10 e-waste categories. The "e-waste reverse vending machine" by E-Waste Exchange in India identifies and sorts over 15 e-waste types in public locations like airports and railway stations. Smart bins are a promising technological answer for trash problems. Smart bins make e-waste management more sustainable by

IP Address: 223.231.178.10

automating sorting, encouraging recycling, and providing data for decision-making. They also raise awareness about e-waste and encourage recycling to create a greener electronics environment.

E-Cycle Tracker

EcycleTracker is a smartphone software that helps users track and manage their electronic waste (e-waste) and find nearby recycling facilities. The Electronics Takeback Coalition (ETC), a nonprofit dedicated to reducing electronic waste, produced the software to improve e-waste management. EcycleTracker's core feature is e-waste tracking. Individuals can track their electronic trash categories and volumes. This data can help design better electronic waste management programs and provide useful insights into usage habits. Additionally, the app makes finding nearby recycling sites easy. This technology simplifies finding nearby recycling facilities, making electronic garbage disposal easier for individuals. This trait makes recycling easier and more accessible. EcycleTracker also gives e-waste recycling advice. This guidance intends to make recycling electronic garbage environmentally sustainable and safe while minimizing hazardous material concerns. There are many benefits to using EcycleTracker. First, it promotes e-waste recycling to prevent the spread of harmful compounds that could poison the environment. It also streamlines recycling facility location and provides data on e-waste types and volumes, improving efficiency and efficacy. By eliminating labor-intensive operations like collecting and transporting electronic garbage, this technique may reduce e-waste management costs. EcycleTracker helps raise awareness of e-waste and encourages recycling. EcycleTracker is free to download from the App Store or Google Play(Aboelmaged, 2021; PR & Narula, 2018). After installing the app, users can create an account to track their electronic waste. The process of adding electronic garbage categories and quantities is simple. Additionally, the app lets users easily find nearby recycling facilities. By selecting the "Recycling Locations" tab in the app, users can view a list of nearby recycling sites. Specific addresses and operational schedules are included in this compilation. EcycleTracker promotes proper electronic waste management in a simple way. This effort helps people reduce their environmental impact and recycle technological waste, creating a more sustainable future.

VR E-Waste Education

VR e-waste education is a novel way to teach people about e-waste and sustainable management. This unique strategy strives to engage and teach people more interactively and captivatingly. Virtual e-waste education offers many engaging experiences. Virtual tours of e-waste recycling facilities can reveal the complex procedures involved in sorting and recycling the materials. VR programs can also show people how inappropriate e-waste disposal harms the environment. VR has various advantages over lectures and presentations for e-waste education. Immersive and captivating learning experiences boost engagement and motivation, improving learning outcomes. VR helps people to learn through personal experiences rather than passive viewing, improving comprehension and retention. VR e-waste education can also teach users empathy and compassion. VR can increase emotional response and motivation to address e-waste concerns by immersing people in real-world situations of its effects on communities and the environment. VR e-waste education is young but has great potential to change how people understand and manage e-waste. VR e-waste education programs may reach more people as VR technology becomes more affordable and accessible.

Several VR e-waste education programs exist:

[1] "Recycle Rush": UNEP created a VR game. Players learn about e-waste recycling and appropriate recycling in this game.
[2] WEF's "The Global e-Waste Challenge": This VR experience from the World Economic Forum shows how e-waste affects the environment and how individuals may help reduce it.
[3] European Commission's "The Circular Economy: A New Way to Make Products" VR experience: This VR experience helps users design and manufacture items sustainably to reduce e-waste.

These examples demonstrate the potential of VR e-waste teaching to raise awareness and promote ethical management. VR technology will certainly lead to more inventive and successful VR-based e-waste education programs.

RESEARCH AND DEVELOPMENT

Researchers need to focus on the following issues, while developing the methodologies on the e-waste minimization using sustainable solutions

[1] *Data collection:* The quality and quantity of data is essential for training AI and ML models. Data collection can be a challenge, especially for e-waste, as it is often difficult to track and collect data on the movement and disposal of electronic devices.
[2] *Model development:* There are many different algorithms and techniques that can be used to develop AI and ML models. The choice of algorithm and technique will depend on the specific problem that is being solved.
[3] *Model evaluation:* It is important to evaluate the performance of AI and ML models before they are deployed in the real world. This can be done by testing the models on a holdout dataset or by using metrics such as accuracy or precision.
[4] *Model deployment:* Once AI and ML models have been developed and evaluated, they need to be deployed in the real world. This may involve integrating them with existing systems or developing new applications.
[5] *Model monitoring:* Once AI and ML models are deployed, it is important to monitor their performance and make improvements as needed. This is important because the environment is constantly changing, and the models need to be able to adapt to these changes.
[6] *The security of data:* E-waste data often contains sensitive information, such as personal data or financial information. It is important to ensure that this data is secure and protected from unauthorized access.
[7] *The scalability of systems:* AI and ML systems can be complex and require a lot of data to train. It is important to ensure that the systems are scalable so that they can be used to process large amounts of data.
[8] *The sustainability of systems:* AI and ML systems can consume a lot of energy. It is important to design systems that are energy-efficient and sustainable.

DISCUSSIONS

Manufacturers can use AI and ML algorithms to create sustainable electronics. These technologies may help identify eco-friendly materials, energy-efficient components, and modular designs that simplify maintenance and recycling. This technique might significantly reduce electronic waste by promoting longer product lifecycles and reducing obsolescence. ioT-enabled intelligent devices can teach customers about e-waste management. Applications on smartphones and other devices can give recycling information, expedite trade-in programs, and incentivize recycling. These technical advances may encourage proper electronic device disposal by raising awareness and making recycling services more accessible. The reverse supply chain for electronic garbage can be optimized by machine learning algorithms for collecting and transporting abandoned gadgets. Predicting e-waste collection needs using historical data and real-time IoT sensor data can improve efficiency. Blockchain technology can establish and maintain transparency and accountability in this system, reducing the risks of illegal disposal.

AI and ML can help implement and improve circular economy techniques for e-waste management. These devices can track and analyze materials from manufacturing to recycling and reuse. Blockchain technology can immutably and securely document the whole lifecycle of materials, ensuring transparency and optimizing resource retrieval. AI-driven robotics and automation can identify and efficiently separate valuable components in electronic waste, improving recycling. Machine learning algorithms can learn and adapt to changes in electronic waste composition, improving sorting accuracy. Blockchain technology can validate proper recycling of diverse components and materials. Blockchain technology could create permanent eco-labels and certifications for electronic devices. This method ensures that consumers can easily confirm manufacturers' sustainability claims, encouraging the purchase of environmentally friendly products and reducing electronic waste over time.

International cooperation is needed to solve the global electronic waste problem. Blockchain technology could make global data exchange and collaboration safer and more efficient for governments, organizations, and recyclers. This technology could provide a global network for handling electronic waste, easing regional standardization and legislation. Researching and developing new technologies requires ongoing funding. Governments, companies, and universities can collaborate to find new ways to reduce electronic waste. This may involve developing better materials, recycling methods, or new artificial intelligence technology. Implementing proper approaches with AI, ML, IoT, blockchain, and other relevant technologies can significantly reduce electronic waste. These technological advances will encourage governments, industry, and individuals to work together to manage electronic trash more sustainably and ethically (Aboelmaged, 2021; Davis & Wolski, 2009; A. Kumar & Dixit, 2018; PR & Narula, 2018).

CONCLUSION

Technology has altered e-waste management and minimization. Blockchain, AI, ML, and IoT have transformed electronic waste sustainability and responsibility. New e-waste solutions benefit the environment, health, and economy. E-waste collection, sorting, and recycling benefit from AI and ML. These systems improve resource allocation and logistics by predicting e-waste creation patterns using large datasets and predictive analytics. Machine learning may reuse or recycle valuable electrical waste. E-waste disassembly is faster and more precise with AI-driven robotics and automation. Real-time e-waste tracking requires

IoT. Electronic bins and collection sites have IoT sensors that monitor e-waste container fill, temperature, and condition. Data-driven rubbish collection route optimization decreases operational expenses and environmental impact. IoT-enabled smart bins sort e-waste and alert authorities or recycling centers when full. Proactive e-waste management streamlines and prevents illicit dumping. E-waste lifecycle transparency and security are enabled by blockchain. Blockchain tracks and accounts for e-waste. This tool combats e-waste trafficking and enforces legislation. Recycling and electronic waste disposal can benefit from blockchain. It builds e-waste ecosystem trust and sustainability. Technology helps protect the environment. Untreated e-waste can pollute soil, water, and air with lead, mercury, and cadmium. AI and ML may categorize dangerous materials, minimizing pollution. Blockchain's transparency prohibits e-waste dumping and shipping to underdeveloped nations. These technologies improve health outside the environment. Workers can become very ill from unregulated e-waste recycling. AI-powered dismantling and recycling robots reduce health risks. E-waste storage and processing facilities can be remotely monitored by IoT devices for worker safety. E-waste recycling is rising due to technology. AI and ML sorting algorithms recycle rare metals, polymers, and minerals into industry. Job creation and value-added services in the circular economy minimize virgin material demand and boost economic growth. AI, ML, IoT, and blockchain have transformed e-waste minimization. These approaches assist us solve electronic waste's growing challenges. These solutions promote a sustainable and responsible future for electronic waste disposal by enhancing recycling efficiency, protecting the environment, improving human health, and boosting economic growth. These improvements help us manage electronic waste sustainably and reduce its harm.

ABSTRACT

This chapter delves into the complexities and recommendations associated with the management of electronic waste, paving the way for a transition towards a circular economy. It underscores the significance of adopting sustainable practices, including eco-friendly product designs, extended producer responsibility, recycling, and remanufacturing. Several challenges are identified, such as the scarcity of data regarding material concentrations in specific electronic equipment and the absence of universally applicable standard methods for evaluating elemental concentrations in e-waste. The chapter underscores the value of integrating technical support and financial incentives to bolster e-waste manage-

ment efforts. Furthermore, it highlights the pivotal roles played by the private sector, non-governmental organizations, and government bodies in the effective implementation of these strategies. Collaboration between businesses, governments, and consumers is underscored as essential for establishing a robust circular economy.

INTRODUCTION

Electronic waste, often known as e-waste, comprises electronic devices powered by a battery or plug that have been discarded because they are no longer needed, functional, or have become obsolete. E-waste can be categorized into six main groups: lamps, small IT and telecom equipment, screens and monitors, temperature exchange equipment, large equipment, and small equipment. Among these categories, small equipment, which encompasses items like microwaves, vacuum cleaners, and kettles, represents the largest proportion of e-waste production by weight. In 2019, the global electronic waste production reached an astonishing 54 million metric tons. This surge in e-waste can be attributed to various factors, including rising disposable income and the widespread availability of electronic devices. Consequently, electronic waste has emerged as the fastest-growing waste category on a global scale. The "Global E-Waste Management Market Outlook, 2028" study report, released by Bonafide study, projects that the industry will grow from USD 60.27 billion in 2022 to USD 122.48 billion by 2028. Furthermore, from 2023 to 2028, the market is expected to expand at a 12.82% CAGR. A substantial amount of garbage has been released into the environment as a result of increased resource consumption brought on by population expansion, urbanisation, and rapid economic growth (Research and Markets, 2023). As of 2023 the total amount of global electronic waste is 61.3 million metric tons. This trajectory is expected to persist, with estimates suggesting that by 2030 it will be 74.7 million metric tons, and the annual worldwide generation of e-waste will expand by around 30 percent (statista.com, 2023). Figure 1 explains growth trend of Global E-waste till 2030.

Figure 1.

The digital revolution has transformed the way people live, communicate, and connect with others across the globe. We are currently living in a remarkable era of technological progress, characterized by a generation deeply enamored with technology. Our lives are filled with a multitude of devices, ranging from household appliances to computers, laptops, and ever-evolving smart phones. People frequently replace their gadgets, almost as often as they update their wardrobes. Each time a new and improved version becomes available, old devices are discarded in favor of new ones. Have you ever stopped to ponder the staggering amount of electronic waste generated by the global population? And, perhaps more importantly, where does all this electronic waste end up?

Electronic waste, often referred to as E-Waste, encompasses electronic devices and gadgets that have reached the end of their useful life. This category includes obsolete electronic devices, cellphones, notebooks, game consoles, and their various components. Here are some eye-opening and concerning facts about electronic waste: Globally, approximately 40 million tons of electronic waste is generated each year, equating to the disposal of 800 laptops every second. On average, cell phone users replace their devices roughly every 18 months, contributing to the growing e-waste problem. Within the total volume of E-Waste, a staggering 70% is considered toxic waste, yet only 12.5% of electronic waste is recycled. An alarming 85% of E-Waste ends up in landfills, where incineration often occurs, releasing harmful toxins into the air. These toxins can include lead, which poses risks to the central nervous system and kidneys, particularly affecting a child's mental development even at low-level exposure. Some of the most common hazardous electronic items include LCD desktop monitors, LCD televisions, plasma televisions, traditional Cathode Ray Tube (CRT) TVs, and computers with CRTs. Electronic waste contains a multitude of substances, many of which are toxic, such as mercury, lead, arsenic, cadmium, selenium, chromium, and flame retardants. Approximately 80% of E-Waste generated in the United States and many other countries is transported to Asia for processing and disposal. The global production of electronic devices is staggering, with 300 million computers and 1 billion cellphones manufactured annually. This production rate is expected to grow by 8% per year, further exacerbating the e-waste challenge (theworldcounts.com, 2023).

The proliferation of electronic waste, often referred to as Waste Electrical and Electronic Equipment (WEEE) or e-waste, is a rapidly escalating global issue. Predictions indicate that this waste stream will double by the year 2045 (Parajuly et al. 2019). This surge is primarily attributed to the ever-increasing demand for electronic products, placing substantial responsibilities on both advanced and developing economies worldwide. Electronic devices have become an integral part of our daily lives, experiencing a growth rate three times faster than that of other solid wastes. While these electronic products have evolved to play a complex and ubiquitous role in our daily routines, they contain valuable resources and hazardous materials that demand careful management. However, the systems for collecting and managing e-waste have not kept pace, resulting in inadequate handling and management. This situation poses various significant risks, including resource wastage and adverse effects on the environment and human health (Awasthi, Li, Koh, & Ogunseitan, 2019).

E-waste is a term subject to various definitions, occasionally causing controversy. According to a report by the United Nations Environment Programme (UNEP), e-waste encompasses a wide range of electrical and electronic equipment that has reached the end of its life cycle and holds no value for its owners. It is also known as Waste Electrical and Electronic Equipment (WEEE). Meanwhile, the European Directive 2002/96/EC defines e-waste as any waste electrical and electronic equipment, along with all its components, subassemblies, and consumables that are part of the product at the time of disposal (UNEP, 2023). The Organisation for Economic Co-operation and Development (OECD) describes e-waste

Table 1. Classification of e-waste

Sl.No	Category	Examples
1	Large household appliances, including cooling and freezing appliances	Televisions, Fans, Freezer, Refrigerator Water cooler, Ice maker, Washing machine Clothes dryer, Drying cabinet, Air-conditioners
2	Small household appliances	Juicers, electric mixers, meat grinders, coffee grinders, deep fryers, herb grinders, food processors, electric kettles, waffle irons, coffee makers, blenders, and dough blenders, as well as rice cookers, toasters, exhaust hoods, are yet another category of kitchen appliances.
3	IT equipment, including monitors	Computers, Telecommunications Equipment, Monitors, Keyboards, Printers, Servers, Drives, and Network HUBs
4	Consumer electronics	Mobile Devices, Smartphones, Wearables, Tablets, And Wireless Charging Platforms
5	Lamps and luminaires	Incandescent, Tungsten Halogen, Fluorescent Compact Fluorescent, Mercury Vapour Metal Halide, High-Pressure Sodium Vapour, Low-Pressure Sodium Vapour, LED
6	Toys	Alarm Clocks, Dance Mats, Digital Cameras, Electronic Pets, Handheld Games, Karaoke Machines, Plug & Play Video Games, Radios, MP3 & CD Players.
7	Tools	Multimeter, Soldering Wire, Soldering Iron, Solder Smoke Absorber, Alligator Clips, Hot Glue Gun, Heat Gun, and Heat Sink
8	Medical devices	Artificial cardiac pacemaker, Sphygmomanometer, Implantable cardioverter-defibrillator, Hearing aid, Defibrillation Glucose meter, Digital Stethoscope Thermometer, and Pulse oximetry
9	Monitoring and control instruments	indicator lights, dials, video displays, and audible alarms, buttons, keyboards, mice, trackballs, touch screens, and thumbwheels.
10	Automatic dispensers	Automatic Dispenser, Hand Sanitizer Dispenser, Automatic Soap Dispenser, Paper Towel Dispenser, Air Freshener Dispenser, and Automatic Tape Dispenser.

Source: (Wikipedia, 2023) .

as any household appliance that consumes electricity and has reached the end of its life cycle. E-waste, also known as electronic waste, is generated when electronic devices are disposed of at the end of their operational life. The proliferation of technology and our consumption-oriented culture has led to the significant accumulation of electronic waste. In the United States, the Environmental Protection Agency (EPA) categorizes e-waste into ten distinct classifications as mentioned in the Table 1(Wikipedia, 2023).

Waste Electrical and Electronic Equipment (WEEE) is a highly diverse and heterogeneous category, encompassing a wide range of constituents, some of which can be hazardous while others are not. Within these electronic devices lie valuable materials such as copper, aluminum, silver, and iron, which can be reclaimed through recycling processes? Therefore, recycling WEEE holds significant importance in waste management and the recovery of precious resources. To establish an efficient and environmentally friendly recycling method, it is essential to identify and quantify both valuable and hazardous components within this waste stream. This allows for a better understanding of its characteristics and facilitates the enhanced recovery of minerals, contributing to the conservation of natural resources and the development of sustainable e-waste management solutions (Ilyassova et al., 2021). Many companies manufacturing electrical and electronic devices frequently release product upgrades. Moreover, these products are often designed with a limited lifespan. The primary component in most electric and electronic equipment is the printed circuit board (PCB), which can contain approximately 20% copper and 250 g/t Au (gold), significantly higher than the concentrations found in copper or gold ore (Cocchiara et al, 2019). Various

Dhanabalan Thangam (ctdhanabalan@gmail.com)

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

methods are available for recovering these valuable metals from electronic waste, including physical, pyrometallurgical, bio-metallurgical, and hydrometallurgical processes (Wang et al, 2021).

Despite having a reasonably established waste management infrastructure and concerted efforts, overall results in addressing the e-waste problem have been unsatisfactory. This could be attributed to the absence of design support evidence, well-developed policies, and research know-how concerning the recovery of e-waste products. To tackle these issues, the concept of a circular economy is regarded as a progressive approach. While an Extended Producer Responsibility (EPR)-based e-waste management system was initially considered a suitable plan, the implementation has not yielded the expected incentives. Individual operators and resource recovery have been limited to minimal collection and subsequent material recycling processes. Additionally, the potential for reusing discarded materials throughout the entire product lifecycle is almost nonexistent (Turaga, et al, 2019).

The circular economy represents a concept that aims to slow down the rate of electrical and electronic equipment (EEE) consumption by keeping waste materials within the system for as long as possible. This is achieved by minimizing and eliminating the need for their regeneration through smarter product design and business models (Ali & Shirazi, 2023). The approach involves the "7 R's" system, which includes reducing, reusing, refusing, recycling, recovering, rethinking, and redesigning. These aspects emphasize the social, economic, and environmental dimensions, aligning with India's E-waste management rule of 2016. However, various obstacles may impede the process, such as limited technology, inadequate collection systems, financial requirements, and a lack of training within the informal sector (Ekins et al, 2020).

The circular economy strives to promote cleaner and renewable technologies, innovative models, and developmental policies to eliminate waste by optimizing products and cycling materials. This ensures they remain in use for as long as possible, preserving their utility and value (Ellen MacArthur Foundation, 2019). This optimization can be observed through improved product design and forward-thinking waste management models, extending a product's lifespan and enabling resourceful material recovery. The general concept of a circular economy in e-waste management is illustrated in Figure 2.

Figure 2. The concept of 7Rs of the circular economy in e-waste management

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform

1. Reimagine solutions at various system levels by exploring alternatives and redefining challenges. As evident in the rapid rise of the sharing economy, a fundamental shift from ownership to sharing is already underway. Platforms like Airbnb facilitate home sharing, numerous websites promote car sharing, and Peerby encourages the sharing of various items. Sharing products beyond individual ownership significantly reduces the need for minerals and resources (goldenplains.vic.gov.au, 2023).
2. Minimize resource consumption by applying lean design principles and extending the lifespan of products. The integration of bionic algorithms into computer-aided design, coupled with 3D printing, can substantially reduce resource usage. For instance, Airbus APWorks recently unveiled the Light Rider, the world's first 3D-printed motorcycle with a frame weighing just six kilograms. This concept holds immense potential, especially in resource-intensive industries like construction (axil-is.com, 2023).
3. Repair components and parts to prolong product usage by the same owner. No one would discard a bicycle due to a flat tire. When the bicycle holds substantial value and tire repair is relatively simple, opting for a repair is the logical choice. However, for more affordable household appliances, people often dispose of items that could have been easily repaired (Palak Jain, 2020).
4. Reuse products by transferring them, either in their original form or with modifications, to another user. While second-hand marketplaces like eBay thrive on the reuse of consumer goods, industrial goods are gradually seeing an uptick in reuse. A railway depot in Groningen, for example, challenges contractors to repurpose items like sleepers, rails, clamps, railway switches, and overhead catenaries that are no longer needed elsewhere (Palak Jain, 2020).
5. Refurbish products by replacing malfunctioning components and parts with new ones. A noteworthy example is OUD NOW, which transforms old cabinets into modern designs. Designer Theo Herfkens replaces broken antique chassis with tailor-made, contemporary ones. This approach appeals to those who want to preserve their grandparents' heritage while enjoying a stylish interior (axil-is.com, 2023).
6. Recycle materials or resources by disassembling components and separating parts. Urban mining, where electronic waste is a valuable source of metals like gold, is gaining traction. Apple's recycling robot Liam disassembles old iPhones to recycle precious metals such as silver and platinum. Estimates suggest that urban mining can cover about one-third of the global demand for rare metals (axil-is.com, 2023).
7. Reclaim embedded energy from non-recyclable waste materials where feasible. Although achieving a 100% circular economy may remain technically and economically unattainable, the embedded energy from non-recyclable waste can be converted into energy through processes like waste-to-energy, including combustion and gasification. In the Netherlands, for instance, approximately one-fifth of waste is diverted from landfills to incineration facilities to recover useful energy (axil-is.com, 2023).

On the energy front, Tesla stands out as a game-changer, disrupting the automotive industry with electric vehicles and revolutionizing energy markets with its energy storage solutions. In terms of cascading materials, Freitag is an innovative player, upcycling well-traveled truck tarps into unique, high-quality bags and accessories, thereby increasing their value (Smart Product Manager, 2023). Exploring the social and behavioral aspects associated with e-product consumption and their alignment with the circular system is an ongoing endeavor. Beyond the technical intricacies and recycling rates within the e-waste circular economy, sustainable product manufacturing should also be prioritized. While the concept of

Dhanabalan Thangam (ctdhanabalan@gmail.com)

IP Address: 223.231.178.10

a circular economy is considered crucial for the generation and management of e-products, it necessitates a collaborative effort across various sectors, including businesses, governments, and consumers (Henriques, Figueiredo, & Nunes, 2023). Both the technological and economic dimensions, as well as consumer behavior, play vital roles in defining the long-term sustainability of the circular economy. Therefore, there is a need to identify opportunities for targeted interventions aimed at enhancing e-waste management and achieving a robust circular economy.

E-WASTE SCENARIO AT THE GLOBAL LEVEL

Electric and electronic products are integral to global development, encompassing a wide range of items used in daily life, both in households and businesses worldwide. However, ownership per capita varies according to income levels. In 2019, the world generated approximately 53.6 million metric tons (Mt) of e-waste, excluding PV panels, equivalent to 7.3 kg per capita. Projections indicate that by 2030, the quantity of e-waste generated will surpass 74 Mt, signifying an alarming annual increase of nearly 2 Mt (Tub et al, 2020). In 2019, the documented formal collection and recycling of e-waste amounted to 9.3 Mt, representing only 17.4% of the total e-waste generated. Figure 3 has revealed that the Global E-waste had grown by 1.8 Mt since 2014, with an annual growth rate of around 0.4 Mt. However, during the same period, the overall e-waste generation increased by 9.2 Mt, at an annual growth rate of nearly 2 Mt. According to the E-waste Management - Global Strategic Business Report, The market for e-waste management is a rapidly expanding sector that is predicted to grow from a modest US$55.6 billion in 2022 to an anticipated US$158.9 billion by 2030. Making decisions in this quickly growing field requires a deep comprehension of market dynamics and trends. This market research study offers comprehensive information and important insights to help firms stay ahead of the curve in this exciting industry. This disparity underscores the inadequacy of recycling efforts in keeping pace with the global surge in e-waste (Forti et al, 2019).

Data on e-waste collection and recycling are derived from country-reported information. The most recent available data on formally collected and recycled e-waste worldwide generally pertain to the year

Figure 3. The e-waste scenario at the global level

Dhanabalan Thangam (ctdhanabalan@gmail.com)

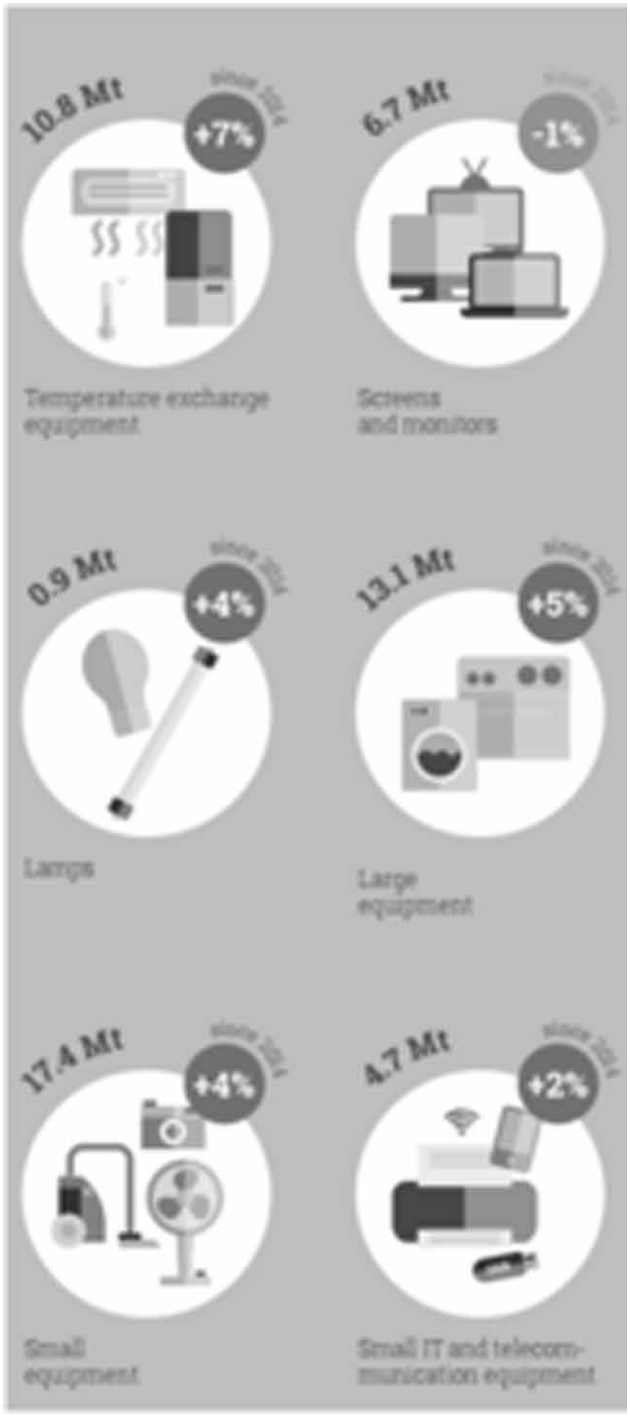
IP Address: 223.231.178.10

2016. In 2019, the majority of e-waste generated (82.6%) likely evaded formal collection and environmentally sounds management practices. These unaccounted flows are typically not documented in a consistent or systematic manner. The absence of data on formally collected and recycled e-waste implies that a significant portion of the 2019 e-waste (44.3 Mt) was managed outside official collection systems and, in some instances, shipped to developing countries. In wealthier countries, small-sized electronic devices may end up in regular waste bins and be disposed of with municipal solid waste, bypassing proper recycling procedures and resulting in material losses. In EU countries alone, it is estimated that 0.6 Mt of e-waste finds its way into waste bins (Tub et al, 2020).

YEAR AND COMPONENT WISE E-WASTE GENERATED

According to the report "Global flows of e-waste 2019, by scenario" by statista, In 2019, 53.6 million metric tonnes of electronic garbage were produced globally. Merely 17. percent, or 9.3 million metric tonnes, of this total were recorded as being collected and recycled appropriately. However, almost 83% of e-waste was not recorded, which means it was probably recycled, burnt, exchanged, or disposed of in a way that did not protect the environment. In the nations of the European Union, an estimated 0.6 million metric tonnes of e-waste were disposed of in trash cans. The global e-waste volume in 2019 primarily consisted of Small equipment (17.4 Mt), Large equipment (13.1 Mt), and Temperature exchange equipment (10.8 Mt). Screens and monitors, Small IT and telecommunication equipment, and Lamps constituted smaller proportions of the e-waste generated in 2019, accounting for 6.7 Mt, 4.7 Mt, and 0.9 Mt, respectively. Since 2014, the e-waste categories experiencing the most significant growth (in terms of total weight of e-waste generated) are Temperature exchange equipment (with an annual average increase of 7%), Large equipment (+5%), and Lamps and Small equipment (+4%). This trend is primarily driven by the increased consumption of these products in lower-income countries, where these items contribute to improved living standards and the same explained in Figure 4. In contrast, Small IT and telecommunication equipment have been growing at a slower rate, while Screens and monitors have exhibited a slight decline (-1%). This decline can be attributed to the replacement of heavy CRT monitors and screens with lighter flat panel displays, resulting in a reduction in total weight despite an increase in the number of units in circulation (Forti et al, 2020).

REGION WISE E-WASTE GENERATED



In 2019, the majority of e-waste was generated in Asia, amounting to 24.9 Mt, while Europe had the highest per capita e-waste generation, averaging 16.2 kg per capita. Europe also boasted the highest documented formal e-waste collection and recycling rate, standing at 42.5%. Conversely, all other continents reported significantly lower quantities of e-waste that was formally collected and recycled compared to the estimated e-waste generation. Figure 5 explains the e-waste generated region wise.

According to e-waste monitor report, in 2019, Asia ranked second, accounting for 11.7% of global e-waste generation, followed by the Americas and Oceania at 9.4% and 8.8%, respectively. Africa had the lowest contribution, with just 0.9% of the total. It's worth noting that e-waste statistics can vary significantly among regions due to various factors such as income levels, existing policies, and the

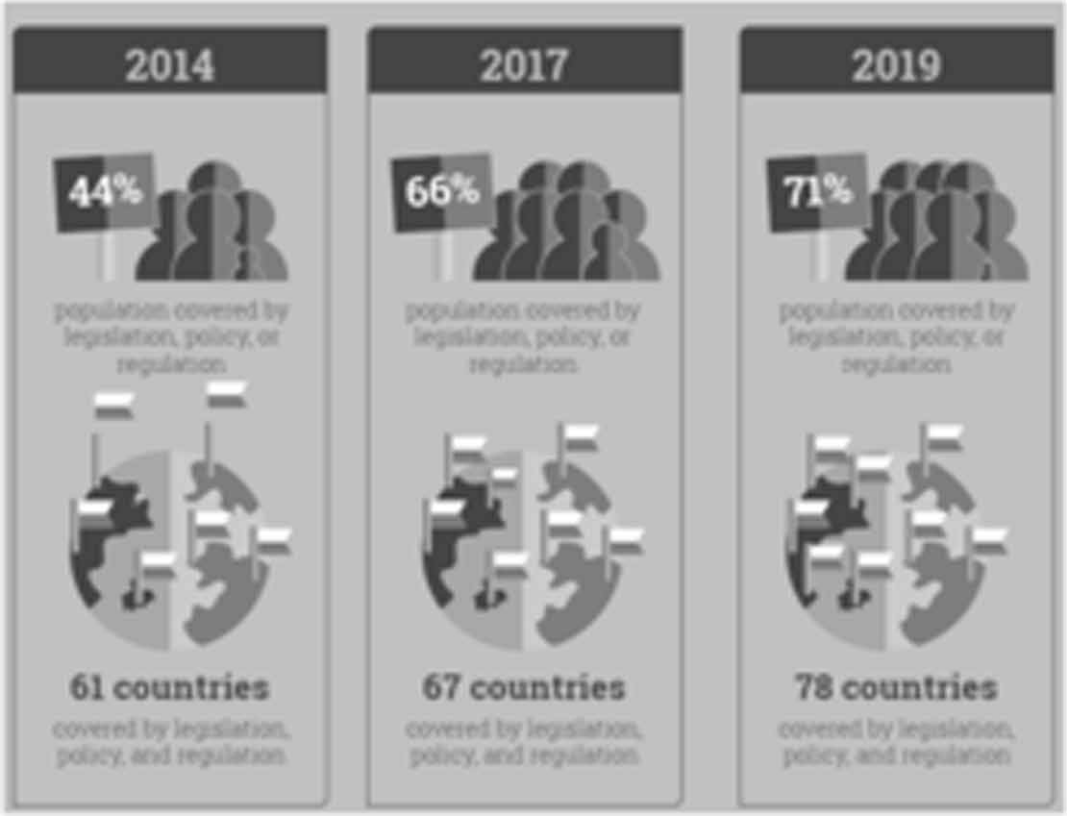
Figure 5.

structure of waste management systems, all of which influence consumption and disposal behaviors (ewastemonitor.info, 2020).



NUMBER OF COUNTRIES AND PERCENTAGE OF POPULATION COVERED BY NATIONAL E-WASTE POLICY

According to the report "Global e-waste generation 2010-2019" published by Ian Tiseo (2023), The period in which electronics have emerged as a significant contributor to the waste stream has been characterised by technological breakthroughs and rising consumer demand. 12.8 million metric tonnes of small equipment, 11.8 million metric tonnes of big equipment, and 7 million metric tonnes of temperature exchange equipment (including cooling and freezing equipment) accounted for the majority of the world's electronic trash in 2014. By 2018, it is anticipated that the overall volume of e-waste will have increased to about 50 million metric tonnes, growing at a pace of 4 to 5 percent annually. With 16 million metric tonnes of e-waste created in 2014, the majority of the world's e-waste was produced in Asia, the nation expected to have the fastest increase in the electrical and electronics sector from 2014 to 2016. By contrast, the combined output of the Americas and Europe was around 11.6 million metric tonnes. That being said, at 15.6 kg per person, the biggest amount of e-waste per resident was in Europe. The Americas and Oceania came in close second and third, respectively, with 12.2 and 15.2 kilogrammes per person.

In October 2019, approximately 71% of the global population fell under the umbrella of a national e-waste policy, legislation, or regulation. This marks significant progress compared to 2014 when a mere 44% of the population enjoyed such coverage. Notably, the higher coverage rate is influenced by the

Figure 6.

presence of national legal frameworks in the most populous countries, such as China and India. However, it's essential to recognize that this coverage extends to only 78 out of the 193 countries worldwide. Consequently, less than half of all nations currently benefit from the presence of e-waste policies, legislation, or regulations (Shahabuddin et al, 2023). Figure 6 explains the number of countries and percentage of population covered by national e-waste policy.

As far as India is concerned, only a meager 5% of e-waste is currently being recycled due to the absence of suitable infrastructure and the frailty of policies and institutional frameworks. This glaring shortfall in recycling results in a depletion of natural resources and heightened environmental degradation, which adversely affects those engaged in the recycling industry. Within India, for instance, 60% of the country's total e-waste emanates from 65 cities, with the highest contributors being Maharashtra, Tamil Nadu, and Andhra Pradesh (Manish & Chakraborty, 2019). Furthermore, e-waste poses significant health and environmental hazards due to the presence of toxic additives and hazardous substances such as mercury (which damages the human brain) and chlorofluorocarbons (CFCs). It is imperative to manage e-waste in an environmentally sound manner. Achieving effective waste management requires the design of an enhanced collection and recycling system aimed at accelerating waste recovery and treatment (Abalansa et al, 2021).

While several countries have collaborated to adopt national e-waste policies focusing on legislation and regulation of e-waste recycling, progress remains slow in numerous regions, marked by inadequate

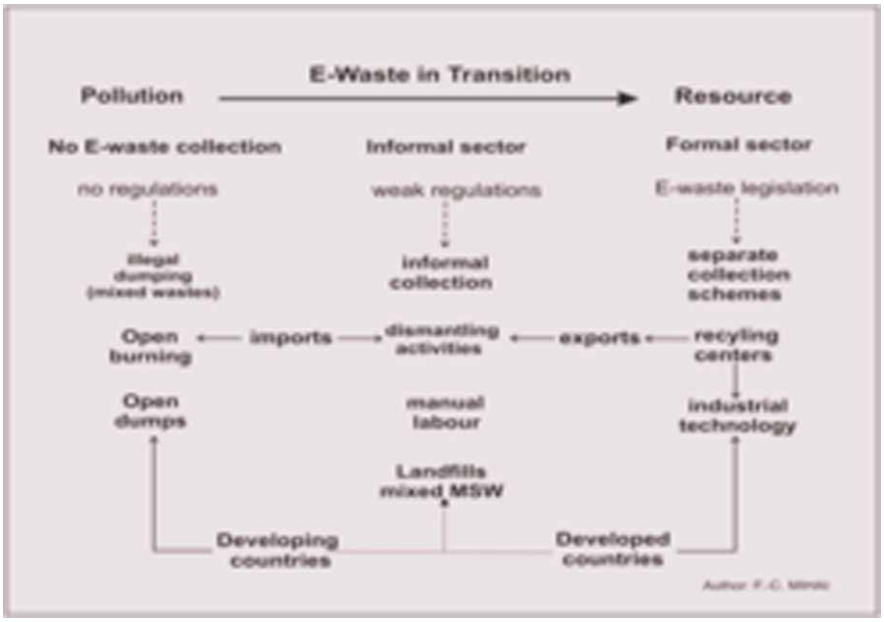
collection and management strategies. In developing nations, although improved living standards result from robust economic growth, addressing e-waste management challenges as a critical environmental and health issue has not yet been extensively considered, missing out on potential opportunities for product recovery. WEEE is predominantly generated by OECD (Organization for Economic Cooperation and Development) countries, with developing countries witnessing a significant upsurge in WEEE generation compared to their developed counterparts. It is estimated that both developed and developing nations will collectively dispose of an average of 550 million metric tons of WEEE by 2030. Developed countries typically deal with their e-waste by exporting it to developing nations, specifically China, India, and Africa, thereby posing severe threats to their ecosystems (weee-forum.org, 2023).

This cross-border movement of e-waste has escalated, mainly because importers and unauthorized recyclers face no levied duties and employ inappropriate technologies for disposal. To address this, the Basel Convention on the Control of Trans-boundary Movements of Hazardous Wastes and their Disposal was implemented, aiming to safeguard human health and the environment from the adverse impacts of hazardous wastes. Nevertheless, illegal transport of WEEE in forms other than waste has continued, undermining the Basel Convention's intended purpose. European nations have also taken action by introducing the WEEE directive and the Restriction of Hazardous Substances Directive (RoHS Directive, 2002/95/EC) as additional initiatives to tackle the e-waste challenge (eur-lex.europa.eu, 2023).

WEEE MANAGEMENT SCENARIO IN DEVELOPED AND DEVELOPING COUNTRIES



In the pursuit of an effective e-waste management system on a global scale, several critical factors come into play. These factors include waste collection, handling, recycling or recovery, and disposal, as outlined in the E-waste management rule of 2016. However, developing countries face significant challenges in managing the vast volumes of e-waste due to issues such as informal recycling practices and the absence of robust e-waste legislation. Additionally, low- and middle-income countries have a significant presence of informal sectors, which cannot be underestimated in this context (Mohammed, 2022). Figure 7 provides an overview of the current practices within the e-waste management system.

Despite slower technological advancement, developing countries have observed a faster consumption rate of Electrical and Electronic Equipment (EEE), resulting in a higher generation of e-waste, which is estimated to be double that of developed countries (Garlapati 2016). For example, by 2030, it is projected that developing countries will discard between 400-700 million dead computer components, compared to 200–300 million in developed countries. The technological lag and inadequate regulatory frameworks in developing nations amplify the challenges of e-waste management when compared to their developed counterparts. While e-waste management in developed nations receives more attention with respect to policy development and structural frameworks, developing countries face significant hurdles (Thakur & Kumar, 2022).

In comparing legislative policies between developed and developing countries, the former generally have stricter regulations and more effective enforcement mechanisms in place. Nonetheless, many developing countries are taking the initiative to formulate and implement specific e-waste management policies. Developed nations often employ national registry systems, encompassing proper collection and robust logistics systems (Sthiannopkao and Wong 2013). For instance, Germany has implemented programs like the Packaging Waste Program and Extended Producer Responsibility (EPR) to place

Figure 7.

financial responsibilities on manufacturers for collecting and reducing packaging waste (rekart.co.in, 2023). The EPR concept has been adopted by countries such as Sweden, Switzerland, Norway, and Taiwan. Another significant EU legislation, the RoHS Directive, restricts the use of hazardous substances in e-wastes (Directive 2002/95/EC), endorsing their collection and recycling (Directive 2002/96/EC). Meanwhile, countries like China and India, despite the absence of a national registry, have implemented EPR legislation systems to monitor EEE production and establish manufacturer take-back systems.

One major contributor to the e-waste challenge in developing countries is the presence of thriving gray markets, where second-hand EEE is readily available, exacerbating the situation. Despite lower labor costs in countries like China, India, and Pakistan, the substantial quantities of e-waste (both imported and domestic) and the dominance of informal parties have been identified as major obstacles to effective e-waste management (Srivastava & Pathak, 2020).

Global e-waste recycling policies often rely on consumer behavior and the local market. However, research indicates that a significant portion of e-waste is generated by economically developed countries. Different regions have varying degrees of e-waste regulations and recycling infrastructure. Developed countries like Canada, Europe (with all 27 countries having their own regulations for WEEE recycling), and parts of the United States (where approximately half of the states have e-waste recycling laws) have well-established recycling and processing industries adhering to industry standards. In Latin America, several countries such as Colombia, Mexico, Costa Rica, Peru, and Brazil have e-waste policies in place, while Africa generally lacks comprehensive e-waste recycling regulations, leading to around 85% of surplus electronic imports being reclaimed rather than discarded (Shahabuddin et al, 2023). Egypt, a significant e-waste producer in Africa, lacks a robust e-waste management system. In Australia, the National Television and Computer Recycling Scheme utilize a combination of government directives and industry engagement for e-waste assembly and recycling. In Asia, South Korea, Japan, China, Taiwan, and India have e-waste policies, with Taiwan leading in e-waste recycling at approximately 82%,

15	Vietnam	Law on environmental protection, 2005

Source: (Barapatre & Rastogi, 2022)

followed by Japan and South Korea recycling about 75% of their e-waste. Although China has formal e-waste management regulations, it continues to work on expanding its recycling capacity and remains both the primary destination for e-waste dumping and the largest producer and consumer of electronics worldwide (Ahirwar & Tripathi, 2021). E-waste management protocols in many other countries worldwide are still in the developmental stages. Table 2 provides an overview of the legislative framework for WEEE management in different countries.

Forti, Baldé & Kuehr (2018) extensively details the operational practices employed by countries worldwide in the collection, preprocessing, and recycling of e-waste. Their study reveals that developed economies exhibit greater innovation in this realm compared to their developing counterparts. However, there remains substantial room for improvement in both categories. One noteworthy trend is that developed countries often export their e-waste to developing nations for disposal. This practice is driven by several factors, including the relatively high cost of labor and stringent environmental regulations governing hazardous waste disposal in developed nations (Abalansa et al, 2021). Despite the inadequacy of appropriate technologies, facilities, and resources for efficient e-waste recycling in developing countries, they continue to import e-waste from developed nations for short-term gains. These recyclers rely on rudimentary methods to extract precious materials from e-waste. However, a few countries, such as Tunisia, have begun efforts to formulate more effective approaches to e-waste management and recycling. A significant volume of e-waste is exported from European countries, with a substantial portion finding its way to Asia and Africa under the false pretense of being sent for reuse and refurbishment. This mislabeling often includes malfunctioning items being unlawfully classified as "used goods," resulting in significant harm to the environment and local populations (Sakhuja, 2022).

STRATEGIC APPROACHES FOR WEEE

Amidst growing concerns about recycling, the strategic approach of the circular economy (CE) is gaining recognition for its potential to alleviate environmental stress and promote economic balance (Akram et al. 2019). The waste management sector is more important than ever in this age of increased environmental awareness. Waste management's future presents a vibrant frontier full of opportunities for investment. With a current worth of an astounding US$987.1 billion, the business is poised to reach a far higher valuation of $1.4 trillion by 2030. Gaining a deep and comprehensive grasp of this market's moving parts is essential to capitalising on its growth (Research and Markets, 2023). The concept of CE has been carefully chosen in response to the relentless rise in electronic products and the recycling challenges posed by these end-of-life (EoL) products, as illustrated in Figure 8.

This strategic approach holds particular relevance for developing countries like India, which are emerging as potent economic systems. Implementing EoL product recycling practices can contribute significantly to sustainable development in such regions (Slaveykova et al. 2019) Sustainable development efforts in this context entail a focus on critical issues such as waste management, pollution reduction, e-waste management strategies, environmental sustainability, and protection. Among these, the "environmental management system" (EMS) stands out as a pivotal driving tool. EMS places emphasis on the creation of eco-friendly products, the establishment of stringent regulations, the cultivation of a green image, and support for producers in the effective implementation of CE principles. This approach empowers stakeholders and policymakers to reduce the environmental burden and build an efficient e-waste management system, with a specific focus on key enablers such as EMS and environmental partners (Krishnamurthy et al. 2019).

Figure 8.

It is becoming increasingly evident that top-down regulatory approaches are insufficient for the international management of e-waste, given its high-value content that often undergoes inefficient and unsafe rudimentary recycling in emerging market economies. To address this challenge, it is essential to involve the private sector, including manufacturers, retailers, and labor investors, in the development of innovative solutions. These solutions should bring the extensive informal e-waste management sector under guidelines that safeguard environmental quality and human health while supporting workers whose livelihoods depend on discarded e-waste. In this context, we explore opportunities to create or adapt cost-effective innovations, such as Apple's Daisy robot recycler, for artisanal e-waste processing within the informal sectors (Blomsma and Brennan 2017). Thus there are strategies has been proposed with the aim to integrate e-waste management into a global circular economy (CE) agenda. This entails combining technical innovation for e-waste processing with financial incentives through collaborative efforts involving multiple agencies (Awasthi et al, 2019). The objective is to enhance rudimentary e-waste management practices in regions where waste accumulates, often at the expense of laborers' well-being and environmental quality due to the toxic components of electronic products.

Right-Scaling Technology

The expense associated with establishing and operating supply chains and equipment for effective e-waste management can be prohibitive due to stringent policies and regulations designed to protect the environment and human health. Consequently, rudimentary approaches to e-waste processing have proliferated, shifting the costs of human health impacts and environmental degradation to society. For instance, studies have shown alarming levels of lead in the blood of children residing near informal e-waste processing sites, such as Guiyu, China (Ogunseitan et al, 2009).

The informal rudimentary e-waste sector, comprised of small groups involved in collecting, transporting, and recycling, mainly emerged in Asia and Africa to meet unmet demands. However, recent advancements in informal e-waste management practices have been driven by government interventions, particularly in China and India. China has effectively implemented e-waste regulations, expanding its regulatory oversight. India has also proposed new approaches to enhance formal e-waste collection through the enforcement of e-waste management rules (Zheng Jinran and Qiu Quanlin, 2016). Despite the progress made in emerging market economy countries, a significant gap persists between the best available technology for e-waste management and resource recovery, exemplified by innovations like Apple's Daisy robot, and the actual technologies employed in the informal sector. This informal sector predominantly relies on manual sorting, dismantling, material separation, and burning. We argue that widespread adoption of best environmental practices cannot occur without the international sharing or adaptation of state-of-the-art technologies. This is particularly crucial for countries that import e-waste for refurbishment, resale, or scrap, yet lack the necessary infrastructure and policy environment to ensure the safety and efficiency of widely practiced rudimentary recycling processes (Nidhi Singal, 2023).

Policy Advancements

Within the context of the circular economy (CE) framework, the concept of extended producer responsibility (EPR) holds pivotal significance in bridging the widening gap between e-waste generation and the recovery of precious resources, including rare earth metals. Presently, EPR initiatives tend to be voluntary and primarily motivated by economic incentives. However, the rapid pace of technological innovation and

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

the trend towards miniaturization in electronic products suggest that economic incentives alone may not suffice to justify EPR in the long term. To effectively manage various categories of e-waste, including those devoid of economically valuable materials but containing toxic components, mandatory EPR is essential. This approach aims not only to facilitate resource recovery but also to prevent environmental pollution and human health hazards resulting from toxic elements (Balde et al., 2015).

Implementing mandatory EPR will require policies that ensure equitable participation, particularly to prevent undue burdens on small manufacturers. To achieve this, a collective "superfund" mechanism can be established, whereby all electronic product manufacturers contribute financially. Manufacturers can also be incentivized by compensating them for adopting green chemistry or eco-design principles that eliminate the use of hazardous materials throughout their product life cycles. The EPR superfund should encompass the end-of-life recovery and material reuse aspects, with manufacturers contributing funds in proportion to their product sales. An independent agency would be responsible for designing and executing strategies for the collection, sorting, and recycling of obsolete electronic products on a global scale (D'Adamo et al, 2019).

This CE model is more attainable for larger electronic products that are easily traceable and for which widespread technical knowledge for repair or refurbishment is lacking in emerging market economies. For these product categories, preventing unsafe and unregulated rudimentary recycling is a priority for integration into the proposed EPR superfund and CE framework. However, for high-volume electronic products like mobile phones, laptops, and televisions, which dominate the e-waste stream, alternative e-waste management models are required. These models should involve local entrepreneurial stakeholders and employ minimally restrictive regulatory and policy instruments. The objective is to formalize rudimentary e-waste processing, integrating it into CE models with new technological tools and regulatory policies that ensure safe operations without compromising worker health or environmental integrity (Ibn-Mohammed et al, 2019). A noteworthy example is Guiyu, China, a formerly prominent e-waste management town. It transformed from housing around 5,000 informal sector operations to hosting 29 integrated formal companies in an industrial park. While this progress in environmental protection and occupational conditions is commendable, manual labor remains inefficient, and the lack of technical and financial infrastructure for EPR hinders the sustainable development of e-waste management CE in the region (Ogunseitan et al, 2009).

Economic Incentive Initiatives

Effective retrieval of old and obsolete electronic products from consumers poses a significant challenge in the realm of proper e-waste management worldwide. However, promising solutions are emerging, particularly in China, where web-based applications such as the Baidu and Recycling Brother (Huishouge) apps have gained popularity. These apps connect consumers seeking to dispose of e-waste with certified recycling and dismantling services. The Baidu app, in particular, was launched in collaboration with the United Nations Development Programme (UNDP) Asia–Pacific Innovation Fund (unep.org, 2017). There is growing interest in forming collaborative alliances involving various stakeholders, including electronics manufacturers and financial institutions, to establish comprehensive online e-waste management processes. This collaboration aims to integrate the experiences gained from informal e-waste recycling collectives in Chinese industrial parks with microfinance-driven economic incentives in India. This integration could potentially lead to the creation of self-help group (SHG) parks, operating under the oversight of environmental regulatory authorities (mca.gov.in, 2021).

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

In India, banks have taken the initiative to provide initial capital investments to promote sustainable rural development practices, particularly in rudimentary e-waste management. For instance, the National Bank for Agriculture and Rural Developments and the Small Industries Development Bank of India has collaborated to establish an SHG bank linkage scheme. This scheme offers short-term lending facilities to specific industrial sectors, especially micro, small, and medium enterprises (MSMEs). These micro-financial strategies are regulated and supervised by the Reserve Bank of India, and they also extend small-scale funding support to non-governmental organizations that promote SHG formation (Balde et al., 2015). To scale up this approach and support e-waste management at the national level in emerging economies worldwide, a similar scheme could be implemented. Another example is based on corporate social responsibility (CSR) funding for designated industrial sectors. Since 2014, the Indian Ministry of Corporate Affairs has mandated that industries allocate 2% of their average net profit from the previous three financial years to CSR activities. This framework could be adapted to transform e-waste management in transitioning economies (Turaga et al, 2019).

India has already established SHGs for various forms of community development, providing economic opportunities for low-income workers. An illustrative example is a solid waste collection and handling cooperative that transitioned from rudimentary procedures to a formal partnership with the municipality of Pune. This cooperative, comprising approximately 2,300 members, delivers formal collection and recycling services to about 400,000 households in Pune. Initially, local government subsidies covered administrative and equipment-related costs. More recently, the cooperative invested in resources such as a waste recycling storage site, protective equipment, and worker salaries (Awasthi, Li, Koh, & Ogunseitan, 2019). While these models offer promise, further research is necessary to assess their adaptability to processing hazardous solid waste like e-waste, which may contain toxic materials and potentially explosive components such as rechargeable batteries. Additionally, addressing concerns related to digital data and personal information security on discarded smartphones and computers is crucial in such contexts (WHO, 2021). Other examples of economic incentive initiatives in transitioning economies include the World Bank's pilot project on e-waste management in Egypt and Ethiopia. This project, conducted in collaboration with the Egyptian government, emphasizes economic incentives and employs a collection strategy involving non-governmental organizations and the private sector in e-waste management. Further research is required to compare these experiences and identify best practices that can be shared among countries grappling with mounting e-waste challenges, all while contributing to a sustainable circular economy on a global scale without compromising local employment opportunities (Balde et al., 2015).

RECOMMENDATIONS FOR ENHANCED INTEGRATION

In light of the rapid advancements in electronic product design and the widespread proliferation of mobile devices on a global scale, addressing the issue of e-waste, which represents the fastest-growing category of solid hazardous waste with international transport implications, demands innovative and cross-border management strategies. Particularly in countries undergoing economic transitions, various models for financial and technical support in e-waste management have emerged. Here, we put forth recommendations aimed at effectively integrating technical support and financial incentives to revolutionize rudimentary e-waste recycling and resource recovery across different scopes. To provide a comprehensive framework for such integration, we can draw upon the United Nations Sustainable Development Goals (SDGs), specifically Goals 8 and 12. These SDGs offer valuable guidance for exploring the multifaceted dimensions

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

of collaboration required to transform informal e-waste management. Aligning with the principles of a Circular Economy (CE), these SDGs encourage policies that have the potential to generate employment through partnerships between public and private enterprises, diversify labor-intensive sectors with high added value, protect labor rights, and promote safe and secure working conditions for laborers while minimizing environmental and health impacts (unstats.un.org, 2023).

Recognizing the critical role of the information and communication technology sector, primarily driven by electronic products, in sustainable development, the United Nations Environment Programme (UNEP) highlights both the challenges posed by electronic waste and it's potential as a secondary resource material capable of meeting raw material demand for manufacturing new products, provided economic considerations justify it (Awasthi, Li, Koh, & Ogunseitan, 2019). In order to strengthen programmatic collaboration with national governments, United Nations agencies responsible for labor market integrity, economic development, environmental protection, and monitoring health risk factors can leverage their advanced knowledge and expertise in electronic product life-cycle stewardship. They can also facilitate the allocation of financial resources to address emerging e-waste challenges in many developing countries. Moreover, these agencies can support web-based platforms for knowledge-sharing related to e-waste (unstats.un.org, 2023).

Drawing from a past initiative by the UNDP Asia–Pacific Innovation Fund, which introduced an app-based approach that showed promise in China but faced scalability limitations, we propose adapting and tailoring similar initiatives for countries like Ghana and Nigeria. These initiatives should be locally customized, ensuring sustainability through engagement and investments by local or regional financial institutions, with support from local governments to provide security and infrastructure guarantees. Collaborative efforts with other UN agencies, including the World Health Organization, Environmental Programme, and International Labour Organization, will be essential to ensure the coherence of policies and actions across various sectors for effective global e-waste management (Awasthi, Li, Koh, & Ogunseitan, 2019). The multi-dimensional approach, guided by SDGs, CE principles, and UN agency collaboration, can pave the way for improved e-waste management and sustainable development, with a focus on emerging economies transitioning towards more effective practices.

E-WASTE AND THEIR IMPACT

According to the UNEP report on "Compendium of Technologies for the Recovery of Materials from WEEE / E-waste" One of the main effects of rising consumption is the rapid rise in garbage output. According to World Bank projections, 2.2 billion tonnes of municipal solid trash would be produced annually by 4.3 billion urban dwellers by 20251. The kind and makeup of trash have changed significantly throughout time as a result of to altered consumer behaviour and consumption. Consequently, many waste streams are developing, leading to issues with the sustainable management of local and national governments. Given that waste management has a significant impact on the environment, public health, and the negative effects of inappropriate garbage disposal management are well-documented and quite serious. In an era marked by rapid urbanization, electronic waste, or e-waste, has emerged as a paramount concern in the modernized world. This issue continually introduces toxic and hazardous elements, including lead, mercury, calcium, polybrominated biphenyls, and chromium, into our environment (Chen, et al., 2018). The primary apprehension surrounding e-waste is rooted in its composition of hazardous substances, posing threats to public health and environmental well-being. Improper handling of such waste leads

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

to detrimental consequences, as perilous substances are released. E-waste comprises numerous toxic components that can inflict severe harm on the environment, human health, and animal well-being if not properly disposed of in an environmentally responsible manner (Yong, Lim & Ilankoon, 2019). Some of the adverse effects of the chemicals commonly found in e-waste on human health are outlined below:

Brominated Flame Retardants (BFRs): These chemicals have been routinely added to consumer products for decades to reduce fire-related injuries and property damage. Concern has arisen due to the occurrence of various classes of BFRs in the environment and humans. BFRs resist decomposition in the environment and can lead to impaired memory function, learning difficulties, and behavioral problems in babies born to exposed pregnant women. They interfere with estrogen and thyroid functioning (Kumar, 2021).

Lead: Present in most computer monitors and televisions, lead exposure, especially in children under six, can result in intellectual impairment, damage to the reproductive and nervous systems, and blood disorders. Lead poisoning can have multiple adverse health effects, particularly on the neurological development of children (Borthakur & Govind, 2017).

Cadmium: This element primarily targets the kidneys in both the general population and occupationally exposed individuals. Cadmium can accumulate in the human kidney for an extended period, causing kidney damage and affecting the respiratory system. Found in rechargeable batteries for laptops and other electronic devices, cadmium is highly toxic, especially to the kidneys and bones (Borthakur & Govind, 2017).

Mercury: Elemental and methyl mercury are toxic to the central and peripheral nervous systems. Inhalation of mercury vapor can harm the nervous, digestive, immune, respiratory, and renal systems and may even be fatal. Inorganic mercury salts are corrosive to the skin, eyes, and gastrointestinal tract, potentially inducing kidney toxicity. Mercury exposure can lead to neurological and behavioral disorders, including tremors, insomnia, memory loss, neuromuscular effects, headaches, and cognitive and motor dysfunction. It is used in lighting devices in flat-screen monitors and televisions and can affect breast milk (Kumar, 2021).

***Hexavalent Chromium Compounds*:** Hexavalent chromium, a known carcinogen, is employed in various industries, including electronics, for creating metal housings. Exposure to it can cause lung cancer and irritation or damage to the respiratory tract, eyes, throat, and skin (Kumar, 2021).

Plastic Compounds: Polyvinyl chloride (PVC) cabling is commonly used in printed circuit boards, connectors, plastic covers, and cables. When PVCs are incinerated or landfilled, they release dioxins that have harmful effects on human reproductive and immune systems (Kumar, 2021). E-waste contamination extends to air, soil, and water pollution, a stark reality observed during the recycling or landfilling of these hazardous and toxic materials. Hazardous organic compounds like PCBs (polychlorinated biphenyls), PBDEs (polybrominated diphenyl ethers), and PCDD/Fs (polychlorinated dibenzo-p-dioxins and dibenzofurans) contribute to air and water contamination, disrupting the food chain and adversely affecting human health (Borthakur and Singh, 2017).

Informal recycling exacerbates the e-waste crisis in developing countries such as India, Ghana, Nigeria, China, Thailand, Indonesia, Vietnam, Pakistan, and Bangladesh. Illicit and unregulated practices, including the unauthorized melting of circuit boards, open burning of wire piles, and disposal of metal-bearing acidic solutions, have become distressingly common (Borthakur and Singh, 2017). Dismantling, another inappropriate e-waste disposal method, often occurs under poor conditions, resulting in severe pollution and harm to public health. Generated waste is recklessly disposed of through open burning

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

and dumping, representing the least desirable alternatives in countries lacking proper legislation and essential waste management infrastructure (Shittu, Williams & Shaw, 2021).

These practices typically involve the manual disassembly of e-waste using rudimentary tools such as hammers, chisels, and screwdrivers. Precious metals like gold are extracted by stripping them in open-pit acid baths, while copper recovery involves burning electric cables in open pits. Plastics are shredded and liquefied at high temperatures without adequate ventilation, releasing toxins like dioxins and furans. These rudimentary techniques pose threats to both environmental protection and worker health (Borthakur and Singh, 2017). The improper dumping of e-waste is also observed in developed countries, often attributed to inadequate implementation of environmental laws and WEEE management regulations by authorities.

All electronic devices contain printed circuit boards, which house toxic components like lead, brominates flame retardants, and antimony oxide. The heating of printed circuit boards (PCBs) for component removal is a common practice, releasing hazardous materials such as lead, mercury, and hexavalent chromium. These substances are found in cathode-ray tubes (CRTs), capacitors, mercury switches, batteries, LCDs, cartridges, and electrolytes. Cadmium and lead are prevalent in computer batteries and circuit boards, while cathode-ray tubes contain cadmium and lead oxide, and mercury is present in switches and flat-screen monitors (Borthakur and Singh, 2017). Polychlorinated biphenyls (PCBs) are identified in transformers and capacitors. These harmful substances contribute to various health disorders, including those related to growth, reproduction, thyroid function, lung health, and cellular abnormalities. Those

Table 3. Impacts associated with e-waste exposure

Pollutants or Toxins	Occurrences	Available Places
Heavy metals	Widespread	Found in many electronic components, including batteries, circuit boards, and cathode ray tubes
Polybrominated Diphenyl Ethers (PBDEs)	Common	Used as flame retardants in electronic devices, such as televisions, computers, and smart phones
Polychlorinated Biphenyls (PCBs)	Less common	Once used in a variety of electronic devices, but now banned in most countries
Polycyclic Aromatic Hydrocarbons (PAHs)	Common	Formed when organic matter is burned, such as in the open burning of e-waste
Hexavalent Chromium	Less common	Used in some electronic components, such as computer monitors and fluorescent light bulbs
Mercury	Widespread	Used in fluorescent light bulbs, thermostats, and some medical devices
Lead	Widespread	Used in batteries, solder, and some electronic components
Cadmium	Less common	Used in batteries, nickel-cadmium batteries, and some electronic components
Barium	Less common	Used in cathode ray tubes and some electronic components
Lithium	Common	Used in rechargeable batteries, such as those found in laptops and smart phones
Nickel	Common	Found in Blends, cells, switches, transistors, colorants
Selenium	Less common	Photovoltaic Cells, Colorants, Photocopiers, Fax Devices
Silver	Common	Condensers, switches, cells, resistors
Zinc	Widespread	Iron, copper-zinc alloy, mixed metals, single-use and rechargeable cells, luminescent materials

most affected are individuals directly exposed to these pollutants, including pregnant women, infants, and children. In light of these concerns, addressing the e-waste challenge is imperative for safeguarding both environmental sustainability and public health (Vanapalli et al, 2021).

One of the most concerning aspects of e-waste exposure is its impact on the development of the nervous system, particularly in children living in e-waste recycling areas. These children are exposed to extraordinarily high levels of hazardous substances over their lifetimes. Despite their smaller body weight compared to adults, the volume of toxicants they inhale far exceeds their body weight. These hazardous substances also have detrimental effects on various organ systems. The dangerous health impacts associated with e-waste exposure are summarized in Table 3.

EXPANDING PRODUCER RESPONSIBILITY (EPR) FOR ADVANCING A CIRCULAR ECONOMY

European nations have invested significant effort in reducing e-waste and its environmental impact. To achieve this goal, they have engaged manufacturers and expanded their responsibilities under an "extended producer responsibility (EPR) system." The Organization for Economic Co-operation and Development (OECD) defines EPR as an environmental approach where producers take on increased responsibility for their products at the post-consumer stage of their lifecycle (OECD 2001). EPR aims to incentivize manufacturers to consider environmental factors in their product design, shifting the responsibility for e-waste management from municipalities to producers. Manufacturers are tasked with handling recycling, reuse, and the final disposal of waste components, often by incorporating treatment and disposal costs into the product's selling price. These efforts also encourage producers to offer high-quality products in the global market.

The EPR system is a comprehensive policy framework that utilizes various tools such as advance recycling fees (ARF), waste collection charges, landfill bans, subsidies, and more. The central idea behind EPR for electronics is the acknowledgment that e-waste collection and management incur a net cost that must be addressed to prevent irresponsible and careless handling of these hazardous materials. EPR seeks to engage original equipment manufacturers (OEMs) by setting collection targets for e-waste accumulation and recovery, thereby preventing it from ending up in landfills. To meet these targets, manufacturers collaborate with compliance organizations in exchange for EPR fees (Shan, Xiao & Yang, 2021).However, India's diverse social structure, with a population ranging from lower to middle-income levels, has contributed to the growth of a gray market for used electrical and electronic equipment (UEEE), even after a product's end of life.

In Europe, the EPR concept has been applied to Waste Electrical and Electronic Equipment (WEEE) since 2003, following the first WEEE Directive (2002/96/EC) and its subsequent revision (the WEEE Recast Directive 2012/19/EU) in 2012. In December 2015, the European Commission launched the EU strategy for a circular economy, recognizing that EPR protocols play a vital role in efficient waste management systems and those incentives should be provided to producers for taking responsibility for recycling and reusing their products during the design phase. This circular economy concept aligns with the principles of eco-industrial development and aims to create a "win-win" scenario where economic growth and environmental protection can coexist. However, the transition from a linear economic model of "take, make, and dispose" to a circular one presents significant challenges (McDowall et al. 2017).

E-waste is considered a crucial resource within the circular economy framework. Circular economy seeks to reduce the consumption of new materials and minimize waste generation by establishing sustainable resource flow loops. It not only addresses resource scarcity and waste generation but also offers economic opportunities through recycling and recovering valuable materials. Circular economy encourages the reuse and recycling of e-waste, making it a promising sector for future development. To achieve this, environmental, health, economic, and technological considerations must be incorporated into the system (McDowall et al. 2017).

Implementing a single guiding principle may not be sufficient to achieve multiple environmental objectives, such as landfill diversion and reducing product toxicity. A Pigovian tax on market activities that pose threats to social order and well-being can effectively reduce landfills and promote the use of recycled materials in manufacturing processes, although illegal dumping remains a concern (Calcott and Walls, 2000). Alternatively, a deposit-refund system can address this issue, where a tax imposed on products is refunded when the product is returned for recycling. However, this system comes with implementation costs and complexities, leading to command-and-control strategies by governments. These strategies involve government-mandated reductions in pollution levels through the imposition of collection targets under EPR-based take-back regulations, with government oversight (Palmer and Walls 1999).

Recently, e-waste reverse logistics (RL) has gained momentum, involving the efficient and profitable management of raw materials, work-in-progress inventory, finished goods, and information in a reverse flow from consumption points back to the origin. The goal is to recover value and ensure appropriate disposal. Rapid technological advancements and market competition have shortened product lifecycles and accelerated product obsolescence, highlighting the need to incorporate RL into management practices (Calcott and Walls, 2000). The growth in e-waste, stricter environmental regulations, and increased consumer demand for corporate social responsibility have driven the adoption of reverse logistics. While various RL models have been developed in developed countries, developing nations are still in the early stages of implementation. In economies like India and China, challenges include inadequate legislation, limited economic incentives, low public awareness, the prevalence of unbranded products, and informal waste pickers who collect and treat e-waste without regard for health, safety, or environmental protection (Islam et al, 2020).

Several gaps hinder the effective implementation of reverse logistics. Producers often hesitate to invest in RL due to the associated infrastructure costs for collection, recycling, and reuse of e-waste. Difficulty in managing relationships with wholesalers, retailers, consumers, and recycling organizations also contributes to corporate reluctance toward RL (Kumar, 2019). Inadequate legislation can render RL processes ineffective. For example, in the European Directive, a shared responsibility model is used to define that producers are responsible for WEEE treatment, but the collection process is not clearly outlined. As a result, retailers may accept returned WEEE but refuse to cover transportation costs to producers or municipal collection sites. In some countries, the lack of economic incentives has been identified as a barrier to achieving set targets (Vidal, 2023). To overcome these challenges, both developed and developing countries are continually working to design more effective RL management models.

CHALLENGES IN THE MANAGEMENT OF ELECTRONIC WASTE RECYCLING

Countries worldwide are typically categorized as either developed or developing, and two distinct classification criteria are employed, resulting in different country groupings. The Basel Convention uses the Annex VII (developed countries) and non-Annex VII (developing) countries classification. This convention is a crucial international trade agreement designed to regulate the cross-border movement of hazardous waste (Yang, 2020). In contrast, the World Trade Organization (WTO) also classifies countries as developed or developing but does not provide a specific definition for this classification. While the Basel Convention designates the developed countries group to include the OECD, the European Union (EU), and Liechtenstein (Zhang, 2021), the WTO's classification includes the EU, North America (excluding Mexico), the European Free Trade Association (Iceland, Liechtenstein, Norway, and Switzerland), Japan, New Zealand, and Australia as developed countries. Developing countries, according to the WTO, encompass Africa, Mexico, South and Central America, the Caribbean, Europe (excluding the EU and EFTA), the Middle East, and Asia (excluding Australia, Japan, and New Zealand) (Shittu, Williams, & Shaw, 2021). These varying country classifications create significant challenges in the international trade of e-waste.

In practice, many developed economies act as e-waste exporters, while developing countries import these wastes. According to the Basel Convention Report, most hazardous e-waste is exchanged between developed countries, with minimal trade occurring with developing economies. However, the WTO claims that most developed countries send their e-waste to developing countries. India, China, and various African nations have become major destinations for the global dumping of WEEE. India grapples with this issue due to the growth of the UEEE market, the rise of the lower-middle class economy, the expansion of the upper-middle class economy through rapid industrialization, and the proliferation of the informal recycling sector (Cheshmeh et al, 2023). China, on the other hand, was one of the world's largest importers of e-waste but completely banned e-waste imports in 2000, with no reported imports of waste printed boards (WPBs) after that year, although certain countries reported exporting WPBs to China during the same period (Barapatre & Rastogi, 2022).

Due to technological, infrastructural, and financial constraints, developing economies continue to struggle with adopting recommended e-waste recycling and disposal techniques. A practical solution to this problem can be found in the "best-of-2-worlds" (Bo2W) theory (Barapatre & Rastogi, 2022). This theory suggests establishing collection and screening centers based on population size and adopting sustainable practices such as eco-friendly product designs, extended producer responsibility (EPR), product stewardship, recycling, and remanufacturing (Payne, 2022). The increasing global demand for WEEE production, coupled with its diverse composition, raises concerns about exposure to hazardous substances resulting from improper e-waste handling. This underscores the importance of adopting sustainable management practices, such as EPR, but there is still room for improvement in transforming these practices into a circular economy. To achieve this goal, it is crucial to identify and address the existing challenges.

DISCUSSIONS AND IMPLICATIONS

To develop effective management strategies for WEEE, a comprehensive understanding of its composition is essential, given the constant evolution of electronic devices driven by technological advancements.

Currently, there is a lack of information regarding material concentrations in specific equipment and limited data available on the components within these devices. Additionally, the absence of universally applicable standard methods for assessing elemental concentrations in WEEE complicates the analytical process. To address these challenges, the creation of an official database containing detailed information on WEEE components and standardized analytical protocols is necessary. Such a database would facilitate the characterization and comparison of results.

To establish a circular economy and close the loop, stringent policies and suitable infrastructure are required. These approaches should be tailored to the specific needs of different regions. While countries like the United States, Canada, India, and various European states have explicit legislation and adhere to EPR principles, there is room for improvement in their collection rates. One way to enhance these rates is by implementing competitive collection systems involving both public and private sectors (Compagnoni, 2022). Conversely, regions lacking specific regulations and handling capacities face even greater challenges due to the increasing production of WEEE. Addressing this issue necessitates the formulation of effective policies, taking into account region-specific conditions in each country.

The absence of adequate legislation often results in the emergence of informal WEEE management sectors that engage in illegal e-waste trading, involving both imported and domestic WEEE. This problem can be mitigated by banning WEEE imports and expanding formal collection rates. To achieve a circular economy, improvements in recycling methods are imperative, as they serve as the foundation of sustainable resource extraction from WEEE, thus alleviating environmental burdens. The recycling industry requires innovation and enhancement since current processes involve pretreatment, mechanical separation, and refining methods to obtain desired materials. Not all facilities possess the technical expertise required for efficient refining techniques, which hampers the recycling industry's growth. The intricate composition of WEEE renders conventional recycling methods inefficient, necessitating alternative approaches (Vaccari et al, 2019).

The circular economy concept emphasizes maximizing resource extraction from WEEE while minimizing environmental impacts. Although many hazardous substances have been phased out, heavy metals and organic pollutants persist. Restricting the use of hazardous materials in electronics can enhance recycling efficiency. Bio-based electronic components offer an alternative to eliminate the hazards associated with WEEE recycling (Cardamone, Ardolino & Arena, 2021). Furthermore, electronic product design should consider ease of disassembly during recycling and recovery processes, promoting reuse in line with circular economy principles. Environmental compatibility, profitability, and the efficient replacement of natural resources should guide recycling processes. The incorporation of bio-metallurgical techniques as alternatives to pyro-metallurgy and hydrometallurgy for refining is essential (Vaccari et al, 2019). Although biosorption and bioleaching are proven techniques, their limitations in terms of loading capacity and reaction time must be addressed.

Hazardous substances contained within WEEE gradually leach into the environment, causing contamination that adversely affects the health of humans and animals. This concern is particularly pronounced when linked to informal waste recycling processes. Workers engaged in such rudimentary and unsupervised practices face various occupational hazards. Additionally, populations residing in the vicinity are exposed to hazardous pollutant concentrations that contaminate the air, water, and land. Cesaro et al. (2018) proposed an approach to assess the potential relative impacts of different types of WEEE based on their metal content, chosen as target contaminants. This approach relies on prioritization criteria for WEEE management, with one of the main challenges being the computation of risks associated with potential contamination scenarios. To address this issue effectively, a comprehensive inventory

Dhanabalan Thangam (ctdhanabalan@gmail.com)

of classified organic and inorganic pollutants resulting from the informal treatment of WEEE and the associated hazards can be compiled to evaluate risks to human health. Such an inventory would be valuable in formulating effective guidelines and recycling practices. Dealing with this issue is particularly challenging, especially when it comes to classifying WEEE based on material composition. The use of innovative materials in Electrical and Electronic Equipment (EEE) due to technological advancements makes it difficult to assess the potential long-term impacts of these diverse materials on health and the environment (Shaikh, Thomas, Zuhair, & Magalini, 2020).

Procedures followed by developed economies cannot be directly transplanted into underdeveloped or developing economies due to differences in socioeconomic conditions in various regions. An integrated approach that combines formal and informal systems supported by legal processes can offer a viable and constructive alternative. This can be achieved through a division of labor where the informal sector handles the collection and manual dismantling of valuable WEEE components, while the formal sector takes responsibility for metal refining and residue disposal. This approach would help reduce the on-site generation of WEEE and limit its entry into the informal sector. However, the feasibility of this approach hinges on the implementation of stringent policies regarding the illegal importation of WEEE, and developed countries play a crucial role in this regard (Vaccari et al, 2019).

The management of end-of-life products has become increasingly challenging for developing countries due to the surge in the quantity of e-waste being imported and the inadequacy of e-waste legislation. Furthermore, the general public often lacks awareness of the toxicity levels of hazardous e-waste and is compelled to work in unhealthy conditions during its recycling, as the government fails to provide safety measures in recycling facilities. This dire situation forces individuals to choose between poor working conditions and unemployment. Insufficient technical expertise, infrastructure, managed landfill sites, equipment, and recycling facilities compound the problem, exacerbated by the absence of well-regulated collection and preprocessing systems. Consequently, only a small fraction of the total volume of available e-waste is handled by collecting and disposal companies. Illicit dumping and incineration of this hazardous e-waste alongside other types of solid waste pose a severe threat to both human health and the environment.

CONCLUSION

The management of e-waste is a global concern and presents a significant challenge, particularly for developing countries that receive substantial amounts of this waste. To address this issue effectively, it is crucial to establish an appropriate legislative framework and policies tailored specifically for developed countries. Over the past few decades, numerous policies have been enacted, all of which have been rooted in the circular economy model. To enhance the recovery performance of e-waste, these legislations must be accompanied by investments in training campaigns and capacity building. Innovations in current processing techniques are needed to efficiently recover metals from the intricate e-waste stream. Additionally, there is a need for accurate databases and mapping of e-waste collection and treatment centers. To improve global e-waste management, developed countries should demonstrate a stronger commitment to technology development and the expansion of new recycling facilities. Simultaneously, developing countries should focus on implementing stringent legislation and enhancing the collection of WEEE (Waste Electrical and Electronic Equipment) to expand their recycling capacity. States with lower e-waste production can collaborate to establish shared treatment and recycling facilities.

E-waste recycling holds significant potential for urban mining, allowing the recovery of precious metals, which are found in much higher concentrations in e-waste compared to their natural ores. Circular economy principles and sustainability have already captured the attention of researchers, managers, and policymakers. Now, it's essential for the general public to recognize the moral obligation to transform the linear model into a circular one. An ideal version of a circular economy would be based on utilizing resources extracted from WEEEs to meet SDGs. A significant improvement in the e-waste management system, aligned with the principles of the circular economy, can be expected in the near future through the collaborative efforts of both formal and informal sectors in adopting integrated recycling practices.

About the Contributors

Rajesh Kumar K. V. is currently working as Assistant Professor in School of Business, Woxsen University, Hyderabad, Telangana. He earned his M. Tech in Embedded Systems from JNTU, Kakinada, and AMIE in ECE from the Institution of Engineers, Kolkata. He is pursuing his Ph.D. from VIT University, Chennai. He was earlier associated with VIT as Junior Research Fellow and upGrad Educational Private Limited where he was guiding students in selecting research problems and in writing a thesis, to deal with AI/ML models, for those who are pursuing M.Sc. in Data Science / AI ML courses from LIVERPOOL JOHN MOORES University through upGrad. His research specialization is signals and sensor-based Data Analytics for Bio-Medical Applications.

Hemachandran Kannan holds the Area Chair of the Analytics Department at Woxsen University. Dr. Hemachandran is an Advisory board member at APT AI Labs, LLC. He has been a passionate teacher with 15 years of teaching experience and 5 years of research experience. He served as an effective resource person at various national and international scientific conferences and also gave lectures on topics related to Artificial Intelligence. He was bestowed as Best faculty at Woxsen University in 2021-2022 and also in Ashoka Institute of Engineering & Technology in 2019 – 2020. He is having rich working experience in Natural Language Processing, Computer Vision, Building Video recommendation systems, Building Chatbots for HR policies and Education Sector, Automatic Interview processes, and Autonomous Robots. He is working on various real-time use cases and projects in collaboration with Industries such as Advertflair, LLC, Course5i and Apstek Corp. He has organized many International Conferences, Hackathons and Ideathon. An open-ended positive person who has a stupendous peer-reviewed publication record with more than 35 journals and international conference publications.

* * *

Afaq Ahmad is an accomplished communication researcher and educator. He currently holds a faculty position at the School of Liberal Arts and Humanities at Woxsen University in Hyderabad, India. Dr. Ahmad specializes in the field of journalism and media studies and has an impressive track record of guiding numerous PhD scholars in various academic institutions. His research expertise spans a broad spectrum of areas, including convergence media, digital media, the role of media in promoting human rights, film communication, and broadcast media. Dr. Ahmad brings a diverse skill set to the table, which includes proficiency in research design, lecturing, curriculum assessment, and the editing and proofreading of a wide range of materials, including manuscripts, research proposals, and doctoral theses.

Ramamurthy B. M. is an MBA, M.Phil, Ph.D in Finance, passionate about exploring new pedagogical tools for teaching Accounting and Finance courses with two and half decades of experience in teaching, research and administration. He is currently serving as an Associate Professor and Principal – UG Programs at AIMS B-School, Peenya, Bengaluru. He has completed Simulation Certificate in Entrepreneurship Strategy from Wharton Interactive, Wharton University of Pennsylvania. He has been instrumental in introducing "Simulations" as a new pedagogical tool to enhance experiential teaching and learning processes at AIMS B-School. He has organized International Conference on "Transformative Business Innovation" in collaboration with University of Cyberjaya at Malaysia in the year 2022. He has received "Dr. Radhakrishna Shikshana Ratna National Award" for the distinguished contributions to the development of the Nation and achieving outstanding excellence in the field of Teaching/ Training/Research and Administration presented by International Institute for Social and Economic Reforms(R), Bengaluru on 13 th January 2014. He has published patent on "Monetary Incentives and Employee Performance" in 2023.

C. V. Suresh Babu is a pioneer in content development. A true entrepreneur, he founded Anniyappa Publications, a company that is highly active in publishing books related to Computer Science and Management. Dr. C.V. Suresh Babu has also ventured into SB Institute, a center for knowledge transfer. He holds a Ph.D. in Engineering Education from the National Institute of Technical Teachers Training & Research in Chennai, along with seven master's degrees in various disciplines such as Engineering, Computer Applications, Management, Commerce, Economics, Psychology, Law, and Education. Additionally, he has UGC-NET/SET qualifications in the fields of Computer Science, Management, Commerce, and Education. Currently, Dr. C.V. Suresh Babu is a Professor in the Department of Information Technology at the School of Computing Science, Hindustan Institute of Technology and Science (Hindustan University) in Padur, Chennai, Tamil Nadu, India. For more information, you can visit his personal blog at .

Jyoti Chawla is currently working as Professor in the Department of Applied Sciences (Chemistry), School of Engineering and Technology, Manav Rachna International Institute of Research and Studies, Faridabad. She received her Ph.D. in Chemical Sciences from Guru Nanak Dev University (GNDU) where she conducted research as junior research fellow under collaborative IUC-DAE project of GNDU, Amritsar and Bhabha Atomic Research Centre (BARC) Mumbai. She is NET qualified. Her research interest includes Water Treatment, Surface Chemistry, Risk assessment of Nanomaterials. She has contributed more than 50 papers in journals and conferences proceedings. She has also contributed 5 chapters in Books. She had guided two Ph.D. scholars. Recently she is guiding two research scholars.

