About the Conference

The changes faced by modern day business are distinctly different than those of past years. The world is undergoing change and facing challenges on various fronts for the growth and development of the country and making it a better place. Some of the issues are to promote sustainable agriculture by adopting efficient business models for achieving food & nutrition requirement, creating new jobs to provide opportunity for the unemployed & the millennial who will seek employment in coming years.

The macro environment factors such as political economy affecting global economy are playing a key role in the world of business. The backlash against globalization as witnessed after Donald Trump's new trade barriers and trade wars with China and the rest of the world, rising crude oil prices, the US Fed's series of rate increases are a few examples.

Conversely, the micro-environment is also significantly influencing the macro-economy. For instance, the tech start-ups and disruptive technologies are redefining the macro-economic environment. Disruptive innovations due to internet have redefined the trade and business through e-commerce, digital payments and new ways of delivering products and services.

The challenges faced by the modern-day business today are radically different and very complex compared to the past. There is a paradigm shift across all sectors including manufacturing, agriculture, and service spheres in the face of digital disruption. Given this scenario, business needs dramatic transformation in order to tackle larger sustainability related issues such as, shifting demographics, rural-urban digital divide and global warming.

The dynamic nature of Technologies like Artificial Intelligence, Big Data, Machine learning, Internet of Things, and Robotics is bringing in significant changes in our lives. These new technologies will transform every functional area of business and help us manage resources more efficiently and sustainably. Organizations need to have new business models to seize the opportunities offered by these new technologies.

It is in this context, ISME is organizing an International Conference on "Contemporary Issues in Management" which would be providing a platform for academicians, thought leaders, research scholars, entrepreneurs and industry professionals to share ideas, deliberate and generate new knowledge.

We thank all the Participants of this Conference.

ABSTRACT

Financial derivatives are most effective tool for risk management in various asset classes. But these assets are not wisely used by Indian retail or individual investors. Various studies including market regulators SEBI shared their concerns about trading technique of retails or individual investor. The recently said individual investors many of them not financial fit to bear the loss caused by equity derivative market due to various factors associated with derivative segment. In order to curb the retails trading volume SEBI has done various changes in equity derivative segment. This research paper is an attempt towards studying the impact on such events on individual investor's volume. Event study methodology has been used along with T-test. The data for the study has been taken from SEBI and NSE official website from 2015 to 2018. The results showed that most events of the SEBI have not brought any significant change on individual investors' volume.

Keywords: Equity derivative, Individual investors, SEBI Events, Hedging, Event Study.

MEASURING EMPLOYER'S EXPECTATIONS ON SKILLS FOR HR ANALYTICS ROLES

ABSTRACT

Human resource (HR) analytics is increasingly considered the next frontier in the larger business analytics spectrum. There is an evolving consensus in the industry about the role of HR analytics in optimizing human capital, improving overall performance and in contributing to competitive advantage of the organization. While organizations have started adopting HR analytics processes the details are often grey. There is very limited body of work in the literature that explores HR analytics from a practice perspective. Specifically, skills and competencies required is a grossly under researched area. This article tries to understand the skillsets that are expected by employers by applying text mining techniques on 200 job descriptions extracted from a popular job aggregating website. The results provide insights into curriculum design and development that can help business students to be 'industry -ready'.

"CUSTOMER IS THE KING" - A FACT OR MYTH? AN EMPIRICAL RESEARCH BASED ON BENGALURU

S. Shyam Prasad PhD, Shampa Nandi PhD
Faculty, ISME, Bangalore, Karnataka

ABSTRACT

With the advancement of modern technology and social media in hand, Indian customers are becoming more informed about their need and want. They scout around for best product, brand, quality, service support and above all great experience. Marketing has thus, undergone a paradigm shift and has become more challenging. This exploratory study is aimed to-

- Are Indian customers treated like king? How far they are happy and prefer to stay with current organization?
- How far Indian companies have shifted their focus from being product-centric to customer-centric?

This research is planned to use scheduler method with judgmental sampling. An empirical study will be done with the data collected by intensive interview of Bengaluru customers across genders income groups and product/ service. Also, the research would be based on extensive literature review and secondary data sources about customers' experiences shared in social media.

Keywords: Customer is the King, Customer-centric, Service encounters.

PREDICTIVE MODELING OF BITCOIN PRICES

ABSTRACT

Bitcoins are traded securities. But they do not have a set of known variables that can define their price stability. Bitcoin markets are also inefficient, providing a lot of opportunities for those who are able to determine the inherent value. As the markets are inefficient, the first level of available information – historical trade data, that includes the price and volume data, are also not fully subsumed in the price. Chances are very high that the pricing of bitcoins are imperfect and there lies huge potential for abnormal gains. On the other hand, there are econometric models built to predict the next value of a time series data. These models, do not just consider the pattern or trend or the slope, they also consider the volatility. When the goal of the study is to analyze and forecast volatility, models like ARCH and GARCH have assumed greater importance, especially, time series financial data. (Engle, 2014). The problem this paper addresses is assuming bitcoin prices follow a pattern or a random walk, can a predictive model be built using ARCH, GARCH models to model the volatility of the bitcoin prices? Daily closing prices of bitcoins, collected from the official bitcoin website (https://bitcoin.org/en/) for the period between January-2010 to December-2018. Firstly, volatility of the price series has been measures and exhibited. The Bit Coin returns, then have been modeled using both symmetric and asymmetric GARCH techniques - GARCH, EGARCH and TGARCH. Further, the volatility has been forecasted for out of sample period while estimating various error coefficients. It was concluded that indicate that the asymmetric GARCH (1,1) model do perform better in forecasting conditional variance of the Bit Coin returns rather than the Asymmetric GARCH model, although confirming the presence of leverage effects.

Keywords: Bitcoins, Predictive Modeling, GARCH, EGARCH, TGARCH, Volatility Modeling, Market Efficiency.

EXPLORATORY RESEARCH ON FACTORS DRIVING GLOBAL MBA RANKINGS

Anshu Sharma and Swarnalakshmi Umamaheswaran
Faculty, ISME, Bangalore, Karnataka

ABSTRACT

Technology has shrunk the world in many ways. For aspiring MBAs, it has dramatically increased access to global business schools as compared to a few years ago. As a result, global rankings have come to play a very significant role in students' decision-making process. Thus, it becomes important for schools to focus and manage their rankings and use it as a strong tool for marketing. This paper intends to look at underlying factors which influence b-school rankings. We specifically focus on the financial times (FT) rankings. The insights generated have direct relevance for b-school management looking to sustain or improve their global rankings. The article is broadly organized as three sections. The first section is a brief commentary on the FT methodology and underlying factors which influence rankings. In the second section we further conduct exploratory data analysis on ranking and other related parameters with the objective of detecting underlying trends if any. Findings indicate that age and geographical location of schools have a telling influence on overall ranking and its stability over the years and thus act as entry barriers for other schools. Finally, we conclude with a discussion of some schools which have bucked these entry barriers with a focus on the key parameters that were identified in the earlier analysis.

ABSTRACT

Financial derivatives are most effective tool for risk management in various asset classes. But these assets are not wisely used by Indian retail or individual investors. Various studies including market regulators SEBI shared their concerns about trading technique of retails or individual investor. The recently said individual investors many of them not financial fit to bear the loss caused by equity derivative market due to various factors associated with derivative segment. In order to curb the retails trading volume SEBI has done various changes in equity derivative segment. This research paper is an attempt towards studying the impact on such events on individual investor's volume. Event study methodology has been used along with T-test. The data for the study has been taken from SEBI and NSE official website from 2015 to 2018. The results showed that most events of the SEBI have not brought any significant change on individual investors' volume.

Keywords: Equity derivative, Individual investors, SEBI Events, Hedging, Event Study.

MEASURING EMPLOYER'S EXPECTATIONS ON SKILLS FOR HR ANALYTICS ROLES

Swarnalakshmi Umamaheswaran

HR Faculty, ISME, Bangalore, Karnataka

Dr. Anju Kumar
HR Faculty, ISME, Bangalore, Karnataka

ABSTRACT

Human resource (HR) analytics is increasingly considered the next frontier in the larger business analytics spectrum. There is an evolving consensus in the industry about the role of HR analytics in optimizing human capital, improving overall performance and in contributing to competitive advantage of the organization. While organizations have started adopting HR analytics processes the details are often grey. There is very limited body of work in the literature that explores HR analytics from a practice perspective. Specifically, skills and competencies required is a grossly under researched area. This article tries to understand the skillsets that are expected by employers by applying text mining techniques on 200 job descriptions extracted from a popular job aggregating website. The results provide insights into curriculum design and development that can help business students to be 'industry -ready'.

"CUSTOMER IS THE KING" - A FACT OR MYTH? AN EMPIRICAL RESEARCH BASED ON BENGALURU

S. Shyam Prasad PhD, Shampa Nandi PhD
Faculty, ISME, Bangalore, Karnataka

ABSTRACT

With the advancement of modern technology and social media in hand, Indian customers are becoming more informed about their need and want. They scout around for best product, brand, quality, service support and above all great experience. Marketing has thus, undergone a paradigm shift and has become more challenging. This exploratory study is aimed to-

- Are Indian customers treated like king? How far they are happy and prefer to stay with current organization?
- How far Indian companies have shifted their focus from being product-centric to customer-centric?

This research is planned to use scheduler method with judgmental sampling. An empirical study will be done with the data collected by intensive interview of Bengaluru customers across genders income groups and product/ service. Also, the research would be based on extensive literature review and secondary data sources about customers' experiences shared in social media.

Keywords: Customer is the King, Customer-centric, Service encounters.

PREDICTIVE MODELING OF BITCOIN PRICES

ABSTRACT

Bitcoins are traded securities. But they do not have a set of known variables that can define their price stability. Bitcoin markets are also inefficient, providing a lot of opportunities for those who are able to determine the inherent value. As the markets are inefficient, the first level of available information – historical trade data, that includes the price and volume data, are also not fully subsumed in the price. Chances are very high that the pricing of bitcoins are imperfect and there lies huge potential for abnormal gains. On the other hand, there are econometric models built to predict the next value of a time series data. These models, do not just consider the pattern or trend or the slope, they also consider the volatility. When the goal of the study is to analyze and forecast volatility, models like ARCH and GARCH have assumed greater importance, especially, time series financial data. (Engle, 2014). The problem this paper addresses is assuming bitcoin prices follow a pattern or a random walk, can a predictive model be built using ARCH, GARCH models to model the volatility of the bitcoin prices? Daily closing prices of bitcoins, collected from the official bitcoin website (https://bitcoin.org/en/) for the period between January-2010 to December-2018. Firstly, volatility of the price series has been measures and exhibited. The Bit Coin returns, then have been modeled using both symmetric and asymmetric GARCH techniques - GARCH, EGARCH and TGARCH. Further, the volatility has been forecasted for out of sample period while estimating various error coefficients. It was concluded that indicate that the asymmetric GARCH (1,1) model do perform better in forecasting conditional variance of the Bit Coin returns rather than the Asymmetric GARCH model, although confirming the presence of leverage effects.

Keywords: Bitcoins, Predictive Modeling, GARCH, EGARCH, TGARCH, Volatility Modeling, Market Efficiency.

EXPLORATORY RESEARCH ON FACTORS DRIVING GLOBAL MBA RANKINGS

Anshu Sharma and Swarnalakshmi Umamaheswaran
Faculty, ISME, Bangalore, Karnataka

ABSTRACT

Technology has shrunk the world in many ways. For aspiring MBAs, it has dramatically increased access to global business schools as compared to a few years ago. As a result, global rankings have come to play a very significant role in students' decision-making process. Thus, it becomes important for schools to focus and manage their rankings and use it as a strong tool for marketing. This paper intends to look at underlying factors which influence b-school rankings. We specifically focus on the financial times (FT) rankings. The insights generated have direct relevance for b-school management looking to sustain or improve their global rankings. The article is broadly organized as three sections. The first section is a brief commentary on the FT methodology and underlying factors which influence rankings. In the second section we further conduct exploratory data analysis on ranking and other related parameters with the objective of detecting underlying trends if any. Findings indicate that age and geographical location of schools have a telling influence on overall ranking and its stability over the years and thus act as entry barriers for other schools. Finally, we conclude with a discussion of some schools which have bucked these entry barriers with a focus on the key parameters that were identified in the earlier analysis.

HIGH PERFORMANCE WORK SYSTEM AND TURN OVER INTENTION: THE MEDIATING ROLE OF HAPPINESS AT WORK PLACE

Shurlly Tiwari
HR Faculty, ISME, Bangalore, Karnataka

ABSTRACT

This paper is an effort to identify the relation between High Performance Work System and Turnover intention. Researcher wants to understand the mediating role of happiness at work place and its effect on the behavior and attitude of the employee for quitting the organization. The three pre-requisites of happiness at work place in the culture of any organization are, job satisfaction, employee engagement and organizational commitment. The effort is to draw an insight between the high-performance work systems and turn over intention while mediated by HWP. The paper is conceptual in nature, which includes literature review from various journals, reports and research papers. Researcher has also identified a few examples from the corporate world, which worked as a trigger point for the research work. The study tries to provide help in dealing with attrition rates and studying the behavior of employees in any organization.

About the Conference

The changes faced by modern day business are distinctly different than those of past years. The world is undergoing change and facing challenges on various fronts for the growth and development of the country and making it a better place. Some of the issues are to promote sustainable agriculture by adopting efficient business models for achieving food & nutrition requirement, creating new jobs to provide opportunity for the unemployed & the millennial who will seek employment in coming years.

The macro environment factors such as political economy affecting global economy are playing a key role in the world of business. The backlash against globalization as witnessed after Donald Trump's new trade barriers and trade wars with China and the rest of the world, rising crude oil prices, the US Fed's series of rate increases are a few examples.

Conversely, the micro-environment is also significantly influencing the macro-economy. For instance, the tech start-ups and disruptive technologies are redefining the macro-economic environment. Disruptive innovations due to internet have redefined the trade and business through e-commerce, digital payments and new ways of delivering products and services.

The challenges faced by the modern-day business today are radically different and very complex compared to the past. There is a paradigm shift across all sectors including manufacturing, agriculture, and service spheres in the face of digital disruption. Given this scenario, business needs dramatic transformation in order to tackle larger sustainability related issues such as, shifting demographics, rural-urban digital divide and global warming.

The dynamic nature of Technologies like Artificial Intelligence, Big Data, Machine learning, Internet of Things, and Robotics is bringing in significant changes in our lives. These new technologies will transform every functional area of business and help us manage resources more efficiently and sustainably. Organizations need to have new business models to seize the opportunities offered by these new technologies.

It is in this context, ISME is organizing an International Conference on "Contemporary Issues in Management" which would be providing a platform for academicians, thought leaders, research scholars, entrepreneurs and industry professionals to share ideas, deliberate and generate new knowledge.

We thank all the Participants of this Conference.

Thus, it becomes important for schools to focus and manage their rankings and use it as a strong tool for marketing. This paper intends to look at underlying factors which influence b-school rankings. We specifically focus on the financial times (FT) rankings. The insights generated have direct relevance for b-school management looking to sustain or improve their global rankings. The article is broadly organized as three sections. The first section is a brief commentary on the FT methodology and underlying factors which influence rankings. In the second section we further conduct exploratory data analysis on ranking and other related parameters with the objective of detecting underlying trends if any. Findings indicate that age and geographical location of schools have a telling influence on overall ranking and its stability over the years and thus act as entry barriers for other schools. Finally, we conclude with a discussion of some schools which have bucked these entry barriers with a focus on the key parameters that were identified in the earlier analysis.

About the Conference

The changes faced by modern day business are distinctly different than those of past years. The world is undergoing change and facing challenges on various fronts for the growth and development of the country and making it a better place. Some of the issues are to promote sustainable agriculture by adopting efficient business models for achieving food & nutrition requirement, creating new jobs to provide opportunity for the unemployed & the millennial who will seek employment in coming years.

The macro environment factors such as political economy affecting global economy are playing a key role in the world of business. The backlash against globalization as witnessed after Donald Trump's new trade barriers and trade wars with China and the rest of the world, rising crude oil prices, the US Fed's series of rate increases are a few examples.

Conversely, the micro-environment is also significantly influencing the macro-economy. For instance, the tech start-ups and disruptive technologies are redefining the macro-economic environment. Disruptive innovations due to internet have redefined the trade and business through e-commerce, digital payments and new ways of delivering products and services.

The challenges faced by the modern-day business today are radically different and very complex compared to the past. There is a paradigm shift across all sectors including manufacturing, agriculture, and service spheres in the face of digital disruption. Given this scenario, business needs dramatic transformation in order to tackle larger sustainability related issues such as, shifting demographics, rural-urban digital divide and global warming.

The dynamic nature of Technologies like Artificial Intelligence, Big Data, Machine learning, Internet of Things, and Robotics is bringing in significant changes in our lives. These new technologies will transform every functional area of business and help us manage resources more efficiently and sustainably. Organizations need to have new business models to seize the opportunities offered by these new technologies.

It is in this context, ISME is organizing an International Conference on "Contemporary Issues in Management" which would be providing a platform for academicians, thought leaders, research scholars, entrepreneurs and industry professionals to share ideas, deliberate and generate new knowledge.

We thank all the Participants of this Conference.

ABSTRACT

Financial derivatives are most effective tool for risk management in various asset classes. But these assets are not wisely used by Indian retail or individual investors. Various studies including market regulators SEBI shared their concerns about trading technique of retails or individual investor. The recently said individual investors many of them not financial fit to bear the loss caused by equity derivative market due to various factors associated with derivative segment. In order to curb the retails trading volume SEBI has done various changes in equity derivative segment. This research paper is an attempt towards studying the impact on such events on individual investor's volume. Event study methodology has been used along with T-test. The data for the study has been taken from SEBI and NSE official website from 2015 to 2018. The results showed that most events of the SEBI have not brought any significant change on individual investors' volume.