Bhagya D. is working as Assistant Professor at the Department of Information Science and Engineering, Sapthagiri College of Engineering, Bengaluru. She has obtained PhD degree in Electronics and Communication Engineering from Vellore Institute of Technology (VIT) University, Chennai during March 2022. She completed BTech in Electronics and Communication Engineering and M.Tech. in Communication Engineering from Mahatma Gandhi University, Kottayam, Kerala. She has a teaching experience of 3 years. Her areas of interest include analog and digital electronics, signal processing and Information theory. Her research is mainly focussed on image processing, biomedical signal processing, and machine learning techniques for medical applications. Her research works till date are published in reputed SCI/Scopus-indexed IEEE journals.

Jagadeesan D. obtained his Bachelor's degree in Computer Science and Engineering from Anna University in 2005 at Chennai, Tamil Nadu, India. He obtained his Master's degree in Computer Science and Engineering from Dr. M.G.R University in 2007 at Chennai, Tamil Nadu, India and his Ph. D in Computer Science and Engineering at Sri Chandrasekharendra Saraswathi Viswa Mahavidyalaya (SCSVMV University), Kanchipuram, Tamil Nadu, India. He is Life Member of the ISTE and a Member of the IEEE. He is Microsoft Certified Power BI Data Analyst Associate. Currently, he working as Associate Professor in Department of Computer Science and Engineering, School of Technology at The Apollo University, Murukambattu, Chittoor. He is specialized in Networking, Mobile Ad-hoc Network, Compiler Design and Computation Theory. His current research interests are Mobile Routing Protocols, Heterogeneous Network, Network Security, e-Agriculture, Healthcare Data Analytics.

Raghunandan G. is working as an Assistant Professor in the School of Commerce, Finance and Accountancy, CHRIST (Deemed to be University). He has to his credit a Bachelor of Engineering in Chemical Engineering, MBA in Finance, PhD in the area of Management Information Systems and over 15 years of Industry and Teaching experience. His areas of Interest are International Finance, Strategic Finance, Quantitative Techniques, Financial Risk Management and Wealth Management. Currently, he has been working on two externally funded projects one by ICSSR, New Delhi on the topic "Entrepreneurship Ecosystem in North East Region of India" and the other on "Tech4all for Special Students" by Cheshire Disability Trust.

Sam Goundar is an Editor-in-Chief of the International Journal of Blockchains and Cryptocurrencies (IJFC) – Inderscience Publishers, Editor-in-Chief of the International Journal of Fog Computing (IJFC) – IGI Publishers, Section Editor of the Journal of Education and Information Technologies (EAIT) – Springer and Editor-in-Chief (Emeritus) of the International Journal of Cloud Applications and Computing (IJCAC) – IGI Publishers. He is also with more than 20 high impact factor journals. As a researcher, apart from Blockchains, Cryptocurrencies, Fog Computing, Mobile Cloud Computing and Cloud Computing, Dr. Sam Goundar also researches in Educational Technology, Artificial Intelligence, ICT in Climate Change, ICT Devices in the Classroom, Using Mobile Devices in Education, and e-Government. He has published on all these topics. He was a Research Fellow with the United Nations University. He is a Senior Lecturer in CS at British University Vietnam, Adjunct Senior Lecturer at The University of the South Pacific, Affiliate Professor of Information Technology at Pontificia Universidad Catolica Del Peru, and Adjunct Professor at The University of Fiji.

Adip Krishna Guduru is a student at Woxsen University currently pursuing his Bachelor's of Technology in Computer Science Engineering, with a specialisation in Artificial Intelligence and Machine Learning. He is a Tech-Enthusiast who enjoys exploring all parts of the field ranging from networking and web development, to most recently, machine learning, computer vision, and natural language processing. His latest projects include a web-based chatting interface named JollyChat, a computer vision based pothole detector, and an NLP based legal case prioritisation system called VerdictAI. He is passionate about advancing computer science and looks forward to working on innovative technologies.

A. K. M. Jawadul Haque is working in the private Bank in Bangladesh. He completed MS in Environmental Science in 2021. His research interest in sustainability issues especially on e-waste management to have a look a better world in future. Despite his MBA and banking profession for last twenty two

years Mr. Haque is enthusiast about environment. He envisioned sustainability practices to save energy, water and reduce waste. He is also concerned about climate action by engaging himself at the Rotary Club of Shyamoli in Bangladesh. At present, he is pursuing professional Masters in Peace Conflict and Human Rights at the University of Dhaka.

Md. Shafiqul Islam specializes in sustainable development issues including sustainable waste management, e-waste management, waste management principles and value creation, environmental hazard & disaster management, organic farming with particular expertise on tea garden, NGOs and civil society. Other interests include rural development, livelihood, food security, humanitarian assistance, maternal & child health and nutrition, organizational issues in development agencies, and bottom up approaches of development. An Environmentalist by education and doing, he has conducted extensive field research in cross range of field including climate change adaptation, disaster risk reduction, ecological resilience, and has advised and consulted for a wide range of national international development agencies, universities NGOs and private sectors. Shafiqul Islam is an Associate Professor of Environmental Science at the International University of Business Agriculture and Technology. He is a specialist on Disaster Management, with a regional focus on Drought in Barind Tract in Bangladesh. Dr. Islam has published widely on the Climate Change Adaptation. His recent work includes Cultivation and Drought Management in Agriculture (Springer Nature, 2022). His two chapters published in two renowned books from IGI Global. After studying in Chittagong University, Shafiqul Islam was awarded a doctorate in Sustainable Approaches to Drought Management: Exploratory Study on selected regions of Northwest in Bangladesh' from the Institute of Disaster Management and Vulnerability Studies, University of Dhaka, Bangladesh. He worked as a Post-Doctoral Research Fellow at the London School of Economics and Political Science (LSE), UK and conducted a research on "Exploring Social Ecological Resilience of Fisher Folks to Coastal Disasters". He worked for 13 years with WB DFID, USAID, EU, GWAB, NETZ, DanChurchAid and ADD funded projects for research, collaboration, partnership, implementation, network linkages and dissemination. He returned to academia as an Assistant Professor at the Center for Sustainable Development in the University of Liberal Arts Bangladesh in 2010. Dr Islam is a Forester with broad interests in the ecology, silviculture, and conservation of biodiversity. He was a semester Faculty at the United International University in 2019. He was the Associate Professor and Chairman at the Department of Environmental Science (Graduate Program) in State University of Bangladesh from 2019-2022. He supervised more than 80 Master's student theses as the major Professor from 2019 to 2022. After receiving his doctoral degree in Disaster Management from the University of Dhaka, Bangladesh. His expertise includes community-based disaster risk management, climate change adaptation, and disaster and environmental education. Prof. Islam has published more than 50 academic papers and book chapters. Dr. Islam has been involved in research in the areas of gender, disasters, environment, climate change, education, social inclusion, indigenous community and other areas of social development since the late nineties.

Avula Jhansy is a dedicated student currently pursuing a B-Tech degree in Data Science and Artificial Intelligence at WOXSEN UNIVERSITY in Hyderabad. Her primary interests are data analysis and Machine learning. She is familiar with programming languages like Python, Java (object-oriented programming), SQL, HTML, and JavaScript. As a beginner in the field, she is committed to independent work and exploration of various topics.

Mohammad Juned is currently working as an Assistant Professor at Presidency College, Bangalore. He is a graduate in Information Technology with an MBA and a doctorate in Supply Chain Management. His teaching and research interests include supply chain management, operations management, quantitative methods and statistics, business analytics, and total quality management. He presented and published papers in related subjects.

Prakhyath Kandula is working as a Research Assistant at Woxsen University in the Department of Operations.

K. Dinesh Kumar working as an Assistant Professor in the School of Computing, Amrita Vishwa Vidyapeetham University. Ph.D. degree received from the School of Computer Science and Engineering, VIT University. Published international publications and participated in various international and national conferences. Active review member for various reputed leading research journals like IEEE transactions, Springer, Wiley, IGI Global, Taylor & Francis Online, Hindawi etc. and also acted as review member for international conferences like MBDAS-2021, Shenzhen, China and ICMEMSCE-2018, Xiamen, China. Co-author of three textbooks. Certified AWS Solution Architect (Associate). Research area is Cloud computing and Machine learning also have interests in Fog computing and Computer networks.

Rajeev Kumar is currently working as Associate Professor in the Department of Applied Sciences (Chemistry), School of Engineering and Technology, Manav Rachna International Institute of Research and Studies, Faridabad. He obtained his Ph.D. degree from Indian Institute of Technology, Roorkee (IIT Roorkee). He had done M.Sc. from CCS University, Meerut. He had qualified NET-JRF from CSIR-UGC. He has more than 14 years of teaching and research experience. He has published 32 research papers in national and international reputed journals. He has also contributed 5 chapters in Books. He had co-guided two Ph.D. scholars. Recently he is guiding two research scholars. His current research interests include Environmental Sciences, Orgeno-metallic synthesis, Analytical Chemistry, Water Treatment, and Optimization techniques.

Vijay Kumar received his Ph.D. in Statistics from Maharishi Dayanand University, Rohtak. Presently, he is working as a Professor& Head of Department, Applied Sciences, Manav Rachna International Institute of Research & Studies, Faridabad. His research interest includes Decision Making and Machine Learning. He has authored more than 65 research publications including research papers, conference papers, and chapters in Books. He has authored 4 books, out of which 3 are research books. He gave several invited talks in various seminars and conferences. Prof. Kumar is a member of editorial boards of several International/National journals and member of various academic advisory committees.

A. Muralidhar obtained his Bachelor's degree from Sri Krishna Devaraya University and Master's degree from Jawaharlal Nehru Technological University Hyderabad. He has awarded Doctor of Philosophy in Computer science from Vellore Institute of Technology – Chennai. He has a total Professional experience of more than 18 years working in various prestigious institutions. He has published 20 papers in various National and International peer reviewed journals and conferences. He is currently working as Associate Professor at Vellore Institute of Technology - Chennai Campus, India. His teaching and research expertise covers a wide range of subject area including Machine Learning, Knowledge Discovery and Data mining, Database Technologies, Big Data Analytics, etc.

Badrinath N. is working as Associate Professor in Department of Computer Science and Engineering, Vellore Institute of Technology, Vellore. He has 18 years of opulent experience in Teaching, research and Industrial Exposure with Research activities. He has published several papers in international & national journals and conferences and delivered guest lectures in many national & international seminars. He has completed BE (CSE) from Bharathidasan University, M. Tech (Advanced Computing) from SASTRA university and PhD in soft computing from Bharathidasan University.

P. V. Satya Prasad is an erudite academician with over 15 years of teaching and research experience in the domain of Journalism and Media Studies having taught at the under-graduate as well as Graduate level in higher education institutions in India as well as in the Gulf region. Dr Satya Prasad worked as a senior journalist in leading print media publications like The Hindu, in India and Oman Daily Observer, Muscat, Oman and Gulf Daily News, Bahrain, in a career spanning over two decades. Dr Satya Prasad is currently working as Dean and Associate Professor, School of Liberal Arts and Humanities, Woxsen University, Hyderabad, India.

Dipalee D. Rane received her ME from University of Pune and Bachelor's degree from J.T. Mahajan Faizpur, Maharashtra, India. Currently she is pursuing PhD from Vellore Institute of Technology (VIT) Chennai Campus. Since last 16 years she is working with D. Y. Patil College of Engineering, Akurdi, Pune- 44, Maharashtra, India.

Jayaditya Reddy is an undergraduate student pursuing a B.Tech in Computer Science with a specialization in Artificial Intelligence and Machine Learning at Woxsen University. He has prior experience working with computer vision and is very interested in the world of machine learning and data analytics. A passionate, curious and enthusiastic individual, Jayaditya leaves no chance to learn. Jayaditya has worked on several projects in the field of machine learning, including developing a computer vision model to detect and classify objects in images and a natural language processing model to generate text. He is also interested in the applications of machine learning to real-world problems. His latest projects include a computer vision based pothole detector, and an NLP based legal case prioritisation system called VerdictAI.

Oladri Renuka is an emerging talent in the field of Data Science and Artificial Intelligence. Currently in the third year of her B.Tech program. With a strong foundation in Machine Learning, Python programming, and Data Analysis, HTML, CSS, data visualization, she is well-equipped to delve deep into the fascinating world of Data Science. Her academic journey has honed her skills and deepened her understanding of these critical domains. Renuka's primary area of interest lies in the fusion of Data Science and Machine Learning. She aspires to leverage her knowledge to contribute to the ongoing advancements in this exciting field. Her dedication to research and her enthusiasm for tackling complex data-driven challenges make her a promising prospect in the world of academia and industry. As she continues her educational journey, Renuka eagerly anticipates exploring new frontiers in Data Science and Machine Learning. Her commitment to pushing the boundaries of knowledge in these fields underscores her determination to make a meaningful impact in the world of data-driven technologies.

B. Rupa Devi, Head and Associate Professor, Department of MCA in AITS Tirupati. She is pursuing her PhD in Department of CSE, SVUCE, SVU, Tirupati. Her areas on interest are Data Mining, Machine

Learning and Data Analytics. She has published 15 International journals. She is ratified as Associate Professor by JNTUA, Anantapuramu in 2010. She has 20 years of teaching experience.

Bhanu Prakash Saripalli serves as an Assistant Professor at the School of Technology, Woxsen University, bringing more than 13 years of valuable experience in teaching and research. Throughout his academic journey, he has made significant contributions to the field, publishing papers in esteemed national and international conferences and peer-reviewed journals. In 2022, he earned his Ph.D. from DIT University, India, focusing on supercapacitor-based smoothing of Solar Photovoltaic power generation fluctuations. His research interests center around Mitigating fluctuations in solar photovoltaic power generation, Energy Management, Power electronics for renewable energy, and Supercapacitor Energy storage systems. With four peer-reviewed publications in reputed journals, two conference papers, and two book chapters on Smart and Intelligent Systems in Proceedings of SIS 2021, his expertise is well-established.

Arti Saxena is currently working as Associate Professor in the Department of Applied Sciences (Maths), School of Engineering and Technology, Manav Rachna International Institute of Research and Studies, Faridabad. She received her Ph.D. from Dayalbagh Educational Institute, Deemed to be University, Agra. She has contributed more than 30 papers in journals and conferences proceedings. She has also contributed 5 chapters in Books and 4 Research Books. She had guided two Ph.D. scholars. Recently she is guiding two research scholars. She got DIRECTOR'S MEDAL for securing highest marks in M. Sc. Mathematics specialization in COMPUTER APPLICATIONS. She got many appreciations during my research and afterwards. She got a position in top 32% in NIIT National IT Aptitude test (NITAT) 2004. Successfully organised a National Conference on "Recent Trends in Mathematical Modeling and Soft Computing Techniques" Department of Mathematics, on 29th March 2014, FET, MRIU. Many more educational workshops and seminars organised in department.

Bodapatla Sindhu Priya is an undergraduate student currently pursuing B. Tech 3rd year in Data Science and Artificial Intelligence at Woxsen University. She possesses a diverse set of skills, including proficiency in HTML, CSS, JavaScript, Python, and Data Analysis. Her academic journey reflects a dedication to contemporary knowledge, training, and practical applications in the field of Data Science. Data Science equips learners with the skills to deploy and model data-based solutions, making it a fitting choice for someone.

Sivaji U. received the B.Tech. and M.Tech. degrees in computer science and engineering from JNTU Hyderabad, in 1999 and 2003, respectively, and the Ph.D. degree from the Computer Science engineering, Andhra University, Andhra Pradesh, India, in 2022. He is currently an Associate Professor with the Department of Information Technology, Institute of Aeronautical Engineering, Dundigal, Hyderabad, Telangana. He has teaching experience of more than 20 years in the areas of computer science and information technology. He has published more than 30 number of research papers/articles. He has also written a number of books in the area of computer science engineering. His current research interests include software Engineering, Machine Learning, networks, cyber security, software Automation, and cloud computing.

ABOUT THE CONFERENCE

Contemporary issues in management refer to the current and relevant challenges, trends, and developments that affect organizations, leaders, and managers in today's dynamic business environment. The current business environment is facing issues like geopolitical instability, trade tensions, increasing inflation and declining GDP in many nations. Further, organizations across the world are increasingly emphasizing on digital innovation, inclusive growth and sustainability. The conference will deliberate on such key issues and discuss possible options and solutions.

This conference will provide a platform for researchers, academicians, practitioners, entrepreneurs and industry experts to share their latest research findings, discuss emerging trends in management, and exchange knowledge with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants.

The event will feature keynote speeches from renowned scholars and industry leaders, and will have practitioner-led workshop sessions. The goal is to foster collaboration, exchange ideas, and inspire further research and practical implementations in the field of management. We invite original research papers for presentation from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

MESSAGE FROM THE CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore! On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 12th International Conference on 'Contemporary Issues in Management - CIM-24'.

In an era marked by geopolitical tensions and rapid technological advancements, the dynamics of management are undergoing profound changes. The influence of geopolitical shifts on business strategies, risk management and global collaborations cannot be overstated. As AI continues to advance, it brings with it both opportunities and challenges. We aim to explore how organizations are adapting to these geo political shifts, digital revolution and impact of AI on business landscape.

The program is rich and varied with eminent international and national keynote speakers. We are honored to have Prof. Harald Bolsinger, Professor of Business Ethics & Economics at Technical University of Applied Sciences Würz burg-Schweinfurt (Germany) as Chief Guest. It is a privilege to have Prof. S Sadagopan, Founder Director of IIITB as the Guest of Honor. Prof. Rajesh Bagchi from Virginia Tech (USA) and Prof. Macario Fernandes from H&H Search Partners (UK) are the keynote speakers for the conference. The participants will learn the nuances of paper development in the workshop conducted by Prof. Kirankumar Momaya, Editor-in-Chief of International Journal of Global Business and Competitiveness. At the conference, ISME proudly confers Lifetime Achievement Award to Prof. M Rammohan Rao (Former Dean- ISB Hyderabad and Former Director- IIM Bangalore) for his exceptional contribution in academics and research.

We are delighted to share that CIM24 has received papers from reputed institutions like Indian Institute of Technology Madras, Indian Institute of Technology Dhanbad, Indian Institute of Foreign Trade, University Putra Malaysia, SP Jain School of Global Management and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business Excellence, Competitiveness & Sustainability: Manufacturing, Services and Agricultural Sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference. Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,

Dr. Rony G Kurien
Dean and Conference Chair

ARGUMENTS FAVOURING TAX DEDUCTIONS AGAINST CORPORATE SOCIAL RESPONSIBILITY EXPENDITURE INCURRED BY MULTINATIONAL ENTERPRISES

Moses Pinto
Doctoral Student at the PhD in Law,
Faculty of Law at the Autonomous University of Barcelona
Universitat Autònoma de Barcelona (UAB), Barcelona, Spain.
mosesingoa@gmail.com

ABSTRACT

Why are the local taxation laws prevalent in the Host Country viewed as not being harmoniously constructed in support of the Corporate Social Responsibility (CSR) policies by the Managers of Multinational Enterprises (MNES)? Could it postulate that the Governments functioning the host country by allowing deductions against the Corporate Social Responsibility (CSR) expenditures could invoke an impetus towards the strategic alignment towards International Taxation Laws by Multinational Enterprises (MNES) while demonstrating a heightened degree of transparency which would qualify as industry best practices in declaring the CSR expenditures incurred as a function of the tax avoidance endeavour by the MNE. This kind of amalgamation of transparent practices in the realm of seeking tax deductions for an MNE's CSR expenditure could also help minimise conflicts of perception before the proponents who interchangeably refer to tax avoidance by MNEs as Tax Evasion. Therefore, it could be estimated that global CSR laws could be harmoniously constructed vis-à-vis local taxation laws in their interpretation by MNEs if encouraged by the governments of the host country.

A REVIEW OF GREEN ECONOMY AND ITS RELATED CONCEPTS

Rimli Rajan
Research Scholar
CMR University, Bengaluru
rimli23rajan@gmail.com

ABSTRACT

The term green economy has been considered as a major impetus for sustainable development. But still, the green economy is faced with severe shortcomings and tensions within its definitions and discourses. Due to lack of adequate data with respect to transformation towards green economy, still there is a lot of inconsistencies. The concept of green economy involves various concepts and its connection with sustainability is obscure. This paper considers the various concepts, definitions and measurement methodologies towards green economy. It also focuses on monitoring the OECD green growth framework, different approaches for alternative measurement. The paper concludes by stating that there has to be a better policy for a progress which is beyond GDP. It also recommendations an alternative source of information, new methodologies and measurement approaches to make green economy successful. The paper highlights by stating that it is only through proper collective adjustments economically, we can solve the dangerous effects on the climate change and environmental degradation. To obtain this, the concept of green economy involves a complete transformation to decrease the harmful effects on climate change and thereby reduce emissions. To reduce the carbon emissions globally, there is a major need for radical changes related to energy policy. To measure the progress, there is a need for proper framework for ascertaining the actions related to green economy. In 2013, The Green Growth Knowledge Platform, initiated the need for proper economic opportunities and tools related to the growth of green economy. Without a proper measurement, it would be hard to understand the efficacy of the policies and attain the sustainable goals for green economy related to climate action and sustainable development. This paper concludes by stating the important recommendations to ameliorate the transformation related to the measurements of the green economy.

A BIBLIOMETRIC APPROACH TO EXAMINING THE DEVELOPMENT OF GREEN FINANCE AND ITS EFFECT ON ENVIRONMENTAL SUSTAINABILITY

Suman Ahuja
Research Scholar
Guru Gobind Singh Indraprastha University, Delhi
sumanahuja037@gmail.com

ABSTRACT

With the 28th annual summit of the United Nations Framework on Climate Change (COP28) highlighting the necessity of coordinated action to avert climate change, the literature on green finance and its impact on environmental sustainability has changed over time. In order to minimize carbon emissions, create urban infrastructure, financing of renewable and green energy projects, and preserve environmental sustainability, green finance is essential. The impact of green finance challenges on environmental sustainability varies amongst nations, and opinions on the relative importance of these challenges and advancements are not entirely consistent. The current study discusses the development of the concept of green finance using bibliometric analysis, thereby offering policy recommendations for promoting economic expansion. The co-citation of authors, documents, and journals, as well as the co-occurrence of keywords, were analyzed using VOS Viewer to determine which country has given green finance and the environment the most attention in addition to the profiled authors in the relevant field. Research gaps have been highlighted which can be pursued by the future researchers.

ABSTRACT

As India continues to integrate into the global economy, foreign direct investment has emerged as an important driver of economic growth and development. The study provides a comprehensive overview and examines the impact of foreign direct investment on the growth trajectories of the banking and insurance sectors in India, and then the impact of the growth of these sectors and foreign investment on India's economic growth. The study uses time series data for the period 2002-2022. The study uses correlation and multiple regression analysis techniques to analyse the data. The findings of the study indicate a positive relationship between FDI inflows and the growth of the banking and insurance sectors in India. The results also showed a strong relationship between the growth of the banking and insurance sectors and foreign direct investment flows. The results showed that the growth of the banking and insurance sectors has an impact on economic growth, as increasing the growth of the banking sectors by (1,277,166) million dollars leads to an increase in Indian economic growth by (1,941.85) billion dollars. The growth of the insurance sector by (741,991) million dollars will lead to an increase in economic growth by (1,406) billion dollars. The results of the analysis showed that foreign direct investment has a positive impact on economic growth in India, as the inflow of foreign direct investment by (1,996) million dollars will lead to growth in the economy by (666,683) million dollars. The study recommends that the Indian government implement reforms in the local market to attract more foreign direct investment by raising the ceiling on foreign ownership in companies and various economic sectors, as well as reducing the profits tax on businesses to encourage more local and foreign investors.

INTEGRATION OF SUSTAINABLE FARMING AND AGRO TOURISM TO STIMULATE FARMERS ECONOMIC STATUS IN KARNATAKA: A SOCIAL ENTREPRENEURSHIP INITIATIVE

Vikas Janardhan Salunkhe
PhD Scholar
CMS School of Business and Management,
JAIN (Deemed to be University), Bangalore

Dr. Sarangapani Nivarthi
Associate Professor
CMS School of Business and Management,
JAIN (Deemed to be University), Bangalore

ABSTRACT

As a social entrepreneurship project to improve the financial standing of farmers in Karnataka, India, this study explores the theoretical foundation and possible effects of fusing agrotourism with sustainable agricultural methods. With sustainable agriculture and tourism working together, the goal is to promote socioeconomic growth in the area. The integration aims to create a model in which farmers provide tourists an immersive experience in rural life and agriculture in addition to cultivating crops sustainably. Given that it tackles farmers' social and economic problems, this integration is consistent with the tenets of social entrepreneurship. The project aims to create a sustainable and reproducible model that may be modified for use in other areas through cooperative efforts between local communities, governmental organisations, and commercial businesses. The final section of the abstract highlights the integrated approach's revolutionary potential and shows how it may support the overall growth of Karnataka's rural economy.

BEYOND BORDERS: CHARTING A COURSE FOR THE FUTURE OF MULTILATERAL COOPERATION

Tadepalli Aditya Kamal
Student
KLE Law College, Bengaluru
tadepalli.21bbl023@klelawcollege.org

ABSTRACT

In an era marked by global challenges that transcend national boundaries, the imperative for robust multilateral cooperation has never been more pressing. This paper explores the evolving landscape of international relations and the critical role that multilateralism plays in addressing complex issues such as climate change, global health crises, and economic inequality. As the world becomes increasingly interconnected, the need for collaborative frameworks that extend beyond borders becomes evident, necessitating a re-evaluation and reinvigoration of the foundations of multilateral cooperation. The paper begins by examining the historical context of multilateralism, tracing its roots in the aftermath of World War II and the establishment of international organizations like the United Nations. It then delves into the challenges faced by the existing multilateral system, including shifts in geopolitical power, rising nationalism, and scepticism towards global governance. By analysing case studies of successful and unsuccessful multilateral initiatives, the paper identifies key factors that contribute to effective cooperation, emphasizing the importance of inclusivity, transparency, and shared responsibility. Building on these insights, the paper proposes a forward-looking framework for the future of multilateral cooperation. It advocates for the adaptation of existing institutions to better reflect the current geopolitical landscape, as well as the creation of innovative mechanisms that foster collaboration between governments, non-governmental organizations, and the private sector. The role of technology in facilitating cross-border cooperation is also explored, with a focus on harnessing digital tools for enhanced communication, data sharing, and problem-solving. Moreover, the paper addresses the role of individual nations in bolstering multilateral efforts, urging a renewed commitment to diplomacy, compromise, and the pursuit of common goals. It concludes by emphasizing the urgency of collaborative action and the shared responsibility of the global community in charting a course towards a future where multilateral cooperation transcends borders, effectively addressing the multifaceted challenges of the 21st century. The purpose of this paper is to analyse the aspects of multilateralism with respect to its history and the future. The paper also aims to facilitate towards the geopolitical landscape and the future of diplomacy.

I aim to build this paper with the help of primary sources such as UN reports, government initiations, etc. and also by using secondary sources such as articles, research papers, etc. Some of the major findings that I found during the research is the importance of global governance, preference for stability, acknowledgement of challenges and call for innovation.

Keywords: *Climate Change, Economic Inequality, Multi-lateral Initiatives, Innovative Mechanism and Enhanced Communications.*

ANALYZING THE CATALYST EFFECT OF THE 'MAKE IN INDIA' INITIATIVE ON ADVANCING THE STARTUP ECOSYSTEM: AN EMPIRICAL STUDY

Dr. K V N Lakshmi
Assistant Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

Dr. S. Ramesh

Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

ABSTRACT

Launched in 2014, the 'Make in India' initiative was conceived to position India as a global manufacturing hub, fostering economic growth, job creation, and technological advancements. This initiative aimed to attract both domestic and foreign investments in manufacturing, emphasizing the production of goods within the country. The convergence of 'Make in India' and startups forms an intriguing intersection where traditional manufacturing and cutting-edge innovation meet. The primary goal is to investigate the factors shaping the startup ecosystem in India and analyze its impact on the country's GDP. Employing Structural Equation Modeling (SEM) for a comprehensive analysis, the study underscores the robustness of the model, with fitness indices confirming its adequacy. The findings highlight the substantial positive influence of the 'Make in India' initiative on the startup ecosystem, while also dismissing the notion of a positive impact from geopolitical risks.

Keywords: Make in India, Start up Eco system, Innovation, Geo-Political Risk, SEM, GDP.

FUTURE OF MULTILATERLISM

Sarath R
Student,
IA School of Management Studies, Bangalore
thisissarath6@gmail.com

ABSTRACT

The future of multilateralism is unfolding amid complex opportunities and challenges with profound implications for global governance. This paper examines both the positive and negative dimensions that are likely to shape the trajectory of multilateralism in the coming years. On the positive side, there is an opportunity for the international community to strengthen cooperation to address pressing global issues, from climate change to pandemics. Collaboration can lead to innovative solutions, increased sustainability and the creation of new partnerships. On the other hand, the downsides of the future of multilateralism are intertwined with growing geopolitical tensions, nationalist sentiments and declining trust in international institutions. The report explores the potential consequences of declining cooperation, such as stalled progress on critical issues and a weakened ability to respond effectively to transnational challenges. The emergence of competing factions and power struggles can hinder the inclusive and cooperative spirit that multilateralism seeks to promote. This research paper also explores new risks, such as cyber threats and digital divides, which affect the effectiveness of multilateral approaches.

ABSTRACT

In India, the Companies Act 2013 made spending and reporting of CSR mandatory for a set of companies which fulfil certain criteria. The objective of this study is to examine the impact of this mandatory CSR regulation on stock return, which has not been explored so far. We use actual CSR spending data from Indian listed companies on National Stock Exchange (NSE) extracted from CMIE's Prowess database for the period 2010-2022. Using the mandatory CSR regulation as an exogenous shock, we examine the impact of mandatory CSR on stock return using a fixed effect model and apply Difference-in-Difference (DID) technique to investigate whether this law change this relationship significantly post-2015. We find CSR has a positive impact on stock return. However, CSR has a negative impact in the post-2015 period on treated firms compare to pre-2015 when CSR was not mandatory. We also look at subgroups of firms who spend on CSR more than, less than or equal to the mandated 2% and how it affects this relationship. Overall, our finding support CSR as a strategic investment in long run. This paper contributes to the emerging literature on mandatory CSR and firm performance. To our knowledge, this is the first study which examines the long-term impact of mandatory CSR on stock return using actual CSR expenditure using DID methodology in pre and post scenario of the Companies Act 2013.

Keywords: *Mandatory Corporate Social Responsibility, CSR, Stock Return, Firm Performance, DID, CSR regulation.*

ABSTRACT

Spirituality at the workplace is connected to the economic sphere. Max Weber (1904) found out about the positive implications of spirituality regarding economic results. These findings can be explained with the positive aspects; which spirituality can cause in the economic context. This value of spirituality in an economic context can be seen in the theoretical concept of spiritual capital. In this context, spiritual leadership has found its way into management literature. This state of the art is discussed in the article and serves as a starting point for the development of Spiritual-Based Humanism.

In the first part the working paper spans a thematic framework between spirituality and spiritual capital in organizations. In addition to relevant definitions, the context of spirituality is described, which is closely linked to the worldview of believers of different religious imprints, personal calling, vision and corresponding values. Spiritual capital is operationalized by means of values that come into play in spiritual or servant leadership.

This paper delivers ground for development of a model for the possible effects of Spiritual leadership on their organization's performance. Embedded in the national cultural context, spiritual leadership has an impact on the performance of companies in financial and other areas (e.g. innovation, sustainability, CSR) through the lived organizational culture with specific values and employee commitment. Therefore, in a second part, value portfolios of selected globally widespread worldviews are discussed on the basis of concrete manifestations in sample countries, and their particular country-specific context is explained. Based on this, a general research design shall be derived in a follow-up paper that can empirically investigate the relationship between spiritual capital and organizational performance.

ABSTRACT

Ascent of emerging multinationals (EMNEs) from India is an exciting phenomenon for the promise of India's techade and climb to next levels of international competitiveness for development. Knowledge-based groups from India are also striving to climb on competitiveness, but it is an under-researched topic. How can we analyze trends and the journey of the groups, is an exciting question. We use qualitative analysis of quantitative and qualitative data from a single case to help characterize the phenomenon. Quick benchmarking of groups identified in India and other Asian countries provides some interesting trends. In Asia, groups in Japan, Malaysia have climbed to good heights. Emerging findings are summarized using the concept of 'journey map' to help identify phenomenon, trends and issues. We contribute to 'theory of Competitiveness' by assessing the journey map to evolve options for next levels for the group.

ARE WE READY FOR NEW TECHNOLOGICAL ADVANCES IN MARKETING?

Sulagna Nandy Dutta
Research Scholar,
Indian Institute of Technology (Indian School of Mines), Dhanbad
sulagna.nandydutta@gmail.com

ABSTRACT

Technological advancement has undoubtedly eased the marketing process in this highly competitive business environment. If business entities do not adopt this technological upgradation in a fast-changing world, there may be severe competitive issues for survival. The recent technological advancements ["Artificial Intelligence (AI)," "Augmented Reality (AR)," "Virtual Reality (VR)," and "Chatbot (CB)"]- from the computer science field which has reached the mass outside its domain due to their super efficiency and utility for various activities which needed human intelligence. This article explores the concept in two ways: generic and specific perspectives. Initially, the paper aims at concept-oriented (generic) exploration concerning the introductory idea of critical concepts (I), their emergence (E), future arena (F), and risk factors associated with them (R) [the IEFR framework]. Lastly, this paper does the bibliometric analysis of published documents (specific) indexed in the Web of Science in connection to sustainable goals for better comprehension of the domain and its implications. Papers are scattered in terms of categorization. No salient field is grown to its fullest potential. As sustainability is not the prime concern in this domain, policy-level decisions are needed.

Keywords: *Artificial Intelligence (AI), Augmented Reality (AR), Virtual Reality (VR), Chatbot (CB), Marketing, Sustainable Goals.*

ASSESSING THE IMPACT OF HINDUSTAN UNILEVER LIMITED'S SUSTAINABLE INITIATIVES ON SUSTAINABLE DEVELOPMENT GOALS (SDGS) IN INDIA

ABSTRACT

The impact of Hindustan Unilever Limited's (HUL) sustainability measures on India's progress toward the Sustainable Development Goals (SDGs) is examined in this study report. The study examines how money is allocated and used in the fields of women's empowerment, environmental sustainability, healthcare, and other areas. HUL's Environmental, Social, and Governance (ESG) objectives serve as a gauge for the company's dedication to sustainability. In order to shed light on the company's contributions to social and environmental well-being in India, the study uses a quantitative research methodology to investigate the relationship between HUL's efforts and SDGs.

Dr. A. P. J. Abdul Kalam Technical University, Lucknow
ajayk.yadav25@gmail.com

ABSTRACT

Environmental Social and Governance (ESG) is a frame-work used to assess an organization's business practices and performance on various sustainability and ethical issues. It also provides a way to measure business risks and opportunities in those areas sustainable finance is all about ethical decision –making in business and investment. It pivots on environment, social and good governance (ESG) standards (especially in asset management and corporate strategy) that customers, workers and investors demand of companies. The methodology used involves analyzing key ESG issues and indicators, which are split into three themes: Environmental, Social and Governance. The set of issues and indicators analysed will vary by industry with a specific weight placed on each issue. The four- pillars of sustainable finance are (1) Definition: Use of Proceeds, (2) Selection: Process of Project Evaluation (3) Trace-ability: Management of Proceeds, (4) Transparency: Monitoring and Reporting. Common goals include reducing greenhouse gas emission investing in sustainable energy, increasing work-place diversity and providing transparent financial practices. By integrating ESG considerations into their investment, banking, insurance, and other financial product companies can maintain profitability while making good on their customer's and investor's desires to promote sustainable practices support social causes and foster responsible governance. The metrics and disclosures proposed here have been organized in four pillars that are aligned with the SDG's and principal ESG domains: Principles of governance, planet, people and prosperity.

serinjose888@gmail.com

ABSTRACT

Gender equality has become one of the cornerstones for driving this world into a sustainable and thriving ecosystem in the contemporary time. Women's participation and contribution has proven to be an inevitable and significant component for the progress of a nation as a whole and economy in particular. This perspective article delves into the transformative role that women play in shaping the future of India through the family business domain. Historically, family businesses in India have been male-dominated, but changing societal norms, increased education, and evolving business landscapes have created opportunities for women to play a pivotal role. Drawing inspiration from the emphasis on family business, we delve into the intricate tapestry of women's influence within family businesses, illuminating their entrepreneurial behaviours, decision-making processes, and leadership styles, helping in the sustainability and transformation of family business domains. Furthermore, we examine the challenges faced by women in the family business landscape, such as gender bias and societal expectations, and propose strategies for overcoming these obstacles. Shedding light on these issues, this article contributes to a deeper understanding of how women are reshaping the future of family businesses in India and the importance of gender diversity and inclusivity for the sustained growth and prosperity of these enterprises.This paper is an integrative review based on a concise and critical literature study. The research findings reveal that women in the Indian family business landscape drive economic prosperity through inclusivity, innovation, diversity, and sustainability initiatives, contributing significantly to business and economic growth and adaptability despite the traditional barriers and challenging stereotypes.

Additionally, gender diversity within family businesses correlates with improved financial performance and resilience in the evolving market landscape. This perspective article introduces a fresh perspective on the role of women in shaping the future of India through family businesses. It distinguishes itself by emphasizing how women's contributions drive innovation and adaptation within these businesses. By triangulating gender dynamics, entrepreneurship, and family business context, it offers an innovative lens to understand and address evolving challenges, contributing to future research and practical solutions in the context of Indian family businesses.

ABSTRACT

Energy poverty (EP) is one of the most challenging problems in the contemporary world, equally affecting developed and emerging nations. Its mitigation is an important facet of the United Nations' (UN) Sustainable Development Goals (SDGs). However, the antecedents of EP have not been completely investigated. The present study augments the extant literature on the determinants of energy accessibility for the BRICS countries. Ours is one of the very few studies investigating the impact of GDP, government spending, income inequality, trade openness, and FDI on energy poverty with the help of robust panel data techniques of CS-ARDL and panel causality tests to probe the impact of select variables on EP. This study employs annual data (from 1990 to 2022) in context of BRICS countries. The econometric findings revealed that income inequality and energy intensity aggravate the problem of EP while FDI, trade openness and government spending helps in reducing the EP in BRICS economies. The current study's results hold up well under different model configurations, we were able to offer useful recommendations for energy affordability and accessibility in accordance with the SDGs.

Keywords: *Energy Poverty, BRICS, Government Spending, Income Inequality, Access to Energy.*

HARVESTING KNOWLEDGE: A COMPREHENSIVE SYSTEMATIC REVIEW OF AGRICULTURAL SUPPLY CHAIN MANAGEMENT

Dr. Mohammed Farooq Pasha
Associate Professor
Govt. First Grade College, Bangalore
farooqpasha2002@gmail.com

Preethi A
Assistant Professor, Surana College, Bangalore
Research Scholar, Jain University
Preethim289@gmail.com

ABSTRACT

In response to the intricate challenges facing modern agriculture, "Harvesting Knowledge: A Comprehensive Systematic Review of Agricultural Supply Chain Management" rigorously examines a broad spectrum of scholarly works, comprising articles, journals, and conference papers. The paper not only consolidates existing knowledge but also identifies gaps in the literature, suggesting avenues for future research and development in agricultural supply chain management. By citing foundational works such as that of Ivanov and Dolgui (2019) and Seuring and Gold (2012), the review establishes a robust framework for understanding the current state of agricultural supply chains and identifies areas where further investigation is warranted. As global agriculture grapples with dynamic shifts and unprecedented demands, "Harvesting Knowledge" emerges as an indispensable resource for researchers, practitioners, and policymakers alike. Rooted in evidence-based insights, the paper concludes with practical implications and recommendations, fostering a collaborative commitment towards cultivating sustainable, efficient, and resilient agricultural supply chains in the face of evolving global challenges (Blackhurst et al., 2008; Pagell & Shevchenko, 2014). This systematic review, titled "Harvesting Knowledge: A Comprehensive Systematic Review of Agricultural Supply Chain Management," aims to provide a thorough examination of the existing literature on agricultural supply chain management. With the escalating challenges facing global agriculture, the primary purpose is to unravel prevalent practices, challenges, and innovative strategies within agricultural supply chain management. The review seeks to contribute to a nuanced understanding of the complexities involved in production, distribution, and consumption processes, shedding light on key considerations for stakeholders in the agricultural sector. Employing a systematic approach, this review meticulously selects and evaluates scholarly works, including articles, journals, and conference papers.

The methodology involves a comprehensive search across reputable databases, utilizing stringent inclusion and exclusion criteria to ensure the relevance and quality of the selected literature. The information related to empirical research and viewpoint of various ASC drivers were captured, studied and analysed in detail.

Although inventory policy, demand forecasting and ASC integration were found to be important areas of ASC, they were less focused, studied and researched.

ABSTRACT

This study delves into the intricate dynamics of Supply Chain Entrainment (SCE) and its impact on Organizational Performance (OP) in the context of manufacturing supply chains. Employing Partial Least Squares Structural Equation Modeling (PLS-SEM), The study employs Partial Least Squares Structural Equation Modeling (PLS-SEM) to explain the crucial contribution of supplier collaboration, information sharing, and process integration as potential enablers of SCE. Furthermore, the study investigates the moderating influence of technology adoption on the interactions among SCE and OP. The managers can leverage from the identified enablers to enhance SCE, thereby fostering improved OP. The findings from the study contribute to both academic and practical realms by offering a comprehensive understanding of the intricate mechanisms governing manufacturing supply chains, thus advancing the discourse on effective supply chain management strategies.

Assistant Professor, BBA, PES University, Bengaluru

ABSTRACT

The papers submitted for this publication represent research based on the role of event design elements. Events serve as platforms for brand representation and communication. The design elements contribute to the visual and sensory aspects of the brand, influencing how attendees perceive and remember the brand associated with the event. In addition to being aesthetically pleasing, event planning also acts as a visual language to convey the concept and goal of the gathering. An event's design can distinguish it from others in a packed schedule of events. An event may become more intriguing by using well-thought-out and unique aesthetics that help it stand out in the eyes of participants and become unforgettable. The methodology used for this paper was a literature review and the sources for the papers were from Google Scholar. The design elements contribute to the visual and sensory aspects of the brand, influencing how attendees perceive and remember the brand associated with the event. Through this study, event planners get a better understanding of the attendee's behavior to curate design elements accordingly. With the rise in cutting-edge technology elements like virtual reality and additive reality could be incorporated to improve the overall enjoyment of the event. The efficiency of event design components leads to more pleasant, lasting, and enjoyable events for participants.

M Thashneem T Bhanu
Assistant Professor, BBA, PES University, Bengaluru

ABSTRACT

Flower arrangement aims to connect with nature by capturing its splendour and framing it in a unique design. It adds positivity and ambience to any hospitality industry setting. Sustainable floristry meets current and future generations' environmental, social, and economic needs. The purpose is to identify unforeseen problems in the floristry and acknowledge them for a better and sustainable environment. The methodology used is an extensive literature review, drawing on numerous research papers from Google Scholar. This paper provides an overview of the historical evolution, sustainable approaches, technologies, techniques and suggestive methods for addressing environmental impact in the floral arrangements of the hospitality industry. With technology advancing rapidly, it is crucial to utilise it positively to not harm the environment. In the floristry industry, it is essential to adopt sustainable techniques to ensure that our actions do not have a negative impact on the ecosystem.

A CASE STUDY ON HOW CAPACITY IS AFFECTING DEMAND AND IN TURN OPERATING REVENUE OF AIR INDIA

Sidharth M Chandran
Student, MBA-MS,
Amrita School of Business, Bengaluru
sidharthchandran300@gmail.com

ABSTRACT:

The majority of Indian scheduled civil aviation companies report recurring annual losses in spite of positive growth. in capacity and demand. Air India has been reporting losses year-on-year. The purpose of this study is to investigate the linkages between capacity, demand, and operating revenue of Air India for the period 2014–15 to 2018–19. The methodology includes a two-stage empirical analysis, wherein regression analysis is used in both stages for estimating the relationship between capacity and demand and demand and operating revenue. The effect of passenger load factor and Break-even load factor on operating result is also analysed. The findings suggest that, though there is a positive correlation between capacity and demand and in turn demand and operating revenue of Air India, underutilization of capacity by Air India is resulting in losses to Air India and the industry as a whole. The study can prevent operating losses to Air India in future.

geetanjalisrinivas415@gmail.com

ABSTRACT

A spectrum of behaviors and policies governed by the principles of integrity, impartiality, and accountability constitute ethical practices within an organizational framework. A fundamental component of an organization's ethical framework is the incorporation and consistent application of ethical standards in all aspects of its operations, including employee relations, consumer interactions, decision-making, and community involvement. The significance of ethical practices has been further underscored by the globalization of business. Organizations that operate in locations with varying cultural and regulatory environments encounter the difficulty of navigating the ethical nuances that are specific to each setting. By embracing an all-encompassing viewpoint, this research attempts to reveal the ways in which cultural sensitivity and ethical adaptability bolster the resilience of organizations in an era of globalization. To analyze the responses of the participants, multiple response analysis, regression analysis, and the ANOVA test were implemented. The significant impact of investor intentions regarding company accountability is further validated by the quantitative results, underscoring the critical importance of ethical considerations in shaping investment choices.

krishnakumaran95@gmail.com

ABSTRACT

This paper investigates the impact of generative artificial intelligence (AI) on Quality Assurance (QA) professionals and strategic decision-makers within the Information Technology (IT) sector. The focal question guiding this research is centered around understanding perceptions, challenges, and strategic considerations related to the integration of generative AI technologies. A comprehensive survey methodology encompassed questions related to awareness, perceived benefits, challenges, integration strategies, collaboration dynamics, and long-term considerations. Data analysis involved quantitative assessments of responses to derive nuanced insights into the complex landscape of generative AI adoption in the IT sector. The findings present a detailed exploration of the awareness levels, perceived benefits, and challenges associated with generative AI among QA professionals. Insights into integration strategies, collaboration dynamics, and long-term considerations from both QA professionals and decision-makers in strategic roles are synthesized to provide a holistic understanding of the landscape. The implications of this research extend to informing decision-makers and practitioners about the challenges and opportunities inherent in incorporating generative AI in QA processes and strategic planning. The nuanced insights into collaboration dynamics, workforce impacts, and strategic considerations offer practical guidance for navigating the evolving technological landscape. This research holds significance in contributing to the ongoing discourse on the intersection of generative AI, QA practices, and strategic decision-making in the IT sector. By shedding light on the perceptions and strategic considerations of professionals, it aids in developing a roadmap for organizations seeking to harness the potential of generative AI effectively.

ANALYSE THE FACTORS INFLUENCING THE ADOPTION OF ELECTRIC VEHICLE IN VARIOUS COUNTRIES – COMPARISON OF ELECTRIC VEHICLE ADOPTION RATES IN DIFFERENT COUNTRIES

Pon Barath Suva Raj P
Student,
Amrita School of Business, Bangalore
ponbarath10@gmail.com

ABSTRACT

This research dives into the diverse landscape of electric vehicle adoption across the countries India, United States of America, United Kingdom, China, Norway and Ireland to discover the factors that shaped this trend. By analysing the findings from different articles and publications, this study comprehensively examines the financial incentives, charging infrastructure, local production, regulatory policies and consumers behaviour towards electric vehicles (EV). This analysis integrates the perspectives from different studies to contribute to the understanding of the different factors that are influencing and shaping the global adoption of electric vehicles (EV). Also offering valuable insights to the policymakers and the industry experts, helping them to navigate the evolving landscape of sustainable mobility.

STUDY OF THE BEHAVIOUR OF RETAIL INVESTORS WITH RESPECT TO INVESTMENT IN ESG FUNDS

Shruti Modi
Student,
Indus Business Academy, Bangalore
fpb2224.144.shruti@iba.ac.in

Prof. Narendra Babu
Senior Assistant Professor,
Indus Business Academy, Bangalore

ABSTRACT

This study aims at studying the consumer behaviour of retail investors with respect to investment in Environmental, Social and Governance (ESG) funds. It also focuses on the awareness of retail investors for ESG funds and the reason why there has been a positive shift towards investment in ESG funds. The researcher tries to establish the relationship between awareness level of retail investors with their investment behaviour in ESG funds. Primary as well as secondary method was used to conduct the study. It was found that investment in ESG backed funds depended on the level of awareness regarding ESG. Also, more young males are having knowledge of ESG backed funds and it's not that related with level of income. So, awareness is a key factor which needs to be focused on. Also, the irony here is that inventors are investing in ESG funds but having more focus on returns of those funds.

A STUDY ON IMPACT OF SUSTAINABLE DEVELOPMENT GOALS ON SHAREHOLDER VALUE: WITH SPECIAL REFERENCE TO LISTED COMPANIES IN INDIA

Maya Patil
Research Scholar,
International School of Management Excellence, Bangalore
mayap.isme20@gmail.com

Dr. Geetha Rajaram
Research Guide,
International School of Management Excellence, Bangalore

ABSTRACT

This research aimed to comprehensively evaluate sustainable development goals adaptation in Indian corporations, providing insights into strategies, challenges, and impact for fostering a more sustainable future. Utilizing bibliometric analysis with Scopus search criteria, the study identified a rising trend in sustainable development goals adaptation in India, potentially driven by corporate awareness and investor demands from 2016 to 2023. The sector wise analysis reveals, SDG is driven by social sciences with 33.1%, environmental science with 17.8% and business management with 11% subject wise, emphasizing and the importance of social and environmental dimensions & a business-centric focus. Cluster analysis reveals the five clusters about environmental policy, technological development, gender equity, entrepreneurship and governance. Poorly touched upon subjects were found to be tourism, water quality and sanitation. Bibliometric analysis, Dematel analysis, and social network analysis have been used to gain insights into the subject. Descriptive statistics showcased that the shareholder value has increased over the years and created value for shareholders during the period. Standard deviation (SD) shows some signs of volatility over the years in 2018-2020 with high SD and low volatility in 2016-17 with low SD. Over the stipulated years, shareholder value is considerably impacted by the Sustainable Development Goals (SDG). The absence of statistical significance suggests that there is no proof, in the model's current form, that these factors have any appreciable bearing on shareholder value. The results of the multivariate analysis do not show enough evidence to reject the null hypothesis for either the annual impact of the Sustainable Development Goals or the total shareholder value over time. This suggests that overall, there is no discernible change in shareholder value between 2016 and 2020, and that shareholder value is not significantly impacted by the Sustainable Development Goals for any year. Key themes, including environmental performance and social factors, provide strategic guidance for aligning sustainability strategies with prevalent themes, addressing critical issues for businesses and society.

NAVIGATING FINANCIAL MARKETS: AN EMPIRICAL EXAMINATION OF THE INFLUENCE OF EMOTIONAL AND PSYCHOLOGICAL WELL-BEING ON PROFESSIONAL FEMALE INVESTORS

Mr. Raveesh Ramdas
International School of Management Excellence, Bangalore

Dr. Shurlly Tiwari
Professor
International School of Management Excellence, Bangalore

ABSTRACT

The purpose of this study is to examine the complex relationship that exists between female investors in metropolitan locations between the ages of 31 and 51 and their emotional and psychological well-being. Given the increasing importance of women as investors, this research aims to understand the ways in which emotional and psychological aspects impact financial decision-making in this population. To obtain thorough insights, the research uses a mixed-methods strategy that combines surveys and in-depth interviews. Structured surveys will be used to gather quantitative data on factors like investment preferences, risk tolerance, and financial objectives. Simultaneously, in-depth interviews will be utilised to gather qualitative data, which will enable participants to express their experiences and perspectives in a sophisticated way. Emotional intelligence and investment success among female professionals are significantly correlated, according to research on "Navigating Financial Markets: Influence of Emotional and Psychological Well-Being on Professional Female Investors". The study emphasizes how cognitive biases, such as risk aversion and overconfidence, affect how people make decisions. Furthermore, evident that a supportive and welcoming work atmosphere is essential to the mental health of female investors and to their ability to bounce back from market setbacks. These results highlight the necessity of focused initiatives to address psychological issues and advance an environment that is supportive to women working in finance. The study's emphasis on urban environments is driven by the special opportunities and challenges that come with living in an urban area, which may influence female investors' emotional and psychological health. The study will investigate how personal and financial components are interconnected, considering elements including family dynamics, work-related stress, and societal expectations. The goal of this study is to provide significant new understandings to the domains of psychology and finance.

Financial institutions, legislators, and mental health specialists can all benefit from knowing how female investors' emotional and psychological well-being influences their investment decisions.

In the end, the results might open the door for customised treatments and tactics meant to improve this group's financial health and promote a more inclusive and all-encompassing approach to investment management. This research brings into light the various elements that impact the decision-making of women with special attention to investment avenues.

ABSTRACT

This study has been carried out to understand the prevailing awareness and willingness among consumers to adopt the new open-source e-commerce initiative - ONDC (Open Network for Digital Commerce) backed by the Indian Government. This will be ascertained against the backdrop of five key factors and trends identified in today's e-commerce landscape - direct to consumer trend, increasing aversion towards monopolistic practices, need for convenience, and patriotism. Furthermore, the study also aims to assess any possible variation in the level of willingness contingent on the product category. This study is predominantly exploratory and takes into consideration only three product categories - food & grocery, electronics, apparel. The initiative is in its nascent stages and has not garnered the attention, trust or understanding of the general public, owing to which the respondents of the survey may not be entirely aware of the platform or its functioning. However, the questionnaire of the study is designed such that respondents are offered a rudimentary demonstration of the platform's functioning which in turn creates awareness about it. The ONDC platform with its open source interface is set to democratise and revolutionise the e-commerce landscape in India. For a platform that aims to shift the dynamic of interaction between buyers and sellers it is imperative to understand the existing levels of awareness and willingness to adopt the platform among consumers. This study intends to aid the platform in understanding its current footing in consumers' minds as well as its position with respect to existing, centralised, e-commerce platforms such as Amazon, Flipkart etc. While preliminary research on the platform, its structure, and functions have been conducted, its adoption among consumers and the factors that contribute to it remain largely unexplored.

This study aims to assess as well as improve the level of awareness about the platform while identifying the factors that play a role in consumers' adoption of the platform.

MULTIPAGE MEDICAL DOCUMENT CLASSIFICATION OF PRINTED AND SCANNED PAGES USING MACHINE LEARNING ALGORITHMS

Prof. Shreedhar Deshmukh
Assistant Professor
National School of Business Academy, Bangalore
shreedhar@nsb.edu.in

ABSTRACT

One of the most challenging projects in machine learning for text classification is extracting information from unstructured scanned documents and texts, including medical document. Medical documents usually include both typed and untyped handwritten documents written by doctors prescribed to patients. These are the collection of papers of patient went several times to clinic or hospital. It will be difficult for a doctor or a health care company to go through all the documents which is time consuming process. We have tried to develop an application call auto index system, that classifies a medical document by analysing its content and categorizing it under predefined class (e.g. Consultation, Anaesthesia, Lab Report-Culture test, Radiology, office visit) topics and creating an index of pages falling under the category. We have plenty of classes to classify but fixed the scope to four-five predefined topics namely, Progress notes, consultation, CT, Lab reports, radiology. We use term frequency technology to convert and count number of words in the medical text documents and classify them based on weightage calculation.

PES University, Bengaluru

ABSTRACT

Reusing oil in the kitchen involves extending the lifespan of cooking oil by filtering and storing it for future use. This practice can save costs, reduce waste, and add flavors to dishes. Proper filtration is essential to remove impurities and maintain the oil's quality. The main purpose of choosing this topic of reusing oil in the kitchen serves multiple purposes. It promotes sustainability by reducing waste and conserving resources. Additionally, it offers economic benefits as it allows individuals to save money by extending the life of cooking oil. Exploring proper methods for oil reuse also contributes to healthier cooking practices and encourages mindful consumption in the kitchen. The paper was searched using Google Scholar. The paper explores the practicality and benefits of reusing cooking oil in kitchens. The focus is on sustainability, cost savings, and promoting healthier cooking practices. The study emphasizes monitoring and limited reuse to ensure food safety and quality. The suggestion for future improvement in your area of research which would help the hospitality industry are primary focus is cooking oil reuse I suggest exploring sustainable practices like implementing advanced waste recycling systems or developing eco-friendly packaging solutions to benefit the hospitality and event industry. This can contribute to reducing environmental impact and promoting a more sustainable approach.

ABSTRACT

Psychological empowerment is a very crucial component in the aspect of employee empowerment. It includes the four dimensions, Meaning, Competence, Self-determination, and Impact, contributing to its different variations and levels. As a result of investigations conducted in different industries, it is noted that less attention is given to the aspect of Job Satisfaction in Connection with Psychological Empowerment. Therefore, this study discusses the Psychological Empowerment of Women Employees in leadership positions and its relationship with their Job Satisfaction. The study's significant goals are to examine which dimensions of Psychological Empowerment are strongly linked with the aspects of Job Satisfaction. A sample size of 107 was collected from 4 different private industries. The Psychological Empowerment tool of Spreitzer (1992) and the Job Satisfaction tool of Minnesota Satisfaction Questionnaire (MSQ) are used for measurement. The Questionnaire was distributed to the women employees in leadership positions in 4 different industries. The study's findings propose that Psychological Empowerment has a very significant and highly positive relationship with Job Satisfaction, and the dimensions of Self-determination and Impact have the most decisive influence. Therefore, this research illuminates the critical role psychological empowerment plays in shaping the job satisfaction of women in leadership roles. The findings underscore the importance of fostering self-determination and recognizing the impact of individual contributions in enhancing not only psychological empowerment but also overall job satisfaction among women employees in leadership positions.

This nuanced exploration adds valuable insights to the evolving discourse on employee empowerment and organizational well-being, calling for a more comprehensive integration of psychological empowerment considerations in contemporary workplace strategies.

ABSTRACT

The traditional economic models have led to significant and negative repercussions for environmental progress, as well as an unreasonable division of capital has resulted in increased ecological footprint and demographic disparities. Due to the existence of disparities in opportunities and availability of resources in the economy worldwide, it has become extremely necessary to evaluate the inter-connections between the concept of Corporate Social Responsibility (CSR) and why it is required. Further it has also become important to associate Sustainability along with CSR. Therefore, the primary aim of this study is to examine and analyse the evolution of CSR as a domain in the past two decades and also identify the evolving interrelation of CSR with sustainability. The study also makes an effort to understand the trend by reflecting on historical trends. This study uses bibliometric analysis to mark the upcoming trend in CSR and also dwells on its connection with sustainable development. Thus, on comparing the trend of the past two decades, it was found that CSR has gained a lot of traction from the research community and it is being inclined towards 17 Sustainable Development Goals. The analysis dwells into different dimensions of publication data extracted in January 2024, from the Scopus database using two different search strings and three different searching strategies. Where the United States has maintained its position as the country to produce most publications in the CSR domain, two countries namely India and China, can be observed advancing in the respective domain.

ABSTRACT

The study aims to understand the strategies used by visually impaired consumers (VIC) in acquiring product information and the challenges they face. The study also explores VIC's preferences for accessible labeling and its benefits. This study employed the qualitative approach of thematic analysis to explore the strategies used by VIC to obtain product information and their preferences for accessible labeling. A snowball sampling technique was used to recruit participants. Data was collected from VIC through semi-structured interviews. The sample size of the study is twelve. The data was analyzed by using NVivo software. The study revealed three strategies used by VIC to obtain product information, such as reliance on caregivers, staff, and technology. However, all the strategies employed have drawbacks, such as lack of autonomy and time consumption. The narratives of VIC propose solutions to these challenges faced by implementing accessible labeling on product packages. The study reported a high preference for accessible labeling in braille and QR codes. Implementing a combination of braille and QR codes on product packages will be the most beneficial strategy for VIC. Implementation of accessible labels ensures inclusion in the marketplace.

Dheeraj Harshit
Student PGDM
International School of Management Excellence, Bengaluru
dheerajh.isme2224@gmail.com

ABSTRACT

India's economy is among the fastest-growing in the world. It is anticipated that Indians will spend more time engaging in leisure activities as they climb the economic development curve. In India, there are many different options for leisure activities, but movies are still the most popular place to go for an out-of-home activity. A major contributor to the thriving film industry of the nation is the Indian cinema exhibition industry, also referred to as the Indian film exhibition sector. Smaller theatres are finding it difficult to compete with larger chains as a result of the growth, which has also increased competition and consolidation. Additionally, multiplexes have been essential in growing the market for regional language and non-Bollywood films. The expansion of multiplexes, however, has also had a big effect on conventional single-screen theatres, many of which have found it difficult to compete with the bigger chains. This study examines the gradual decline of single-screen theatres in India, highlighting the factors and challenges that either caused or contributed to this trend, as well as the rising demand for high-end, experience-driven theatres. The majority of this study is exploratory in nature because there hasn't been a lot of collaborative research on India's exhibition industry, particularly on standalone and single-screen theatres.

This study used both qualitative and quantitative methodology. The qualitative portion includes podcasts, industry reports, and interviews with professionals in the field of cinema exhibition to gain insight into how renovating or improving single-screen theatres can promote survival of the fittest. The quantitative portion consists of a questionnaire designed to comprehend consumer prospects and behaviours that are taken into account when attending a movie in a theatre, particularly in a single-screen cinema. Hypotheses testing was conducted on the questionnaire.

ABSTRACT

As our society recognizes the urgency of living sustainably, the field of interior design holds great potential for initiating transformative change. In this qualitative study, we investigate the incorporation of sustainability values into the world of interior design. Our main focus is on creating a robust framework that takes into account the temporal aspect of design processes. As our planet faces ever-increasing environmental threats, the interior design field has responded with a significant shift towards sustainable practices. As a result, there is an urgent need for comprehensive frameworks that go beyond traditional considerations such as material and energy efficiency. This research framework presents a holistic approach to sustainable design, incorporating traditional principles and adding a temporal component. It outlines key milestones and strategies for sustainable decision-making throughout the entire design process. Moreover, this research contributes to the broader dialogue on sustainable design by highlighting the interplay between temporal considerations and other crucial elements such as culture, society, and the economy. The research aim is to shed light on the temporal framework that guides sustainable design practices, providing valuable insights into how the concept of time influences the creation and maintenance of environmentally conscious living spaces. To carry out this research, we adopt a qualitative approach and conduct in-depth interviews with experienced interior designers, architects, and sustainability experts. By carefully selecting participants through purposive sampling, we ensure that our study includes diverse perspectives and experiences. By shedding light on the temporal dimension, it serves to deepen our understanding of sustainable design and its multifaceted nature. This research lays a foundation for future investigations into the practical implementation and refinement of the proposed framework within diverse design contexts.

CMR University, Bangalore
kanthimathinathan@cmr.edu.in

ABSTRACT:

The vital reason behind this research is to explore customer perception on cooperative banks concerning their services. The study is exploratory in nature. To investigate the perception of customers towards services provided in Cooperative Banks, the research has been done by using both primary and secondary data. The primary data have been analyzed using SPSS. The hypothesis has been tested using the ANOVA. The overall result of the study indicates that the age factor of the beneficiaries doesn't have any influence on their perception of the cooperative banking services in Rural India.

ABSTRACT

With the rapid growth of e-commerce and online shopping, it is crucial to understand consumer perceptions, hence the researcher aims to study the perceived risks and benefits of online shopping by Indian consumers. In order to transform themselves from fierce competition, marketers need to adopt right strategies to provide superior service to satisfy consumer needs and ultimately create consumers perceived value. The benefits of online shopping are come up with potential risks that the consumer always be aware of. One of the biggest challenges of online retailer is to attract profitable customers. For the present study the researcher collected the opinions of 528 consumers, who are aware of the online shopping. For checking internal consistency and validity using Cronbach's alpha test. The data collected is analysed, summarised and controlled by using Excel and SPSS. For collecting data a structured questionnaire was administered, which includes perceptions of various risks and benefits associated with online shopping. It also includes number of factors which motivates the individuals towards online shopping. After conducting statistical analysis to identify that the more risks associated with online shopping are security, product quality and privacy at the same time the perception towards benefits from online shopping are product variety, time and cost saving determine the importance of consumer perceptions towards online shopping. The findings offer after comprehensive understanding of the risks and benefits of online shopping retailers focus on to develop more innovative strategies in terms of developing web portals, privacy and maintaining product quality, definitely online shopping business generate more revenues to the firm.

ABSTRACT

The phenomenon of Virtual Influencer (VI) marketing has experienced a significant popularity within the realm of social media, owing to the continuous and dynamic evolution of the digital landscape. The present research explores the pivotal determinants shaping social media (Instagram) Users' attitudes towards virtual influencers through Exploratory Factor Analysis. Additionally, an attempt is made to categorize the respondents based on various psychographic and demographic attributes using hierarchical and K-Means cluster analysis. EFA findings revealed four fundamental dimensions of virtual influencers namely; Attitudinal Homophily, Aesthetic Influence, Informativeness & Ad Content Value, Perceived Reciprocity and Perceived Originality.

Employing hierarchical and K-Means cluster methodologies to segment 182 respondents led to the identification of two distinct groups: VR Enthusiast and Discerning Realist. The paper contributes useful implications for marketing practitioners and brands to target these diverse segments effectively by evaluating significant traits of virtual influencers in a meaningful way.

ABSTRACT

E-leadership has become crucial for productive remote work in the quickly developing IT industry. The study examines how e-leadership affects remote work, how e-leadership may be applied in the virtual environment in the IT sector, and how remote work affects employee performance. The selection of publications using PRISMA criteria has increased the relevance of the current review. According to the current study, firms can improve communication, boost team morale, encourage goal alignment, and inspire creativity by utilizing efficient e-leadership tactics. The present review suggested that e-leaders can overcome the difficulties of remote work and guide their teams to success in the digital era with the proper strategy and use of technological tools. The study is helpful in analysing the significance of electronic leadership in the scenario of remote work.

IMPACT OF SOCIAL MEDIA MARKETING ON PURCHASE INTENTION OF GEN Z

Deepika K S
Assistant Professor, PES University, Bangalore
deepikaks@pes.edu

Dr. Ajay Massand
Associate Professor, PES University, Bangalore
ajaymassand@pes.edu

ABSTRACT

Brand marketing activities are becoming more innovative and attractive. Social media is a platform that maximizes the reach of brands. This paper emphasizes Gen Z's intentions to purchase branded products or services based on social media marketing activities and their characteristics. It aims to determine the factors impacting the purchase intention of Generation Z to a maximum extent. The critical points analysed are how Gen Z perceives brands marketed on social media (SM) and what characteristics they consider before their purchase. A sample size of 250 is considered for the analysis. The research uses a convenience sampling technique amongst Gen Z as they are primarily into Social Media usage. On applying Factor Analysis using SPSS on 20 items, the items were grouped into two main factors named Trendiness and Customer engagement. The analysis also reveals that gender does not significantly impact the purchase intention among Gen Z. This research helps the brands design their SM marketing activities focusing on the most vibrant factors that attract most of the specified target segment. It is of practical importance as Gen Z is the fresh entrant to the customer base of all brands. Gen Z's changing behaviour of adapting to new and trending social media platforms and leveraging of maximum time on social media along with easy access to the same, makes it much more important for the marketers to focus on this research results.

ABSTRACT

Bangalore, India's tech hub is witnessing the rapid growth of Cloud Kitchens, creating a unique niche in the online food segment. These delivery-only kitchens operate on a budget, offering great flexibility. Their manufacturing and distribution strategy contrasts with traditional restaurants, and other online channels of selling, thus relying heavily on data analytics and effective kitchen management for efficient distribution. Interestingly, no one has yet surveyed consumer perceptions of this market. Though a survey of consumers using structured questionnaire we try to analyse how the 4 Ps of Marketing, Product, Price, Place and Promotion influence the purchase decision of the consumers and thereon their satisfaction.

MARKETING PROBLEMS FACED BY THE FARMERS: EVIDENCE FROM SIRSA (HARYANA)

Kanchan
Research Scholar, Department of Commerce and Management,
Banasthali University, Rajasthan
kanchu.nekiram@gmail.com

Dr. Shikha Singh
Assistant Professor, Banasthali University, Rajasthan

ABSTRACT

India is known for being one of the largest agricultural producers and exporters globally, with agriculture contributing over 18% of the country's GDP and providing employment to approximately 60% of the workforce. However, despite this significant contribution, farming remains risky for Indian farmers. Despite being an agriculture hub in Haryana state and having ample agricultural resources in Sirsa, marketing agricultural produce remains a major challenge affecting farmers' income and livelihoods. This study aims to identify farmers' problems when marketing their farm produce in Sirsa District, Haryana. Additionally, it aims to suggest possible solutions to address these constraints and help policymakers and stakeholders develop appropriate interventions to support farmers. The study selected a sample of 50 farmers from Sirsa District, Haryana, using a purposive sampling technique, and collected data from both primary and secondary sources. The study also provides practical recommendations for policymakers and stakeholders to foster a sustainable and profitable agricultural industry.

THE OMNICHANNEL CONUNDRUM: EXPLORING CONSUMER PRIVACY CONCERNS AND DATA SECURITY PERCEPTIONS

Rahul S Menon
MBA Student, Amrita School of Business, Bangalore
rahulsmenon101@gmail.com

ABSTRACT

Omnichannel retailing, which is increasingly prevalent today, it is the new normal in consumer convenience. However, alongside this improved accessibility, there is a growing concern. Increasing worries about data protection and security. The study whose results we present below explores this key but under-researched area, attempting to answer the question of how consumers view omnichannel retailing in terms of information about themselves. We have adopted mixed method approach to conduct the survey. With the help of open-ended questions. We hope more relevant details can be collected. This research focuses on addressing below mentioned questions: In exploring omnichannel retailing, we aim to understand consumer expectations on privacy and security. We're curious about data security aspects that resonate with individuals, considering demographics, shopping habits, and tech comfort. Advocating for transparent record-keeping, we want retailers to build trust and win customer confidence. Beyond data and regulations, it's about empowering individuals to navigate the digital landscape securely. Our goal is to illuminate the delicate balance between convenience, personalization, and privacy, creating a space where businesses and individuals thrive in a relationship of convenience with robust data protection.

ABSTRACT

This research investigates the relation between visual entertainment media and aggression in the youth. The research study is an exploratory study assessing the factors which contribute towards aggressive behaviour amongst young people who are exposed to media violence portrayed through various sources of visual entertainment media. Qualitative data was gathered through interviews with 30 respondents, categorized into three groups: undergraduate students, postgraduate students, and teachers, with 10 participants in each. This segmentation facilitated a better understanding of how various age groups analyse and respond to the subject. The information gathered from the interview was examined using NVIVO. The social/cognitive theories were explored and applied to comprehend the behaviour patterns/aggression. Findings –Based on the interviews conducted for our research, it has become evident that visual entertainment media holds significant influence, often leaning towards the negative spectrum. Our findings indicate that such media can notably impact individuals' behaviour and personality, prompting changes therein. Participants emphasized the necessity of implementing restrictions or guidelines concerning the content consumed, particularly emphasizing the importance of this for individuals at impressionable ages, as exposure to certain content during this developmental stage can potentially alter personality and behaviour trajectories. Research implications-The implications of our research highlight the significant influence of visual entertainment media on individuals' behaviour and personality, particularly emphasizing its potential negative impact. Implementing age-appropriate restrictions or guidelines for media consumption is crucial, especially for impressionable individuals, to mitigate potential alterations in personality and behaviour trajectories. Additionally, fostering an understanding of the distinction between fantasy and reality within media content is essential for navigating its effects on individuals' perceptions and actions.

These findings underscore the importance of proactive measures to promote responsible media consumption and address potential adverse effects on individuals' development and well-being.

ABSTRACT

The major objective of this paper is to study the factors related to Technology-Organisation-Environment (TOE) context that influence the adoption of Digitization in Unorganised Retail Outlets. With this objective a study a proposed conceptual model of TOE framework was taken. A quantitative survey was conducted with unorganised retail outlets in Karnataka, India to validate the model. The survey generated 75 respondents. AMOS and SPSS were used to access the model. It is observed that the elements related to Technology in TOE (Technology-Organization-Environment) framework have a major impact on the intention to adopt technology (Digitalisation). However, the mindset of Retailers, which falls under the categories of Environment and Organization, needs to be improved in order to encourage technology adoption intention. The government might utilize the study to promote additional digitalization efforts in rural areas. They hold the ability to comprehend the needs of rural areas and adapt their work accordingly. This model can be utilized by unorganized merchants to expand their customer base and survive in the highly competitive market of today.

IMPACT OF SOCIAL MEDIA INFLUENCERS ON BEAUTY & WELLNESS PRODUCTS PURCHASE INTENTIONS

Dr. S. Shyam Prasad
Professor
International School of Management and Excellence, Bengaluru

Dr. Rameshkumar Murugesan
Professor
International School of Management and Excellence, Bengaluru

ABSTRACT:

The growth of social media has spawned a new category of celebrities - the social media influencers. Social media influencers are people who have acquired a sizable fan base on social media and monetize their influence by urging their followers to purchase goods and services. Social media has been found to play an important role in influencing purchase decisions. However, there is a lack of understanding of the extent of a social media influencer's impact on a consumer's purchase intention, particularly for beauty and wellness products. We have chosen to study beauty and wellness products for the reason that they no more remain as luxury products; they have come to be used more frequently and commonly. This is reflected in the global Beauty and Wellness Products Market size which is projected to grow from $1,610.5 billion in 2023 to $2,765.8 billion by 2030, at a CAGR of 8.03% (Fortune Business Insights). The study collected data from 386 respondents and applied PLS-SEM to identify the factors influencing purchase decisions and the moderating role of social media influencers.

DESTINATION MARKETING IN POST-PANDEMIC INDIA TO BOOST TOURISM

Geeta Ashok
Professor
International School of Management and Excellence, Bengaluru
geetaashok@isme.in

ABSTRACT

According to the Ministry of Tourism, over 6.19 million and 1.52 million foreign tourists arrived in India in 2022 and 2021 respectively compared to 10.93 million in 2019, representing a - 44% de growth. After this lull, post-pandemic weekend vacations and domestic travels are on the upswing which is helping in boosting economic activity and employment creation. In recent years, there has been a remarkable change in the way people travel. More and more people are seen travelling on long weekends and school vacations. This is majorly spurred by social media where people vlog and post about the places that they have visited. Also, resorts and hotels endorse tourist destinations with the help of influencers and celebrities. Lately, India has been very keen on destination branding to promote tourism amongst people residing in and out of India. The government supports the tourism industry through various schemes such as 'Pilgrimage Rejuvenation and Spiritual Augmentation Drive' (PRASHAD), Swadesh Darshan, 'System for Assessment, Awareness & Training for Hospitality Industry' (SAATHI), Dekho ApnaDesh, and 'The National Integrated Database of Hospitality Industry' (NIDHI). There are many more initiatives that the government is undertaking to brand India as a destination worthy of visiting. Destination marketing is a relatively new concept which is gathering momentum in India. Destination marketing is designed to attract people to a particular place and explore its origins, heritage and values. It is about creating a brand story and building a narrative around it. Brand stories are not about ads and sales pitches. These are stories which are to be told by a brand persona who connects with the core audience. It tries to project why your place is more exotic than other enticing locations. This study aims to explore the strategies that can be used to brand India as a destination for increased tourist inflow.

ABSTRACT

This study aims to address the research gap in understanding the factors influencing adventure tourists in India. The rapid growth and potential of the adventure tourism sector in India make it crucial to explore and analyze the factors that impact destination visit intention and word-of-mouth intentions of adventure tourists. By examining target respondent attitude, involvement, and destination image, this study aims to provide insights into the influences on adventure tourists and their overall satisfaction with adventure tourism experiences. A questionnaire was administered to 205 adventure tourists using simple random sampling, and the collected data was analyzed using various statistical tools such as reliability analysis, independent samples t-test, one-way ANOVA analysis, correlation analysis, regression analysis, and structural equation modeling. The findings of this study will assist marketers and adventure sports organizers in developing effective strategies to attract and cater to adventure tourists in the post-pandemic era. Additionally, the study aims to provide recommendations for marketing and policy regulations that can maximize the potential of adventure tourism in India. This research contributes to the existing literature and provides a foundation for further exploration in the field of adventure tourism.

ABSTRACT

This research paper investigates the burgeoning convergence of Augmented Reality (AR), Virtual Reality (VR), and Artificial Intelligence (AI) Chatbots in the burgeoning arena of marketing. While each technology individually possesses powerful potential to engage and influence consumers, their combined synergy presents an unprecedented opportunity for immersive, interactive, and hyper-personalised brand experiences. Drawing upon case studies and empirical data, this paper delves into the unique strengths and capabilities of each technology within the marketing landscape. AR's ability to overlay digital elements onto the physical world can be harnessed for virtual try-ons, interactive product demonstrations, and location-based marketing campaigns. VR's immersive environments unlock possibilities for virtual showrooms, product testing simulations, and gamified brand experiences. AI chatbots, powered by Natural Language Processing (NLP) and machine learning, provide 24/7 customer support, personalise product recommendations, and facilitate conversational marketing on a grand scale. This paper examines the intricate interplay between these technologies, highlighting the synergistic effects they produce. Further, it analyses the ethical considerations surrounding data privacy, user control, and potential biases within AI-powered marketing tools.

In conclusion, the paper proposes a future-oriented framework for harnessing the combined power of AR, VR, and AI chat bots to design transformative marketing strategies that drive deeper engagement, foster brand loyalty, and ultimately revolutionise the way brands connect with consumers in the digital age.

ABSTRACT

In the life cycle of a milk product, marketing proposes strategies to improve quality and sales. To tap, keep, and stay in the market, constant consumer assessments are needed to create marketing strategies that meet changing consumer behavior, as evidenced by industrialized countries. This study examined customer behavior for milk, buttermilk, curd, and ghee. The analysis reveals marketers must act to stay in business and establish customer loyalty. Based on the study, the researcher made useful recommendations for dairy marketing tactics. Finally, for India's health and development, the government should support dairy farmers and promote milk products.

BEYOND BRICK AND MORTAR UNDERSTANDING THE DYNAMICS OF PURCHASE INTENTIONS

Kavya K M
Research Scholar
Christ Deemed to be University, Bangalore
kavyathilaksana@gmail.com

ABSTRACT

The objective of this article is to create a comprehensive database of academic information on purchase intention on houses through the use of a systematic literature review (SLR). This database will help to promote global progress in research within the real estate sector. This study conducted a scoping review using papers from two well-regarded databases, Scopus and Google Scholar, spanning the years 1993 to 2023. The research also included a theme analysis method, as described by (Arksey & O'Malley, 2005). A total of 289 articles were assessed for inclusion based on predetermined criteria, and 178 of them were subjected to evaluation utilizing the theme analysis methodology. A thematic map of purchase intention of house research was created by evaluating data from 178 papers thematically. The study identified three primary topics and their corresponding sub-themes: consumer behavior, housing qualities, variables influencing purchasing intention. These themes were crucial in gaining insights into the House Purchase Intention and understanding customer preferences for buying a house. A thematic map of House Purchase Intention research is created by evaluating data from 178 papers thematically. This study aims to offer valuable and novel perspectives on consumer apprehensions regarding home purchases in the fast-evolving residential real estate market. It also highlights the key areas that marketers, stakeholders in the housing sector, the real estate industry, and researchers should focus on, both presently and in the future.

ABSTRACT

Strategic Brand Management for Zomato through Innovative Digital Marketing Strategies" explores the dynamic interplay between digital marketing and brand management, using Zomato as a case study. In the contemporary business landscape, the digital realm plays apivotal role in shaping consumer perceptions and behaviors. This paper investigates how Zomato, a prominent food delivery and restaurant discovery platform, strategically employs digital marketing to enhance its brand. Zomato's digital marketing initiatives are dissected, revealing a multifaceted approach. The plat form engages users through social media, leveraging user-generated content and inter active campaigns to actively participate in shaping its brand narrative. Content marketing emerges as a corner stone, with Zomato curating informative and emotionally resonant content, fostering a deeper connection with its diverse audience. Adata-driven approach is also explored, highlighting how Zomato utilizes user data to personalize recommendations and promotions. This personalized approach enhances customer satisfaction and strengthens brand affinity. The paper acknowledges the ethical considerations associated with data-driven marketing while emphasizing its role in delivering tail ored user experiences. As businesses navigate the ever-evolving digital landscape, this research provides insights into the strategies that have propelled Zomato to the forefront of the industry. The symbiotic relationship between digital marketing and brand management is scrutinized, contributing to the broader understanding of the transformative power of digitalization in contemporary business.

CHALLENGES OF DIGITAL INDIA PAYMENT SYSTEM WITH SPECIAL EMPHASIS ON MOBILE PAYMENT APPLICATIONS

V. Anitha
AssistantProfessor
Departmentof Management Studies,
SriSaiRamEngineeringCollege, Chennai
ramu.mba@sairam.edu.in

ABSTRACT

The purpose of this study is to investigate the effects of digital payment systems on mobile payment applications. The fundamentals of the digital public infrastructure were laid out by the government and built upon by robust public-private partnerships, and the main motive of this study is to understand the conceptualization of the unified payment interface (UPI), which has supported India's transition to non-cash payments by facilitating direct payments linked to a bank account. UPI is a public-private partnership that the national payments corporation of India led with interoperable platform applications including Gpay, Paytm, Phonepe, etc., For this current study, the researcher has done various sequences of statistical tests intended to confirm the consistency and has applied the various statistical tools. The hypotheses were tested with smart PLS 3.0 structural equation modeling on variables. From the findings, it demonstrates that the Indian digital payment system has been a tool to eradicate black money and create notorious awareness for cashless transactions. To conclude, the Indian digital payment system has amplified awareness towards eradicating corruption and magnifying social progress with UPI forms of cashless transactions.

ABSTRACT

In today's ever-changing business landscape, designing appropriate green communication has become an increasingly complex activity for marketers. The present study aims to redefine the strategic orientation of green marketing communication by putting forth a comprehensive framework. The study seeks to identify and analyse the various antecedents that serve a pivotal role in the advancement of GMC domain. With the help of a single cross-sectional survey of 164 green apparel customers from four states of Northern India, Exploratory Factor Analysis was conducted and study offers implications for the marketers to revisit their underlying process of green communication and strengthen their GMC in a strategic manner. 12 factors emerged from 42 items through EFA and factors namely Environmental Consciousness, Harmful Future Consequences, Emotional Connect with Nature, Process Oriented Communication, Image Oriented Communication dominate among all. Deep insights into these antecedents will not only help to foster a positive attitude among consumers towards green initiatives, but also serve as a safeguard against the detrimental effects of green buzzwords and the practice of green washing. Additionally, the study offers useful implications to marketers in the design of sustainable green communication strategies. Originality of the study lies in integrating cognitive, affective, individual and strategic perspectives which will assist marketers in strengthening their promotional strategies and ultimately achieving long-term competitive advantages.

ABSTRACT

Within the dynamic milieu of collegiate admissions, influencer marketing emerges as a contemporary and influential instrument that moulds the perceptions and decisions of prospective students in the domain of higher education. Influencers can shape the student's perspectives on campus life and culture, providing first-hand experiences, and influencing institutional preferences. Institutions must carefully select influencers to ensure alignment with their values and goals, as the right influencers can authentically communicate the unique attributes of the institution, effectively reaching and resonating with the desired target audience. This research paper delves into the pivotal investigation of factors influencing the selection of influencers in the admission process, examining the nuanced criteria and considerations that institutions weigh in identifying and engaging influencers to effectively shape prospective students' decisions in higher education. "Grounded on source credibility theory", this study employs validated questionnaires from diverse sources, surveying 213 management institutes through purposive sampling methods. Data collection involved the utilization of Google Form surveys and on-site field surveys to ensure comprehensive insights. The study found that influencers' expertise, trustworthiness, and objectivity significantly influenced their credibility, with attractiveness having the least impact.