Keywords: Equity derivative, Individual investors, SEBI Events, Hedging, Event Study.

MEASURING EMPLOYER'S EXPECTATIONS ON SKILLS FOR HR ANALYTICS ROLES

ABSTRACT

Human resource (HR) analytics is increasingly considered the next frontier in the larger business analytics spectrum. There is an evolving consensus in the industry about the role of HR analytics in optimizing human capital, improving overall performance and in contributing to competitive advantage of the organization. While organizations have started adopting HR analytics processes the details are often grey. There is very limited body of work in the literature that explores HR analytics from a practice perspective. Specifically, skills and competencies required is a grossly under researched area. This article tries to understand the skillsets that are expected by employers by applying text mining techniques on 200 job descriptions extracted from a popular job aggregating website. The results provide insights into curriculum design and development that can help business students to be 'industry -ready'.

"CUSTOMER IS THE KING" - A FACT OR MYTH? AN EMPIRICAL RESEARCH BASED ON BENGALURU

S. Shyam Prasad PhD, Shampa Nandi PhD
Faculty, ISME, Bangalore, Karnataka

ABSTRACT

With the advancement of modern technology and social media in hand, Indian customers are becoming more informed about their need and want. They scout around for best product, brand, quality, service support and above all great experience. Marketing has thus, undergone a paradigm shift and has become more challenging. This exploratory study is aimed to-

- Are Indian customers treated like king? How far they are happy and prefer to stay with current organization?
- How far Indian companies have shifted their focus from being product-centric to customer-centric?

This research is planned to use scheduler method with judgmental sampling. An empirical study will be done with the data collected by intensive interview of Bengaluru customers across genders income groups and product/ service. Also, the research would be based on extensive literature review and secondary data sources about customers' experiences shared in social media.

Keywords: Customer is the King, Customer-centric, Service encounters.

PREDICTIVE MODELING OF BITCOIN PRICES

ABSTRACT

Bitcoins are traded securities. But they do not have a set of known variables that can define their price stability. Bitcoin markets are also inefficient, providing a lot of opportunities for those who are able to determine the inherent value. As the markets are inefficient, the first level of available information – historical trade data, that includes the price and volume data, are also not fully subsumed in the price. Chances are very high that the pricing of bitcoins are imperfect and there lies huge potential for abnormal gains. On the other hand, there are econometric models built to predict the next value of a time series data. These models, do not just consider the pattern or trend or the slope, they also consider the volatility. When the goal of the study is to analyze and forecast volatility, models like ARCH and GARCH have assumed greater importance, especially, time series financial data. (Engle, 2014). The problem this paper addresses is assuming bitcoin prices follow a pattern or a random walk, can a predictive model be built using ARCH, GARCH models to model the volatility of the bitcoin prices? Daily closing prices of bitcoins, collected from the official bitcoin website (https://bitcoin.org/en/) for the period between January-2010 to December-2018. Firstly, volatility of the price series has been measures and exhibited. The Bit Coin returns, then have been modeled using both symmetric and asymmetric GARCH techniques - GARCH, EGARCH and TGARCH. Further, the volatility has been forecasted for out of sample period while estimating various error coefficients. It was concluded that indicate that the asymmetric GARCH (1,1) model do perform better in forecasting conditional variance of the Bit Coin returns rather than the Asymmetric GARCH model, although confirming the presence of leverage effects.

Keywords: Bitcoins, Predictive Modeling, GARCH, EGARCH, TGARCH, Volatility Modeling, Market Efficiency.

EXPLORATORY RESEARCH ON FACTORS DRIVING GLOBAL MBA RANKINGS

Anshu Sharma and Swarnalakshmi Umamaheswaran
Faculty, ISME, Bangalore, Karnataka

ABSTRACT

Technology has shrunk the world in many ways. For aspiring MBAs, it has dramatically increased access to global business schools as compared to a few years ago. As a result, global rankings have come to play a very significant role in students' decision-making process. Thus, it becomes important for schools to focus and manage their rankings and use it as a strong tool for marketing. This paper intends to look at underlying factors which influence b-school rankings. We specifically focus on the financial times (FT) rankings. The insights generated have direct relevance for b-school management looking to sustain or improve their global rankings. The article is broadly organized as three sections. The first section is a brief commentary on the FT methodology and underlying factors which influence rankings. In the second section we further conduct exploratory data analysis on ranking and other related parameters with the objective of detecting underlying trends if any. Findings indicate that age and geographical location of schools have a telling influence on overall ranking and its stability over the years and thus act as entry barriers for other schools. Finally, we conclude with a discussion of some schools which have bucked these entry barriers with a focus on the key parameters that were identified in the earlier analysis.

ABSTRACT

Financial derivatives are most effective tool for risk management in various asset classes. But these assets are not wisely used by Indian retail or individual investors. Various studies including market regulators SEBI shared their concerns about trading technique of retails or individual investor. The recently said individual investors many of them not financial fit to bear the loss caused by equity derivative market due to various factors associated with derivative segment. In order to curb the retails trading volume SEBI has done various changes in equity derivative segment. This research paper is an attempt towards studying the impact on such events on individual investor's volume. Event study methodology has been used along with T-test. The data for the study has been taken from SEBI and NSE official website from 2015 to 2018. The results showed that most events of the SEBI have not brought any significant change on individual investors' volume.

Keywords: Equity derivative, Individual investors, SEBI Events, Hedging, Event Study.

MEASURING EMPLOYER'S EXPECTATIONS ON SKILLS FOR HR ANALYTICS ROLES

ABSTRACT

Human resource (HR) analytics is increasingly considered the next frontier in the larger business analytics spectrum. There is an evolving consensus in the industry about the role of HR analytics in optimizing human capital, improving overall performance and in contributing to competitive advantage of the organization. While organizations have started adopting HR analytics processes the details are often grey. There is very limited body of work in the literature that explores HR analytics from a practice perspective. Specifically, skills and competencies required is a grossly under researched area. This article tries to understand the skillsets that are expected by employers by applying text mining techniques on 200 job descriptions extracted from a popular job aggregating website. The results provide insights into curriculum design and development that can help business students to be 'industry -ready'.

"CUSTOMER IS THE KING" - A FACT OR MYTH? AN EMPIRICAL RESEARCH BASED ON BENGALURU

S. Shyam Prasad PhD, Shampa Nandi PhD
Faculty, ISME, Bangalore, Karnataka

ABSTRACT

With the advancement of modern technology and social media in hand, Indian customers are becoming more informed about their need and want. They scout around for best product, brand, quality, service support and above all great experience. Marketing has thus, undergone a paradigm shift and has become more challenging. This exploratory study is aimed to-

- Are Indian customers treated like king? How far they are happy and prefer to stay with current organization?
- How far Indian companies have shifted their focus from being product-centric to customer-centric?

This research is planned to use scheduler method with judgmental sampling. An empirical study will be done with the data collected by intensive interview of Bengaluru customers across genders income groups and product/ service. Also, the research would be based on extensive literature review and secondary data sources about customers' experiences shared in social media.

Keywords: Customer is the King, Customer-centric, Service encounters.

ABSTRACT

Bitcoins are traded securities. But they do not have a set of known variables that can define their price stability. Bitcoin markets are also inefficient, providing a lot of opportunities for those who are able to determine the inherent value. As the markets are inefficient, the first level of available information – historical trade data, that includes the price and volume data, are also not fully subsumed in the price. Chances are very high that the pricing of bitcoins are imperfect and there lies huge potential for abnormal gains. On the other hand, there are econometric models built to predict the next value of a time series data. These models, do not just consider the pattern or trend or the slope, they also consider the volatility. When the goal of the study is to analyze and forecast volatility, models like ARCH and GARCH have assumed greater importance, especially, time series financial data. (Engle, 2014). The problem this paper addresses is assuming bitcoin prices follow a pattern or a random walk, can a predictive model be built using ARCH, GARCH models to model the volatility of the bitcoin prices? Daily closing prices of bitcoins, collected from the official bitcoin website (https://bitcoin.org/en/) for the period between January-2010 to December-2018. Firstly, volatility of the price series has been measures and exhibited. The Bit Coin returns, then have been modeled using both symmetric and asymmetric GARCH techniques - GARCH, EGARCH and TGARCH. Further, the volatility has been forecasted for out of sample period while estimating various error coefficients. It was concluded that indicate that the asymmetric GARCH (1,1) model do perform better in forecasting conditional variance of the Bit Coin returns rather than the Asymmetric GARCH model, although confirming the presence of leverage effects.

Keywords: Bitcoins, Predictive Modeling, GARCH, EGARCH, TGARCH, Volatility Modeling, Market Efficiency.

EXPLORATORY RESEARCH ON FACTORS DRIVING GLOBAL MBA RANKINGS

Anshu Sharma and Swarnalakshmi Umamaheswaran
Faculty, ISME, Bangalore, Karnataka

ABSTRACT

Technology has shrunk the world in many ways. For aspiring MBAs, it has dramatically increased access to global business schools as compared to a few years ago. As a result, global rankings have come to play a very significant role in students' decision-making process. Thus, it becomes important for schools to focus and manage their rankings and use it as a strong tool for marketing. This paper intends to look at underlying factors which influence b-school rankings. We specifically focus on the financial times (FT) rankings. The insights generated have direct relevance for b-school management looking to sustain or improve their global rankings. The article is broadly organized as three sections. The first section is a brief commentary on the FT methodology and underlying factors which influence rankings. In the second section we further conduct exploratory data analysis on ranking and other related parameters with the objective of detecting underlying trends if any. Findings indicate that age and geographical location of schools have a telling influence on overall ranking and its stability over the years and thus act as entry barriers for other schools. Finally, we conclude with a discussion of some schools which have bucked these entry barriers with a focus on the key parameters that were identified in the earlier analysis.

About the Conference

The changes faced by modern day business are distinctly different than those of past years. The world is undergoing change and facing challenges on various fronts for the growth and development of the country and making it a better place. Some of the issues are to promote sustainable agriculture by adopting efficient business models for achieving food & nutrition requirement, creating new jobs to provide opportunity for the unemployed & the millennial who will seek employment in coming years.

The macro environment factors such as political economy affecting global economy are playing a key role in the world of business. The backlash against globalization as witnessed after Donald Trump's new trade barriers and trade wars with China and the rest of the world, rising crude oil prices, the US Fed's series of rate increases are a few examples.

Conversely, the micro-environment is also significantly influencing the macro-economy. For instance, the tech start-ups and disruptive technologies are redefining the macro-economic environment. Disruptive innovations due to internet have redefined the trade and business through e-commerce, digital payments and new ways of delivering products and services.

The challenges faced by the modern-day business today are radically different and very complex compared to the past. There is a paradigm shift across all sectors including manufacturing, agriculture, and service spheres in the face of digital disruption. Given this scenario, business needs dramatic transformation in order to tackle larger sustainability related issues such as, shifting demographics, rural-urban digital divide and global warming.

The dynamic nature of Technologies like Artificial Intelligence, Big Data, Machine learning, Internet of Things, and Robotics is bringing in significant changes in our lives. These new technologies will transform every functional area of business and help us manage resources more efficiently and sustainably. Organizations need to have new business models to seize the opportunities offered by these new technologies.

It is in this context, ISME is organizing an International Conference on "Contemporary Issues in Management" which would be providing a platform for academicians, thought leaders, research scholars, entrepreneurs and industry professionals to share ideas, deliberate and generate new knowledge.

We thank all the Participants of this Conference.

The insights generated have direct relevance for b-school management looking to sustain or improve their global rankings. The article is broadly organized as three sections. The first section is a brief commentary on the FT methodology and underlying factors which influence rankings. In the second section we further conduct exploratory data analysis on ranking and other related parameters with the objective of detecting underlying trends if any. Findings indicate that age and geographical location of schools have a telling influence on overall ranking and its stability over the years and thus act as entry barriers for other schools. Finally, we conclude with a discussion of some schools which have bucked these entry barriers with a focus on the key parameters that were identified in the earlier analysis.

Errors, if any, are purely unintentional and readers are requested to communicate such errors to the editors or publishers to avoid discrepancies in future.

About the Conference

The changes faced by modern day business are distinctly different than those of past years. The world is undergoing change and facing challenges on various fronts for the growth and development of the country and making it a better place. Some of the issues are to promote sustainable agriculture by adopting efficient business models for achieving food & nutrition requirement, creating new jobs to provide opportunity for the unemployed & the millennial who will seek employment in coming years.

The macro environment factors such as political economy affecting global economy are playing a key role in the world of business. The backlash against globalization as witnessed after Donald Trump's new trade barriers and trade wars with China and the rest of the world, rising crude oil prices, the US Fed's series of rate increases are a few examples.

Conversely, the micro-environment is also significantly influencing the macro-economy. For instance, the tech start-ups and disruptive technologies are redefining the macro-economic environment. Disruptive innovations due to internet have redefined the trade and business through e-commerce, digital payments and new ways of delivering products and services.

The challenges faced by the modern-day business today are radically different and very complex compared to the past. There is a paradigm shift across all sectors including manufacturing, agriculture, and service spheres in the face of digital disruption. Given this scenario, business needs dramatic transformation in order to tackle larger sustainability related issues such as, shifting demographics, rural-urban digital divide and global warming.

The dynamic nature of Technologies like Artificial Intelligence, Big Data, Machine learning, Internet of Things, and Robotics is bringing in significant changes in our lives. These new technologies will transform every functional area of business and help us manage resources more efficiently and sustainably. Organizations need to have new business models to seize the opportunities offered by these new technologies.

It is in this context, ISME is organizing an International Conference on "Contemporary Issues in Management" which would be providing a platform for academicians, thought leaders, research scholars, entrepreneurs and industry professionals to share ideas, deliberate and generate new knowledge.

We thank all the Participants of this Conference.

CROWDFUNDING AS A FINANCING OPTION FOR MSMEs

Prof. Sakeerthi. S[1] and Prof. Vikku Agarwal[2]

[1]*Assistant Professor, ISME, Bangalore*
[2]*Professor, ISME, Bangalore*

ABSTRACT

Crowdfunding is a source of mobilizing funds from the general public through the internet or by making use of social media. It is a very popular medium of fundraising for businesses as well as for social causes due to the increasing penetration of technology into our day to day lives. It allows a large group of people to replace banks or other financial institutions and makes finance accessible to those who find it difficult to raise it via such formal channels. It not only helps in raising funds, but most of the time validates the ideas or innovations of the person or firm raising it. In India, the concept of crowd funding is still in its nascent stage and in this backdrop, its future scope is huge. When we speak of crowd funding in India, it's the contribution towards social causes which always comes first as that is the general trend that has been observed in the Indian crowd funding platforms. But when we speak of the scope of crowd funding in business, MSMEs are the sectors which can never be avoided as they form the backbone of the Indian industrial sector, contributing almost around 45% to the country's GDP and providing employment to nearly 106 million people, which is around three times of what the big fat corporates put together contribute. Needless to say, raising funds (both in the setup stage and for daily operations) is one of the biggest challenges in front of the Indian MSMEs. Although, there are quite a few numbers of the funding sources for MSMEs in India and moreover multiple government schemes aimed at promoting MSME growth, there still is a gap in terms of the actual fund requirement and the availability of funds for such enterprises. Through this paper, the authors try to analyse how crowd funding can be used as a potent and reliable source for filling up these gaps and for boosting the growth of MSMEs. It also tries to find out the scope of debt funding and the legalities of equity funding concepts and how debt funding could be a great source of MSME funding. The study is conducted using secondary data and interpretations are drawn from the same.

CO-CREATION: DOES IT LEAD COMPETITIVE ADVANTAGE?

Prof. S. Shyam Prasad[1], Prof. Rony George Kurien[2] and Prof. Jayant Mahajan[3]

[1]***Professor,*** *Marketing, ISME, Bangalore*
[2]***Dean,*** *ISME, Bangalore*

ABSTRACT

The concept of co-creation is a well-established phenomenon and it has changed the way the businesses market their offerings to the customers (Grönroos & Voima, 2013). Co-creation is a process of collaboration of two or more players such as producers and consumers to create value (Vargo & Lusch, 2016). Though the extant literature has dealt with many aspects of co-creation, no study has established its role in creating competitive advantage to the business. Competitive advantage enables the firm to earn more profit than its competitors, generate higher revenue and sustain itself in the market. Hence, this paper attempts to study the extent to which co-creation engenders competitive advantage.

Keywords: *Co-creation, Competitive advantage, Collaboration, Consumers, Value creation.*

ABSTRACT

The concept of co-creation is a well-established phenomenon and it has changed the way the businesses market their offerings to the customers (Grönroos & Voima, 2013). Co-creation is a process of collaboration of two or more players such as producers and consumers to create value (Vargo & Lusch, 2016). Though the extant literature has dealt with many aspects of co-creation, no study has established its role in creating competitive advantage to the business. Competitive advantage enables the firm to earn more profit than its competitors, generate higher revenue and sustain itself in the market. Hence, this paper attempts to study the extent to which co-creation engenders competitive advantage.

Keywords: *Co-creation, Competitive advantage, Collaboration, Consumers, Value creation.*

About the Conference

Contemporary management issues often trigger in us the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices that facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time of pandemic where it is important for all organisations world-wide to embrace the continuous changes in technology, economy, environment, and government policies across all sectors while remaining focused on the organisational mission and goals to remain competitive. The rise in technology adoption by businesses and consumers, economic fallout of the pandemic across the word, the rise of China as a global belligerent force and government policies moving towards a more nationalist agenda are some of the more recent changes that confront businesses and management today.