Additionally, cost and industry pressure were identified as mediators in the relationship between intention and actual use of influencers in the admission process. These research findings would help in guiding institutions to prioritize influencers with demonstrated expertise, trustworthiness, and objectivity. Socially, it promotes informed decision-making among prospective students, fostering a more transparent and credible admission process.

ABSTRACT

This paper aims to review articles on healthcare services marketing published in the past decade to identify research gaps created in the backdrop of the recent pandemic and propose a future research direction necessitated by the global crisis. A literature review is performed based on the search term "healthcare services marketing" applied to the Scopus database, resulting in a final pool of 65 articles. The authors conducted the analysis based on Callahan's 6 W framework (2014). In the last decade, healthcare service marketing research emphasised medical tourism and concentrated on service quality. Towards the end of the last decade, the research on online healthcare service marketing saw a rise indicating a trend in the field. Based on this and considering the recent pandemic, the paper proposes possible topics for future research. The growing importance of global healthcare services is well-understood post-pandemic, and there is a growing interest in this area. A comprehensive review exploring topics researched in healthcare services marketing in the preceding decade before the pandemic will help identify research trends that will need further exploration to handle future global health crises.

ABSTRACT

In the modern era of digital transformation, higher education institutions all over the world are actively exploring and adopting Artificial Intelligence (AI) to enhance learning experiences. The present study aims to unveil the pivotal factors impacting digital transformation in Higher Education (HE). Based on the exploratory qualitative design, the study integrates UTAUT framework to conceptualize the role of digital transformation in AI adoption intention and inclusive education in HE. The Study reveals that expectations of AI, personal innovativeness, self-efficacy, facilitating conditions, and effort expectancy influence digital transformation in Higher Education (HE) which further drives the AI adoption intention and inclusive education in HE. The present study provides useful insights for marketers and practitioners to understand the dynamics of AI adoption in higher education, as well as a path for institutions to overcome challenges and leverage the opportunities of digital transformation.

ABSTRACT

In recent years, AI-powered influencer marketing has emerged as a pivotal force reshaping the digital advertising landscape. This study delves into the efficacy and impact of integrating AI within influencer marketing campaigns, drawing comparisons to traditional methods. Utilizing a mixed-method approach encompassing interviews and quantitative data analysis, the research assesses AI's influence on influencer selection, campaign performance, and ethical considerations. The study's findings highlight the substantial advantages of AI-driven influencer selection over manual methods in terms of accuracy and efficiency. AI algorithms proficiently align influencers with target audiences, resulting in increased engagement rates and increased brand visibility. The real-time analytics furnished by AI tools empower marketers to leverage data-driven insights, thereby optimizing campaign strategies and decision-making processes. Influencer campaigns optimized by AI consistently surpass conventional campaigns across key metrics like reach, impressions, and ROI. The data-centric approach of AI fosters more precise and pertinent campaigns that resonate deeply with audiences, yielding tangible business outcomes. However, ethical concerns pertaining to algorithmic biases stand as critical considerations in AI-driven influencer marketing. Emphasis is placed on transparent practices and ongoing audits of AI algorithms to mitigate biases and ensure ethical influencer selections. The future of AI in influencer marketing holds promise. Advancements in AI algorithms will lead to enhanced precision in matching influencers and provide sophisticated audience insights, fostering hyper-personalized campaigns. Responsibly embracing AI technologies enables businesses to forge stronger connections with their target audiences, positioning them at the forefront of the ever-evolving realm of digital advertising.

ABSTRACT

This paper aims to present a bibliometric analysis of publications from the Scopus database on initial public offering (IPO) pricing studies. And aim to consolidate the knowledge and explore current dynamics, understand knowledge progression, elicit trends, and provide future research directions for IPO pricing research. The current research used Microsoft Excel to conduct the frequency analysis, VOS viewer for data visualisation and analysis. This study has observed that the research interest in the field of IPO pricing has been increasing annually, with China recently surpassing the United States in terms of the number of published articles. Research themes have shifted from early long-term performance and stock markets to information asymmetry and underwriter reputation. A focus on business perspectives and emerging Asian markets has become a central aspect of the research. This research successfully revealed the most influential literature, outstanding authors, and top journals in the relevant field. This not only provides us with a comprehensive and profound understanding of the formation and development of knowledge structures, but also provides a guiding direction for future academic research.

STUDY OF "MARKET DYNAMICS IN CRISIS: UNRAVELLING THE IMPACT OF INTERNATIONAL SHOCKS ON INDIA'S BANKING AND CORPORATE SECTORS"

Dr. Prathibha Raj M.S
Associate Professor,
Christ (Deemed to be University), Bengaluru
prathibharaj.ms@christuniversity.in

Vibhav Gupta
Student,
Christ (Deemed to be University), Bengaluru
vibhavgupt02@gmail.com

ABSTRACT

This research scrutinizes "Market Dynamics in Crisis," focusing on the repercussions of international shocks on India's banking and corporate sectors. By means of a historical analysis, with specific reference to the recession of 2008–2009, the research analyses the complex impacts of international events on India's economic resilience. Employing event study analysis on important entities—State Bank of India, Infosys, Adani Green, and Indian Oil Corporation—across sectors Nifty Bank, Nifty IT, and Nifty Energy, the research unravels intricate patterns in stock returns. The results highlight the significance of temporal dynamics by highlighting the possibility that significant events might have an impact on certain days as opposed to the full observation period. In a broader context, this research contributes vital insights into the interplay between global financial institutions, individual stocks, and market dynamics during critical junctures, guiding stakeholders in navigating crises effectively.

A STUDY ON CORPORATE VALUATION IN MINING SECTOR USING MULTIPLES APPROACH

Dhanya Gowda R
Student, PES University, Bengaluru
dhanyagowdar@gmail.com

ABSTRACT

Mining and metals are one among the best performing equity sector globally, but due to few conflicting issues like resource scarcity, pricing bubbles, demand destruction and imminent recessions, there's confusion among the investors. Recently, the equity and commodity prices have exceeded the expectations level and the importance of mining on the economy is evident. Thus, commodities have attracted long-time investments as they protect against currency devaluation and are a safe haven during economic crisis. Thus, it is important to know how to do valuation of the mining companies. Predicting the valuation of these companies is complex. Though there are numerous methods of valuation to value the sector many are neither applicable nor useful. The factors to be considered while valuing companies are: financing risk, price cyclicality, changes in capital and operating cost structures, volatility in stock market, etc. The objective of this research paper is to understand the valuation of mining sector by applying multiples approach and its effectiveness and limitations involved. From the top nine mining companies in India one company is selected for multiple valuation process and peer group comparison is made to arrive at the results. The research is completely based on the secondary data obtained from various sources available online.

LONG-TERM EXAMINATION OF VOLATILITY AND RETURNS: AN ANALYSIS OF NIFTY 100 AND NIFTY 100 ESG INDICES

Shashwati Khuas
Research Scholar, Department of Business Administration, Sambalpur University
khuasshashwati@gmail.com

Dr. Anuradha Samal
Assistant Professor, Department of Business Administration, Sambalpur University

Gourav Kumar Panda
Research Scholar, Department of Business Administration, Sambalpur University
gouravkumarpanda@suniv.ac.in

ABSTRACT

This paper presents a comparative analysis of the NIFTY 100 and NIFTY 100 ESG indices, shedding light on the profound impact of Environmental, Social, and Governance (ESG) criteria within investment strategies, particularly in the context of emerging markets such as India. The study examines how the integration of ESG principles can substantially influence the risk-return profile of portfolios and contribute to their stability. The NIFTY 100 ESG index, designed to prioritize sustainable investing principles, emerges as a standout performer when contrasted with the traditional NIFTY 100 index. Notably, the former consistently exhibits more stable performance with lower volatility, even during times of economic uncertainty. This resilience suggests that ESG factors can act as a safeguard against market volatilities, providing investors with a cushion during turbulent times. The findings of this study hold critical implications for investors and policymakers alike. It underscores the potential of ESG-focused investments to align with ethical and sustainable objectives while simultaneously delivering competitive financial returns. The growing prominence of ESG considerations within the financial sector is highlighted, emphasizing their pivotal role in shaping the future landscape of investment strategies. This research contributes significantly to our broader understanding of how sustainable investing can seamlessly integrate into mainstream investment portfolios. It demonstrates the feasibility of striking a harmonious balance between ethical considerations and financial performance, particularly within the dynamic and burgeoning markets of India.

In a world increasingly conscious of environmental and social responsibilities, this comparative study serves as a beacon for investors seeking opportunities that resonate with their values. It underscores the transformative power of ESG criteria, not only as a driver of ethical investing but also as a cornerstone of sound financial decision-making in the ever-evolving global investment landscape.

tsadvaith@gmail.com

Dr. Partha Saha
Associate Professor, Amrita School of Business
Amrita Vishwa Vidyapeetham, Bengaluru

ABSTRACT

Green finance is a core part of the low carbon green growth, because it connects the financial industry, environmental improvement, and economic growth. Sustainable finance contributes to better development and better finance for economic growth. Sustainable finance is one financial instrument to fight climate change and its impacts by regulating emissions and promoting developments in renewable energy. Green Finance is a hot topic throughout the world as the environmental conditions are going worse day by day and there is need to develop projects which are eco friendly in nature the financing and funding environmental friendly projects has to go in flow as there is a responsibility to conserve and protect the nature while the business activities must function in order to increase the commerce and maintain economic balance but with the integration of activities which goes in hand with sustainability aspect. The study is basically to obtain extensive and reliable information, the study methodology employs a descriptive technique, using qualitative data collection method like preparing questionnaire for data collection. The study's key question is "on what basis bank managers provide loans to small or medium scale enterprises which focuses on eco friendly projects and how do bank managers analyse the project in terms of repayment".

praseethaprasad33@gmail.com

ABSTRACT

Navigating the intricate world of venture capital and private equity (VC/PE) raises a fundamental question: what drives these high-stakes decisions? This research, delving into the minds of VC/PE players sheds light on the metrics, motivations, and strategies behind their investment choices in the rapidly growing startup environment. Employing a qualitative survey, we delve beyond mere numbers to capture the nuanced perspectives of these influential investors. This study employs a qualitative data collection method. We conducted one-on-one, open-ended interviews with seasoned venture capitalists, private equity investors professionals, and fund managers based in Karnataka, allowing them to freely share their perspectives and experiences regarding the factors that motivate them to invest in a company. Our findings discover a multi-faceted picture of the entrepreneurial landscape. Start-up characteristics like the novel nature of their product/service, their funding stage, financial stability, and demonstrated capacity for innovation all emerge as pivotal determinants. Interestingly, the research goes beyond traditional financial metrics to reveal the crucial role of "soft factors" like the founders' vision, passion, and ability to execute. The human element, such as the ability to recognize potential and assess team dynamics, is crucial for VC/PE success. Ultimately, the practical implications of this study empower both startups and established firms. By understanding the intricate calculus guiding VC/PE choices, startups can tailor their approach and presentation to resonate with investors. For other firms, the insights gleaned offer valuable knowledge about the evolving startup ecosystem and its potential partners. In essence, this research bridges the gap between promising ventures and their financial lifelines, fostering a more vibrant and dynamic entrepreneurial landscape.

ABSTRACT

In a given locality, families living with finance and social status are herein taken into an analysis for locating the living or financing status, though developing a modelling by various approaches. Such status named by FSG in this present study, is symbolized by finance (F), Social (S) and Geography (G) for each and every family. Networking among households gets thereby formed upon finding an interaction between or among families, by FSG, and this network further leads to generation of a modelling, called by FSG modelling in this study. Expressed as theoretical study entirely, it has various usefulness to crop up entirety of a locality with regard to F, S and G features or variables, to know one family's interaction or FSG status (as an effect) upon another family. How a locality is equipped with by present resources (by F, S, G indeed) as available to or how it should be maneuverer to or many such fortunes can be described well by the study's FSG modelling. It should solve complexity in organizing among families onto their (FSG) distribution agendas or various marketing propositions or insights to bring in along with giving scopes of future research to be a doing-for aspect for a country's mankind.

ABSTRACT

The purpose of this study is threefold. First, it examines the effect of peer working capital management (WCM) on a firm's WCM decisions, followed by investigating the heterogeneity in peer effects across financial constraints, information environment and industry competition. Finally, it explores the moderating effect of peer WCM on the relationship between WCM and Firm Value. We analyse a panel dataset including firm fixed effects and industry fixed effects. We used a two-stage least squares regression approach to overcome the endogeneity issue, using peer idiosyncratic return as an instrumental variable (IV) for endogenous variable peer WCM. The sample for this study comprises 1419 Indian manufacturing firms listed on the Bombay Stock Exchange (BSE) from 2011 to 2022. The WCM decisions of a firm are positively affected by the WCM decisions of their industry peers. It is also found that less financially constrained firms have more potent peer effects. Peer effects are more pronounced in a highly competitive environment, thus supporting the rivalry theory of mimicking. Further, mimicking working capital has a moderating impact on WCM and firm value relationships. These results are robust to alternate WCM measures, another IV and different industry peer groups. The findings will benefit firm management in making better and more effective WCM decisions, besides guiding future researchers on further studies related to peer effect in financial decision-making. To the best of our knowledge, this is a maiden study that investigates peer WCM effects on WCM decisions of a firm in an emerging market.

The existing literature on peer effects is extended by examining the impact of peers on a firm's WCM policies in the presence of financial constraints, information and rivalry theory. In addition, our findings suggest that peer WCM moderates the relationship between WCM and firm value.

ABSTRACT

A healthy economy depends upon the financial service sector of a nation. Scheduled commercial banks occupy an important place in this sector by lending funds and creating saving habits of people. The aim of this study to evaluate financial performance of selected private sector banks of India by using EAGLE model. Private sector banks such as Axis Bank, HDFC Bank, ICICI Bank, IndusInd Bank and Kotak Mahindra Bank were selected based on market capitalization. To achieve this objective, the financial data of the selected sample was retrieved from the bank's annual reports for the period from 20019-2023. Ranking the banks with the help of EAGLE model. The results show that Kotak Mahindra Bank has a high mean and ranks first in Earnings and Equity. Indus Ind Bank, on the other hand, has a high mean in Growth and liquidity. The study concluded that there is a significant difference among the performance of Axis bank, HDFC bank, ICICI bank, Indus Ind bank and Kotak Mahindra bank in terms of Earning ratios, Asset Quality ratios, Growth ratios, Liquidity ratios, Equity ratios.

ABSTRACT

Examining the complex relationship between innovation and the fields of finance and human resource management, "Technological Disruption: Navigating the Future of Finance and HR Management in the Digital Age" probes the revolutionary effects of technology on these fields. The challenge of keeping up with the complexity caused by these industries' lightning-fast technological development is the driving force behind this research. There are two major holes in the current body of research: first, there has to be an analysis that takes into account the impact of technology on HR and finance as a whole; and second, there is a lack of solutions that connect theory with practice in the workplace. The main goal is to provide stakeholders with practical insights that show how technology may change finance and HR. The research makes use of a mixed-method strategy, polling HR and financial experts quantitatively and analyzing qualitative case studies from the industry. For this research 300 samples have been taken as primary research, 12 journals selected for secondary research.

To ensure sustainable and inclusive practices in the ever-changing digital environment, the report also recommends ongoing research into the development of adaptable frameworks that balance technical breakthroughs with ethical concerns.

ABSTRACT

The value of financial literacy in the quickly changing world of finance today cannot be emphasized, particularly for IT workers who must manage unpredictable career paths and particular financial difficulties. This study looks into how IT workers' decision-making about investments is influenced by their financial literacy. Using a mixed-methods approach, the study collects detailed insights by combining quantitative surveys with qualitative interviews. Through the use of a specifically created questionnaire, the quantitative phase evaluates the financial literacy skills of IT workers by probing into their knowledge of important financial concepts, investment tools, and risk management techniques. Simultaneously, the qualitative phase uses in-depth interviews to dive into the lived experiences and decision-making processes of a chosen set of IT personnel, providing insight into the complex aspects driving their investment decisions. By demonstrating the degree to which IT professionals' investment decisions are influenced by their financial literacy, the research findings hope to add to the body of knowledge already in existence. The study intends to give useful recommendations for specialized financial education programs geared at improving the financial acumen of IT workers by identifying particular areas of strength and weakness in financial literacy. Furthermore, the study investigates how demographic factors—like age, experience level, and educational background—affect investing behaviour and financial literacy in the IT industry. The ultimate goal of this research is to educate policymakers and employers on the vital role that financial literacy plays in enabling IT staff to make wise and well-informed investment decisions.

Understanding the relationship between financial literacy and investment decision-making is crucial for promoting financial resilience and long-term success for IT workers, as firms increasingly acknowledge the value of holistic employee well-being.

ABSTRACT

In the dynamic landscape of the financial industry, the emergence of Generative AI (Gen AI) heralds a transformative era, promising streamlined transactions and hyper-personalized financial experiences. This research delves into the profound impact of Gen AI on financial services while addressing critical concerns. Employing a meticulous methodology that combines a comprehensive review of literature, academic publications, industry research, and expert opinions, our study unveils the complexities of Gen AI. The major findings underscore its potential for enhanced efficiency, improved customer experiences, and strengthened risk management. However, shadows of concern loom, including algorithmic biases and potential liquidity risks. We advocate for clear regulatory frameworks and human oversight to ensure accuracy, trust, and ethical standards. The interconnectedness of the financial system introduces the specter of systemic risk, emphasizing the need for cautious integration. While Gen AI holds the promise of a brighter financial future, our research emphasizes the importance of patience and diligence to navigate its evolution responsibly. In paving the way for Gen AI integration, we contribute to creating a symbiotic relationship between technology and finance for the benefit of all stakeholders.

IMPACT OF SOCIAL ENTREPRENEURSHIP ON ECONOMIC GROWTH IN LOW- AND MIDDLE-INCOME COUNTRIES

Dr. Gunjan Dwivedi
Assistant Professor, Amity Business School,
Amity University, Madhya Pradesh
dwivedigunjan0586@gmail.com

ABSTRACT

In recent years, social entrepreneurship has grown in significance and scope. Economic growth on the other hand is also an integral part of research for understanding the condition of any nation. The purpose of present study was to examine the effect of social Entrepreneurship on economic growth. The study uses yearly data for last 12 years from 2012 to 2023 to investigate the bond between social Entrepreneurship and economic growth. It is supposed that the result of this study would spread the existing works by providing some expressive in sight to the impact of social Entrepreneurship on economy growth. The Finding of this study was that there is the impact of social entrepreneurship on economic growth in low- and middle-income counties.

ABSTRACT

Backward region development has been characterized in various ways. Development is an interaction that guarantees use of the assets of a nation, including labour assets, to build the financial development and progression of the government assistance of the local area overall. Development will incorporate both growth and distributive equity as fundamental components comprising the all out cycle. Improvement has hence to be imagined as a multi-layered process, and must be perceived as an all out frameworks issue. Since the advancement issues are multifaceted, untidy and complex, they are undeniably appropriate for the frameworks approach. India has various in backward areas, and financial improvement of these locales requires exceptional methodologies. More than 10 years there are no motivating forces to financial backers and proper infrastructure to construct foundation in backward regions. The potential motivating forces can be Assessment concessions, sponsorships in power and unrefined substance and Property at low costs. The conceivable explanation is to foster the region by redistributing the assets. There are numerous exercises which are not embraced by the confidential area because of the absence of benefits or enormous ventures included. Arrangements like water supply, sterilization and so forth, must be assumed responsibility for by the Government itself. The Government can urge the public area to check out the creation of public products by giving expense concessions and appropriations and this is the manner by which it helps in redistributing the assets.

ABSTRACT

The study primarily aims to identify the risks and challenges that impact the adoption of alternative finance. To attain the study's objective, we employed a systematic literature review (SLR) method to identify and consolidate all the risks and challenges of alternative finance models. The study used the SCOPUS database to collect relevant material and analyzed 65 articles published between 2015 and 2023. The study found 19 risks and challenges segregated into four major categories: technical risks, legal and regulatory risks, financial risks, and user-centric risks and challenges. The study concludes that these risks and challenges must be addressed through a collaborative approach for the sustainable success of alternative finance. The study is the first of its kind that employs the SLR method to elaborate comprehensively on risks and challenges associated with alternative finance and serves as a practical guide to enhance knowledge for academicians, alternative finance entrepreneurs, developers, programmers, and policymakers. Hence, the study contributes to alternative finance literature.

ABSTRACT

Central Bank Digital Currency (CBDC) is a recent global phenomenon, with just a few people familiar. Pilot testing has been successfully implemented in several regions, including India, but awareness remains low. The government intends to implement CBDC as a strategic approach to reduce the high expenses connected with physical currency manufacture and combat corruption. This digital currency is directly supervised by the Reserve Bank of India (RBI), resulting in a transparent and accountable system with no third-party involvement. The shift to CBDC not only coincides with global trends, but it also tackles local concerns by offering potential answers to issues such as currency printing costs and corruption, enabling a more efficient and safe financial environment in the country. It is a Systematic Literature Assessment of secondary data, from various sources on fintech departments during the last ten years. The researcher identifies a correlation between CBDC-related elements, including UPI, cryptocurrency, data security, infrastructure, and illiteracy rates. The implications of this paper can be seen in various financial institutions and fintech industries across the country, providing clarity to the government and banks on whether it is appropriate to introduce this type of currency into society, as it will increase transparency and traceability, reduce reliance on cash, bring financial stability by mitigating risk, and aid in improving control over the financial system. This investigation illuminates the intricate dynamics of the industry and offers valuable perspectives on enhancing employee performance, well-being, and organizational health.

NAVIGATING THE CHALLENGE OF INTRODUCING A HYBRID WORK MODEL IN THE POST-PANDEMIC WORK CULTURE IN THE INDIAN IT SECTOR

Dr. Lakshmi Subramani
Senior Academic Manager,
SP Jain School of Global Management -Dubai Campus
lakshmi.subramani@spjain.org

ABSTRACT

As the dust settles from the pandemic's disruption, the service sector in India finds itself on the precipice of a new era: the era of hybrid work. This study delves into the evolving preferences of employees across the sector, illuminating the complex interplay between their mindsets and this burgeoning work model. Through a tapestry of quantitative and qualitative methods, the research paints a vibrant picture of this transition. Employee surveys, capturing the voices of over 500+ participants, provided a quantitative foundation. In-depth interviews with 15 individuals, representing diverse roles and demographics, added layers of richness and nuance. By delving into this data, the study unearths a trove of insights. One resounding finding is the multifaceted nature of employee preferences. Flexibility and work life balance emerge as key motivators of embracing hybrid models, with many valuing the freedom to juggle personal responsibilities and professional pursuits. The ability to escape the daily commute and create a customized workspace further fuels the appeal of remote work. However, the human need to connection and collaboration also finds its voice. Younger employees, in particular highlight the importance of in-person interactions for fostering teamwork and nurturing professional networks. The study paints a nuanced picture of the operational implications of hybrid model. While the potential for cost savings, particularly in office space, is undeniable, challenges in resource management and collaboration arise. Finding the sweet spot – the optimal balance between remote and in person workdays – becomes a crucial dance for organizations navigating this uncharted territory. Ultimately, the research offers a roadmap for navigating the complexities of hybrid work in the Indian service sector. By acknowledging the diverse needs and preferences of employees investing in technology and communication tools and fostering a culture of adaptability, organizations can unlock the full potential of this model, ushering in a new era of productivity, employee satisfaction, and ultimately, success.

ABSTRACT

Traditional Banking sector had been a dream job sector for the job seekers in the pre-COVID era though the Digital Banking was becoming popular and even traditional banks were also adopting it gradually. This paper analysed the skill needs for the new Banking 5.0 environment enriched with Fin-Tech. The study was conducted in two levels: Among retired employees and current employees. The need of the study is to analyse the adaption of employees with the dynamic environment where the traditional positions are already replaced with new positions that needs advance technical skills. The features of Smart phones along with Fin-tech attributes made the financial services quick, easy and less chances for mediation and fraudulence. The advanced technology increased the productivity per employee very high and cyber security system monitor the application-based transactions. This research analyses how the employees cop up with this higher work stress and the effect of emotional intelligence in managing work stress.

ABSTRACT

After Post Covid – 19 situations many employees are been given work from home policy. They are contributing their efforts to achieve organizational objectives. Many IT Sector Companies have closed their offices and are operating remotely. The new trend of Remote working is being developed and expenses on electricity, maintenance, rent, overheads etc are avoided by companies. Pool of employees were happy by doing work from home. The trend was quiet familiar in USA where due to extreme weather conditions employees have to do work from home. The purpose of this research paper is to find out the social, psychological and communication impacts due to Online learning, training. The employees doing work from home must attend training sessions which are mostly online in nature. This new method of learning employees needs to learn. Different platforms like Microsoft Teams, Zoom, Google Meet etc, are available for online learners. Video Conferencing become quite popular in the country. Interview tests, training sessions become common in organizations. The Research Paper is based on Secondary Data collected from different journals, newspapers etc. As per study of employee behavior many organizations observed Communication Gap between Manager to employee, Employee are not able to communicate effectively to lower-level staff and customers. Also, psychological stress is more than regular employee who works from office.

HUMAN RESOURCE DEVELOPMENT IN INDIA IN THE CONTEXT OF YOUTH EMPLOYABILITY: A CRITICAL REVIEW

Dr. Satyajeet Nanda
Associate Professor, CMS Business School, FMS
Jain (Deemed-to-be University), Bengaluru,
dr.satyajeetnanda@cms.ac.in

ABSTRACT

With a global significance of youth employment, and the heightened need to understand the conditionality surrounding youth employability, a critical review is undertaken. The objectives of the review is to critique the existing employability related policies, guidelines, data, programs, best practices, key stakeholders, challenges and gaps. The research dwells on a qualitative research method of SLR (Systematic Literature Review) using relevant existing literature/ studies/ reports from reliable sources. As part of qualitative approach, 60 literatures after being subjected through 'eligibility for inclusion' on aspects of youth employability finally ended with detailed analysis of 40 literatures. Various data emerged from different studies shows interesting insights at India's national and states level. At national level the rate of youth unemployment in India is found to be declined to 12.9% during 2020-21 as compared to 17.8% in 2017-18 for the persons in age group 15-29 years. The proportion of youth unemployment to total unemployment revealed that the youth unemployment is around 83-85% of total unemployment. This means a large portion of unemployed is comprised of youth only. This paper digs into information on the availability of training options, various initiatives and challenges in government and private sectors programs for youth employability. A study on rural youth employability in India finds an advantage for the youth who have completed their schooling in the labour market whereas joblessness is found to be high among the rural youth with poor levels of education. So the rural youth employability hinges on personal factors like financial constraints and lack of networks, as well as external factors including job scarcity and unfair recruitment practices (Venkatanarayana, 2013). Geographical isolation worsens the situation. There are critics on National Skill Development Corporation, NGOs and corporate social responsibility (CSR) initiatives which focus on skill development but post training youth employment is not appropriate. This is because of delivery issues, such as; at grassroots level, the focus is sometimes on imparting merely the low-end skills and not getting youth employed. Also, the exploitative nature of unorganized sectors in which youth end up working as disguised unemployed.

The finding of this thorough critical review provides rich insights and recommendations for youth employability programs. (a)In view of the findings that employability does not depend only on the characteristics of the individual graduates like subject knowledge, experience, skills and personality traits but also depends on the faculty, curriculum, and teaching method in university systems, proper refresher training and sensitization have to be given to the trainers.(b)As it is found that receiving career guidance may or may not be significantly (statistically) associated with the employment status, while lack of resources available to people looking for job, lack of network to the labour market and discriminatory recruitment practices may have a strong impact on employability. Hence required resources for job scrutiny, enhanced network need to be made available to the youths. The discriminatory recruitment practices should be reduced through proper sensitization, advocacy and regulation. (c)Often the exploitative nature of unorganized sectors ends up youth working as disguised unemployed. There has to be proper regulation and sensitization in the unorganized sectors. (d)In West Bengal context is found that the skill trainings for youths are sometimes not effective and quality of training are not up to the mark. This hampers the training outcomes and youth employability. An absence of a formal mechanism to review and update curriculum based on industry needs, results in outdated courses for youth training. Hence proper intervention is required in these areas (review and update curriculum) of youth training. (d)In some programmes in West Bengal, the segmentation in youth employment training without industry alignment, lack of refresher trainings for trainers leads to poor youth employment outcomes. Hence follow up training based on proper segmentation will be useful. (e)It is found that problem arises when Industries prefer nationally certified courses and not by state of West Bengal as such. Hence pan-India relevant training and certificates should be provided.

Guntur, Andhra Pradesh

ABSTRACT

Employee experience and employee engagement are crucial for the hotel industry if it wants to get a competitive edge in the cutthroat competitive market. The hotel industry consists of a wide range of services to offer to its customers and this is the reason why well-experienced and trained employee engagement is important. The purpose of this research article is to understand the perspective of the employees regarding their engagement in the hotel industry. The perspective of the employees has been understood with the help of data collection through a survey of 101 respondents by asking them 11 questions. The results of the survey analysis have shown that a vast majority of survey participants were satisfied while working in the organization, they were satisfied with the level of support they were receiving and the kind of appreciation they got while working in the hotel industry. From the overall analysis, it can be said that from the employee's perspective, their experiences and engagement have been greatly enhanced in the hotel industry.

ABSTRACT

The pandemic has had a significant impact on the hotel sector, changing customer interactions and business practices. These days, safety precautions like improved sanitary practices, contactless services, and social separation have become essential. The ongoing development of contactless services, the incorporation of cutting-edge technology for touch less encounters, and improved dissemination of safety precautions are potential avenues for further advancements in pandemic hospitality.

ABSTRACT

This study aims to understand the factors driving employee's choice of WFH or office work, the factors motivating employers to bring back employees to office and how employee engagement activities impact these decisions. It seeks to identify key factors influencing decision-making and explore the potential of engagement in facilitating a smooth return to the office. This study will employ a mixed-methods approach, combining quantitative and qualitative data collection methods. We conducted a survey in the questionnaire format from the IT employees working in Karnataka/Kerala to identify the various factors contributing towards their work location decision. In depth interviews were conducted with HR professionals/decision makers in IT companies regarding the factors that motivate employers to bring back employees to office and to identify the role of employee engagement programs in the process. The findings of the study show that factors like work environment & flexibility, work life balance, connection & team bonding, financial savings affect employee decision of work location & factors like Moonlighting, Coffee badging, Training & Development, Team bonding, Communication affect employers' decision in bringing back employees to office. The practical implications of the research help IT companies in understanding the factors that contribute to employee work location decision. Employers/decision makers can attract employees to office by coming up with proper employee engagement programs.

IMPACT OF WORK FROM HOME ENVIRONMENT ON EMPLOYEES' PSYCHOLOGICAL WELL-BEING

Research Scholar,
International School of Management Excellence (ISME) Research Centre, Bangalore
(A recognised research centre of University of Mysore)
sriram.prabhakar@gmail.com

Dr. M Ramesh Kumar
Associate Professor,
International School of Management Excellence, Bengaluru

ABSTRACT

To examine the relationship between the employees' perception about theoretically grounded work-from-home factors and its relationship with overall satisfaction and perceived advantage, and to investigate the impact of work-from-home outcome variables on psychological well-being. Work-from-home factors and psychological well-being components were empirically investigated using 294 responses from the IT industry. Productivity, morale, and flexibility had a significant positive impact whereas, teamwork and work-life balance had a significant negative impact on the overall satisfaction and perceived advantage. Outcome variables were significantly influencing the psychological well-being of the employees. Organizations can take a cue from this study for framing work-from-home policies for their employees in the new normal. Although prior studies show positive and negative effects on the interaction between work-from-home and psychological well-being, conclusions are limited by the way the interaction between them has been modelled.

ABSTRACT

This research explores the experiential dimensions of Vipassana meditation and its correlation with overall well-being, employing Interpretative Phenomenological Analysis (Smith, Flowers, & Larkin, 2009) as the primary research methodology. Aligned with the principles of IPA, this study aims to uncover the personal stories of individuals deeply engaged in Vipassana meditation, seeking to understand the intricate relationships between Vipassana a meditative practice and one's holistic sense of well-being. The analysis reveals a multifaceted understanding of Vipassana meditation, exposing dimensions such as heightened mindfulness, emotional equanimity, self-awareness, personal transformation, and interconnectedness. Participants consistently report transformative experiences within these themes, offering nuanced insights into the complex relationship between Vipassana meditation and holistic well-being. The findings contribute to the development of an interpretative phenomenological understanding that elucidates the complexities of meditation in the context of individual well-being. Employing an Interpretative Phenomenological Analysis (IPA) design, this study utilizes purposive sampling to select ten participants deeply engaged in Vipassana meditation.

Semi-structured interviews are conducted, recorded, transcribed verbatim, and subjected to rigorous IPA analysis involving in-depth examination of individual experiences, identification of emergent themes, and interpretative analysis.

Acknowledging limitations, including a small sample size of ten participants, potential biases in self-reporting during interviews, and contextual specificity that may limit generalizability, the study underscores the need for future research to consider larger and more diverse participant pools to enhance the applicability of findings. This research contributes to the understanding of Vipassana meditation by providing an interpretative phenomenological exploration of individuals actively practicing this form of mindfulness. The IPA methodology enriches our understanding of the intricate relationship between Vipassana meditation and well-being, offering distinctive insights into the challenges and rewards associated with meditative practices.

Keywords: *Vipassana Meditation, Well-being, Mindfulness, Experiential Consumption, Qualitative Research, Interpretative Phenomenological Analysis (IPA).*

VALIDATION OF DIMENSIONS OF LEARNING ORGANIZATION QUESTIONNAIRE (DLOQ) FOR THE INDIAN IT INDUSTRY

Biji Varughese
Research Scholar, Fellow Program in Management,
International School of Management Excellence, Bangalore
biji_v@yahoo.com

Dr. M. Rameshkumar
Associate Professor,
International School of Management Excellence, Bangalore

ABSTRACT

A Learning Culture helps organizations be more competitive and effective in their output. The focus on this has increased manifold with the advent of new technologies at a substantial pace. Adaptation of AI is another development driving organizations to rethink their strategies for up skilling and re skilling their employees. With the advent of time, we have new learning approaches and practices in place. Dimensions of the Learning Organization Questionnaire (DLOQ), which was developed by Watkins, Yang, and Marsick (1997) and Yang, Watkins, and Marsick (1998, 2004) is a widely used tool to understand the various dimensions of the Learning Organization. This tool has been deployed internationally and used in at least 15 countries worldwide. Kim (2015) did a detailed analysis of the uses of DLOQ in the past and suggested further research on the topic. Our literature review found few studies in India where DLOQ was used. However, we did not find a study validating the tool for the Indian IT industry. This study aims to bridge this gap. While validating the instrument from an Indian perspective, it attempts to clarify some past research questions about the validity and use of the instrument. We conducted research on the Indian IT Sector with close to 400 respondents to understand their perception of the Learning Culture in their organization. As per our findings DLOQ is a reliable instrument that can be used in the Indian IT Sector. We did not find any issues with the construct validity of the instrument. DLOQ can be used to assess their current standing and progress made over time while highlighting the areas that may need intervention. Further, it can be used by practitioners to understand the relationship with other variables.

ANALYZING THE IMPACT OF INTERSECTIONAL IDENTITY ON WOMEN'S LIFE SATISFACTION AND PERCEIVED MARGINALIZATION IN HIGHER EDUCATION

Dr. Ameer Asra Ahmed
Associate Professor,
Dayananda Sagar College of Arts, Science & Commerce, Bangalore

tr.chetan@jainuniversity.ac.in

Dr. Harold Andrew Patrick
Professor & Dean,
CMS Business School, Jain University, Bangalore

ABSTRACT

Black feminist legal scholar Kimberlé Crenshaw invented inter sectionality in the early 1990s. Inter sectionality discusses how gender, colour, ethnicity, sexual orientation, gender identity, disability, class, and other discriminating systems "intersect" to generate unique dynamics and consequences. When a Muslim woman wearing the Hijab is discriminated against, it is hard to separate her gender from her Muslim identity and isolate the factors. Race, class, and gender are intersectional. This intersectional approach suggests that we must look at multiple forms of oppression and treat women as a heterogeneous category where caste, class, region, locality, language, and others affect women in different ways. For instance, Dalit women have a distinct issue than upper-caste women. People tend to portray women as a monolithic group and oversimplify their oppression as affecting all women regardless of caste or status. These common sense reasons only make sense when we compare women to males. This reductionist view of women's oppression overlooks internal distinctions, marginalising marginalised women and creating new kinds of discrimination. Some of the students daily face racism, sexism, classism, ableism, and other oppressions. The purpose of this study is to understand the ways in which the intersectional identity of girl students in higher education can influence their satisfaction with life and the extent to which their perceived marginalization by the societal norms can mediate this relationship. A research model was framed and tested to find out the direct and also the indirect effect of intersectional identity of girl students in higher education students on their life satisfaction in the presence of their percieved marginalization. The study was administered to 400 girl students across higher educational institutions in Bangalore.

The sampling technique adopted was stratified sampling and girl students across various demographics were chosen for the study. The responses obtained were analysed using SPSS software and the findings and implications were reported in the paper. The findings of the study indicates two main intersectional identities based on the results of cluster analysis and it was found that there is a significant variation in both clusters when it comes to the factors of perceived marginalization and life satisfaction. The results also indicate that perceived marginalization partially mediates between intersectional identity and life satisfaction.

INFLUENCE OF INTRINSIC MOTIVATION, ENGAGEMENT ON LEARNER'S SATISFACTION OF THE ONLINE COURSES

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence, Bangalore

Rameshkumar Murugesan
Associate Professor
International School of Management Excellence, Bangalore

ABSTRACT

The advancement of computer-assisted learning and educational technology has brought about a number of changes to higher education. Online education has been a vital part of the higher education scene during the past 20 years. The ability of online learning to provide top-notch instructional materials to a large audience without regard to time or location is one of its main advantages. In essence, a lot of teachers and students favor online learning because it offers unmatched options for equalizing educational materials. When a learner is unable to attend traditional in-person classes because of obligations like work or family obligations, online learning can be very beneficial. One of the most important factors in encouraging effective educational processes is student satisfaction with online learning. It has been determined that student satisfaction is a key factor in encouraging students to enroll in online courses since it affects their drive and engagement to finish the program. Thus, this study, which has its roots in the self-determination theory, uses structural equation modelling to examine intrinsic motivation, learner engagement and the mediating effect that it plays on learner satisfaction in online learning. Students (n = 714) were emailed online surveys using a cross-sectional technique. Data from dependable tools is gathered using convenience sampling from postgraduate students who are enrolled in online courses. Using structural equation modelling, the study discovered that learner satisfaction with the online course is mediated by student engagement.

Dr. K. C. Arunadevi
Associate Professor,
GR Damodaran Academy of Management, Coimbatore.
arunadevi.kc@grd.edu.in

ABSTRACT

The Study aims to examine the intricate relationship between Self-efficacy, Resilience, and Job Performance of an Employee working in the IT sector in the South zone of Coimbatore and explore the synergistic effects of these psychological constructs in the workplace. A questionnaire survey method was employed to collect data from 372 employees working in the South zone of Coimbatore IT companies. SPSS Software was used to perform data analysis. Furthermore, the study investigates how Self-efficacy influences Job performance both directly and indirectly through the mediating role of Resilience. Hence it was found that Resilience may act as a full mediator in the relationship between Self-efficacy and Job Performance of an employee. Resilience is expected to play a critical role in shaping how self-efficacy influences an employee's ability to overcome challenges, cope with stress, and ultimately enhance job performance. The findings of this study have practical implications for organizations seeking to enhance employee performance by understanding and promoting factors such as self-efficacy and resilience. By identifying the mediating role of resilience, organizations can develop targeted interventions and training programs to bolster employees' belief in their capabilities and equip them with the skills to navigate challenges effectively, thereby fostering improved job performance and overall workplace well-being.

ABSTRACT

Emotional Intelligence is a type of cognitive ability, a soft skill which has many benefits and is consider important in many industries for the success of a leader, performance and overall work culture. In Indian construction industry concept of Emotional Intelligence is unexplored or we can say the concept itself is not introduced and understood. The aim of this paper is to understand and reinforce the conceptual understanding of Emotional intelligence and its competencies in Indian construction industry. For the study we have searched literature available in Scopus, Web of Science and Google Scholar and UGC care. Relevant keywords like emotional intelligence, Construction worker, Project Manager, Emotional Intelligence were used to discover publications. The publication selected based on the theme. The study on the importance of Emotional intelligence in construction industry has been introduced in the developed countries but it is not been introduced, understood or researched in the developing countries. The conception of Emotional Intelligence has made outstanding importance in other industries when the concept was introduced either by management, researchers, or human resource. But the importance of Emotional Intelligence has not been introduced or researched in construction industry. Since the research on Emotional Intelligence pertaining to construction industry are not done the way it explored and researched in other industry. Very few publications are available which are relevant for the review. In spite the term is well researched in other industry and the publications available but the number of publications reviewed may not relevant to construction industry and or can be exhaustive.

The methodical review of the literature which is available have given an insight to introduce the knowledge of EI research in construction industry which will further help the leadership team and management for the successful completion of project with good interpersonal relationship.

Keywords: *Emotional Intelligence, Construction Industry, EI Competencies, Construction Worker, Construction Project Management.*

EVOLUTION OF HIGH PERFORMING WORK CULTURE

Patnana Sharmila
Student, Indus Business Academy, Bangalore
fpb2224.083.sharmila@iba.ac.in

Prof.Narendra Babu BV
Senior Assistant Professor,
Indus Business Academy, Bangalore

ABSTRACT

This abstract explores the concept of attrition in organizations, emphasizing its impact on workforce and customer base. The company under consideration faces a 35% attrition rate, prompting strategic efforts to reduce it to the IT industry standard of 21%. Identified reasons for attrition include lack of recognition, inadequate training, and a bureaucratic approach towards human resources. The challenges posed by attrition are categorized into monetary (cost and productivity) and non-monetary (morale, knowledge loss, and customer satisfaction) aspects. This article is a case study of work force management that is linked to attrition rate. In this regard company introduced initiatives like AMIGO Program, focusing on employee engagement, and the 3:3:3 Feedback system, collecting feedback at intervals during the first three months of employment. Additionally, the company invests in Training and Development Initiatives, especially in the context of advancing technologies like AI. Future goals include ingraining values, ensuring employees understand the significance of their work, fostering autonomous teams, promoting continuous learning, and encouraging adaptability. These goals align with characteristics of a high-performing work culture. To achieve the target attrition rate of 21%, the company proposes an evolution in organizational culture. The model includes elements such as self-directing teams, vitality and learning through the 70:20:10 model, departmental appraisals, organized feedback using the STAR-E format, and peer-to-peer recognition. These components collectively contribute to the development of a high-performing work culture, emphasizing trust in intangible assets and effective communication.

Keywords: *Organisational Culture, Attrition, AMIGO Program, 3:3:3 Feedback, Training and Development Initiatives, High Performing Work Culture.*

A CASE STUDY ON HRIS IN MOTHERHOOD HOSPITAL

Tousiti Ghosh
Student, Indus Business Academy, Bengaluru
fpb2224.033.tousiti@iba.ac.in

Prof. Narendra Babu BV
Senior Assistant Professor,
Indus Business Academy, Bengaluru

ABSTRACT

Companies normally adopt technological applications to manage Human Resources function. By doing so they are able align their HR process with the changing landscapes of technology influenced services. This research paper deals with the efficiency of the human resource information system in motherhood hospital. Human Resource Information System (HRIS) is a portal widely used and is been talked in many sectors. It collates the special features and capabilities of MIS (Management information System) and facilitate towards supporting the administration with one stop information, adoption and provisions and facilitations. HRIS is a platform which facilitates the human resources management and thus helps in overall management by easing the whole process. This article is a case study from health care sector where in the organisation is in focus is currently in the process of implementing and using HRONE software. This research article is based on technology acceptance model and eco modernisation that influence the adoption of HRONE in the hospital context. The research gives an insider to all the companies out there who are still struggling with the way out to manual application of all the human resource facets. The background of the research comes from the usage of HRIS in Motherhood Hospital. Being a company of expansion, it had to develop HRIS and implement it and understand the challenges in the process of installation of the software in the company. The independent variables include the variables that are related to the employees and their behaviour and attitude towards accepting HRIS as a platform The variables may also related to implementation challenges associated with HRIS. The dependent variable may include the adoption of HRIS as a platform for managing Human resources across the organization. The article is presented as a case that reflects upon the adoption of HRIS in hospital set up. It highlights the major contributing factors towards adoption of the HRIS platform. It also highlights the major challenges and hurdles that are common while adopting a platform across the organization. The method that is been used is the qualitative in nature in terms of interview and analysing them in terms of qualitative tool. The results of the study directly impact on the implementation strategies, training as well as the challenges that are overcame have been analysed.

Also the problems that could not be met yet are to be curved through further study that will create a further study of the paper.

EXPLORING CORRELATION BETWEEN CAREER TRANSITION AND WORK-LIFE BALANCE OF OSWAL GROUP: AN EMPIRICAL STUDY

Dr. Tanu Kalsi
Assistant Professor, Government Degree College,Ramshehar,
Solan, Himachal Pradesh
tanu.kalsi21@gmail.com

ABSTRACT

Dynamically changing economy has brought metamorphic changes in the business. Businesses must undergo changes in technology, methods of production, work force and working environment. These changes increase the level of stress and increase pressure on employees. It is in the interest of the organizations to take care of the employees to maintain their work-life balance so that the employees can be retained. The dissatisfaction among employees can lead to employee turnover, which could be harmful for the organizations. The transition in the career of the employees also plays a significant role in maintenance of their work-life balance. The objective of the study is to study the relationship between career transition and work-life balance of Oswal group. For this purpose, a sample of 581 has been taken from VardhmanPolytex Ltd. of Oswal group. Primary data has been used for the study and data has been collected using the questionnaire.

A SYSTEMATIC REVIEW OF THE LITERATURE: EXAMINING THE INFLUENCE OF ETHICAL LEADERSHIP ON EMPLOYEE JOB PERFORMANCE

Garima Bajpai
Research Scholar, *Doon University, Dehradun*
garimabajpai06@gmail.com

Dr. Reena Singh
Professor, School of Management,
Doon University, Dehradun

ABSTRACT

This research constitutes an extensive exploration of ethical leadership, meticulously scrutinizing pertinent systematic literature to unravel its intricate dynamics within organizational contexts. The investigation comprehensively navigates through various dimensions, encompassing theories, measurement scales, and outcomes. To compile a robust dataset, the Scopus database is employed, collecting 311 papers spanning the period from 2005 to 2023, all centrally focused on the subject of ethical leadership. From this comprehensive pool, 48 publications are judiciously selected for a meticulous analysis, aligning with the rigorous Preferred Reporting Items for Systematic Reviews (PRISMA) protocol. The study's outcomes significantly underscore the critical importance of integrating ethical leadership, extending beyond its influence on overall employee performance to serve as a catalyst for diverse factors undertaking mediating or moderating roles within organizational frameworks. Examining the global landscape, especially in Asian nations like China, Pakistan, Malaysia, and Indonesia, reveals a noticeable surge in the emphasis on ethical leadership. This emphasis is evident through active participation in studies delving into the practical applications of ethical leadership. Empirical findings robustly affirm the positive influence of ethical leadership on performance outcomes, advocating for a broader scope that encompasses Indian organizations. This paper not only highlights the paramount significance of ethical leadership but also contributes valuable insights for future research endeavours. By synthesizing theoretical frameworks, empirical evidence, and a systematic review process, this research stands as a foundational contribution to the evolving discourse on ethical leadership. The nuanced exploration of ethical leadership within diverse organizational landscapes not only informs the current understanding but also lays the groundwork for continued exploration and development in this crucial area.

SUSTAINABLE LEADERSHIP IN THE 21ST CENTURY UNVEILING EMERGING TRENDS AND PARADIGMS THROUGH BIBLIOMETRIC ANALYSIS

Farah Johri
Research Scholar, Doon University, Dehradun
farha9677@gmail.com

Dr.Swati Bisht
Associate Professor, Doon University, Dehradun
swatiibisht@gmail.com

ABSTRACT

Researchers have worked very hard to expand our understanding of sustainable leadership (SL) over the past 20 years. The objective of this study was to examine, through publishing outputs, worldwide research trends in the field of SL. The top writers, publications, organizations, and nations were the main subjects of the analysis. The Scopus database yielded a total of 357 publications. The productivity, citations, and h-index were among the bibliometric metrics that were employed in the performance study. In addition, the scientific landscapes were visualized using the VOS viewer. Author keywords from the bibliographic coupling of co-occurrence and bibliographic co-authorship coupling among related nations were used in the graphical analysis. The outcome showed that there has been a sharp rise in the trend of SL research. Furthermore, SL has generally been related with the subjects of job satisfaction and leadership. In addition, certain other elements discovered in recent research related to SL were also identified. Since our study covered the majority of the important SL components, it serves a complementary and educational purpose.

WORKPLACE HAPPINESS - A SYSTEMATIC REVIEW

Yshab Rafiq
Research Scholar, Department of Business Administration,
Aligarh Muslim University
yshabrafiq@gmail.com

ABSTRACT

The Purpose of the study is to review the progress of research on happiness at workplace. A Systematic Review has been done by delineating the authors, unit of the study, methodology and major findings. Peer Reviewed articles published between 2008-2018 confined to the discipline –business, management, accounting and psychology written only in English which studied concepts of happiness at workplace were taken into consideration. Happiness at Workplace is taken as Subjective Happiness in this Study. Happiness Intervention Programmes, Demographic Factors, Leadership, Big 5 Personality Traits were identified as the common antecedents. Productivity, Organizational Citizenship Behaviour, Organizational Commitment were identified as the common outcomes. Research Articles published only in English are taken. Inaccessible Databases is another limitation to this Study. This Study identifies the Workplace Variables which have not been related with Happiness at Workplace. Future Research might take into consideration the identified variables to empirically test with Happiness at Workplace. Review Study related to Workplace Happiness are limited, this study in itself is a contribution to the literature by identifying novel variables which have been associated rarely with Workplace Happiness till now. This Study will help stakeholders such as Government in Human Resource Policy Making; Organizations to target those areas in an organization which can boost Happiness at Workplace. This Research contributes to the existing literature by providing a comprehensive framework aimed at enhancing happiness at workplace.

"THRIVING IN TURBULENCE: UNVEILING THE RESILIENCE-JOY NEXUS AMONG HEALTHCARE PROFESSIONALS FOR ENHANCED JOB SATISFACTION"

Harish Rawat
Research Scholar, Doon University, Dehradun
mbahr700@gmail.com

Dr. Reena Singh
Professor, School of Management,
Doon University, Dehradun

ABSTRACT

Mental illness, constituting 32% of global disability-adjusted life years, significantly impacts workplaces, particularly affecting healthcare workers who face high rates of burnout, stress, and depression. This paper explores the interplay between joy, resilience, and job satisfaction in healthcare professionals to address the pressing issue of mental health in this crucial sector. Healthcare professionals, renowned for dedication, face challenges such as excessive workloads, workplace violence, and bullying. The resulting mental health issues not only affect workers' satisfaction but also impact patients and overall workplace happiness. Despite their exceptional commitment, long hours and high-pressure circumstances often lead to reduced job satisfaction. Cultivating joy and resilience emerges as a key strategy to enhance overall satisfaction levels in this demanding profession. The capacity of a healthcare system to manage crises hinges on the well-being of its professionals, who often find themselves among the most vulnerable individuals. To ensure their mental health, identifying and minimizing risk factors in the work environment is imperative. Exhaustion, common in demanding settings, can be alleviated through resilient practices, including a clear sense of purpose, work-life balance, and adaptive coping skills. This systematic review employed a realist framework to analyze 60 selected articles from three health-related databases. Organizational-level interventions in high-income countries were studied, focusing on skills development, well-being, job satisfaction, joy, resilience, stress management, and workload. The findings underscore the need for additional research in low- and middle-income countries and for studies assessing the long-term impacts of promoting mental health in the workplace.In conclusion, fostering a joyful work environment and resilience positively influences job satisfaction and mental health in healthcare professionals, ultimately contributing to overall well-being and improving the quality of patient care. This synthesis provides valuable insights for organizational interventions to address the mental health challenges faced by healthcare workers globally.

ramesh@isme.in

ABSTRACT

Coaching has been defined and practised for some years. However, there's rarely been a study on whether coachees prefer circumstantial or programmatic coaching across age groups, especially while being coached for performance. This study makes an effort to understand the coaching preferences of age groups. Knowing this would aid coaches in modifying their styles while coaching these diverse age-groups. This study intends to aid Managers who are involved in Developmental Coaching. Coachees of different age groups may exhibit distinct responses to specific coaching styles, thus requiring a more subtle and refined approach. In this context, the choice between programmatic and contextual approaches is a crucial distinction among coaching methodologies. For Performance Coaching within an Indian context, the Coachee's preference is not known. Managers who coach may experience difficulties with their competence or skill set, which may limit their capacity to produce the necessary performance outcomes (Grant, 2019). The study involved a Coaching preference survey across corporations including Technology, Manufacturing, Healthcare, and Ecommerce domains. The population involved Managers who Coach for performance and employees who undergo coaching. The responses of 392 managers were analysed to find their preferences and compared to the preferences of 692 coachees.

Programmatic style was preferred by younger Coachees up to 40 years of age. Older coachees above 41 years significantly preferred a circumstantial style. Knowing this will help us eliminate any gaps and calibrate the Coaching style of Managers for better impact.

NAVIGATING SOCIAL CAPITAL FORMATION IN VIRTUAL WORK ENVIRONMENTS: THE ROLE OF DIVERSITY PERCEPTION AND INTERVENTIONS

Dr. Harold Patrick
Dean Center for Management Studies
Jain Deemed to be University, Bangalore

Dr. Moovendhan V
Associate Professor
Center for Management Studies
Jain Deemed to be University, Bangalore
dr.moovendhan_v@cms.ac.in

ABSTRACT

This study investigates the moderating impact of Diversity Challenges Management on the relationship between diversity perception and various dimensions of social capital within the virtual working environment. The analysis establishes a positive connection among diversity perception, diversity management, and social capital. Notably, a negative correlation is identified between the cognitive dimension of diversity perception and individual aspects of social capital. Moderation analysis uncovers that individual challenges develops negative social capital with second-order social capital, whereas organizational challenges do not show a significant relationship. Intriguingly, the management of both individual and organizational challenges demonstrates both negative and positive moderation in the association between diversity perception and sub-dimensions of social capital with mixed results. Survey data from 564 virtual team members in India's Information Technology industry professionals are analyzed using SMART PLS-based structural equation modeling. The findings of this research affirm that diversity perception and challenges can be surmounted in the virtual working environment. However, the present study throws some light on the need for managing organizational and individual challenges in different way for virtual working environment and much research required to develop innovative practices to overcome the identified challenges. Additionally, it aligns with prior studies in emphasizing that social capital should be considered at the sub-dimension's level. The implications and future research are discussed.

ABSTRACT

This study aims to understand the effect of work values on organizational commitment among Generation Y and Generation Z employees. This paper also attempts to study the work values and organizational commitment of these two different generations. Organizations may confront situations of confusion on how to treat two different generations in the workplace. Generation Y are those born between 1980-1995 and Generation Z are those born between 1996- 2010.As the Indian population has 52 % people belonging to this generational cohorts, a study on them is essential to get insights which will help HR professionals to make impactful decisions in the workplace. This study collected data from 120 employees of the private sector who belongs to either Gen Y or Gen Z. Lyon's work value Survey and Allen & Meyer Organizational Commitment Questionnaire were used to collect data. The study found no significant difference in the work value or Organizational Commitment between the two generations. Work value is found to significantly influence Organizational commitment in both generations. The findings can be useful for organizations to device strategies such as that for employee engagement and motivation in improving the Organizational commitment of its employees.

ABSTRACT

Work-life balance is the ability of an individual to manage their personal and professional obligations while yet finding time for relaxation and recreation. This study examines the impact of night shift on work-life balance of women employees working in IT Industries in Bangalore. This study focus on eight dimensions of work life balance such as employee motivation, flexible working conditions, job enrichment, job satisfaction, welfare and recreation, grievances, life and total work space, and family support. Sample for this study constitute women employees aged between 25 to 35 years working in IT Industries in Bangalore. Descriptive research design with convenience sampling is used and the sample size is 100 participants. Data collection is conducted through standardized questionnaire and analyses is conducted using jamovi software. This study aims to find out the important factors influencing the work life balance of women working during night and to analyze the impact of Night shift on work life balance of women working in IT Industries. The major findings are that there is negative correlation between work life balance and night shift. The coefficient for the "Night Shifts" predictor is negative and statistically significant, indicating that working night shifts is associated with a lower total score of work-life balance.

pramod.kumar.parida@ibm.com

ABSTRACT

This paper presents a comprehensive analysis evaluating provisions of the EU AI Act against key risks posed by generative AI systems. Large generative models were employed alongside a rigorous assessment framework to critically gauge the Act's coverage of issues like fairness, explainable outcomes, environmental sustainability, and financial stability. By examining alignment with high-level ethical principles and probing operational gaps, limitations become apparent despite promising intentions. While the Act pushes laudable transparency and accountability, acute generative threats demand tailored oversight tuned to complex, rapidly advancing technologies. Unclear guidance regarding safety standards and the balancing act of open-sourced models necessitates a cautious approach. Similarly, urging legal compliance overlooks unresolved statutory ambiguity as novel socio technical paradigms emerge. However concrete movement to log sustainability impacts signifies progress. Overall findings reveal moderate issue relevance but shortage of practical mechanisms across most risks. Targeted guidance and incentives rather than blanket penalties, participative design drawing collective intelligence, resolving disclosure, and copyrighting blind spots, and boosting research investment are advised. With upgrades balancing permission less innovation and public good, a layer below high-level principles, the Act can foster responsible generative stewardship. As researchers we provide an analytical methodology and risk coverage ratings to further collaborative governance.

In summary, while the EU AI Act signifies positive momentum, upgrades grounded in generative models' distinct nature are essential to realize proportional, compassionate, and inclusive technological progress that respects human dignity. Failing at the inflection point risks profound social fractures.

Assistant Professor, Oman College of Management and Technology
tvyas@omancollege.edu.om

ABSTRACT

Even after 75 years of independence celebrated India is still a developing nation that exists only in its dreams of development. The concept of gig workers is growing in the country due to the usage of smart phones and technology. Prior to Covid-19, corruption prevented the country from growing and destroyed the economy. In western countries, the term "gig worker" did not exist. For people who work with digital platforms or online software products, the gig economy is a novel idea. Any new concept is born for a variety of causes, many of which are invisible but yet contribute significantly to the concept's creation. The two key factors that led to the creation of the gig economy concept were unemployment and technological use. Gig workers with a focus on technology have increased significantly in recent years, making a significant economic contribution to the nation. Both men and women are becoming more involved in this profession, and in the near future, there is a greater chance that this percentage will rise. The current wave of inventive technology developments has broadened and transformed the nature of corporate operations. As a result, these developments must figure out how to let people adjust the effects of different modernizations on their life. These days, comprehensive study is being conducted as a result of the Gig Economy's rapid rise and the advancement of these work relationships. A multitude of causes have contributed to the growth of the Gig as a trend in recent times. In India, it is in a promising stage.

The goal of this study is to identify the present issues surrounding the gig economy's rise. In these precarious employment arrangements, action must be taken to protect the workers and update the employment laws to match modern business practices. In developing countries like India, where unemployment is a major problem, the majority of people depend on the gig economy for their livelihood. Even though a nation's unemployment rate can be decreased with the aid of this organizational framework for jobs, it is equally important to take the workers' viewpoint into account. The Gig economy has evolved which is threatening the conventional job market (Veluchamy et al., 2021).

LEADER'S WELL-BEING AT WORK: A SYSTEMATIC REVIEW OF LITERATURE

Shivani Peer
Research Scholar
Jain University, Bangalore
shivani.peer@gmail.com

ABSTRACT

Leaders play a vital role in the functioning of an organization, and researchers have devoted considerable attention to understanding their behavior and performance. However, the wellbeing of leaders remains a neglected subject of discussion in the existing literature. There is a pressing need to draw the attention of researchers to this crucial area of study. The current research seeks to consolidate existing studies on the wellbeing of leaders, aiming to identify gaps in the literature and present these gaps as avenues for future research. The present paper employs the PRISMA Model to filter and identify 110 from ABDC-listed journals. Utilizing Van Horn's model of wellbeing, it systematically discusses various dimensions of wellbeing among leaders. The study reveals how crucial it is for organizations to prioritize leaders' well-being by combining leadership and well-being writing. This analysis has shown that a leader's well- being are highly linked to their workplace's leadership style, culture, and wellness initiatives. The study solves a literature gap by focusing on leaders' well-being. The study illuminates this neglected area and impacts leadership development and organizational strategy. The paper not only fills a significant void in the existing literature but also sets the stage for a holistic examination of leaders' wellbeing in future research endeavours. The paper explores the often-ignored area of leaders' well-being, bringing valuable insights to the existing research by highlighting this overlooked aspect.

ABSTRACT

Heutagogy or self-determined learning was defined as a logical progression to Andragogy (adult learning or self-directed learning) in 2000. Heutagogy which has theoretical underpinnings from core learning theories like behaviourism, humanism, andragogy and connectivism presents an interesting yet intriguing tapestry for a modern adult learning environment. Adaptive learning and personalized learning have areas that have challenged researchers since the evolution of teaching machines (Skinner). However, adaptive learning and personalized learning overlap with Heutagogy as they are also learner centric approaches. Technology channels like E-learning / AR / VR / AI etc. have made significant inroads into learning through innovation and the algorithms are designed around core learning theories and principles. The paper explores the opportunity of bringing together the strengths of Heutagogical principles with the modalities and practical realities of adaptive and personalized learning and create a value network around a Heutagogic learner. The paper represents work in progress, is based on comprehensive literature review and attempts to evolve a conceptual framework that captures the value network of a Heutagogical learner and a working charter that can be considered for designing and implementation by any knowledge-based organization that is looking at an autodidactic learning environment. The framework captures the constructs and variables and represents stakeholder interactions with a heutagogical learner.

Keywords: *Heutagogy, Adaptive Learning, Personalized Learning, Digital Learning, Value Networks.*

FROM SMILES TO SUCCESS: UNDERSTANDING THE ROLE OF HAPPINESS IN EMPLOYEE CONFLICT MANAGEMENT AND CREATIVE OUTCOMES

Ekalavya Baruah
Director- Placements
Narsee Monjee Institute of Management Studies
ekalavya.baruah@nmims.edu

ABSTRACT

This research examines the influence of employee happiness on conflict handling behaviour and creativity in the hospitality industry. The study explores the relationship between happiness, conflict avoidance, and creative performance behaviour and presents a conceptual model that may be tested by future researchers. This knowledge can inform theoretical frameworks, guide human resource practices, and shape talent acquisition and employee engagement strategies.

Keywords: *Happiness at Work, Conflict Handling, Conflict Avoidance, Creative Performance Behaviour.*

AN INVESTIGATION INTO THE EFFECTS OF FLEXIBLE WORKING CONDITIONS ON PERFORMANCE AND JOB SATISFACTION AT POLYFIT FABRICATORS PVT LTD.

ABSTRACT

Companies that offer flexible working arrangements know how employee welfare influences profits. In today's competitive market, companies spend a lot on employee satisfaction to boost productivity and meet needs. Flexible work arrangements may boost employee performance and job happiness, according to one study. Flexible work arrangements enable employees combine work and life and manage time. Workers and employers benefit from flexible work schedules, which boost productivity and profits. Financial, social, political, and economic constraints are changing living demands, and both genders must work. To achieve work-life balance and maintain healthy family life, both men and women embrace flexible working hours. With proper formality and degree planning, flex-hours can reduce stress and improve employee well-being. Flexible work allows employees to adjust as needed. It increases output, job satisfaction, workplace effectiveness, performance, quality of life, and decreased absenteeism and overtime expenditures for the organization. For this study, 110 manufacturing business employees were surveyed. The study tested the null premise that age correlates with flexible work schedule interest. Executives may be more familiar with flexible work hours than middle and lower-level employees, according to simple graphs and frequency distributions. Many companies advocate flexible work hours because they benefit employers and employees.

ABSTRACT

With the spread of the coronavirus in 2020 in India, there was a shift to a new way of working across organizations which had several impacts on employees. The work from home concept had to be adopted worldwide to adhere to the norms during the pandemic. However, post pandemic a lot of organizations have included this practice as a part of HR policy and have designed a hybrid mode of working. Therefore, it is important to understand the long-term impacts of work from home on employee performance and productivity. This paper studies the effect of work from home on employee productivity using the Job Demands-Resources model by Bakker and Demerouti, for IT employees from different companies in India. The study concludes that perception of work from home has a positive impact on employees' perception of productivity among IT employees in India, and even post pandemic employees are looking for a hybrid mode of work, instead of shifting back to the traditional mode of working from office completely. The JDR model is not tested earlier in a work from home setup for IT employees. This is an empirical study used to identify the effect of work from home perception on employee productivity perception during and post-pandemic. This study is based on primary and secondary data. The study was done on a total of 276 IT employees across different organizations in India. Data Analysis done using SPSS and AMOS software. The research suggests that while excessive demand in a WFH setup is having a negative impact on employee productivity, if the necessary resources are provided to the employees it would result substantial improvement in productivity. The study has a unique theoretical contribution in Work from Home set up, an empirical analysis of JDR model brings new perspective and it can be used to revise the HR policy aligned to our findings.

UNDERSTANDING THE CONCEPT OF MOONLIGHTING FROM THE LENS OF HUMAN RESOURCE MANAGER IN IT INDUSTRIES

Ashni Bryana James
Masters in Social Work (Human Resource Development and Management)
Christ (Deemed to be University)
ashnijames18@gmail.com

ABSTRACT

The research conducted on the topic "Understanding the concept of moonlighting from the lens of human resource managers in IT industries" aims to not only understand the perspective of employees in the human resource management department of any organization that belongs to the IT sector company but also to make them think about the various reasons due to which the employees might be engaging in moonlighting. Therefore, the research conducted can be helpful for the organization in terms of understanding what the employees are in need of and try to cater to their needs. As human resource management personnel these measures can help in improving the employees' performance as well which eventually results in betterment of the business. A qualitative nature of research was conducted for which the sample size taken was 10 using snowball and purposive sampling techniques. Moonlighting being a contemporary topic on which people have unclear thoughts as of now the saturation was reached at 7 participants out of which 3 were female and 4 were male. The data was collected using a self-developed semi-structured interview schedule with 10 open-ended questions which was transcribed and thematically analyzed. The major findings of the research include that moonlighting recently gained its popularity due to the COVID and various other reasons such as financial insecurity, employer's concerns related to moonlighting and strategies which can be used in order to deal with the cases of moonlight occurring in the organizations which are not detrimental for the employees as well as the employers. Apart from all the other findings the major finding was that the perception of the HR managers in accordance with the organization as a professional was very contrasting when compared to their personal viewpoint which influences a lot of decisions that are taken in the industry.

sneha.john@msw.christuniversity.in

Dr. Mathew P M
Associate professor, Department of Sociology and Social Work,
Christ (Deemed to be University), Bengaluru
mathew.pm@christuniversity.in

ABSTRACT

Organizational justice can be a significant factor in predicting the extra-role behaviours that are discretionary in nature of the employees in an organization. In the IT industry where employee turnover intention, workload, and work pressure are high, ensuring organizational justice will be beneficial for the organization to retain the employees. As there are only very few studies conducted in this area, especially in Indian as well as Asian contexts, this quantitative study aims to understand the relationship between organizational justice (OJ) focusing on its dimensions of procedural justice, distributive justice, interactional justice, and organizational citizenship behavior (OCB) focusing on its dimensions such as Altruism, Courtesy, Civic Virtue, Sportsmanship, and Conscientiousness. The study tries to understand the correlation between perceived organizational justice and organizational citizenship behavior along with that it also investigates whether gender dynamics has any role in the perception of organizational Justice and the display of organizational citizenship behavior. The study used standardized questionnaires, ; for Organizational justice, organizational justice scale developed by: Niehoff and Moorman (1993). And for organizational citizenship behavior, Scale developed for the Asian context by Shah and Kumar (2015) was used and analyzed the data with the use of Jamovi. Spearman's Correlation, linear regression and Mann-Whitney U test were utilized to arrive at the results. The study found a positive relationship between organizational justice and organizational citizenship behavior, dimensions of organizational justice were also found to be correlating with organizational citizenship behavior. The study also found that Organizational justice had an impact on organizational citizenship behavior.

Among the employees in the IT industry, perceived procedural justice is positively correlated with OCB, perceived distributive justice dimension has the most impact on OCB and categorical gender differences do not affect the employee perception of justice and organizational citizenship behavior.

ABSTRACT

In the present-day workplaces, the role of Human Resource Management (HRM) practices is increasingly recognized as a crucial factor in shaping employee attitudes. Organizational commitment, job satisfaction, and employee engagement are essential elements to the overall well-being of the workforce, directly influencing productivity and organizational success. This set up for an exploration into understanding relationship between HRM practices and employee attitudes. As organizations strive to attract and retain top talent, understanding how strategic HRM initiatives impact the way employees perceive their roles and the organization becomes imperative. This study aims to contribute practical understanding of how technology and HRM practices intersect in Industry 4.0, shaping the attitudes of IT professionals and guiding organizations towards effective strategies in this transformative era.

RETAIL STORE MANAGEMENT SYSTEM

Priyanka MR
Student, PES University, Bangalore
knowledgegrain@gmail.com

ABSTRACT

The purpose of the study is to propose a Retail Store Management System (RSMS) that will improve customer experience and operational efficiency in retail sectors. It streamlines customer engagement, sales tracking, and inventory management by integrating technology-driven solutions. A user-friendly interface is used by the RSMS to track inventory, enabling automated reordering procedures and real-time stock-level changes. To comprehend preferences, optimize marketing campaigns, and personalize interactions, the system also uses customer relationship management tools. The RSMS aims to enable retailers with the ability to make informed decisions and quickly adapt to changing market conditions by utilizing data analytics. The paper emphasizes how the RSMS is essential to transforming retail processes, improving customer relations, and increasing overall business performance.

ABSTRACT

The Pradhan Mantri Jan Arogya Yojana (PMJAY) stands as a crucial healthcare initiative in India, striving to furnish financial protection to susceptible households by granting access to high-quality healthcare services. This research examines the efficacy of the PMJAY scheme at the state level, employing an exhaustive analysis through Technical Efficiency Frontier Analysis, using linear regressions to estimate the production function. The investigation concentrates on assessing the technical efficiency of PMJAY implementation across various states in India, utilizing a robust analytical framework. Linear regression models are employed to establish the relationship between essential input and output variables, thereby ascertaining the technical efficiency frontier. The dataset from the PMJAY website, encompassing the number of hospitals empanelled, the total patients treated under the scheme in each state, and the total number of physicians and nurses, is utilized. By considering the number of patients treated as the dependent/outcome variable and the total physicians, nurses, and total number of beds as input variables, we conduct the linear regression model and determine the frontier of the production function. The technical efficiency ratios highlight Tamil Nadu as the most efficient state and Arunachal Pradesh as the least efficient state. This study contributes to the prevailing body of literature on health policy and management, presenting a nuanced understanding of the challenges and opportunities linked with the PMJAY scheme across diverse state contexts in India. The insights derived from this research can guide evidence-based policy decisions and enrich the ongoing discourse on enhancing healthcare accessibility and outcomes for the nation's vulnerable populations.

ABSTRACT

The purpose of this paper is to analyze the transformations in retail analytics and the drivers of transformation. The methodology used is Systematic Literature Review. The Retail industry has a significant position in the global economy of both developed and developing companies. The industry is one of the largest employers worldwide providing ~314 million jobs globally (ILO, 2020), and also contributes to ~15% of GDP in developed countries. The new age explosive growth in this industry is catapulted by Global Trade Integration and E-Commerce Explosion, which can seamlessly happen with effective data management and transformative Analytics of the same. This transformation that requires changes in conservative and traditional data analysis methods is fuelled by technological advancement, shifts in consumer behavior, and the inclination towards data-driven decision-making. Retail analytics, which once focused on dashboards for sales and product reporting, is evolving into a highly sophisticated stream that empowers retailers to improve customer experiences, optimization of operations, and driving of strategic business growth. This article explores the key transformations in retail analytics, highlighting the pivotal role it plays in the modern retail landscape and the drivers of the same. The key parameters observed as important for driving the transformations are (i) The change of analytical methods – focus transforming from retrospective analysis to predictive analytics governed by advanced machine learning models (ii) The Importance of consumer opinion and word-of-mouth – largely driven by Natural Language Processing (NLP) and Artificial Intelligence (AI) tools such as GPT3/4. (iii) Real-time analysis and decision making – in insights generation for quicker conversions (iv) Deep Personalization (v) Customer data as the center of other retail data entities (vi) OMNI channel integration. Ethical considerations are also deemed important and are also bound as a legal requirement in some economies. Therefore, however important the growing transformations are, some of them like AI and NLP need an extremely governed implementation. It is also observed that the COVID-19 pandemic accelerated the adoption of contactless shopping and payment methods.

This has transformed retailers to handle additional data and consume analytical insights that facilitate the integration of mobile wallets, contactless cards, and other digital payment options to provide a more convenient and hygienic checkout experience.

STUDY OF 6S LEAN MANUFACTURING TOOL IN AN INDUSTRIAL ENVIRONMENT: A REVIEW

Dr. Richa Sharma
Associate Professor, Asian Business School
Sharmadrricha24@gmail.com

ABSTRACT

Lean management is based on the 6S methodology, which was originated by the Toyota Production System between 1948 and 1975. The advanced version of the 5S lean method is the 6S methodology. The 6S lean methodology enhances the overall plant performance of any organization. This approach is being used in the sector to reduce surplus inventory, improve process flow, organize work, offer a safe working environment, and improve the work environment. The major goals of this article is to highlight the considerable benefits of 6S and to explore the 6S implementation process in all the various industrial scenarios. The report is based on an organized review of the literature that tracks the adoption of the 6S methodology in various organizations. The article examines the predominance of the various finding through literature survey and productive output achieved through 6S implementation. The results exhibit the effectiveness of the 6S tool to enhance the overall performance and to resource the company to gain non-stop improvement and higher overall performance.

ABSTRACT

This study examines the disruptive landscape of Industry 5.0, and explores the dynamic evolution, cutting-edge technologies that are emerging, and various applications of Artificial Intelligence (AI) in the context of the next industrial revolution. The study synthesizes current knowledge to provide insights into how Artificial Intelligence (AI) is revolutionizing diverse industries, signifies a paradigm change, with a strong emphasis on the transformation phase and the potential of Industry 5.0, tracing the evolution from mechanization to digitalization and now toward the dawn of Industry 5.0, this paper encapsulates the transformative journey that Artificial intelligence (AI) embarks upon, the key trends shaping this evolution, from Explainable AI to decentralized architectures, highlighting their role in reshaping the industrial paradigm. The real-world applications of AI, ranging from predictive maintenance to autonomous systems, illustrate the tangible impact on various sectors, emphasizing the present-day implications of this technological shift, amidst the promises of efficiency and innovation. Also, contributes to a comprehensive understanding of the role Artificial Intelligence (AI) that plays in fostering innovation, efficiency, and the opportunities and challenges, including ethical considerations, workforce transformations, and security imperatives that accompany the integration of AI into the industrial fabric sustainable development within the ever-evolving industrial landscape and examines the complex interplay between technological advancements navigating the transformative journey towards the modern industrial landscape, and processes. The dynamic interplay between the evolution, trends, and applications of AI, induces a comprehensive exploration of the next industrial revolution and its profound implications for the future.

ABSTRACT

With the growth of internet and technology, the pace of electronic commerce has enlarged, due to which consumers have started referring to online reviews before making a purchase. Such reviews have become an important source of information for online consumers. These reviews can be positive and negative, depending on one's experience. The purpose of this research is to study the impact of online reviews on the attitude of online customers. There are different types of consumers, with variant perception levels, due to which react differently to the online reviews. Therefore, this study aims at investigating the effect of such reviews on the purchasing decision of the consumers. For the purpose of research, the authors have collected the data from the online consumers' who consider online reviews before purchasing a product from the biggest online shopping sites', namely Amazon and Flipkart. Number of respondents are 400. Confirmatory Factor Analysis (CFA) and Structural Equation Modelling (SEM) techniques have been used to examine the effect of online reviews on the attitude of the consumers. The data analysis reveals that online reviews have a significant effect on the attitude of online customers. Such consumers' even change their purchasing after considering the reviews. In other words, a positive review may create a positive attitude, ending in purchase, whereas a negative review can cause negative repercussions that may discourage their purchasing decision. This study aims at online reviews from the biggest retailing sites of the country, so it would be beneficial for the marketers and the companies. The big market companies would be able to handle the grievance of the aggrieved customers, thereby creating a positive impact on the readers of the same. The findings would, thus provide managerial implications for the sellers who sell their products on Amazon and Flipkart.

chairperson.cms@ganpatuniversity.ac.in

ABSTRACT

The research explores the dynamic landscape of cybersecurity in the context of rapid digital transformation. The study focuses on the development of a comprehensive framework, focusing on sustainable management practices and cybercrime prevention measures. The framework addresses key dimensions such as technological advancements, organizational culture, regulatory compliance, incident response, employee behavior, supply chain security, and continuous improvement. The study involved 394 respondents, analyzing demographic variables and utilizing Confirmatory Factor Analysis (CFA) to validate the measurement model. Findings indicate the relation between supply chain security, regulatory compliance, incident response, and employee behavior, influencing the development of advanced cybersecurity technologies. Although the study provides valuable insights, limitations highlight the need for diversified samples and qualitative methods. Future research opportunities include longitudinal studies, cross-cultural investigations, and exploration of emerging technologies beyond artificial intelligence. This research aims to develop a comprehensive framework for cybersecurity adaptability, addressing sustainable management practices and cybercrime prevention measures, with a focus on technological advancements, organizational culture, regulatory compliance, incident response, employee behavior, supply chain security, and continuous improvement.

The findings emphasize the crucial role of employee behavior in integrating advanced cybersecurity technologies and demonstrate the significant positive relationship between effective incident response capabilities and the integration of such technologies. These insights have practical implications for organizations which urges them to prioritize supply chain security, regulatory compliance, and to shape employee behavior as essential elements of a comprehensive cybersecurity strategy in the digital era. The research contributes to the field by offering an innovative and comprehensive framework that links sustainable management practices with cybercrime prevention measures which provides valuable insights for organizations to navigate the complexities of the digital era.

FINTECH AND BANKING: OPPORTUNITIES AND CHALLENGES

Abijith M Kumar
MBA-MS student, Amrita School of Business,
Bengaluru, Karnataka
abijithmkumar2001@gmail.com

ABSTRACT

Banking is a bunch of services provided by the bank to its customers. Innovation and development in technology plays a crucial role to keep up in this competitive world. Fintech companies develop new products and services that helps the banks to increase and enhance their customer base. But some challenges have emerged in recent times that have impacted both banks as well as fintech companies. By deep evaluation and analysis, I have pointed out few key challenges faced by them which are critical and needed to be solved as soon as possible, these problems will be standing as my objective towards the research as follows: -

a) Negative impact of Chinese loan apps,
b) Increase in data breach and hacking.

In conclusion, this study will show how the banks with the help of the fintech companies and their technologically upgraded products can overcome these challenges.

ABSTRACT

The paper is centered on comprehending automated production methods. In contrasting automated and conventional production techniques, the study emphasized the former's superiority and its many benefits for customers, labourers, manufacturers, and society at broadly. The primary goal of the research is to understand what influences the textile industry in Ramnagar's adoption of both automated and traditional manufacturing techniques. The purpose of the study was to determine the factors influencing the adoption of automated and conventional manufacturing techniques, as well as the correlations between such variables alongside the automated techniques used in the Ramnagar textile industry. 50 manufacturing textile industries in Ramnagar provided responses, and convenient random sampling technique was used to gather those responses. The study was conducted using KMO and Bartlett's Test, Factor Analysis and Regression for data analysis. The research encompasses the motivations beneath and goals of implementing automated techniques, as well as various aspects of integrating and evolving automated manufacturers in Textile Industry at Ramnagar.

ABSTRACT

Over the past years, e-commerce platforms have expanded substantially, providing customers with convenient shopping experiences. To enhance e-commerce websites, it's essential to grasp user engagement and factors affecting conversion rates. This optimization is achieved by aligning platforms with user expectations, thereby fostering successful online shopping experiences, and contributing to sustained growth in the dynamic digital marketplace. In this paper, we conduct a comprehensive analysis focusing on user interactions, conversion metrics, and the entire user journey within an e-commerce platform. Our exploration spans exit rates and sessions across different devices and browsers, conversion rates for various traffic sources, and the user journey from product details to checkout. Findings suggest a need for targeted improvements in mobile optimization and browser compatibility, indicated by higher exit rates on mobile devices and varying rates on different browsers. The conversion rate analysis emphasizes the varying effectiveness of traffic sources, highlighting the potential of CPM and CPC mediums, while identifying areas for improvement in referral and affiliate traffic. Examining the user journey reveals potential bottlenecks in the conversion process, especially the identified gap between user interest and completed transactions. Our study suggests improving the checkout process strategically to streamline user transactions. These insights provide actionable guidance for businesses seeking to refine their platforms and optimize performance in the ever-evolving landscape of e-commerce.

ABSTRACT

Financial resilience among consumers is an emerging and important area of research. This study aims to shed light on the role of fintech in building consumers' financial resilience, identify major themes of research, and synthesize directions for future research in this area. A systematic literature review was performed using the Preferred Reporting Items for Systematic Reviews and Meta-Analyses protocol followed by content analysis techniques such as bibliometric analysis, and keywords co-occurrence analysis to identify the thematic clusters. Fintech can support financial resilience by promoting interventions such as financial inclusion through easy and affordable financial access, financial and digital literacy through personal financial management applications, and by enabling individuals and households to manage their finances more effectively through budgeting tools. The study also identified three major themes of scholarly work: (1) Drivers of fintech adoption, (2) Nexus between fintech and financial capabilities (financial literacy, financial inclusion, and financial behaviours/practices), and (3) Fintech and sustainable growth. The review contributes to a seminal synthesis of research on consumer's financial resilience, reflecting its current state and agenda for future research. The article is a valuable resource for academicians and practitioners interested in understanding the potential of fintech in building consumers' financial resilience.