This conference will be a platform for industry practitioners, academicians, entrepreneurs and research scholars to come to together, to learn, share and discuss current and emerging topics in management with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants. The event has inspirational keynote speakers, practitioner-led workshop sessions, and mutually beneficial networking opportunities.

We invite original papers from interested professionals and researchers to present and participate in the conference in response to the uncertain and complex pandemic scenario and to interconnect all these issues with business sustainability and excellence.

Message from Conference Chair

Greetings from International School of Management Excellence! (ISME)

On behalf of ISME Conference Committee, I am honored and delighted to welcome you to our 9th International Conference on 'Contemporary Issues in Management - CIM-21'.

We are living in a world of disruption and drastic changes with different countries being in different parts of the economic cycle which is closely linked to the vaccination cycle. The aim of this conference is to discuss issues relevant to the present time of the pandemic, where it is important for all organizations to embrace the changes in technology, economy, environment and government policies to remain productive and competitive.

This conference will be a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with 2 international keynote speakers,4 eminent speakers at the panel discussion on 'Research frontiers in e-business in the new era' and multiple tracks for paper presentations.

The conference will bring out the latest thoughts and deliberations to enhance management practices. The abstracts for the conference that were earlier accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment

Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector

Track 3: Functional areas of business

Track 4: Management of technology

Track 5: Redefining management education

I am thankful to the conference organizing committee, the Track chairs, Session chairs and the numerous faculty and student volunteers and our knowledge partners for supporting the conference.

Most of all, I thank you participants for enriching the annual conference with your presence. I hope you will enjoy the conference, get new ideas and make new friends with numerous opportunities for networking.

Best Regards,

Dr Rony G Kurien,

Dean and Conference Chair

AN EXAMINATION OF THE ROLE OF SPIRITUAL LEADERSHIP AND SERVANT LEADERSHIP ON KNOWLEDGE CREATION UNDER THE MEDITATING INFLUENCE OF MINDFULNESS

Ms. Preetha Suresh[1] and Dr. M Ramesh Kumar[2]

[1]E Mail ID: preethas.isme20@gmail.com
[2]E Mail ID: ramesh@isme.in

ABSTRACT:

The business environment is in a constant state of flux characterized by increased competition, uncertainty and restructuring to incorporate more effective work models to sustain growth. Organizations are required to leverage employee knowledge and capabilities to ensure sustained competitive advantage. In this process, leaders are required to be the facilitators of knowledge creation and transmission within the organization. Knowledge creation and management is relevant for the workers themselves and for the organizations. In this sense, this paper aims to discuss the role and effectiveness of spiritual and servant leadership in knowledge creation in organizations under the influence of mindfulness. This study also views knowledge creation and management as the dynamic set of activities undertaken by organizations to optimally use the knowledge within the boundaries of the organization. These processes are further linked to complex human involvement and interactions

The relevance of altering leadership dimensions in reaction to paradigm shifts in business processes and workforce management becomes an important study to be undertaken. In this context, the researchers have conducted primary research to explore the relationship between leadership styles and knowledge creation in the organizations. The study looks at both spiritual and service leadership and their influence on knowledge creation strategies in organizations. On the basis of their study the researchers have proposed a model to explore the effectiveness of spiritual and servant leadership styles on knowledge creation at the individual level.

Keywords: Spiritual Leadership, Servant Leadership, Knowledge Creation, Mindfulness.

USING PIOTROSKI F-SCORE FOR ASSESSING FINANCIAL HEALTH: EVIDENCE FROM LEADING INDIAN PRIVATE BANKS

S. Rangapriya[1], and Dr.J. Meenakumari[2]

[1]E Mail ID: rangapriyas.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

This research investigates the efficacy of Piotroski F-score to screen firms with good financial health and to identify early signs of financial distress in Indian banking stocks. This study complements existing empirical evidence which indicate that the venerable model can provide valuable insight for investment decision making and risk management.

The evidence is drawn from valuation signals across leading private banks in India for a period ranging from 2014-2020. Piotroski F-score evaluates companies with a discrete number between zero and nine, the score facilitates determination of financial strength of the company. Higher score indicates better financial health and vice versa. The F-score is calculated as a sum of criteria which evaluates profitability signals, leverage and liquidity, sources of funds and operating efficiencies. In this study, each of these ratios have been analyzed to gain valuable insight on the banks (company-level). Analysis of Variance of various ratios, ascertains intensity of relationship across banks (industry-level). This can help manage exposure in the portfolio as per the economic environment. The Piotroski F-score evaluates the generic financial health of the firm and indicates the direction in which the firm is headed. By studying individual factors, relative strength can be assessed. Piotroski F-score ranged between 0-7 for all the banks under study, indicating that none of them were a 'compelling buy' (score 8 or 9) over the seven-year horizon. Some banks have consistently shown depleting F-score over at least 3 years, this can be interpreted as a signal of financial distress. It is evident that consistent monitoring of F-score empowers pro-active risk management.

This work attempts to introduce Piotroski F-score as an integral valuation metric in evaluating Indian banking stocks. F-score can be used for initial screening; it's consistent monitoring can facilitate optimized returns at risk-adjusted levels.

Keywords: Piotroski, Indian Private Banks, F-score, Valuation, Risk Management

CENTRALBANK DIGITAL CURRENCY (CBDC) CAN IT REPLACE NOTES AND COINS IN INDIA

Dwijendra Kumar Kashyap[1] and Dr.J. Meenakumari[2]

ABSTRACT:

In golden old days when notes and coins were still to become medium of exchange, barter system was prevalent. Many modern analysts feel that the system was free from the complexities in managing modern day's Monetary Policy or issues in International Trade, and therefore had its own advantages. However, with the growth of economies and trade relationship amongst countries, notes and coins emerged as means of exchange with global acceptability of currency unit of some countries in foreign trade. Major disruption in the present system of use of currencies in settlement of goods and services is glaring in the form of digital currencies, popularly known as Crypto Currencies or bitcoin. In this paper, effort has been made to understand need of Digital Currency from Central Banks (CBDC). The paper is an attempt to explain possibility of CBDC as replacement of actual currency, advantages and disadvantages for India if we use digital currency and possible impact on monetary policy.

In India, crypto currency is illegal either as means of exchange or as commodity for storage. A study of major crypto currencies around the world in brief will give idea of its disruptive nature in modern world. Efforts in other countries to introduce CBDC so far will also give idea of how far the world has moved to introduce digital currency as legal object. Further, study on basic nature of currency and digital currency and possible technologies for introduction of CBDC in India will give us idea of how far CBDC can replace usage of currency. The study will also look into aspects related to CBDC which can help in India's goal of universal financial inclusion.

The study will help in understanding the nature, method and usage of CBDC in Indian context and desirability and success of CBDC as replacement of actual currency.

Keywords: Central Bank Digital Currency (CBDC), Crypto currency, Disruptive technology, Bitcoin

the unintended intrusion from the digital malicious practices - all are the additional significant risks and challenges, as the probability for the occurrence of these events have increased exponentially due to the latest work arrangements. This paper attempts to evaluate the current risk mitigation strategies and analyse the gaps in the current system. The aim is to effectively manage the upcoming threats and risks in the long-term implementation of the current working (WFH) scenarios. The overall objective of the paper is to (1) analyse the present-day risks (2) evaluate the contemporary ideas that could be modified into solid framework for better risk mitigation strategies in long-term (3) what to anticipate in the future risk analysis and management processes related to IT Project Management.

ABSTRACT:

The global perspective of human life drastically changed after the spread of COVID-19. The world reduced itself, to a digital cocoon. Education, work, commerce, shopping, industry, sales - all walks of life, transformed mostly into a digital mode. The IT (Information Technology) and ITES (IT Enabled services) saw a tremendous transformation in the operational aspects. 'WFH (Work from Home)' enabled the resources to work from their preferred locations. These factors increased the risk of data management and data security. The security of the network and the personal devices used to handle the sensitive and confidential data aggregated the risk factors in project management. The significant challenges faced by the IT sector project management were (1)Global Travel restrictions (2) Forecast of Global Recession in near future and resultant minimization of budget allocated to new projects (3)Negative growth Impact from multiple domains, resulting in reduction of new projects and reducing the scope for existing ones (4)Initial adaptation glitches due to the quantum leap in the digital channels (5)Manage constant fluctuating attitudes and anxieties of employees on personal aspects, job security, drastic change in work environment(6) Unprecedented and unpredictable exorbitant influence of macro environment in the routine enterprise activities. The chances of non-availability of critical resource due to health issues, the network issues faced in the remote locations, the unpredictable exposure of data - all these were contributing elements that increased the risk management complexity. In future, many IT companies have decided to operate mainly in the WFH mode as the operational expenses are drastically reduced. The implementation of efficient and effective risk management strategies become crucial considering the long-term implementation of 'not from office' operating model. The trust of the multinational clients, commitment of meeting the deadlines, maintaining the confidentiality and sensitivity of data, protecting

A STUDY ON EXISTING CONTRACT FARMING MODELS IN INDIS AND FRAMING MODELS IN INDIA AND FRAMING A HYBRID MODEL

Narayana B[1] and Dr. J. Meenakumari[2]

[1]E Mail ID: narayanab.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

The price fluctuations due to the time lag between the start of the sowing and the harvest of the agricultural produce results in huge distress to farmers. Price fixation in India happens basis the Demand and supply for the produce and basis the Minimum Support Price fixed by the Government from time to time. Durable products can be stored till the desired price is arrived, but in case of Perishable products storing is not an option that can be considered coupled with the lack of availability in required infrastructure. With the current policy changes from the Government of India, contract farming is looked as a means of handling risk on Price fluctuations which enables the farmers and buyers to decide the quantity, quality and price of the agricultural produce even before sowing stage.

This paper is an attempt to highlight the various Models of Contract Farming existing in India along with their prospects and challenges to farmers. Basis the analysis of these models it is very evident that Bargaining power of the corporates are much better when compared to farmers which would put the farmers to test at each stage of execution of the contract farming, which resulted in the need for a new Hybrid model which requires direct intervention from the statutory bodies. This Hybrid model would enable the farmers to have a balanced execution of the contract resulting in the win-win situation for both the farmers and corporates.

Keywords: Price Fluctuations, Contract Farming, Support Price and Agricultural produce.

A STUDY TO EXAMINE THE FACTORS INFLUENCING MOBILE BANKING ADOPTION IN INDIA

Prof. Raja Sankaran[1], Mohammed Yousuf[2], Vannala Lavanya[3]

[2]E Mail ID: yusufunu1999@gmail.com
[3]E Mail ID: lavanyavannala@gmail.com

ABSTRACT:

Purpose: The purpose of the study was to examine the factors influencing adoption of mobile banking in India. For this study, four factors namely, Perceived Usefulness, Perceived Ease of Use, Habit, trust were used to determine the consumer perception on mobile banking in India.

Methodology/Approach: An online survey was used to collect data from 113 consumers using mobile banking in India. IBM SPSS was used to test the conceptual model and to validate and statistically analyze the results.

Findings: The factors Perceived Usefulness and Trust were found to be significant on behavioral intention, whereas Perceived Ease of Use and Habit were found not to be significant.

Implications: Banking and Financial organization can use the results from the study to strategize and to attract consumers to adopt m-banking in India.

Keywords: m-banking, Perceived Usefulness, Perceived Ease of Use.

PRIVATE EQUITY AND VENTURE CAPITAL – PREAMBLE

Palash Khatri[1], Sudindra V R[2]

[1]E Mail ID: palashk.isme1921@gmail.com
[2]E Mail ID: sudindravr@isme.in

ABSTRACT:

Private equity investment can offer very strong returns in comparison to any stock market returns or public market investment opportunity. Private equity invests in companies which are not listed in the recognized stock exchange. Every business comes across six stages of the life cycle which include; Development, Start-up, early-stage growth, expansion, maturity, and decline/crisis stage. PE firms invest in the initial three stages. In today's fast-moving world with technological changes very great business plan may hit by various events and successes of companies. Private equity not only invests in companies, but they also provide management support and assist in the overall success of companies. The present study discussed on Birth of US Private equity, Indian Private Equity major players, steps in venture capital funding.

Keywords: Venture capital, Private Equity.

ADOPTING THE UNCERTAINITY: AN INTEGRATIVE LITERATURE REVIEW ON WORK FROM HOME

Prof. Shurlly Tiwari[1], Mr. Rishikesh[2], Ms. Khusboo[3] & Ms. Ishita[4]

ABSTRACT:

Things become revolutionary when people get out of their comfort zone and adapt to the other side of the coin. The concept of remote working was introduced in the early 1980s and this evolution came into mainstream after global pandemic. Working from home allows a broader diversification of optimization of resources which includes labour skills, machinery skills etc. This paper studies how a sudden change can affect the emotional social wellbeing of people. During Pandemic increase in the productivity of employees is observed despite being at home and facing enormous constraints employees are able to perform well constantly across industries. This paper tries to find out the impact of the several factors on employees during WFH.

Thematic analysis was conducted in the paper. This study highlights the importance of Work-life balance as a source of satisfaction among employees. Pandemic 2020 has witnessed the impact of WFH on work life balance, this study is an attempt to identify the definitions, importance, evolution, antecedents and the impact of WFH on overall performance of employees. Research suggests curation of job patterns in this emergency which can minimize the work pressure by achieving maximum efficiency with deterministic values and sustainability in the long run.

Keywords: Work from Home, Pandemic, Employee Performance

TO STUDY THE IMPACT OF WORK FROM HOME ON FACULTY OF HIGHER EDUCATION-BANGALORE

Prof. Shurlly Tiwari[1], Ms. Priyanka Gautam[2] & Ms. Pratibha[3]

ABSTRACT:

Work from home is an arrangement where people do their work outside their traditional workplace settings. The concept of WFH and its impact was realized in 1970s, but it became the main stream during global pandemic-2020, Professional workforce was forced to start work from home. It is also a new acronym in the world of education. Now a day's college and school are no longer the only teaching place for teachers to teach, after pandemic many teachers considering work from home. Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

AN EXAMINATION OF THE ROLE OF SPIRITUAL LEADERSHIP AND SERVANT LEADERSHIP ON KNOWLEDGE CREATION UNDER THE MEDITATING INFLUENCE OF MINDFULNESS

Ms. Preetha Suresh[1] and Dr. M Ramesh Kumar[2]

[1]E Mail ID: preethas.isme20@gmail.com
[2]E Mail ID: ramesh@isme.in

ABSTRACT:

The business environment is in a constant state of flux characterized by increased competition, uncertainty and restructuring to incorporate more effective work models to sustain growth. Organizations are required to leverage employee knowledge and capabilities to ensure sustained competitive advantage. In this process, leaders are required to be the facilitators of knowledge creation and transmission within the organization. Knowledge creation and management is relevant for the workers themselves and for the organizations. In this sense, this paper aims to discuss the role and effectiveness of spiritual and servant leadership in knowledge creation in organizations under the influence of mindfulness. This study also views knowledge creation and management as the dynamic set of activities undertaken by organizations to optimally use the knowledge within the boundaries of the organization. These processes are further linked to complex human involvement and interactions

The relevance of altering leadership dimensions in reaction to paradigm shifts in business processes and workforce management becomes an important study to be undertaken. In this context, the researchers have conducted primary research to explore the relationship between leadership styles and knowledge creation in the organizations. The study looks at both spiritual and service leadership and their influence on knowledge creation strategies in organizations. On the basis of their study the researchers have proposed a model to explore the effectiveness of spiritual and servant leadership styles on knowledge creation at the individual level.

Keywords: Spiritual Leadership, Servant Leadership, Knowledge Creation, Mindfulness.

USING PIOTROSKI F-SCORE FOR ASSESSING FINANCIAL HEALTH: EVIDENCE FROM LEADING INDIAN PRIVATE BANKS

S. Rangapriya[1], and Dr.J. Meenakumari[2]

[1]*E Mail ID: rangapriyas.isme20@gmail.com*
[2]*E Mail ID: meenakumari@isme.in*

ABSTRACT:

This research investigates the efficacy of Piotroski F-score to screen firms with good financial health and to identify early signs of financial distress in Indian banking stocks. This study complements existing empirical evidence which indicate that the venerable model can provide valuable insight for investment decision making and risk management.

The evidence is drawn from valuation signals across leading private banks in India for a period ranging from 2014-2020. Piotroski F-score evaluates companies with a discrete number between zero and nine, the score facilitates determination of financial strength of the company. Higher score indicates better financial health and vice versa. The F-score is calculated as a sum of criteria which evaluates profitability signals, leverage and liquidity, sources of funds and operating efficiencies. In this study, each of these ratios have been analyzed to gain valuable insight on the banks (company-level). Analysis of Variance of various ratios, ascertains intensity of relationship across banks (industry-level). This can help manage exposure in the portfolio as per the economic environment. The Piotroski F-score evaluates the generic financial health of the firm and indicates the direction in which the firm is headed. By studying individual factors, relative strength can be assessed. Piotroski F-score ranged between 0-7 for all the banks under study, indicating that none of them were a 'compelling buy' (score 8 or 9) over the seven-year horizon. Some banks have consistently shown depleting F-score over at least 3 years, this can be interpreted as a signal of financial distress. It is evident that consistent monitoring of F-score empowers pro-active risk management.

This work attempts to introduce Piotroski F-score as an integral valuation metric in evaluating Indian banking stocks. F-score can be used for initial screening; it's consistent monitoring can facilitate optimized returns at risk-adjusted levels.