ENHANCING E-HEALTH ASSIMILATION IN INDIAN HOSPITALS: AN INVESTIGATION INTO THE ROLE OF INSTITUTIONAL PRESSURES, TOP MANAGEMENT SUPPORT AND LEARNING CULTURE

Puneet Kour
Research Scholar, University of Jammu
kourpuneet01@gmail.com

Versha Mehta
University of Jammu
mehta.versha@gmail.com

ABSTRACT

Drawing upon the institutional theory and conceptual lenses of top management support, learning culture and absorptive capacity views of an organization, we frame and test a model that examines how the internal contextual factors mediate the effect of external institutional pressures on E-health assimilation, taking place within hospitals. It is tested empirically using survey-data from personnels working in select hospitals from Indian healthcare sector. Results using PLS-SEM, reveal that institutional pressures on one hand, affect the top management support, which creates a learning culture in the organization, necessary for E-health assimilation. On the other, these external pressures, influence absorptive capacity of the organization, which impacts the E-health assimilation in a hospital. The research throws light on potential antecedents to E-health system assimilation and establishes top management support, absorptive capacity and learning culture as crucial organizational factors affecting the phenomenon of E- health assimilation. We provide a guidance for the management and medical practitioners in hospitals to enhance top management support to achieve higher levels of absorptive capacity and cautiously develop a strong learning culture, resulting into successful E-health assimilation. By bringing to light, new insights into IT assimilation research, the present study, intends to makes a novel contribution in the concerned field.

ABSTRACT

This research paper explores the pivotal role of digital transformation and technology ecosystems in the data storage industry, focusing on the adoption of emerging technologies. The study constructs a comprehensive theoretical framework through a questionnaire-based approach by integrating the Technology Acceptance Model (TAM) and extending it with the Stimulus Theoretical Framework. The primary aim is to identify critical factors influencing successful adoption, considering the current state of digital transformation and the dynamics of technology ecosystems within organizations. The literature review delves into influential theories such as TAM, Diffusion of Innovations, Theory of Task Technology Fit, and the Unified Theory of Acceptance and Use of Technology. These theories inform the research's theoretical framework by providing insights into the drivers of consumer acceptance of new technologies. Utilizing a mixed-methods approach, the study incorporates qualitative insights from an exploratory multi-case study, employing systematic thematic content analysis. For the quantitative aspect, a structured questionnaire grounded in TAM and the Stimulus Theoretical Framework gathers perspectives on digital transformation, technology ecosystems, perceived usefulness, ease of use, and intention to use from senior and mid-level employees in prominent storage organizations. The study categorizes user acceptance of emerging technologies - 5G, Artificial Intelligence, Cloud Computing, and Edge - in major enterprise storage entities: Dell Technologies, IBM, HPE, Hitachi Vantara, and Net App. In the results and discussion section, emphasis is placed on the impact of digital transformation and technology ecosystems, with perceived usefulness and ease of use identified as key motivators influencing employees' responses and intention to adopt.

The study systematically analyzes expected technology adoption outcomes, contributing to a deeper understanding of successful technology integration within the enterprise storage sector.

A STUDY ON THE CONSUMER PERCEPTIONS ON ELECTRICAL VEHICLES IN THE INDIAN MARKET

Dr. Ranjith P V
Associate Professor
Christ (Deemed to be University)

Tejaswi K N
Student Executive MBA
Christ (Deemed to be University)

Dr. Manish Srivastava
Professor
Christ (Deemed to be University)

ABSTRACT

This study investigates consumer perceptions regarding Electrical Vehicles (EVs) within the Indian market. The research aims to discern the attitudes, preferences, and behaviour alintentions of consumers towards EV adoption. It focuses on understanding the factors influencing consumer decision-making processes in embracing EVs over conventional vehicles. Through a meticulous examination and analysis of data collected from diverse demographic segments across India, this study endeavors to quantify the level of consumer awareness, knowledge, and sentiments regarding EVs. It seeks to measure the correlation between these perceptions and various influential factors such as infrastructure readiness, attitudes towards EVs, government policies and incentives, environmental concerns, range anxiety, psychological and economic factors, understanding of EV technologies, and social influences. By delineating the landscape of consumer perceptions and preferences towards EVs in the Indian market, this research aims to provide valuable insights for industry stakeholders, policymakers, and marketers. The outcomes of this study aspire to contribute to the development of strategies and policies aimed at fostering greater EV adoption in India while offering a comprehensive understanding of the challenges and opportunities in herent in the EV market landscape.

dkmahalik@suniv.ac.in

ABSTRACT

In an era of rapid digital transformation, the role of digital literacy in education, particularly among postgraduate students engaged in online learning, has become increasingly pivotal. This study aimed to comprehensively assess the proficiency, specific elements, perceptions, and experiences related to digital literacy in the context of online education, with the ultimate goal of informing educational strategies and enhancing the digital competence of postgraduate students. To achieve these objectives, a quantitative approach was employed, utilizing a stratified random sampling technique to select 200 postgraduate students from six universities in Western Odisha, who had engaged in online learning for at least one academic year. Data collection was conducted through a structured questionnaire consisting of 30 questions employing a 5-point Likert scale. The questionnaire covered various aspects of digital literacy, including perceptions and experiences, the impact of online learning, specific elements, and overall proficiency. Descriptive statistics and exploratory factor analysis (EFA) were utilized to analyze the data. The major findings of this study revealed that postgraduate students exhibited a moderate level of digital literacy proficiency, highlighting areas for improvement in their digital competence. When dissecting specific elements of digital literacy, students displayed varying levels of competency across different areas, with strengths in online collaboration and ethical/legal aspects but challenges in using search engines for academic research. Perceptions and experiences regarding the impact of online learning on digital literacy were diverse, underscoring the complexity of students' digital learning journeys. The exploratory factor analysis (EFA) unveiled eleven distinct components or factors, shedding light on the multifaceted nature of digital literacy among postgraduate students.

CHALLENGES AND DIFFICULTIES IN IMPLEMENTING ADAPTIVE TEACHING IN HIGHER EDUCATION

Dr. Muhammedali Chalikandy
Former Deputy Head, Department of English
Al Buraimi University College, Oman
mchalikandy@gmail.com

ABSTRACT

The purpose of this paper is to explore the difficulties and challenges that the tertiary level teachers face in their classrooms. Adaptive teaching aims at personalizing teaching and learning process to individual students' needs, level and abilities. Although in multicultural classrooms like in India the students have different learning styles, attitudes, preferences likes and dislikes interests and learning difficulties, they want success in their learning. As a result, it is imperative to use adaptive teaching techniques to help learners to achieve this common goal. However, there are a number of hurdles for the teachers to implement adaptive teaching in their classrooms. In order to examine the challenges and difficulties that the teachers face in the classrooms, ten college lecturers from one of the colleges from Kerala were interviewed using an open-ended questionnaire. The data was analysed and interpreted thematically and the result shows that the teachers have a number of hurdles in implementing adaptive teaching and learning.

ABSTRACT

This journal article investigates the intricate dynamics of cross-cultural leadership effectiveness within Bangalore's Information Technology (IT) sector that has experienced a significant growth, attracting both the foreign and domestic enterprises and emerging as a global leader in IT Industry. The study explores the nexus between demographic variables, cultural intelligence (CQ) dimensions, and the cross-cultural leadership effectiveness among IT leaders and managers. The research employs a robust methodology, including ANOVA, Chi-Square Tests, and Partial Least Squares Structural Equation Modelling (PLS-SEM) to analyse data from 413 IT Industry leaders and mangers. The findings uncover significant associations between demographic variables, cultural intelligence dimensions (Cognitive CQ, Physical CQ, Emotional CQ, and Behavioural CQ), and Cross-Cultural Leadership Effectiveness. Noteworthy results include the positive impact of Emotional CQ and Behavioural CQ on leadership effectiveness. Age, job designation, education qualification, total experience, and annual income exhibit varying degrees of influence on cultural intelligence dimensions. Importantly, the study emphasises the critical role of Cross-Cultural Leadership Effectiveness in navigating the complexities of diverse, globalized environments. Chi-Square tests reveal intricate relationships between demographic variables, cultural intelligence dimensions and Cross-Cultural leadership effectiveness.

Regression analysis using PLS-SEM emphasizes the remarkable explanatory power of the Cross-Cultural Leadership Effectiveness model, highlighting its centrality in the leadership discourse. The study suggests that a holistic understanding of cross-cultural leadership effectiveness is essential, encompassing various dimensions and factors. In conclusion, this research contributes to the evolving discourse on cross-cultural leadership by offering empirical insights and practical implications for IT leaders and organizations operating in diverse, global contexts. The findings pave the way for future research and strategic initiatives aimed at enhancing cross-cultural leadership competencies and overall organizational success.

Dr Irshad Naseer
Professor & HOD, Presidency college, Mangalore
nazeer.irshad@gmail.com

ABSTRACT

Cultural intelligence is the ability of an individual to effectively adjust and adapt to different cultural environments. Research has shown that students with higher levels of Cultural quotient exhibit better adjustment in multicultural environments. Bangalore district selected for the study. Eight colleges comprising of 50 students each accounting total sample as 400 on random sampling basis using descriptive survey method. Data base covering of two components a) Socio-economic status. b) Cultural intelligence tool with 20 statements with four domains a) Meta Cognitive b) Cognitive c) Motivational d) Behavioral on five point Likert scale. The Analysis includes descriptive and Inferential Statistics (Chi-square and F-Test). Majority of the respondents (46%) found as 18 years of age, boys (56%),1st year and language as English (90%), second ordinal position (48%) and one sibling (40%). Academic performance with 61-72 marks (40%) and from home (56%) Regarding background majority (82%) from urban family, Hindu (58%) respondents. Majority of respondents (72%)under nuclear family and income of Rs. 75,000-1,00,000. The result indicates that 40% of respondents possess with adequate Cultural Intelligence level as compared to 60% with moderate cultural intelligence level. Regarding Mata cognitive (56%), cognitive domain (16%) and Motivation domain (48%) showed adequate level as compared to Behavior domain (38%), Established significant difference Statistically ($F=5.47^*$, $p<0.05$). Chi-square test reveals the association between socio-economic characteristics with cultural intelligence level among under graduate students found to significant ($p<0.05$).

ADAPTIVE TEACHING AS AN INVALUABLE PEDAGOGIC PRACTICE – A COMPREHENSIVE REVIEW

Dr. Jayakumari Nikesh Vadhvani
Assistant Professor,
S. S Agrawal College of Commerce and Management, Gujarat
jaya.dakhwani@gmail.com

ABSTRACT

Since the education sector is dynamic and always changing, teachers must use cutting-edge teaching strategies to address the unique requirements of their pupils and get them ready for the intricacies of the corporate world. This study examines the idea of adaptive teaching by looking at its theoretical foundations, real-world applications, and comprehensive evaluation of the literature on adaptive teaching and learning strategies. Faculties have the difficult task of getting students ready for the ever-changing needs of the working world. The review delves into the body of research on adaptive teaching approaches, the theoretical underpinnings of these approaches, and how adaptive learning affects student outcomes. This study seeks to provide insights into the efficacy and possible drawbacks of adaptive teaching and learning by synthesizing recent research.

UNVEILING THE DYNAMICS: EXPLORING THE INTERSECTION OF ACADEMIC ECOSYSTEMS AND ENTREPRENEURSHIP EDUCATION IN THE DIGITAL AGE

Prof. Shashirekha B V
Research Scholar, Department of Commerce
Christ University, Bangalore.
Shashi.bv@res.christuniversity.in

ABSTRACT

In the rapidly evolving landscape of higher education, the convergence of academic ecosystems and entrepreneurship education has emerged as a focal point for scholars and practitioners alike. This review research paper delves into the intricate dynamics that unfold at the intersection of these two realms, shedding light on the transformative impact of the digital age. The study undertakes a comprehensive analysis of the symbiotic relationship between academic ecosystems and entrepreneurship education, emphasizing the multifaceted connections that drive innovation, knowledge transfer, and economic development. Through an extensive literature review, the paper synthesizes key insights into the evolving paradigms shaping entrepreneurial education within the digital context. Examining digital technologies as enablers of innovative pedagogical approaches and collaborative frameworks forms a central theme. The paper also explores how academic institutions adapt to the demands of the digital age, leveraging technology to foster entrepreneurial mindsets among students and facilitate industry-academic partnerships. It further investigates the role of online platforms, virtual incubators, and digital resources in bridging the gap between academia and the entrepreneurial ecosystem. Additionally, the paper critically assesses the challenges and opportunities arising from the intersection, considering issues such as curriculum design, faculty engagement, and the integration of real-world experiences. The synthesis of empirical findings and theoretical perspectives provides a nuanced understanding of the complexities involved in nurturing entrepreneurship within academic settings in the digital era. This research offers valuable insights for educators, policymakers, and stakeholders seeking to enhance the integration of entrepreneurship education within academic ecosystems, providing a roadmap for navigating the evolving landscape of higher education in the digital age.

ABOUT THE CONFERENCE

Contemporary issues in management refer to the current and relevant challenges, trends, and developments that affect organizations, leaders, and managers in today's dynamic business environment. The current business environment is facing issues like geopolitical instability, trade tensions, increasing inflation and declining GDP in many nations. Further, organizations across the world are increasingly emphasizing on digital innovation, inclusive growth and sustainability. The conference will deliberate on such key issues and discuss possible options and solutions.

This conference will provide a platform for researchers, academicians, practitioners, entrepreneurs and industry experts to share their latest research findings, discuss emerging trends in management, and exchange knowledge with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants.

The event will feature keynote speeches from renowned scholars and industry leaders, and will have practitioner-led workshop sessions. The goal is to foster collaboration, exchange ideas, and inspire further research and practical implementations in the field of management. We invite original research papers for presentation from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

MESSAGE FROM THE CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore! On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 12th International Conference on 'Contemporary Issues in Management - CIM-24'.

In an era marked by geopolitical tensions and rapid technological advancements, the dynamics of management are undergoing profound changes. The influence of geopolitical shifts on business strategies, risk management and global collaborations cannot be overstated. As AI continues to advance, it brings with it both opportunities and challenges. We aim to explore how organizations are adapting to these geo political shifts, digital revolution and impact of AI on business landscape.

The program is rich and varied with eminent international and national keynote speakers. We are honored to have Prof. Harald Bolsinger, Professor of Business Ethics & Economics at Technical University of Applied Sciences Würz burg-Schweinfurt (Germany) as Chief Guest. It is a privilege to have Prof. S Sadagopan, Founder Director of IIITB as the Guest of Honor. Prof. Rajesh Bagchi from Virginia Tech (USA) and Prof. Macario Fernandes from H&H Search Partners (UK) are the keynote speakers for the conference. The participants will learn the nuances of paper development in the workshop conducted by Prof. Kirankumar Momaya, Editor-in-Chief of International Journal of Global Business and Competitiveness. At the conference, ISME proudly confers Lifetime Achievement Award to Prof. M Rammohan Rao (Former Dean- ISB Hyderabad and Former Director- IIM Bangalore) for his exceptional contribution in academics and research.

We are delighted to share that CIM24 has received papers from reputed institutions like Indian Institute of Technology Madras, Indian Institute of Technology Dhanbad, Indian Institute of Foreign Trade, University Putra Malaysia, SP Jain School of Global Management and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business Excellence, Competitiveness & Sustainability: Manufacturing, Services and Agricultural Sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference. Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,

Dr. Rony G Kurien
Dean and Conference Chair

ARGUMENTS FAVOURING TAX DEDUCTIONS AGAINST CORPORATE SOCIAL RESPONSIBILITY EXPENDITURE INCURRED BY MULTINATIONAL ENTERPRISES

Moses Pinto
Doctoral Student at the PhD in Law,
Faculty of Law at the Autonomous University of Barcelona
Universitat Autònoma de Barcelona (UAB), Barcelona, Spain.
mosesingoa@gmail.com

ABSTRACT

Why are the local taxation laws prevalent in the Host Country viewed as not being harmoniously constructed in support of the Corporate Social Responsibility (CSR) policies by the Managers of Multinational Enterprises (MNES)? Could it postulate that the Governments functioning the host country by allowing deductions against the Corporate Social Responsibility (CSR) expenditures could invoke an impetus towards the strategic alignment towards International Taxation Laws by Multinational Enterprises (MNES) while demonstrating a heightened degree of transparency which would qualify as industry best practices in declaring the CSR expenditures incurred as a function of the tax avoidance endeavour by the MNE. This kind of amalgamation of transparent practices in the realm of seeking tax deductions for an MNE's CSR expenditure could also help minimise conflicts of perception before the proponents who interchangeably refer to tax avoidance by MNEs as Tax Evasion. Therefore, it could be estimated that global CSR laws could be harmoniously constructed vis-à-vis local taxation laws in their interpretation by MNEs if encouraged by the governments of the host country.

A REVIEW OF GREEN ECONOMY AND ITS RELATED CONCEPTS

Rimli Rajan
Research Scholar
CMR University, Bengaluru
rimli23rajan@gmail.com

ABSTRACT

The term green economy has been considered as a major impetus for sustainable development. But still, the green economy is faced with severe shortcomings and tensions within its definitions and discourses. Due to lack of adequate data with respect to transformation towards green economy, still there is a lot of inconsistencies. The concept of green economy involves various concepts and its connection with sustainability is obscure. This paper considers the various concepts, definitions and measurement methodologies towards green economy. It also focuses on monitoring the OECD green growth framework, different approaches for alternative measurement. The paper concludes by stating that there has to be a better policy for a progress which is beyond GDP. It also recommendations an alternative source of information, new methodologies and measurement approaches to make green economy successful. The paper highlights by stating that it is only through proper collective adjustments economically, we can solve the dangerous effects on the climate change and environmental degradation. To obtain this, the concept of green economy involves a complete transformation to decrease the harmful effects on climate change and thereby reduce emissions. To reduce the carbon emissions globally, there is a major need for radical changes related to energy policy. To measure the progress, there is a need for proper framework for ascertaining the actions related to green economy. In 2013, The Green Growth Knowledge Platform, initiated the need for proper economic opportunities and tools related to the growth of green economy. Without a proper measurement, it would be hard to understand the efficacy of the policies and attain the sustainable goals for green economy related to climate action and sustainable development. This paper concludes by stating the important recommendations to ameliorate the transformation related to the measurements of the green economy.

A BIBLIOMETRIC APPROACH TO EXAMINING THE DEVELOPMENT OF GREEN FINANCE AND ITS EFFECT ON ENVIRONMENTAL SUSTAINABILITY

Suman Ahuja
Research Scholar
Guru Gobind Singh Indraprastha University, Delhi
sumanahuja037@gmail.com

ABSTRACT

With the 28th annual summit of the United Nations Framework on Climate Change (COP28) highlighting the necessity of coordinated action to avert climate change, the literature on green finance and its impact on environmental sustainability has changed over time. In order to minimize carbon emissions, create urban infrastructure, financing of renewable and green energy projects, and preserve environmental sustainability, green finance is essential. The impact of green finance challenges on environmental sustainability varies amongst nations, and opinions on the relative importance of these challenges and advancements are not entirely consistent. The current study discusses the development of the concept of green finance using bibliometric analysis, thereby offering policy recommendations for promoting economic expansion. The co-citation of authors, documents, and journals, as well as the co-occurrence of keywords, were analyzed using VOS Viewer to determine which country has given green finance and the environment the most attention in addition to the profiled authors in the relevant field. Research gaps have been highlighted which can be pursued by the future researchers.

ABSTRACT

As India continues to integrate into the global economy, foreign direct investment has emerged as an important driver of economic growth and development. The study provides a comprehensive overview and examines the impact of foreign direct investment on the growth trajectories of the banking and insurance sectors in India, and then the impact of the growth of these sectors and foreign investment on India's economic growth. The study uses time series data for the period 2002-2022. The study uses correlation and multiple regression analysis techniques to analyse the data. The findings of the study indicate a positive relationship between FDI inflows and the growth of the banking and insurance sectors in India. The results also showed a strong relationship between the growth of the banking and insurance sectors and foreign direct investment flows. The results showed that the growth of the banking and insurance sectors has an impact on economic growth, as increasing the growth of the banking sectors by (1,277,166) million dollars leads to an increase in Indian economic growth by (1,941.85) billion dollars. The growth of the insurance sector by (741,991) million dollars will lead to an increase in economic growth by (1,406) billion dollars. The results of the analysis showed that foreign direct investment has a positive impact on economic growth in India, as the inflow of foreign direct investment by (1,996) million dollars will lead to growth in the economy by (666,683) million dollars. The study recommends that the Indian government implement reforms in the local market to attract more foreign direct investment by raising the ceiling on foreign ownership in companies and various economic sectors, as well as reducing the profits tax on businesses to encourage more local and foreign investors.

INTEGRATION OF SUSTAINABLE FARMING AND AGRO TOURISM TO STIMULATE FARMERS ECONOMIC STATUS IN KARNATAKA: A SOCIAL ENTREPRENEURSHIP INITIATIVE

Vikas Janardhan Salunkhe
PhD Scholar
CMS School of Business and Management,
JAIN (Deemed to be University), Bangalore

Dr. Sarangapani Nivarthi
Associate Professor
CMS School of Business and Management,
JAIN (Deemed to be University), Bangalore

ABSTRACT

As a social entrepreneurship project to improve the financial standing of farmers in Karnataka, India, this study explores the theoretical foundation and possible effects of fusing agrotourism with sustainable agricultural methods. With sustainable agriculture and tourism working together, the goal is to promote socioeconomic growth in the area. The integration aims to create a model in which farmers provide tourists an immersive experience in rural life and agriculture in addition to cultivating crops sustainably. Given that it tackles farmers' social and economic problems, this integration is consistent with the tenets of social entrepreneurship. The project aims to create a sustainable and reproducible model that may be modified for use in other areas through cooperative efforts between local communities, governmental organisations, and commercial businesses. The final section of the abstract highlights the integrated approach's revolutionary potential and shows how it may support the overall growth of Karnataka's rural economy.

BEYOND BORDERS: CHARTING A COURSE FOR THE FUTURE OF MULTILATERAL COOPERATION

Tadepalli Aditya Kamal
Student
KLE Law College, Bengaluru
tadepalli.21bbl023@klelawcollege.org

ABSTRACT

In an era marked by global challenges that transcend national boundaries, the imperative for robust multilateral cooperation has never been more pressing. This paper explores the evolving landscape of international relations and the critical role that multilateralism plays in addressing complex issues such as climate change, global health crises, and economic inequality. As the world becomes increasingly interconnected, the need for collaborative frameworks that extend beyond borders becomes evident, necessitating a re-evaluation and reinvigoration of the foundations of multilateral cooperation. The paper begins by examining the historical context of multilateralism, tracing its roots in the aftermath of World War II and the establishment of international organizations like the United Nations. It then delves into the challenges faced by the existing multilateral system, including shifts in geopolitical power, rising nationalism, and scepticism towards global governance. By analysing case studies of successful and unsuccessful multilateral initiatives, the paper identifies key factors that contribute to effective cooperation, emphasizing the importance of inclusivity, transparency, and shared responsibility. Building on these insights, the paper proposes a forward-looking framework for the future of multilateral cooperation. It advocates for the adaptation of existing institutions to better reflect the current geopolitical landscape, as well as the creation of innovative mechanisms that foster collaboration between governments, non-governmental organizations, and the private sector. The role of technology in facilitating cross-border cooperation is also explored, with a focus on harnessing digital tools for enhanced communication, data sharing, and problem-solving. Moreover, the paper addresses the role of individual nations in bolstering multilateral efforts, urging a renewed commitment to diplomacy, compromise, and the pursuit of common goals. It concludes by emphasizing the urgency of collaborative action and the shared responsibility of the global community in charting a course towards a future where multilateral cooperation transcends borders, effectively addressing the multifaceted challenges of the 21st century. The purpose of this paper is to analyse the aspects of multilateralism with respect to its history and the future. The paper also aims to facilitate towards the geopolitical landscape and the future of diplomacy.

I aim to build this paper with the help of primary sources such as UN reports, government initiations, etc. and also by using secondary sources such as articles, research papers, etc. Some of the major findings that I found during the research is the importance of global governance, preference for stability, acknowledgement of challenges and call for innovation.

ANALYZING THE CATALYST EFFECT OF THE 'MAKE IN INDIA' INITIATIVE ON ADVANCING THE STARTUP ECOSYSTEM: AN EMPIRICAL STUDY

Dr. K V N Lakshmi
Assistant Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

Dr. S. Ramesh
Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

Dr. Swapna H R
Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

ABSTRACT

Launched in 2014, the 'Make in India' initiative was conceived to position India as a global manufacturing hub, fostering economic growth, job creation, and technological advancements. This initiative aimed to attract both domestic and foreign investments in manufacturing, emphasizing the production of goods within the country. The convergence of 'Make in India' and startups forms an intriguing intersection where traditional manufacturing and cutting-edge innovation meet. The primary goal is to investigate the factors shaping the startup ecosystem in India and analyze its impact on the country's GDP. Employing Structural Equation Modeling (SEM) for a comprehensive analysis, the study underscores the robustness of the model, with fitness indices confirming its adequacy. The findings highlight the substantial positive influence of the 'Make in India' initiative on the startup ecosystem, while also dismissing the notion of a positive impact from geopolitical risks.

Keywords: Make in India, Start up Eco system, Innovation, Geo-Political Risk, SEM, GDP.

FUTURE OF MULTILATERLISM

Sarath R
Student,
IA School of Management Studies, Bangalore
thisissarath6@gmail.com

ABSTRACT

The future of multilateralism is unfolding amid complex opportunities and challenges with profound implications for global governance. This paper examines both the positive and negative dimensions that are likely to shape the trajectory of multilateralism in the coming years. On the positive side, there is an opportunity for the international community to strengthen cooperation to address pressing global issues, from climate change to pandemics. Collaboration can lead to innovative solutions, increased sustainability and the creation of new partnerships. On the other hand, the downsides of the future of multilateralism are intertwined with growing geopolitical tensions, nationalist sentiments and declining trust in international institutions. The report explores the potential consequences of declining cooperation, such as stalled progress on critical issues and a weakened ability to respond effectively to transnational challenges. The emergence of competing factions and power struggles can hinder the inclusive and cooperative spirit that multilateralism seeks to promote. This research paper also explores new risks, such as cyber threats and digital divides, which affect the effectiveness of multilateral approaches.

ABSTRACT

In India, the Companies Act 2013 made spending and reporting of CSR mandatory for a set of companies which fulfil certain criteria. The objective of this study is to examine the impact of this mandatory CSR regulation on stock return, which has not been explored so far. We use actual CSR spending data from Indian listed companies on National Stock Exchange (NSE) extracted from CMIE's Prowess database for the period 2010-2022. Using the mandatory CSR regulation as an exogenous shock, we examine the impact of mandatory CSR on stock return using a fixed effect model and apply Difference-in-Difference (DID) technique to investigate whether this law change this relationship significantly post-2015. We find CSR has a positive impact on stock return. However, CSR has a negative impact in the post-2015 period on treated firms compare to pre-2015 when CSR was not mandatory. We also look at subgroups of firms who spend on CSR more than, less than or equal to the mandated 2% and how it affects this relationship. Overall, our finding support CSR as a strategic investment in long run. This paper contributes to the emerging literature on mandatory CSR and firm performance. To our knowledge, this is the first study which examines the long-term impact of mandatory CSR on stock return using actual CSR expenditure using DID methodology in pre and post scenario of the Companies Act 2013.

ABSTRACT

Spirituality at the workplace is connected to the economic sphere. Max Weber (1904) found out about the positive implications of spirituality regarding economic results. These findings can be explained with the positive aspects; which spirituality can cause in the economic context. This value of spirituality in an economic context can be seen in the theoretical concept of spiritual capital. In this context, spiritual leadership has found its way into management literature. This state of the art is discussed in the article and serves as a starting point for the development of Spiritual-Based Humanism.

In the first part the working paper spans a thematic framework between spirituality and spiritual capital in organizations. In addition to relevant definitions, the context of spirituality is described, which is closely linked to the worldview of believers of different religious imprints, personal calling, vision and corresponding values. Spiritual capital is operationalized by means of values that come into play in spiritual or servant leadership.

This paper delivers ground for development of a model for the possible effects of Spiritual leadership on their organization's performance. Embedded in the national cultural context, spiritual leadership has an impact on the performance of companies in financial and other areas (e.g. innovation, sustainability, CSR) through the lived organizational culture with specific values and employee commitment. Therefore, in a second part, value portfolios of selected globally widespread worldviews are discussed on the basis of concrete manifestations in sample countries, and their particular country-specific context is explained. Based on this, a general research design shall be derived in a follow-up paper that can empirically investigate the relationship between spiritual capital and organizational performance.

ABSTRACT

Ascent of emerging multinationals (EMNEs) from India is an exciting phenomenon for the promise of India's techade and climb to next levels of international competitiveness for development. Knowledge-based groups from India are also striving to climb on competitiveness, but it is an under-researched topic. How can we analyze trends and the journey of the groups, is an exciting question. We use qualitative analysis of quantitative and qualitative data from a single case to help characterize the phenomenon. Quick benchmarking of groups identified in India and other Asian countries provides some interesting trends. In Asia, groups in Japan, Malaysia have climbed to good heights. Emerging findings are summarized using the concept of 'journey map' to help identify phenomenon, trends and issues. We contribute to 'theory of Competitiveness' by assessing the journey map to evolve options for next levels for the group.

ARE WE READY FOR NEW TECHNOLOGICAL ADVANCES IN MARKETING?

Sulagna Nandy Dutta
Research Scholar,
Indian Institute of Technology (Indian School of Mines), Dhanbad
sulagna.nandydutta@gmail.com

ABSTRACT

Technological advancement has undoubtedly eased the marketing process in this highly competitive business environment. If business entities do not adopt this technological upgradation in a fast-changing world, there may be severe competitive issues for survival. The recent technological advancements ["Artificial Intelligence (AI)," "Augmented Reality (AR)," "Virtual Reality (VR)," and "Chatbot (CB)"]- from the computer science field which has reached the mass outside its domain due to their super efficiency and utility for various activities which needed human intelligence. This article explores the concept in two ways: generic and specific perspectives. Initially, the paper aims at concept-oriented (generic) exploration concerning the introductory idea of critical concepts (I), their emergence (E), future arena (F), and risk factors associated with them (R) [the IEFR framework]. Lastly, this paper does the bibliometric analysis of published documents (specific) indexed in the Web of Science in connection to sustainable goals for better comprehension of the domain and its implications. Papers are scattered in terms of categorization. No salient field is grown to its fullest potential. As sustainability is not the prime concern in this domain, policy-level decisions are needed.

ABSTRACT

The impact of Hindustan Unilever Limited's (HUL) sustainability measures on India's progress toward the Sustainable Development Goals (SDGs) is examined in this study report. The study examines how money is allocated and used in the fields of women's empowerment, environmental sustainability, healthcare, and other areas. HUL's Environmental, Social, and Governance (ESG) objectives serve as a gauge for the company's dedication to sustainability. In order to shed light on the company's contributions to social and environmental well-being in India, the study uses a quantitative research methodology to investigate the relationship between HUL's efforts and SDGs.

ABSTRACT

Environmental Social and Governance (ESG) is a frame-work used to assess an organization's business practices and performance on various sustainability and ethical issues. It also provides a way to measure business risks and opportunities in those areas sustainable finance is all about ethical decision –making in business and investment. It pivots on environment, social and good governance (ESG) standards (especially in asset management and corporate strategy) that customers, workers and investors demand of companies. The methodology used involves analyzing key ESG issues and indicators, which are split into three themes: Environmental, Social and Governance. The set of issues and indicators analysed will vary by industry with a specific weight placed on each issue. The four- pillars of sustainable finance are (1) Definition: Use of Proceeds, (2) Selection: Process of Project Evaluation (3) Trace-ability: Management of Proceeds, (4) Transparency: Monitoring and Reporting. Common goals include reducing greenhouse gas emission investing in sustainable energy, increasing work-place diversity and providing transparent financial practices. By integrating ESG considerations into their investment, banking, insurance, and other financial product companies can maintain profitability while making good on their customer's and investor's desires to promote sustainable practices support social causes and foster responsible governance. The metrics and disclosures proposed here have been organized in four pillars that are aligned with the SDG's and principal ESG domains: Principles of governance, planet, people and prosperity.

serinjose888@gmail.com

ABSTRACT

Gender equality has become one of the cornerstones for driving this world into a sustainable and thriving ecosystem in the contemporary time. Women's participation and contribution has proven to be an inevitable and significant component for the progress of a nation as a whole and economy in particular. This perspective article delves into the transformative role that women play in shaping the future of India through the family business domain. Historically, family businesses in India have been male-dominated, but changing societal norms, increased education, and evolving business landscapes have created opportunities for women to play a pivotal role. Drawing inspiration from the emphasis on family business, we delve into the intricate tapestry of women's influence within family businesses, illuminating their entrepreneurial behaviours, decision-making processes, and leadership styles, helping in the sustainability and transformation of family business domains. Furthermore, we examine the challenges faced by women in the family business landscape, such as gender bias and societal expectations, and propose strategies for overcoming these obstacles. Shedding light on these issues, this article contributes to a deeper understanding of how women are reshaping the future of family businesses in India and the importance of gender diversity and inclusivity for the sustained growth and prosperity of these enterprises.This paper is an integrative review based on a concise and critical literature study. The research findings reveal that women in the Indian family business landscape drive economic prosperity through inclusivity, innovation, diversity, and sustainability initiatives, contributing significantly to business and economic growth and adaptability despite the traditional barriers and challenging stereotypes.

Additionally, gender diversity within family businesses correlates with improved financial performance and resilience in the evolving market landscape. This perspective article introduces a fresh perspective on the role of women in shaping the future of India through family businesses. It distinguishes itself by emphasizing how women's contributions drive innovation and adaptation within these businesses. By triangulating gender dynamics, entrepreneurship, and family business context, it offers an innovative lens to understand and address evolving challenges, contributing to future research and practical solutions in the context of Indian family businesses.

ABSTRACT

Energy poverty (EP) is one of the most challenging problems in the contemporary world, equally affecting developed and emerging nations. Its mitigation is an important facet of the United Nations' (UN) Sustainable Development Goals (SDGs). However, the antecedents of EP have not been completely investigated. The present study augments the extant literature on the determinants of energy accessibility for the BRICS countries. Ours is one of the very few studies investigating the impact of GDP, government spending, income inequality, trade openness, and FDI on energy poverty with the help of robust panel data techniques of CS-ARDL and panel causality tests to probe the impact of select variables on EP. This study employs annual data (from 1990 to 2022) in context of BRICS countries. The econometric findings revealed that income inequality and energy intensity aggravate the problem of EP while FDI, trade openness and government spending helps in reducing the EP in BRICS economies. The current study's results hold up well under different model configurations, we were able to offer useful recommendations for energy affordability and accessibility in accordance with the SDGs.

HARVESTING KNOWLEDGE: A COMPREHENSIVE SYSTEMATIC REVIEW OF AGRICULTURAL SUPPLY CHAIN MANAGEMENT

Dr. Mohammed Farooq Pasha
Associate Professor
Govt. First Grade College, Bangalore
farooqpasha2002@gmail.com

Preethi A
Assistant Professor, Surana College, Bangalore
Research Scholar, Jain University
Preethim289@gmail.com

ABSTRACT

In response to the intricate challenges facing modern agriculture, "Harvesting Knowledge: A Comprehensive Systematic Review of Agricultural Supply Chain Management" rigorously examines a broad spectrum of scholarly works, comprising articles, journals, and conference papers. The paper not only consolidates existing knowledge but also identifies gaps in the literature, suggesting avenues for future research and development in agricultural supply chain management. By citing foundational works such as that of Ivanov and Dolgui (2019) and Seuring and Gold (2012), the review establishes a robust framework for understanding the current state of agricultural supply chains and identifies areas where further investigation is warranted. As global agriculture grapples with dynamic shifts and unprecedented demands, "Harvesting Knowledge" emerges as an indispensable resource for researchers, practitioners, and policymakers alike. Rooted in evidence-based insights, the paper concludes with practical implications and recommendations, fostering a collaborative commitment towards cultivating sustainable, efficient, and resilient agricultural supply chains in the face of evolving global challenges (Blackhurst et al., 2008; Pagell & Shevchenko, 2014). This systematic review, titled "Harvesting Knowledge: A Comprehensive Systematic Review of Agricultural Supply Chain Management," aims to provide a thorough examination of the existing literature on agricultural supply chain management. With the escalating challenges facing global agriculture, the primary purpose is to unravel prevalent practices, challenges, and innovative strategies within agricultural supply chain management. The review seeks to contribute to a nuanced understanding of the complexities involved in production, distribution, and consumption processes, shedding light on key considerations for stakeholders in the agricultural sector. Employing a systematic approach, this review meticulously selects and evaluates scholarly works, including articles, journals, and conference papers.

The methodology involves a comprehensive search across reputable databases, utilizing stringent inclusion and exclusion criteria to ensure the relevance and quality of the selected literature. The information related to empirical research and viewpoint of various ASC drivers were captured, studied and analysed in detail.

Although inventory policy, demand forecasting and ASC integration were found to be important areas of ASC, they were less focused, studied and researched.

OP Jindal Global University, Sonipat
adwivedi@jgu.edu.in

ABSTRACT

This study delves into the intricate dynamics of Supply Chain Entrainment (SCE) and its impact on Organizational Performance (OP) in the context of manufacturing supply chains. Employing Partial Least Squares Structural Equation Modeling (PLS-SEM), The study employs Partial Least Squares Structural Equation Modeling (PLS-SEM) to explain the crucial contribution of supplier collaboration, information sharing, and process integration as potential enablers of SCE. Furthermore, the study investigates the moderating influence of technology adoption on the interactions among SCE and OP. The managers can leverage from the identified enablers to enhance SCE, thereby fostering improved OP. The findings from the study contribute to both academic and practical realms by offering a comprehensive understanding of the intricate mechanisms governing manufacturing supply chains, thus advancing the discourse on effective supply chain management strategies.

Assistant Professor, BBA, PES University, Bengaluru

ABSTRACT

The papers submitted for this publication represent research based on the role of event design elements. Events serve as platforms for brand representation and communication. The design elements contribute to the visual and sensory aspects of the brand, influencing how attendees perceive and remember the brand associated with the event. In addition to being aesthetically pleasing, event planning also acts as a visual language to convey the concept and goal of the gathering. An event's design can distinguish it from others in a packed schedule of events. An event may become more intriguing by using well-thought-out and unique aesthetics that help it stand out in the eyes of participants and become unforgettable. The methodology used for this paper was a literature review and the sources for the papers were from Google Scholar. The design elements contribute to the visual and sensory aspects of the brand, influencing how attendees perceive and remember the brand associated with the event. Through this study, event planners get a better understanding of the attendee's behavior to curate design elements accordingly. With the rise in cutting-edge technology elements like virtual reality and additive reality could be incorporated to improve the overall enjoyment of the event. The efficiency of event design components leads to more pleasant, lasting, and enjoyable events for participants.

tarunikaraghu@gmail.com

M Thashneem T Bhanu
Assistant Professor, BBA, PES University, Bengaluru

ABSTRACT

Flower arrangement aims to connect with nature by capturing its splendour and framing it in a unique design. It adds positivity and ambience to any hospitality industry setting. Sustainable floristry meets current and future generations' environmental, social, and economic needs. The purpose is to identify unforeseen problems in the floristry and acknowledge them for a better and sustainable environment. The methodology used is an extensive literature review, drawing on numerous research papers from Google Scholar. This paper provides an overview of the historical evolution, sustainable approaches, technologies, techniques and suggestive methods for addressing environmental impact in the floral arrangements of the hospitality industry. With technology advancing rapidly, it is crucial to utilise it positively to not harm the environment. In the floristry industry, it is essential to adopt sustainable techniques to ensure that our actions do not have a negative impact on the ecosystem.

A CASE STUDY ON HOW CAPACITY IS AFFECTING DEMAND AND IN TURN OPERATING REVENUE OF AIR INDIA

Sidharth M Chandran
Student, MBA-MS,
Amrita School of Business, Bengaluru
sidharthchandran300@gmail.com

ABSTRACT:

The majority of Indian scheduled civil aviation companies report recurring annual losses in spite of positive growth. in capacity and demand. Air India has been reporting losses year-on-year. The purpose of this study is to investigate the linkages between capacity, demand, and operating revenue of Air India for the period 2014–15 to 2018–19. The methodology includes a two-stage empirical analysis, wherein regression analysis is used in both stages for estimating the relationship between capacity and demand and demand and operating revenue. The effect of passenger load factor and Break-even load factor on operating result is also analysed. The findings suggest that, though there is a positive correlation between capacity and demand and in turn demand and operating revenue of Air India, underutilization of capacity by Air India is resulting in losses to Air India and the industry as a whole. The study can prevent operating losses to Air India in future.

Keywords: *Capacity, Demand, Operating Revenue, Passenger load factor, Break-even load factor, Operating Result.*

SUSTAINING SUCCESS: AN EMPIRICAL EXPLORATION OF ETHICAL PRACTICES AND ORGANIZATIONAL LONGEVITY

geetanjalisrinivas415@gmail.com

ABSTRACT

A spectrum of behaviors and policies governed by the principles of integrity, impartiality, and accountability constitute ethical practices within an organizational framework. A fundamental component of an organization's ethical framework is the incorporation and consistent application of ethical standards in all aspects of its operations, including employee relations, consumer interactions, decision-making, and community involvement. The significance of ethical practices has been further underscored by the globalization of business. Organizations that operate in locations with varying cultural and regulatory environments encounter the difficulty of navigating the ethical nuances that are specific to each setting. By embracing an all-encompassing viewpoint, this research attempts to reveal the ways in which cultural sensitivity and ethical adaptability bolster the resilience of organizations in an era of globalization. To analyze the responses of the participants, multiple response analysis, regression analysis, and the ANOVA test were implemented. The significant impact of investor intentions regarding company accountability is further validated by the quantitative results, underscoring the critical importance of ethical considerations in shaping investment choices.

akshaysudheert@gmail.com

Krishnakumaaran R G
Student, MBA,
Amrita School of Business, Bangalore
krishnakumaran95@gmail.com

ABSTRACT

This paper investigates the impact of generative artificial intelligence (AI) on Quality Assurance (QA) professionals and strategic decision-makers within the Information Technology (IT) sector. The focal question guiding this research is centered around understanding perceptions, challenges, and strategic considerations related to the integration of generative AI technologies. A comprehensive survey methodology encompassed questions related to awareness, perceived benefits, challenges, integration strategies, collaboration dynamics, and long-term considerations. Data analysis involved quantitative assessments of responses to derive nuanced insights into the complex landscape of generative AI adoption in the IT sector. The findings present a detailed exploration of the awareness levels, perceived benefits, and challenges associated with generative AI among QA professionals. Insights into integration strategies, collaboration dynamics, and long-term considerations from both QA professionals and decision-makers in strategic roles are synthesized to provide a holistic understanding of the landscape. The implications of this research extend to informing decision-makers and practitioners about the challenges and opportunities inherent in incorporating generative AI in QA processes and strategic planning. The nuanced insights into collaboration dynamics, workforce impacts, and strategic considerations offer practical guidance for navigating the evolving technological landscape. This research holds significance in contributing to the ongoing discourse on the intersection of generative AI, QA practices, and strategic decision-making in the IT sector. By shedding light on the perceptions and strategic considerations of professionals, it aids in developing a roadmap for organizations seeking to harness the potential of generative AI effectively.

ANALYSE THE FACTORS INFLUENCING THE ADOPTION OF ELECTRIC VEHICLE IN VARIOUS COUNTRIES – COMPARISON OF ELECTRIC VEHICLE ADOPTION RATES IN DIFFERENT COUNTRIES

Pon Barath Suva Raj P
Student,
Amrita School of Business, Bangalore
ponbarath10@gmail.com

ABSTRACT

This research dives into the diverse landscape of electric vehicle adoption across the countries India, United States of America, United Kingdom, China, Norway and Ireland to discover the factors that shaped this trend. By analysing the findings from different articles and publications, this study comprehensively examines the financial incentives, charging infrastructure, local production, regulatory policies and consumers behaviour towards electric vehicles (EV). This analysis integrates the perspectives from different studies to contribute to the understanding of the different factors that are influencing and shaping the global adoption of electric vehicles (EV). Also offering valuable insights to the policymakers and the industry experts, helping them to navigate the evolving landscape of sustainable mobility.

STUDY OF THE BEHAVIOUR OF RETAIL INVESTORS WITH RESPECT TO INVESTMENT IN ESG FUNDS

Shruti Modi
Student,
Indus Business Academy, Bangalore
fpb2224.144.shruti@iba.ac.in

Prof. Narendra Babu
Senior Assistant Professor,
Indus Business Academy, Bangalore

ABSTRACT

This study aims at studying the consumer behaviour of retail investors with respect to investment in Environmental, Social and Governance (ESG) funds. It also focuses on the awareness of retail investors for ESG funds and the reason why there has been a positive shift towards investment in ESG funds. The researcher tries to establish the relationship between awareness level of retail investors with their investment behaviour in ESG funds. Primary as well as secondary method was used to conduct the study. It was found that investment in ESG backed funds depended on the level of awareness regarding ESG. Also, more young males are having knowledge of ESG backed funds and it's not that related with level of income. So, awareness is a key factor which needs to be focused on. Also, the irony here is that inventors are investing in ESG funds but having more focus on returns of those funds.

Keywords: *Investment Behaviour, Retail Investors, Environmental, Social and Governance, Awareness.*

A STUDY ON IMPACT OF SUSTAINABLE DEVELOPMENT GOALS ON SHAREHOLDER VALUE: WITH SPECIAL REFERENCE TO LISTED COMPANIES IN INDIA

Maya Patil
Research Scholar,
International School of Management Excellence, Bangalore
mayap.isme20@gmail.com

Dr. Geetha Rajaram
Research Guide,
International School of Management Excellence, Bangalore

ABSTRACT

This research aimed to comprehensively evaluate sustainable development goals adaptation in Indian corporations, providing insights into strategies, challenges, and impact for fostering a more sustainable future. Utilizing bibliometric analysis with Scopus search criteria, the study identified a rising trend in sustainable development goals adaptation in India, potentially driven by corporate awareness and investor demands from 2016 to 2023. The sector wise analysis reveals, SDG is driven by social sciences with 33.1%, environmental science with 17.8% and business management with 11% subject wise, emphasizing and the importance of social and environmental dimensions & a business-centric focus. Cluster analysis reveals the five clusters about environmental policy, technological development, gender equity, entrepreneurship and governance. Poorly touched upon subjects were found to be tourism, water quality and sanitation. Bibliometric analysis, Dematel analysis, and social network analysis have been used to gain insights into the subject. Descriptive statistics showcased that the shareholder value has increased over the years and created value for shareholders during the period. Standard deviation (SD) shows some signs of volatility over the years in 2018-2020 with high SD and low volatility in 2016-17 with low SD. Over the stipulated years, shareholder value is considerably impacted by the Sustainable Development Goals (SDG). The absence of statistical significance suggests that there is no proof, in the model's current form, that these factors have any appreciable bearing on shareholder value. The results of the multivariate analysis do not show enough evidence to reject the null hypothesis for either the annual impact of the Sustainable Development Goals or the total shareholder value over time. This suggests that overall, there is no discernible change in shareholder value between 2016 and 2020, and that shareholder value is not significantly impacted by the Sustainable Development Goals for any year. Key themes, including environmental performance and social factors, provide strategic guidance for aligning sustainability strategies with prevalent themes, addressing critical issues for businesses and society.

NAVIGATING FINANCIAL MARKETS: AN EMPIRICAL EXAMINATION OF THE INFLUENCE OF EMOTIONAL AND PSYCHOLOGICAL WELL-BEING ON PROFESSIONAL FEMALE INVESTORS

Mr. Raveesh Ramdas
International School of Management Excellence, Bangalore

Dr. Shurlly Tiwari
Professor
International School of Management Excellence, Bangalore

ABSTRACT

The purpose of this study is to examine the complex relationship that exists between female investors in metropolitan locations between the ages of 31 and 51 and their emotional and psychological well-being. Given the increasing importance of women as investors, this research aims to understand the ways in which emotional and psychological aspects impact financial decision-making in this population. To obtain thorough insights, the research uses a mixed-methods strategy that combines surveys and in-depth interviews. Structured surveys will be used to gather quantitative data on factors like investment preferences, risk tolerance, and financial objectives. Simultaneously, in-depth interviews will be utilised to gather qualitative data, which will enable participants to express their experiences and perspectives in a sophisticated way. Emotional intelligence and investment success among female professionals are significantly correlated, according to research on "Navigating Financial Markets: Influence of Emotional and Psychological Well-Being on Professional Female Investors". The study emphasizes how cognitive biases, such as risk aversion and overconfidence, affect how people make decisions. Furthermore, evident that a supportive and welcoming work atmosphere is essential to the mental health of female investors and to their ability to bounce back from market setbacks. These results highlight the necessity of focused initiatives to address psychological issues and advance an environment that is supportive to women working in finance. The study's emphasis on urban environments is driven by the special opportunities and challenges that come with living in an urban area, which may influence female investors' emotional and psychological health. The study will investigate how personal and financial components are interconnected, considering elements including family dynamics, work-related stress, and societal expectations. The goal of this study is to provide significant new understandings to the domains of psychology and finance.

Financial institutions, legislators, and mental health specialists can all benefit from knowing how female investors' emotional and psychological well-being influences their investment decisions.

In the end, the results might open the door for customised treatments and tactics meant to improve this group's financial health and promote a more inclusive and all-encompassing approach to investment management. This research brings into light the various elements that impact the decision-making of women with special attention to investment avenues.

Roshna Thomas
Christ (Deemed to be University), Bangalore

ABSTRACT

This study has been carried out to understand the prevailing awareness and willingness among consumers to adopt the new open-source e-commerce initiative - ONDC (Open Network for Digital Commerce) backed by the Indian Government. This will be ascertained against the backdrop of five key factors and trends identified in today's e-commerce landscape - direct to consumer trend, increasing aversion towards monopolistic practices, need for convenience, and patriotism. Furthermore, the study also aims to assess any possible variation in the level of willingness contingent on the product category. This study is predominantly exploratory and takes into consideration only three product categories - food & grocery, electronics, apparel. The initiative is in its nascent stages and has not garnered the attention, trust or understanding of the general public, owing to which the respondents of the survey may not be entirely aware of the platform or its functioning. However, the questionnaire of the study is designed such that respondents are offered a rudimentary demonstration of the platform's functioning which in turn creates awareness about it. The ONDC platform with its open source interface is set to democratise and revolutionise the e-commerce landscape in India. For a platform that aims to shift the dynamic of interaction between buyers and sellers it is imperative to understand the existing levels of awareness and willingness to adopt the platform among consumers. This study intends to aid the platform in understanding its current footing in consumers' minds as well as its position with respect to existing, centralised, e-commerce platforms such as Amazon, Flipkart etc. While preliminary research on the platform, its structure, and functions have been conducted, its adoption among consumers and the factors that contribute to it remain largely unexplored.

This study aims to assess as well as improve the level of awareness about the platform while identifying the factors that play a role in consumers' adoption of the platform.

MULTIPAGE MEDICAL DOCUMENT CLASSIFICATION OF PRINTED AND SCANNED PAGES USING MACHINE LEARNING ALGORITHMS

Prof. Shreedhar Deshmukh
Assistant Professor
National School of Business Academy, Bangalore
shreedhar@nsb.edu.in

ABSTRACT

One of the most challenging projects in machine learning for text classification is extracting information from unstructured scanned documents and texts, including medical document. Medical documents usually include both typed and untyped handwritten documents written by doctors prescribed to patients. These are the collection of papers of patient went several times to clinic or hospital. It will be difficult for a doctor or a health care company to go through all the documents which is time consuming process. We have tried to develop an application call auto index system, that classifies a medical document by analysing its content and categorizing it under predefined class (e.g. Consultation, Anaesthesia, Lab Report-Culture test, Radiology, office visit) topics and creating an index of pages falling under the category. We have plenty of classes to classify but fixed the scope to four-five predefined topics namely, Progress notes, consultation, CT, Lab reports, radiology. We use term frequency technology to convert and count number of words in the medical text documents and classify them based on weightage calculation.

PES University, Bengaluru

T. K. Chethan Kumar
Student – BBA,
PES University, Bengaluru

M. Thashneem T. Bhanu
Assistant Professor,
PES University, Bengaluru

ABSTRACT

Reusing oil in the kitchen involves extending the lifespan of cooking oil by filtering and storing it for future use. This practice can save costs, reduce waste, and add flavors to dishes. Proper filtration is essential to remove impurities and maintain the oil's quality. The main purpose of choosing this topic of reusing oil in the kitchen serves multiple purposes. It promotes sustainability by reducing waste and conserving resources. Additionally, it offers economic benefits as it allows individuals to save money by extending the life of cooking oil. Exploring proper methods for oil reuse also contributes to healthier cooking practices and encourages mindful consumption in the kitchen. The paper was searched using Google Scholar. The paper explores the practicality and benefits of reusing cooking oil in kitchens. The focus is on sustainability, cost savings, and promoting healthier cooking practices. The study emphasizes monitoring and limited reuse to ensure food safety and quality. The suggestion for future improvement in your area of research which would help the hospitality industry are primary focus is cooking oil reuse I suggest exploring sustainable practices like implementing advanced waste recycling systems or developing eco-friendly packaging solutions to benefit the hospitality and event industry. This can contribute to reducing environmental impact and promoting a more sustainable approach.

Bengaluru, Karnataka

ABSTRACT

Psychological empowerment is a very crucial component in the aspect of employee empowerment. It includes the four dimensions, Meaning, Competence, Self-determination, and Impact, contributing to its different variations and levels. As a result of investigations conducted in different industries, it is noted that less attention is given to the aspect of Job Satisfaction in Connection with Psychological Empowerment. Therefore, this study discusses the Psychological Empowerment of Women Employees in leadership positions and its relationship with their Job Satisfaction. The study's significant goals are to examine which dimensions of Psychological Empowerment are strongly linked with the aspects of Job Satisfaction. A sample size of 107 was collected from 4 different private industries. The Psychological Empowerment tool of Spreitzer (1992) and the Job Satisfaction tool of Minnesota Satisfaction Questionnaire (MSQ) are used for measurement. The Questionnaire was distributed to the women employees in leadership positions in 4 different industries. The study's findings propose that Psychological Empowerment has a very significant and highly positive relationship with Job Satisfaction, and the dimensions of Self-determination and Impact have the most decisive influence. Therefore, this research illuminates the critical role psychological empowerment plays in shaping the job satisfaction of women in leadership roles. The findings underscore the importance of fostering self-determination and recognizing the impact of individual contributions in enhancing not only psychological empowerment but also overall job satisfaction among women employees in leadership positions.

This nuanced exploration adds valuable insights to the evolving discourse on employee empowerment and organizational well-being, calling for a more comprehensive integration of psychological empowerment considerations in contemporary workplace strategies.

ABSTRACT

The traditional economic models have led to significant and negative repercussions for environmental progress, as well as an unreasonable division of capital has resulted in increased ecological footprint and demographic disparities. Due to the existence of disparities in opportunities and availability of resources in the economy worldwide, it has become extremely necessary to evaluate the inter-connections between the concept of Corporate Social Responsibility (CSR) and why it is required. Further it has also become important to associate Sustainability along with CSR. Therefore, the primary aim of this study is to examine and analyse the evolution of CSR as a domain in the past two decades and also identify the evolving interrelation of CSR with sustainability. The study also makes an effort to understand the trend by reflecting on historical trends. This study uses bibliometric analysis to mark the upcoming trend in CSR and also dwells on its connection with sustainable development. Thus, on comparing the trend of the past two decades, it was found that CSR has gained a lot of traction from the research community and it is being inclined towards 17 Sustainable Development Goals. The analysis dwells into different dimensions of publication data extracted in January 2024, from the Scopus database using two different search strings and three different searching strategies. Where the United States has maintained its position as the country to produce most publications in the CSR domain, two countries namely India and China, can be observed advancing in the respective domain.

ABSTRACT

The study aims to understand the strategies used by visually impaired consumers (VIC) in acquiring product information and the challenges they face. The study also explores VIC's preferences for accessible labeling and its benefits. This study employed the qualitative approach of thematic analysis to explore the strategies used by VIC to obtain product information and their preferences for accessible labeling. A snowball sampling technique was used to recruit participants. Data was collected from VIC through semi-structured interviews. The sample size of the study is twelve. The data was analyzed by using NVivo software. The study revealed three strategies used by VIC to obtain product information, such as reliance on caregivers, staff, and technology. However, all the strategies employed have drawbacks, such as lack of autonomy and time consumption. The narratives of VIC propose solutions to these challenges faced by implementing accessible labeling on product packages. The study reported a high preference for accessible labeling in braille and QR codes. Implementing a combination of braille and QR codes on product packages will be the most beneficial strategy for VIC. Implementation of accessible labels ensures inclusion in the marketplace.

ABSTRACT

India's economy is among the fastest-growing in the world. It is anticipated that Indians will spend more time engaging in leisure activities as they climb the economic development curve. In India, there are many different options for leisure activities, but movies are still the most popular place to go for an out-of-home activity. A major contributor to the thriving film industry of the nation is the Indian cinema exhibition industry, also referred to as the Indian film exhibition sector. Smaller theatres are finding it difficult to compete with larger chains as a result of the growth, which has also increased competition and consolidation. Additionally, multiplexes have been essential in growing the market for regional language and non-Bollywood films. The expansion of multiplexes, however, has also had a big effect on conventional single-screen theatres, many of which have found it difficult to compete with the bigger chains. This study examines the gradual decline of single-screen theatres in India, highlighting the factors and challenges that either caused or contributed to this trend, as well as the rising demand for high-end, experience-driven theatres. The majority of this study is exploratory in nature because there hasn't been a lot of collaborative research on India's exhibition industry, particularly on standalone and single-screen theatres.

This study used both qualitative and quantitative methodology. The qualitative portion includes podcasts, industry reports, and interviews with professionals in the field of cinema exhibition to gain insight into how renovating or improving single-screen theatres can promote survival of the fittest. The quantitative portion consists of a questionnaire designed to comprehend consumer prospects and behaviours that are taken into account when attending a movie in a theatre, particularly in a single-screen cinema. Hypotheses testing was conducted on the questionnaire.

ABSTRACT

As our society recognizes the urgency of living sustainably, the field of interior design holds great potential for initiating transformative change. In this qualitative study, we investigate the incorporation of sustainability values into the world of interior design. Our main focus is on creating a robust framework that takes into account the temporal aspect of design processes. As our planet faces ever-increasing environmental threats, the interior design field has responded with a significant shift towards sustainable practices. As a result, there is an urgent need for comprehensive frameworks that go beyond traditional considerations such as material and energy efficiency. This research framework presents a holistic approach to sustainable design, incorporating traditional principles and adding a temporal component. It outlines key milestones and strategies for sustainable decision-making throughout the entire design process. Moreover, this research contributes to the broader dialogue on sustainable design by highlighting the interplay between temporal considerations and other crucial elements such as culture, society, and the economy. The research aim is to shed light on the temporal framework that guides sustainable design practices, providing valuable insights into how the concept of time influences the creation and maintenance of environmentally conscious living spaces. To carry out this research, we adopt a qualitative approach and conduct in-depth interviews with experienced interior designers, architects, and sustainability experts. By carefully selecting participants through purposive sampling, we ensure that our study includes diverse perspectives and experiences. By shedding light on the temporal dimension, it serves to deepen our understanding of sustainable design and its multifaceted nature. This research lays a foundation for future investigations into the practical implementation and refinement of the proposed framework within diverse design contexts.

swapna.ns@cmr.edu.in

Dr. Kanthimathinathan
Professor, School of Management
CMR University, Bangalore
kanthimathinathan@cmr.edu.in

ABSTRACT:

The vital reason behind this research is to explore customer perception on cooperative banks concerning their services. The study is exploratory in nature. To investigate the perception of customers towards services provided in Cooperative Banks, the research has been done by using both primary and secondary data. The primary data have been analyzed using SPSS. The hypothesis has been tested using the ANOVA. The overall result of the study indicates that the age factor of the beneficiaries doesn't have any influence on their perception of the cooperative banking services in Rural India.

ABSTRACT

With the rapid growth of e-commerce and online shopping, it is crucial to understand consumer perceptions, hence the researcher aims to study the perceived risks and benefits of online shopping by Indian consumers. In order to transform themselves from fierce competition, marketers need to adopt right strategies to provide superior service to satisfy consumer needs and ultimately create consumers perceived value. The benefits of online shopping are come up with potential risks that the consumer always be aware of. One of the biggest challenges of online retailer is to attract profitable customers. For the present study the researcher collected the opinions of 528 consumers, who are aware of the online shopping. For checking internal consistency and validity using Cronbach's alpha test. The data collected is analysed, summarised and controlled by using Excel and SPSS. For collecting data a structured questionnaire was administered, which includes perceptions of various risks and benefits associated with online shopping. It also includes number of factors which motivates the individuals towards online shopping. After conducting statistical analysis to identify that the more risks associated with online shopping are security, product quality and privacy at the same time the perception towards benefits from online shopping are product variety, time and cost saving determine the importance of consumer perceptions towards online shopping. The findings offer after comprehensive understanding of the risks and benefits of online shopping retailers focus on to develop more innovative strategies in terms of developing web portals, privacy and maintaining product quality, definitely online shopping business generate more revenues to the firm.

ABSTRACT

The phenomenon of Virtual Influencer (VI) marketing has experienced a significant popularity within the realm of social media, owing to the continuous and dynamic evolution of the digital landscape. The present research explores the pivotal determinants shaping social media (Instagram) Users' attitudes towards virtual influencers through Exploratory Factor Analysis. Additionally, an attempt is made to categorize the respondents based on various psychographic and demographic attributes using hierarchical and K-Means cluster analysis. EFA findings revealed four fundamental dimensions of virtual influencers namely; Attitudinal Homophily, Aesthetic Influence, Informativeness & Ad Content Value, Perceived Reciprocity and Perceived Originality.

Employing hierarchical and K-Means cluster methodologies to segment 182 respondents led to the identification of two distinct groups: VR Enthusiast and Discerning Realist. The paper contributes useful implications for marketing practitioners and brands to target these diverse segments effectively by evaluating significant traits of virtual influencers in a meaningful way.

ABSTRACT

E-leadership has become crucial for productive remote work in the quickly developing IT industry. The study examines how e-leadership affects remote work, how e-leadership may be applied in the virtual environment in the IT sector, and how remote work affects employee performance. The selection of publications using PRISMA criteria has increased the relevance of the current review. According to the current study, firms can improve communication, boost team morale, encourage goal alignment, and inspire creativity by utilizing efficient e-leadership tactics. The present review suggested that e-leaders can overcome the difficulties of remote work and guide their teams to success in the digital era with the proper strategy and use of technological tools. The study is helpful in analysing the significance of electronic leadership in the scenario of remote work.

IMPACT OF SOCIAL MEDIA MARKETING ON PURCHASE INTENTION OF GEN Z

Deepika K S
Assistant Professor, PES University, Bangalore
deepikaks@pes.edu

Dr. Ajay Massand
Associate Professor, PES University, Bangalore
ajaymassand@pes.edu

ABSTRACT

Brand marketing activities are becoming more innovative and attractive. Social media is a platform that maximizes the reach of brands. This paper emphasizes Gen Z's intentions to purchase branded products or services based on social media marketing activities and their characteristics. It aims to determine the factors impacting the purchase intention of Generation Z to a maximum extent. The critical points analysed are how Gen Z perceives brands marketed on social media (SM) and what characteristics they consider before their purchase. A sample size of 250 is considered for the analysis. The research uses a convenience sampling technique amongst Gen Z as they are primarily into Social Media usage. On applying Factor Analysis using SPSS on 20 items, the items were grouped into two main factors named Trendiness and Customer engagement. The analysis also reveals that gender does not significantly impact the purchase intention among Gen Z. This research helps the brands design their SM marketing activities focusing on the most vibrant factors that attract most of the specified target segment. It is of practical importance as Gen Z is the fresh entrant to the customer base of all brands. Gen Z's changing behaviour of adapting to new and trending social media platforms and leveraging of maximum time on social media along with easy access to the same, makes it much more important for the marketers to focus on this research results.

ABSTRACT

Bangalore, India's tech hub is witnessing the rapid growth of Cloud Kitchens, creating a unique niche in the online food segment. These delivery-only kitchens operate on a budget, offering great flexibility. Their manufacturing and distribution strategy contrasts with traditional restaurants, and other online channels of selling, thus relying heavily on data analytics and effective kitchen management for efficient distribution. Interestingly, no one has yet surveyed consumer perceptions of this market. Though a survey of consumers using structured questionnaire we try to analyse how the 4 Ps of Marketing, Product, Price, Place and Promotion influence the purchase decision of the consumers and thereon their satisfaction.

Research Scholar, Department of Commerce and Management,
Banasthali University, Rajasthan
kanchu.nekiram@gmail.com

Dr. Shikha Singh
Assistant Professor, Banasthali University, Rajasthan

ABSTRACT

India is known for being one of the largest agricultural producers and exporters globally, with agriculture contributing over 18% of the country's GDP and providing employment to approximately 60% of the workforce. However, despite this significant contribution, farming remains risky for Indian farmers. Despite being an agriculture hub in Haryana state and having ample agricultural resources in Sirsa, marketing agricultural produce remains a major challenge affecting farmers' income and livelihoods. This study aims to identify farmers' problems when marketing their farm produce in Sirsa District, Haryana. Additionally, it aims to suggest possible solutions to address these constraints and help policymakers and stakeholders develop appropriate interventions to support farmers. The study selected a sample of 50 farmers from Sirsa District, Haryana, using a purposive sampling technique, and collected data from both primary and secondary sources. The study also provides practical recommendations for policymakers and stakeholders to foster a sustainable and profitable agricultural industry.

THE OMNICHANNEL CONUNDRUM: EXPLORING CONSUMER PRIVACY CONCERNS AND DATA SECURITY PERCEPTIONS

Rahul S Menon
MBA Student, Amrita School of Business, Bangalore
rahulsmenon101@gmail.com

ABSTRACT

Omnichannel retailing, which is increasingly prevalent today, it is the new normal in consumer convenience. However, alongside this improved accessibility, there is a growing concern. Increasing worries about data protection and security. The study whose results we present below explores this key but under-researched area, attempting to answer the question of how consumers view omnichannel retailing in terms of information about themselves. We have adopted mixed method approach to conduct the survey. With the help of open-ended questions. We hope more relevant details can be collected. This research focuses on addressing below mentioned questions: In exploring omnichannel retailing, we aim to understand consumer expectations on privacy and security. We're curious about data security aspects that resonate with individuals, considering demographics, shopping habits, and tech comfort. Advocating for transparent record-keeping, we want retailers to build trust and win customer confidence. Beyond data and regulations, it's about empowering individuals to navigate the digital landscape securely. Our goal is to illuminate the delicate balance between convenience, personalization, and privacy, creating a space where businesses and individuals thrive in a relationship of convenience with robust data protection.

ABSTRACT

This research investigates the relation between visual entertainment media and aggression in the youth. The research study is an exploratory study assessing the factors which contribute towards aggressive behaviour amongst young people who are exposed to media violence portrayed through various sources of visual entertainment media. Qualitative data was gathered through interviews with 30 respondents, categorized into three groups: undergraduate students, postgraduate students, and teachers, with 10 participants in each. This segmentation facilitated a better understanding of how various age groups analyse and respond to the subject. The information gathered from the interview was examined using NVIVO. The social/cognitive theories were explored and applied to comprehend the behaviour patterns/aggression. Findings –Based on the interviews conducted for our research, it has become evident that visual entertainment media holds significant influence, often leaning towards the negative spectrum. Our findings indicate that such media can notably impact individuals' behaviour and personality, prompting changes therein. Participants emphasized the necessity of implementing restrictions or guidelines concerning the content consumed, particularly emphasizing the importance of this for individuals at impressionable ages, as exposure to certain content during this developmental stage can potentially alter personality and behaviour trajectories. Research implications-The implications of our research highlight the significant influence of visual entertainment media on individuals' behaviour and personality, particularly emphasizing its potential negative impact. Implementing age-appropriate restrictions or guidelines for media consumption is crucial, especially for impressionable individuals, to mitigate potential alterations in personality and behaviour trajectories. Additionally, fostering an understanding of the distinction between fantasy and reality within media content is essential for navigating its effects on individuals' perceptions and actions.

These findings underscore the importance of proactive measures to promote responsible media consumption and address potential adverse effects on individuals' development and well-being.

tanujab.isme20@gmail.com

Dr. Shampa Nandi
Research Guide,
International School of Management Excellence (ISME) Research Centre, Bangalore
(A recognised research centre of University of Mysore)

ABSTRACT

The major objective of this paper is to study the factors related to Technology-Organisation-Environment (TOE) context that influence the adoption of Digitization in Unorganised Retail Outlets. With this objective a study a proposed conceptual model of TOE framework was taken. A quantitative survey was conducted with unorganised retail outlets in Karnataka, India to validate the model. The survey generated 75 respondents. AMOS and SPSS were used to access the model. It is observed that the elements related to Technology in TOE (Technology-Organization-Environment) framework have a major impact on the intention to adopt technology (Digitalisation). However, the mindset of Retailers, which falls under the categories of Environment and Organization, needs to be improved in order to encourage technology adoption intention. The government might utilize the study to promote additional digitalization efforts in rural areas. They hold the ability to comprehend the needs of rural areas and adapt their work accordingly. This model can be utilized by unorganized merchants to expand their customer base and survive in the highly competitive market of today.

IMPACT OF SOCIAL MEDIA INFLUENCERS ON BEAUTY & WELLNESS PRODUCTS PURCHASE INTENTIONS

Dr. S. Shyam Prasad
Professor
International School of Management and Excellence, Bengaluru

Dr. Rameshkumar Murugesan
Professor
International School of Management and Excellence, Bengaluru

ABSTRACT:

The growth of social media has spawned a new category of celebrities - the social media influencers. Social media influencers are people who have acquired a sizable fan base on social media and monetize their influence by urging their followers to purchase goods and services. Social media has been found to play an important role in influencing purchase decisions. However, there is a lack of understanding of the extent of a social media influencer's impact on a consumer's purchase intention, particularly for beauty and wellness products. We have chosen to study beauty and wellness products for the reason that they no more remain as luxury products; they have come to be used more frequently and commonly. This is reflected in the global Beauty and Wellness Products Market size which is projected to grow from $1,610.5 billion in 2023 to $2,765.8 billion by 2030, at a CAGR of 8.03% (Fortune Business Insights). The study collected data from 386 respondents and applied PLS-SEM to identify the factors influencing purchase decisions and the moderating role of social media influencers.

DESTINATION MARKETING IN POST-PANDEMIC INDIA TO BOOST TOURISM

Geeta Ashok
Professor
International School of Management and Excellence, Bengaluru
geetaashok@isme.in

ABSTRACT

According to the Ministry of Tourism, over 6.19 million and 1.52 million foreign tourists arrived in India in 2022 and 2021 respectively compared to 10.93 million in 2019, representing a - 44% de growth. After this lull, post-pandemic weekend vacations and domestic travels are on the upswing which is helping in boosting economic activity and employment creation. In recent years, there has been a remarkable change in the way people travel. More and more people are seen travelling on long weekends and school vacations. This is majorly spurred by social media where people vlog and post about the places that they have visited. Also, resorts and hotels endorse tourist destinations with the help of influencers and celebrities. Lately, India has been very keen on destination branding to promote tourism amongst people residing in and out of India. The government supports the tourism industry through various schemes such as 'Pilgrimage Rejuvenation and Spiritual Augmentation Drive' (PRASHAD), Swadesh Darshan, 'System for Assessment, Awareness & Training for Hospitality Industry' (SAATHI), Dekho ApnaDesh, and 'The National Integrated Database of Hospitality Industry' (NIDHI). There are many more initiatives that the government is undertaking to brand India as a destination worthy of visiting. Destination marketing is a relatively new concept which is gathering momentum in India. Destination marketing is designed to attract people to a particular place and explore its origins, heritage and values. It is about creating a brand story and building a narrative around it. Brand stories are not about ads and sales pitches. These are stories which are to be told by a brand persona who connects with the core audience. It tries to project why your place is more exotic than other enticing locations. This study aims to explore the strategies that can be used to brand India as a destination for increased tourist inflow.

ABSTRACT

This study aims to address the research gap in understanding the factors influencing adventure tourists in India. The rapid growth and potential of the adventure tourism sector in India make it crucial to explore and analyze the factors that impact destination visit intention and word-of-mouth intentions of adventure tourists. By examining target respondent attitude, involvement, and destination image, this study aims to provide insights into the influences on adventure tourists and their overall satisfaction with adventure tourism experiences. A questionnaire was administered to 205 adventure tourists using simple random sampling, and the collected data was analyzed using various statistical tools such as reliability analysis, independent samples t-test, one-way ANOVA analysis, correlation analysis, regression analysis, and structural equation modeling. The findings of this study will assist marketers and adventure sports organizers in developing effective strategies to attract and cater to adventure tourists in the post-pandemic era. Additionally, the study aims to provide recommendations for marketing and policy regulations that can maximize the potential of adventure tourism in India. This research contributes to the existing literature and provides a foundation for further exploration in the field of adventure tourism.

ABSTRACT

This research paper investigates the burgeoning convergence of Augmented Reality (AR), Virtual Reality (VR), and Artificial Intelligence (AI) Chatbots in the burgeoning arena of marketing. While each technology individually possesses powerful potential to engage and influence consumers, their combined synergy presents an unprecedented opportunity for immersive, interactive, and hyper-personalised brand experiences. Drawing upon case studies and empirical data, this paper delves into the unique strengths and capabilities of each technology within the marketing landscape. AR's ability to overlay digital elements onto the physical world can be harnessed for virtual try-ons, interactive product demonstrations, and location-based marketing campaigns. VR's immersive environments unlock possibilities for virtual showrooms, product testing simulations, and gamified brand experiences. AI chatbots, powered by Natural Language Processing (NLP) and machine learning, provide 24/7 customer support, personalise product recommendations, and facilitate conversational marketing on a grand scale. This paper examines the intricate interplay between these technologies, highlighting the synergistic effects they produce. Further, it analyses the ethical considerations surrounding data privacy, user control, and potential biases within AI-powered marketing tools.

In conclusion, the paper proposes a future-oriented framework for harnessing the combined power of AR, VR, and AI chat bots to design transformative marketing strategies that drive deeper engagement, foster brand loyalty, and ultimately revolutionise the way brands connect with consumers in the digital age.

ABSTRACT

In the life cycle of a milk product, marketing proposes strategies to improve quality and sales. To tap, keep, and stay in the market, constant consumer assessments are needed to create marketing strategies that meet changing consumer behavior, as evidenced by industrialized countries. This study examined customer behavior for milk, buttermilk, curd, and ghee. The analysis reveals marketers must act to stay in business and establish customer loyalty. Based on the study, the researcher made useful recommendations for dairy marketing tactics. Finally, for India's health and development, the government should support dairy farmers and promote milk products.

BEYOND BRICK AND MORTAR UNDERSTANDING THE DYNAMICS OF PURCHASE INTENTIONS

Kavya K M
Research Scholar
Christ Deemed to be University, Bangalore
kavyathilaksana@gmail.com

ABSTRACT

The objective of this article is to create a comprehensive database of academic information on purchase intention on houses through the use of a systematic literature review (SLR). This database will help to promote global progress in research within the real estate sector. This study conducted a scoping review using papers from two well-regarded databases, Scopus and Google Scholar, spanning the years 1993 to 2023. The research also included a theme analysis method, as described by (Arksey & O'Malley, 2005). A total of 289 articles were assessed for inclusion based on predetermined criteria, and 178 of them were subjected to evaluation utilizing the theme analysis methodology. A thematic map of purchase intention of house research was created by evaluating data from 178 papers thematically. The study identified three primary topics and their corresponding sub-themes: consumer behavior, housing qualities, variables influencing purchasing intention. These themes were crucial in gaining insights into the House Purchase Intention and understanding customer preferences for buying a house. A thematic map of House Purchase Intention research is created by evaluating data from 178 papers thematically. This study aims to offer valuable and novel perspectives on consumer apprehensions regarding home purchases in the fast-evolving residential real estate market. It also highlights the key areas that marketers, stakeholders in the housing sector, the real estate industry, and researchers should focus on, both presently and in the future.

ABSTRACT

Strategic Brand Management for Zomato through Innovative Digital Marketing Strategies" explores the dynamic interplay between digital marketing and brand management, using Zomato as a case study. In the contemporary business landscape, the digital realm plays apivotal role in shaping consumer perceptions and behaviors. This paper investigates how Zomato, a prominent food delivery and restaurant discovery platform, strategically employs digital marketing to enhance its brand. Zomato's digital marketing initiatives are dissected, revealing a multifaceted approach. The plat form engages users through social media, leveraging user-generated content and inter active campaigns to actively participate in shaping its brand narrative. Content marketing emerges as a corner stone, with Zomato curating informative and emotionally resonant content, fostering a deeper connection with its diverse audience. Adata-driven approach is also explored, highlighting how Zomato utilizes user data to personalize recommendations and promotions. This personalized approach enhances customer satisfaction and strengthens brand affinity. The paper acknowledges the ethical considerations associated with data-driven marketing while emphasizing its role in delivering tail ored user experiences. As businesses navigate the ever-evolving digital landscape, this research provides insights into the strategies that have propelled Zomato to the forefront of the industry. The symbiotic relationship between digital marketing and brand management is scrutinized, contributing to the broader understanding of the transformative power of digitalization in contemporary business.

CHALLENGES OF DIGITAL INDIA PAYMENT SYSTEM WITH SPECIAL EMPHASIS ON MOBILE PAYMENT APPLICATIONS

V. Anitha
AssistantProfessor
Departmentof Management Studies,
SriSaiRamEngineeringCollege, Chennai
ramu.mba@sairam.edu.in

ABSTRACT

The purpose of this study is to investigate the effects of digital payment systems on mobile payment applications. The fundamentals of the digital public infrastructure were laid out by the government and built upon by robust public-private partnerships, and the main motive of this study is to understand the conceptualization of the unified payment interface (UPI), which has supported India's transition to non-cash payments by facilitating direct payments linked to a bank account. UPI is a public-private partnership that the national payments corporation of India led with interoperable platform applications including Gpay, Paytm, Phonepe, etc., For this current study, the researcher has done various sequences of statistical tests intended to confirm the consistency and has applied the various statistical tools. The hypotheses were tested with smart PLS 3.0 structural equation modeling on variables. From the findings, it demonstrates that the Indian digital payment system has been a tool to eradicate black money and create notorious awareness for cashless transactions. To conclude, the Indian digital payment system has amplified awareness towards eradicating corruption and magnifying social progress with UPI forms of cashless transactions.

ABSTRACT

In today's ever-changing business landscape, designing appropriate green communication has become an increasingly complex activity for marketers. The present study aims to redefine the strategic orientation of green marketing communication by putting forth a comprehensive framework. The study seeks to identify and analyse the various antecedents that serve a pivotal role in the advancement of GMC domain. With the help of a single cross-sectional survey of 164 green apparel customers from four states of Northern India, Exploratory Factor Analysis was conducted and study offers implications for the marketers to revisit their underlying process of green communication and strengthen their GMC in a strategic manner. 12 factors emerged from 42 items through EFA and factors namely Environmental Consciousness, Harmful Future Consequences, Emotional Connect with Nature, Process Oriented Communication, Image Oriented Communication dominate among all. Deep insights into these antecedents will not only help to foster a positive attitude among consumers towards green initiatives, but also serve as a safeguard against the detrimental effects of green buzzwords and the practice of green washing. Additionally, the study offers useful implications to marketers in the design of sustainable green communication strategies. Originality of the study lies in integrating cognitive, affective, individual and strategic perspectives which will assist marketers in strengthening their promotional strategies and ultimately achieving long-term competitive advantages.

ABSTRACT

Within the dynamic milieu of collegiate admissions, influencer marketing emerges as a contemporary and influential instrument that moulds the perceptions and decisions of prospective students in the domain of higher education. Influencers can shape the student's perspectives on campus life and culture, providing first-hand experiences, and influencing institutional preferences. Institutions must carefully select influencers to ensure alignment with their values and goals, as the right influencers can authentically communicate the unique attributes of the institution, effectively reaching and resonating with the desired target audience. This research paper delves into the pivotal investigation of factors influencing the selection of influencers in the admission process, examining the nuanced criteria and considerations that institutions weigh in identifying and engaging influencers to effectively shape prospective students' decisions in higher education. "Grounded on source credibility theory", this study employs validated questionnaires from diverse sources, surveying 213 management institutes through purposive sampling methods. Data collection involved the utilization of Google Form surveys and on-site field surveys to ensure comprehensive insights. The study found that influencers' expertise, trustworthiness, and objectivity significantly influenced their credibility, with attractiveness having the least impact.

Additionally, cost and industry pressure were identified as mediators in the relationship between intention and actual use of influencers in the admission process. These research findings would help in guiding institutions to prioritize influencers with demonstrated expertise, trustworthiness, and objectivity. Socially, it promotes informed decision-making among prospective students, fostering a more transparent and credible admission process.

ABSTRACT

This paper aims to review articles on healthcare services marketing published in the past decade to identify research gaps created in the backdrop of the recent pandemic and propose a future research direction necessitated by the global crisis. A literature review is performed based on the search term "healthcare services marketing" applied to the Scopus database, resulting in a final pool of 65 articles. The authors conducted the analysis based on Callahan's 6 W framework (2014). In the last decade, healthcare service marketing research emphasised medical tourism and concentrated on service quality. Towards the end of the last decade, the research on online healthcare service marketing saw a rise indicating a trend in the field. Based on this and considering the recent pandemic, the paper proposes possible topics for future research. The growing importance of global healthcare services is well-understood post-pandemic, and there is a growing interest in this area. A comprehensive review exploring topics researched in healthcare services marketing in the preceding decade before the pandemic will help identify research trends that will need further exploration to handle future global health crises.

ABSTRACT

In the modern era of digital transformation, higher education institutions all over the world are actively exploring and adopting Artificial Intelligence (AI) to enhance learning experiences. The present study aims to unveil the pivotal factors impacting digital transformation in Higher Education (HE). Based on the exploratory qualitative design, the study integrates UTAUT framework to conceptualize the role of digital transformation in AI adoption intention and inclusive education in HE. The Study reveals that expectations of AI, personal innovativeness, self-efficacy, facilitating conditions, and effort expectancy influence digital transformation in Higher Education (HE) which further drives the AI adoption intention and inclusive education in HE. The present study provides useful insights for marketers and practitioners to understand the dynamics of AI adoption in higher education, as well as a path for institutions to overcome challenges and leverage the opportunities of digital transformation.

ABSTRACT

In recent years, AI-powered influencer marketing has emerged as a pivotal force reshaping the digital advertising landscape. This study delves into the efficacy and impact of integrating AI within influencer marketing campaigns, drawing comparisons to traditional methods. Utilizing a mixed-method approach encompassing interviews and quantitative data analysis, the research assesses AI's influence on influencer selection, campaign performance, and ethical considerations. The study's findings highlight the substantial advantages of AI-driven influencer selection over manual methods in terms of accuracy and efficiency. AI algorithms proficiently align influencers with target audiences, resulting in increased engagement rates and increased brand visibility. The real-time analytics furnished by AI tools empower marketers to leverage data-driven insights, thereby optimizing campaign strategies and decision-making processes. Influencer campaigns optimized by AI consistently surpass conventional campaigns across key metrics like reach, impressions, and ROI. The data-centric approach of AI fosters more precise and pertinent campaigns that resonate deeply with audiences, yielding tangible business outcomes. However, ethical concerns pertaining to algorithmic biases stand as critical considerations in AI-driven influencer marketing. Emphasis is placed on transparent practices and ongoing audits of AI algorithms to mitigate biases and ensure ethical influencer selections. The future of AI in influencer marketing holds promise. Advancements in AI algorithms will lead to enhanced precision in matching influencers and provide sophisticated audience insights, fostering hyper-personalized campaigns. Responsibly embracing AI technologies enables businesses to forge stronger connections with their target audiences, positioning them at the forefront of the ever-evolving realm of digital advertising.