CENTRALBANK DIGITAL CURRENCY (CBDC) CAN IT REPLACE NOTES AND COINS IN INDIA

Dwijendra Kumar Kashyap[1] and Dr.J. Meenakumari[2]

ABSTRACT:

In golden old days when notes and coins were still to become medium of exchange, barter system was prevalent. Many modern analysts feel that the system was free from the complexities in managing modern day's Monetary Policy or issues in International Trade, and therefore had its own advantages. However, with the growth of economies and trade relationship amongst countries, notes and coins emerged as means of exchange with global acceptability of currency unit of some countries in foreign trade. Major disruption in the present system of use of currencies in settlement of goods and services is glaring in the form of digital currencies, popularly known as Crypto Currencies or bitcoin. In this paper, effort has been made to understand need of Digital Currency from Central Banks (CBDC). The paper is an attempt to explain possibility of CBDC as replacement of actual currency, advantages and disadvantages for India if we use digital currency and possible impact on monetary policy.

In India, crypto currency is illegal either as means of exchange or as commodity for storage. A study of major crypto currencies around the world in brief will give idea of its disruptive nature in modern world. Efforts in other countries to introduce CBDC so far will also give idea of how far the world has moved to introduce digital currency as legal object. Further, study on basic nature of currency and digital currency and possible technologies for introduction of CBDC in India will give us idea of how far CBDC can replace usage of currency. The study will also look into aspects related to CBDC which can help in India's goal of universal financial inclusion.

The study will help in understanding the nature, method and usage of CBDC in Indian context and desirability and success of CBDC as replacement of actual currency.

Keywords: Central Bank Digital Currency (CBDC), Crypto currency, Disruptive technology, Bitcoin

the unintended intrusion from the digital malicious practices - all are the additional significant risks and challenges, as the probability for the occurrence of these events have increased exponentially due to the latest work arrangements. This paper attempts to evaluate the current risk mitigation strategies and analyse the gaps in the current system. The aim is to effectively manage the upcoming threats and risks in the long-term implementation of the current working (WFH) scenarios. The overall objective of the paper is to (1) analyse the present-day risks (2) evaluate the contemporary ideas that could be modified into solid framework for better risk mitigation strategies in long-term (3) what to anticipate in the future risk analysis and management processes related to IT Project Management.

ABSTRACT:

The global perspective of human life drastically changed after the spread of COVID-19. The world reduced itself, to a digital cocoon. Education, work, commerce, shopping, industry, sales - all walks of life, transformed mostly into a digital mode. The IT (Information Technology) and ITES (IT Enabled services) saw a tremendous transformation in the operational aspects. 'WFH (Work from Home)' enabled the resources to work from their preferred locations. These factors increased the risk of data management and data security. The security of the network and the personal devices used to handle the sensitive and confidential data aggregated the risk factors in project management. The significant challenges faced by the IT sector project management were (1)Global Travel restrictions (2) Forecast of Global Recession in near future and resultant minimization of budget allocated to new projects (3)Negative growth Impact from multiple domains, resulting in reduction of new projects and reducing the scope for existing ones (4)Initial adaptation glitches due to the quantum leap in the digital channels (5)Manage constant fluctuating attitudes and anxieties of employees on personal aspects, job security, drastic change in work environment(6) Unprecedented and unpredictable exorbitant influence of macro environment in the routine enterprise activities. The chances of non-availability of critical resource due to health issues, the network issues faced in the remote locations, the unpredictable exposure of data - all these were contributing elements that increased the risk management complexity. In future, many IT companies have decided to operate mainly in the WFH mode as the operational expenses are drastically reduced. The implementation of efficient and effective risk management strategies become crucial considering the long-term implementation of 'not from office' operating model. The trust of the multinational clients, commitment of meeting the deadlines, maintaining the confidentiality and sensitivity of data, protecting

A STUDY ON EXISTING CONTRACT FARMING MODELS IN INDIS AND FRAMING MODELS IN INDIA AND FRAMING A HYBRID MODEL

Narayana B[1] and Dr. J. Meenakumari[2]

[1]E Mail ID: narayanab.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

The price fluctuations due to the time lag between the start of the sowing and the harvest of the agricultural produce results in huge distress to farmers. Price fixation in India happens basis the Demand and supply for the produce and basis the Minimum Support Price fixed by the Government from time to time. Durable products can be stored till the desired price is arrived, but in case of Perishable products storing is not an option that can be considered coupled with the lack of availability in required infrastructure. With the current policy changes from the Government of India, contract farming is looked as a means of handling risk on Price fluctuations which enables the farmers and buyers to decide the quantity, quality and price of the agricultural produce even before sowing stage.

This paper is an attempt to highlight the various Models of Contract Farming existing in India along with their prospects and challenges to farmers. Basis the analysis of these models it is very evident that Bargaining power of the corporates are much better when compared to farmers which would put the farmers to test at each stage of execution of the contract farming, which resulted in the need for a new Hybrid model which requires direct intervention from the statutory bodies. This Hybrid model would enable the farmers to have a balanced execution of the contract resulting in the win-win situation for both the farmers and corporates.

Keywords: Price Fluctuations, Contract Farming, Support Price and Agricultural produce.

A STUDY TO EXAMINE THE FACTORS INFLUENCING MOBILE BANKING ADOPTION IN INDIA

Prof. Raja Sankaran[1], Mohammed Yousuf[2], Vannala Lavanya[3]

[2]E Mail ID: yusufunu1999@gmail.com
[3]E Mail ID: lavanyavannala@gmail.com

ABSTRACT:

Purpose: The purpose of the study was to examine the factors influencing adoption of mobile banking in India. For this study, four factors namely, Perceived Usefulness, Perceived Ease of Use, Habit, trust were used to determine the consumer perception on mobile banking in India.

Methodology/Approach: An online survey was used to collect data from 113 consumers using mobile banking in India. IBM SPSS was used to test the conceptual model and to validate and statistically analyze the results.

Findings: The factors Perceived Usefulness and Trust were found to be significant on behavioral intention, whereas Perceived Ease of Use and Habit were found not to be significant.

Implications: Banking and Financial organization can use the results from the study to strategize and to attract consumers to adopt m-banking in India.

Keywords: m-banking, Perceived Usefulness, Perceived Ease of Use.

PRIVATE EQUITY AND VENTURE CAPITAL – PREAMBLE

Palash Khatri[1], Sudindra V R[2]

[1]E Mail ID: palashk.isme1921@gmail.com
[2]E Mail ID: sudindravr@isme.in

ABSTRACT:

Private equity investment can offer very strong returns in comparison to any stock market returns or public market investment opportunity. Private equity invests in companies which are not listed in the recognized stock exchange. Every business comes across six stages of the life cycle which include; Development, Start-up, early-stage growth, expansion, maturity, and decline/crisis stage. PE firms invest in the initial three stages. In today's fast-moving world with technological changes very great business plan may hit by various events and successes of companies. Private equity not only invests in companies, but they also provide management support and assist in the overall success of companies. The present study discussed on Birth of US Private equity, Indian Private Equity major players, steps in venture capital funding.

Keywords: Venture capital, Private Equity.

ADOPTING THE UNCERTAINITY: AN INTEGRATIVE LITERATURE REVIEW ON WORK FROM HOME

Prof. Shurlly Tiwari[1], Mr. Rishikesh[2], Ms. Khusboo[3] & Ms. Ishita[4]

ABSTRACT:

Things become revolutionary when people get out of their comfort zone and adapt to the other side of the coin. The concept of remote working was introduced in the early 1980s and this evolution came into mainstream after global pandemic. Working from home allows a broader diversification of optimization of resources which includes labour skills, machinery skills etc. This paper studies how a sudden change can affect the emotional social wellbeing of people. During Pandemic increase in the productivity of employees is observed despite being at home and facing enormous constraints employees are able to perform well constantly across industries. This paper tries to find out the impact of the several factors on employees during WFH.

Thematic analysis was conducted in the paper. This study highlights the importance of Work-life balance as a source of satisfaction among employees. Pandemic 2020 has witnessed the impact of WFH on work life balance, this study is an attempt to identify the definitions, importance, evolution, antecedents and the impact of WFH on overall performance of employees. Research suggests curation of job patterns in this emergency which can minimize the work pressure by achieving maximum efficiency with deterministic values and sustainability in the long run.

TO STUDY THE IMPACT OF WORK FROM HOME ON FACULTY OF HIGHER EDUCATION-BANGALORE

Prof. Shurlly Tiwari[1], Ms. Priyanka Gautam[2] & Ms. Pratibha[3]

ABSTRACT:

Work from home is an arrangement where people do their work outside their traditional workplace settings. The concept of WFH and its impact was realized in 1970s, but it became the main stream during global pandemic-2020, Professional workforce was forced to start work from home. It is also a new acronym in the world of education. Now a day's college and school are no longer the only teaching place for teachers to teach, after pandemic many teachers considering work from home. Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

About the Conference

Contemporary management issues often trigger in us the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices that facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time of pandemic where it is important for all organisations world-wide to embrace the continuous changes in technology, economy, environment, and government policies across all sectors while remaining focused on the organisational mission and goals to remain competitive. The rise in technology adoption by businesses and consumers, economic fallout of the pandemic across the word, the rise of China as a global belligerent force and government policies moving towards a more nationalist agenda are some of the more recent changes that confront businesses and management today.