ABSTRACT

This paper aims to present a bibliometric analysis of publications from the Scopus database on initial public offering (IPO) pricing studies. And aim to consolidate the knowledge and explore current dynamics, understand knowledge progression, elicit trends, and provide future research directions for IPO pricing research. The current research used Microsoft Excel to conduct the frequency analysis, VOS viewer for data visualisation and analysis. This study has observed that the research interest in the field of IPO pricing has been increasing annually, with China recently surpassing the United States in terms of the number of published articles. Research themes have shifted from early long-term performance and stock markets to information asymmetry and underwriter reputation. A focus on business perspectives and emerging Asian markets has become a central aspect of the research. This research successfully revealed the most influential literature, outstanding authors, and top journals in the relevant field. This not only provides us with a comprehensive and profound understanding of the formation and development of knowledge structures, but also provides a guiding direction for future academic research.

ABSTRACT

This research scrutinizes "Market Dynamics in Crisis," focusing on the repercussions of international shocks on India's banking and corporate sectors. By means of a historical analysis, with specific reference to the recession of 2008–2009, the research analyses the complex impacts of international events on India's economic resilience. Employing event study analysis on important entities—State Bank of India, Infosys, Adani Green, and Indian Oil Corporation—across sectors Nifty Bank, Nifty IT, and Nifty Energy, the research unravels intricate patterns in stock returns. The results highlight the significance of temporal dynamics by highlighting the possibility that significant events might have an impact on certain days as opposed to the full observation period. In a broader context, this research contributes vital insights into the interplay between global financial institutions, individual stocks, and market dynamics during critical junctures, guiding stakeholders in navigating crises effectively.

A STUDY ON CORPORATE VALUATION IN MINING SECTOR USING MULTIPLES APPROACH

Dhanya Gowda R
Student, PES University, Bengaluru
dhanyagowdar@gmail.com

ABSTRACT

Mining and metals are one among the best performing equity sector globally, but due to few conflicting issues like resource scarcity, pricing bubbles, demand destruction and imminent recessions, there's confusion among the investors. Recently, the equity and commodity prices have exceeded the expectations level and the importance of mining on the economy is evident. Thus, commodities have attracted long-time investments as they protect against currency devaluation and are a safe haven during economic crisis. Thus, it is important to know how to do valuation of the mining companies. Predicting the valuation of these companies is complex. Though there are numerous methods of valuation to value the sector many are neither applicable nor useful. The factors to be considered while valuing companies are: financing risk, price cyclicality, changes in capital and operating cost structures, volatility in stock market, etc. The objective of this research paper is to understand the valuation of mining sector by applying multiples approach and its effectiveness and limitations involved. From the top nine mining companies in India one company is selected for multiple valuation process and peer group comparison is made to arrive at the results. The research is completely based on the secondary data obtained from various sources available online.

Dr. Anuradha Samal
Assistant Professor, Department of Business Administration, Sambalpur University

Gourav Kumar Panda
Research Scholar, Department of Business Administration, Sambalpur University
gouravkumarpanda@suniv.ac.in

ABSTRACT

This paper presents a comparative analysis of the NIFTY 100 and NIFTY 100 ESG indices, shedding light on the profound impact of Environmental, Social, and Governance (ESG) criteria within investment strategies, particularly in the context of emerging markets such as India. The study examines how the integration of ESG principles can substantially influence the risk-return profile of portfolios and contribute to their stability. The NIFTY 100 ESG index, designed to prioritize sustainable investing principles, emerges as a standout performer when contrasted with the traditional NIFTY 100 index. Notably, the former consistently exhibits more stable performance with lower volatility, even during times of economic uncertainty. This resilience suggests that ESG factors can act as a safeguard against market volatilities, providing investors with a cushion during turbulent times. The findings of this study hold critical implications for investors and policymakers alike. It underscores the potential of ESG-focused investments to align with ethical and sustainable objectives while simultaneously delivering competitive financial returns. The growing prominence of ESG considerations within the financial sector is highlighted, emphasizing their pivotal role in shaping the future landscape of investment strategies. This research contributes significantly to our broader understanding of how sustainable investing can seamlessly integrate into mainstream investment portfolios. It demonstrates the feasibility of striking a harmonious balance between ethical considerations and financial performance, particularly within the dynamic and burgeoning markets of India.

In a world increasingly conscious of environmental and social responsibilities, this comparative study serves as a beacon for investors seeking opportunities that resonate with their values. It underscores the transformative power of ESG criteria, not only as a driver of ethical investing but also as a cornerstone of sound financial decision-making in the ever-evolving global investment landscape.

tsadvaith@gmail.com

Dr. Partha Saha
Associate Professor, Amrita School of Business
Amrita Vishwa Vidyapeetham, Bengaluru

ABSTRACT

Green finance is a core part of the low carbon green growth, because it connects the financial industry, environmental improvement, and economic growth. Sustainable finance contributes to better development and better finance for economic growth. Sustainable finance is one financial instrument to fight climate change and its impacts by regulating emissions and promoting developments in renewable energy. Green Finance is a hot topic throughout the world as the environmental conditions are going worse day by day and there is need to develop projects which are eco friendly in nature the financing and funding environmental friendly projects has to go in flow as there is a responsibility to conserve and protect the nature while the business activities must function in order to increase the commerce and maintain economic balance but with the integration of activities which goes in hand with sustainability aspect. The study is basically to obtain extensive and reliable information, the study methodology employs a descriptive technique, using qualitative data collection method like preparing questionnaire for data collection. The study's key question is "on what basis bank managers provide loans to small or medium scale enterprises which focuses on eco friendly projects and how do bank managers analyse the project in terms of repayment".

praseethaprasad33@gmail.com

ABSTRACT

Navigating the intricate world of venture capital and private equity (VC/PE) raises a fundamental question: what drives these high-stakes decisions? This research, delving into the minds of VC/PE players sheds light on the metrics, motivations, and strategies behind their investment choices in the rapidly growing startup environment. Employing a qualitative survey, we delve beyond mere numbers to capture the nuanced perspectives of these influential investors. This study employs a qualitative data collection method. We conducted one-on-one, open-ended interviews with seasoned venture capitalists, private equity investors professionals, and fund managers based in Karnataka, allowing them to freely share their perspectives and experiences regarding the factors that motivate them to invest in a company. Our findings discover a multi-faceted picture of the entrepreneurial landscape. Start-up characteristics like the novel nature of their product/service, their funding stage, financial stability, and demonstrated capacity for innovation all emerge as pivotal determinants. Interestingly, the research goes beyond traditional financial metrics to reveal the crucial role of "soft factors" like the founders' vision, passion, and ability to execute. The human element, such as the ability to recognize potential and assess team dynamics, is crucial for VC/PE success. Ultimately, the practical implications of this study empower both startups and established firms. By understanding the intricate calculus guiding VC/PE choices, startups can tailor their approach and presentation to resonate with investors. For other firms, the insights gleaned offer valuable knowledge about the evolving startup ecosystem and its potential partners. In essence, this research bridges the gap between promising ventures and their financial lifelines, fostering a more vibrant and dynamic entrepreneurial landscape.

ABSTRACT

In a given locality, families living with finance and social status are herein taken into an analysis for locating the living or financing status, though developing a modelling by various approaches. Such status named by FSG in this present study, is symbolized by finance (F), Social (S) and Geography (G) for each and every family. Networking among households gets thereby formed upon finding an interaction between or among families, by FSG, and this network further leads to generation of a modelling, called by FSG modelling in this study. Expressed as theoretical study entirely, it has various usefulness to crop up entirety of a locality with regard to F, S and G features or variables, to know one family's interaction or FSG status (as an effect) upon another family. How a locality is equipped with by present resources (by F, S, G indeed) as available to or how it should be maneuverer to or many such fortunes can be described well by the study's FSG modelling. It should solve complexity in organizing among families onto their (FSG) distribution agendas or various marketing propositions or insights to bring in along with giving scopes of future research to be a doing-for aspect for a country's mankind.

Assistant Professor, *International Management Institute, New Delhi*
prateek.bedi@imi.edu

ABSTRACT

The purpose of this study is threefold. First, it examines the effect of peer working capital management (WCM) on a firm's WCM decisions, followed by investigating the heterogeneity in peer effects across financial constraints, information environment and industry competition. Finally, it explores the moderating effect of peer WCM on the relationship between WCM and Firm Value. We analyse a panel dataset including firm fixed effects and industry fixed effects. We used a two-stage least squares regression approach to overcome the endogeneity issue, using peer idiosyncratic return as an instrumental variable (IV) for endogenous variable peer WCM. The sample for this study comprises 1419 Indian manufacturing firms listed on the Bombay Stock Exchange (BSE) from 2011 to 2022. The WCM decisions of a firm are positively affected by the WCM decisions of their industry peers. It is also found that less financially constrained firms have more potent peer effects. Peer effects are more pronounced in a highly competitive environment, thus supporting the rivalry theory of mimicking. Further, mimicking working capital has a moderating impact on WCM and firm value relationships. These results are robust to alternate WCM measures, another IV and different industry peer groups. The findings will benefit firm management in making better and more effective WCM decisions, besides guiding future researchers on further studies related to peer effect in financial decision-making. To the best of our knowledge, this is a maiden study that investigates peer WCM effects on WCM decisions of a firm in an emerging market.

The existing literature on peer effects is extended by examining the impact of peers on a firm's WCM policies in the presence of financial constraints, information and rivalry theory. In addition, our findings suggest that peer WCM moderates the relationship between WCM and firm value.

sravanakathyaini@gmail.com

ABSTRACT

A healthy economy depends upon the financial service sector of a nation. Scheduled commercial banks occupy an important place in this sector by lending funds and creating saving habits of people. The aim of this study to evaluate financial performance of selected private sector banks of India by using EAGLE model. Private sector banks such as Axis Bank, HDFC Bank, ICICI Bank, IndusInd Bank and Kotak Mahindra Bank were selected based on market capitalization. To achieve this objective, the financial data of the selected sample was retrieved from the bank's annual reports for the period from 20019-2023. Ranking the banks with the help of EAGLE model. The results show that Kotak Mahindra Bank has a high mean and ranks first in Earnings and Equity. Indus Ind Bank, on the other hand, has a high mean in Growth and liquidity. The study concluded that there is a significant difference among the performance of Axis bank, HDFC bank, ICICI bank, Indus Ind bank and Kotak Mahindra bank in terms of Earning ratios, Asset Quality ratios, Growth ratios, Liquidity ratios, Equity ratios.

ABSTRACT

Examining the complex relationship between innovation and the fields of finance and human resource management, "Technological Disruption: Navigating the Future of Finance and HR Management in the Digital Age" probes the revolutionary effects of technology on these fields. The challenge of keeping up with the complexity caused by these industries' lightning-fast technological development is the driving force behind this research. There are two major holes in the current body of research: first, there has to be an analysis that takes into account the impact of technology on HR and finance as a whole; and second, there is a lack of solutions that connect theory with practice in the workplace. The main goal is to provide stakeholders with practical insights that show how technology may change finance and HR. The research makes use of a mixed-method strategy, polling HR and financial experts quantitatively and analyzing qualitative case studies from the industry. For this research 300 samples have been taken as primary research, 12 journals selected for secondary research.

To ensure sustainable and inclusive practices in the ever-changing digital environment, the report also recommends ongoing research into the development of adaptable frameworks that balance technical breakthroughs with ethical concerns.

Dr.Nisha Mary Thomas
Research Guide,
International School of Management and Excellence, Bengaluru

ABSTRACT

The value of financial literacy in the quickly changing world of finance today cannot be emphasized, particularly for IT workers who must manage unpredictable career paths and particular financial difficulties. This study looks into how IT workers' decision-making about investments is influenced by their financial literacy. Using a mixed-methods approach, the study collects detailed insights by combining quantitative surveys with qualitative interviews. Through the use of a specifically created questionnaire, the quantitative phase evaluates the financial literacy skills of IT workers by probing into their knowledge of important financial concepts, investment tools, and risk management techniques. Simultaneously, the qualitative phase uses in-depth interviews to dive into the lived experiences and decision-making processes of a chosen set of IT personnel, providing insight into the complex aspects driving their investment decisions. By demonstrating the degree to which IT professionals' investment decisions are influenced by their financial literacy, the research findings hope to add to the body of knowledge already in existence. The study intends to give useful recommendations for specialized financial education programs geared at improving the financial acumen of IT workers by identifying particular areas of strength and weakness in financial literacy. Furthermore, the study investigates how demographic factors—like age, experience level, and educational background—affect investing behaviour and financial literacy in the IT industry. The ultimate goal of this research is to educate policymakers and employers on the vital role that financial literacy plays in enabling IT staff to make wise and well-informed investment decisions.

Understanding the relationship between financial literacy and investment decision-making is crucial for promoting financial resilience and long-term success for IT workers, as firms increasingly acknowledge the value of holistic employee well-being.

ABSTRACT

In the dynamic landscape of the financial industry, the emergence of Generative AI (Gen AI) heralds a transformative era, promising streamlined transactions and hyper-personalized financial experiences. This research delves into the profound impact of Gen AI on financial services while addressing critical concerns. Employing a meticulous methodology that combines a comprehensive review of literature, academic publications, industry research, and expert opinions, our study unveils the complexities of Gen AI. The major findings underscore its potential for enhanced efficiency, improved customer experiences, and strengthened risk management. However, shadows of concern loom, including algorithmic biases and potential liquidity risks. We advocate for clear regulatory frameworks and human oversight to ensure accuracy, trust, and ethical standards. The interconnectedness of the financial system introduces the specter of systemic risk, emphasizing the need for cautious integration. While Gen AI holds the promise of a brighter financial future, our research emphasizes the importance of patience and diligence to navigate its evolution responsibly. In paving the way for Gen AI integration, we contribute to creating a symbiotic relationship between technology and finance for the benefit of all stakeholders.

IMPACT OF SOCIAL ENTREPRENEURSHIP ON ECONOMIC GROWTH IN LOW- AND MIDDLE-INCOME COUNTRIES

Dr. Gunjan Dwivedi
Assistant Professor, Amity Business School,
Amity University, Madhya Pradesh
dwivedigunjan0586@gmail.com

ABSTRACT

In recent years, social entrepreneurship has grown in significance and scope. Economic growth on the other hand is also an integral part of research for understanding the condition of any nation. The purpose of present study was to examine the effect of social Entrepreneurship on economic growth. The study uses yearly data for last 12 years from 2012 to 2023 to investigate the bond between social Entrepreneurship and economic growth. It is supposed that the result of this study would spread the existing works by providing some expressive in sight to the impact of social Entrepreneurship on economy growth. The Finding of this study was that there is the impact of social entrepreneurship on economic growth in low- and middle-income counties.

ABSTRACT

Backward region development has been characterized in various ways. Development is an interaction that guarantees use of the assets of a nation, including labour assets, to build the financial development and progression of the government assistance of the local area overall. Development will incorporate both growth and distributive equity as fundamental components comprising the all out cycle. Improvement has hence to be imagined as a multi-layered process, and must be perceived as an all out frameworks issue. Since the advancement issues are multifaceted, untidy and complex, they are undeniably appropriate for the frameworks approach. India has various in backward areas, and financial improvement of these locales requires exceptional methodologies. More than 10 years there are no motivating forces to financial backers and proper infrastructure to construct foundation in backward regions. The potential motivating forces can be Assessment concessions, sponsorships in power and unrefined substance and Property at low costs. The conceivable explanation is to foster the region by redistributing the assets. There are numerous exercises which are not embraced by the confidential area because of the absence of benefits or enormous ventures included. Arrangements like water supply, sterilization and so forth, must be assumed responsibility for by the Government itself. The Government can urge the public area to check out the creation of public products by giving expense concessions and appropriations and this is the manner by which it helps in redistributing the assets.

ABSTRACT

The study primarily aims to identify the risks and challenges that impact the adoption of alternative finance. To attain the study's objective, we employed a systematic literature review (SLR) method to identify and consolidate all the risks and challenges of alternative finance models. The study used the SCOPUS database to collect relevant material and analyzed 65 articles published between 2015 and 2023. The study found 19 risks and challenges segregated into four major categories: technical risks, legal and regulatory risks, financial risks, and user-centric risks and challenges. The study concludes that these risks and challenges must be addressed through a collaborative approach for the sustainable success of alternative finance. The study is the first of its kind that employs the SLR method to elaborate comprehensively on risks and challenges associated with alternative finance and serves as a practical guide to enhance knowledge for academicians, alternative finance entrepreneurs, developers, programmers, and policymakers. Hence, the study contributes to alternative finance literature.

ABSTRACT

Central Bank Digital Currency (CBDC) is a recent global phenomenon, with just a few people familiar. Pilot testing has been successfully implemented in several regions, including India, but awareness remains low. The government intends to implement CBDC as a strategic approach to reduce the high expenses connected with physical currency manufacture and combat corruption. This digital currency is directly supervised by the Reserve Bank of India (RBI), resulting in a transparent and accountable system with no third-party involvement. The shift to CBDC not only coincides with global trends, but it also tackles local concerns by offering potential answers to issues such as currency printing costs and corruption, enabling a more efficient and safe financial environment in the country. It is a Systematic Literature Assessment of secondary data, from various sources on fintech departments during the last ten years. The researcher identifies a correlation between CBDC-related elements, including UPI, cryptocurrency, data security, infrastructure, and illiteracy rates. The implications of this paper can be seen in various financial institutions and fintech industries across the country, providing clarity to the government and banks on whether it is appropriate to introduce this type of currency into society, as it will increase transparency and traceability, reduce reliance on cash, bring financial stability by mitigating risk, and aid in improving control over the financial system. This investigation illuminates the intricate dynamics of the industry and offers valuable perspectives on enhancing employee performance, well-being, and organizational health.

NAVIGATING THE CHALLENGE OF INTRODUCING A HYBRID WORK MODEL IN THE POST-PANDEMIC WORK CULTURE IN THE INDIAN IT SECTOR

Dr. Lakshmi Subramani
Senior Academic Manager,
SP Jain School of Global Management -Dubai Campus
lakshmi.subramani@spjain.org

ABSTRACT

As the dust settles from the pandemic's disruption, the service sector in India finds itself on the precipice of a new era: the era of hybrid work. This study delves into the evolving preferences of employees across the sector, illuminating the complex interplay between their mindsets and this burgeoning work model. Through a tapestry of quantitative and qualitative methods, the research paints a vibrant picture of this transition. Employee surveys, capturing the voices of over 500+ participants, provided a quantitative foundation. In-depth interviews with 15 individuals, representing diverse roles and demographics, added layers of richness and nuance. By delving into this data, the study unearths a trove of insights. One resounding finding is the multifaceted nature of employee preferences. Flexibility and work life balance emerge as key motivators of embracing hybrid models, with many valuing the freedom to juggle personal responsibilities and professional pursuits. The ability to escape the daily commute and create a customized workspace further fuels the appeal of remote work. However, the human need to connection and collaboration also finds its voice. Younger employees, in particular highlight the importance of in-person interactions for fostering teamwork and nurturing professional networks. The study paints a nuanced picture of the operational implications of hybrid model. While the potential for cost savings, particularly in office space, is undeniable, challenges in resource management and collaboration arise. Finding the sweet spot – the optimal balance between remote and in person workdays – becomes a crucial dance for organizations navigating this uncharted territory. Ultimately, the research offers a roadmap for navigating the complexities of hybrid work in the Indian service sector. By acknowledging the diverse needs and preferences of employees investing in technology and communication tools and fostering a culture of adaptability, organizations can unlock the full potential of this model, ushering in a new era of productivity, employee satisfaction, and ultimately, success.

ABSTRACT

Traditional Banking sector had been a dream job sector for the job seekers in the pre-COVID era though the Digital Banking was becoming popular and even traditional banks were also adopting it gradually. This paper analysed the skill needs for the new Banking 5.0 environment enriched with Fin-Tech. The study was conducted in two levels: Among retired employees and current employees. The need of the study is to analyse the adaption of employees with the dynamic environment where the traditional positions are already replaced with new positions that needs advance technical skills. The features of Smart phones along with Fin-tech attributes made the financial services quick, easy and less chances for mediation and fraudulence. The advanced technology increased the productivity per employee very high and cyber security system monitor the application-based transactions. This research analyses how the employees cop up with this higher work stress and the effect of emotional intelligence in managing work stress.

ABSTRACT

After Post Covid – 19 situations many employees are been given work from home policy. They are contributing their efforts to achieve organizational objectives. Many IT Sector Companies have closed their offices and are operating remotely. The new trend of Remote working is being developed and expenses on electricity, maintenance, rent, overheads etc are avoided by companies. Pool of employees were happy by doing work from home. The trend was quiet familiar in USA where due to extreme weather conditions employees have to do work from home. The purpose of this research paper is to find out the social, psychological and communication impacts due to Online learning, training. The employees doing work from home must attend training sessions which are mostly online in nature. This new method of learning employees needs to learn. Different platforms like Microsoft Teams, Zoom, Google Meet etc, are available for online learners. Video Conferencing become quite popular in the country. Interview tests, training sessions become common in organizations. The Research Paper is based on Secondary Data collected from different journals, newspapers etc. As per study of employee behavior many organizations observed Communication Gap between Manager to employee, Employee are not able to communicate effectively to lower-level staff and customers. Also, psychological stress is more than regular employee who works from office.

HUMAN RESOURCE DEVELOPMENT IN INDIA IN THE CONTEXT OF YOUTH EMPLOYABILITY: A CRITICAL REVIEW

Dr. Satyajeet Nanda
Associate Professor, CMS Business School, FMS
Jain (Deemed-to-be University), Bengaluru,
dr.satyajeetnanda@cms.ac.in

ABSTRACT

With a global significance of youth employment, and the heightened need to understand the conditionality surrounding youth employability, a critical review is undertaken. The objectives of the review is to critique the existing employability related policies, guidelines, data, programs, best practices, key stakeholders, challenges and gaps. The research dwells on a qualitative research method of SLR (Systematic Literature Review) using relevant existing literature/ studies/ reports from reliable sources. As part of qualitative approach, 60 literatures after being subjected through 'eligibility for inclusion' on aspects of youth employability finally ended with detailed analysis of 40 literatures. Various data emerged from different studies shows interesting insights at India's national and states level. At national level the rate of youth unemployment in India is found to be declined to 12.9% during 2020-21 as compared to 17.8% in 2017-18 for the persons in age group 15-29 years. The proportion of youth unemployment to total unemployment revealed that the youth unemployment is around 83-85% of total unemployment. This means a large portion of unemployed is comprised of youth only. This paper digs into information on the availability of training options, various initiatives and challenges in government and private sectors programs for youth employability. A study on rural youth employability in India finds an advantage for the youth who have completed their schooling in the labour market whereas joblessness is found to be high among the rural youth with poor levels of education. So the rural youth employability hinges on personal factors like financial constraints and lack of networks, as well as external factors including job scarcity and unfair recruitment practices (Venkatanarayana, 2013). Geographical isolation worsens the situation. There are critics on National Skill Development Corporation, NGOs and corporate social responsibility (CSR) initiatives which focus on skill development but post training youth employment is not appropriate. This is because of delivery issues, such as; at grassroots level, the focus is sometimes on imparting merely the low-end skills and not getting youth employed. Also, the exploitative nature of unorganized sectors in which youth end up working as disguised unemployed.

The finding of this thorough critical review provides rich insights and recommendations for youth employability programs. (a)In view of the findings that employability does not depend only on the characteristics of the individual graduates like subject knowledge, experience, skills and personality traits but also depends on the faculty, curriculum, and teaching method in university systems, proper refresher training and sensitization have to be given to the trainers.(b)As it is found that receiving career guidance may or may not be significantly (statistically) associated with the employment status, while lack of resources available to people looking for job, lack of network to the labour market and discriminatory recruitment practices may have a strong impact on employability. Hence required resources for job scrutiny, enhanced network need to be made available to the youths. The discriminatory recruitment practices should be reduced through proper sensitization, advocacy and regulation. (c)Often the exploitative nature of unorganized sectors ends up youth working as disguised unemployed. There has to be proper regulation and sensitization in the unorganized sectors. (d)In West Bengal context is found that the skill trainings for youths are sometimes not effective and quality of training are not up to the mark. This hampers the training outcomes and youth employability. An absence of a formal mechanism to review and update curriculum based on industry needs, results in outdated courses for youth training. Hence proper intervention is required in these areas (review and update curriculum) of youth training. (d)In some programmes in West Bengal, the segmentation in youth employment training without industry alignment, lack of refresher trainings for trainers leads to poor youth employment outcomes. Hence follow up training based on proper segmentation will be useful. (e)It is found that problem arises when Industries prefer nationally certified courses and not by state of West Bengal as such. Hence pan-India relevant training and certificates should be provided.

Guntur, Andhra Pradesh

ABSTRACT

Employee experience and employee engagement are crucial for the hotel industry if it wants to get a competitive edge in the cutthroat competitive market. The hotel industry consists of a wide range of services to offer to its customers and this is the reason why well-experienced and trained employee engagement is important. The purpose of this research article is to understand the perspective of the employees regarding their engagement in the hotel industry. The perspective of the employees has been understood with the help of data collection through a survey of 101 respondents by asking them 11 questions. The results of the survey analysis have shown that a vast majority of survey participants were satisfied while working in the organization, they were satisfied with the level of support they were receiving and the kind of appreciation they got while working in the hotel industry. From the overall analysis, it can be said that from the employee's perspective, their experiences and engagement have been greatly enhanced in the hotel industry.

M. Thashneem T. Bhanu
Assistant Professor, BBA, PES University, Bengaluru

ABSTRACT

The pandemic has had a significant impact on the hotel sector, changing customer interactions and business practices. These days, safety precautions like improved sanitary practices, contactless services, and social separation have become essential. The ongoing development of contactless services, the incorporation of cutting-edge technology for touch less encounters, and improved dissemination of safety precautions are potential avenues for further advancements in pandemic hospitality.

lekshmyjayaram98@gmail.com

ABSTRACT

This study aims to understand the factors driving employee's choice of WFH or office work, the factors motivating employers to bring back employees to office and how employee engagement activities impact these decisions. It seeks to identify key factors influencing decision-making and explore the potential of engagement in facilitating a smooth return to the office. This study will employ a mixed-methods approach, combining quantitative and qualitative data collection methods. We conducted a survey in the questionnaire format from the IT employees working in Karnataka/Kerala to identify the various factors contributing towards their work location decision. In depth interviews were conducted with HR professionals/decision makers in IT companies regarding the factors that motivate employers to bring back employees to office and to identify the role of employee engagement programs in the process. The findings of the study show that factors like work environment & flexibility, work life balance, connection & team bonding, financial savings affect employee decision of work location & factors like Moonlighting, Coffee badging, Training & Development, Team bonding, Communication affect employers' decision in bringing back employees to office. The practical implications of the research help IT companies in understanding the factors that contribute to employee work location decision. Employers/decision makers can attract employees to office by coming up with proper employee engagement programs.

IMPACT OF WORK FROM HOME ENVIRONMENT ON EMPLOYEES' PSYCHOLOGICAL WELL-BEING

Sriram Prabhakar
Research Scholar,
International School of Management Excellence (ISME) Research Centre, Bangalore
(A recognised research centre of University of Mysore)
sriram.prabhakar@gmail.com

Dr. M Ramesh Kumar
Associate Professor,
International School of Management Excellence, Bengaluru

ABSTRACT

To examine the relationship between the employees' perception about theoretically grounded work-from-home factors and its relationship with overall satisfaction and perceived advantage, and to investigate the impact of work-from-home outcome variables on psychological well-being. Work-from-home factors and psychological well-being components were empirically investigated using 294 responses from the IT industry. Productivity, morale, and flexibility had a significant positive impact whereas, teamwork and work-life balance had a significant negative impact on the overall satisfaction and perceived advantage. Outcome variables were significantly influencing the psychological well-being of the employees. Organizations can take a cue from this study for framing work-from-home policies for their employees in the new normal. Although prior studies show positive and negative effects on the interaction between work-from-home and psychological well-being, conclusions are limited by the way the interaction between them has been modelled.

Professor, Institute of Public Enterprise, Hyderabad, India f15ujjalm@iima.ac.in

ABSTRACT

This research explores the experiential dimensions of Vipassana meditation and its correlation with overall well-being, employing Interpretative Phenomenological Analysis (Smith, Flowers, & Larkin, 2009) as the primary research methodology. Aligned with the principles of IPA, this study aims to uncover the personal stories of individuals deeply engaged in Vipassana meditation, seeking to understand the intricate relationships between Vipassana a meditative practice and one's holistic sense of well-being. The analysis reveals a multifaceted understanding of Vipassana meditation, exposing dimensions such as heightened mindfulness, emotional equanimity, self-awareness, personal transformation, and interconnectedness. Participants consistently report transformative experiences within these themes, offering nuanced insights into the complex relationship between Vipassana meditation and holistic well-being. The findings contribute to the development of an interpretative phenomenological understanding that elucidates the complexities of meditation in the context of individual well-being. Employing an Interpretative Phenomenological Analysis (IPA) design, this study utilizes purposive sampling to select ten participants deeply engaged in Vipassana meditation.

Semi-structured interviews are conducted, recorded, transcribed verbatim, and subjected to rigorous IPA analysis involving in-depth examination of individual experiences, identification of emergent themes, and interpretative analysis.

Acknowledging limitations, including a small sample size of ten participants, potential biases in self-reporting during interviews, and contextual specificity that may limit generalizability, the study underscores the need for future research to consider larger and more diverse participant pools to enhance the applicability of findings. This research contributes to the understanding of Vipassana meditation by providing an interpretative phenomenological exploration of individuals actively practicing this form of mindfulness. The IPA methodology enriches our understanding of the intricate relationship between Vipassana meditation and well-being, offering distinctive insights into the challenges and rewards associated with meditative practices.

VALIDATION OF DIMENSIONS OF LEARNING ORGANIZATION QUESTIONNAIRE (DLOQ) FOR THE INDIAN IT INDUSTRY

Biji Varughese
Research Scholar, Fellow Program in Management,
International School of Management Excellence, Bangalore
biji_v@yahoo.com

Dr. M. Rameshkumar
Associate Professor,
International School of Management Excellence, Bangalore

ABSTRACT

A Learning Culture helps organizations be more competitive and effective in their output. The focus on this has increased manifold with the advent of new technologies at a substantial pace. Adaptation of AI is another development driving organizations to rethink their strategies for up skilling and re skilling their employees. With the advent of time, we have new learning approaches and practices in place. Dimensions of the Learning Organization Questionnaire (DLOQ), which was developed by Watkins, Yang, and Marsick (1997) and Yang, Watkins, and Marsick (1998, 2004) is a widely used tool to understand the various dimensions of the Learning Organization. This tool has been deployed internationally and used in at least 15 countries worldwide. Kim (2015) did a detailed analysis of the uses of DLOQ in the past and suggested further research on the topic. Our literature review found few studies in India where DLOQ was used. However, we did not find a study validating the tool for the Indian IT industry. This study aims to bridge this gap. While validating the instrument from an Indian perspective, it attempts to clarify some past research questions about the validity and use of the instrument. We conducted research on the Indian IT Sector with close to 400 respondents to understand their perception of the Learning Culture in their organization. As per our findings DLOQ is a reliable instrument that can be used in the Indian IT Sector. We did not find any issues with the construct validity of the instrument. DLOQ can be used to assess their current standing and progress made over time while highlighting the areas that may need intervention. Further, it can be used by practitioners to understand the relationship with other variables.

ANALYZING THE IMPACT OF INTERSECTIONAL IDENTITY ON WOMEN'S LIFE SATISFACTION AND PERCEIVED MARGINALIZATION IN HIGHER EDUCATION

Dr. Ameer Asra Ahmed
Associate Professor,
Dayananda Sagar College of Arts, Science & Commerce, Bangalore
azraahmed2015@gmail.com

Prof. Chetan TR
Assistant Professor, Jain University, Bangalore
tr.chetan@jainuniversity.ac.in

Dr. Harold Andrew Patrick
Professor & Dean,
CMS Business School, Jain University, Bangalore

ABSTRACT

Black feminist legal scholar Kimberlé Crenshaw invented inter sectionality in the early 1990s. Inter sectionality discusses how gender, colour, ethnicity, sexual orientation, gender identity, disability, class, and other discriminating systems "intersect" to generate unique dynamics and consequences. When a Muslim woman wearing the Hijab is discriminated against, it is hard to separate her gender from her Muslim identity and isolate the factors. Race, class, and gender are intersectional. This intersectional approach suggests that we must look at multiple forms of oppression and treat women as a heterogeneous category where caste, class, region, locality, language, and others affect women in different ways. For instance, Dalit women have a distinct issue than upper-caste women. People tend to portray women as a monolithic group and oversimplify their oppression as affecting all women regardless of caste or status. These common sense reasons only make sense when we compare women to males. This reductionist view of women's oppression overlooks internal distinctions, marginalising marginalised women and creating new kinds of discrimination. Some of the students daily face racism, sexism, classism, ableism, and other oppressions. The purpose of this study is to understand the ways in which the intersectional identity of girl students in higher education can influence their satisfaction with life and the extent to which their perceived marginalization by the societal norms can mediate this relationship. A research model was framed and tested to find out the direct and also the indirect effect of intersectional identity of girl students in higher education students on their life satisfaction in the presence of their percieved marginalization. The study was administered to 400 girl students across higher educational institutions in Bangalore.

The sampling technique adopted was stratified sampling and girl students across various demographics were chosen for the study. The responses obtained were analysed using SPSS software and the findings and implications were reported in the paper. The findings of the study indicates two main intersectional identities based on the results of cluster analysis and it was found that there is a significant variation in both clusters when it comes to the factors of perceived marginalization and life satisfaction. The results also indicate that perceived marginalization partially mediates between intersectional identity and life satisfaction.

INFLUENCE OF INTRINSIC MOTIVATION, ENGAGEMENT ON LEARNER'S SATISFACTION OF THE ONLINE COURSES

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence, Bangalore

Rameshkumar Murugesan
Associate Professor
International School of Management Excellence, Bangalore

ABSTRACT

The advancement of computer-assisted learning and educational technology has brought about a number of changes to higher education. Online education has been a vital part of the higher education scene during the past 20 years. The ability of online learning to provide top-notch instructional materials to a large audience without regard to time or location is one of its main advantages. In essence, a lot of teachers and students favor online learning because it offers unmatched options for equalizing educational materials. When a learner is unable to attend traditional in-person classes because of obligations like work or family obligations, online learning can be very beneficial. One of the most important factors in encouraging effective educational processes is student satisfaction with online learning. It has been determined that student satisfaction is a key factor in encouraging students to enroll in online courses since it affects their drive and engagement to finish the program. Thus, this study, which has its roots in the self-determination theory, uses structural equation modelling to examine intrinsic motivation, learner engagement and the mediating effect that it plays on learner satisfaction in online learning. Students (n = 714) were emailed online surveys using a cross-sectional technique. Data from dependable tools is gathered using convenience sampling from postgraduate students who are enrolled in online courses. Using structural equation modelling, the study discovered that learner satisfaction with the online course is mediated by student engagement.

ABSTRACT

The Study aims to examine the intricate relationship between Self-efficacy, Resilience, and Job Performance of an Employee working in the IT sector in the South zone of Coimbatore and explore the synergistic effects of these psychological constructs in the workplace. A questionnaire survey method was employed to collect data from 372 employees working in the South zone of Coimbatore IT companies. SPSS Software was used to perform data analysis. Furthermore, the study investigates how Self-efficacy influences Job performance both directly and indirectly through the mediating role of Resilience. Hence it was found that Resilience may act as a full mediator in the relationship between Self-efficacy and Job Performance of an employee. Resilience is expected to play a critical role in shaping how self-efficacy influences an employee's ability to overcome challenges, cope with stress, and ultimately enhance job performance. The findings of this study have practical implications for organizations seeking to enhance employee performance by understanding and promoting factors such as self-efficacy and resilience. By identifying the mediating role of resilience, organizations can develop targeted interventions and training programs to bolster employees' belief in their capabilities and equip them with the skills to navigate challenges effectively, thereby fostering improved job performance and overall workplace well-being.

ABSTRACT

Emotional Intelligence is a type of cognitive ability, a soft skill which has many benefits and is consider important in many industries for the success of a leader, performance and overall work culture. In Indian construction industry concept of Emotional Intelligence is unexplored or we can say the concept itself is not introduced and understood. The aim of this paper is to understand and reinforce the conceptual understanding of Emotional intelligence and its competencies in Indian construction industry. For the study we have searched literature available in Scopus, Web of Science and Google Scholar and UGC care. Relevant keywords like emotional intelligence, Construction worker, Project Manager, Emotional Intelligence were used to discover publications. The publication selected based on the theme. The study on the importance of Emotional intelligence in construction industry has been introduced in the developed countries but it is not been introduced, understood or researched in the developing countries. The conception of Emotional Intelligence has made outstanding importance in other industries when the concept was introduced either by management, researchers, or human resource. But the importance of Emotional Intelligence has not been introduced or researched in construction industry. Since the research on Emotional Intelligence pertaining to construction industry are not done the way it explored and researched in other industry. Very few publications are available which are relevant for the review. In spite the term is well researched in other industry and the publications available but the number of publications reviewed may not relevant to construction industry and or can be exhaustive.

The methodical review of the literature which is available have given an insight to introduce the knowledge of EI research in construction industry which will further help the leadership team and management for the successful completion of project with good interpersonal relationship.

Prof.Narendra Babu BV
Senior Assistant Professor,
Indus Business Academy, Bangalore

ABSTRACT

This abstract explores the concept of attrition in organizations, emphasizing its impact on workforce and customer base. The company under consideration faces a 35% attrition rate, prompting strategic efforts to reduce it to the IT industry standard of 21%. Identified reasons for attrition include lack of recognition, inadequate training, and a bureaucratic approach towards human resources. The challenges posed by attrition are categorized into monetary (cost and productivity) and non-monetary (morale, knowledge loss, and customer satisfaction) aspects. This article is a case study of work force management that is linked to attrition rate. In this regard company introduced initiatives like AMIGO Program, focusing on employee engagement, and the 3:3:3 Feedback system, collecting feedback at intervals during the first three months of employment. Additionally, the company invests in Training and Development Initiatives, especially in the context of advancing technologies like AI. Future goals include ingraining values, ensuring employees understand the significance of their work, fostering autonomous teams, promoting continuous learning, and encouraging adaptability. These goals align with characteristics of a high-performing work culture. To achieve the target attrition rate of 21%, the company proposes an evolution in organizational culture. The model includes elements such as self-directing teams, vitality and learning through the 70:20:10 model, departmental appraisals, organized feedback using the STAR-E format, and peer-to-peer recognition. These components collectively contribute to the development of a high-performing work culture, emphasizing trust in intangible assets and effective communication.

Keywords: *Organisational Culture, Attrition, AMIGO Program, 3:3:3 Feedback, Training and Development Initiatives, High Performing Work Culture.*

A CASE STUDY ON HRIS IN MOTHERHOOD HOSPITAL

Tousiti Ghosh
Student, Indus Business Academy, Bengaluru
fpb2224.033.tousiti@iba.ac.in

Prof. Narendra Babu BV
Senior Assistant Professor,
Indus Business Academy, Bengaluru

ABSTRACT

Companies normally adopt technological applications to manage Human Resources function. By doing so they are able align their HR process with the changing landscapes of technology influenced services. This research paper deals with the efficiency of the human resource information system in motherhood hospital. Human Resource Information System (HRIS) is a portal widely used and is been talked in many sectors. It collates the special features and capabilities of MIS (Management information System) and facilitate towards supporting the administration with one stop information, adoption and provisions and facilitations. HRIS is a platform which facilitates the human resources management and thus helps in overall management by easing the whole process. This article is a case study from health care sector where in the organisation is in focus is currently in the process of implementing and using HRONE software. This research article is based on technology acceptance model and eco modernisation that influence the adoption of HRONE in the hospital context. The research gives an insider to all the companies out there who are still struggling with the way out to manual application of all the human resource facets. The background of the research comes from the usage of HRIS in Motherhood Hospital. Being a company of expansion, it had to develop HRIS and implement it and understand the challenges in the process of installation of the software in the company. The independent variables include the variables that are related to the employees and their behaviour and attitude towards accepting HRIS as a platform The variables may also related to implementation challenges associated with HRIS. The dependent variable may include the adoption of HRIS as a platform for managing Human resources across the organization. The article is presented as a case that reflects upon the adoption of HRIS in hospital set up. It highlights the major contributing factors towards adoption of the HRIS platform. It also highlights the major challenges and hurdles that are common while adopting a platform across the organization. The method that is been used is the qualitative in nature in terms of interview and analysing them in terms of qualitative tool. The results of the study directly impact on the implementation strategies, training as well as the challenges that are overcame have been analysed.

Also the problems that could not be met yet are to be curved through further study that will create a further study of the paper.

EXPLORING CORRELATION BETWEEN CAREER TRANSITION AND WORK-LIFE BALANCE OF OSWAL GROUP: AN EMPIRICAL STUDY

Dr. Tanu Kalsi
Assistant Professor, Government Degree College,Ramshehar,
Solan, Himachal Pradesh
tanu.kalsi21@gmail.com

ABSTRACT

Dynamically changing economy has brought metamorphic changes in the business. Businesses must undergo changes in technology, methods of production, work force and working environment. These changes increase the level of stress and increase pressure on employees. It is in the interest of the organizations to take care of the employees to maintain their work-life balance so that the employees can be retained. The dissatisfaction among employees can lead to employee turnover, which could be harmful for the organizations. The transition in the career of the employees also plays a significant role in maintenance of their work-life balance. The objective of the study is to study the relationship between career transition and work-life balance of Oswal group. For this purpose, a sample of 581 has been taken from VardhmanPolytex Ltd. of Oswal group. Primary data has been used for the study and data has been collected using the questionnaire.

A SYSTEMATIC REVIEW OF THE LITERATURE: EXAMINING THE INFLUENCE OF ETHICAL LEADERSHIP ON EMPLOYEE JOB PERFORMANCE

Garima Bajpai
Research Scholar, *Doon University, Dehradun*
garimabajpai06@gmail.com

Dr. Reena Singh
Professor, School of Management,
Doon University, Dehradun

ABSTRACT

This research constitutes an extensive exploration of ethical leadership, meticulously scrutinizing pertinent systematic literature to unravel its intricate dynamics within organizational contexts. The investigation comprehensively navigates through various dimensions, encompassing theories, measurement scales, and outcomes. To compile a robust dataset, the Scopus database is employed, collecting 311 papers spanning the period from 2005 to 2023, all centrally focused on the subject of ethical leadership. From this comprehensive pool, 48 publications are judiciously selected for a meticulous analysis, aligning with the rigorous Preferred Reporting Items for Systematic Reviews (PRISMA) protocol. The study's outcomes significantly underscore the critical importance of integrating ethical leadership, extending beyond its influence on overall employee performance to serve as a catalyst for diverse factors undertaking mediating or moderating roles within organizational frameworks. Examining the global landscape, especially in Asian nations like China, Pakistan, Malaysia, and Indonesia, reveals a noticeable surge in the emphasis on ethical leadership. This emphasis is evident through active participation in studies delving into the practical applications of ethical leadership. Empirical findings robustly affirm the positive influence of ethical leadership on performance outcomes, advocating for a broader scope that encompasses Indian organizations. This paper not only highlights the paramount significance of ethical leadership but also contributes valuable insights for future research endeavours. By synthesizing theoretical frameworks, empirical evidence, and a systematic review process, this research stands as a foundational contribution to the evolving discourse on ethical leadership. The nuanced exploration of ethical leadership within diverse organizational landscapes not only informs the current understanding but also lays the groundwork for continued exploration and development in this crucial area.

SUSTAINABLE LEADERSHIP IN THE 21ST CENTURY UNVEILING EMERGING TRENDS AND PARADIGMS THROUGH BIBLIOMETRIC ANALYSIS

Farah Johri
Research Scholar, Doon University, Dehradun
farha9677@gmail.com

Dr.Swati Bisht
Associate Professor, Doon University, Dehradun
swatiibisht@gmail.com

ABSTRACT

Researchers have worked very hard to expand our understanding of sustainable leadership (SL) over the past 20 years. The objective of this study was to examine, through publishing outputs, worldwide research trends in the field of SL. The top writers, publications, organizations, and nations were the main subjects of the analysis. The Scopus database yielded a total of 357 publications. The productivity, citations, and h-index were among the bibliometric metrics that were employed in the performance study. In addition, the scientific landscapes were visualized using the VOS viewer. Author keywords from the bibliographic coupling of co-occurrence and bibliographic co-authorship coupling among related nations were used in the graphical analysis. The outcome showed that there has been a sharp rise in the trend of SL research. Furthermore, SL has generally been related with the subjects of job satisfaction and leadership. In addition, certain other elements discovered in recent research related to SL were also identified. Since our study covered the majority of the important SL components, it serves a complementary and educational purpose.

Keywords: *Bibliometric Analysis, Author Keyword Sustainable Leadership, Organizational Citizenship Behaviour, Scopus Database, VOS viewer*.

WORKPLACE HAPPINESS - A SYSTEMATIC REVIEW

Yshab Rafiq
Research Scholar, Department of Business Administration,
Aligarh Muslim University
yshabrafiq@gmail.com

ABSTRACT

The Purpose of the study is to review the progress of research on happiness at workplace. A Systematic Review has been done by delineating the authors, unit of the study, methodology and major findings. Peer Reviewed articles published between 2008-2018 confined to the discipline –business, management, accounting and psychology written only in English which studied concepts of happiness at workplace were taken into consideration. Happiness at Workplace is taken as Subjective Happiness in this Study. Happiness Intervention Programmes, Demographic Factors, Leadership, Big 5 Personality Traits were identified as the common antecedents. Productivity, Organizational Citizenship Behaviour, Organizational Commitment were identified as the common outcomes. Research Articles published only in English are taken. Inaccessible Databases is another limitation to this Study. This Study identifies the Workplace Variables which have not been related with Happiness at Workplace. Future Research might take into consideration the identified variables to empirically test with Happiness at Workplace. Review Study related to Workplace Happiness are limited, this study in itself is a contribution to the literature by identifying novel variables which have been associated rarely with Workplace Happiness till now. This Study will help stakeholders such as Government in Human Resource Policy Making; Organizations to target those areas in an organization which can boost Happiness at Workplace. This Research contributes to the existing literature by providing a comprehensive framework aimed at enhancing happiness at workplace.

"THRIVING IN TURBULENCE: UNVEILING THE RESILIENCE-JOY NEXUS AMONG HEALTHCARE PROFESSIONALS FOR ENHANCED JOB SATISFACTION"

Harish Rawat
Research Scholar, Doon University, Dehradun
mbahr700@gmail.com

Dr. Reena Singh
Professor, School of Management,
Doon University, Dehradun

ABSTRACT

Mental illness, constituting 32% of global disability-adjusted life years, significantly impacts workplaces, particularly affecting healthcare workers who face high rates of burnout, stress, and depression. This paper explores the interplay between joy, resilience, and job satisfaction in healthcare professionals to address the pressing issue of mental health in this crucial sector. Healthcare professionals, renowned for dedication, face challenges such as excessive workloads, workplace violence, and bullying. The resulting mental health issues not only affect workers' satisfaction but also impact patients and overall workplace happiness. Despite their exceptional commitment, long hours and high-pressure circumstances often lead to reduced job satisfaction. Cultivating joy and resilience emerges as a key strategy to enhance overall satisfaction levels in this demanding profession. The capacity of a healthcare system to manage crises hinges on the well-being of its professionals, who often find themselves among the most vulnerable individuals. To ensure their mental health, identifying and minimizing risk factors in the work environment is imperative. Exhaustion, common in demanding settings, can be alleviated through resilient practices, including a clear sense of purpose, work-life balance, and adaptive coping skills. This systematic review employed a realist framework to analyze 60 selected articles from three health-related databases. Organizational-level interventions in high-income countries were studied, focusing on skills development, well-being, job satisfaction, joy, resilience, stress management, and workload. The findings underscore the need for additional research in low- and middle-income countries and for studies assessing the long-term impacts of promoting mental health in the workplace.In conclusion, fostering a joyful work environment and resilience positively influences job satisfaction and mental health in healthcare professionals, ultimately contributing to overall well-being and improving the quality of patient care. This synthesis provides valuable insights for organizational interventions to address the mental health challenges faced by healthcare workers globally.

Keywords: *Joy, Resilience, Job Satisfaction, Mental Health.*

USE OF CIRCUMSTANTIAL AND PROGRAMMATIC COACHING WHILE COACHING FOR PERFORMANCE ACROSS AGE GROUPS

ramesh@isme.in

ABSTRACT

Coaching has been defined and practised for some years. However, there's rarely been a study on whether coachees prefer circumstantial or programmatic coaching across age groups, especially while being coached for performance. This study makes an effort to understand the coaching preferences of age groups. Knowing this would aid coaches in modifying their styles while coaching these diverse age-groups. This study intends to aid Managers who are involved in Developmental Coaching. Coachees of different age groups may exhibit distinct responses to specific coaching styles, thus requiring a more subtle and refined approach. In this context, the choice between programmatic and contextual approaches is a crucial distinction among coaching methodologies. For Performance Coaching within an Indian context, the Coachee's preference is not known. Managers who coach may experience difficulties with their competence or skill set, which may limit their capacity to produce the necessary performance outcomes (Grant, 2019). The study involved a Coaching preference survey across corporations including Technology, Manufacturing, Healthcare, and Ecommerce domains. The population involved Managers who Coach for performance and employees who undergo coaching. The responses of 392 managers were analysed to find their preferences and compared to the preferences of 692 coachees.

Programmatic style was preferred by younger Coachees up to 40 years of age. Older coachees above 41 years significantly preferred a circumstantial style. Knowing this will help us eliminate any gaps and calibrate the Coaching style of Managers for better impact.

NAVIGATING SOCIAL CAPITAL FORMATION IN VIRTUAL WORK ENVIRONMENTS: THE ROLE OF DIVERSITY PERCEPTION AND INTERVENTIONS

Dr. Harold Patrick
Dean Center for Management Studies
Jain Deemed to be University, Bangalore

Dr. Moovendhan V
Associate Professor
Center for Management Studies
Jain Deemed to be University, Bangalore
dr.moovendhan_v@cms.ac.in

ABSTRACT

This study investigates the moderating impact of Diversity Challenges Management on the relationship between diversity perception and various dimensions of social capital within the virtual working environment. The analysis establishes a positive connection among diversity perception, diversity management, and social capital. Notably, a negative correlation is identified between the cognitive dimension of diversity perception and individual aspects of social capital. Moderation analysis uncovers that individual challenges develops negative social capital with second-order social capital, whereas organizational challenges do not show a significant relationship. Intriguingly, the management of both individual and organizational challenges demonstrates both negative and positive moderation in the association between diversity perception and sub-dimensions of social capital with mixed results. Survey data from 564 virtual team members in India's Information Technology industry professionals are analyzed using SMART PLS-based structural equation modeling. The findings of this research affirm that diversity perception and challenges can be surmounted in the virtual working environment. However, the present study throws some light on the need for managing organizational and individual challenges in different way for virtual working environment and much research required to develop innovative practices to overcome the identified challenges. Additionally, it aligns with prior studies in emphasizing that social capital should be considered at the sub-dimension's level. The implications and future research are discussed.

ABSTRACT

This study aims to understand the effect of work values on organizational commitment among Generation Y and Generation Z employees. This paper also attempts to study the work values and organizational commitment of these two different generations. Organizations may confront situations of confusion on how to treat two different generations in the workplace. Generation Y are those born between 1980-1995 and Generation Z are those born between 1996- 2010.As the Indian population has 52 % people belonging to this generational cohorts, a study on them is essential to get insights which will help HR professionals to make impactful decisions in the workplace. This study collected data from 120 employees of the private sector who belongs to either Gen Y or Gen Z. Lyon's work value Survey and Allen & Meyer Organizational Commitment Questionnaire were used to collect data. The study found no significant difference in the work value or Organizational Commitment between the two generations. Work value is found to significantly influence Organizational commitment in both generations. The findings can be useful for organizations to device strategies such as that for employee engagement and motivation in improving the Organizational commitment of its employees.

ABSTRACT

Work-life balance is the ability of an individual to manage their personal and professional obligations while yet finding time for relaxation and recreation. This study examines the impact of night shift on work-life balance of women employees working in IT Industries in Bangalore. This study focus on eight dimensions of work life balance such as employee motivation, flexible working conditions, job enrichment, job satisfaction, welfare and recreation, grievances, life and total work space, and family support. Sample for this study constitute women employees aged between 25 to 35 years working in IT Industries in Bangalore. Descriptive research design with convenience sampling is used and the sample size is 100 participants. Data collection is conducted through standardized questionnaire and analyses is conducted using jamovi software. This study aims to find out the important factors influencing the work life balance of women working during night and to analyze the impact of Night shift on work life balance of women working in IT Industries. The major findings are that there is negative correlation between work life balance and night shift. The coefficient for the "Night Shifts" predictor is negative and statistically significant, indicating that working night shifts is associated with a lower total score of work-life balance.

pramod.kumar.parida@ibm.com

ABSTRACT

This paper presents a comprehensive analysis evaluating provisions of the EU AI Act against key risks posed by generative AI systems. Large generative models were employed alongside a rigorous assessment framework to critically gauge the Act's coverage of issues like fairness, explainable outcomes, environmental sustainability, and financial stability. By examining alignment with high-level ethical principles and probing operational gaps, limitations become apparent despite promising intentions. While the Act pushes laudable transparency and accountability, acute generative threats demand tailored oversight tuned to complex, rapidly advancing technologies. Unclear guidance regarding safety standards and the balancing act of open-sourced models necessitates a cautious approach. Similarly, urging legal compliance overlooks unresolved statutory ambiguity as novel socio technical paradigms emerge. However concrete movement to log sustainability impacts signifies progress. Overall findings reveal moderate issue relevance but shortage of practical mechanisms across most risks. Targeted guidance and incentives rather than blanket penalties, participative design drawing collective intelligence, resolving disclosure, and copyrighting blind spots, and boosting research investment are advised. With upgrades balancing permission less innovation and public good, a layer below high-level principles, the Act can foster responsible generative stewardship. As researchers we provide an analytical methodology and risk coverage ratings to further collaborative governance.

In summary, while the EU AI Act signifies positive momentum, upgrades grounded in generative models' distinct nature are essential to realize proportional, compassionate, and inclusive technological progress that respects human dignity. Failing at the inflection point risks profound social fractures.

ABSTRACT

Even after 75 years of independence celebrated India is still a developing nation that exists only in its dreams of development. The concept of gig workers is growing in the country due to the usage of smart phones and technology. Prior to Covid-19, corruption prevented the country from growing and destroyed the economy. In western countries, the term "gig worker" did not exist. For people who work with digital platforms or online software products, the gig economy is a novel idea. Any new concept is born for a variety of causes, many of which are invisible but yet contribute significantly to the concept's creation. The two key factors that led to the creation of the gig economy concept were unemployment and technological use. Gig workers with a focus on technology have increased significantly in recent years, making a significant economic contribution to the nation. Both men and women are becoming more involved in this profession, and in the near future, there is a greater chance that this percentage will rise. The current wave of inventive technology developments has broadened and transformed the nature of corporate operations. As a result, these developments must figure out how to let people adjust the effects of different modernizations on their life. These days, comprehensive study is being conducted as a result of the Gig Economy's rapid rise and the advancement of these work relationships. A multitude of causes have contributed to the growth of the Gig as a trend in recent times. In India, it is in a promising stage.

The goal of this study is to identify the present issues surrounding the gig economy's rise. In these precarious employment arrangements, action must be taken to protect the workers and update the employment laws to match modern business practices. In developing countries like India, where unemployment is a major problem, the majority of people depend on the gig economy for their livelihood. Even though a nation's unemployment rate can be decreased with the aid of this organizational framework for jobs, it is equally important to take the workers' viewpoint into account. The Gig economy has evolved which is threatening the conventional job market (Veluchamy et al., 2021).

LEADER'S WELL-BEING AT WORK: A SYSTEMATIC REVIEW OF LITERATURE

Shivani Peer
Research Scholar
Jain University, Bangalore
shivani.peer@gmail.com

ABSTRACT

Leaders play a vital role in the functioning of an organization, and researchers have devoted considerable attention to understanding their behavior and performance. However, the wellbeing of leaders remains a neglected subject of discussion in the existing literature. There is a pressing need to draw the attention of researchers to this crucial area of study. The current research seeks to consolidate existing studies on the wellbeing of leaders, aiming to identify gaps in the literature and present these gaps as avenues for future research. The present paper employs the PRISMA Model to filter and identify 110 from ABDC-listed journals. Utilizing Van Horn's model of wellbeing, it systematically discusses various dimensions of wellbeing among leaders. The study reveals how crucial it is for organizations to prioritize leaders' well-being by combining leadership and well-being writing. This analysis has shown that a leader's well- being are highly linked to their workplace's leadership style, culture, and wellness initiatives. The study solves a literature gap by focusing on leaders' well-being. The study illuminates this neglected area and impacts leadership development and organizational strategy. The paper not only fills a significant void in the existing literature but also sets the stage for a holistic examination of leaders' wellbeing in future research endeavours. The paper explores the often-ignored area of leaders' well-being, bringing valuable insights to the existing research by highlighting this overlooked aspect.

ABSTRACT

Heutagogy or self-determined learning was defined as a logical progression to Andragogy (adult learning or self-directed learning) in 2000. Heutagogy which has theoretical underpinnings from core learning theories like behaviourism, humanism, andragogy and connectivism presents an interesting yet intriguing tapestry for a modern adult learning environment. Adaptive learning and personalized learning have areas that have challenged researchers since the evolution of teaching machines (Skinner). However, adaptive learning and personalized learning overlap with Heutagogy as they are also learner centric approaches. Technology channels like E-learning / AR / VR / AI etc. have made significant inroads into learning through innovation and the algorithms are designed around core learning theories and principles. The paper explores the opportunity of bringing together the strengths of Heutagogical principles with the modalities and practical realities of adaptive and personalized learning and create a value network around a Heutagogic learner. The paper represents work in progress, is based on comprehensive literature review and attempts to evolve a conceptual framework that captures the value network of a Heutagogical learner and a working charter that can be considered for designing and implementation by any knowledge-based organization that is looking at an autodidactic learning environment. The framework captures the constructs and variables and represents stakeholder interactions with a heutagogical learner.

FROM SMILES TO SUCCESS: UNDERSTANDING THE ROLE OF HAPPINESS IN EMPLOYEE CONFLICT MANAGEMENT AND CREATIVE OUTCOMES

Ekalavya Baruah
Director- Placements
Narsee Monjee Institute of Management Studies
ekalavya.baruah@nmims.edu

ABSTRACT

This research examines the influence of employee happiness on conflict handling behaviour and creativity in the hospitality industry. The study explores the relationship between happiness, conflict avoidance, and creative performance behaviour and presents a conceptual model that may be tested by future researchers. This knowledge can inform theoretical frameworks, guide human resource practices, and shape talent acquisition and employee engagement strategies.

ABSTRACT

Companies that offer flexible working arrangements know how employee welfare influences profits. In today's competitive market, companies spend a lot on employee satisfaction to boost productivity and meet needs. Flexible work arrangements may boost employee performance and job happiness, according to one study. Flexible work arrangements enable employees combine work and life and manage time. Workers and employers benefit from flexible work schedules, which boost productivity and profits. Financial, social, political, and economic constraints are changing living demands, and both genders must work. To achieve work-life balance and maintain healthy family life, both men and women embrace flexible working hours. With proper formality and degree planning, flex-hours can reduce stress and improve employee well-being. Flexible work allows employees to adjust as needed. It increases output, job satisfaction, workplace effectiveness, performance, quality of life, and decreased absenteeism and overtime expenditures for the organization. For this study, 110 manufacturing business employees were surveyed. The study tested the null premise that age correlates with flexible work schedule interest. Executives may be more familiar with flexible work hours than middle and lower-level employees, according to simple graphs and frequency distributions. Many companies advocate flexible work hours because they benefit employers and employees.

ABSTRACT

With the spread of the coronavirus in 2020 in India, there was a shift to a new way of working across organizations which had several impacts on employees. The work from home concept had to be adopted worldwide to adhere to the norms during the pandemic. However, post pandemic a lot of organizations have included this practice as a part of HR policy and have designed a hybrid mode of working. Therefore, it is important to understand the long-term impacts of work from home on employee performance and productivity. This paper studies the effect of work from home on employee productivity using the Job Demands-Resources model by Bakker and Demerouti, for IT employees from different companies in India. The study concludes that perception of work from home has a positive impact on employees' perception of productivity among IT employees in India, and even post pandemic employees are looking for a hybrid mode of work, instead of shifting back to the traditional mode of working from office completely. The JDR model is not tested earlier in a work from home setup for IT employees. This is an empirical study used to identify the effect of work from home perception on employee productivity perception during and post-pandemic. This study is based on primary and secondary data. The study was done on a total of 276 IT employees across different organizations in India. Data Analysis done using SPSS and AMOS software. The research suggests that while excessive demand in a WFH setup is having a negative impact on employee productivity, if the necessary resources are provided to the employees it would result substantial improvement in productivity. The study has a unique theoretical contribution in Work from Home set up, an empirical analysis of JDR model brings new perspective and it can be used to revise the HR policy aligned to our findings.

UNDERSTANDING THE CONCEPT OF MOONLIGHTING FROM THE LENS OF HUMAN RESOURCE MANAGER IN IT INDUSTRIES

Ashni Bryana James
Masters in Social Work (Human Resource Development and Management)
Christ (Deemed to be University)
ashnijames18@gmail.com

ABSTRACT

The research conducted on the topic "Understanding the concept of moonlighting from the lens of human resource managers in IT industries" aims to not only understand the perspective of employees in the human resource management department of any organization that belongs to the IT sector company but also to make them think about the various reasons due to which the employees might be engaging in moonlighting. Therefore, the research conducted can be helpful for the organization in terms of understanding what the employees are in need of and try to cater to their needs. As human resource management personnel these measures can help in improving the employees' performance as well which eventually results in betterment of the business. A qualitative nature of research was conducted for which the sample size taken was 10 using snowball and purposive sampling techniques. Moonlighting being a contemporary topic on which people have unclear thoughts as of now the saturation was reached at 7 participants out of which 3 were female and 4 were male. The data was collected using a self-developed semi-structured interview schedule with 10 open-ended questions which was transcribed and thematically analyzed. The major findings of the research include that moonlighting recently gained its popularity due to the COVID and various other reasons such as financial insecurity, employer's concerns related to moonlighting and strategies which can be used in order to deal with the cases of moonlight occurring in the organizations which are not detrimental for the employees as well as the employers. Apart from all the other findings the major finding was that the perception of the HR managers in accordance with the organization as a professional was very contrasting when compared to their personal viewpoint which influences a lot of decisions that are taken in the industry.

IMPACT OF PERCEIVED ORGANIZATIONAL JUSTICE ON ORGANIZATIONAL CITIZENSHIP BEHAVIOR AMONG EMPLOYEES IN THE IT INDUSTRY

Sneha John
Post Graduate Student, Department of Sociology and Social Work,
Christ (Deemed to be University), Bengaluru
sneha.john@msw.christuniversity.in

Dr. Mathew P M
Associate professor, Department of Sociology and Social Work,
Christ (Deemed to be University), Bengaluru
mathew.pm@christuniversity.in

ABSTRACT

Organizational justice can be a significant factor in predicting the extra-role behaviours that are discretionary in nature of the employees in an organization. In the IT industry where employee turnover intention, workload, and work pressure are high, ensuring organizational justice will be beneficial for the organization to retain the employees. As there are only very few studies conducted in this area, especially in Indian as well as Asian contexts, this quantitative study aims to understand the relationship between organizational justice (OJ) focusing on its dimensions of procedural justice, distributive justice, interactional justice, and organizational citizenship behavior (OCB) focusing on its dimensions such as Altruism, Courtesy, Civic Virtue, Sportsmanship, and Conscientiousness. The study tries to understand the correlation between perceived organizational justice and organizational citizenship behavior along with that it also investigates whether gender dynamics has any role in the perception of organizational Justice and the display of organizational citizenship behavior. The study used standardized questionnaires, ; for Organizational justice, organizational justice scale developed by: Niehoff and Moorman (1993). And for organizational citizenship behavior, Scale developed for the Asian context by Shah and Kumar (2015) was used and analyzed the data with the use of Jamovi. Spearman's Correlation, linear regression and Mann-Whitney U test were utilized to arrive at the results. The study found a positive relationship between organizational justice and organizational citizenship behavior, dimensions of organizational justice were also found to be correlating with organizational citizenship behavior. The study also found that Organizational justice had an impact on organizational citizenship behavior.

Among the employees in the IT industry, perceived procedural justice is positively correlated with OCB, perceived distributive justice dimension has the most impact on OCB and categorical gender differences do not affect the employee perception of justice and organizational citizenship behavior.

ABSTRACT

In the present-day workplaces, the role of Human Resource Management (HRM) practices is increasingly recognized as a crucial factor in shaping employee attitudes. Organizational commitment, job satisfaction, and employee engagement are essential elements to the overall well-being of the workforce, directly influencing productivity and organizational success. This set up for an exploration into understanding relationship between HRM practices and employee attitudes. As organizations strive to attract and retain top talent, understanding how strategic HRM initiatives impact the way employees perceive their roles and the organization becomes imperative. This study aims to contribute practical understanding of how technology and HRM practices intersect in Industry 4.0, shaping the attitudes of IT professionals and guiding organizations towards effective strategies in this transformative era.

RETAIL STORE MANAGEMENT SYSTEM

Priyanka MR
Student, PES University, Bangalore
knowledgegrain@gmail.com

ABSTRACT

The purpose of the study is to propose a Retail Store Management System (RSMS) that will improve customer experience and operational efficiency in retail sectors. It streamlines customer engagement, sales tracking, and inventory management by integrating technology-driven solutions. A user-friendly interface is used by the RSMS to track inventory, enabling automated reordering procedures and real-time stock-level changes. To comprehend preferences, optimize marketing campaigns, and personalize interactions, the system also uses customer relationship management tools. The RSMS aims to enable retailers with the ability to make informed decisions and quickly adapt to changing market conditions by utilizing data analytics. The paper emphasizes how the RSMS is essential to transforming retail processes, improving customer relations, and increasing overall business performance.

ABSTRACT

The Pradhan Mantri Jan Arogya Yojana (PMJAY) stands as a crucial healthcare initiative in India, striving to furnish financial protection to susceptible households by granting access to high-quality healthcare services. This research examines the efficacy of the PMJAY scheme at the state level, employing an exhaustive analysis through Technical Efficiency Frontier Analysis, using linear regressions to estimate the production function. The investigation concentrates on assessing the technical efficiency of PMJAY implementation across various states in India, utilizing a robust analytical framework. Linear regression models are employed to establish the relationship between essential input and output variables, thereby ascertaining the technical efficiency frontier. The dataset from the PMJAY website, encompassing the number of hospitals empanelled, the total patients treated under the scheme in each state, and the total number of physicians and nurses, is utilized. By considering the number of patients treated as the dependent/outcome variable and the total physicians, nurses, and total number of beds as input variables, we conduct the linear regression model and determine the frontier of the production function. The technical efficiency ratios highlight Tamil Nadu as the most efficient state and Arunachal Pradesh as the least efficient state. This study contributes to the prevailing body of literature on health policy and management, presenting a nuanced understanding of the challenges and opportunities linked with the PMJAY scheme across diverse state contexts in India. The insights derived from this research can guide evidence-based policy decisions and enrich the ongoing discourse on enhancing healthcare accessibility and outcomes for the nation's vulnerable populations.

Keywords: *PMJAY, Technical Efficiency, Linear Regression.*

TRANSFORMATIONS IN RETAIL ANALYTICS

Rajesh Rajendran

ABSTRACT

The purpose of this paper is to analyze the transformations in retail analytics and the drivers of transformation. The methodology used is Systematic Literature Review. The Retail industry has a significant position in the global economy of both developed and developing companies. The industry is one of the largest employers worldwide providing ~314 million jobs globally (ILO, 2020), and also contributes to ~15% of GDP in developed countries. The new age explosive growth in this industry is catapulted by Global Trade Integration and E-Commerce Explosion, which can seamlessly happen with effective data management and transformative Analytics of the same. This transformation that requires changes in conservative and traditional data analysis methods is fuelled by technological advancement, shifts in consumer behavior, and the inclination towards data-driven decision-making. Retail analytics, which once focused on dashboards for sales and product reporting, is evolving into a highly sophisticated stream that empowers retailers to improve customer experiences, optimization of operations, and driving of strategic business growth. This article explores the key transformations in retail analytics, highlighting the pivotal role it plays in the modern retail landscape and the drivers of the same. The key parameters observed as important for driving the transformations are (i) The change of analytical methods – focus transforming from retrospective analysis to predictive analytics governed by advanced machine learning models (ii) The Importance of consumer opinion and word-of-mouth – largely driven by Natural Language Processing (NLP) and Artificial Intelligence (AI) tools such as GPT3/4. (iii) Real-time analysis and decision making – in insights generation for quicker conversions (iv) Deep Personalization (v) Customer data as the center of other retail data entities (vi) OMNI channel integration. Ethical considerations are also deemed important and are also bound as a legal requirement in some economies. Therefore, however important the growing transformations are, some of them like AI and NLP need an extremely governed implementation. It is also observed that the COVID-19 pandemic accelerated the adoption of contactless shopping and payment methods.

This has transformed retailers to handle additional data and consume analytical insights that facilitate the integration of mobile wallets, contactless cards, and other digital payment options to provide a more convenient and hygienic checkout experience.

EXPLORING DETERMINANTS OF ADOPTION OF BLOCKCHAIN-BASED GAMES: A TEXT MINING APPROACH

Vandana Kumari
Area of Information Systems and Business Analytics,
Indian Institute of Management, Ranchi, Jharkhand
vandanakumari291@gmail.com

ABSTRACT

The study analyses the adoption factors of block chain-based games using user reviews from the google play store. It considered 13059 reviews from seven block chain gaming mobile apps. The study used LDA-based topic modelling and identified seven topics "earning", "withdrawal", "game play", "enjoyment", "game device performance", "user account creation and issues" and "reward and income features".

STUDY OF 6S LEAN MANUFACTURING TOOL IN AN INDUSTRIAL ENVIRONMENT: A REVIEW

Dr. Richa Sharma
Associate Professor, Asian Business School
Sharmadrricha24@gmail.com

ABSTRACT

Lean management is based on the 6S methodology, which was originated by the Toyota Production System between 1948 and 1975. The advanced version of the 5S lean method is the 6S methodology. The 6S lean methodology enhances the overall plant performance of any organization. This approach is being used in the sector to reduce surplus inventory, improve process flow, organize work, offer a safe working environment, and improve the work environment. The major goals of this article is to highlight the considerable benefits of 6S and to explore the 6S implementation process in all the various industrial scenarios. The report is based on an organized review of the literature that tracks the adoption of the 6S methodology in various organizations. The article examines the predominance of the various finding through literature survey and productive output achieved through 6S implementation. The results exhibit the effectiveness of the 6S tool to enhance the overall performance and to resource the company to gain non-stop improvement and higher overall performance.

ABSTRACT

This paper explores the potential of self-sovereign identity (SSI) technology to revolutionize employee identity verification processes. This paper discusses the key benefits of SSI, including simplification, enhanced security, employee empowerment, and cost reduction. The paper outlines the strategic advantages of investing in SSI, including leadership positioning, talent acquisition and retention, efficiency gains, and data security compliance. This paper addresses about SSI implementation and the future potential of digital identity.

ABSTRACT

This study examines the disruptive landscape of Industry 5.0, and explores the dynamic evolution, cutting-edge technologies that are emerging, and various applications of Artificial Intelligence (AI) in the context of the next industrial revolution. The study synthesizes current knowledge to provide insights into how Artificial Intelligence (AI) is revolutionizing diverse industries, signifies a paradigm change, with a strong emphasis on the transformation phase and the potential of Industry 5.0, tracing the evolution from mechanization to digitalization and now toward the dawn of Industry 5.0, this paper encapsulates the transformative journey that Artificial intelligence (AI) embarks upon, the key trends shaping this evolution, from Explainable AI to decentralized architectures, highlighting their role in reshaping the industrial paradigm. The real-world applications of AI, ranging from predictive maintenance to autonomous systems, illustrate the tangible impact on various sectors, emphasizing the present-day implications of this technological shift, amidst the promises of efficiency and innovation. Also, contributes to a comprehensive understanding of the role Artificial Intelligence (AI) that plays in fostering innovation, efficiency, and the opportunities and challenges, including ethical considerations, workforce transformations, and security imperatives that accompany the integration of AI into the industrial fabric sustainable development within the ever-evolving industrial landscape and examines the complex interplay between technological advancements navigating the transformative journey towards the modern industrial landscape, and processes. The dynamic interplay between the evolution, trends, and applications of AI, induces a comprehensive exploration of the next industrial revolution and its profound implications for the future.

ABSTRACT

With the growth of internet and technology, the pace of electronic commerce has enlarged, due to which consumers have started referring to online reviews before making a purchase. Such reviews have become an important source of information for online consumers. These reviews can be positive and negative, depending on one's experience. The purpose of this research is to study the impact of online reviews on the attitude of online customers. There are different types of consumers, with variant perception levels, due to which react differently to the online reviews. Therefore, this study aims at investigating the effect of such reviews on the purchasing decision of the consumers. For the purpose of research, the authors have collected the data from the online consumers' who consider online reviews before purchasing a product from the biggest online shopping sites', namely Amazon and Flipkart. Number of respondents are 400. Confirmatory Factor Analysis (CFA) and Structural Equation Modelling (SEM) techniques have been used to examine the effect of online reviews on the attitude of the consumers. The data analysis reveals that online reviews have a significant effect on the attitude of online customers. Such consumers' even change their purchasing after considering the reviews. In other words, a positive review may create a positive attitude, ending in purchase, whereas a negative review can cause negative repercussions that may discourage their purchasing decision. This study aims at online reviews from the biggest retailing sites of the country, so it would be beneficial for the marketers and the companies. The big market companies would be able to handle the grievance of the aggrieved customers, thereby creating a positive impact on the readers of the same. The findings would, thus provide managerial implications for the sellers who sell their products on Amazon and Flipkart.

Keywords: *eWOM, e-Retailing, Attitude, Amazon and Flipkart.*

CYBERSECURITY ADAPTABILITY IN THE ERA OF DIGITAL TRANSFORMATION: A COMPREHENSIVE FRAMEWORK FOR SUSTAINABLE MANAGEMENT AND CYBERCRIME PREVENTION

Ruchir Shah
MBA Business Analytics, Centre for Management Studies and Research, Ganpat University, Gujarat, India
ruchirshah23@gnu.ac.in

Dr. Suraj Shah
Chairperson, Centre for Management Studies and Research, Ganpat University, Gujarat, India

Dr. Priyanka Pathak
Chairperson, Centre for Management Studies and Research, Ganpat University, Gujarat, India,
chairperson.cms@ganpatuniversity.ac.in

ABSTRACT

The research explores the dynamic landscape of cybersecurity in the context of rapid digital transformation. The study focuses on the development of a comprehensive framework, focusing on sustainable management practices and cybercrime prevention measures. The framework addresses key dimensions such as technological advancements, organizational culture, regulatory compliance, incident response, employee behavior, supply chain security, and continuous improvement. The study involved 394 respondents, analyzing demographic variables and utilizing Confirmatory Factor Analysis (CFA) to validate the measurement model. Findings indicate the relation between supply chain security, regulatory compliance, incident response, and employee behavior, influencing the development of advanced cybersecurity technologies. Although the study provides valuable insights, limitations highlight the need for diversified samples and qualitative methods. Future research opportunities include longitudinal studies, cross-cultural investigations, and exploration of emerging technologies beyond artificial intelligence. This research aims to develop a comprehensive framework for cybersecurity adaptability, addressing sustainable management practices and cybercrime prevention measures, with a focus on technological advancements, organizational culture, regulatory compliance, incident response, employee behavior, supply chain security, and continuous improvement.

The findings emphasize the crucial role of employee behavior in integrating advanced cybersecurity technologies and demonstrate the significant positive relationship between effective incident response capabilities and the integration of such technologies. These insights have practical implications for organizations which urges them to prioritize supply chain security, regulatory compliance, and to shape employee behavior as essential elements of a comprehensive cybersecurity strategy in the digital era. The research contributes to the field by offering an innovative and comprehensive framework that links sustainable management practices with cybercrime prevention measures which provides valuable insights for organizations to navigate the complexities of the digital era.

FINTECH AND BANKING: OPPORTUNITIES AND CHALLENGES

Abijith M Kumar
MBA-MS student, Amrita School of Business,
Bengaluru, Karnataka
abijithmkumar2001@gmail.com

ABSTRACT

Banking is a bunch of services provided by the bank to its customers. Innovation and development in technology plays a crucial role to keep up in this competitive world. Fintech companies develop new products and services that helps the banks to increase and enhance their customer base. But some challenges have emerged in recent times that have impacted both banks as well as fintech companies. By deep evaluation and analysis, I have pointed out few key challenges faced by them which are critical and needed to be solved as soon as possible, these problems will be standing as my objective towards the research as follows: -

a) Negative impact of Chinese loan apps,
b) Increase in data breach and hacking.

In conclusion, this study will show how the banks with the help of the fintech companies and their technologically upgraded products can overcome these challenges.

A STUDY ON THE DEPLOYMENT OF AUTOMATED MANUFACTURING TECHNIQUES IN THE TEXTILE INDUSTRY, WITH A SPECIAL EMPHASIS ON SILK FIBRES AT RAMNAGAR

Dr. Guru Basava Aradhya S
Professor & Head, Department of Management studies
New Horizon College of Engineering, Bengaluru.
guruaradhya@gmail.com

Prof.Rajat B Hubballi
Assistant Professor, Department of Management studies
New Horizon College of Engineering, Bengaluru
rajatb570@gmail.com

ABSTRACT

The paper is centered on comprehending automated production methods. In contrasting automated and conventional production techniques, the study emphasized the former's superiority and its many benefits for customers, labourers, manufacturers, and society at broadly. The primary goal of the research is to understand what influences the textile industry in Ramnagar's adoption of both automated and traditional manufacturing techniques. The purpose of the study was to determine the factors influencing the adoption of automated and conventional manufacturing techniques, as well as the correlations between such variables alongside the automated techniques used in the Ramnagar textile industry. 50 manufacturing textile industries in Ramnagar provided responses, and convenient random sampling technique was used to gather those responses. The study was conducted using KMO and Bartlett's Test, Factor Analysis and Regression for data analysis. The research encompasses the motivations beneath and goals of implementing automated techniques, as well as various aspects of integrating and evolving automated manufacturers in Textile Industry at Ramnagar.

B.M.S. College of Engineering, Bengaluru, India
amrutham.research@gmail.com

Yathindra Lakkanna
Dept. of Fashion and Lifestyle Accessory Design
National Institute of Fashion Technology, Bengaluru, India
yathindra.lakkanna@nift.ac.in

ABSTRACT

Over the past years, e-commerce platforms have expanded substantially, providing customers with convenient shopping experiences. To enhance e-commerce websites, it's essential to grasp user engagement and factors affecting conversion rates. This optimization is achieved by aligning platforms with user expectations, thereby fostering successful online shopping experiences, and contributing to sustained growth in the dynamic digital marketplace. In this paper, we conduct a comprehensive analysis focusing on user interactions, conversion metrics, and the entire user journey within an e-commerce platform. Our exploration spans exit rates and sessions across different devices and browsers, conversion rates for various traffic sources, and the user journey from product details to checkout. Findings suggest a need for targeted improvements in mobile optimization and browser compatibility, indicated by higher exit rates on mobile devices and varying rates on different browsers. The conversion rate analysis emphasizes the varying effectiveness of traffic sources, highlighting the potential of CPM and CPC mediums, while identifying areas for improvement in referral and affiliate traffic. Examining the user journey reveals potential bottlenecks in the conversion process, especially the identified gap between user interest and completed transactions. Our study suggests improving the checkout process strategically to streamline user transactions. These insights provide actionable guidance for businesses seeking to refine their platforms and optimize performance in the ever-evolving landscape of e-commerce.

Keywords: *User Behavior Analysis, Transaction Optimization, Conversion Rates, Funnel Analysis, E-Commerce.*

ROLE OF FINTECH IN DEVELOPING CONSUMER'S FINANCIAL RESILIENCE: A SYSTEMATIC REVIEW AND FUTURE RESEARCH DIRECTIONS

hiteshubs.rsh@gndu.ac.in

Supreet Sandhu
Assistant Professor, University Business School,
Guru Nanak Dev University, Amritsar, Punjab.
supreet05@yahoo.co.in

ABSTRACT

Financial resilience among consumers is an emerging and important area of research. This study aims to shed light on the role of fintech in building consumers' financial resilience, identify major themes of research, and synthesize directions for future research in this area. A systematic literature review was performed using the Preferred Reporting Items for Systematic Reviews and Meta-Analyses protocol followed by content analysis techniques such as bibliometric analysis, and keywords co-occurrence analysis to identify the thematic clusters. Fintech can support financial resilience by promoting interventions such as financial inclusion through easy and affordable financial access, financial and digital literacy through personal financial management applications, and by enabling individuals and households to manage their finances more effectively through budgeting tools. The study also identified three major themes of scholarly work: (1) Drivers of fintech adoption, (2) Nexus between fintech and financial capabilities (financial literacy, financial inclusion, and financial behaviours/practices), and (3) Fintech and sustainable growth. The review contributes to a seminal synthesis of research on consumer's financial resilience, reflecting its current state and agenda for future research. The article is a valuable resource for academicians and practitioners interested in understanding the potential of fintech in building consumers' financial resilience.

ENHANCING E-HEALTH ASSIMILATION IN INDIAN HOSPITALS: AN INVESTIGATION INTO THE ROLE OF INSTITUTIONAL PRESSURES, TOP MANAGEMENT SUPPORT AND LEARNING CULTURE

Puneet Kour
Research Scholar, University of Jammu
kourpuneet01@gmail.com

Versha Mehta
University of Jammu
mehta.versha@gmail.com

ABSTRACT

Drawing upon the institutional theory and conceptual lenses of top management support, learning culture and absorptive capacity views of an organization, we frame and test a model that examines how the internal contextual factors mediate the effect of external institutional pressures on E-health assimilation, taking place within hospitals. It is tested empirically using survey-data from personnels working in select hospitals from Indian healthcare sector. Results using PLS-SEM, reveal that institutional pressures on one hand, affect the top management support, which creates a learning culture in the organization, necessary for E-health assimilation. On the other, these external pressures, influence absorptive capacity of the organization, which impacts the E-health assimilation in a hospital. The research throws light on potential antecedents to E-health system assimilation and establishes top management support, absorptive capacity and learning culture as crucial organizational factors affecting the phenomenon of E- health assimilation. We provide a guidance for the management and medical practitioners in hospitals to enhance top management support to achieve higher levels of absorptive capacity and cautiously develop a strong learning culture, resulting into successful E-health assimilation. By bringing to light, new insights into IT assimilation research, the present study, intends to makes a novel contribution in the concerned field.

shampa@isme.in

ABSTRACT

This research paper explores the pivotal role of digital transformation and technology ecosystems in the data storage industry, focusing on the adoption of emerging technologies. The study constructs a comprehensive theoretical framework through a questionnaire-based approach by integrating the Technology Acceptance Model (TAM) and extending it with the Stimulus Theoretical Framework. The primary aim is to identify critical factors influencing successful adoption, considering the current state of digital transformation and the dynamics of technology ecosystems within organizations. The literature review delves into influential theories such as TAM, Diffusion of Innovations, Theory of Task Technology Fit, and the Unified Theory of Acceptance and Use of Technology. These theories inform the research's theoretical framework by providing insights into the drivers of consumer acceptance of new technologies. Utilizing a mixed-methods approach, the study incorporates qualitative insights from an exploratory multi-case study, employing systematic thematic content analysis. For the quantitative aspect, a structured questionnaire grounded in TAM and the Stimulus Theoretical Framework gathers perspectives on digital transformation, technology ecosystems, perceived usefulness, ease of use, and intention to use from senior and mid-level employees in prominent storage organizations. The study categorizes user acceptance of emerging technologies - 5G, Artificial Intelligence, Cloud Computing, and Edge - in major enterprise storage entities: Dell Technologies, IBM, HPE, Hitachi Vantara, and Net App. In the results and discussion section, emphasis is placed on the impact of digital transformation and technology ecosystems, with perceived usefulness and ease of use identified as key motivators influencing employees' responses and intention to adopt.

The study systematically analyzes expected technology adoption outcomes, contributing to a deeper understanding of successful technology integration within the enterprise storage sector.

A STUDY ON THE CONSUMER PERCEPTIONS ON ELECTRICAL VEHICLES IN THE INDIAN MARKET

Dr. Ranjith P V
Associate Professor
Christ (Deemed to be University)

Tejaswi K N
Student Executive MBA
Christ (Deemed to be University)

Dr. Manish Srivastava
Professor
Christ (Deemed to be University)

ABSTRACT

This study investigates consumer perceptions regarding Electrical Vehicles (EVs) within the Indian market. The research aims to discern the attitudes, preferences, and behaviour alintentions of consumers towards EV adoption. It focuses on understanding the factors influencing consumer decision-making processes in embracing EVs over conventional vehicles. Through a meticulous examination and analysis of data collected from diverse demographic segments across India, this study endeavors to quantify the level of consumer awareness, knowledge, and sentiments regarding EVs. It seeks to measure the correlation between these perceptions and various influential factors such as infrastructure readiness, attitudes towards EVs, government policies and incentives, environmental concerns, range anxiety, psychological and economic factors, understanding of EV technologies, and social influences. By delineating the landscape of consumer perceptions and preferences towards EVs in the Indian market, this research aims to provide valuable insights for industry stakeholders, policymakers, and marketers. The outcomes of this study aspire to contribute to the development of strategies and policies aimed at fostering greater EV adoption in India while offering a comprehensive understanding of the challenges and opportunities in herent in the EV market landscape.

ABSTRACT

In an era of rapid digital transformation, the role of digital literacy in education, particularly among postgraduate students engaged in online learning, has become increasingly pivotal. This study aimed to comprehensively assess the proficiency, specific elements, perceptions, and experiences related to digital literacy in the context of online education, with the ultimate goal of informing educational strategies and enhancing the digital competence of postgraduate students. To achieve these objectives, a quantitative approach was employed, utilizing a stratified random sampling technique to select 200 postgraduate students from six universities in Western Odisha, who had engaged in online learning for at least one academic year. Data collection was conducted through a structured questionnaire consisting of 30 questions employing a 5-point Likert scale. The questionnaire covered various aspects of digital literacy, including perceptions and experiences, the impact of online learning, specific elements, and overall proficiency. Descriptive statistics and exploratory factor analysis (EFA) were utilized to analyze the data. The major findings of this study revealed that postgraduate students exhibited a moderate level of digital literacy proficiency, highlighting areas for improvement in their digital competence. When dissecting specific elements of digital literacy, students displayed varying levels of competency across different areas, with strengths in online collaboration and ethical/legal aspects but challenges in using search engines for academic research. Perceptions and experiences regarding the impact of online learning on digital literacy were diverse, underscoring the complexity of students' digital learning journeys. The exploratory factor analysis (EFA) unveiled eleven distinct components or factors, shedding light on the multifaceted nature of digital literacy among postgraduate students.

CHALLENGES AND DIFFICULTIES IN IMPLEMENTING ADAPTIVE TEACHING IN HIGHER EDUCATION

Dr. Muhammedali Chalikandy
Former Deputy Head, Department of English
Al Buraimi University College, Oman
mchalikandy@gmail.com

ABSTRACT

The purpose of this paper is to explore the difficulties and challenges that the tertiary level teachers face in their classrooms. Adaptive teaching aims at personalizing teaching and learning process to individual students' needs, level and abilities. Although in multicultural classrooms like in India the students have different learning styles, attitudes, preferences likes and dislikes interests and learning difficulties, they want success in their learning. As a result, it is imperative to use adaptive teaching techniques to help learners to achieve this common goal. However, there are a number of hurdles for the teachers to implement adaptive teaching in their classrooms. In order to examine the challenges and difficulties that the teachers face in the classrooms, ten college lecturers from one of the colleges from Kerala were interviewed using an open-ended questionnaire. The data was analysed and interpreted thematically and the result shows that the teachers have a number of hurdles in implementing adaptive teaching and learning.

ABSTRACT

This journal article investigates the intricate dynamics of cross-cultural leadership effectiveness within Bangalore's Information Technology (IT) sector that has experienced a significant growth, attracting both the foreign and domestic enterprises and emerging as a global leader in IT Industry. The study explores the nexus between demographic variables, cultural intelligence (CQ) dimensions, and the cross-cultural leadership effectiveness among IT leaders and managers. The research employs a robust methodology, including ANOVA, Chi-Square Tests, and Partial Least Squares Structural Equation Modelling (PLS-SEM) to analyse data from 413 IT Industry leaders and mangers. The findings uncover significant associations between demographic variables, cultural intelligence dimensions (Cognitive CQ, Physical CQ, Emotional CQ, and Behavioural CQ), and Cross-Cultural Leadership Effectiveness. Noteworthy results include the positive impact of Emotional CQ and Behavioural CQ on leadership effectiveness. Age, job designation, education qualification, total experience, and annual income exhibit varying degrees of influence on cultural intelligence dimensions. Importantly, the study emphasises the critical role of Cross-Cultural Leadership Effectiveness in navigating the complexities of diverse, globalized environments. Chi-Square tests reveal intricate relationships between demographic variables, cultural intelligence dimensions and Cross-Cultural leadership effectiveness.

Regression analysis using PLS-SEM emphasizes the remarkable explanatory power of the Cross-Cultural Leadership Effectiveness model, highlighting its centrality in the leadership discourse. The study suggests that a holistic understanding of cross-cultural leadership effectiveness is essential, encompassing various dimensions and factors. In conclusion, this research contributes to the evolving discourse on cross-cultural leadership by offering empirical insights and practical implications for IT leaders and organizations operating in diverse, global contexts. The findings pave the way for future research and strategic initiatives aimed at enhancing cross-cultural leadership competencies and overall organizational success.

ABSTRACT

Cultural intelligence is the ability of an individual to effectively adjust and adapt to different cultural environments. Research has shown that students with higher levels of Cultural quotient exhibit better adjustment in multicultural environments. Bangalore district selected for the study. Eight colleges comprising of 50 students each accounting total sample as 400 on random sampling basis using descriptive survey method. Data base covering of two components a) Socio-economic status. b) Cultural intelligence tool with 20 statements with four domains a) Meta Cognitive b) Cognitive c) Motivational d) Behavioral on five point Likert scale. The Analysis includes descriptive and Inferential Statistics (Chi-square and F-Test). Majority of the respondents (46%) found as 18 years of age, boys (56%),1st year and language as English (90%), second ordinal position (48%) and one sibling (40%). Academic performance with 61-72 marks (40%) and from home (56%) Regarding background majority (82%) from urban family, Hindu (58%) respondents. Majority of respondents (72%)under nuclear family and income of Rs. 75,000-1,00,000. The result indicates that 40% of respondents possess with adequate Cultural Intelligence level as compared to 60% with moderate cultural intelligence level. Regarding Mata cognitive (56%), cognitive domain (16%) and Motivation domain (48%) showed adequate level as compared to Behavior domain (38%), Established significant difference Statistically ($F=5.47^*$, $p<0.05$). Chi-square test reveals the association between socio-economic characteristics with cultural intelligence level among under graduate students found to significant ($p<0.05$).

ADAPTIVE TEACHING AS AN INVALUABLE PEDAGOGIC PRACTICE – A COMPREHENSIVE REVIEW

Dr. Jayakumari Nikesh Vadhvani
Assistant Professor,
S. S Agrawal College of Commerce and Management, Gujarat
jaya.dakhwani@gmail.com

ABSTRACT

Since the education sector is dynamic and always changing, teachers must use cutting-edge teaching strategies to address the unique requirements of their pupils and get them ready for the intricacies of the corporate world. This study examines the idea of adaptive teaching by looking at its theoretical foundations, real-world applications, and comprehensive evaluation of the literature on adaptive teaching and learning strategies. Faculties have the difficult task of getting students ready for the ever-changing needs of the working world. The review delves into the body of research on adaptive teaching approaches, the theoretical underpinnings of these approaches, and how adaptive learning affects student outcomes. This study seeks to provide insights into the efficacy and possible drawbacks of adaptive teaching and learning by synthesizing recent research.

UNVEILING THE DYNAMICS: EXPLORING THE INTERSECTION OF ACADEMIC ECOSYSTEMS AND ENTREPRENEURSHIP EDUCATION IN THE DIGITAL AGE

Prof. Shashirekha B V
Research Scholar, Department of Commerce
Christ University, Bangalore.
Shashi.bv@res.christuniversity.in

ABSTRACT

In the rapidly evolving landscape of higher education, the convergence of academic ecosystems and entrepreneurship education has emerged as a focal point for scholars and practitioners alike. This review research paper delves into the intricate dynamics that unfold at the intersection of these two realms, shedding light on the transformative impact of the digital age. The study undertakes a comprehensive analysis of the symbiotic relationship between academic ecosystems and entrepreneurship education, emphasizing the multifaceted connections that drive innovation, knowledge transfer, and economic development. Through an extensive literature review, the paper synthesizes key insights into the evolving paradigms shaping entrepreneurial education within the digital context. Examining digital technologies as enablers of innovative pedagogical approaches and collaborative frameworks forms a central theme. The paper also explores how academic institutions adapt to the demands of the digital age, leveraging technology to foster entrepreneurial mindsets among students and facilitate industry-academic partnerships. It further investigates the role of online platforms, virtual incubators, and digital resources in bridging the gap between academia and the entrepreneurial ecosystem. Additionally, the paper critically assesses the challenges and opportunities arising from the intersection, considering issues such as curriculum design, faculty engagement, and the integration of real-world experiences. The synthesis of empirical findings and theoretical perspectives provides a nuanced understanding of the complexities involved in nurturing entrepreneurship within academic settings in the digital era. This research offers valuable insights for educators, policymakers, and stakeholders seeking to enhance the integration of entrepreneurship education within academic ecosystems, providing a roadmap for navigating the evolving landscape of higher education in the digital age.

ABOUT THE CONFERENCE

Contemporary issues in management refer to the current and relevant challenges, trends, and developments that affect organizations, leaders, and managers in today's dynamic business environment. The current business environment is facing issues like geopolitical instability, trade tensions, increasing inflation and declining GDP in many nations. Further, organizations across the world are increasingly emphasizing on digital innovation, inclusive growth and sustainability. The conference will deliberate on such key issues and discuss possible options and solutions.

This conference will provide a platform for researchers, academicians, practitioners, entrepreneurs and industry experts to share their latest research findings, discuss emerging trends in management, and exchange knowledge with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants.

The event will feature keynote speeches from renowned scholars and industry leaders, and will have practitioner-led workshop sessions. The goal is to foster collaboration, exchange ideas, and inspire further research and practical implementations in the field of management. We invite original research papers for presentation from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

MESSAGE FROM THE CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore! On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 12th International Conference on 'Contemporary Issues in Management - CIM-24'.

In an era marked by geopolitical tensions and rapid technological advancements, the dynamics of management are undergoing profound changes. The influence of geopolitical shifts on business strategies, risk management and global collaborations cannot be overstated. As AI continues to advance, it brings with it both opportunities and challenges. We aim to explore how organizations are adapting to these geo political shifts, digital revolution and impact of AI on business landscape.

The program is rich and varied with eminent international and national keynote speakers. We are honored to have Prof. Harald Bolsinger, Professor of Business Ethics & Economics at Technical University of Applied Sciences Würz burg-Schweinfurt (Germany) as Chief Guest. It is a privilege to have Prof. S Sadagopan, Founder Director of IIITB as the Guest of Honor. Prof. Rajesh Bagchi from Virginia Tech (USA) and Prof. Macario Fernandes from H&H Search Partners (UK) are the keynote speakers for the conference. The participants will learn the nuances of paper development in the workshop conducted by Prof. Kirankumar Momaya, Editor-in-Chief of International Journal of Global Business and Competitiveness. At the conference, ISME proudly confers Lifetime Achievement Award to Prof. M Rammohan Rao (Former Dean- ISB Hyderabad and Former Director- IIM Bangalore) for his exceptional contribution in academics and research.

We are delighted to share that CIM24 has received papers from reputed institutions like Indian Institute of Technology Madras, Indian Institute of Technology Dhanbad, Indian Institute of Foreign Trade, University Putra Malaysia, SP Jain School of Global Management and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business Excellence, Competitiveness & Sustainability: Manufacturing, Services and Agricultural Sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference. Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,

Dr. Rony G Kurien
Dean and Conference Chair

ARGUMENTS FAVOURING TAX DEDUCTIONS AGAINST CORPORATE SOCIAL RESPONSIBILITY EXPENDITURE INCURRED BY MULTINATIONAL ENTERPRISES

Moses Pinto
Doctoral Student at the PhD in Law,
Faculty of Law at the Autonomous University of Barcelona
Universitat Autònoma de Barcelona (UAB), Barcelona, Spain.
mosesingoa@gmail.com

ABSTRACT

Why are the local taxation laws prevalent in the Host Country viewed as not being harmoniously constructed in support of the Corporate Social Responsibility (CSR) policies by the Managers of Multinational Enterprises (MNES)? Could it postulate that the Governments functioning the host country by allowing deductions against the Corporate Social Responsibility (CSR) expenditures could invoke an impetus towards the strategic alignment towards International Taxation Laws by Multinational Enterprises (MNES) while demonstrating a heightened degree of transparency which would qualify as industry best practices in declaring the CSR expenditures incurred as a function of the tax avoidance endeavour by the MNE. This kind of amalgamation of transparent practices in the realm of seeking tax deductions for an MNE's CSR expenditure could also help minimise conflicts of perception before the proponents who interchangeably refer to tax avoidance by MNEs as Tax Evasion. Therefore, it could be estimated that global CSR laws could be harmoniously constructed vis-à-vis local taxation laws in their interpretation by MNEs if encouraged by the governments of the host country.

A REVIEW OF GREEN ECONOMY AND ITS RELATED CONCEPTS

Rimli Rajan
Research Scholar
CMR University, Bengaluru
rimli23rajan@gmail.com

ABSTRACT

The term green economy has been considered as a major impetus for sustainable development. But still, the green economy is faced with severe shortcomings and tensions within its definitions and discourses. Due to lack of adequate data with respect to transformation towards green economy, still there is a lot of inconsistencies. The concept of green economy involves various concepts and its connection with sustainability is obscure. This paper considers the various concepts, definitions and measurement methodologies towards green economy. It also focuses on monitoring the OECD green growth framework, different approaches for alternative measurement. The paper concludes by stating that there has to be a better policy for a progress which is beyond GDP. It also recommendations an alternative source of information, new methodologies and measurement approaches to make green economy successful. The paper highlights by stating that it is only through proper collective adjustments economically, we can solve the dangerous effects on the climate change and environmental degradation. To obtain this, the concept of green economy involves a complete transformation to decrease the harmful effects on climate change and thereby reduce emissions. To reduce the carbon emissions globally, there is a major need for radical changes related to energy policy. To measure the progress, there is a need for proper framework for ascertaining the actions related to green economy. In 2013, The Green Growth Knowledge Platform, initiated the need for proper economic opportunities and tools related to the growth of green economy. Without a proper measurement, it would be hard to understand the efficacy of the policies and attain the sustainable goals for green economy related to climate action and sustainable development. This paper concludes by stating the important recommendations to ameliorate the transformation related to the measurements of the green economy.

A BIBLIOMETRIC APPROACH TO EXAMINING THE DEVELOPMENT OF GREEN FINANCE AND ITS EFFECT ON ENVIRONMENTAL SUSTAINABILITY

Suman Ahuja
Research Scholar
Guru Gobind Singh Indraprastha University, Delhi
sumanahuja037@gmail.com

ABSTRACT

With the 28th annual summit of the United Nations Framework on Climate Change (COP28) highlighting the necessity of coordinated action to avert climate change, the literature on green finance and its impact on environmental sustainability has changed over time. In order to minimize carbon emissions, create urban infrastructure, financing of renewable and green energy projects, and preserve environmental sustainability, green finance is essential. The impact of green finance challenges on environmental sustainability varies amongst nations, and opinions on the relative importance of these challenges and advancements are not entirely consistent. The current study discusses the development of the concept of green finance using bibliometric analysis, thereby offering policy recommendations for promoting economic expansion. The co-citation of authors, documents, and journals, as well as the co-occurrence of keywords, were analyzed using VOS Viewer to determine which country has given green finance and the environment the most attention in addition to the profiled authors in the relevant field. Research gaps have been highlighted which can be pursued by the future researchers.

ABSTRACT

As India continues to integrate into the global economy, foreign direct investment has emerged as an important driver of economic growth and development. The study provides a comprehensive overview and examines the impact of foreign direct investment on the growth trajectories of the banking and insurance sectors in India, and then the impact of the growth of these sectors and foreign investment on India's economic growth. The study uses time series data for the period 2002-2022. The study uses correlation and multiple regression analysis techniques to analyse the data. The findings of the study indicate a positive relationship between FDI inflows and the growth of the banking and insurance sectors in India. The results also showed a strong relationship between the growth of the banking and insurance sectors and foreign direct investment flows. The results showed that the growth of the banking and insurance sectors has an impact on economic growth, as increasing the growth of the banking sectors by (1,277,166) million dollars leads to an increase in Indian economic growth by (1,941.85) billion dollars. The growth of the insurance sector by (741,991) million dollars will lead to an increase in economic growth by (1,406) billion dollars. The results of the analysis showed that foreign direct investment has a positive impact on economic growth in India, as the inflow of foreign direct investment by (1,996) million dollars will lead to growth in the economy by (666,683) million dollars. The study recommends that the Indian government implement reforms in the local market to attract more foreign direct investment by raising the ceiling on foreign ownership in companies and various economic sectors, as well as reducing the profits tax on businesses to encourage more local and foreign investors.

INTEGRATION OF SUSTAINABLE FARMING AND AGRO TOURISM TO STIMULATE FARMERS ECONOMIC STATUS IN KARNATAKA: A SOCIAL ENTREPRENEURSHIP INITIATIVE

Vikas Janardhan Salunkhe
PhD Scholar
CMS School of Business and Management,
JAIN (Deemed to be University), Bangalore

Dr. Sarangapani Nivarthi
Associate Professor
CMS School of Business and Management,
JAIN (Deemed to be University), Bangalore

ABSTRACT

As a social entrepreneurship project to improve the financial standing of farmers in Karnataka, India, this study explores the theoretical foundation and possible effects of fusing agrotourism with sustainable agricultural methods. With sustainable agriculture and tourism working together, the goal is to promote socioeconomic growth in the area. The integration aims to create a model in which farmers provide tourists an immersive experience in rural life and agriculture in addition to cultivating crops sustainably. Given that it tackles farmers' social and economic problems, this integration is consistent with the tenets of social entrepreneurship. The project aims to create a sustainable and reproducible model that may be modified for use in other areas through cooperative efforts between local communities, governmental organisations, and commercial businesses. The final section of the abstract highlights the integrated approach's revolutionary potential and shows how it may support the overall growth of Karnataka's rural economy.

BEYOND BORDERS: CHARTING A COURSE FOR THE FUTURE OF MULTILATERAL COOPERATION

Tadepalli Aditya Kamal
Student
KLE Law College, Bengaluru
tadepalli.21bbl023@klelawcollege.org

ABSTRACT

In an era marked by global challenges that transcend national boundaries, the imperative for robust multilateral cooperation has never been more pressing. This paper explores the evolving landscape of international relations and the critical role that multilateralism plays in addressing complex issues such as climate change, global health crises, and economic inequality. As the world becomes increasingly interconnected, the need for collaborative frameworks that extend beyond borders becomes evident, necessitating a re-evaluation and reinvigoration of the foundations of multilateral cooperation. The paper begins by examining the historical context of multilateralism, tracing its roots in the aftermath of World War II and the establishment of international organizations like the United Nations. It then delves into the challenges faced by the existing multilateral system, including shifts in geopolitical power, rising nationalism, and scepticism towards global governance. By analysing case studies of successful and unsuccessful multilateral initiatives, the paper identifies key factors that contribute to effective cooperation, emphasizing the importance of inclusivity, transparency, and shared responsibility. Building on these insights, the paper proposes a forward-looking framework for the future of multilateral cooperation. It advocates for the adaptation of existing institutions to better reflect the current geopolitical landscape, as well as the creation of innovative mechanisms that foster collaboration between governments, non-governmental organizations, and the private sector. The role of technology in facilitating cross-border cooperation is also explored, with a focus on harnessing digital tools for enhanced communication, data sharing, and problem-solving. Moreover, the paper addresses the role of individual nations in bolstering multilateral efforts, urging a renewed commitment to diplomacy, compromise, and the pursuit of common goals. It concludes by emphasizing the urgency of collaborative action and the shared responsibility of the global community in charting a course towards a future where multilateral cooperation transcends borders, effectively addressing the multifaceted challenges of the 21st century. The purpose of this paper is to analyse the aspects of multilateralism with respect to its history and the future. The paper also aims to facilitate towards the geopolitical landscape and the future of diplomacy.

I aim to build this paper with the help of primary sources such as UN reports, government initiations, etc. and also by using secondary sources such as articles, research papers, etc. Some of the major findings that I found during the research is the importance of global governance, preference for stability, acknowledgement of challenges and call for innovation.

Keywords: *Climate Change, Economic Inequality, Multi-lateral Initiatives, Innovative Mechanism and Enhanced Communications.*

ANALYZING THE CATALYST EFFECT OF THE 'MAKE IN INDIA' INITIATIVE ON ADVANCING THE STARTUP ECOSYSTEM: AN EMPIRICAL STUDY

Dr. K V N Lakshmi
Assistant Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

Dr. S. Ramesh
Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

Dr. Swapna H R
Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

ABSTRACT

Launched in 2014, the 'Make in India' initiative was conceived to position India as a global manufacturing hub, fostering economic growth, job creation, and technological advancements. This initiative aimed to attract both domestic and foreign investments in manufacturing, emphasizing the production of goods within the country. The convergence of 'Make in India' and startups forms an intriguing intersection where traditional manufacturing and cutting-edge innovation meet. The primary goal is to investigate the factors shaping the startup ecosystem in India and analyze its impact on the country's GDP. Employing Structural Equation Modeling (SEM) for a comprehensive analysis, the study underscores the robustness of the model, with fitness indices confirming its adequacy. The findings highlight the substantial positive influence of the 'Make in India' initiative on the startup ecosystem, while also dismissing the notion of a positive impact from geopolitical risks.

Keywords: Make in India, Start up Eco system, Innovation, Geo-Political Risk, SEM, GDP.

FUTURE OF MULTILATERLISM

Sarath R
Student,
IA School of Management Studies, Bangalore
thisissarath6@gmail.com

ABSTRACT

The future of multilateralism is unfolding amid complex opportunities and challenges with profound implications for global governance. This paper examines both the positive and negative dimensions that are likely to shape the trajectory of multilateralism in the coming years. On the positive side, there is an opportunity for the international community to strengthen cooperation to address pressing global issues, from climate change to pandemics. Collaboration can lead to innovative solutions, increased sustainability and the creation of new partnerships. On the other hand, the downsides of the future of multilateralism are intertwined with growing geopolitical tensions, nationalist sentiments and declining trust in international institutions. The report explores the potential consequences of declining cooperation, such as stalled progress on critical issues and a weakened ability to respond effectively to transnational challenges. The emergence of competing factions and power struggles can hinder the inclusive and cooperative spirit that multilateralism seeks to promote. This research paper also explores new risks, such as cyber threats and digital divides, which affect the effectiveness of multilateral approaches.

ABSTRACT

In India, the Companies Act 2013 made spending and reporting of CSR mandatory for a set of companies which fulfil certain criteria. The objective of this study is to examine the impact of this mandatory CSR regulation on stock return, which has not been explored so far. We use actual CSR spending data from Indian listed companies on National Stock Exchange (NSE) extracted from CMIE's Prowess database for the period 2010-2022. Using the mandatory CSR regulation as an exogenous shock, we examine the impact of mandatory CSR on stock return using a fixed effect model and apply Difference-in-Difference (DID) technique to investigate whether this law change this relationship significantly post-2015. We find CSR has a positive impact on stock return. However, CSR has a negative impact in the post-2015 period on treated firms compare to pre-2015 when CSR was not mandatory. We also look at subgroups of firms who spend on CSR more than, less than or equal to the mandated 2% and how it affects this relationship. Overall, our finding support CSR as a strategic investment in long run. This paper contributes to the emerging literature on mandatory CSR and firm performance. To our knowledge, this is the first study which examines the long-term impact of mandatory CSR on stock return using actual CSR expenditure using DID methodology in pre and post scenario of the Companies Act 2013.

ABSTRACT

Spirituality at the workplace is connected to the economic sphere. Max Weber (1904) found out about the positive implications of spirituality regarding economic results. These findings can be explained with the positive aspects; which spirituality can cause in the economic context. This value of spirituality in an economic context can be seen in the theoretical concept of spiritual capital. In this context, spiritual leadership has found its way into management literature. This state of the art is discussed in the article and serves as a starting point for the development of Spiritual-Based Humanism.

In the first part the working paper spans a thematic framework between spirituality and spiritual capital in organizations. In addition to relevant definitions, the context of spirituality is described, which is closely linked to the worldview of believers of different religious imprints, personal calling, vision and corresponding values. Spiritual capital is operationalized by means of values that come into play in spiritual or servant leadership.

This paper delivers ground for development of a model for the possible effects of Spiritual leadership on their organization's performance. Embedded in the national cultural context, spiritual leadership has an impact on the performance of companies in financial and other areas (e.g. innovation, sustainability, CSR) through the lived organizational culture with specific values and employee commitment. Therefore, in a second part, value portfolios of selected globally widespread worldviews are discussed on the basis of concrete manifestations in sample countries, and their particular country-specific context is explained. Based on this, a general research design shall be derived in a follow-up paper that can empirically investigate the relationship between spiritual capital and organizational performance.

ABSTRACT

Ascent of emerging multinationals (EMNEs) from India is an exciting phenomenon for the promise of India's techade and climb to next levels of international competitiveness for development. Knowledge-based groups from India are also striving to climb on competitiveness, but it is an under-researched topic. How can we analyze trends and the journey of the groups, is an exciting question. We use qualitative analysis of quantitative and qualitative data from a single case to help characterize the phenomenon. Quick benchmarking of groups identified in India and other Asian countries provides some interesting trends. In Asia, groups in Japan, Malaysia have climbed to good heights. Emerging findings are summarized using the concept of 'journey map' to help identify phenomenon, trends and issues. We contribute to 'theory of Competitiveness' by assessing the journey map to evolve options for next levels for the group.

ARE WE READY FOR NEW TECHNOLOGICAL ADVANCES IN MARKETING?

Sulagna Nandy Dutta
Research Scholar,
Indian Institute of Technology (Indian School of Mines), Dhanbad
sulagna.nandydutta@gmail.com

ABSTRACT

Technological advancement has undoubtedly eased the marketing process in this highly competitive business environment. If business entities do not adopt this technological upgradation in a fast-changing world, there may be severe competitive issues for survival. The recent technological advancements ["Artificial Intelligence (AI)," "Augmented Reality (AR)," "Virtual Reality (VR)," and "Chatbot (CB)"]- from the computer science field which has reached the mass outside its domain due to their super efficiency and utility for various activities which needed human intelligence. This article explores the concept in two ways: generic and specific perspectives. Initially, the paper aims at concept-oriented (generic) exploration concerning the introductory idea of critical concepts (I), their emergence (E), future arena (F), and risk factors associated with them (R) [the IEFR framework]. Lastly, this paper does the bibliometric analysis of published documents (specific) indexed in the Web of Science in connection to sustainable goals for better comprehension of the domain and its implications. Papers are scattered in terms of categorization. No salient field is grown to its fullest potential. As sustainability is not the prime concern in this domain, policy-level decisions are needed.

ABSTRACT

The impact of Hindustan Unilever Limited's (HUL) sustainability measures on India's progress toward the Sustainable Development Goals (SDGs) is examined in this study report. The study examines how money is allocated and used in the fields of women's empowerment, environmental sustainability, healthcare, and other areas. HUL's Environmental, Social, and Governance (ESG) objectives serve as a gauge for the company's dedication to sustainability. In order to shed light on the company's contributions to social and environmental well-being in India, the study uses a quantitative research methodology to investigate the relationship between HUL's efforts and SDGs.

Dr. A. P. J. Abdul Kalam Technical University, Lucknow
ajayk.yadav25@gmail.com

ABSTRACT

Environmental Social and Governance (ESG) is a frame-work used to assess an organization's business practices and performance on various sustainability and ethical issues. It also provides a way to measure business risks and opportunities in those areas sustainable finance is all about ethical decision –making in business and investment. It pivots on environment, social and good governance (ESG) standards (especially in asset management and corporate strategy) that customers, workers and investors demand of companies. The methodology used involves analyzing key ESG issues and indicators, which are split into three themes: Environmental, Social and Governance. The set of issues and indicators analysed will vary by industry with a specific weight placed on each issue. The four- pillars of sustainable finance are (1) Definition: Use of Proceeds, (2) Selection: Process of Project Evaluation (3) Trace-ability: Management of Proceeds, (4) Transparency: Monitoring and Reporting. Common goals include reducing greenhouse gas emission investing in sustainable energy, increasing work-place diversity and providing transparent financial practices. By integrating ESG considerations into their investment, banking, insurance, and other financial product companies can maintain profitability while making good on their customer's and investor's desires to promote sustainable practices support social causes and foster responsible governance. The metrics and disclosures proposed here have been organized in four pillars that are aligned with the SDG's and principal ESG domains: Principles of governance, planet, people and prosperity.

ABSTRACT

Gender equality has become one of the cornerstones for driving this world into a sustainable and thriving ecosystem in the contemporary time. Women's participation and contribution has proven to be an inevitable and significant component for the progress of a nation as a whole and economy in particular. This perspective article delves into the transformative role that women play in shaping the future of India through the family business domain. Historically, family businesses in India have been male-dominated, but changing societal norms, increased education, and evolving business landscapes have created opportunities for women to play a pivotal role. Drawing inspiration from the emphasis on family business, we delve into the intricate tapestry of women's influence within family businesses, illuminating their entrepreneurial behaviours, decision-making processes, and leadership styles, helping in the sustainability and transformation of family business domains. Furthermore, we examine the challenges faced by women in the family business landscape, such as gender bias and societal expectations, and propose strategies for overcoming these obstacles. Shedding light on these issues, this article contributes to a deeper understanding of how women are reshaping the future of family businesses in India and the importance of gender diversity and inclusivity for the sustained growth and prosperity of these enterprises.This paper is an integrative review based on a concise and critical literature study. The research findings reveal that women in the Indian family business landscape drive economic prosperity through inclusivity, innovation, diversity, and sustainability initiatives, contributing significantly to business and economic growth and adaptability despite the traditional barriers and challenging stereotypes.

Additionally, gender diversity within family businesses correlates with improved financial performance and resilience in the evolving market landscape. This perspective article introduces a fresh perspective on the role of women in shaping the future of India through family businesses. It distinguishes itself by emphasizing how women's contributions drive innovation and adaptation within these businesses. By triangulating gender dynamics, entrepreneurship, and family business context, it offers an innovative lens to understand and address evolving challenges, contributing to future research and practical solutions in the context of Indian family businesses.

ABSTRACT

Energy poverty (EP) is one of the most challenging problems in the contemporary world, equally affecting developed and emerging nations. Its mitigation is an important facet of the United Nations' (UN) Sustainable Development Goals (SDGs). However, the antecedents of EP have not been completely investigated. The present study augments the extant literature on the determinants of energy accessibility for the BRICS countries. Ours is one of the very few studies investigating the impact of GDP, government spending, income inequality, trade openness, and FDI on energy poverty with the help of robust panel data techniques of CS-ARDL and panel causality tests to probe the impact of select variables on EP. This study employs annual data (from 1990 to 2022) in context of BRICS countries. The econometric findings revealed that income inequality and energy intensity aggravate the problem of EP while FDI, trade openness and government spending helps in reducing the EP in BRICS economies. The current study's results hold up well under different model configurations, we were able to offer useful recommendations for energy affordability and accessibility in accordance with the SDGs.

HARVESTING KNOWLEDGE: A COMPREHENSIVE SYSTEMATIC REVIEW OF AGRICULTURAL SUPPLY CHAIN MANAGEMENT

Dr. Mohammed Farooq Pasha
Associate Professor
Govt. First Grade College, Bangalore
farooqpasha2002@gmail.com

Preethi A
Assistant Professor, Surana College, Bangalore
Research Scholar, Jain University
Preethim289@gmail.com

ABSTRACT

In response to the intricate challenges facing modern agriculture, "Harvesting Knowledge: A Comprehensive Systematic Review of Agricultural Supply Chain Management" rigorously examines a broad spectrum of scholarly works, comprising articles, journals, and conference papers. The paper not only consolidates existing knowledge but also identifies gaps in the literature, suggesting avenues for future research and development in agricultural supply chain management. By citing foundational works such as that of Ivanov and Dolgui (2019) and Seuring and Gold (2012), the review establishes a robust framework for understanding the current state of agricultural supply chains and identifies areas where further investigation is warranted. As global agriculture grapples with dynamic shifts and unprecedented demands, "Harvesting Knowledge" emerges as an indispensable resource for researchers, practitioners, and policymakers alike. Rooted in evidence-based insights, the paper concludes with practical implications and recommendations, fostering a collaborative commitment towards cultivating sustainable, efficient, and resilient agricultural supply chains in the face of evolving global challenges (Blackhurst et al., 2008; Pagell & Shevchenko, 2014). This systematic review, titled "Harvesting Knowledge: A Comprehensive Systematic Review of Agricultural Supply Chain Management," aims to provide a thorough examination of the existing literature on agricultural supply chain management. With the escalating challenges facing global agriculture, the primary purpose is to unravel prevalent practices, challenges, and innovative strategies within agricultural supply chain management. The review seeks to contribute to a nuanced understanding of the complexities involved in production, distribution, and consumption processes, shedding light on key considerations for stakeholders in the agricultural sector. Employing a systematic approach, this review meticulously selects and evaluates scholarly works, including articles, journals, and conference papers.

The methodology involves a comprehensive search across reputable databases, utilizing stringent inclusion and exclusion criteria to ensure the relevance and quality of the selected literature. The information related to empirical research and viewpoint of various ASC drivers were captured, studied and analysed in detail.

Although inventory policy, demand forecasting and ASC integration were found to be important areas of ASC, they were less focused, studied and researched.

ABSTRACT

This study delves into the intricate dynamics of Supply Chain Entrainment (SCE) and its impact on Organizational Performance (OP) in the context of manufacturing supply chains. Employing Partial Least Squares Structural Equation Modeling (PLS-SEM), The study employs Partial Least Squares Structural Equation Modeling (PLS-SEM) to explain the crucial contribution of supplier collaboration, information sharing, and process integration as potential enablers of SCE. Furthermore, the study investigates the moderating influence of technology adoption on the interactions among SCE and OP. The managers can leverage from the identified enablers to enhance SCE, thereby fostering improved OP. The findings from the study contribute to both academic and practical realms by offering a comprehensive understanding of the intricate mechanisms governing manufacturing supply chains, thus advancing the discourse on effective supply chain management strategies.

ABSTRACT

The papers submitted for this publication represent research based on the role of event design elements. Events serve as platforms for brand representation and communication. The design elements contribute to the visual and sensory aspects of the brand, influencing how attendees perceive and remember the brand associated with the event. In addition to being aesthetically pleasing, event planning also acts as a visual language to convey the concept and goal of the gathering. An event's design can distinguish it from others in a packed schedule of events. An event may become more intriguing by using well-thought-out and unique aesthetics that help it stand out in the eyes of participants and become unforgettable. The methodology used for this paper was a literature review and the sources for the papers were from Google Scholar. The design elements contribute to the visual and sensory aspects of the brand, influencing how attendees perceive and remember the brand associated with the event. Through this study, event planners get a better understanding of the attendee's behavior to curate design elements accordingly. With the rise in cutting-edge technology elements like virtual reality and additive reality could be incorporated to improve the overall enjoyment of the event. The efficiency of event design components leads to more pleasant, lasting, and enjoyable events for participants.

ABSTRACT

Flower arrangement aims to connect with nature by capturing its splendour and framing it in a unique design. It adds positivity and ambience to any hospitality industry setting. Sustainable floristry meets current and future generations' environmental, social, and economic needs. The purpose is to identify unforeseen problems in the floristry and acknowledge them for a better and sustainable environment. The methodology used is an extensive literature review, drawing on numerous research papers from Google Scholar. This paper provides an overview of the historical evolution, sustainable approaches, technologies, techniques and suggestive methods for addressing environmental impact in the floral arrangements of the hospitality industry. With technology advancing rapidly, it is crucial to utilise it positively to not harm the environment. In the floristry industry, it is essential to adopt sustainable techniques to ensure that our actions do not have a negative impact on the ecosystem.

A CASE STUDY ON HOW CAPACITY IS AFFECTING DEMAND AND IN TURN OPERATING REVENUE OF AIR INDIA

Sidharth M Chandran
Student, MBA-MS,
Amrita School of Business, Bengaluru
sidharthchandran300@gmail.com

ABSTRACT:

The majority of Indian scheduled civil aviation companies report recurring annual losses in spite of positive growth. in capacity and demand. Air India has been reporting losses year-on-year. The purpose of this study is to investigate the linkages between capacity, demand, and operating revenue of Air India for the period 2014–15 to 2018–19. The methodology includes a two-stage empirical analysis, wherein regression analysis is used in both stages for estimating the relationship between capacity and demand and demand and operating revenue. The effect of passenger load factor and Break-even load factor on operating result is also analysed. The findings suggest that, though there is a positive correlation between capacity and demand and in turn demand and operating revenue of Air India, underutilization of capacity by Air India is resulting in losses to Air India and the industry as a whole. The study can prevent operating losses to Air India in future.

Keywords: *Capacity, Demand, Operating Revenue, Passenger load factor, Break-even load factor, Operating Result.*

SUSTAINING SUCCESS: AN EMPIRICAL EXPLORATION OF ETHICAL PRACTICES AND ORGANIZATIONAL LONGEVITY

geetanjalisrinivas415@gmail.com

ABSTRACT

A spectrum of behaviors and policies governed by the principles of integrity, impartiality, and accountability constitute ethical practices within an organizational framework. A fundamental component of an organization's ethical framework is the incorporation and consistent application of ethical standards in all aspects of its operations, including employee relations, consumer interactions, decision-making, and community involvement. The significance of ethical practices has been further underscored by the globalization of business. Organizations that operate in locations with varying cultural and regulatory environments encounter the difficulty of navigating the ethical nuances that are specific to each setting. By embracing an all-encompassing viewpoint, this research attempts to reveal the ways in which cultural sensitivity and ethical adaptability bolster the resilience of organizations in an era of globalization. To analyze the responses of the participants, multiple response analysis, regression analysis, and the ANOVA test were implemented. The significant impact of investor intentions regarding company accountability is further validated by the quantitative results, underscoring the critical importance of ethical considerations in shaping investment choices.

ABSTRACT

This paper investigates the impact of generative artificial intelligence (AI) on Quality Assurance (QA) professionals and strategic decision-makers within the Information Technology (IT) sector. The focal question guiding this research is centered around understanding perceptions, challenges, and strategic considerations related to the integration of generative AI technologies. A comprehensive survey methodology encompassed questions related to awareness, perceived benefits, challenges, integration strategies, collaboration dynamics, and long-term considerations. Data analysis involved quantitative assessments of responses to derive nuanced insights into the complex landscape of generative AI adoption in the IT sector. The findings present a detailed exploration of the awareness levels, perceived benefits, and challenges associated with generative AI among QA professionals. Insights into integration strategies, collaboration dynamics, and long-term considerations from both QA professionals and decision-makers in strategic roles are synthesized to provide a holistic understanding of the landscape. The implications of this research extend to informing decision-makers and practitioners about the challenges and opportunities inherent in incorporating generative AI in QA processes and strategic planning. The nuanced insights into collaboration dynamics, workforce impacts, and strategic considerations offer practical guidance for navigating the evolving technological landscape. This research holds significance in contributing to the ongoing discourse on the intersection of generative AI, QA practices, and strategic decision-making in the IT sector. By shedding light on the perceptions and strategic considerations of professionals, it aids in developing a roadmap for organizations seeking to harness the potential of generative AI effectively.

ABSTRACT

This research dives into the diverse landscape of electric vehicle adoption across the countries India, United States of America, United Kingdom, China, Norway and Ireland to discover the factors that shaped this trend. By analysing the findings from different articles and publications, this study comprehensively examines the financial incentives, charging infrastructure, local production, regulatory policies and consumers behaviour towards electric vehicles (EV). This analysis integrates the perspectives from different studies to contribute to the understanding of the different factors that are influencing and shaping the global adoption of electric vehicles (EV). Also offering valuable insights to the policymakers and the industry experts, helping them to navigate the evolving landscape of sustainable mobility.

A CASE STUDY ON HOW CAPACITY IS AFFECTING DEMAND AND IN TURN OPERATING REVENUE OF INDIGO AIRLINES

Aakash RV
Student,
Amrita School of Business, Bangalore
aakashraj112@gmail.com

ABSTRACT

The purpose of this study is to investigate the linkages between capacity, demand, operating revenue, passenger load factor, break-even load factor and operating result of Indigo Airlines for the period 2014-15 to 2018-19. The methodology includes a two-stage empirical analysis, wherein regression analysis is used in both stages for estimating the relationship between capacity and demand and demand and operating revenue. The effect of passenger load factor and break-even load factor on operating result is also analysed. The findings suggest that, though there is a positive correlation between capacity and demand as well as demand and operating revenue, underutilization of capacity by some of the Indian scheduled airlines is resulting in losses to the individual airlines and the industry as a whole. The study can prevent operating losses to in future.

Keywords: *Capacity, Demand, Operating Revenue, Passenger load factor, Break-even load factor, Operating result.*

STUDY OF THE BEHAVIOUR OF RETAIL INVESTORS WITH RESPECT TO INVESTMENT IN ESG FUNDS

Shruti Modi
Student,
Indus Business Academy, Bangalore
fpb2224.144.shruti@iba.ac.in

Prof. Narendra Babu
Senior Assistant Professor,
Indus Business Academy, Bangalore

ABSTRACT

This study aims at studying the consumer behaviour of retail investors with respect to investment in Environmental, Social and Governance (ESG) funds. It also focuses on the awareness of retail investors for ESG funds and the reason why there has been a positive shift towards investment in ESG funds. The researcher tries to establish the relationship between awareness level of retail investors with their investment behaviour in ESG funds. Primary as well as secondary method was used to conduct the study. It was found that investment in ESG backed funds depended on the level of awareness regarding ESG. Also, more young males are having knowledge of ESG backed funds and it's not that related with level of income. So, awareness is a key factor which needs to be focused on. Also, the irony here is that inventors are investing in ESG funds but having more focus on returns of those funds.

Keywords: *Investment Behaviour, Retail Investors, Environmental, Social and Governance, Awareness.*

A STUDY ON IMPACT OF SUSTAINABLE DEVELOPMENT GOALS ON SHAREHOLDER VALUE: WITH SPECIAL REFERENCE TO LISTED COMPANIES IN INDIA

Maya Patil
Research Scholar,
International School of Management Excellence, Bangalore
mayap.isme20@gmail.com

Dr. Geetha Rajaram
Research Guide,
International School of Management Excellence, Bangalore

ABSTRACT

This research aimed to comprehensively evaluate sustainable development goals adaptation in Indian corporations, providing insights into strategies, challenges, and impact for fostering a more sustainable future. Utilizing bibliometric analysis with Scopus search criteria, the study identified a rising trend in sustainable development goals adaptation in India, potentially driven by corporate awareness and investor demands from 2016 to 2023. The sector wise analysis reveals, SDG is driven by social sciences with 33.1%, environmental science with 17.8% and business management with 11% subject wise, emphasizing and the importance of social and environmental dimensions & a business-centric focus. Cluster analysis reveals the five clusters about environmental policy, technological development, gender equity, entrepreneurship and governance. Poorly touched upon subjects were found to be tourism, water quality and sanitation. Bibliometric analysis, Dematel analysis, and social network analysis have been used to gain insights into the subject. Descriptive statistics showcased that the shareholder value has increased over the years and created value for shareholders during the period. Standard deviation (SD) shows some signs of volatility over the years in 2018-2020 with high SD and low volatility in 2016-17 with low SD. Over the stipulated years, shareholder value is considerably impacted by the Sustainable Development Goals (SDG). The absence of statistical significance suggests that there is no proof, in the model's current form, that these factors have any appreciable bearing on shareholder value. The results of the multivariate analysis do not show enough evidence to reject the null hypothesis for either the annual impact of the Sustainable Development Goals or the total shareholder value over time. This suggests that overall, there is no discernible change in shareholder value between 2016 and 2020, and that shareholder value is not significantly impacted by the Sustainable Development Goals for any year. Key themes, including environmental performance and social factors, provide strategic guidance for aligning sustainability strategies with prevalent themes, addressing critical issues for businesses and society.

NAVIGATING FINANCIAL MARKETS: AN EMPIRICAL EXAMINATION OF THE INFLUENCE OF EMOTIONAL AND PSYCHOLOGICAL WELL-BEING ON PROFESSIONAL FEMALE INVESTORS

Mr. Raveesh Ramdas
International School of Management Excellence, Bangalore

Dr. Shurlly Tiwari
Professor
International School of Management Excellence, Bangalore

ABSTRACT

The purpose of this study is to examine the complex relationship that exists between female investors in metropolitan locations between the ages of 31 and 51 and their emotional and psychological well-being. Given the increasing importance of women as investors, this research aims to understand the ways in which emotional and psychological aspects impact financial decision-making in this population. To obtain thorough insights, the research uses a mixed-methods strategy that combines surveys and in-depth interviews. Structured surveys will be used to gather quantitative data on factors like investment preferences, risk tolerance, and financial objectives. Simultaneously, in-depth interviews will be utilised to gather qualitative data, which will enable participants to express their experiences and perspectives in a sophisticated way. Emotional intelligence and investment success among female professionals are significantly correlated, according to research on "Navigating Financial Markets: Influence of Emotional and Psychological Well-Being on Professional Female Investors". The study emphasizes how cognitive biases, such as risk aversion and overconfidence, affect how people make decisions. Furthermore, evident that a supportive and welcoming work atmosphere is essential to the mental health of female investors and to their ability to bounce back from market setbacks. These results highlight the necessity of focused initiatives to address psychological issues and advance an environment that is supportive to women working in finance. The study's emphasis on urban environments is driven by the special opportunities and challenges that come with living in an urban area, which may influence female investors' emotional and psychological health. The study will investigate how personal and financial components are interconnected, considering elements including family dynamics, work-related stress, and societal expectations. The goal of this study is to provide significant new understandings to the domains of psychology and finance.

Financial institutions, legislators, and mental health specialists can all benefit from knowing how female investors' emotional and psychological well-being influences their investment decisions.

In the end, the results might open the door for customised treatments and tactics meant to improve this group's financial health and promote a more inclusive and all-encompassing approach to investment management. This research brings into light the various elements that impact the decision-making of women with special attention to investment avenues.

ABSTRACT

This study has been carried out to understand the prevailing awareness and willingness among consumers to adopt the new open-source e-commerce initiative - ONDC (Open Network for Digital Commerce) backed by the Indian Government. This will be ascertained against the backdrop of five key factors and trends identified in today's e-commerce landscape - direct to consumer trend, increasing aversion towards monopolistic practices, need for convenience, and patriotism. Furthermore, the study also aims to assess any possible variation in the level of willingness contingent on the product category. This study is predominantly exploratory and takes into consideration only three product categories - food & grocery, electronics, apparel. The initiative is in its nascent stages and has not garnered the attention, trust or understanding of the general public, owing to which the respondents of the survey may not be entirely aware of the platform or its functioning. However, the questionnaire of the study is designed such that respondents are offered a rudimentary demonstration of the platform's functioning which in turn creates awareness about it. The ONDC platform with its open source interface is set to democratise and revolutionise the e-commerce landscape in India. For a platform that aims to shift the dynamic of interaction between buyers and sellers it is imperative to understand the existing levels of awareness and willingness to adopt the platform among consumers. This study intends to aid the platform in understanding its current footing in consumers' minds as well as its position with respect to existing, centralised, e-commerce platforms such as Amazon, Flipkart etc. While preliminary research on the platform, its structure, and functions have been conducted, its adoption among consumers and the factors that contribute to it remain largely unexplored.

This study aims to assess as well as improve the level of awareness about the platform while identifying the factors that play a role in consumers' adoption of the platform.
Keywords: *ONDC, E-commerce, Awareness, Willingness to Adopt, Open-source Interface.*

MULTIPAGE MEDICAL DOCUMENT CLASSIFICATION OF PRINTED AND SCANNED PAGES USING MACHINE LEARNING ALGORITHMS

Prof. Shreedhar Deshmukh
Assistant Professor
National School of Business Academy, Bangalore
shreedhar@nsb.edu.in

ABSTRACT

One of the most challenging projects in machine learning for text classification is extracting information from unstructured scanned documents and texts, including medical document. Medical documents usually include both typed and untyped handwritten documents written by doctors prescribed to patients. These are the collection of papers of patient went several times to clinic or hospital. It will be difficult for a doctor or a health care company to go through all the documents which is time consuming process. We have tried to develop an application call auto index system, that classifies a medical document by analysing its content and categorizing it under predefined class (e.g. Consultation, Anaesthesia, Lab Report-Culture test, Radiology, office visit) topics and creating an index of pages falling under the category. We have plenty of classes to classify but fixed the scope to four-five predefined topics namely, Progress notes, consultation, CT, Lab reports, radiology. We use term frequency technology to convert and count number of words in the medical text documents and classify them based on weightage calculation.

ABSTRACT

Reusing oil in the kitchen involves extending the lifespan of cooking oil by filtering and storing it for future use. This practice can save costs, reduce waste, and add flavors to dishes. Proper filtration is essential to remove impurities and maintain the oil's quality. The main purpose of choosing this topic of reusing oil in the kitchen serves multiple purposes. It promotes sustainability by reducing waste and conserving resources. Additionally, it offers economic benefits as it allows individuals to save money by extending the life of cooking oil. Exploring proper methods for oil reuse also contributes to healthier cooking practices and encourages mindful consumption in the kitchen. The paper was searched using Google Scholar. The paper explores the practicality and benefits of reusing cooking oil in kitchens. The focus is on sustainability, cost savings, and promoting healthier cooking practices. The study emphasizes monitoring and limited reuse to ensure food safety and quality. The suggestion for future improvement in your area of research which would help the hospitality industry are primary focus is cooking oil reuse I suggest exploring sustainable practices like implementing advanced waste recycling systems or developing eco-friendly packaging solutions to benefit the hospitality and event industry. This can contribute to reducing environmental impact and promoting a more sustainable approach.

ABSTRACT

Psychological empowerment is a very crucial component in the aspect of employee empowerment. It includes the four dimensions, Meaning, Competence, Self-determination, and Impact, contributing to its different variations and levels. As a result of investigations conducted in different industries, it is noted that less attention is given to the aspect of Job Satisfaction in Connection with Psychological Empowerment. Therefore, this study discusses the Psychological Empowerment of Women Employees in leadership positions and its relationship with their Job Satisfaction. The study's significant goals are to examine which dimensions of Psychological Empowerment are strongly linked with the aspects of Job Satisfaction. A sample size of 107 was collected from 4 different private industries. The Psychological Empowerment tool of Spreitzer (1992) and the Job Satisfaction tool of Minnesota Satisfaction Questionnaire (MSQ) are used for measurement. The Questionnaire was distributed to the women employees in leadership positions in 4 different industries. The study's findings propose that Psychological Empowerment has a very significant and highly positive relationship with Job Satisfaction, and the dimensions of Self-determination and Impact have the most decisive influence. Therefore, this research illuminates the critical role psychological empowerment plays in shaping the job satisfaction of women in leadership roles. The findings underscore the importance of fostering self-determination and recognizing the impact of individual contributions in enhancing not only psychological empowerment but also overall job satisfaction among women employees in leadership positions.

This nuanced exploration adds valuable insights to the evolving discourse on employee empowerment and organizational well-being, calling for a more comprehensive integration of psychological empowerment considerations in contemporary workplace strategies.

ABSTRACT

The traditional economic models have led to significant and negative repercussions for environmental progress, as well as an unreasonable division of capital has resulted in increased ecological footprint and demographic disparities. Due to the existence of disparities in opportunities and availability of resources in the economy worldwide, it has become extremely necessary to evaluate the inter-connections between the concept of Corporate Social Responsibility (CSR) and why it is required. Further it has also become important to associate Sustainability along with CSR. Therefore, the primary aim of this study is to examine and analyse the evolution of CSR as a domain in the past two decades and also identify the evolving interrelation of CSR with sustainability. The study also makes an effort to understand the trend by reflecting on historical trends. This study uses bibliometric analysis to mark the upcoming trend in CSR and also dwells on its connection with sustainable development. Thus, on comparing the trend of the past two decades, it was found that CSR has gained a lot of traction from the research community and it is being inclined towards 17 Sustainable Development Goals. The analysis dwells into different dimensions of publication data extracted in January 2024, from the Scopus database using two different search strings and three different searching strategies. Where the United States has maintained its position as the country to produce most publications in the CSR domain, two countries namely India and China, can be observed advancing in the respective domain.

ABSTRACT

The study aims to understand the strategies used by visually impaired consumers (VIC) in acquiring product information and the challenges they face. The study also explores VIC's preferences for accessible labeling and its benefits. This study employed the qualitative approach of thematic analysis to explore the strategies used by VIC to obtain product information and their preferences for accessible labeling. A snowball sampling technique was used to recruit participants. Data was collected from VIC through semi-structured interviews. The sample size of the study is twelve. The data was analyzed by using NVivo software. The study revealed three strategies used by VIC to obtain product information, such as reliance on caregivers, staff, and technology. However, all the strategies employed have drawbacks, such as lack of autonomy and time consumption. The narratives of VIC propose solutions to these challenges faced by implementing accessible labeling on product packages. The study reported a high preference for accessible labeling in braille and QR codes. Implementing a combination of braille and QR codes on product packages will be the most beneficial strategy for VIC. Implementation of accessible labels ensures inclusion in the marketplace.

RISE AND FALL OF SINGLE SCREEN CINEMAS IN INDIA

Satyam Anand
Student PGDM
International School of Management Excellence, Bengaluru

Dheeraj Harshit
Student PGDM
International School of Management Excellence, Bengaluru
dheerajh.isme2224@gmail.com

ABSTRACT

India's economy is among the fastest-growing in the world. It is anticipated that Indians will spend more time engaging in leisure activities as they climb the economic development curve. In India, there are many different options for leisure activities, but movies are still the most popular place to go for an out-of-home activity. A major contributor to the thriving film industry of the nation is the Indian cinema exhibition industry, also referred to as the Indian film exhibition sector. Smaller theatres are finding it difficult to compete with larger chains as a result of the growth, which has also increased competition and consolidation. Additionally, multiplexes have been essential in growing the market for regional language and non-Bollywood films. The expansion of multiplexes, however, has also had a big effect on conventional single-screen theatres, many of which have found it difficult to compete with the bigger chains. This study examines the gradual decline of single-screen theatres in India, highlighting the factors and challenges that either caused or contributed to this trend, as well as the rising demand for high-end, experience-driven theatres. The majority of this study is exploratory in nature because there hasn't been a lot of collaborative research on India's exhibition industry, particularly on standalone and single-screen theatres.

This study used both qualitative and quantitative methodology. The qualitative portion includes podcasts, industry reports, and interviews with professionals in the field of cinema exhibition to gain insight into how renovating or improving single-screen theatres can promote survival of the fittest. The quantitative portion consists of a questionnaire designed to comprehend consumer prospects and behaviours that are taken into account when attending a movie in a theatre, particularly in a single-screen cinema. Hypotheses testing was conducted on the questionnaire.

ABSTRACT

As our society recognizes the urgency of living sustainably, the field of interior design holds great potential for initiating transformative change. In this qualitative study, we investigate the incorporation of sustainability values into the world of interior design. Our main focus is on creating a robust framework that takes into account the temporal aspect of design processes. As our planet faces ever-increasing environmental threats, the interior design field has responded with a significant shift towards sustainable practices. As a result, there is an urgent need for comprehensive frameworks that go beyond traditional considerations such as material and energy efficiency. This research framework presents a holistic approach to sustainable design, incorporating traditional principles and adding a temporal component. It outlines key milestones and strategies for sustainable decision-making throughout the entire design process. Moreover, this research contributes to the broader dialogue on sustainable design by highlighting the interplay between temporal considerations and other crucial elements such as culture, society, and the economy. The research aim is to shed light on the temporal framework that guides sustainable design practices, providing valuable insights into how the concept of time influences the creation and maintenance of environmentally conscious living spaces. To carry out this research, we adopt a qualitative approach and conduct in-depth interviews with experienced interior designers, architects, and sustainability experts. By carefully selecting participants through purposive sampling, we ensure that our study includes diverse perspectives and experiences. By shedding light on the temporal dimension, it serves to deepen our understanding of sustainable design and its multifaceted nature. This research lays a foundation for future investigations into the practical implementation and refinement of the proposed framework within diverse design contexts.

CMR University, Bangalore
kanthimathinathan@cmr.edu.in

ABSTRACT:

The vital reason behind this research is to explore customer perception on cooperative banks concerning their services. The study is exploratory in nature. To investigate the perception of customers towards services provided in Cooperative Banks, the research has been done by using both primary and secondary data. The primary data have been analyzed using SPSS. The hypothesis has been tested using the ANOVA. The overall result of the study indicates that the age factor of the beneficiaries doesn't have any influence on their perception of the cooperative banking services in Rural India.

ABSTRACT

With the rapid growth of e-commerce and online shopping, it is crucial to understand consumer perceptions, hence the researcher aims to study the perceived risks and benefits of online shopping by Indian consumers. In order to transform themselves from fierce competition, marketers need to adopt right strategies to provide superior service to satisfy consumer needs and ultimately create consumers perceived value. The benefits of online shopping are come up with potential risks that the consumer always be aware of. One of the biggest challenges of online retailer is to attract profitable customers. For the present study the researcher collected the opinions of 528 consumers, who are aware of the online shopping. For checking internal consistency and validity using Cronbach's alpha test. The data collected is analysed, summarised and controlled by using Excel and SPSS. For collecting data a structured questionnaire was administered, which includes perceptions of various risks and benefits associated with online shopping. It also includes number of factors which motivates the individuals towards online shopping. After conducting statistical analysis to identify that the more risks associated with online shopping are security, product quality and privacy at the same time the perception towards benefits from online shopping are product variety, time and cost saving determine the importance of consumer perceptions towards online shopping. The findings offer after comprehensive understanding of the risks and benefits of online shopping retailers focus on to develop more innovative strategies in terms of developing web portals, privacy and maintaining product quality, definitely online shopping business generate more revenues to the firm.

ABSTRACT

The phenomenon of Virtual Influencer (VI) marketing has experienced a significant popularity within the realm of social media, owing to the continuous and dynamic evolution of the digital landscape. The present research explores the pivotal determinants shaping social media (Instagram) Users' attitudes towards virtual influencers through Exploratory Factor Analysis. Additionally, an attempt is made to categorize the respondents based on various psychographic and demographic attributes using hierarchical and K-Means cluster analysis. EFA findings revealed four fundamental dimensions of virtual influencers namely; Attitudinal Homophily, Aesthetic Influence, Informativeness & Ad Content Value, Perceived Reciprocity and Perceived Originality.

Employing hierarchical and K-Means cluster methodologies to segment 182 respondents led to the identification of two distinct groups: VR Enthusiast and Discerning Realist. The paper contributes useful implications for marketing practitioners and brands to target these diverse segments effectively by evaluating significant traits of virtual influencers in a meaningful way.

ABSTRACT

E-leadership has become crucial for productive remote work in the quickly developing IT industry. The study examines how e-leadership affects remote work, how e-leadership may be applied in the virtual environment in the IT sector, and how remote work affects employee performance. The selection of publications using PRISMA criteria has increased the relevance of the current review. According to the current study, firms can improve communication, boost team morale, encourage goal alignment, and inspire creativity by utilizing efficient e-leadership tactics. The present review suggested that e-leaders can overcome the difficulties of remote work and guide their teams to success in the digital era with the proper strategy and use of technological tools. The study is helpful in analysing the significance of electronic leadership in the scenario of remote work.

IMPACT OF SOCIAL MEDIA MARKETING ON PURCHASE INTENTION OF GEN Z

Deepika K S
Assistant Professor, PES University, Bangalore
deepikaks@pes.edu

Dr. Ajay Massand
Associate Professor, PES University, Bangalore
ajaymassand@pes.edu

ABSTRACT

Brand marketing activities are becoming more innovative and attractive. Social media is a platform that maximizes the reach of brands. This paper emphasizes Gen Z's intentions to purchase branded products or services based on social media marketing activities and their characteristics. It aims to determine the factors impacting the purchase intention of Generation Z to a maximum extent. The critical points analysed are how Gen Z perceives brands marketed on social media (SM) and what characteristics they consider before their purchase. A sample size of 250 is considered for the analysis. The research uses a convenience sampling technique amongst Gen Z as they are primarily into Social Media usage. On applying Factor Analysis using SPSS on 20 items, the items were grouped into two main factors named Trendiness and Customer engagement. The analysis also reveals that gender does not significantly impact the purchase intention among Gen Z. This research helps the brands design their SM marketing activities focusing on the most vibrant factors that attract most of the specified target segment. It is of practical importance as Gen Z is the fresh entrant to the customer base of all brands. Gen Z's changing behaviour of adapting to new and trending social media platforms and leveraging of maximum time on social media along with easy access to the same, makes it much more important for the marketers to focus on this research results.

ABSTRACT

Bangalore, India's tech hub is witnessing the rapid growth of Cloud Kitchens, creating a unique niche in the online food segment. These delivery-only kitchens operate on a budget, offering great flexibility. Their manufacturing and distribution strategy contrasts with traditional restaurants, and other online channels of selling, thus relying heavily on data analytics and effective kitchen management for efficient distribution. Interestingly, no one has yet surveyed consumer perceptions of this market. Though a survey of consumers using structured questionnaire we try to analyse how the 4 Ps of Marketing, Product, Price, Place and Promotion influence the purchase decision of the consumers and thereon their satisfaction.

MARKETING PROBLEMS FACED BY THE FARMERS: EVIDENCE FROM SIRSA (HARYANA)

Kanchan
Research Scholar, Department of Commerce and Management,
Banasthali University, Rajasthan
kanchu.nekiram@gmail.com

Dr. Shikha Singh
Assistant Professor, Banasthali University, Rajasthan

ABSTRACT

India is known for being one of the largest agricultural producers and exporters globally, with agriculture contributing over 18% of the country's GDP and providing employment to approximately 60% of the workforce. However, despite this significant contribution, farming remains risky for Indian farmers. Despite being an agriculture hub in Haryana state and having ample agricultural resources in Sirsa, marketing agricultural produce remains a major challenge affecting farmers' income and livelihoods. This study aims to identify farmers' problems when marketing their farm produce in Sirsa District, Haryana. Additionally, it aims to suggest possible solutions to address these constraints and help policymakers and stakeholders develop appropriate interventions to support farmers. The study selected a sample of 50 farmers from Sirsa District, Haryana, using a purposive sampling technique, and collected data from both primary and secondary sources. The study also provides practical recommendations for policymakers and stakeholders to foster a sustainable and profitable agricultural industry.

ABSTRACT

Omnichannel retailing, which is increasingly prevalent today, it is the new normal in consumer convenience. However, alongside this improved accessibility, there is a growing concern. Increasing worries about data protection and security. The study whose results we present below explores this key but under-researched area, attempting to answer the question of how consumers view omnichannel retailing in terms of information about themselves. We have adopted mixed method approach to conduct the survey. With the help of open-ended questions. We hope more relevant details can be collected. This research focuses on addressing below mentioned questions: In exploring omnichannel retailing, we aim to understand consumer expectations on privacy and security. We're curious about data security aspects that resonate with individuals, considering demographics, shopping habits, and tech comfort. Advocating for transparent record-keeping, we want retailers to build trust and win customer confidence. Beyond data and regulations, it's about empowering individuals to navigate the digital landscape securely. Our goal is to illuminate the delicate balance between convenience, personalization, and privacy, creating a space where businesses and individuals thrive in a relationship of convenience with robust data protection.

ABSTRACT

This research investigates the relation between visual entertainment media and aggression in the youth. The research study is an exploratory study assessing the factors which contribute towards aggressive behaviour amongst young people who are exposed to media violence portrayed through various sources of visual entertainment media. Qualitative data was gathered through interviews with 30 respondents, categorized into three groups: undergraduate students, postgraduate students, and teachers, with 10 participants in each. This segmentation facilitated a better understanding of how various age groups analyse and respond to the subject. The information gathered from the interview was examined using NVIVO. The social/cognitive theories were explored and applied to comprehend the behaviour patterns/aggression. Findings –Based on the interviews conducted for our research, it has become evident that visual entertainment media holds significant influence, often leaning towards the negative spectrum. Our findings indicate that such media can notably impact individuals' behaviour and personality, prompting changes therein. Participants emphasized the necessity of implementing restrictions or guidelines concerning the content consumed, particularly emphasizing the importance of this for individuals at impressionable ages, as exposure to certain content during this developmental stage can potentially alter personality and behaviour trajectories. Research implications-The implications of our research highlight the significant influence of visual entertainment media on individuals' behaviour and personality, particularly emphasizing its potential negative impact. Implementing age-appropriate restrictions or guidelines for media consumption is crucial, especially for impressionable individuals, to mitigate potential alterations in personality and behaviour trajectories. Additionally, fostering an understanding of the distinction between fantasy and reality within media content is essential for navigating its effects on individuals' perceptions and actions.

These findings underscore the importance of proactive measures to promote responsible media consumption and address potential adverse effects on individuals' development and well-being.

ABSTRACT

The major objective of this paper is to study the factors related to Technology-Organisation-Environment (TOE) context that influence the adoption of Digitization in Unorganised Retail Outlets. With this objective a study a proposed conceptual model of TOE framework was taken. A quantitative survey was conducted with unorganised retail outlets in Karnataka, India to validate the model. The survey generated 75 respondents. AMOS and SPSS were used to access the model. It is observed that the elements related to Technology in TOE (Technology-Organization-Environment) framework have a major impact on the intention to adopt technology (Digitalisation). However, the mindset of Retailers, which falls under the categories of Environment and Organization, needs to be improved in order to encourage technology adoption intention. The government might utilize the study to promote additional digitalization efforts in rural areas. They hold the ability to comprehend the needs of rural areas and adapt their work accordingly. This model can be utilized by unorganized merchants to expand their customer base and survive in the highly competitive market of today.

IMPACT OF SOCIAL MEDIA INFLUENCERS ON BEAUTY & WELLNESS PRODUCTS PURCHASE INTENTIONS

Dr. S. Shyam Prasad
Professor
International School of Management and Excellence, Bengaluru

Dr. Rameshkumar Murugesan
Professor
International School of Management and Excellence, Bengaluru

ABSTRACT:

The growth of social media has spawned a new category of celebrities - the social media influencers. Social media influencers are people who have acquired a sizable fan base on social media and monetize their influence by urging their followers to purchase goods and services. Social media has been found to play an important role in influencing purchase decisions. However, there is a lack of understanding of the extent of a social media influencer's impact on a consumer's purchase intention, particularly for beauty and wellness products. We have chosen to study beauty and wellness products for the reason that they no more remain as luxury products; they have come to be used more frequently and commonly. This is reflected in the global Beauty and Wellness Products Market size which is projected to grow from $1,610.5 billion in 2023 to $2,765.8 billion by 2030, at a CAGR of 8.03% (Fortune Business Insights). The study collected data from 386 respondents and applied PLS-SEM to identify the factors influencing purchase decisions and the moderating role of social media influencers.

DESTINATION MARKETING IN POST-PANDEMIC INDIA TO BOOST TOURISM

Geeta Ashok
Professor
International School of Management and Excellence, Bengaluru
geetaashok@isme.in

ABSTRACT

According to the Ministry of Tourism, over 6.19 million and 1.52 million foreign tourists arrived in India in 2022 and 2021 respectively compared to 10.93 million in 2019, representing a - 44% de growth. After this lull, post-pandemic weekend vacations and domestic travels are on the upswing which is helping in boosting economic activity and employment creation. In recent years, there has been a remarkable change in the way people travel. More and more people are seen travelling on long weekends and school vacations. This is majorly spurred by social media where people vlog and post about the places that they have visited. Also, resorts and hotels endorse tourist destinations with the help of influencers and celebrities. Lately, India has been very keen on destination branding to promote tourism amongst people residing in and out of India. The government supports the tourism industry through various schemes such as 'Pilgrimage Rejuvenation and Spiritual Augmentation Drive' (PRASHAD), Swadesh Darshan, 'System for Assessment, Awareness & Training for Hospitality Industry' (SAATHI), Dekho ApnaDesh, and 'The National Integrated Database of Hospitality Industry' (NIDHI). There are many more initiatives that the government is undertaking to brand India as a destination worthy of visiting. Destination marketing is a relatively new concept which is gathering momentum in India. Destination marketing is designed to attract people to a particular place and explore its origins, heritage and values. It is about creating a brand story and building a narrative around it. Brand stories are not about ads and sales pitches. These are stories which are to be told by a brand persona who connects with the core audience. It tries to project why your place is more exotic than other enticing locations. This study aims to explore the strategies that can be used to brand India as a destination for increased tourist inflow.

ABSTRACT

This study aims to address the research gap in understanding the factors influencing adventure tourists in India. The rapid growth and potential of the adventure tourism sector in India make it crucial to explore and analyze the factors that impact destination visit intention and word-of-mouth intentions of adventure tourists. By examining target respondent attitude, involvement, and destination image, this study aims to provide insights into the influences on adventure tourists and their overall satisfaction with adventure tourism experiences. A questionnaire was administered to 205 adventure tourists using simple random sampling, and the collected data was analyzed using various statistical tools such as reliability analysis, independent samples t-test, one-way ANOVA analysis, correlation analysis, regression analysis, and structural equation modeling. The findings of this study will assist marketers and adventure sports organizers in developing effective strategies to attract and cater to adventure tourists in the post-pandemic era. Additionally, the study aims to provide recommendations for marketing and policy regulations that can maximize the potential of adventure tourism in India. This research contributes to the existing literature and provides a foundation for further exploration in the field of adventure tourism.

ABSTRACT

This research paper investigates the burgeoning convergence of Augmented Reality (AR), Virtual Reality (VR), and Artificial Intelligence (AI) Chatbots in the burgeoning arena of marketing. While each technology individually possesses powerful potential to engage and influence consumers, their combined synergy presents an unprecedented opportunity for immersive, interactive, and hyper-personalised brand experiences. Drawing upon case studies and empirical data, this paper delves into the unique strengths and capabilities of each technology within the marketing landscape. AR's ability to overlay digital elements onto the physical world can be harnessed for virtual try-ons, interactive product demonstrations, and location-based marketing campaigns. VR's immersive environments unlock possibilities for virtual showrooms, product testing simulations, and gamified brand experiences. AI chatbots, powered by Natural Language Processing (NLP) and machine learning, provide 24/7 customer support, personalise product recommendations, and facilitate conversational marketing on a grand scale. This paper examines the intricate interplay between these technologies, highlighting the synergistic effects they produce. Further, it analyses the ethical considerations surrounding data privacy, user control, and potential biases within AI-powered marketing tools.

In conclusion, the paper proposes a future-oriented framework for harnessing the combined power of AR, VR, and AI chat bots to design transformative marketing strategies that drive deeper engagement, foster brand loyalty, and ultimately revolutionise the way brands connect with consumers in the digital age.

ABSTRACT

In the life cycle of a milk product, marketing proposes strategies to improve quality and sales. To tap, keep, and stay in the market, constant consumer assessments are needed to create marketing strategies that meet changing consumer behavior, as evidenced by industrialized countries. This study examined customer behavior for milk, buttermilk, curd, and ghee. The analysis reveals marketers must act to stay in business and establish customer loyalty. Based on the study, the researcher made useful recommendations for dairy marketing tactics. Finally, for India's health and development, the government should support dairy farmers and promote milk products.

BEYOND BRICK AND MORTAR UNDERSTANDING THE DYNAMICS OF PURCHASE INTENTIONS

Kavya K M
Research Scholar
Christ Deemed to be University, Bangalore
kavyathilaksana@gmail.com

ABSTRACT

The objective of this article is to create a comprehensive database of academic information on purchase intention on houses through the use of a systematic literature review (SLR). This database will help to promote global progress in research within the real estate sector. This study conducted a scoping review using papers from two well-regarded databases, Scopus and Google Scholar, spanning the years 1993 to 2023. The research also included a theme analysis method, as described by (Arksey & O'Malley, 2005). A total of 289 articles were assessed for inclusion based on predetermined criteria, and 178 of them were subjected to evaluation utilizing the theme analysis methodology. A thematic map of purchase intention of house research was created by evaluating data from 178 papers thematically. The study identified three primary topics and their corresponding sub-themes: consumer behavior, housing qualities, variables influencing purchasing intention. These themes were crucial in gaining insights into the House Purchase Intention and understanding customer preferences for buying a house. A thematic map of House Purchase Intention research is created by evaluating data from 178 papers thematically. This study aims to offer valuable and novel perspectives on consumer apprehensions regarding home purchases in the fast-evolving residential real estate market. It also highlights the key areas that marketers, stakeholders in the housing sector, the real estate industry, and researchers should focus on, both presently and in the future.

ABSTRACT

Strategic Brand Management for Zomato through Innovative Digital Marketing Strategies" explores the dynamic interplay between digital marketing and brand management, using Zomato as a case study. In the contemporary business landscape, the digital realm plays apivotal role in shaping consumer perceptions and behaviors. This paper investigates how Zomato, a prominent food delivery and restaurant discovery platform, strategically employs digital marketing to enhance its brand. Zomato's digital marketing initiatives are dissected, revealing a multifaceted approach. The plat form engages users through social media, leveraging user-generated content and inter active campaigns to actively participate in shaping its brand narrative. Content marketing emerges as a corner stone, with Zomato curating informative and emotionally resonant content, fostering a deeper connection with its diverse audience. Adata-driven approach is also explored, highlighting how Zomato utilizes user data to personalize recommendations and promotions. This personalized approach enhances customer satisfaction and strengthens brand affinity. The paper acknowledges the ethical considerations associated with data-driven marketing while emphasizing its role in delivering tail ored user experiences. As businesses navigate the ever-evolving digital landscape, this research provides insights into the strategies that have propelled Zomato to the forefront of the industry. The symbiotic relationship between digital marketing and brand management is scrutinized, contributing to the broader understanding of the transformative power of digitalization in contemporary business.

CHALLENGES OF DIGITAL INDIA PAYMENT SYSTEM WITH SPECIAL EMPHASIS ON MOBILE PAYMENT APPLICATIONS

V. Anitha
AssistantProfessor
Departmentof Management Studies,
SriSaiRamEngineeringCollege, Chennai
ramu.mba@sairam.edu.in

ABSTRACT

The purpose of this study is to investigate the effects of digital payment systems on mobile payment applications. The fundamentals of the digital public infrastructure were laid out by the government and built upon by robust public-private partnerships, and the main motive of this study is to understand the conceptualization of the unified payment interface (UPI), which has supported India's transition to non-cash payments by facilitating direct payments linked to a bank account. UPI is a public-private partnership that the national payments corporation of India led with interoperable platform applications including Gpay, Paytm, Phonepe, etc., For this current study, the researcher has done various sequences of statistical tests intended to confirm the consistency and has applied the various statistical tools. The hypotheses were tested with smart PLS 3.0 structural equation modeling on variables. From the findings, it demonstrates that the Indian digital payment system has been a tool to eradicate black money and create notorious awareness for cashless transactions. To conclude, the Indian digital payment system has amplified awareness towards eradicating corruption and magnifying social progress with UPI forms of cashless transactions.

ABSTRACT

In today's ever-changing business landscape, designing appropriate green communication has become an increasingly complex activity for marketers. The present study aims to redefine the strategic orientation of green marketing communication by putting forth a comprehensive framework. The study seeks to identify and analyse the various antecedents that serve a pivotal role in the advancement of GMC domain. With the help of a single cross-sectional survey of 164 green apparel customers from four states of Northern India, Exploratory Factor Analysis was conducted and study offers implications for the marketers to revisit their underlying process of green communication and strengthen their GMC in a strategic manner. 12 factors emerged from 42 items through EFA and factors namely Environmental Consciousness, Harmful Future Consequences, Emotional Connect with Nature, Process Oriented Communication, Image Oriented Communication dominate among all. Deep insights into these antecedents will not only help to foster a positive attitude among consumers towards green initiatives, but also serve as a safeguard against the detrimental effects of green buzzwords and the practice of green washing. Additionally, the study offers useful implications to marketers in the design of sustainable green communication strategies. Originality of the study lies in integrating cognitive, affective, individual and strategic perspectives which will assist marketers in strengthening their promotional strategies and ultimately achieving long-term competitive advantages.

ABSTRACT

Within the dynamic milieu of collegiate admissions, influencer marketing emerges as a contemporary and influential instrument that moulds the perceptions and decisions of prospective students in the domain of higher education. Influencers can shape the student's perspectives on campus life and culture, providing first-hand experiences, and influencing institutional preferences. Institutions must carefully select influencers to ensure alignment with their values and goals, as the right influencers can authentically communicate the unique attributes of the institution, effectively reaching and resonating with the desired target audience. This research paper delves into the pivotal investigation of factors influencing the selection of influencers in the admission process, examining the nuanced criteria and considerations that institutions weigh in identifying and engaging influencers to effectively shape prospective students' decisions in higher education. "Grounded on source credibility theory", this study employs validated questionnaires from diverse sources, surveying 213 management institutes through purposive sampling methods. Data collection involved the utilization of Google Form surveys and on-site field surveys to ensure comprehensive insights. The study found that influencers' expertise, trustworthiness, and objectivity significantly influenced their credibility, with attractiveness having the least impact.

Additionally, cost and industry pressure were identified as mediators in the relationship between intention and actual use of influencers in the admission process. These research findings would help in guiding institutions to prioritize influencers with demonstrated expertise, trustworthiness, and objectivity. Socially, it promotes informed decision-making among prospective students, fostering a more transparent and credible admission process.

ABSTRACT

This paper aims to review articles on healthcare services marketing published in the past decade to identify research gaps created in the backdrop of the recent pandemic and propose a future research direction necessitated by the global crisis. A literature review is performed based on the search term "healthcare services marketing" applied to the Scopus database, resulting in a final pool of 65 articles. The authors conducted the analysis based on Callahan's 6 W framework (2014). In the last decade, healthcare service marketing research emphasised medical tourism and concentrated on service quality. Towards the end of the last decade, the research on online healthcare service marketing saw a rise indicating a trend in the field. Based on this and considering the recent pandemic, the paper proposes possible topics for future research. The growing importance of global healthcare services is well-understood post-pandemic, and there is a growing interest in this area. A comprehensive review exploring topics researched in healthcare services marketing in the preceding decade before the pandemic will help identify research trends that will need further exploration to handle future global health crises.

ABSTRACT

In the modern era of digital transformation, higher education institutions all over the world are actively exploring and adopting Artificial Intelligence (AI) to enhance learning experiences. The present study aims to unveil the pivotal factors impacting digital transformation in Higher Education (HE). Based on the exploratory qualitative design, the study integrates UTAUT framework to conceptualize the role of digital transformation in AI adoption intention and inclusive education in HE. The Study reveals that expectations of AI, personal innovativeness, self-efficacy, facilitating conditions, and effort expectancy influence digital transformation in Higher Education (HE) which further drives the AI adoption intention and inclusive education in HE. The present study provides useful insights for marketers and practitioners to understand the dynamics of AI adoption in higher education, as well as a path for institutions to overcome challenges and leverage the opportunities of digital transformation.

ABSTRACT

In recent years, AI-powered influencer marketing has emerged as a pivotal force reshaping the digital advertising landscape. This study delves into the efficacy and impact of integrating AI within influencer marketing campaigns, drawing comparisons to traditional methods. Utilizing a mixed-method approach encompassing interviews and quantitative data analysis, the research assesses AI's influence on influencer selection, campaign performance, and ethical considerations. The study's findings highlight the substantial advantages of AI-driven influencer selection over manual methods in terms of accuracy and efficiency. AI algorithms proficiently align influencers with target audiences, resulting in increased engagement rates and increased brand visibility. The real-time analytics furnished by AI tools empower marketers to leverage data-driven insights, thereby optimizing campaign strategies and decision-making processes. Influencer campaigns optimized by AI consistently surpass conventional campaigns across key metrics like reach, impressions, and ROI. The data-centric approach of AI fosters more precise and pertinent campaigns that resonate deeply with audiences, yielding tangible business outcomes. However, ethical concerns pertaining to algorithmic biases stand as critical considerations in AI-driven influencer marketing. Emphasis is placed on transparent practices and ongoing audits of AI algorithms to mitigate biases and ensure ethical influencer selections. The future of AI in influencer marketing holds promise. Advancements in AI algorithms will lead to enhanced precision in matching influencers and provide sophisticated audience insights, fostering hyper-personalized campaigns. Responsibly embracing AI technologies enables businesses to forge stronger connections with their target audiences, positioning them at the forefront of the ever-evolving realm of digital advertising.

ABSTRACT

This paper aims to present a bibliometric analysis of publications from the Scopus database on initial public offering (IPO) pricing studies. And aim to consolidate the knowledge and explore current dynamics, understand knowledge progression, elicit trends, and provide future research directions for IPO pricing research. The current research used Microsoft Excel to conduct the frequency analysis, VOS viewer for data visualisation and analysis. This study has observed that the research interest in the field of IPO pricing has been increasing annually, with China recently surpassing the United States in terms of the number of published articles. Research themes have shifted from early long-term performance and stock markets to information asymmetry and underwriter reputation. A focus on business perspectives and emerging Asian markets has become a central aspect of the research. This research successfully revealed the most influential literature, outstanding authors, and top journals in the relevant field. This not only provides us with a comprehensive and profound understanding of the formation and development of knowledge structures, but also provides a guiding direction for future academic research.

prathibharaj.ms@christuniversity.in

Vibhav Gupta
Student,
Christ (Deemed to be University), Bengaluru
vibhavgupt02@gmail.com

ABSTRACT

This research scrutinizes "Market Dynamics in Crisis," focusing on the repercussions of international shocks on India's banking and corporate sectors. By means of a historical analysis, with specific reference to the recession of 2008–2009, the research analyses the complex impacts of international events on India's economic resilience. Employing event study analysis on important entities—State Bank of India, Infosys, Adani Green, and Indian Oil Corporation—across sectors Nifty Bank, Nifty IT, and Nifty Energy, the research unravels intricate patterns in stock returns. The results highlight the significance of temporal dynamics by highlighting the possibility that significant events might have an impact on certain days as opposed to the full observation period. In a broader context, this research contributes vital insights into the interplay between global financial institutions, individual stocks, and market dynamics during critical junctures, guiding stakeholders in navigating crises effectively.

A STUDY ON CORPORATE VALUATION IN MINING SECTOR USING MULTIPLES APPROACH

Dhanya Gowda R
Student, PES University, Bengaluru
dhanyagowdar@gmail.com

ABSTRACT

Mining and metals are one among the best performing equity sector globally, but due to few conflicting issues like resource scarcity, pricing bubbles, demand destruction and imminent recessions, there's confusion among the investors. Recently, the equity and commodity prices have exceeded the expectations level and the importance of mining on the economy is evident. Thus, commodities have attracted long-time investments as they protect against currency devaluation and are a safe haven during economic crisis. Thus, it is important to know how to do valuation of the mining companies. Predicting the valuation of these companies is complex. Though there are numerous methods of valuation to value the sector many are neither applicable nor useful. The factors to be considered while valuing companies are: financing risk, price cyclicality, changes in capital and operating cost structures, volatility in stock market, etc. The objective of this research paper is to understand the valuation of mining sector by applying multiples approach and its effectiveness and limitations involved. From the top nine mining companies in India one company is selected for multiple valuation process and peer group comparison is made to arrive at the results. The research is completely based on the secondary data obtained from various sources available online.

LONG-TERM EXAMINATION OF VOLATILITY AND RETURNS: AN ANALYSIS OF NIFTY 100 AND NIFTY 100 ESG INDICES

Shashwati Khuas
Research Scholar, Department of Business Administration, Sambalpur University
khuasshashwati@gmail.com

Dr. Anuradha Samal
Assistant Professor, Department of Business Administration, Sambalpur University

Gourav Kumar Panda
Research Scholar, Department of Business Administration, Sambalpur University
gouravkumarpanda@suniv.ac.in

ABSTRACT

This paper presents a comparative analysis of the NIFTY 100 and NIFTY 100 ESG indices, shedding light on the profound impact of Environmental, Social, and Governance (ESG) criteria within investment strategies, particularly in the context of emerging markets such as India. The study examines how the integration of ESG principles can substantially influence the risk-return profile of portfolios and contribute to their stability. The NIFTY 100 ESG index, designed to prioritize sustainable investing principles, emerges as a standout performer when contrasted with the traditional NIFTY 100 index. Notably, the former consistently exhibits more stable performance with lower volatility, even during times of economic uncertainty. This resilience suggests that ESG factors can act as a safeguard against market volatilities, providing investors with a cushion during turbulent times. The findings of this study hold critical implications for investors and policymakers alike. It underscores the potential of ESG-focused investments to align with ethical and sustainable objectives while simultaneously delivering competitive financial returns. The growing prominence of ESG considerations within the financial sector is highlighted, emphasizing their pivotal role in shaping the future landscape of investment strategies. This research contributes significantly to our broader understanding of how sustainable investing can seamlessly integrate into mainstream investment portfolios. It demonstrates the feasibility of striking a harmonious balance between ethical considerations and financial performance, particularly within the dynamic and burgeoning markets of India.

In a world increasingly conscious of environmental and social responsibilities, this comparative study serves as a beacon for investors seeking opportunities that resonate with their values. It underscores the transformative power of ESG criteria, not only as a driver of ethical investing but also as a cornerstone of sound financial decision-making in the ever-evolving global investment landscape.

ABSTRACT

Green finance is a core part of the low carbon green growth, because it connects the financial industry, environmental improvement, and economic growth. Sustainable finance contributes to better development and better finance for economic growth. Sustainable finance is one financial instrument to fight climate change and its impacts by regulating emissions and promoting developments in renewable energy. Green Finance is a hot topic throughout the world as the environmental conditions are going worse day by day and there is need to develop projects which are eco friendly in nature the financing and funding environmental friendly projects has to go in flow as there is a responsibility to conserve and protect the nature while the business activities must function in order to increase the commerce and maintain economic balance but with the integration of activities which goes in hand with sustainability aspect. The study is basically to obtain extensive and reliable information, the study methodology employs a descriptive technique, using qualitative data collection method like preparing questionnaire for data collection. The study's key question is "on what basis bank managers provide loans to small or medium scale enterprises which focuses on eco friendly projects and how do bank managers analyse the project in terms of repayment".

ABSTRACT

Navigating the intricate world of venture capital and private equity (VC/PE) raises a fundamental question: what drives these high-stakes decisions? This research, delving into the minds of VC/PE players sheds light on the metrics, motivations, and strategies behind their investment choices in the rapidly growing startup environment. Employing a qualitative survey, we delve beyond mere numbers to capture the nuanced perspectives of these influential investors. This study employs a qualitative data collection method. We conducted one-on-one, open-ended interviews with seasoned venture capitalists, private equity investors professionals, and fund managers based in Karnataka, allowing them to freely share their perspectives and experiences regarding the factors that motivate them to invest in a company. Our findings discover a multi-faceted picture of the entrepreneurial landscape. Start-up characteristics like the novel nature of their product/service, their funding stage, financial stability, and demonstrated capacity for innovation all emerge as pivotal determinants. Interestingly, the research goes beyond traditional financial metrics to reveal the crucial role of "soft factors" like the founders' vision, passion, and ability to execute. The human element, such as the ability to recognize potential and assess team dynamics, is crucial for VC/PE success. Ultimately, the practical implications of this study empower both startups and established firms. By understanding the intricate calculus guiding VC/PE choices, startups can tailor their approach and presentation to resonate with investors. For other firms, the insights gleaned offer valuable knowledge about the evolving startup ecosystem and its potential partners. In essence, this research bridges the gap between promising ventures and their financial lifelines, fostering a more vibrant and dynamic entrepreneurial landscape.

ABSTRACT

In a given locality, families living with finance and social status are herein taken into an analysis for locating the living or financing status, though developing a modelling by various approaches. Such status named by FSG in this present study, is symbolized by finance (F), Social (S) and Geography (G) for each and every family. Networking among households gets thereby formed upon finding an interaction between or among families, by FSG, and this network further leads to generation of a modelling, called by FSG modelling in this study. Expressed as theoretical study entirely, it has various usefulness to crop up entirety of a locality with regard to F, S and G features or variables, to know one family's interaction or FSG status (as an effect) upon another family. How a locality is equipped with by present resources (by F, S, G indeed) as available to or how it should be maneuverer to or many such fortunes can be described well by the study's FSG modelling. It should solve complexity in organizing among families onto their (FSG) distribution agendas or various marketing propositions or insights to bring in along with giving scopes of future research to be a doing-for aspect for a country's mankind.

ABSTRACT

The purpose of this study is threefold. First, it examines the effect of peer working capital management (WCM) on a firm's WCM decisions, followed by investigating the heterogeneity in peer effects across financial constraints, information environment and industry competition. Finally, it explores the moderating effect of peer WCM on the relationship between WCM and Firm Value. We analyse a panel dataset including firm fixed effects and industry fixed effects. We used a two-stage least squares regression approach to overcome the endogeneity issue, using peer idiosyncratic return as an instrumental variable (IV) for endogenous variable peer WCM. The sample for this study comprises 1419 Indian manufacturing firms listed on the Bombay Stock Exchange (BSE) from 2011 to 2022. The WCM decisions of a firm are positively affected by the WCM decisions of their industry peers. It is also found that less financially constrained firms have more potent peer effects. Peer effects are more pronounced in a highly competitive environment, thus supporting the rivalry theory of mimicking. Further, mimicking working capital has a moderating impact on WCM and firm value relationships. These results are robust to alternate WCM measures, another IV and different industry peer groups. The findings will benefit firm management in making better and more effective WCM decisions, besides guiding future researchers on further studies related to peer effect in financial decision-making. To the best of our knowledge, this is a maiden study that investigates peer WCM effects on WCM decisions of a firm in an emerging market.

The existing literature on peer effects is extended by examining the impact of peers on a firm's WCM policies in the presence of financial constraints, information and rivalry theory. In addition, our findings suggest that peer WCM moderates the relationship between WCM and firm value.

ABSTRACT

A healthy economy depends upon the financial service sector of a nation. Scheduled commercial banks occupy an important place in this sector by lending funds and creating saving habits of people. The aim of this study to evaluate financial performance of selected private sector banks of India by using EAGLE model. Private sector banks such as Axis Bank, HDFC Bank, ICICI Bank, IndusInd Bank and Kotak Mahindra Bank were selected based on market capitalization. To achieve this objective, the financial data of the selected sample was retrieved from the bank's annual reports for the period from 20019-2023. Ranking the banks with the help of EAGLE model. The results show that Kotak Mahindra Bank has a high mean and ranks first in Earnings and Equity. Indus Ind Bank, on the other hand, has a high mean in Growth and liquidity. The study concluded that there is a significant difference among the performance of Axis bank, HDFC bank, ICICI bank, Indus Ind bank and Kotak Mahindra bank in terms of Earning ratios, Asset Quality ratios, Growth ratios, Liquidity ratios, Equity ratios.

ABSTRACT

Examining the complex relationship between innovation and the fields of finance and human resource management, "Technological Disruption: Navigating the Future of Finance and HR Management in the Digital Age" probes the revolutionary effects of technology on these fields. The challenge of keeping up with the complexity caused by these industries' lightning-fast technological development is the driving force behind this research. There are two major holes in the current body of research: first, there has to be an analysis that takes into account the impact of technology on HR and finance as a whole; and second, there is a lack of solutions that connect theory with practice in the workplace. The main goal is to provide stakeholders with practical insights that show how technology may change finance and HR. The research makes use of a mixed-method strategy, polling HR and financial experts quantitatively and analyzing qualitative case studies from the industry. For this research 300 samples have been taken as primary research, 12 journals selected for secondary research.

To ensure sustainable and inclusive practices in the ever-changing digital environment, the report also recommends ongoing research into the development of adaptable frameworks that balance technical breakthroughs with ethical concerns.

ABSTRACT

The value of financial literacy in the quickly changing world of finance today cannot be emphasized, particularly for IT workers who must manage unpredictable career paths and particular financial difficulties. This study looks into how IT workers' decision-making about investments is influenced by their financial literacy. Using a mixed-methods approach, the study collects detailed insights by combining quantitative surveys with qualitative interviews. Through the use of a specifically created questionnaire, the quantitative phase evaluates the financial literacy skills of IT workers by probing into their knowledge of important financial concepts, investment tools, and risk management techniques. Simultaneously, the qualitative phase uses in-depth interviews to dive into the lived experiences and decision-making processes of a chosen set of IT personnel, providing insight into the complex aspects driving their investment decisions. By demonstrating the degree to which IT professionals' investment decisions are influenced by their financial literacy, the research findings hope to add to the body of knowledge already in existence. The study intends to give useful recommendations for specialized financial education programs geared at improving the financial acumen of IT workers by identifying particular areas of strength and weakness in financial literacy. Furthermore, the study investigates how demographic factors—like age, experience level, and educational background—affect investing behaviour and financial literacy in the IT industry. The ultimate goal of this research is to educate policymakers and employers on the vital role that financial literacy plays in enabling IT staff to make wise and well-informed investment decisions.

Understanding the relationship between financial literacy and investment decision-making is crucial for promoting financial resilience and long-term success for IT workers, as firms increasingly acknowledge the value of holistic employee well-being.

ABSTRACT

In the dynamic landscape of the financial industry, the emergence of Generative AI (Gen AI) heralds a transformative era, promising streamlined transactions and hyper-personalized financial experiences. This research delves into the profound impact of Gen AI on financial services while addressing critical concerns. Employing a meticulous methodology that combines a comprehensive review of literature, academic publications, industry research, and expert opinions, our study unveils the complexities of Gen AI. The major findings underscore its potential for enhanced efficiency, improved customer experiences, and strengthened risk management. However, shadows of concern loom, including algorithmic biases and potential liquidity risks. We advocate for clear regulatory frameworks and human oversight to ensure accuracy, trust, and ethical standards. The interconnectedness of the financial system introduces the specter of systemic risk, emphasizing the need for cautious integration. While Gen AI holds the promise of a brighter financial future, our research emphasizes the importance of patience and diligence to navigate its evolution responsibly. In paving the way for Gen AI integration, we contribute to creating a symbiotic relationship between technology and finance for the benefit of all stakeholders.

ABSTRACT

Backward region development has been characterized in various ways. Development is an interaction that guarantees use of the assets of a nation, including labour assets, to build the financial development and progression of the government assistance of the local area overall. Development will incorporate both growth and distributive equity as fundamental components comprising the all out cycle. Improvement has hence to be imagined as a multi-layered process, and must be perceived as an all out frameworks issue. Since the advancement issues are multifaceted, untidy and complex, they are undeniably appropriate for the frameworks approach. India has various in backward areas, and financial improvement of these locales requires exceptional methodologies. More than 10 years there are no motivating forces to financial backers and proper infrastructure to construct foundation in backward regions. The potential motivating forces can be Assessment concessions, sponsorships in power and unrefined substance and Property at low costs. The conceivable explanation is to foster the region by redistributing the assets. There are numerous exercises which are not embraced by the confidential area because of the absence of benefits or enormous ventures included. Arrangements like water supply, sterilization and so forth, must be assumed responsibility for by the Government itself. The Government can urge the public area to check out the creation of public products by giving expense concessions and appropriations and this is the manner by which it helps in redistributing the assets.

ABSTRACT

The study primarily aims to identify the risks and challenges that impact the adoption of alternative finance. To attain the study's objective, we employed a systematic literature review (SLR) method to identify and consolidate all the risks and challenges of alternative finance models. The study used the SCOPUS database to collect relevant material and analyzed 65 articles published between 2015 and 2023. The study found 19 risks and challenges segregated into four major categories: technical risks, legal and regulatory risks, financial risks, and user-centric risks and challenges. The study concludes that these risks and challenges must be addressed through a collaborative approach for the sustainable success of alternative finance. The study is the first of its kind that employs the SLR method to elaborate comprehensively on risks and challenges associated with alternative finance and serves as a practical guide to enhance knowledge for academicians, alternative finance entrepreneurs, developers, programmers, and policymakers. Hence, the study contributes to alternative finance literature.

ABSTRACT

Central Bank Digital Currency (CBDC) is a recent global phenomenon, with just a few people familiar. Pilot testing has been successfully implemented in several regions, including India, but awareness remains low. The government intends to implement CBDC as a strategic approach to reduce the high expenses connected with physical currency manufacture and combat corruption. This digital currency is directly supervised by the Reserve Bank of India (RBI), resulting in a transparent and accountable system with no third-party involvement. The shift to CBDC not only coincides with global trends, but it also tackles local concerns by offering potential answers to issues such as currency printing costs and corruption, enabling a more efficient and safe financial environment in the country. It is a Systematic Literature Assessment of secondary data, from various sources on fintech departments during the last ten years. The researcher identifies a correlation between CBDC-related elements, including UPI, cryptocurrency, data security, infrastructure, and illiteracy rates. The implications of this paper can be seen in various financial institutions and fintech industries across the country, providing clarity to the government and banks on whether it is appropriate to introduce this type of currency into society, as it will increase transparency and traceability, reduce reliance on cash, bring financial stability by mitigating risk, and aid in improving control over the financial system. This investigation illuminates the intricate dynamics of the industry and offers valuable perspectives on enhancing employee performance, well-being, and organizational health.

NAVIGATING THE CHALLENGE OF INTRODUCING A HYBRID WORK MODEL IN THE POST-PANDEMIC WORK CULTURE IN THE INDIAN IT SECTOR

Dr. Lakshmi Subramani
Senior Academic Manager,
SP Jain School of Global Management -Dubai Campus
lakshmi.subramani@spjain.org

ABSTRACT

As the dust settles from the pandemic's disruption, the service sector in India finds itself on the precipice of a new era: the era of hybrid work. This study delves into the evolving preferences of employees across the sector, illuminating the complex interplay between their mindsets and this burgeoning work model. Through a tapestry of quantitative and qualitative methods, the research paints a vibrant picture of this transition. Employee surveys, capturing the voices of over 500+ participants, provided a quantitative foundation. In-depth interviews with 15 individuals, representing diverse roles and demographics, added layers of richness and nuance. By delving into this data, the study unearths a trove of insights. One resounding finding is the multifaceted nature of employee preferences. Flexibility and work life balance emerge as key motivators of embracing hybrid models, with many valuing the freedom to juggle personal responsibilities and professional pursuits. The ability to escape the daily commute and create a customized workspace further fuels the appeal of remote work. However, the human need to connection and collaboration also finds its voice. Younger employees, in particular highlight the importance of in-person interactions for fostering teamwork and nurturing professional networks. The study paints a nuanced picture of the operational implications of hybrid model. While the potential for cost savings, particularly in office space, is undeniable, challenges in resource management and collaboration arise. Finding the sweet spot – the optimal balance between remote and in person workdays – becomes a crucial dance for organizations navigating this uncharted territory. Ultimately, the research offers a roadmap for navigating the complexities of hybrid work in the Indian service sector. By acknowledging the diverse needs and preferences of employees investing in technology and communication tools and fostering a culture of adaptability, organizations can unlock the full potential of this model, ushering in a new era of productivity, employee satisfaction, and ultimately, success.

ABSTRACT

Traditional Banking sector had been a dream job sector for the job seekers in the pre-COVID era though the Digital Banking was becoming popular and even traditional banks were also adopting it gradually. This paper analysed the skill needs for the new Banking 5.0 environment enriched with Fin-Tech. The study was conducted in two levels: Among retired employees and current employees. The need of the study is to analyse the adaption of employees with the dynamic environment where the traditional positions are already replaced with new positions that needs advance technical skills. The features of Smart phones along with Fin-tech attributes made the financial services quick, easy and less chances for mediation and fraudulence. The advanced technology increased the productivity per employee very high and cyber security system monitor the application-based transactions. This research analyses how the employees cop up with this higher work stress and the effect of emotional intelligence in managing work stress.

ABSTRACT

After Post Covid – 19 situations many employees are been given work from home policy. They are contributing their efforts to achieve organizational objectives. Many IT Sector Companies have closed their offices and are operating remotely. The new trend of Remote working is being developed and expenses on electricity, maintenance, rent, overheads etc are avoided by companies. Pool of employees were happy by doing work from home. The trend was quiet familiar in USA where due to extreme weather conditions employees have to do work from home. The purpose of this research paper is to find out the social, psychological and communication impacts due to Online learning, training. The employees doing work from home must attend training sessions which are mostly online in nature. This new method of learning employees needs to learn. Different platforms like Microsoft Teams, Zoom, Google Meet etc, are available for online learners. Video Conferencing become quite popular in the country. Interview tests, training sessions become common in organizations. The Research Paper is based on Secondary Data collected from different journals, newspapers etc. As per study of employee behavior many organizations observed Communication Gap between Manager to employee, Employee are not able to communicate effectively to lower-level staff and customers. Also, psychological stress is more than regular employee who works from office.

HUMAN RESOURCE DEVELOPMENT IN INDIA IN THE CONTEXT OF YOUTH EMPLOYABILITY: A CRITICAL REVIEW

Dr. Satyajeet Nanda
Associate Professor, CMS Business School, FMS
Jain (Deemed-to-be University), Bengaluru,
dr.satyajeetnanda@cms.ac.in

ABSTRACT

With a global significance of youth employment, and the heightened need to understand the conditionality surrounding youth employability, a critical review is undertaken. The objectives of the review is to critique the existing employability related policies, guidelines, data, programs, best practices, key stakeholders, challenges and gaps. The research dwells on a qualitative research method of SLR (Systematic Literature Review) using relevant existing literature/ studies/ reports from reliable sources. As part of qualitative approach, 60 literatures after being subjected through 'eligibility for inclusion' on aspects of youth employability finally ended with detailed analysis of 40 literatures. Various data emerged from different studies shows interesting insights at India's national and states level. At national level the rate of youth unemployment in India is found to be declined to 12.9% during 2020-21 as compared to 17.8% in 2017-18 for the persons in age group 15-29 years. The proportion of youth unemployment to total unemployment revealed that the youth unemployment is around 83-85% of total unemployment. This means a large portion of unemployed is comprised of youth only. This paper digs into information on the availability of training options, various initiatives and challenges in government and private sectors programs for youth employability. A study on rural youth employability in India finds an advantage for the youth who have completed their schooling in the labour market whereas joblessness is found to be high among the rural youth with poor levels of education. So the rural youth employability hinges on personal factors like financial constraints and lack of networks, as well as external factors including job scarcity and unfair recruitment practices (Venkatanarayana, 2013). Geographical isolation worsens the situation. There are critics on National Skill Development Corporation, NGOs and corporate social responsibility (CSR) initiatives which focus on skill development but post training youth employment is not appropriate. This is because of delivery issues, such as; at grassroots level, the focus is sometimes on imparting merely the low-end skills and not getting youth employed. Also, the exploitative nature of unorganized sectors in which youth end up working as disguised unemployed.

The finding of this thorough critical review provides rich insights and recommendations for youth employability programs. (a)In view of the findings that employability does not depend only on the characteristics of the individual graduates like subject knowledge, experience, skills and personality traits but also depends on the faculty, curriculum, and teaching method in university systems, proper refresher training and sensitization have to be given to the trainers.(b)As it is found that receiving career guidance may or may not be significantly (statistically) associated with the employment status, while lack of resources available to people looking for job, lack of network to the labour market and discriminatory recruitment practices may have a strong impact on employability. Hence required resources for job scrutiny, enhanced network need to be made available to the youths. The discriminatory recruitment practices should be reduced through proper sensitization, advocacy and regulation. (c)Often the exploitative nature of unorganized sectors ends up youth working as disguised unemployed. There has to be proper regulation and sensitization in the unorganized sectors. (d)In West Bengal context is found that the skill trainings for youths are sometimes not effective and quality of training are not up to the mark. This hampers the training outcomes and youth employability. An absence of a formal mechanism to review and update curriculum based on industry needs, results in outdated courses for youth training. Hence proper intervention is required in these areas (review and update curriculum) of youth training. (d)In some programmes in West Bengal, the segmentation in youth employment training without industry alignment, lack of refresher trainings for trainers leads to poor youth employment outcomes. Hence follow up training based on proper segmentation will be useful. (e)It is found that problem arises when Industries prefer nationally certified courses and not by state of West Bengal as such. Hence pan-India relevant training and certificates should be provided.

ABSTRACT

Employee experience and employee engagement are crucial for the hotel industry if it wants to get a competitive edge in the cutthroat competitive market. The hotel industry consists of a wide range of services to offer to its customers and this is the reason why well-experienced and trained employee engagement is important. The purpose of this research article is to understand the perspective of the employees regarding their engagement in the hotel industry. The perspective of the employees has been understood with the help of data collection through a survey of 101 respondents by asking them 11 questions. The results of the survey analysis have shown that a vast majority of survey participants were satisfied while working in the organization, they were satisfied with the level of support they were receiving and the kind of appreciation they got while working in the hotel industry. From the overall analysis, it can be said that from the employee's perspective, their experiences and engagement have been greatly enhanced in the hotel industry.

ABSTRACT

The pandemic has had a significant impact on the hotel sector, changing customer interactions and business practices. These days, safety precautions like improved sanitary practices, contactless services, and social separation have become essential. The ongoing development of contactless services, the incorporation of cutting-edge technology for touch less encounters, and improved dissemination of safety precautions are potential avenues for further advancements in pandemic hospitality.

Lekshmy Jayaram
Student - MBA, Amrita School of Business
Amrita Vishwa Vidyapeetham, Bengaluru
lekshmyjayaram98@gmail.com

ABSTRACT

This study aims to understand the factors driving employee's choice of WFH or office work, the factors motivating employers to bring back employees to office and how employee engagement activities impact these decisions. It seeks to identify key factors influencing decision-making and explore the potential of engagement in facilitating a smooth return to the office. This study will employ a mixed-methods approach, combining quantitative and qualitative data collection methods. We conducted a survey in the questionnaire format from the IT employees working in Karnataka/Kerala to identify the various factors contributing towards their work location decision. In depth interviews were conducted with HR professionals/decision makers in IT companies regarding the factors that motivate employers to bring back employees to office and to identify the role of employee engagement programs in the process. The findings of the study show that factors like work environment & flexibility, work life balance, connection & team bonding, financial savings affect employee decision of work location & factors like Moonlighting, Coffee badging, Training & Development, Team bonding, Communication affect employers' decision in bringing back employees to office. The practical implications of the research help IT companies in understanding the factors that contribute to employee work location decision. Employers/decision makers can attract employees to office by coming up with proper employee engagement programs.

IMPACT OF WORK FROM HOME ENVIRONMENT ON EMPLOYEES' PSYCHOLOGICAL WELL-BEING

ABSTRACT

To examine the relationship between the employees' perception about theoretically grounded work-from-home factors and its relationship with overall satisfaction and perceived advantage, and to investigate the impact of work-from-home outcome variables on psychological well-being. Work-from-home factors and psychological well-being components were empirically investigated using 294 responses from the IT industry. Productivity, morale, and flexibility had a significant positive impact whereas, teamwork and work-life balance had a significant negative impact on the overall satisfaction and perceived advantage. Outcome variables were significantly influencing the psychological well-being of the employees. Organizations can take a cue from this study for framing work-from-home policies for their employees in the new normal. Although prior studies show positive and negative effects on the interaction between work-from-home and psychological well-being, conclusions are limited by the way the interaction between them has been modelled.

ABSTRACT

This research explores the experiential dimensions of Vipassana meditation and its correlation with overall well-being, employing Interpretative Phenomenological Analysis (Smith, Flowers, & Larkin, 2009) as the primary research methodology. Aligned with the principles of IPA, this study aims to uncover the personal stories of individuals deeply engaged in Vipassana meditation, seeking to understand the intricate relationships between Vipassana a meditative practice and one's holistic sense of well-being. The analysis reveals a multifaceted understanding of Vipassana meditation, exposing dimensions such as heightened mindfulness, emotional equanimity, self-awareness, personal transformation, and interconnectedness. Participants consistently report transformative experiences within these themes, offering nuanced insights into the complex relationship between Vipassana meditation and holistic well-being. The findings contribute to the development of an interpretative phenomenological understanding that elucidates the complexities of meditation in the context of individual well-being. Employing an Interpretative Phenomenological Analysis (IPA) design, this study utilizes purposive sampling to select ten participants deeply engaged in Vipassana meditation.

Semi-structured interviews are conducted, recorded, transcribed verbatim, and subjected to rigorous IPA analysis involving in-depth examination of individual experiences, identification of emergent themes, and interpretative analysis.

Acknowledging limitations, including a small sample size of ten participants, potential biases in self-reporting during interviews, and contextual specificity that may limit generalizability, the study underscores the need for future research to consider larger and more diverse participant pools to enhance the applicability of findings. This research contributes to the understanding of Vipassana meditation by providing an interpretative phenomenological exploration of individuals actively practicing this form of mindfulness. The IPA methodology enriches our understanding of the intricate relationship between Vipassana meditation and well-being, offering distinctive insights into the challenges and rewards associated with meditative practices.

VALIDATION OF DIMENSIONS OF LEARNING ORGANIZATION QUESTIONNAIRE (DLOQ) FOR THE INDIAN IT INDUSTRY

Biji Varughese
Research Scholar, Fellow Program in Management,
International School of Management Excellence, Bangalore
biji_v@yahoo.com

Dr. M. Rameshkumar
Associate Professor,
International School of Management Excellence, Bangalore

ABSTRACT

A Learning Culture helps organizations be more competitive and effective in their output. The focus on this has increased manifold with the advent of new technologies at a substantial pace. Adaptation of AI is another development driving organizations to rethink their strategies for up skilling and re skilling their employees. With the advent of time, we have new learning approaches and practices in place. Dimensions of the Learning Organization Questionnaire (DLOQ), which was developed by Watkins, Yang, and Marsick (1997) and Yang, Watkins, and Marsick (1998, 2004) is a widely used tool to understand the various dimensions of the Learning Organization. This tool has been deployed internationally and used in at least 15 countries worldwide. Kim (2015) did a detailed analysis of the uses of DLOQ in the past and suggested further research on the topic. Our literature review found few studies in India where DLOQ was used. However, we did not find a study validating the tool for the Indian IT industry. This study aims to bridge this gap. While validating the instrument from an Indian perspective, it attempts to clarify some past research questions about the validity and use of the instrument. We conducted research on the Indian IT Sector with close to 400 respondents to understand their perception of the Learning Culture in their organization. As per our findings DLOQ is a reliable instrument that can be used in the Indian IT Sector. We did not find any issues with the construct validity of the instrument. DLOQ can be used to assess their current standing and progress made over time while highlighting the areas that may need intervention. Further, it can be used by practitioners to understand the relationship with other variables.

CMS Business School, Jain University, Bangalore

ABSTRACT

Black feminist legal scholar Kimberlé Crenshaw invented inter sectionality in the early 1990s. Inter sectionality discusses how gender, colour, ethnicity, sexual orientation, gender identity, disability, class, and other discriminating systems "intersect" to generate unique dynamics and consequences. When a Muslim woman wearing the Hijab is discriminated against, it is hard to separate her gender from her Muslim identity and isolate the factors. Race, class, and gender are intersectional. This intersectional approach suggests that we must look at multiple forms of oppression and treat women as a heterogeneous category where caste, class, region, locality, language, and others affect women in different ways. For instance, Dalit women have a distinct issue than upper-caste women. People tend to portray women as a monolithic group and oversimplify their oppression as affecting all women regardless of caste or status. These common sense reasons only make sense when we compare women to males. This reductionist view of women's oppression overlooks internal distinctions, marginalising marginalised women and creating new kinds of discrimination. Some of the students daily face racism, sexism, classism, ableism, and other oppressions. The purpose of this study is to understand the ways in which the intersectional identity of girl students in higher education can influence their satisfaction with life and the extent to which their perceived marginalization by the societal norms can mediate this relationship. A research model was framed and tested to find out the direct and also the indirect effect of intersectional identity of girl students in higher education students on their life satisfaction in the presence of their percieved marginalization. The study was administered to 400 girl students across higher educational institutions in Bangalore.

The sampling technique adopted was stratified sampling and girl students across various demographics were chosen for the study. The responses obtained were analysed using SPSS software and the findings and implications were reported in the paper. The findings of the study indicates two main intersectional identities based on the results of cluster analysis and it was found that there is a significant variation in both clusters when it comes to the factors of perceived marginalization and life satisfaction. The results also indicate that perceived marginalization partially mediates between intersectional identity and life satisfaction.

INFLUENCE OF INTRINSIC MOTIVATION, ENGAGEMENT ON LEARNER'S SATISFACTION OF THE ONLINE COURSES

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence, Bangalore

Rameshkumar Murugesan
Associate Professor
International School of Management Excellence, Bangalore

ABSTRACT

The advancement of computer-assisted learning and educational technology has brought about a number of changes to higher education. Online education has been a vital part of the higher education scene during the past 20 years. The ability of online learning to provide top-notch instructional materials to a large audience without regard to time or location is one of its main advantages. In essence, a lot of teachers and students favor online learning because it offers unmatched options for equalizing educational materials. When a learner is unable to attend traditional in-person classes because of obligations like work or family obligations, online learning can be very beneficial. One of the most important factors in encouraging effective educational processes is student satisfaction with online learning. It has been determined that student satisfaction is a key factor in encouraging students to enroll in online courses since it affects their drive and engagement to finish the program. Thus, this study, which has its roots in the self-determination theory, uses structural equation modelling to examine intrinsic motivation, learner engagement and the mediating effect that it plays on learner satisfaction in online learning. Students (n = 714) were emailed online surveys using a cross-sectional technique. Data from dependable tools is gathered using convenience sampling from postgraduate students who are enrolled in online courses. Using structural equation modelling, the study discovered that learner satisfaction with the online course is mediated by student engagement.

Dr. K. C. Arunadevi
Associate Professor,
GR Damodaran Academy of Management, Coimbatore.
arunadevi.kc@grd.edu.in

ABSTRACT

The Study aims to examine the intricate relationship between Self-efficacy, Resilience, and Job Performance of an Employee working in the IT sector in the South zone of Coimbatore and explore the synergistic effects of these psychological constructs in the workplace. A questionnaire survey method was employed to collect data from 372 employees working in the South zone of Coimbatore IT companies. SPSS Software was used to perform data analysis. Furthermore, the study investigates how Self-efficacy influences Job performance both directly and indirectly through the mediating role of Resilience. Hence it was found that Resilience may act as a full mediator in the relationship between Self-efficacy and Job Performance of an employee. Resilience is expected to play a critical role in shaping how self-efficacy influences an employee's ability to overcome challenges, cope with stress, and ultimately enhance job performance. The findings of this study have practical implications for organizations seeking to enhance employee performance by understanding and promoting factors such as self-efficacy and resilience. By identifying the mediating role of resilience, organizations can develop targeted interventions and training programs to bolster employees' belief in their capabilities and equip them with the skills to navigate challenges effectively, thereby fostering improved job performance and overall workplace well-being.

ABSTRACT

Emotional Intelligence is a type of cognitive ability, a soft skill which has many benefits and is consider important in many industries for the success of a leader, performance and overall work culture. In Indian construction industry concept of Emotional Intelligence is unexplored or we can say the concept itself is not introduced and understood. The aim of this paper is to understand and reinforce the conceptual understanding of Emotional intelligence and its competencies in Indian construction industry. For the study we have searched literature available in Scopus, Web of Science and Google Scholar and UGC care. Relevant keywords like emotional intelligence, Construction worker, Project Manager, Emotional Intelligence were used to discover publications. The publication selected based on the theme. The study on the importance of Emotional intelligence in construction industry has been introduced in the developed countries but it is not been introduced, understood or researched in the developing countries. The conception of Emotional Intelligence has made outstanding importance in other industries when the concept was introduced either by management, researchers, or human resource. But the importance of Emotional Intelligence has not been introduced or researched in construction industry. Since the research on Emotional Intelligence pertaining to construction industry are not done the way it explored and researched in other industry. Very few publications are available which are relevant for the review. In spite the term is well researched in other industry and the publications available but the number of publications reviewed may not relevant to construction industry and or can be exhaustive.

The methodical review of the literature which is available have given an insight to introduce the knowledge of EI research in construction industry which will further help the leadership team and management for the successful completion of project with good interpersonal relationship.

Prof.Narendra Babu BV
Senior Assistant Professor,
Indus Business Academy, Bangalore

ABSTRACT

This abstract explores the concept of attrition in organizations, emphasizing its impact on workforce and customer base. The company under consideration faces a 35% attrition rate, prompting strategic efforts to reduce it to the IT industry standard of 21%. Identified reasons for attrition include lack of recognition, inadequate training, and a bureaucratic approach towards human resources. The challenges posed by attrition are categorized into monetary (cost and productivity) and non-monetary (morale, knowledge loss, and customer satisfaction) aspects. This article is a case study of work force management that is linked to attrition rate. In this regard company introduced initiatives like AMIGO Program, focusing on employee engagement, and the 3:3:3 Feedback system, collecting feedback at intervals during the first three months of employment. Additionally, the company invests in Training and Development Initiatives, especially in the context of advancing technologies like AI. Future goals include ingraining values, ensuring employees understand the significance of their work, fostering autonomous teams, promoting continuous learning, and encouraging adaptability. These goals align with characteristics of a high-performing work culture. To achieve the target attrition rate of 21%, the company proposes an evolution in organizational culture. The model includes elements such as self-directing teams, vitality and learning through the 70:20:10 model, departmental appraisals, organized feedback using the STAR-E format, and peer-to-peer recognition. These components collectively contribute to the development of a high-performing work culture, emphasizing trust in intangible assets and effective communication.

Keywords: *Organisational Culture, Attrition, AMIGO Program, 3:3:3 Feedback, Training and Development Initiatives, High Performing Work Culture.*

A CASE STUDY ON HRIS IN MOTHERHOOD HOSPITAL

Tousiti Ghosh
Student, Indus Business Academy, Bengaluru
fpb2224.033.tousiti@iba.ac.in

Prof. Narendra Babu BV
Senior Assistant Professor,
Indus Business Academy, Bengaluru

ABSTRACT

Companies normally adopt technological applications to manage Human Resources function. By doing so they are able align their HR process with the changing landscapes of technology influenced services. This research paper deals with the efficiency of the human resource information system in motherhood hospital. Human Resource Information System (HRIS) is a portal widely used and is been talked in many sectors. It collates the special features and capabilities of MIS (Management information System) and facilitate towards supporting the administration with one stop information, adoption and provisions and facilitations. HRIS is a platform which facilitates the human resources management and thus helps in overall management by easing the whole process. This article is a case study from health care sector where in the organisation is in focus is currently in the process of implementing and using HRONE software. This research article is based on technology acceptance model and eco modernisation that influence the adoption of HRONE in the hospital context. The research gives an insider to all the companies out there who are still struggling with the way out to manual application of all the human resource facets. The background of the research comes from the usage of HRIS in Motherhood Hospital. Being a company of expansion, it had to develop HRIS and implement it and understand the challenges in the process of installation of the software in the company. The independent variables include the variables that are related to the employees and their behaviour and attitude towards accepting HRIS as a platform The variables may also related to implementation challenges associated with HRIS. The dependent variable may include the adoption of HRIS as a platform for managing Human resources across the organization. The article is presented as a case that reflects upon the adoption of HRIS in hospital set up. It highlights the major contributing factors towards adoption of the HRIS platform. It also highlights the major challenges and hurdles that are common while adopting a platform across the organization. The method that is been used is the qualitative in nature in terms of interview and analysing them in terms of qualitative tool. The results of the study directly impact on the implementation strategies, training as well as the challenges that are overcame have been analysed.

Also the problems that could not be met yet are to be curved through further study that will create a further study of the paper.

EXPLORING CORRELATION BETWEEN CAREER TRANSITION AND WORK-LIFE BALANCE OF OSWAL GROUP: AN EMPIRICAL STUDY

Dr. Tanu Kalsi
Assistant Professor, Government Degree College,Ramshehar,
Solan, Himachal Pradesh
tanu.kalsi21@gmail.com

ABSTRACT

Dynamically changing economy has brought metamorphic changes in the business. Businesses must undergo changes in technology, methods of production, work force and working environment. These changes increase the level of stress and increase pressure on employees. It is in the interest of the organizations to take care of the employees to maintain their work-life balance so that the employees can be retained. The dissatisfaction among employees can lead to employee turnover, which could be harmful for the organizations. The transition in the career of the employees also plays a significant role in maintenance of their work-life balance. The objective of the study is to study the relationship between career transition and work-life balance of Oswal group. For this purpose, a sample of 581 has been taken from VardhmanPolytex Ltd. of Oswal group. Primary data has been used for the study and data has been collected using the questionnaire.

A SYSTEMATIC REVIEW OF THE LITERATURE: EXAMINING THE INFLUENCE OF ETHICAL LEADERSHIP ON EMPLOYEE JOB PERFORMANCE

Garima Bajpai
Research Scholar, *Doon University, Dehradun*
garimabajpai06@gmail.com

Dr. Reena Singh
Professor, School of Management,
Doon University, Dehradun

ABSTRACT

This research constitutes an extensive exploration of ethical leadership, meticulously scrutinizing pertinent systematic literature to unravel its intricate dynamics within organizational contexts. The investigation comprehensively navigates through various dimensions, encompassing theories, measurement scales, and outcomes. To compile a robust dataset, the Scopus database is employed, collecting 311 papers spanning the period from 2005 to 2023, all centrally focused on the subject of ethical leadership. From this comprehensive pool, 48 publications are judiciously selected for a meticulous analysis, aligning with the rigorous Preferred Reporting Items for Systematic Reviews (PRISMA) protocol. The study's outcomes significantly underscore the critical importance of integrating ethical leadership, extending beyond its influence on overall employee performance to serve as a catalyst for diverse factors undertaking mediating or moderating roles within organizational frameworks. Examining the global landscape, especially in Asian nations like China, Pakistan, Malaysia, and Indonesia, reveals a noticeable surge in the emphasis on ethical leadership. This emphasis is evident through active participation in studies delving into the practical applications of ethical leadership. Empirical findings robustly affirm the positive influence of ethical leadership on performance outcomes, advocating for a broader scope that encompasses Indian organizations. This paper not only highlights the paramount significance of ethical leadership but also contributes valuable insights for future research endeavours. By synthesizing theoretical frameworks, empirical evidence, and a systematic review process, this research stands as a foundational contribution to the evolving discourse on ethical leadership. The nuanced exploration of ethical leadership within diverse organizational landscapes not only informs the current understanding but also lays the groundwork for continued exploration and development in this crucial area.

farha9677@gmail.com

Dr.Swati Bisht
Associate Professor, Doon University, Dehradun
swatiibisht@gmail.com

ABSTRACT

Researchers have worked very hard to expand our understanding of sustainable leadership (SL) over the past 20 years. The objective of this study was to examine, through publishing outputs, worldwide research trends in the field of SL. The top writers, publications, organizations, and nations were the main subjects of the analysis. The Scopus database yielded a total of 357 publications. The productivity, citations, and h-index were among the bibliometric metrics that were employed in the performance study. In addition, the scientific landscapes were visualized using the VOS viewer. Author keywords from the bibliographic coupling of co-occurrence and bibliographic co-authorship coupling among related nations were used in the graphical analysis. The outcome showed that there has been a sharp rise in the trend of SL research. Furthermore, SL has generally been related with the subjects of job satisfaction and leadership. In addition, certain other elements discovered in recent research related to SL were also identified. Since our study covered the majority of the important SL components, it serves a complementary and educational purpose.

Keywords: *Bibliometric Analysis, Author Keyword Sustainable Leadership, Organizational Citizenship Behaviour, Scopus Database, VOS viewer*.

WORKPLACE HAPPINESS - A SYSTEMATIC REVIEW

Yshab Rafiq
Research Scholar, Department of Business Administration,
Aligarh Muslim University
yshabrafiq@gmail.com

ABSTRACT

The Purpose of the study is to review the progress of research on happiness at workplace. A Systematic Review has been done by delineating the authors, unit of the study, methodology and major findings. Peer Reviewed articles published between 2008-2018 confined to the discipline –business, management, accounting and psychology written only in English which studied concepts of happiness at workplace were taken into consideration. Happiness at Workplace is taken as Subjective Happiness in this Study. Happiness Intervention Programmes, Demographic Factors, Leadership, Big 5 Personality Traits were identified as the common antecedents. Productivity, Organizational Citizenship Behaviour, Organizational Commitment were identified as the common outcomes. Research Articles published only in English are taken. Inaccessible Databases is another limitation to this Study. This Study identifies the Workplace Variables which have not been related with Happiness at Workplace. Future Research might take into consideration the identified variables to empirically test with Happiness at Workplace. Review Study related to Workplace Happiness are limited, this study in itself is a contribution to the literature by identifying novel variables which have been associated rarely with Workplace Happiness till now. This Study will help stakeholders such as Government in Human Resource Policy Making; Organizations to target those areas in an organization which can boost Happiness at Workplace. This Research contributes to the existing literature by providing a comprehensive framework aimed at enhancing happiness at workplace.

"THRIVING IN TURBULENCE: UNVEILING THE RESILIENCE-JOY NEXUS AMONG HEALTHCARE PROFESSIONALS FOR ENHANCED JOB SATISFACTION"

Harish Rawat
Research Scholar, Doon University, Dehradun
mbahr700@gmail.com

Dr. Reena Singh
Professor, School of Management,
Doon University, Dehradun

ABSTRACT

Mental illness, constituting 32% of global disability-adjusted life years, significantly impacts workplaces, particularly affecting healthcare workers who face high rates of burnout, stress, and depression. This paper explores the interplay between joy, resilience, and job satisfaction in healthcare professionals to address the pressing issue of mental health in this crucial sector. Healthcare professionals, renowned for dedication, face challenges such as excessive workloads, workplace violence, and bullying. The resulting mental health issues not only affect workers' satisfaction but also impact patients and overall workplace happiness. Despite their exceptional commitment, long hours and high-pressure circumstances often lead to reduced job satisfaction. Cultivating joy and resilience emerges as a key strategy to enhance overall satisfaction levels in this demanding profession. The capacity of a healthcare system to manage crises hinges on the well-being of its professionals, who often find themselves among the most vulnerable individuals. To ensure their mental health, identifying and minimizing risk factors in the work environment is imperative. Exhaustion, common in demanding settings, can be alleviated through resilient practices, including a clear sense of purpose, work-life balance, and adaptive coping skills. This systematic review employed a realist framework to analyze 60 selected articles from three health-related databases. Organizational-level interventions in high-income countries were studied, focusing on skills development, well-being, job satisfaction, joy, resilience, stress management, and workload. The findings underscore the need for additional research in low- and middle-income countries and for studies assessing the long-term impacts of promoting mental health in the workplace.In conclusion, fostering a joyful work environment and resilience positively influences job satisfaction and mental health in healthcare professionals, ultimately contributing to overall well-being and improving the quality of patient care. This synthesis provides valuable insights for organizational interventions to address the mental health challenges faced by healthcare workers globally.

ramesh@isme.in

ABSTRACT

Coaching has been defined and practised for some years. However, there's rarely been a study on whether coachees prefer circumstantial or programmatic coaching across age groups, especially while being coached for performance. This study makes an effort to understand the coaching preferences of age groups. Knowing this would aid coaches in modifying their styles while coaching these diverse age-groups. This study intends to aid Managers who are involved in Developmental Coaching. Coachees of different age groups may exhibit distinct responses to specific coaching styles, thus requiring a more subtle and refined approach. In this context, the choice between programmatic and contextual approaches is a crucial distinction among coaching methodologies. For Performance Coaching within an Indian context, the Coachee's preference is not known. Managers who coach may experience difficulties with their competence or skill set, which may limit their capacity to produce the necessary performance outcomes (Grant, 2019). The study involved a Coaching preference survey across corporations including Technology, Manufacturing, Healthcare, and Ecommerce domains. The population involved Managers who Coach for performance and employees who undergo coaching. The responses of 392 managers were analysed to find their preferences and compared to the preferences of 692 coachees.

Programmatic style was preferred by younger Coachees up to 40 years of age. Older coachees above 41 years significantly preferred a circumstantial style. Knowing this will help us eliminate any gaps and calibrate the Coaching style of Managers for better impact.

NAVIGATING SOCIAL CAPITAL FORMATION IN VIRTUAL WORK ENVIRONMENTS: THE ROLE OF DIVERSITY PERCEPTION AND INTERVENTIONS

Dr. Harold Patrick
Dean Center for Management Studies
Jain Deemed to be University, Bangalore

Dr. Moovendhan V
Associate Professor
Center for Management Studies
Jain Deemed to be University, Bangalore
dr.moovendhan_v@cms.ac.in

ABSTRACT

This study investigates the moderating impact of Diversity Challenges Management on the relationship between diversity perception and various dimensions of social capital within the virtual working environment. The analysis establishes a positive connection among diversity perception, diversity management, and social capital. Notably, a negative correlation is identified between the cognitive dimension of diversity perception and individual aspects of social capital. Moderation analysis uncovers that individual challenges develops negative social capital with second-order social capital, whereas organizational challenges do not show a significant relationship. Intriguingly, the management of both individual and organizational challenges demonstrates both negative and positive moderation in the association between diversity perception and sub-dimensions of social capital with mixed results. Survey data from 564 virtual team members in India's Information Technology industry professionals are analyzed using SMART PLS-based structural equation modeling. The findings of this research affirm that diversity perception and challenges can be surmounted in the virtual working environment. However, the present study throws some light on the need for managing organizational and individual challenges in different way for virtual working environment and much research required to develop innovative practices to overcome the identified challenges. Additionally, it aligns with prior studies in emphasizing that social capital should be considered at the sub-dimension's level. The implications and future research are discussed.

Keywords: *Diversity Perception, Social Capital Formation, Virtual Work Environment*

EFFECT OF WORK VALUE ON ORGANIZATIONAL COMMITMENT AMONG GENERATION Y AND GENERATION Z EMPLOYEES

CHRIST (Deemed to be University), Bangalore
mathew.pm@christuniversity.in

ABSTRACT

This study aims to understand the effect of work values on organizational commitment among Generation Y and Generation Z employees. This paper also attempts to study the work values and organizational commitment of these two different generations. Organizations may confront situations of confusion on how to treat two different generations in the workplace. Generation Y are those born between 1980-1995 and Generation Z are those born between 1996- 2010.As the Indian population has 52 % people belonging to this generational cohorts, a study on them is essential to get insights which will help HR professionals to make impactful decisions in the workplace. This study collected data from 120 employees of the private sector who belongs to either Gen Y or Gen Z. Lyon's work value Survey and Allen & Meyer Organizational Commitment Questionnaire were used to collect data. The study found no significant difference in the work value or Organizational Commitment between the two generations. Work value is found to significantly influence Organizational commitment in both generations. The findings can be useful for organizations to device strategies such as that for employee engagement and motivation in improving the Organizational commitment of its employees.

ABSTRACT

Work-life balance is the ability of an individual to manage their personal and professional obligations while yet finding time for relaxation and recreation. This study examines the impact of night shift on work-life balance of women employees working in IT Industries in Bangalore. This study focus on eight dimensions of work life balance such as employee motivation, flexible working conditions, job enrichment, job satisfaction, welfare and recreation, grievances, life and total work space, and family support. Sample for this study constitute women employees aged between 25 to 35 years working in IT Industries in Bangalore. Descriptive research design with convenience sampling is used and the sample size is 100 participants. Data collection is conducted through standardized questionnaire and analyses is conducted using jamovi software. This study aims to find out the important factors influencing the work life balance of women working during night and to analyze the impact of Night shift on work life balance of women working in IT Industries. The major findings are that there is negative correlation between work life balance and night shift. The coefficient for the "Night Shifts" predictor is negative and statistically significant, indicating that working night shifts is associated with a lower total score of work-life balance.

pramod.kumar.parida@ibm.com

ABSTRACT

This paper presents a comprehensive analysis evaluating provisions of the EU AI Act against key risks posed by generative AI systems. Large generative models were employed alongside a rigorous assessment framework to critically gauge the Act's coverage of issues like fairness, explainable outcomes, environmental sustainability, and financial stability. By examining alignment with high-level ethical principles and probing operational gaps, limitations become apparent despite promising intentions. While the Act pushes laudable transparency and accountability, acute generative threats demand tailored oversight tuned to complex, rapidly advancing technologies. Unclear guidance regarding safety standards and the balancing act of open-sourced models necessitates a cautious approach. Similarly, urging legal compliance overlooks unresolved statutory ambiguity as novel socio technical paradigms emerge. However concrete movement to log sustainability impacts signifies progress. Overall findings reveal moderate issue relevance but shortage of practical mechanisms across most risks. Targeted guidance and incentives rather than blanket penalties, participative design drawing collective intelligence, resolving disclosure, and copyrighting blind spots, and boosting research investment are advised. With upgrades balancing permission less innovation and public good, a layer below high-level principles, the Act can foster responsible generative stewardship. As researchers we provide an analytical methodology and risk coverage ratings to further collaborative governance.

In summary, while the EU AI Act signifies positive momentum, upgrades grounded in generative models' distinct nature are essential to realize proportional, compassionate, and inclusive technological progress that respects human dignity. Failing at the inflection point risks profound social fractures.

ABSTRACT

Even after 75 years of independence celebrated India is still a developing nation that exists only in its dreams of development. The concept of gig workers is growing in the country due to the usage of smart phones and technology. Prior to Covid-19, corruption prevented the country from growing and destroyed the economy. In western countries, the term "gig worker" did not exist. For people who work with digital platforms or online software products, the gig economy is a novel idea. Any new concept is born for a variety of causes, many of which are invisible but yet contribute significantly to the concept's creation. The two key factors that led to the creation of the gig economy concept were unemployment and technological use. Gig workers with a focus on technology have increased significantly in recent years, making a significant economic contribution to the nation. Both men and women are becoming more involved in this profession, and in the near future, there is a greater chance that this percentage will rise. The current wave of inventive technology developments has broadened and transformed the nature of corporate operations. As a result, these developments must figure out how to let people adjust the effects of different modernizations on their life. These days, comprehensive study is being conducted as a result of the Gig Economy's rapid rise and the advancement of these work relationships. A multitude of causes have contributed to the growth of the Gig as a trend in recent times. In India, it is in a promising stage.

The goal of this study is to identify the present issues surrounding the gig economy's rise. In these precarious employment arrangements, action must be taken to protect the workers and update the employment laws to match modern business practices. In developing countries like India, where unemployment is a major problem, the majority of people depend on the gig economy for their livelihood. Even though a nation's unemployment rate can be decreased with the aid of this organizational framework for jobs, it is equally important to take the workers' viewpoint into account. The Gig economy has evolved which is threatening the conventional job market (Veluchamy et al., 2021).

LEADER'S WELL-BEING AT WORK: A SYSTEMATIC REVIEW OF LITERATURE

Shivani Peer
Research Scholar
Jain University, Bangalore
shivani.peer@gmail.com

ABSTRACT

Leaders play a vital role in the functioning of an organization, and researchers have devoted considerable attention to understanding their behavior and performance. However, the wellbeing of leaders remains a neglected subject of discussion in the existing literature. There is a pressing need to draw the attention of researchers to this crucial area of study. The current research seeks to consolidate existing studies on the wellbeing of leaders, aiming to identify gaps in the literature and present these gaps as avenues for future research. The present paper employs the PRISMA Model to filter and identify 110 from ABDC-listed journals. Utilizing Van Horn's model of wellbeing, it systematically discusses various dimensions of wellbeing among leaders. The study reveals how crucial it is for organizations to prioritize leaders' well-being by combining leadership and well-being writing. This analysis has shown that a leader's well- being are highly linked to their workplace's leadership style, culture, and wellness initiatives. The study solves a literature gap by focusing on leaders' well-being. The study illuminates this neglected area and impacts leadership development and organizational strategy. The paper not only fills a significant void in the existing literature but also sets the stage for a holistic examination of leaders' wellbeing in future research endeavours. The paper explores the often-ignored area of leaders' well-being, bringing valuable insights to the existing research by highlighting this overlooked aspect.

ABSTRACT

Heutagogy or self-determined learning was defined as a logical progression to Andragogy (adult learning or self-directed learning) in 2000. Heutagogy which has theoretical underpinnings from core learning theories like behaviourism, humanism, andragogy and connectivism presents an interesting yet intriguing tapestry for a modern adult learning environment. Adaptive learning and personalized learning have areas that have challenged researchers since the evolution of teaching machines (Skinner). However, adaptive learning and personalized learning overlap with Heutagogy as they are also learner centric approaches. Technology channels like E-learning / AR / VR / AI etc. have made significant inroads into learning through innovation and the algorithms are designed around core learning theories and principles. The paper explores the opportunity of bringing together the strengths of Heutagogical principles with the modalities and practical realities of adaptive and personalized learning and create a value network around a Heutagogic learner. The paper represents work in progress, is based on comprehensive literature review and attempts to evolve a conceptual framework that captures the value network of a Heutagogical learner and a working charter that can be considered for designing and implementation by any knowledge-based organization that is looking at an autodidactic learning environment. The framework captures the constructs and variables and represents stakeholder interactions with a heutagogical learner.

Keywords: *Heutagogy, Adaptive Learning, Personalized Learning, Digital Learning, Value Networks.*

FROM SMILES TO SUCCESS: UNDERSTANDING THE ROLE OF HAPPINESS IN EMPLOYEE CONFLICT MANAGEMENT AND CREATIVE OUTCOMES

Ekalavya Baruah
Director- Placements
Narsee Monjee Institute of Management Studies
ekalavya.baruah@nmims.edu

ABSTRACT

This research examines the influence of employee happiness on conflict handling behaviour and creativity in the hospitality industry. The study explores the relationship between happiness, conflict avoidance, and creative performance behaviour and presents a conceptual model that may be tested by future researchers. This knowledge can inform theoretical frameworks, guide human resource practices, and shape talent acquisition and employee engagement strategies.

Keywords: *Happiness at Work, Conflict Handling, Conflict Avoidance, Creative Performance Behaviour.*

AN INVESTIGATION INTO THE EFFECTS OF FLEXIBLE WORKING CONDITIONS ON PERFORMANCE AND JOB SATISFACTION AT POLYFIT FABRICATORS PVT LTD.

ABSTRACT

Companies that offer flexible working arrangements know how employee welfare influences profits. In today's competitive market, companies spend a lot on employee satisfaction to boost productivity and meet needs. Flexible work arrangements may boost employee performance and job happiness, according to one study. Flexible work arrangements enable employees combine work and life and manage time. Workers and employers benefit from flexible work schedules, which boost productivity and profits. Financial, social, political, and economic constraints are changing living demands, and both genders must work. To achieve work-life balance and maintain healthy family life, both men and women embrace flexible working hours. With proper formality and degree planning, flex-hours can reduce stress and improve employee well-being. Flexible work allows employees to adjust as needed. It increases output, job satisfaction, workplace effectiveness, performance, quality of life, and decreased absenteeism and overtime expenditures for the organization. For this study, 110 manufacturing business employees were surveyed. The study tested the null premise that age correlates with flexible work schedule interest. Executives may be more familiar with flexible work hours than middle and lower-level employees, according to simple graphs and frequency distributions. Many companies advocate flexible work hours because they benefit employers and employees.

ABSTRACT

With the spread of the coronavirus in 2020 in India, there was a shift to a new way of working across organizations which had several impacts on employees. The work from home concept had to be adopted worldwide to adhere to the norms during the pandemic. However, post pandemic a lot of organizations have included this practice as a part of HR policy and have designed a hybrid mode of working. Therefore, it is important to understand the long-term impacts of work from home on employee performance and productivity. This paper studies the effect of work from home on employee productivity using the Job Demands-Resources model by Bakker and Demerouti, for IT employees from different companies in India. The study concludes that perception of work from home has a positive impact on employees' perception of productivity among IT employees in India, and even post pandemic employees are looking for a hybrid mode of work, instead of shifting back to the traditional mode of working from office completely. The JDR model is not tested earlier in a work from home setup for IT employees. This is an empirical study used to identify the effect of work from home perception on employee productivity perception during and post-pandemic. This study is based on primary and secondary data. The study was done on a total of 276 IT employees across different organizations in India. Data Analysis done using SPSS and AMOS software. The research suggests that while excessive demand in a WFH setup is having a negative impact on employee productivity, if the necessary resources are provided to the employees it would result substantial improvement in productivity. The study has a unique theoretical contribution in Work from Home set up, an empirical analysis of JDR model brings new perspective and it can be used to revise the HR policy aligned to our findings.

UNDERSTANDING THE CONCEPT OF MOONLIGHTING FROM THE LENS OF HUMAN RESOURCE MANAGER IN IT INDUSTRIES

Ashni Bryana James
Masters in Social Work (Human Resource Development and Management)
Christ (Deemed to be University)
ashnijames18@gmail.com

ABSTRACT

The research conducted on the topic "Understanding the concept of moonlighting from the lens of human resource managers in IT industries" aims to not only understand the perspective of employees in the human resource management department of any organization that belongs to the IT sector company but also to make them think about the various reasons due to which the employees might be engaging in moonlighting. Therefore, the research conducted can be helpful for the organization in terms of understanding what the employees are in need of and try to cater to their needs. As human resource management personnel these measures can help in improving the employees' performance as well which eventually results in betterment of the business. A qualitative nature of research was conducted for which the sample size taken was 10 using snowball and purposive sampling techniques. Moonlighting being a contemporary topic on which people have unclear thoughts as of now the saturation was reached at 7 participants out of which 3 were female and 4 were male. The data was collected using a self-developed semi-structured interview schedule with 10 open-ended questions which was transcribed and thematically analyzed. The major findings of the research include that moonlighting recently gained its popularity due to the COVID and various other reasons such as financial insecurity, employer's concerns related to moonlighting and strategies which can be used in order to deal with the cases of moonlight occurring in the organizations which are not detrimental for the employees as well as the employers. Apart from all the other findings the major finding was that the perception of the HR managers in accordance with the organization as a professional was very contrasting when compared to their personal viewpoint which influences a lot of decisions that are taken in the industry.

sneha.john@msw.christuniversity.in

Dr. Mathew P M
Associate professor, Department of Sociology and Social Work,
Christ (Deemed to be University), Bengaluru
mathew.pm@christuniversity.in

ABSTRACT

Organizational justice can be a significant factor in predicting the extra-role behaviours that are discretionary in nature of the employees in an organization. In the IT industry where employee turnover intention, workload, and work pressure are high, ensuring organizational justice will be beneficial for the organization to retain the employees. As there are only very few studies conducted in this area, especially in Indian as well as Asian contexts, this quantitative study aims to understand the relationship between organizational justice (OJ) focusing on its dimensions of procedural justice, distributive justice, interactional justice, and organizational citizenship behavior (OCB) focusing on its dimensions such as Altruism, Courtesy, Civic Virtue, Sportsmanship, and Conscientiousness. The study tries to understand the correlation between perceived organizational justice and organizational citizenship behavior along with that it also investigates whether gender dynamics has any role in the perception of organizational Justice and the display of organizational citizenship behavior. The study used standardized questionnaires, ; for Organizational justice, organizational justice scale developed by: Niehoff and Moorman (1993). And for organizational citizenship behavior, Scale developed for the Asian context by Shah and Kumar (2015) was used and analyzed the data with the use of Jamovi. Spearman's Correlation, linear regression and Mann-Whitney U test were utilized to arrive at the results. The study found a positive relationship between organizational justice and organizational citizenship behavior, dimensions of organizational justice were also found to be correlating with organizational citizenship behavior. The study also found that Organizational justice had an impact on organizational citizenship behavior.

Among the employees in the IT industry, perceived procedural justice is positively correlated with OCB, perceived distributive justice dimension has the most impact on OCB and categorical gender differences do not affect the employee perception of justice and organizational citizenship behavior.

ABSTRACT

In the present-day workplaces, the role of Human Resource Management (HRM) practices is increasingly recognized as a crucial factor in shaping employee attitudes. Organizational commitment, job satisfaction, and employee engagement are essential elements to the overall well-being of the workforce, directly influencing productivity and organizational success. This set up for an exploration into understanding relationship between HRM practices and employee attitudes. As organizations strive to attract and retain top talent, understanding how strategic HRM initiatives impact the way employees perceive their roles and the organization becomes imperative. This study aims to contribute practical understanding of how technology and HRM practices intersect in Industry 4.0, shaping the attitudes of IT professionals and guiding organizations towards effective strategies in this transformative era.

RETAIL STORE MANAGEMENT SYSTEM

Priyanka MR
Student, PES University, Bangalore
knowledgegrain@gmail.com

ABSTRACT

The purpose of the study is to propose a Retail Store Management System (RSMS) that will improve customer experience and operational efficiency in retail sectors. It streamlines customer engagement, sales tracking, and inventory management by integrating technology-driven solutions. A user-friendly interface is used by the RSMS to track inventory, enabling automated reordering procedures and real-time stock-level changes. To comprehend preferences, optimize marketing campaigns, and personalize interactions, the system also uses customer relationship management tools. The RSMS aims to enable retailers with the ability to make informed decisions and quickly adapt to changing market conditions by utilizing data analytics. The paper emphasizes how the RSMS is essential to transforming retail processes, improving customer relations, and increasing overall business performance.

ABSTRACT

The Pradhan Mantri Jan Arogya Yojana (PMJAY) stands as a crucial healthcare initiative in India, striving to furnish financial protection to susceptible households by granting access to high-quality healthcare services. This research examines the efficacy of the PMJAY scheme at the state level, employing an exhaustive analysis through Technical Efficiency Frontier Analysis, using linear regressions to estimate the production function. The investigation concentrates on assessing the technical efficiency of PMJAY implementation across various states in India, utilizing a robust analytical framework. Linear regression models are employed to establish the relationship between essential input and output variables, thereby ascertaining the technical efficiency frontier. The dataset from the PMJAY website, encompassing the number of hospitals empanelled, the total patients treated under the scheme in each state, and the total number of physicians and nurses, is utilized. By considering the number of patients treated as the dependent/outcome variable and the total physicians, nurses, and total number of beds as input variables, we conduct the linear regression model and determine the frontier of the production function. The technical efficiency ratios highlight Tamil Nadu as the most efficient state and Arunachal Pradesh as the least efficient state. This study contributes to the prevailing body of literature on health policy and management, presenting a nuanced understanding of the challenges and opportunities linked with the PMJAY scheme across diverse state contexts in India. The insights derived from this research can guide evidence-based policy decisions and enrich the ongoing discourse on enhancing healthcare accessibility and outcomes for the nation's vulnerable populations.

Keywords: *PMJAY, Technical Efficiency, Linear Regression.*

TRANSFORMATIONS IN RETAIL ANALYTICS

Rajesh Rajendran
Research Scholar,
International School of Management Excellence (ISME) Research Centre, Bangalore

ABSTRACT

The purpose of this paper is to analyze the transformations in retail analytics and the drivers of transformation. The methodology used is Systematic Literature Review. The Retail industry has a significant position in the global economy of both developed and developing companies. The industry is one of the largest employers worldwide providing ~314 million jobs globally (ILO, 2020), and also contributes to ~15% of GDP in developed countries. The new age explosive growth in this industry is catapulted by Global Trade Integration and E-Commerce Explosion, which can seamlessly happen with effective data management and transformative Analytics of the same. This transformation that requires changes in conservative and traditional data analysis methods is fuelled by technological advancement, shifts in consumer behavior, and the inclination towards data-driven decision-making. Retail analytics, which once focused on dashboards for sales and product reporting, is evolving into a highly sophisticated stream that empowers retailers to improve customer experiences, optimization of operations, and driving of strategic business growth. This article explores the key transformations in retail analytics, highlighting the pivotal role it plays in the modern retail landscape and the drivers of the same. The key parameters observed as important for driving the transformations are (i) The change of analytical methods – focus transforming from retrospective analysis to predictive analytics governed by advanced machine learning models (ii) The Importance of consumer opinion and word-of-mouth – largely driven by Natural Language Processing (NLP) and Artificial Intelligence (AI) tools such as GPT3/4. (iii) Real-time analysis and decision making – in insights generation for quicker conversions (iv) Deep Personalization (v) Customer data as the center of other retail data entities (vi) OMNI channel integration. Ethical considerations are also deemed important and are also bound as a legal requirement in some economies. Therefore, however important the growing transformations are, some of them like AI and NLP need an extremely governed implementation. It is also observed that the COVID-19 pandemic accelerated the adoption of contactless shopping and payment methods.

This has transformed retailers to handle additional data and consume analytical insights that facilitate the integration of mobile wallets, contactless cards, and other digital payment options to provide a more convenient and hygienic checkout experience.

STUDY OF 6S LEAN MANUFACTURING TOOL IN AN INDUSTRIAL ENVIRONMENT: A REVIEW

Dr. Richa Sharma
Associate Professor, Asian Business School
Sharmadrricha24@gmail.com

ABSTRACT

Lean management is based on the 6S methodology, which was originated by the Toyota Production System between 1948 and 1975. The advanced version of the 5S lean method is the 6S methodology. The 6S lean methodology enhances the overall plant performance of any organization. This approach is being used in the sector to reduce surplus inventory, improve process flow, organize work, offer a safe working environment, and improve the work environment. The major goals of this article is to highlight the considerable benefits of 6S and to explore the 6S implementation process in all the various industrial scenarios. The report is based on an organized review of the literature that tracks the adoption of the 6S methodology in various organizations. The article examines the predominance of the various finding through literature survey and productive output achieved through 6S implementation. The results exhibit the effectiveness of the 6S tool to enhance the overall performance and to resource the company to gain non-stop improvement and higher overall performance.

ABSTRACT

This study examines the disruptive landscape of Industry 5.0, and explores the dynamic evolution, cutting-edge technologies that are emerging, and various applications of Artificial Intelligence (AI) in the context of the next industrial revolution. The study synthesizes current knowledge to provide insights into how Artificial Intelligence (AI) is revolutionizing diverse industries, signifies a paradigm change, with a strong emphasis on the transformation phase and the potential of Industry 5.0, tracing the evolution from mechanization to digitalization and now toward the dawn of Industry 5.0, this paper encapsulates the transformative journey that Artificial intelligence (AI) embarks upon, the key trends shaping this evolution, from Explainable AI to decentralized architectures, highlighting their role in reshaping the industrial paradigm. The real-world applications of AI, ranging from predictive maintenance to autonomous systems, illustrate the tangible impact on various sectors, emphasizing the present-day implications of this technological shift, amidst the promises of efficiency and innovation. Also, contributes to a comprehensive understanding of the role Artificial Intelligence (AI) that plays in fostering innovation, efficiency, and the opportunities and challenges, including ethical considerations, workforce transformations, and security imperatives that accompany the integration of AI into the industrial fabric sustainable development within the ever-evolving industrial landscape and examines the complex interplay between technological advancements navigating the transformative journey towards the modern industrial landscape, and processes. The dynamic interplay between the evolution, trends, and applications of AI, induces a comprehensive exploration of the next industrial revolution and its profound implications for the future.

ABSTRACT

With the growth of internet and technology, the pace of electronic commerce has enlarged, due to which consumers have started referring to online reviews before making a purchase. Such reviews have become an important source of information for online consumers. These reviews can be positive and negative, depending on one's experience. The purpose of this research is to study the impact of online reviews on the attitude of online customers. There are different types of consumers, with variant perception levels, due to which react differently to the online reviews. Therefore, this study aims at investigating the effect of such reviews on the purchasing decision of the consumers. For the purpose of research, the authors have collected the data from the online consumers' who consider online reviews before purchasing a product from the biggest online shopping sites', namely Amazon and Flipkart. Number of respondents are 400. Confirmatory Factor Analysis (CFA) and Structural Equation Modelling (SEM) techniques have been used to examine the effect of online reviews on the attitude of the consumers. The data analysis reveals that online reviews have a significant effect on the attitude of online customers. Such consumers' even change their purchasing after considering the reviews. In other words, a positive review may create a positive attitude, ending in purchase, whereas a negative review can cause negative repercussions that may discourage their purchasing decision. This study aims at online reviews from the biggest retailing sites of the country, so it would be beneficial for the marketers and the companies. The big market companies would be able to handle the grievance of the aggrieved customers, thereby creating a positive impact on the readers of the same. The findings would, thus provide managerial implications for the sellers who sell their products on Amazon and Flipkart.

ABSTRACT

The research explores the dynamic landscape of cybersecurity in the context of rapid digital transformation. The study focuses on the development of a comprehensive framework, focusing on sustainable management practices and cybercrime prevention measures. The framework addresses key dimensions such as technological advancements, organizational culture, regulatory compliance, incident response, employee behavior, supply chain security, and continuous improvement. The study involved 394 respondents, analyzing demographic variables and utilizing Confirmatory Factor Analysis (CFA) to validate the measurement model. Findings indicate the relation between supply chain security, regulatory compliance, incident response, and employee behavior, influencing the development of advanced cybersecurity technologies. Although the study provides valuable insights, limitations highlight the need for diversified samples and qualitative methods. Future research opportunities include longitudinal studies, cross-cultural investigations, and exploration of emerging technologies beyond artificial intelligence. This research aims to develop a comprehensive framework for cybersecurity adaptability, addressing sustainable management practices and cybercrime prevention measures, with a focus on technological advancements, organizational culture, regulatory compliance, incident response, employee behavior, supply chain security, and continuous improvement.

The findings emphasize the crucial role of employee behavior in integrating advanced cybersecurity technologies and demonstrate the significant positive relationship between effective incident response capabilities and the integration of such technologies. These insights have practical implications for organizations which urges them to prioritize supply chain security, regulatory compliance, and to shape employee behavior as essential elements of a comprehensive cybersecurity strategy in the digital era. The research contributes to the field by offering an innovative and comprehensive framework that links sustainable management practices with cybercrime prevention measures which provides valuable insights for organizations to navigate the complexities of the digital era.

FINTECH AND BANKING: OPPORTUNITIES AND CHALLENGES

Abijith M Kumar
MBA-MS student, Amrita School of Business,
Bengaluru, Karnataka
abijithmkumar2001@gmail.com

ABSTRACT

Banking is a bunch of services provided by the bank to its customers. Innovation and development in technology plays a crucial role to keep up in this competitive world. Fintech companies develop new products and services that helps the banks to increase and enhance their customer base. But some challenges have emerged in recent times that have impacted both banks as well as fintech companies. By deep evaluation and analysis, I have pointed out few key challenges faced by them which are critical and needed to be solved as soon as possible, these problems will be standing as my objective towards the research as follows: -

a) Negative impact of Chinese loan apps,
b) Increase in data breach and hacking.

In conclusion, this study will show how the banks with the help of the fintech companies and their technologically upgraded products can overcome these challenges.

ABSTRACT

The paper is centered on comprehending automated production methods. In contrasting automated and conventional production techniques, the study emphasized the former's superiority and its many benefits for customers, labourers, manufacturers, and society at broadly. The primary goal of the research is to understand what influences the textile industry in Ramnagar's adoption of both automated and traditional manufacturing techniques. The purpose of the study was to determine the factors influencing the adoption of automated and conventional manufacturing techniques, as well as the correlations between such variables alongside the automated techniques used in the Ramnagar textile industry. 50 manufacturing textile industries in Ramnagar provided responses, and convenient random sampling technique was used to gather those responses. The study was conducted using KMO and Bartlett's Test, Factor Analysis and Regression for data analysis. The research encompasses the motivations beneath and goals of implementing automated techniques, as well as various aspects of integrating and evolving automated manufacturers in Textile Industry at Ramnagar.

ABSTRACT

Over the past years, e-commerce platforms have expanded substantially, providing customers with convenient shopping experiences. To enhance e-commerce websites, it's essential to grasp user engagement and factors affecting conversion rates. This optimization is achieved by aligning platforms with user expectations, thereby fostering successful online shopping experiences, and contributing to sustained growth in the dynamic digital marketplace. In this paper, we conduct a comprehensive analysis focusing on user interactions, conversion metrics, and the entire user journey within an e-commerce platform. Our exploration spans exit rates and sessions across different devices and browsers, conversion rates for various traffic sources, and the user journey from product details to checkout. Findings suggest a need for targeted improvements in mobile optimization and browser compatibility, indicated by higher exit rates on mobile devices and varying rates on different browsers. The conversion rate analysis emphasizes the varying effectiveness of traffic sources, highlighting the potential of CPM and CPC mediums, while identifying areas for improvement in referral and affiliate traffic. Examining the user journey reveals potential bottlenecks in the conversion process, especially the identified gap between user interest and completed transactions. Our study suggests improving the checkout process strategically to streamline user transactions. These insights provide actionable guidance for businesses seeking to refine their platforms and optimize performance in the ever-evolving landscape of e-commerce.

ABSTRACT

Financial resilience among consumers is an emerging and important area of research. This study aims to shed light on the role of fintech in building consumers' financial resilience, identify major themes of research, and synthesize directions for future research in this area. A systematic literature review was performed using the Preferred Reporting Items for Systematic Reviews and Meta-Analyses protocol followed by content analysis techniques such as bibliometric analysis, and keywords co-occurrence analysis to identify the thematic clusters. Fintech can support financial resilience by promoting interventions such as financial inclusion through easy and affordable financial access, financial and digital literacy through personal financial management applications, and by enabling individuals and households to manage their finances more effectively through budgeting tools. The study also identified three major themes of scholarly work: (1) Drivers of fintech adoption, (2) Nexus between fintech and financial capabilities (financial literacy, financial inclusion, and financial behaviours/practices), and (3) Fintech and sustainable growth. The review contributes to a seminal synthesis of research on consumer's financial resilience, reflecting its current state and agenda for future research. The article is a valuable resource for academicians and practitioners interested in understanding the potential of fintech in building consumers' financial resilience.

ENHANCING E-HEALTH ASSIMILATION IN INDIAN HOSPITALS: AN INVESTIGATION INTO THE ROLE OF INSTITUTIONAL PRESSURES, TOP MANAGEMENT SUPPORT AND LEARNING CULTURE

Puneet Kour
Research Scholar, University of Jammu
kourpuneet01@gmail.com

Versha Mehta
University of Jammu
mehta.versha@gmail.com

ABSTRACT

Drawing upon the institutional theory and conceptual lenses of top management support, learning culture and absorptive capacity views of an organization, we frame and test a model that examines how the internal contextual factors mediate the effect of external institutional pressures on E-health assimilation, taking place within hospitals. It is tested empirically using survey-data from personnels working in select hospitals from Indian healthcare sector. Results using PLS-SEM, reveal that institutional pressures on one hand, affect the top management support, which creates a learning culture in the organization, necessary for E-health assimilation. On the other, these external pressures, influence absorptive capacity of the organization, which impacts the E-health assimilation in a hospital. The research throws light on potential antecedents to E-health system assimilation and establishes top management support, absorptive capacity and learning culture as crucial organizational factors affecting the phenomenon of E- health assimilation. We provide a guidance for the management and medical practitioners in hospitals to enhance top management support to achieve higher levels of absorptive capacity and cautiously develop a strong learning culture, resulting into successful E-health assimilation. By bringing to light, new insights into IT assimilation research, the present study, intends to makes a novel contribution in the concerned field.

ABSTRACT

This research paper explores the pivotal role of digital transformation and technology ecosystems in the data storage industry, focusing on the adoption of emerging technologies. The study constructs a comprehensive theoretical framework through a questionnaire-based approach by integrating the Technology Acceptance Model (TAM) and extending it with the Stimulus Theoretical Framework. The primary aim is to identify critical factors influencing successful adoption, considering the current state of digital transformation and the dynamics of technology ecosystems within organizations. The literature review delves into influential theories such as TAM, Diffusion of Innovations, Theory of Task Technology Fit, and the Unified Theory of Acceptance and Use of Technology. These theories inform the research's theoretical framework by providing insights into the drivers of consumer acceptance of new technologies. Utilizing a mixed-methods approach, the study incorporates qualitative insights from an exploratory multi-case study, employing systematic thematic content analysis. For the quantitative aspect, a structured questionnaire grounded in TAM and the Stimulus Theoretical Framework gathers perspectives on digital transformation, technology ecosystems, perceived usefulness, ease of use, and intention to use from senior and mid-level employees in prominent storage organizations. The study categorizes user acceptance of emerging technologies - 5G, Artificial Intelligence, Cloud Computing, and Edge - in major enterprise storage entities: Dell Technologies, IBM, HPE, Hitachi Vantara, and Net App. In the results and discussion section, emphasis is placed on the impact of digital transformation and technology ecosystems, with perceived usefulness and ease of use identified as key motivators influencing employees' responses and intention to adopt.

The study systematically analyzes expected technology adoption outcomes, contributing to a deeper understanding of successful technology integration within the enterprise storage sector.

A STUDY ON THE CONSUMER PERCEPTIONS ON ELECTRICAL VEHICLES IN THE INDIAN MARKET

Dr. Ranjith P V
Associate Professor
Christ (Deemed to be University)

Tejaswi K N
Student Executive MBA
Christ (Deemed to be University)

Dr. Manish Srivastava
Professor
Christ (Deemed to be University)

ABSTRACT

This study investigates consumer perceptions regarding Electrical Vehicles (EVs) within the Indian market. The research aims to discern the attitudes, preferences, and behaviour alintentions of consumers towards EV adoption. It focuses on understanding the factors influencing consumer decision-making processes in embracing EVs over conventional vehicles. Through a meticulous examination and analysis of data collected from diverse demographic segments across India, this study endeavors to quantify the level of consumer awareness, knowledge, and sentiments regarding EVs. It seeks to measure the correlation between these perceptions and various influential factors such as infrastructure readiness, attitudes towards EVs, government policies and incentives, environmental concerns, range anxiety, psychological and economic factors, understanding of EV technologies, and social influences. By delineating the landscape of consumer perceptions and preferences towards EVs in the Indian market, this research aims to provide valuable insights for industry stakeholders, policymakers, and marketers. The outcomes of this study aspire to contribute to the development of strategies and policies aimed at fostering greater EV adoption in India while offering a comprehensive understanding of the challenges and opportunities in herent in the EV market landscape.

dkmahalik@suniv.ac.in

ABSTRACT

In an era of rapid digital transformation, the role of digital literacy in education, particularly among postgraduate students engaged in online learning, has become increasingly pivotal. This study aimed to comprehensively assess the proficiency, specific elements, perceptions, and experiences related to digital literacy in the context of online education, with the ultimate goal of informing educational strategies and enhancing the digital competence of postgraduate students. To achieve these objectives, a quantitative approach was employed, utilizing a stratified random sampling technique to select 200 postgraduate students from six universities in Western Odisha, who had engaged in online learning for at least one academic year. Data collection was conducted through a structured questionnaire consisting of 30 questions employing a 5-point Likert scale. The questionnaire covered various aspects of digital literacy, including perceptions and experiences, the impact of online learning, specific elements, and overall proficiency. Descriptive statistics and exploratory factor analysis (EFA) were utilized to analyze the data. The major findings of this study revealed that postgraduate students exhibited a moderate level of digital literacy proficiency, highlighting areas for improvement in their digital competence. When dissecting specific elements of digital literacy, students displayed varying levels of competency across different areas, with strengths in online collaboration and ethical/legal aspects but challenges in using search engines for academic research. Perceptions and experiences regarding the impact of online learning on digital literacy were diverse, underscoring the complexity of students' digital learning journeys. The exploratory factor analysis (EFA) unveiled eleven distinct components or factors, shedding light on the multifaceted nature of digital literacy among postgraduate students.

CHALLENGES AND DIFFICULTIES IN IMPLEMENTING ADAPTIVE TEACHING IN HIGHER EDUCATION

Dr. Muhammedali Chalikandy
Former Deputy Head, Department of English
Al Buraimi University College, Oman
mchalikandy@gmail.com

ABSTRACT

The purpose of this paper is to explore the difficulties and challenges that the tertiary level teachers face in their classrooms. Adaptive teaching aims at personalizing teaching and learning process to individual students' needs, level and abilities. Although in multicultural classrooms like in India the students have different learning styles, attitudes, preferences likes and dislikes interests and learning difficulties, they want success in their learning. As a result, it is imperative to use adaptive teaching techniques to help learners to achieve this common goal. However, there are a number of hurdles for the teachers to implement adaptive teaching in their classrooms. In order to examine the challenges and difficulties that the teachers face in the classrooms, ten college lecturers from one of the colleges from Kerala were interviewed using an open-ended questionnaire. The data was analysed and interpreted thematically and the result shows that the teachers have a number of hurdles in implementing adaptive teaching and learning.

ABSTRACT

This journal article investigates the intricate dynamics of cross-cultural leadership effectiveness within Bangalore's Information Technology (IT) sector that has experienced a significant growth, attracting both the foreign and domestic enterprises and emerging as a global leader in IT Industry. The study explores the nexus between demographic variables, cultural intelligence (CQ) dimensions, and the cross-cultural leadership effectiveness among IT leaders and managers. The research employs a robust methodology, including ANOVA, Chi-Square Tests, and Partial Least Squares Structural Equation Modelling (PLS-SEM) to analyse data from 413 IT Industry leaders and mangers. The findings uncover significant associations between demographic variables, cultural intelligence dimensions (Cognitive CQ, Physical CQ, Emotional CQ, and Behavioural CQ), and Cross-Cultural Leadership Effectiveness. Noteworthy results include the positive impact of Emotional CQ and Behavioural CQ on leadership effectiveness. Age, job designation, education qualification, total experience, and annual income exhibit varying degrees of influence on cultural intelligence dimensions. Importantly, the study emphasises the critical role of Cross-Cultural Leadership Effectiveness in navigating the complexities of diverse, globalized environments. Chi-Square tests reveal intricate relationships between demographic variables, cultural intelligence dimensions and Cross-Cultural leadership effectiveness.

Regression analysis using PLS-SEM emphasizes the remarkable explanatory power of the Cross-Cultural Leadership Effectiveness model, highlighting its centrality in the leadership discourse. The study suggests that a holistic understanding of cross-cultural leadership effectiveness is essential, encompassing various dimensions and factors. In conclusion, this research contributes to the evolving discourse on cross-cultural leadership by offering empirical insights and practical implications for IT leaders and organizations operating in diverse, global contexts. The findings pave the way for future research and strategic initiatives aimed at enhancing cross-cultural leadership competencies and overall organizational success.

ABSTRACT

Cultural intelligence is the ability of an individual to effectively adjust and adapt to different cultural environments. Research has shown that students with higher levels of Cultural quotient exhibit better adjustment in multicultural environments. Bangalore district selected for the study. Eight colleges comprising of 50 students each accounting total sample as 400 on random sampling basis using descriptive survey method. Data base covering of two components a) Socio-economic status. b) Cultural intelligence tool with 20 statements with four domains a) Meta Cognitive b) Cognitive c) Motivational d) Behavioral on five point Likert scale. The Analysis includes descriptive and Inferential Statistics (Chi-square and F-Test). Majority of the respondents (46%) found as 18 years of age, boys (56%),1st year and language as English (90%), second ordinal position (48%) and one sibling (40%). Academic performance with 61-72 marks (40%) and from home (56%) Regarding background majority (82%) from urban family, Hindu (58%) respondents. Majority of respondents (72%)under nuclear family and income of Rs. 75,000-1,00,000. The result indicates that 40% of respondents possess with adequate Cultural Intelligence level as compared to 60% with moderate cultural intelligence level. Regarding Mata cognitive (56%), cognitive domain (16%) and Motivation domain (48%) showed adequate level as compared to Behavior domain (38%), Established significant difference Statistically ($F=5.47^*$, $p<0.05$). Chi-square test reveals the association between socio-economic characteristics with cultural intelligence level among under graduate students found to significant ($p<0.05$).

ADAPTIVE TEACHING AS AN INVALUABLE PEDAGOGIC PRACTICE – A COMPREHENSIVE REVIEW

Dr. Jayakumari Nikesh Vadhvani
Assistant Professor,
S. S Agrawal College of Commerce and Management, Gujarat
jaya.dakhwani@gmail.com

ABSTRACT

Since the education sector is dynamic and always changing, teachers must use cutting-edge teaching strategies to address the unique requirements of their pupils and get them ready for the intricacies of the corporate world. This study examines the idea of adaptive teaching by looking at its theoretical foundations, real-world applications, and comprehensive evaluation of the literature on adaptive teaching and learning strategies. Faculties have the difficult task of getting students ready for the ever-changing needs of the working world. The review delves into the body of research on adaptive teaching approaches, the theoretical underpinnings of these approaches, and how adaptive learning affects student outcomes. This study seeks to provide insights into the efficacy and possible drawbacks of adaptive teaching and learning by synthesizing recent research.

UNVEILING THE DYNAMICS: EXPLORING THE INTERSECTION OF ACADEMIC ECOSYSTEMS AND ENTREPRENEURSHIP EDUCATION IN THE DIGITAL AGE

Prof. Shashirekha B V
Research Scholar, Department of Commerce
Christ University, Bangalore.
Shashi.bv@res.christuniversity.in

ABSTRACT

In the rapidly evolving landscape of higher education, the convergence of academic ecosystems and entrepreneurship education has emerged as a focal point for scholars and practitioners alike. This review research paper delves into the intricate dynamics that unfold at the intersection of these two realms, shedding light on the transformative impact of the digital age. The study undertakes a comprehensive analysis of the symbiotic relationship between academic ecosystems and entrepreneurship education, emphasizing the multifaceted connections that drive innovation, knowledge transfer, and economic development. Through an extensive literature review, the paper synthesizes key insights into the evolving paradigms shaping entrepreneurial education within the digital context. Examining digital technologies as enablers of innovative pedagogical approaches and collaborative frameworks forms a central theme. The paper also explores how academic institutions adapt to the demands of the digital age, leveraging technology to foster entrepreneurial mindsets among students and facilitate industry-academic partnerships. It further investigates the role of online platforms, virtual incubators, and digital resources in bridging the gap between academia and the entrepreneurial ecosystem. Additionally, the paper critically assesses the challenges and opportunities arising from the intersection, considering issues such as curriculum design, faculty engagement, and the integration of real-world experiences. The synthesis of empirical findings and theoretical perspectives provides a nuanced understanding of the complexities involved in nurturing entrepreneurship within academic settings in the digital era. This research offers valuable insights for educators, policymakers, and stakeholders seeking to enhance the integration of entrepreneurship education within academic ecosystems, providing a roadmap for navigating the evolving landscape of higher education in the digital age.

ABOUT THE CONFERENCE

Contemporary issues in management refer to the current and relevant challenges, trends, and developments that affect organizations, leaders, and managers in today's dynamic business environment. The current business environment is facing issues like geopolitical instability, trade tensions, increasing inflation and declining GDP in many nations. Further, organizations across the world are increasingly emphasizing on digital innovation, inclusive growth and sustainability. The conference will deliberate on such key issues and discuss possible options and solutions.

This conference will provide a platform for researchers, academicians, practitioners, entrepreneurs and industry experts to share their latest research findings, discuss emerging trends in management, and exchange knowledge with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants.

The event will feature keynote speeches from renowned scholars and industry leaders, and will have practitioner-led workshop sessions. The goal is to foster collaboration, exchange ideas, and inspire further research and practical implementations in the field of management. We invite original research papers for presentation from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

MESSAGE FROM THE CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore! On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 12th International Conference on 'Contemporary Issues in Management - CIM-24'.

In an era marked by geopolitical tensions and rapid technological advancements, the dynamics of management are undergoing profound changes. The influence of geopolitical shifts on business strategies, risk management and global collaborations cannot be overstated. As AI continues to advance, it brings with it both opportunities and challenges. We aim to explore how organizations are adapting to these geo political shifts, digital revolution and impact of AI on business landscape.

The program is rich and varied with eminent international and national keynote speakers. We are honored to have Prof. Harald Bolsinger, Professor of Business Ethics & Economics at Technical University of Applied Sciences Würz burg-Schweinfurt (Germany) as Chief Guest. It is a privilege to have Prof. S Sadagopan, Founder Director of IIITB as the Guest of Honor. Prof. Rajesh Bagchi from Virginia Tech (USA) and Prof. Macario Fernandes from H&H Search Partners (UK) are the keynote speakers for the conference. The participants will learn the nuances of paper development in the workshop conducted by Prof. Kirankumar Momaya, Editor-in-Chief of International Journal of Global Business and Competitiveness. At the conference, ISME proudly confers Lifetime Achievement Award to Prof. M Rammohan Rao (Former Dean- ISB Hyderabad and Former Director- IIM Bangalore) for his exceptional contribution in academics and research.

We are delighted to share that CIM24 has received papers from reputed institutions like Indian Institute of Technology Madras, Indian Institute of Technology Dhanbad, Indian Institute of Foreign Trade, University Putra Malaysia, SP Jain School of Global Management and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business Excellence, Competitiveness & Sustainability: Manufacturing, Services and Agricultural Sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference. Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,

Dr. Rony G Kurien
Dean and Conference Chair

ARGUMENTS FAVOURING TAX DEDUCTIONS AGAINST CORPORATE SOCIAL RESPONSIBILITY EXPENDITURE INCURRED BY MULTINATIONAL ENTERPRISES

Moses Pinto
Doctoral Student at the PhD in Law,
Faculty of Law at the Autonomous University of Barcelona
Universitat Autònoma de Barcelona (UAB), Barcelona, Spain.
mosesingoa@gmail.com

ABSTRACT

Why are the local taxation laws prevalent in the Host Country viewed as not being harmoniously constructed in support of the Corporate Social Responsibility (CSR) policies by the Managers of Multinational Enterprises (MNES)? Could it postulate that the Governments functioning the host country by allowing deductions against the Corporate Social Responsibility (CSR) expenditures could invoke an impetus towards the strategic alignment towards International Taxation Laws by Multinational Enterprises (MNES) while demonstrating a heightened degree of transparency which would qualify as industry best practices in declaring the CSR expenditures incurred as a function of the tax avoidance endeavour by the MNE. This kind of amalgamation of transparent practices in the realm of seeking tax deductions for an MNE's CSR expenditure could also help minimise conflicts of perception before the proponents who interchangeably refer to tax avoidance by MNEs as Tax Evasion. Therefore, it could be estimated that global CSR laws could be harmoniously constructed vis-à-vis local taxation laws in their interpretation by MNEs if encouraged by the governments of the host country.

A REVIEW OF GREEN ECONOMY AND ITS RELATED CONCEPTS

Rimli Rajan
Research Scholar
CMR University, Bengaluru
rimli23rajan@gmail.com

ABSTRACT

The term green economy has been considered as a major impetus for sustainable development. But still, the green economy is faced with severe shortcomings and tensions within its definitions and discourses. Due to lack of adequate data with respect to transformation towards green economy, still there is a lot of inconsistencies. The concept of green economy involves various concepts and its connection with sustainability is obscure. This paper considers the various concepts, definitions and measurement methodologies towards green economy. It also focuses on monitoring the OECD green growth framework, different approaches for alternative measurement. The paper concludes by stating that there has to be a better policy for a progress which is beyond GDP. It also recommendations an alternative source of information, new methodologies and measurement approaches to make green economy successful. The paper highlights by stating that it is only through proper collective adjustments economically, we can solve the dangerous effects on the climate change and environmental degradation. To obtain this, the concept of green economy involves a complete transformation to decrease the harmful effects on climate change and thereby reduce emissions. To reduce the carbon emissions globally, there is a major need for radical changes related to energy policy. To measure the progress, there is a need for proper framework for ascertaining the actions related to green economy. In 2013, The Green Growth Knowledge Platform, initiated the need for proper economic opportunities and tools related to the growth of green economy. Without a proper measurement, it would be hard to understand the efficacy of the policies and attain the sustainable goals for green economy related to climate action and sustainable development. This paper concludes by stating the important recommendations to ameliorate the transformation related to the measurements of the green economy.

A BIBLIOMETRIC APPROACH TO EXAMINING THE DEVELOPMENT OF GREEN FINANCE AND ITS EFFECT ON ENVIRONMENTAL SUSTAINABILITY

Suman Ahuja
Research Scholar
Guru Gobind Singh Indraprastha University, Delhi
sumanahuja037@gmail.com

ABSTRACT

With the 28th annual summit of the United Nations Framework on Climate Change (COP28) highlighting the necessity of coordinated action to avert climate change, the literature on green finance and its impact on environmental sustainability has changed over time. In order to minimize carbon emissions, create urban infrastructure, financing of renewable and green energy projects, and preserve environmental sustainability, green finance is essential. The impact of green finance challenges on environmental sustainability varies amongst nations, and opinions on the relative importance of these challenges and advancements are not entirely consistent. The current study discusses the development of the concept of green finance using bibliometric analysis, thereby offering policy recommendations for promoting economic expansion. The co-citation of authors, documents, and journals, as well as the co-occurrence of keywords, were analyzed using VOS Viewer to determine which country has given green finance and the environment the most attention in addition to the profiled authors in the relevant field. Research gaps have been highlighted which can be pursued by the future researchers.

salma.begum999@gmail.com

ABSTRACT

As India continues to integrate into the global economy, foreign direct investment has emerged as an important driver of economic growth and development. The study provides a comprehensive overview and examines the impact of foreign direct investment on the growth trajectories of the banking and insurance sectors in India, and then the impact of the growth of these sectors and foreign investment on India's economic growth. The study uses time series data for the period 2002-2022. The study uses correlation and multiple regression analysis techniques to analyse the data. The findings of the study indicate a positive relationship between FDI inflows and the growth of the banking and insurance sectors in India. The results also showed a strong relationship between the growth of the banking and insurance sectors and foreign direct investment flows. The results showed that the growth of the banking and insurance sectors has an impact on economic growth, as increasing the growth of the banking sectors by (1,277,166) million dollars leads to an increase in Indian economic growth by (1,941.85) billion dollars. The growth of the insurance sector by (741,991) million dollars will lead to an increase in economic growth by (1,406) billion dollars. The results of the analysis showed that foreign direct investment has a positive impact on economic growth in India, as the inflow of foreign direct investment by (1,996) million dollars will lead to growth in the economy by (666,683) million dollars. The study recommends that the Indian government implement reforms in the local market to attract more foreign direct investment by raising the ceiling on foreign ownership in companies and various economic sectors, as well as reducing the profits tax on businesses to encourage more local and foreign investors.

INTEGRATION OF SUSTAINABLE FARMING AND AGRO TOURISM TO STIMULATE FARMERS ECONOMIC STATUS IN KARNATAKA: A SOCIAL ENTREPRENEURSHIP INITIATIVE

Vikas Janardhan Salunkhe
PhD Scholar
CMS School of Business and Management,
JAIN (Deemed to be University), Bangalore

Dr. Sarangapani Nivarthi
Associate Professor
CMS School of Business and Management,
JAIN (Deemed to be University), Bangalore

ABSTRACT

As a social entrepreneurship project to improve the financial standing of farmers in Karnataka, India, this study explores the theoretical foundation and possible effects of fusing agrotourism with sustainable agricultural methods. With sustainable agriculture and tourism working together, the goal is to promote socioeconomic growth in the area. The integration aims to create a model in which farmers provide tourists an immersive experience in rural life and agriculture in addition to cultivating crops sustainably. Given that it tackles farmers' social and economic problems, this integration is consistent with the tenets of social entrepreneurship. The project aims to create a sustainable and reproducible model that may be modified for use in other areas through cooperative efforts between local communities, governmental organisations, and commercial businesses. The final section of the abstract highlights the integrated approach's revolutionary potential and shows how it may support the overall growth of Karnataka's rural economy.

BEYOND BORDERS: CHARTING A COURSE FOR THE FUTURE OF MULTILATERAL COOPERATION

Tadepalli Aditya Kamal
Student
KLE Law College, Bengaluru
tadepalli.21bbl023@klelawcollege.org

ABSTRACT

In an era marked by global challenges that transcend national boundaries, the imperative for robust multilateral cooperation has never been more pressing. This paper explores the evolving landscape of international relations and the critical role that multilateralism plays in addressing complex issues such as climate change, global health crises, and economic inequality. As the world becomes increasingly interconnected, the need for collaborative frameworks that extend beyond borders becomes evident, necessitating a re-evaluation and reinvigoration of the foundations of multilateral cooperation. The paper begins by examining the historical context of multilateralism, tracing its roots in the aftermath of World War II and the establishment of international organizations like the United Nations. It then delves into the challenges faced by the existing multilateral system, including shifts in geopolitical power, rising nationalism, and scepticism towards global governance. By analysing case studies of successful and unsuccessful multilateral initiatives, the paper identifies key factors that contribute to effective cooperation, emphasizing the importance of inclusivity, transparency, and shared responsibility. Building on these insights, the paper proposes a forward-looking framework for the future of multilateral cooperation. It advocates for the adaptation of existing institutions to better reflect the current geopolitical landscape, as well as the creation of innovative mechanisms that foster collaboration between governments, non-governmental organizations, and the private sector. The role of technology in facilitating cross-border cooperation is also explored, with a focus on harnessing digital tools for enhanced communication, data sharing, and problem-solving. Moreover, the paper addresses the role of individual nations in bolstering multilateral efforts, urging a renewed commitment to diplomacy, compromise, and the pursuit of common goals. It concludes by emphasizing the urgency of collaborative action and the shared responsibility of the global community in charting a course towards a future where multilateral cooperation transcends borders, effectively addressing the multifaceted challenges of the 21st century. The purpose of this paper is to analyse the aspects of multilateralism with respect to its history and the future. The paper also aims to facilitate towards the geopolitical landscape and the future of diplomacy.

I aim to build this paper with the help of primary sources such as UN reports, government initiations, etc. and also by using secondary sources such as articles, research papers, etc. Some of the major findings that I found during the research is the importance of global governance, preference for stability, acknowledgement of challenges and call for innovation.

Keywords: *Climate Change, Economic Inequality, Multi-lateral Initiatives, Innovative Mechanism and Enhanced Communications.*

ANALYZING THE CATALYST EFFECT OF THE 'MAKE IN INDIA' INITIATIVE ON ADVANCING THE STARTUP ECOSYSTEM: AN EMPIRICAL STUDY

Dr. K V N Lakshmi
Assistant Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

Dr. S. Ramesh
Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

Dr. Swapna H R
Professor, School of Commerce Studies
JAIN (Deemed-to-be University), Bangalore, Karnataka, India

ABSTRACT

Launched in 2014, the 'Make in India' initiative was conceived to position India as a global manufacturing hub, fostering economic growth, job creation, and technological advancements. This initiative aimed to attract both domestic and foreign investments in manufacturing, emphasizing the production of goods within the country. The convergence of 'Make in India' and startups forms an intriguing intersection where traditional manufacturing and cutting-edge innovation meet. The primary goal is to investigate the factors shaping the startup ecosystem in India and analyze its impact on the country's GDP. Employing Structural Equation Modeling (SEM) for a comprehensive analysis, the study underscores the robustness of the model, with fitness indices confirming its adequacy. The findings highlight the substantial positive influence of the 'Make in India' initiative on the startup ecosystem, while also dismissing the notion of a positive impact from geopolitical risks.

FUTURE OF MULTILATERLISM

Sarath R
Student,
IA School of Management Studies, Bangalore
thisissarath6@gmail.com

ABSTRACT

The future of multilateralism is unfolding amid complex opportunities and challenges with profound implications for global governance. This paper examines both the positive and negative dimensions that are likely to shape the trajectory of multilateralism in the coming years. On the positive side, there is an opportunity for the international community to strengthen cooperation to address pressing global issues, from climate change to pandemics. Collaboration can lead to innovative solutions, increased sustainability and the creation of new partnerships. On the other hand, the downsides of the future of multilateralism are intertwined with growing geopolitical tensions, nationalist sentiments and declining trust in international institutions. The report explores the potential consequences of declining cooperation, such as stalled progress on critical issues and a weakened ability to respond effectively to transnational challenges. The emergence of competing factions and power struggles can hinder the inclusive and cooperative spirit that multilateralism seeks to promote. This research paper also explores new risks, such as cyber threats and digital divides, which affect the effectiveness of multilateral approaches.

ABSTRACT

In India, the Companies Act 2013 made spending and reporting of CSR mandatory for a set of companies which fulfil certain criteria. The objective of this study is to examine the impact of this mandatory CSR regulation on stock return, which has not been explored so far. We use actual CSR spending data from Indian listed companies on National Stock Exchange (NSE) extracted from CMIE's Prowess database for the period 2010-2022. Using the mandatory CSR regulation as an exogenous shock, we examine the impact of mandatory CSR on stock return using a fixed effect model and apply Difference-in-Difference (DID) technique to investigate whether this law change this relationship significantly post-2015. We find CSR has a positive impact on stock return. However, CSR has a negative impact in the post-2015 period on treated firms compare to pre-2015 when CSR was not mandatory. We also look at subgroups of firms who spend on CSR more than, less than or equal to the mandated 2% and how it affects this relationship. Overall, our finding support CSR as a strategic investment in long run. This paper contributes to the emerging literature on mandatory CSR and firm performance. To our knowledge, this is the first study which examines the long-term impact of mandatory CSR on stock return using actual CSR expenditure using DID methodology in pre and post scenario of the Companies Act 2013.

ABSTRACT

Spirituality at the workplace is connected to the economic sphere. Max Weber (1904) found out about the positive implications of spirituality regarding economic results. These findings can be explained with the positive aspects; which spirituality can cause in the economic context. This value of spirituality in an economic context can be seen in the theoretical concept of spiritual capital. In this context, spiritual leadership has found its way into management literature. This state of the art is discussed in the article and serves as a starting point for the development of Spiritual-Based Humanism.

In the first part the working paper spans a thematic framework between spirituality and spiritual capital in organizations. In addition to relevant definitions, the context of spirituality is described, which is closely linked to the worldview of believers of different religious imprints, personal calling, vision and corresponding values. Spiritual capital is operationalized by means of values that come into play in spiritual or servant leadership.

This paper delivers ground for development of a model for the possible effects of Spiritual leadership on their organization's performance. Embedded in the national cultural context, spiritual leadership has an impact on the performance of companies in financial and other areas (e.g. innovation, sustainability, CSR) through the lived organizational culture with specific values and employee commitment. Therefore, in a second part, value portfolios of selected globally widespread worldviews are discussed on the basis of concrete manifestations in sample countries, and their particular country-specific context is explained. Based on this, a general research design shall be derived in a follow-up paper that can empirically investigate the relationship between spiritual capital and organizational performance.

ABSTRACT

Ascent of emerging multinationals (EMNEs) from India is an exciting phenomenon for the promise of India's techade and climb to next levels of international competitiveness for development. Knowledge-based groups from India are also striving to climb on competitiveness, but it is an under-researched topic. How can we analyze trends and the journey of the groups, is an exciting question. We use qualitative analysis of quantitative and qualitative data from a single case to help characterize the phenomenon. Quick benchmarking of groups identified in India and other Asian countries provides some interesting trends. In Asia, groups in Japan, Malaysia have climbed to good heights. Emerging findings are summarized using the concept of 'journey map' to help identify phenomenon, trends and issues. We contribute to 'theory of Competitiveness' by assessing the journey map to evolve options for next levels for the group.

ARE WE READY FOR NEW TECHNOLOGICAL ADVANCES IN MARKETING?

Sulagna Nandy Dutta
Research Scholar,
Indian Institute of Technology (Indian School of Mines), Dhanbad
sulagna.nandydutta@gmail.com

ABSTRACT

Technological advancement has undoubtedly eased the marketing process in this highly competitive business environment. If business entities do not adopt this technological upgradation in a fast-changing world, there may be severe competitive issues for survival. The recent technological advancements ["Artificial Intelligence (AI)," "Augmented Reality (AR)," "Virtual Reality (VR)," and "Chatbot (CB)"]- from the computer science field which has reached the mass outside its domain due to their super efficiency and utility for various activities which needed human intelligence. This article explores the concept in two ways: generic and specific perspectives. Initially, the paper aims at concept-oriented (generic) exploration concerning the introductory idea of critical concepts (I), their emergence (E), future arena (F), and risk factors associated with them (R) [the IEFR framework]. Lastly, this paper does the bibliometric analysis of published documents (specific) indexed in the Web of Science in connection to sustainable goals for better comprehension of the domain and its implications. Papers are scattered in terms of categorization. No salient field is grown to its fullest potential. As sustainability is not the prime concern in this domain, policy-level decisions are needed.

ABSTRACT

The impact of Hindustan Unilever Limited's (HUL) sustainability measures on India's progress toward the Sustainable Development Goals (SDGs) is examined in this study report. The study examines how money is allocated and used in the fields of women's empowerment, environmental sustainability, healthcare, and other areas. HUL's Environmental, Social, and Governance (ESG) objectives serve as a gauge for the company's dedication to sustainability. In order to shed light on the company's contributions to social and environmental well-being in India, the study uses a quantitative research methodology to investigate the relationship between HUL's efforts and SDGs.

A GROWING NUMBER OF INSTITUTIONAL INVESTORS AND FUNDS INCORPORATE VARIOUS ENVIRONMENT, SOCIAL AND GOVERNANCE (ESG) INVESTING APPROACHES

Ajay Kumar Yadava
Faculty and Senior Management Scholar,
R.S.M.T. U.P. College, Varanasi
Dr. A. P. J. Abdul Kalam Technical University, Lucknow
ajayk.yadav25@gmail.com

ABSTRACT

Environmental Social and Governance (ESG) is a frame-work used to assess an organization's business practices and performance on various sustainability and ethical issues. It also provides a way to measure business risks and opportunities in those areas sustainable finance is all about ethical decision –making in business and investment. It pivots on environment, social and good governance (ESG) standards (especially in asset management and corporate strategy) that customers, workers and investors demand of companies. The methodology used involves analyzing key ESG issues and indicators, which are split into three themes: Environmental, Social and Governance. The set of issues and indicators analysed will vary by industry with a specific weight placed on each issue. The four- pillars of sustainable finance are (1) Definition: Use of Proceeds, (2) Selection: Process of Project Evaluation (3) Trace-ability: Management of Proceeds, (4) Transparency: Monitoring and Reporting. Common goals include reducing greenhouse gas emission investing in sustainable energy, increasing work-place diversity and providing transparent financial practices. By integrating ESG considerations into their investment, banking, insurance, and other financial product companies can maintain profitability while making good on their customer's and investor's desires to promote sustainable practices support social causes and foster responsible governance. The metrics and disclosures proposed here have been organized in four pillars that are aligned with the SDG's and principal ESG domains: Principles of governance, planet, people and prosperity.

ABSTRACT

Gender equality has become one of the cornerstones for driving this world into a sustainable and thriving ecosystem in the contemporary time. Women's participation and contribution has proven to be an inevitable and significant component for the progress of a nation as a whole and economy in particular. This perspective article delves into the transformative role that women play in shaping the future of India through the family business domain. Historically, family businesses in India have been male-dominated, but changing societal norms, increased education, and evolving business landscapes have created opportunities for women to play a pivotal role. Drawing inspiration from the emphasis on family business, we delve into the intricate tapestry of women's influence within family businesses, illuminating their entrepreneurial behaviours, decision-making processes, and leadership styles, helping in the sustainability and transformation of family business domains. Furthermore, we examine the challenges faced by women in the family business landscape, such as gender bias and societal expectations, and propose strategies for overcoming these obstacles. Shedding light on these issues, this article contributes to a deeper understanding of how women are reshaping the future of family businesses in India and the importance of gender diversity and inclusivity for the sustained growth and prosperity of these enterprises.This paper is an integrative review based on a concise and critical literature study. The research findings reveal that women in the Indian family business landscape drive economic prosperity through inclusivity, innovation, diversity, and sustainability initiatives, contributing significantly to business and economic growth and adaptability despite the traditional barriers and challenging stereotypes.

Additionally, gender diversity within family businesses correlates with improved financial performance and resilience in the evolving market landscape. This perspective article introduces a fresh perspective on the role of women in shaping the future of India through family businesses. It distinguishes itself by emphasizing how women's contributions drive innovation and adaptation within these businesses. By triangulating gender dynamics, entrepreneurship, and family business context, it offers an innovative lens to understand and address evolving challenges, contributing to future research and practical solutions in the context of Indian family businesses.

ABSTRACT

Energy poverty (EP) is one of the most challenging problems in the contemporary world, equally affecting developed and emerging nations. Its mitigation is an important facet of the United Nations' (UN) Sustainable Development Goals (SDGs). However, the antecedents of EP have not been completely investigated. The present study augments the extant literature on the determinants of energy accessibility for the BRICS countries. Ours is one of the very few studies investigating the impact of GDP, government spending, income inequality, trade openness, and FDI on energy poverty with the help of robust panel data techniques of CS-ARDL and panel causality tests to probe the impact of select variables on EP. This study employs annual data (from 1990 to 2022) in context of BRICS countries. The econometric findings revealed that income inequality and energy intensity aggravate the problem of EP while FDI, trade openness and government spending helps in reducing the EP in BRICS economies. The current study's results hold up well under different model configurations, we were able to offer useful recommendations for energy affordability and accessibility in accordance with the SDGs.

HARVESTING KNOWLEDGE: A COMPREHENSIVE SYSTEMATIC REVIEW OF AGRICULTURAL SUPPLY CHAIN MANAGEMENT

Dr. Mohammed Farooq Pasha
Associate Professor
Govt. First Grade College, Bangalore
farooqpasha2002@gmail.com

Preethi A
Assistant Professor, Surana College, Bangalore
Research Scholar, Jain University
Preethim289@gmail.com

ABSTRACT

In response to the intricate challenges facing modern agriculture, "Harvesting Knowledge: A Comprehensive Systematic Review of Agricultural Supply Chain Management" rigorously examines a broad spectrum of scholarly works, comprising articles, journals, and conference papers. The paper not only consolidates existing knowledge but also identifies gaps in the literature, suggesting avenues for future research and development in agricultural supply chain management. By citing foundational works such as that of Ivanov and Dolgui (2019) and Seuring and Gold (2012), the review establishes a robust framework for understanding the current state of agricultural supply chains and identifies areas where further investigation is warranted. As global agriculture grapples with dynamic shifts and unprecedented demands, "Harvesting Knowledge" emerges as an indispensable resource for researchers, practitioners, and policymakers alike. Rooted in evidence-based insights, the paper concludes with practical implications and recommendations, fostering a collaborative commitment towards cultivating sustainable, efficient, and resilient agricultural supply chains in the face of evolving global challenges (Blackhurst et al., 2008; Pagell & Shevchenko, 2014). This systematic review, titled "Harvesting Knowledge: A Comprehensive Systematic Review of Agricultural Supply Chain Management," aims to provide a thorough examination of the existing literature on agricultural supply chain management. With the escalating challenges facing global agriculture, the primary purpose is to unravel prevalent practices, challenges, and innovative strategies within agricultural supply chain management. The review seeks to contribute to a nuanced understanding of the complexities involved in production, distribution, and consumption processes, shedding light on key considerations for stakeholders in the agricultural sector. Employing a systematic approach, this review meticulously selects and evaluates scholarly works, including articles, journals, and conference papers.

The methodology involves a comprehensive search across reputable databases, utilizing stringent inclusion and exclusion criteria to ensure the relevance and quality of the selected literature. The information related to empirical research and viewpoint of various ASC drivers were captured, studied and analysed in detail.

Although inventory policy, demand forecasting and ASC integration were found to be important areas of ASC, they were less focused, studied and researched.

OP Jindal Global University, Sonipat
adwivedi@jgu.edu.in

ABSTRACT

This study delves into the intricate dynamics of Supply Chain Entrainment (SCE) and its impact on Organizational Performance (OP) in the context of manufacturing supply chains. Employing Partial Least Squares Structural Equation Modeling (PLS-SEM), The study employs Partial Least Squares Structural Equation Modeling (PLS-SEM) to explain the crucial contribution of supplier collaboration, information sharing, and process integration as potential enablers of SCE. Furthermore, the study investigates the moderating influence of technology adoption on the interactions among SCE and OP. The managers can leverage from the identified enablers to enhance SCE, thereby fostering improved OP. The findings from the study contribute to both academic and practical realms by offering a comprehensive understanding of the intricate mechanisms governing manufacturing supply chains, thus advancing the discourse on effective supply chain management strategies.

Assistant Professor, BBA, PES University, Bengaluru

ABSTRACT

The papers submitted for this publication represent research based on the role of event design elements. Events serve as platforms for brand representation and communication. The design elements contribute to the visual and sensory aspects of the brand, influencing how attendees perceive and remember the brand associated with the event. In addition to being aesthetically pleasing, event planning also acts as a visual language to convey the concept and goal of the gathering. An event's design can distinguish it from others in a packed schedule of events. An event may become more intriguing by using well-thought-out and unique aesthetics that help it stand out in the eyes of participants and become unforgettable. The methodology used for this paper was a literature review and the sources for the papers were from Google Scholar. The design elements contribute to the visual and sensory aspects of the brand, influencing how attendees perceive and remember the brand associated with the event. Through this study, event planners get a better understanding of the attendee's behavior to curate design elements accordingly. With the rise in cutting-edge technology elements like virtual reality and additive reality could be incorporated to improve the overall enjoyment of the event. The efficiency of event design components leads to more pleasant, lasting, and enjoyable events for participants.

Assistant Professor, BBA, PES University, Bengaluru

ABSTRACT

Flower arrangement aims to connect with nature by capturing its splendour and framing it in a unique design. It adds positivity and ambience to any hospitality industry setting. Sustainable floristry meets current and future generations' environmental, social, and economic needs. The purpose is to identify unforeseen problems in the floristry and acknowledge them for a better and sustainable environment. The methodology used is an extensive literature review, drawing on numerous research papers from Google Scholar. This paper provides an overview of the historical evolution, sustainable approaches, technologies, techniques and suggestive methods for addressing environmental impact in the floral arrangements of the hospitality industry. With technology advancing rapidly, it is crucial to utilise it positively to not harm the environment. In the floristry industry, it is essential to adopt sustainable techniques to ensure that our actions do not have a negative impact on the ecosystem.

A CASE STUDY ON HOW CAPACITY IS AFFECTING DEMAND AND IN TURN OPERATING REVENUE OF AIR INDIA

Sidharth M Chandran
Student, MBA-MS,
Amrita School of Business, Bengaluru
sidharthchandran300@gmail.com

ABSTRACT:

The majority of Indian scheduled civil aviation companies report recurring annual losses in spite of positive growth. in capacity and demand. Air India has been reporting losses year-on-year. The purpose of this study is to investigate the linkages between capacity, demand, and operating revenue of Air India for the period 2014–15 to 2018–19. The methodology includes a two-stage empirical analysis, wherein regression analysis is used in both stages for estimating the relationship between capacity and demand and demand and operating revenue. The effect of passenger load factor and Break-even load factor on operating result is also analysed. The findings suggest that, though there is a positive correlation between capacity and demand and in turn demand and operating revenue of Air India, underutilization of capacity by Air India is resulting in losses to Air India and the industry as a whole. The study can prevent operating losses to Air India in future.

geetanjalisrinivas415@gmail.com

ABSTRACT

A spectrum of behaviors and policies governed by the principles of integrity, impartiality, and accountability constitute ethical practices within an organizational framework. A fundamental component of an organization's ethical framework is the incorporation and consistent application of ethical standards in all aspects of its operations, including employee relations, consumer interactions, decision-making, and community involvement. The significance of ethical practices has been further underscored by the globalization of business. Organizations that operate in locations with varying cultural and regulatory environments encounter the difficulty of navigating the ethical nuances that are specific to each setting. By embracing an all-encompassing viewpoint, this research attempts to reveal the ways in which cultural sensitivity and ethical adaptability bolster the resilience of organizations in an era of globalization. To analyze the responses of the participants, multiple response analysis, regression analysis, and the ANOVA test were implemented. The significant impact of investor intentions regarding company accountability is further validated by the quantitative results, underscoring the critical importance of ethical considerations in shaping investment choices.

akshaysudheert@gmail.com

Krishnakumaaran R G
Student, MBA,
Amrita School of Business, Bangalore
krishnakumaran95@gmail.com

ABSTRACT

This paper investigates the impact of generative artificial intelligence (AI) on Quality Assurance (QA) professionals and strategic decision-makers within the Information Technology (IT) sector. The focal question guiding this research is centered around understanding perceptions, challenges, and strategic considerations related to the integration of generative AI technologies. A comprehensive survey methodology encompassed questions related to awareness, perceived benefits, challenges, integration strategies, collaboration dynamics, and long-term considerations. Data analysis involved quantitative assessments of responses to derive nuanced insights into the complex landscape of generative AI adoption in the IT sector. The findings present a detailed exploration of the awareness levels, perceived benefits, and challenges associated with generative AI among QA professionals. Insights into integration strategies, collaboration dynamics, and long-term considerations from both QA professionals and decision-makers in strategic roles are synthesized to provide a holistic understanding of the landscape. The implications of this research extend to informing decision-makers and practitioners about the challenges and opportunities inherent in incorporating generative AI in QA processes and strategic planning. The nuanced insights into collaboration dynamics, workforce impacts, and strategic considerations offer practical guidance for navigating the evolving technological landscape. This research holds significance in contributing to the ongoing discourse on the intersection of generative AI, QA practices, and strategic decision-making in the IT sector. By shedding light on the perceptions and strategic considerations of professionals, it aids in developing a roadmap for organizations seeking to harness the potential of generative AI effectively.

ANALYSE THE FACTORS INFLUENCING THE ADOPTION OF ELECTRIC VEHICLE IN VARIOUS COUNTRIES – COMPARISON OF ELECTRIC VEHICLE ADOPTION RATES IN DIFFERENT COUNTRIES

Pon Barath Suva Raj P
Student,
Amrita School of Business, Bangalore
ponbarath10@gmail.com

ABSTRACT

This research dives into the diverse landscape of electric vehicle adoption across the countries India, United States of America, United Kingdom, China, Norway and Ireland to discover the factors that shaped this trend. By analysing the findings from different articles and publications, this study comprehensively examines the financial incentives, charging infrastructure, local production, regulatory policies and consumers behaviour towards electric vehicles (EV). This analysis integrates the perspectives from different studies to contribute to the understanding of the different factors that are influencing and shaping the global adoption of electric vehicles (EV). Also offering valuable insights to the policymakers and the industry experts, helping them to navigate the evolving landscape of sustainable mobility.

STUDY OF THE BEHAVIOUR OF RETAIL INVESTORS WITH RESPECT TO INVESTMENT IN ESG FUNDS

Shruti Modi
Student,
Indus Business Academy, Bangalore
fpb2224.144.shruti@iba.ac.in

Prof. Narendra Babu
Senior Assistant Professor,
Indus Business Academy, Bangalore

ABSTRACT

This study aims at studying the consumer behaviour of retail investors with respect to investment in Environmental, Social and Governance (ESG) funds. It also focuses on the awareness of retail investors for ESG funds and the reason why there has been a positive shift towards investment in ESG funds. The researcher tries to establish the relationship between awareness level of retail investors with their investment behaviour in ESG funds. Primary as well as secondary method was used to conduct the study. It was found that investment in ESG backed funds depended on the level of awareness regarding ESG. Also, more young males are having knowledge of ESG backed funds and it's not that related with level of income. So, awareness is a key factor which needs to be focused on. Also, the irony here is that inventors are investing in ESG funds but having more focus on returns of those funds.

Keywords: *Investment Behaviour, Retail Investors, Environmental, Social and Governance, Awareness.*

A STUDY ON IMPACT OF SUSTAINABLE DEVELOPMENT GOALS ON SHAREHOLDER VALUE: WITH SPECIAL REFERENCE TO LISTED COMPANIES IN INDIA

Maya Patil
Research Scholar,
International School of Management Excellence, Bangalore
mayap.isme20@gmail.com

Dr. Geetha Rajaram
Research Guide,
International School of Management Excellence, Bangalore

ABSTRACT

This research aimed to comprehensively evaluate sustainable development goals adaptation in Indian corporations, providing insights into strategies, challenges, and impact for fostering a more sustainable future. Utilizing bibliometric analysis with Scopus search criteria, the study identified a rising trend in sustainable development goals adaptation in India, potentially driven by corporate awareness and investor demands from 2016 to 2023. The sector wise analysis reveals, SDG is driven by social sciences with 33.1%, environmental science with 17.8% and business management with 11% subject wise, emphasizing and the importance of social and environmental dimensions & a business-centric focus. Cluster analysis reveals the five clusters about environmental policy, technological development, gender equity, entrepreneurship and governance. Poorly touched upon subjects were found to be tourism, water quality and sanitation. Bibliometric analysis, Dematel analysis, and social network analysis have been used to gain insights into the subject. Descriptive statistics showcased that the shareholder value has increased over the years and created value for shareholders during the period. Standard deviation (SD) shows some signs of volatility over the years in 2018-2020 with high SD and low volatility in 2016-17 with low SD. Over the stipulated years, shareholder value is considerably impacted by the Sustainable Development Goals (SDG). The absence of statistical significance suggests that there is no proof, in the model's current form, that these factors have any appreciable bearing on shareholder value. The results of the multivariate analysis do not show enough evidence to reject the null hypothesis for either the annual impact of the Sustainable Development Goals or the total shareholder value over time. This suggests that overall, there is no discernible change in shareholder value between 2016 and 2020, and that shareholder value is not significantly impacted by the Sustainable Development Goals for any year. Key themes, including environmental performance and social factors, provide strategic guidance for aligning sustainability strategies with prevalent themes, addressing critical issues for businesses and society.

NAVIGATING FINANCIAL MARKETS: AN EMPIRICAL EXAMINATION OF THE INFLUENCE OF EMOTIONAL AND PSYCHOLOGICAL WELL-BEING ON PROFESSIONAL FEMALE INVESTORS

Mr. Raveesh Ramdas
International School of Management Excellence, Bangalore

Dr. Shurlly Tiwari
Professor
International School of Management Excellence, Bangalore

ABSTRACT

The purpose of this study is to examine the complex relationship that exists between female investors in metropolitan locations between the ages of 31 and 51 and their emotional and psychological well-being. Given the increasing importance of women as investors, this research aims to understand the ways in which emotional and psychological aspects impact financial decision-making in this population. To obtain thorough insights, the research uses a mixed-methods strategy that combines surveys and in-depth interviews. Structured surveys will be used to gather quantitative data on factors like investment preferences, risk tolerance, and financial objectives. Simultaneously, in-depth interviews will be utilised to gather qualitative data, which will enable participants to express their experiences and perspectives in a sophisticated way. Emotional intelligence and investment success among female professionals are significantly correlated, according to research on "Navigating Financial Markets: Influence of Emotional and Psychological Well-Being on Professional Female Investors". The study emphasizes how cognitive biases, such as risk aversion and overconfidence, affect how people make decisions. Furthermore, evident that a supportive and welcoming work atmosphere is essential to the mental health of female investors and to their ability to bounce back from market setbacks. These results highlight the necessity of focused initiatives to address psychological issues and advance an environment that is supportive to women working in finance. The study's emphasis on urban environments is driven by the special opportunities and challenges that come with living in an urban area, which may influence female investors' emotional and psychological health. The study will investigate how personal and financial components are interconnected, considering elements including family dynamics, work-related stress, and societal expectations. The goal of this study is to provide significant new understandings to the domains of psychology and finance.

Financial institutions, legislators, and mental health specialists can all benefit from knowing how female investors' emotional and psychological well-being influences their investment decisions.

In the end, the results might open the door for customised treatments and tactics meant to improve this group's financial health and promote a more inclusive and all-encompassing approach to investment management. This research brings into light the various elements that impact the decision-making of women with special attention to investment avenues.

Roshna Thomas
Christ (Deemed to be University), Bangalore

ABSTRACT

This study has been carried out to understand the prevailing awareness and willingness among consumers to adopt the new open-source e-commerce initiative - ONDC (Open Network for Digital Commerce) backed by the Indian Government. This will be ascertained against the backdrop of five key factors and trends identified in today's e-commerce landscape - direct to consumer trend, increasing aversion towards monopolistic practices, need for convenience, and patriotism. Furthermore, the study also aims to assess any possible variation in the level of willingness contingent on the product category. This study is predominantly exploratory and takes into consideration only three product categories - food & grocery, electronics, apparel. The initiative is in its nascent stages and has not garnered the attention, trust or understanding of the general public, owing to which the respondents of the survey may not be entirely aware of the platform or its functioning. However, the questionnaire of the study is designed such that respondents are offered a rudimentary demonstration of the platform's functioning which in turn creates awareness about it. The ONDC platform with its open source interface is set to democratise and revolutionise the e-commerce landscape in India. For a platform that aims to shift the dynamic of interaction between buyers and sellers it is imperative to understand the existing levels of awareness and willingness to adopt the platform among consumers. This study intends to aid the platform in understanding its current footing in consumers' minds as well as its position with respect to existing, centralised, e-commerce platforms such as Amazon, Flipkart etc. While preliminary research on the platform, its structure, and functions have been conducted, its adoption among consumers and the factors that contribute to it remain largely unexplored.

This study aims to assess as well as improve the level of awareness about the platform while identifying the factors that play a role in consumers' adoption of the platform.

MULTIPAGE MEDICAL DOCUMENT CLASSIFICATION OF PRINTED AND SCANNED PAGES USING MACHINE LEARNING ALGORITHMS

Prof. Shreedhar Deshmukh
Assistant Professor
National School of Business Academy, Bangalore
shreedhar@nsb.edu.in

ABSTRACT

One of the most challenging projects in machine learning for text classification is extracting information from unstructured scanned documents and texts, including medical document. Medical documents usually include both typed and untyped handwritten documents written by doctors prescribed to patients. These are the collection of papers of patient went several times to clinic or hospital. It will be difficult for a doctor or a health care company to go through all the documents which is time consuming process. We have tried to develop an application call auto index system, that classifies a medical document by analysing its content and categorizing it under predefined class (e.g. Consultation, Anaesthesia, Lab Report-Culture test, Radiology, office visit) topics and creating an index of pages falling under the category. We have plenty of classes to classify but fixed the scope to four-five predefined topics namely, Progress notes, consultation, CT, Lab reports, radiology. We use term frequency technology to convert and count number of words in the medical text documents and classify them based on weightage calculation.

M. Thashneem T. Bhanu
Assistant Professor,
PES University, Bengaluru

ABSTRACT

Reusing oil in the kitchen involves extending the lifespan of cooking oil by filtering and storing it for future use. This practice can save costs, reduce waste, and add flavors to dishes. Proper filtration is essential to remove impurities and maintain the oil's quality. The main purpose of choosing this topic of reusing oil in the kitchen serves multiple purposes. It promotes sustainability by reducing waste and conserving resources. Additionally, it offers economic benefits as it allows individuals to save money by extending the life of cooking oil. Exploring proper methods for oil reuse also contributes to healthier cooking practices and encourages mindful consumption in the kitchen. The paper was searched using Google Scholar. The paper explores the practicality and benefits of reusing cooking oil in kitchens. The focus is on sustainability, cost savings, and promoting healthier cooking practices. The study emphasizes monitoring and limited reuse to ensure food safety and quality. The suggestion for future improvement in your area of research which would help the hospitality industry are primary focus is cooking oil reuse I suggest exploring sustainable practices like implementing advanced waste recycling systems or developing eco-friendly packaging solutions to benefit the hospitality and event industry. This can contribute to reducing environmental impact and promoting a more sustainable approach.

delgasimonsh@gmail.com

Dr. Bharathi
Associate Professor,
Department of Sociology and Social Work
CHRIST (Deemed to be University)
Bengaluru, Karnataka

ABSTRACT

Psychological empowerment is a very crucial component in the aspect of employee empowerment. It includes the four dimensions, Meaning, Competence, Self-determination, and Impact, contributing to its different variations and levels. As a result of investigations conducted in different industries, it is noted that less attention is given to the aspect of Job Satisfaction in Connection with Psychological Empowerment. Therefore, this study discusses the Psychological Empowerment of Women Employees in leadership positions and its relationship with their Job Satisfaction. The study's significant goals are to examine which dimensions of Psychological Empowerment are strongly linked with the aspects of Job Satisfaction. A sample size of 107 was collected from 4 different private industries. The Psychological Empowerment tool of Spreitzer (1992) and the Job Satisfaction tool of Minnesota Satisfaction Questionnaire (MSQ) are used for measurement. The Questionnaire was distributed to the women employees in leadership positions in 4 different industries. The study's findings propose that Psychological Empowerment has a very significant and highly positive relationship with Job Satisfaction, and the dimensions of Self-determination and Impact have the most decisive influence. Therefore, this research illuminates the critical role psychological empowerment plays in shaping the job satisfaction of women in leadership roles. The findings underscore the importance of fostering self-determination and recognizing the impact of individual contributions in enhancing not only psychological empowerment but also overall job satisfaction among women employees in leadership positions.

This nuanced exploration adds valuable insights to the evolving discourse on employee empowerment and organizational well-being, calling for a more comprehensive integration of psychological empowerment considerations in contemporary workplace strategies.

ABSTRACT

The traditional economic models have led to significant and negative repercussions for environmental progress, as well as an unreasonable division of capital has resulted in increased ecological footprint and demographic disparities. Due to the existence of disparities in opportunities and availability of resources in the economy worldwide, it has become extremely necessary to evaluate the inter-connections between the concept of Corporate Social Responsibility (CSR) and why it is required. Further it has also become important to associate Sustainability along with CSR. Therefore, the primary aim of this study is to examine and analyse the evolution of CSR as a domain in the past two decades and also identify the evolving interrelation of CSR with sustainability. The study also makes an effort to understand the trend by reflecting on historical trends. This study uses bibliometric analysis to mark the upcoming trend in CSR and also dwells on its connection with sustainable development. Thus, on comparing the trend of the past two decades, it was found that CSR has gained a lot of traction from the research community and it is being inclined towards 17 Sustainable Development Goals. The analysis dwells into different dimensions of publication data extracted in January 2024, from the Scopus database using two different search strings and three different searching strategies. Where the United States has maintained its position as the country to produce most publications in the CSR domain, two countries namely India and China, can be observed advancing in the respective domain.

ABSTRACT

The study aims to understand the strategies used by visually impaired consumers (VIC) in acquiring product information and the challenges they face. The study also explores VIC's preferences for accessible labeling and its benefits. This study employed the qualitative approach of thematic analysis to explore the strategies used by VIC to obtain product information and their preferences for accessible labeling. A snowball sampling technique was used to recruit participants. Data was collected from VIC through semi-structured interviews. The sample size of the study is twelve. The data was analyzed by using NVivo software. The study revealed three strategies used by VIC to obtain product information, such as reliance on caregivers, staff, and technology. However, all the strategies employed have drawbacks, such as lack of autonomy and time consumption. The narratives of VIC propose solutions to these challenges faced by implementing accessible labeling on product packages. The study reported a high preference for accessible labeling in braille and QR codes. Implementing a combination of braille and QR codes on product packages will be the most beneficial strategy for VIC. Implementation of accessible labels ensures inclusion in the marketplace.

ABSTRACT

India's economy is among the fastest-growing in the world. It is anticipated that Indians will spend more time engaging in leisure activities as they climb the economic development curve. In India, there are many different options for leisure activities, but movies are still the most popular place to go for an out-of-home activity. A major contributor to the thriving film industry of the nation is the Indian cinema exhibition industry, also referred to as the Indian film exhibition sector. Smaller theatres are finding it difficult to compete with larger chains as a result of the growth, which has also increased competition and consolidation. Additionally, multiplexes have been essential in growing the market for regional language and non-Bollywood films. The expansion of multiplexes, however, has also had a big effect on conventional single-screen theatres, many of which have found it difficult to compete with the bigger chains. This study examines the gradual decline of single-screen theatres in India, highlighting the factors and challenges that either caused or contributed to this trend, as well as the rising demand for high-end, experience-driven theatres. The majority of this study is exploratory in nature because there hasn't been a lot of collaborative research on India's exhibition industry, particularly on standalone and single-screen theatres.

This study used both qualitative and quantitative methodology. The qualitative portion includes podcasts, industry reports, and interviews with professionals in the field of cinema exhibition to gain insight into how renovating or improving single-screen theatres can promote survival of the fittest. The quantitative portion consists of a questionnaire designed to comprehend consumer prospects and behaviours that are taken into account when attending a movie in a theatre, particularly in a single-screen cinema. Hypotheses testing was conducted on the questionnaire.

ABSTRACT

As our society recognizes the urgency of living sustainably, the field of interior design holds great potential for initiating transformative change. In this qualitative study, we investigate the incorporation of sustainability values into the world of interior design. Our main focus is on creating a robust framework that takes into account the temporal aspect of design processes. As our planet faces ever-increasing environmental threats, the interior design field has responded with a significant shift towards sustainable practices. As a result, there is an urgent need for comprehensive frameworks that go beyond traditional considerations such as material and energy efficiency. This research framework presents a holistic approach to sustainable design, incorporating traditional principles and adding a temporal component. It outlines key milestones and strategies for sustainable decision-making throughout the entire design process. Moreover, this research contributes to the broader dialogue on sustainable design by highlighting the interplay between temporal considerations and other crucial elements such as culture, society, and the economy. The research aim is to shed light on the temporal framework that guides sustainable design practices, providing valuable insights into how the concept of time influences the creation and maintenance of environmentally conscious living spaces. To carry out this research, we adopt a qualitative approach and conduct in-depth interviews with experienced interior designers, architects, and sustainability experts. By carefully selecting participants through purposive sampling, we ensure that our study includes diverse perspectives and experiences. By shedding light on the temporal dimension, it serves to deepen our understanding of sustainable design and its multifaceted nature. This research lays a foundation for future investigations into the practical implementation and refinement of the proposed framework within diverse design contexts.

ABSTRACT:

The vital reason behind this research is to explore customer perception on cooperative banks concerning their services. The study is exploratory in nature. To investigate the perception of customers towards services provided in Cooperative Banks, the research has been done by using both primary and secondary data. The primary data have been analyzed using SPSS. The hypothesis has been tested using the ANOVA. The overall result of the study indicates that the age factor of the beneficiaries doesn't have any influence on their perception of the cooperative banking services in Rural India.

ABSTRACT

With the rapid growth of e-commerce and online shopping, it is crucial to understand consumer perceptions, hence the researcher aims to study the perceived risks and benefits of online shopping by Indian consumers. In order to transform themselves from fierce competition, marketers need to adopt right strategies to provide superior service to satisfy consumer needs and ultimately create consumers perceived value. The benefits of online shopping are come up with potential risks that the consumer always be aware of. One of the biggest challenges of online retailer is to attract profitable customers. For the present study the researcher collected the opinions of 528 consumers, who are aware of the online shopping. For checking internal consistency and validity using Cronbach's alpha test. The data collected is analysed, summarised and controlled by using Excel and SPSS. For collecting data a structured questionnaire was administered, which includes perceptions of various risks and benefits associated with online shopping. It also includes number of factors which motivates the individuals towards online shopping. After conducting statistical analysis to identify that the more risks associated with online shopping are security, product quality and privacy at the same time the perception towards benefits from online shopping are product variety, time and cost saving determine the importance of consumer perceptions towards online shopping. The findings offer after comprehensive understanding of the risks and benefits of online shopping retailers focus on to develop more innovative strategies in terms of developing web portals, privacy and maintaining product quality, definitely online shopping business generate more revenues to the firm.

ABSTRACT

The phenomenon of Virtual Influencer (VI) marketing has experienced a significant popularity within the realm of social media, owing to the continuous and dynamic evolution of the digital landscape. The present research explores the pivotal determinants shaping social media (Instagram) Users' attitudes towards virtual influencers through Exploratory Factor Analysis. Additionally, an attempt is made to categorize the respondents based on various psychographic and demographic attributes using hierarchical and K-Means cluster analysis. EFA findings revealed four fundamental dimensions of virtual influencers namely; Attitudinal Homophily, Aesthetic Influence, Informativeness & Ad Content Value, Perceived Reciprocity and Perceived Originality.

Employing hierarchical and K-Means cluster methodologies to segment 182 respondents led to the identification of two distinct groups: VR Enthusiast and Discerning Realist. The paper contributes useful implications for marketing practitioners and brands to target these diverse segments effectively by evaluating significant traits of virtual influencers in a meaningful way.

ABSTRACT

E-leadership has become crucial for productive remote work in the quickly developing IT industry. The study examines how e-leadership affects remote work, how e-leadership may be applied in the virtual environment in the IT sector, and how remote work affects employee performance. The selection of publications using PRISMA criteria has increased the relevance of the current review. According to the current study, firms can improve communication, boost team morale, encourage goal alignment, and inspire creativity by utilizing efficient e-leadership tactics. The present review suggested that e-leaders can overcome the difficulties of remote work and guide their teams to success in the digital era with the proper strategy and use of technological tools. The study is helpful in analysing the significance of electronic leadership in the scenario of remote work.

IMPACT OF SOCIAL MEDIA MARKETING ON PURCHASE INTENTION OF GEN Z

Deepika K S
Assistant Professor, PES University, Bangalore
deepikaks@pes.edu

Dr. Ajay Massand
Associate Professor, PES University, Bangalore
ajaymassand@pes.edu

ABSTRACT

Brand marketing activities are becoming more innovative and attractive. Social media is a platform that maximizes the reach of brands. This paper emphasizes Gen Z's intentions to purchase branded products or services based on social media marketing activities and their characteristics. It aims to determine the factors impacting the purchase intention of Generation Z to a maximum extent. The critical points analysed are how Gen Z perceives brands marketed on social media (SM) and what characteristics they consider before their purchase. A sample size of 250 is considered for the analysis. The research uses a convenience sampling technique amongst Gen Z as they are primarily into Social Media usage. On applying Factor Analysis using SPSS on 20 items, the items were grouped into two main factors named Trendiness and Customer engagement. The analysis also reveals that gender does not significantly impact the purchase intention among Gen Z. This research helps the brands design their SM marketing activities focusing on the most vibrant factors that attract most of the specified target segment. It is of practical importance as Gen Z is the fresh entrant to the customer base of all brands. Gen Z's changing behaviour of adapting to new and trending social media platforms and leveraging of maximum time on social media along with easy access to the same, makes it much more important for the marketers to focus on this research results.

ABSTRACT

Bangalore, India's tech hub is witnessing the rapid growth of Cloud Kitchens, creating a unique niche in the online food segment. These delivery-only kitchens operate on a budget, offering great flexibility. Their manufacturing and distribution strategy contrasts with traditional restaurants, and other online channels of selling, thus relying heavily on data analytics and effective kitchen management for efficient distribution. Interestingly, no one has yet surveyed consumer perceptions of this market. Though a survey of consumers using structured questionnaire we try to analyse how the 4 Ps of Marketing, Product, Price, Place and Promotion influence the purchase decision of the consumers and thereon their satisfaction.

MARKETING PROBLEMS FACED BY THE FARMERS: EVIDENCE FROM SIRSA (HARYANA)

Kanchan
Research Scholar, Department of Commerce and Management,
Banasthali University, Rajasthan
kanchu.nekiram@gmail.com

Dr. Shikha Singh
Assistant Professor, Banasthali University, Rajasthan

ABSTRACT

India is known for being one of the largest agricultural producers and exporters globally, with agriculture contributing over 18% of the country's GDP and providing employment to approximately 60% of the workforce. However, despite this significant contribution, farming remains risky for Indian farmers. Despite being an agriculture hub in Haryana state and having ample agricultural resources in Sirsa, marketing agricultural produce remains a major challenge affecting farmers' income and livelihoods. This study aims to identify farmers' problems when marketing their farm produce in Sirsa District, Haryana. Additionally, it aims to suggest possible solutions to address these constraints and help policymakers and stakeholders develop appropriate interventions to support farmers. The study selected a sample of 50 farmers from Sirsa District, Haryana, using a purposive sampling technique, and collected data from both primary and secondary sources. The study also provides practical recommendations for policymakers and stakeholders to foster a sustainable and profitable agricultural industry.

THE OMNICHANNEL CONUNDRUM: EXPLORING CONSUMER PRIVACY CONCERNS AND DATA SECURITY PERCEPTIONS

Rahul S Menon
MBA Student, Amrita School of Business, Bangalore
rahulsmenon101@gmail.com

ABSTRACT

Omnichannel retailing, which is increasingly prevalent today, it is the new normal in consumer convenience. However, alongside this improved accessibility, there is a growing concern. Increasing worries about data protection and security. The study whose results we present below explores this key but under-researched area, attempting to answer the question of how consumers view omnichannel retailing in terms of information about themselves. We have adopted mixed method approach to conduct the survey. With the help of open-ended questions. We hope more relevant details can be collected. This research focuses on addressing below mentioned questions: In exploring omnichannel retailing, we aim to understand consumer expectations on privacy and security. We're curious about data security aspects that resonate with individuals, considering demographics, shopping habits, and tech comfort. Advocating for transparent record-keeping, we want retailers to build trust and win customer confidence. Beyond data and regulations, it's about empowering individuals to navigate the digital landscape securely. Our goal is to illuminate the delicate balance between convenience, personalization, and privacy, creating a space where businesses and individuals thrive in a relationship of convenience with robust data protection.

bothrakrish07@gmail.com

Purna Swetha Kasikala
Student, International School of Management Excellence, Bangalore
swetha.kasikala@gmail.com

Dr. Haritha S
Professor, International School of Management Excellence, Bangalore

ABSTRACT

This research investigates the relation between visual entertainment media and aggression in the youth. The research study is an exploratory study assessing the factors which contribute towards aggressive behaviour amongst young people who are exposed to media violence portrayed through various sources of visual entertainment media. Qualitative data was gathered through interviews with 30 respondents, categorized into three groups: undergraduate students, postgraduate students, and teachers, with 10 participants in each. This segmentation facilitated a better understanding of how various age groups analyse and respond to the subject. The information gathered from the interview was examined using NVIVO. The social/cognitive theories were explored and applied to comprehend the behaviour patterns/aggression. Findings –Based on the interviews conducted for our research, it has become evident that visual entertainment media holds significant influence, often leaning towards the negative spectrum. Our findings indicate that such media can notably impact individuals' behaviour and personality, prompting changes therein. Participants emphasized the necessity of implementing restrictions or guidelines concerning the content consumed, particularly emphasizing the importance of this for individuals at impressionable ages, as exposure to certain content during this developmental stage can potentially alter personality and behaviour trajectories. Research implications-The implications of our research highlight the significant influence of visual entertainment media on individuals' behaviour and personality, particularly emphasizing its potential negative impact. Implementing age-appropriate restrictions or guidelines for media consumption is crucial, especially for impressionable individuals, to mitigate potential alterations in personality and behaviour trajectories. Additionally, fostering an understanding of the distinction between fantasy and reality within media content is essential for navigating its effects on individuals' perceptions and actions.

These findings underscore the importance of proactive measures to promote responsible media consumption and address potential adverse effects on individuals' development and well-being.

International School of Management Excellence (ISME) Research Centre, Bangalore
(A recognised research centre of University of Mysore)

ABSTRACT

The major objective of this paper is to study the factors related to Technology-Organisation-Environment (TOE) context that influence the adoption of Digitization in Unorganised Retail Outlets. With this objective a study a proposed conceptual model of TOE framework was taken. A quantitative survey was conducted with unorganised retail outlets in Karnataka, India to validate the model. The survey generated 75 respondents. AMOS and SPSS were used to access the model. It is observed that the elements related to Technology in TOE (Technology-Organization-Environment) framework have a major impact on the intention to adopt technology (Digitalisation). However, the mindset of Retailers, which falls under the categories of Environment and Organization, needs to be improved in order to encourage technology adoption intention. The government might utilize the study to promote additional digitalization efforts in rural areas. They hold the ability to comprehend the needs of rural areas and adapt their work accordingly. This model can be utilized by unorganized merchants to expand their customer base and survive in the highly competitive market of today.

IMPACT OF SOCIAL MEDIA INFLUENCERS ON BEAUTY & WELLNESS PRODUCTS PURCHASE INTENTIONS

Dr. S. Shyam Prasad
Professor
International School of Management and Excellence, Bengaluru

Dr. Rameshkumar Murugesan
Professor
International School of Management and Excellence, Bengaluru

ABSTRACT:

The growth of social media has spawned a new category of celebrities - the social media influencers. Social media influencers are people who have acquired a sizable fan base on social media and monetize their influence by urging their followers to purchase goods and services. Social media has been found to play an important role in influencing purchase decisions. However, there is a lack of understanding of the extent of a social media influencer's impact on a consumer's purchase intention, particularly for beauty and wellness products. We have chosen to study beauty and wellness products for the reason that they no more remain as luxury products; they have come to be used more frequently and commonly. This is reflected in the global Beauty and Wellness Products Market size which is projected to grow from $1,610.5 billion in 2023 to $2,765.8 billion by 2030, at a CAGR of 8.03% (Fortune Business Insights). The study collected data from 386 respondents and applied PLS-SEM to identify the factors influencing purchase decisions and the moderating role of social media influencers.

DESTINATION MARKETING IN POST-PANDEMIC INDIA TO BOOST TOURISM

Geeta Ashok
Professor
International School of Management and Excellence, Bengaluru
geetaashok@isme.in

ABSTRACT

According to the Ministry of Tourism, over 6.19 million and 1.52 million foreign tourists arrived in India in 2022 and 2021 respectively compared to 10.93 million in 2019, representing a - 44% de growth. After this lull, post-pandemic weekend vacations and domestic travels are on the upswing which is helping in boosting economic activity and employment creation. In recent years, there has been a remarkable change in the way people travel. More and more people are seen travelling on long weekends and school vacations. This is majorly spurred by social media where people vlog and post about the places that they have visited. Also, resorts and hotels endorse tourist destinations with the help of influencers and celebrities. Lately, India has been very keen on destination branding to promote tourism amongst people residing in and out of India. The government supports the tourism industry through various schemes such as 'Pilgrimage Rejuvenation and Spiritual Augmentation Drive' (PRASHAD), Swadesh Darshan, 'System for Assessment, Awareness & Training for Hospitality Industry' (SAATHI), Dekho ApnaDesh, and 'The National Integrated Database of Hospitality Industry' (NIDHI). There are many more initiatives that the government is undertaking to brand India as a destination worthy of visiting. Destination marketing is a relatively new concept which is gathering momentum in India. Destination marketing is designed to attract people to a particular place and explore its origins, heritage and values. It is about creating a brand story and building a narrative around it. Brand stories are not about ads and sales pitches. These are stories which are to be told by a brand persona who connects with the core audience. It tries to project why your place is more exotic than other enticing locations. This study aims to explore the strategies that can be used to brand India as a destination for increased tourist inflow.

ABSTRACT

This study aims to address the research gap in understanding the factors influencing adventure tourists in India. The rapid growth and potential of the adventure tourism sector in India make it crucial to explore and analyze the factors that impact destination visit intention and word-of-mouth intentions of adventure tourists. By examining target respondent attitude, involvement, and destination image, this study aims to provide insights into the influences on adventure tourists and their overall satisfaction with adventure tourism experiences. A questionnaire was administered to 205 adventure tourists using simple random sampling, and the collected data was analyzed using various statistical tools such as reliability analysis, independent samples t-test, one-way ANOVA analysis, correlation analysis, regression analysis, and structural equation modeling. The findings of this study will assist marketers and adventure sports organizers in developing effective strategies to attract and cater to adventure tourists in the post-pandemic era. Additionally, the study aims to provide recommendations for marketing and policy regulations that can maximize the potential of adventure tourism in India. This research contributes to the existing literature and provides a foundation for further exploration in the field of adventure tourism.

ABSTRACT

This research paper investigates the burgeoning convergence of Augmented Reality (AR), Virtual Reality (VR), and Artificial Intelligence (AI) Chatbots in the burgeoning arena of marketing. While each technology individually possesses powerful potential to engage and influence consumers, their combined synergy presents an unprecedented opportunity for immersive, interactive, and hyper-personalised brand experiences. Drawing upon case studies and empirical data, this paper delves into the unique strengths and capabilities of each technology within the marketing landscape. AR's ability to overlay digital elements onto the physical world can be harnessed for virtual try-ons, interactive product demonstrations, and location-based marketing campaigns. VR's immersive environments unlock possibilities for virtual showrooms, product testing simulations, and gamified brand experiences. AI chatbots, powered by Natural Language Processing (NLP) and machine learning, provide 24/7 customer support, personalise product recommendations, and facilitate conversational marketing on a grand scale. This paper examines the intricate interplay between these technologies, highlighting the synergistic effects they produce. Further, it analyses the ethical considerations surrounding data privacy, user control, and potential biases within AI-powered marketing tools.

In conclusion, the paper proposes a future-oriented framework for harnessing the combined power of AR, VR, and AI chat bots to design transformative marketing strategies that drive deeper engagement, foster brand loyalty, and ultimately revolutionise the way brands connect with consumers in the digital age.

ABSTRACT

In the life cycle of a milk product, marketing proposes strategies to improve quality and sales. To tap, keep, and stay in the market, constant consumer assessments are needed to create marketing strategies that meet changing consumer behavior, as evidenced by industrialized countries. This study examined customer behavior for milk, buttermilk, curd, and ghee. The analysis reveals marketers must act to stay in business and establish customer loyalty. Based on the study, the researcher made useful recommendations for dairy marketing tactics. Finally, for India's health and development, the government should support dairy farmers and promote milk products.

BEYOND BRICK AND MORTAR UNDERSTANDING THE DYNAMICS OF PURCHASE INTENTIONS

Kavya K M
Research Scholar
Christ Deemed to be University, Bangalore
kavyathilaksana@gmail.com

ABSTRACT

The objective of this article is to create a comprehensive database of academic information on purchase intention on houses through the use of a systematic literature review (SLR). This database will help to promote global progress in research within the real estate sector. This study conducted a scoping review using papers from two well-regarded databases, Scopus and Google Scholar, spanning the years 1993 to 2023. The research also included a theme analysis method, as described by (Arksey & O'Malley, 2005). A total of 289 articles were assessed for inclusion based on predetermined criteria, and 178 of them were subjected to evaluation utilizing the theme analysis methodology. A thematic map of purchase intention of house research was created by evaluating data from 178 papers thematically. The study identified three primary topics and their corresponding sub-themes: consumer behavior, housing qualities, variables influencing purchasing intention. These themes were crucial in gaining insights into the House Purchase Intention and understanding customer preferences for buying a house. A thematic map of House Purchase Intention research is created by evaluating data from 178 papers thematically. This study aims to offer valuable and novel perspectives on consumer apprehensions regarding home purchases in the fast-evolving residential real estate market. It also highlights the key areas that marketers, stakeholders in the housing sector, the real estate industry, and researchers should focus on, both presently and in the future.

ABSTRACT

Strategic Brand Management for Zomato through Innovative Digital Marketing Strategies" explores the dynamic interplay between digital marketing and brand management, using Zomato as a case study. In the contemporary business landscape, the digital realm plays apivotal role in shaping consumer perceptions and behaviors. This paper investigates how Zomato, a prominent food delivery and restaurant discovery platform, strategically employs digital marketing to enhance its brand. Zomato's digital marketing initiatives are dissected, revealing a multifaceted approach. The plat form engages users through social media, leveraging user-generated content and inter active campaigns to actively participate in shaping its brand narrative. Content marketing emerges as a corner stone, with Zomato curating informative and emotionally resonant content, fostering a deeper connection with its diverse audience. Adata-driven approach is also explored, highlighting how Zomato utilizes user data to personalize recommendations and promotions. This personalized approach enhances customer satisfaction and strengthens brand affinity. The paper acknowledges the ethical considerations associated with data-driven marketing while emphasizing its role in delivering tail ored user experiences. As businesses navigate the ever-evolving digital landscape, this research provides insights into the strategies that have propelled Zomato to the forefront of the industry. The symbiotic relationship between digital marketing and brand management is scrutinized, contributing to the broader understanding of the transformative power of digitalization in contemporary business.

CHALLENGES OF DIGITAL INDIA PAYMENT SYSTEM WITH SPECIAL EMPHASIS ON MOBILE PAYMENT APPLICATIONS

V. Anitha
AssistantProfessor
Departmentof Management Studies,
SriSaiRamEngineeringCollege, Chennai
ramu.mba@sairam.edu.in

ABSTRACT

The purpose of this study is to investigate the effects of digital payment systems on mobile payment applications. The fundamentals of the digital public infrastructure were laid out by the government and built upon by robust public-private partnerships, and the main motive of this study is to understand the conceptualization of the unified payment interface (UPI), which has supported India's transition to non-cash payments by facilitating direct payments linked to a bank account. UPI is a public-private partnership that the national payments corporation of India led with interoperable platform applications including Gpay, Paytm, Phonepe, etc., For this current study, the researcher has done various sequences of statistical tests intended to confirm the consistency and has applied the various statistical tools. The hypotheses were tested with smart PLS 3.0 structural equation modeling on variables. From the findings, it demonstrates that the Indian digital payment system has been a tool to eradicate black money and create notorious awareness for cashless transactions. To conclude, the Indian digital payment system has amplified awareness towards eradicating corruption and magnifying social progress with UPI forms of cashless transactions.

ABSTRACT

In today's ever-changing business landscape, designing appropriate green communication has become an increasingly complex activity for marketers. The present study aims to redefine the strategic orientation of green marketing communication by putting forth a comprehensive framework. The study seeks to identify and analyse the various antecedents that serve a pivotal role in the advancement of GMC domain. With the help of a single cross-sectional survey of 164 green apparel customers from four states of Northern India, Exploratory Factor Analysis was conducted and study offers implications for the marketers to revisit their underlying process of green communication and strengthen their GMC in a strategic manner. 12 factors emerged from 42 items through EFA and factors namely Environmental Consciousness, Harmful Future Consequences, Emotional Connect with Nature, Process Oriented Communication, Image Oriented Communication dominate among all. Deep insights into these antecedents will not only help to foster a positive attitude among consumers towards green initiatives, but also serve as a safeguard against the detrimental effects of green buzzwords and the practice of green washing. Additionally, the study offers useful implications to marketers in the design of sustainable green communication strategies. Originality of the study lies in integrating cognitive, affective, individual and strategic perspectives which will assist marketers in strengthening their promotional strategies and ultimately achieving long-term competitive advantages.

ABSTRACT

Within the dynamic milieu of collegiate admissions, influencer marketing emerges as a contemporary and influential instrument that moulds the perceptions and decisions of prospective students in the domain of higher education. Influencers can shape the student's perspectives on campus life and culture, providing first-hand experiences, and influencing institutional preferences. Institutions must carefully select influencers to ensure alignment with their values and goals, as the right influencers can authentically communicate the unique attributes of the institution, effectively reaching and resonating with the desired target audience. This research paper delves into the pivotal investigation of factors influencing the selection of influencers in the admission process, examining the nuanced criteria and considerations that institutions weigh in identifying and engaging influencers to effectively shape prospective students' decisions in higher education. "Grounded on source credibility theory", this study employs validated questionnaires from diverse sources, surveying 213 management institutes through purposive sampling methods. Data collection involved the utilization of Google Form surveys and on-site field surveys to ensure comprehensive insights. The study found that influencers' expertise, trustworthiness, and objectivity significantly influenced their credibility, with attractiveness having the least impact.

Additionally, cost and industry pressure were identified as mediators in the relationship between intention and actual use of influencers in the admission process. These research findings would help in guiding institutions to prioritize influencers with demonstrated expertise, trustworthiness, and objectivity. Socially, it promotes informed decision-making among prospective students, fostering a more transparent and credible admission process.

ABSTRACT

This paper aims to review articles on healthcare services marketing published in the past decade to identify research gaps created in the backdrop of the recent pandemic and propose a future research direction necessitated by the global crisis. A literature review is performed based on the search term "healthcare services marketing" applied to the Scopus database, resulting in a final pool of 65 articles. The authors conducted the analysis based on Callahan's 6 W framework (2014). In the last decade, healthcare service marketing research emphasised medical tourism and concentrated on service quality. Towards the end of the last decade, the research on online healthcare service marketing saw a rise indicating a trend in the field. Based on this and considering the recent pandemic, the paper proposes possible topics for future research. The growing importance of global healthcare services is well-understood post-pandemic, and there is a growing interest in this area. A comprehensive review exploring topics researched in healthcare services marketing in the preceding decade before the pandemic will help identify research trends that will need further exploration to handle future global health crises.

ABSTRACT

In the modern era of digital transformation, higher education institutions all over the world are actively exploring and adopting Artificial Intelligence (AI) to enhance learning experiences. The present study aims to unveil the pivotal factors impacting digital transformation in Higher Education (HE). Based on the exploratory qualitative design, the study integrates UTAUT framework to conceptualize the role of digital transformation in AI adoption intention and inclusive education in HE. The Study reveals that expectations of AI, personal innovativeness, self-efficacy, facilitating conditions, and effort expectancy influence digital transformation in Higher Education (HE) which further drives the AI adoption intention and inclusive education in HE. The present study provides useful insights for marketers and practitioners to understand the dynamics of AI adoption in higher education, as well as a path for institutions to overcome challenges and leverage the opportunities of digital transformation.

ABSTRACT

In recent years, AI-powered influencer marketing has emerged as a pivotal force reshaping the digital advertising landscape. This study delves into the efficacy and impact of integrating AI within influencer marketing campaigns, drawing comparisons to traditional methods. Utilizing a mixed-method approach encompassing interviews and quantitative data analysis, the research assesses AI's influence on influencer selection, campaign performance, and ethical considerations. The study's findings highlight the substantial advantages of AI-driven influencer selection over manual methods in terms of accuracy and efficiency. AI algorithms proficiently align influencers with target audiences, resulting in increased engagement rates and increased brand visibility. The real-time analytics furnished by AI tools empower marketers to leverage data-driven insights, thereby optimizing campaign strategies and decision-making processes. Influencer campaigns optimized by AI consistently surpass conventional campaigns across key metrics like reach, impressions, and ROI. The data-centric approach of AI fosters more precise and pertinent campaigns that resonate deeply with audiences, yielding tangible business outcomes. However, ethical concerns pertaining to algorithmic biases stand as critical considerations in AI-driven influencer marketing. Emphasis is placed on transparent practices and ongoing audits of AI algorithms to mitigate biases and ensure ethical influencer selections. The future of AI in influencer marketing holds promise. Advancements in AI algorithms will lead to enhanced precision in matching influencers and provide sophisticated audience insights, fostering hyper-personalized campaigns. Responsibly embracing AI technologies enables businesses to forge stronger connections with their target audiences, positioning them at the forefront of the ever-evolving realm of digital advertising.

ABSTRACT

This paper aims to present a bibliometric analysis of publications from the Scopus database on initial public offering (IPO) pricing studies. And aim to consolidate the knowledge and explore current dynamics, understand knowledge progression, elicit trends, and provide future research directions for IPO pricing research. The current research used Microsoft Excel to conduct the frequency analysis, VOS viewer for data visualisation and analysis. This study has observed that the research interest in the field of IPO pricing has been increasing annually, with China recently surpassing the United States in terms of the number of published articles. Research themes have shifted from early long-term performance and stock markets to information asymmetry and underwriter reputation. A focus on business perspectives and emerging Asian markets has become a central aspect of the research. This research successfully revealed the most influential literature, outstanding authors, and top journals in the relevant field. This not only provides us with a comprehensive and profound understanding of the formation and development of knowledge structures, but also provides a guiding direction for future academic research.

STUDY OF "MARKET DYNAMICS IN CRISIS: UNRAVELLING THE IMPACT OF INTERNATIONAL SHOCKS ON INDIA'S BANKING AND CORPORATE SECTORS"

Dr. Prathibha Raj M.S
Associate Professor,
Christ (Deemed to be University), Bengaluru
prathibharaj.ms@christuniversity.in

Vibhav Gupta
Student,
Christ (Deemed to be University), Bengaluru
vibhavgupt02@gmail.com

ABSTRACT

This research scrutinizes "Market Dynamics in Crisis," focusing on the repercussions of international shocks on India's banking and corporate sectors. By means of a historical analysis, with specific reference to the recession of 2008–2009, the research analyses the complex impacts of international events on India's economic resilience. Employing event study analysis on important entities—State Bank of India, Infosys, Adani Green, and Indian Oil Corporation—across sectors Nifty Bank, Nifty IT, and Nifty Energy, the research unravels intricate patterns in stock returns. The results highlight the significance of temporal dynamics by highlighting the possibility that significant events might have an impact on certain days as opposed to the full observation period. In a broader context, this research contributes vital insights into the interplay between global financial institutions, individual stocks, and market dynamics during critical junctures, guiding stakeholders in navigating crises effectively.

A STUDY ON CORPORATE VALUATION IN MINING SECTOR USING MULTIPLES APPROACH

Dhanya Gowda R
Student, PES University, Bengaluru
dhanyagowdar@gmail.com

ABSTRACT

Mining and metals are one among the best performing equity sector globally, but due to few conflicting issues like resource scarcity, pricing bubbles, demand destruction and imminent recessions, there's confusion among the investors. Recently, the equity and commodity prices have exceeded the expectations level and the importance of mining on the economy is evident. Thus, commodities have attracted long-time investments as they protect against currency devaluation and are a safe haven during economic crisis. Thus, it is important to know how to do valuation of the mining companies. Predicting the valuation of these companies is complex. Though there are numerous methods of valuation to value the sector many are neither applicable nor useful. The factors to be considered while valuing companies are: financing risk, price cyclicality, changes in capital and operating cost structures, volatility in stock market, etc. The objective of this research paper is to understand the valuation of mining sector by applying multiples approach and its effectiveness and limitations involved. From the top nine mining companies in India one company is selected for multiple valuation process and peer group comparison is made to arrive at the results. The research is completely based on the secondary data obtained from various sources available online.

ABSTRACT

This paper presents a comparative analysis of the NIFTY 100 and NIFTY 100 ESG indices, shedding light on the profound impact of Environmental, Social, and Governance (ESG) criteria within investment strategies, particularly in the context of emerging markets such as India. The study examines how the integration of ESG principles can substantially influence the risk-return profile of portfolios and contribute to their stability. The NIFTY 100 ESG index, designed to prioritize sustainable investing principles, emerges as a standout performer when contrasted with the traditional NIFTY 100 index. Notably, the former consistently exhibits more stable performance with lower volatility, even during times of economic uncertainty. This resilience suggests that ESG factors can act as a safeguard against market volatilities, providing investors with a cushion during turbulent times. The findings of this study hold critical implications for investors and policymakers alike. It underscores the potential of ESG-focused investments to align with ethical and sustainable objectives while simultaneously delivering competitive financial returns. The growing prominence of ESG considerations within the financial sector is highlighted, emphasizing their pivotal role in shaping the future landscape of investment strategies. This research contributes significantly to our broader understanding of how sustainable investing can seamlessly integrate into mainstream investment portfolios. It demonstrates the feasibility of striking a harmonious balance between ethical considerations and financial performance, particularly within the dynamic and burgeoning markets of India.

In a world increasingly conscious of environmental and social responsibilities, this comparative study serves as a beacon for investors seeking opportunities that resonate with their values. It underscores the transformative power of ESG criteria, not only as a driver of ethical investing but also as a cornerstone of sound financial decision-making in the ever-evolving global investment landscape.

TOWARD CLIMATE SUSTAINABILITY: A STRATEGY TO BOOST THE GREEN EV CONOMY

Prasad Rao
Director, Altkuznets Sustainability Advisors Pvt Ltd
director@altkuzadvisors.com

ABSTRACT

Alt Kuznets has a globally-advertised strategy to incentivize adoption of EVs. It offers 2-pronged Durable; Consumable Subsidy to Vehicle Owners, and suggests Wholesale Green EV Charging Power Bundles; Certificate-based recycling of Schumpeterian Durable Plastic waste from discarded conventional vehicles are necessary to increment Sectoral CC Scores. Our Business Strategy Paper broaches the possibility of obtaining Transport Bond-leveraged Sustainability Capital, Plastic Bond-issued Capital; PLI to Secondary Refiners, and a Certificate-based, Capital market-leveraged strategy to increment Demand for Secondary Plastics. Alt Kuznets intends to formulate a multi-module quantitative model and implement the same as an LLC to offer the EV Sector a credible basis to chart its course toward Transportation Sustainability.