This conference will be a platform for industry practitioners, academicians, entrepreneurs and research scholars to come to together, to learn, share and discuss current and emerging topics in management with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants. The event has inspirational keynote speakers, practitioner-led workshop sessions, and mutually beneficial networking opportunities.

We invite original papers from interested professionals and researchers to present and participate in the conference in response to the uncertain and complex pandemic scenario and to interconnect all these issues with business sustainability and excellence.

CONTEMPORARY ISSUES IN MANAGEMENT

ABSTRACT PROCEEDINGS

INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE

88, Chambenahalli, Near Dommasandra Circle Sarjapura Road, Bangalore Karnataka

February 2021

Message from Conference Chair

Greetings from International School of Management Excellence! (ISME)

On behalf of ISME Conference Committee, I am honored and delighted to welcome you to our 9th International Conference on 'Contemporary Issues in Management - CIM-21'.

We are living in a world of disruption and drastic changes with different countries being in different parts of the economic cycle which is closely linked to the vaccination cycle. The aim of this conference is to discuss issues relevant to the present time of the pandemic, where it is important for all organizations to embrace the changes in technology, economy, environment and government policies to remain productive and competitive.

This conference will be a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with 2 international keynote speakers,4 eminent speakers at the panel discussion on 'Research frontiers in e-business in the new era' and multiple tracks for paper presentations.

The conference will bring out the latest thoughts and deliberations to enhance management practices. The abstracts for the conference that were earlier accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment

Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector

Track 3: Functional areas of business

Track 4: Management of technology

Track 5: Redefining management education

I am thankful to the conference organizing committee, the Track chairs, Session chairs and the numerous faculty and student volunteers and our knowledge partners for supporting the conference.

Most of all, I thank you participants for enriching the annual conference with your presence. I hope you will enjoy the conference, get new ideas and make new friends with numerous opportunities for networking.

Best Regards,

Dr Rony G Kurien,

Dean and Conference Chair

USING PIOTROSKI F-SCORE FOR ASSESSING FINANCIAL HEALTH: EVIDENCE FROM LEADING INDIAN PRIVATE BANKS

S. Rangapriya[1], and Dr.J. Meenakumari[2]

[1]*E Mail ID: rangapriyas.isme20@gmail.com*
[2]*E Mail ID: meenakumari@isme.in*

ABSTRACT:

This research investigates the efficacy of Piotroski F-score to screen firms with good financial health and to identify early signs of financial distress in Indian banking stocks. This study complements existing empirical evidence which indicate that the venerable model can provide valuable insight for investment decision making and risk management.

The evidence is drawn from valuation signals across leading private banks in India for a period ranging from 2014-2020. Piotroski F-score evaluates companies with a discrete number between zero and nine, the score facilitates determination of financial strength of the company. Higher score indicates better financial health and vice versa. The F-score is calculated as a sum of criteria which evaluates profitability signals, leverage and liquidity, sources of funds and operating efficiencies. In this study, each of these ratios have been analyzed to gain valuable insight on the banks (company-level). Analysis of Variance of various ratios, ascertains intensity of relationship across banks (industry-level). This can help manage exposure in the portfolio as per the economic environment. The Piotroski F-score evaluates the generic financial health of the firm and indicates the direction in which the firm is headed. By studying individual factors, relative strength can be assessed. Piotroski F-score ranged between 0-7 for all the banks under study, indicating that none of them were a 'compelling buy' (score 8 or 9) over the seven-year horizon. Some banks have consistently shown depleting F-score over at least 3 years, this can be interpreted as a signal of financial distress. It is evident that consistent monitoring of F-score empowers pro-active risk management.

This work attempts to introduce Piotroski F-score as an integral valuation metric in evaluating Indian banking stocks. F-score can be used for initial screening; it's consistent monitoring can facilitate optimized returns at risk-adjusted levels.

ABSTRACT:

The global perspective of human life drastically changed after the spread of COVID-19. The world reduced itself, to a digital cocoon. Education, work, commerce, shopping, industry, sales - all walks of life, transformed mostly into a digital mode. The IT (Information Technology) and ITES (IT Enabled services) saw a tremendous transformation in the operational aspects. 'WFH (Work from Home)' enabled the resources to work from their preferred locations. These factors increased the risk of data management and data security. The security of the network and the personal devices used to handle the sensitive and confidential data aggregated the risk factors in project management. The significant challenges faced by the IT sector project management were (1)Global Travel restrictions (2) Forecast of Global Recession in near future and resultant minimization of budget allocated to new projects (3)Negative growth Impact from multiple domains, resulting in reduction of new projects and reducing the scope for existing ones (4)Initial adaptation glitches due to the quantum leap in the digital channels (5)Manage constant fluctuating attitudes and anxieties of employees on personal aspects, job security, drastic change in work environment(6) Unprecedented and unpredictable exorbitant influence of macro environment in the routine enterprise activities. The chances of non-availability of critical resource due to health issues, the network issues faced in the remote locations, the unpredictable exposure of data - all these were contributing elements that increased the risk management complexity. In future, many IT companies have decided to operate mainly in the WFH mode as the operational expenses are drastically reduced. The implementation of efficient and effective risk management strategies become crucial considering the long-term implementation of 'not from office' operating model. The trust of the multinational clients, commitment of meeting the deadlines, maintaining the confidentiality and sensitivity of data, protecting

A STUDY ON EXISTING CONTRACT FARMING MODELS IN INDIS AND FRAMING MODELS IN INDIA AND FRAMING A HYBRID MODEL

Narayana B[1] and Dr. J. Meenakumari[2]

[1]E Mail ID: narayanab.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

The price fluctuations due to the time lag between the start of the sowing and the harvest of the agricultural produce results in huge distress to farmers. Price fixation in India happens basis the Demand and supply for the produce and basis the Minimum Support Price fixed by the Government from time to time. Durable products can be stored till the desired price is arrived, but in case of Perishable products storing is not an option that can be considered coupled with the lack of availability in required infrastructure. With the current policy changes from the Government of India, contract farming is looked as a means of handling risk on Price fluctuations which enables the farmers and buyers to decide the quantity, quality and price of the agricultural produce even before sowing stage.

This paper is an attempt to highlight the various Models of Contract Farming existing in India along with their prospects and challenges to farmers. Basis the analysis of these models it is very evident that Bargaining power of the corporates are much better when compared to farmers which would put the farmers to test at each stage of execution of the contract farming, which resulted in the need for a new Hybrid model which requires direct intervention from the statutory bodies. This Hybrid model would enable the farmers to have a balanced execution of the contract resulting in the win-win situation for both the farmers and corporates.

A STUDY TO EXAMINE THE FACTORS INFLUENCING MOBILE BANKING ADOPTION IN INDIA

Prof. Raja Sankaran[1], Mohammed Yousuf[2], Vannala Lavanya[3]

[2]E Mail ID: yusufunu1999@gmail.com
[3]E Mail ID: lavanyavannala@gmail.com

ABSTRACT:

Purpose: The purpose of the study was to examine the factors influencing adoption of mobile banking in India. For this study, four factors namely, Perceived Usefulness, Perceived Ease of Use, Habit, trust were used to determine the consumer perception on mobile banking in India.

Methodology/Approach: An online survey was used to collect data from 113 consumers using mobile banking in India. IBM SPSS was used to test the conceptual model and to validate and statistically analyze the results.

Findings: The factors Perceived Usefulness and Trust were found to be significant on behavioral intention, whereas Perceived Ease of Use and Habit were found not to be significant.

Implications: Banking and Financial organization can use the results from the study to strategize and to attract consumers to adopt m-banking in India.

Keywords: m-banking, Perceived Usefulness, Perceived Ease of Use.

PRIVATE EQUITY AND VENTURE CAPITAL – PREAMBLE

Palash Khatri[1], Sudindra V R[2]

[1]E Mail ID: palashk.isme1921@gmail.com
[2]E Mail ID: sudindravr@isme.in

ABSTRACT:

Private equity investment can offer very strong returns in comparison to any stock market returns or public market investment opportunity. Private equity invests in companies which are not listed in the recognized stock exchange. Every business comes across six stages of the life cycle which include; Development, Start-up, early-stage growth, expansion, maturity, and decline/crisis stage. PE firms invest in the initial three stages. In today's fast-moving world with technological changes very great business plan may hit by various events and successes of companies. Private equity not only invests in companies, but they also provide management support and assist in the overall success of companies. The present study discussed on Birth of US Private equity, Indian Private Equity major players, steps in venture capital funding.

ADOPTING THE UNCERTAINITY: AN INTEGRATIVE LITERATURE REVIEW ON WORK FROM HOME

Prof. Shurlly Tiwari[1], Mr. Rishikesh[2], Ms. Khusboo[3] & Ms. Ishita[4]

ABSTRACT:

Things become revolutionary when people get out of their comfort zone and adapt to the other side of the coin. The concept of remote working was introduced in the early 1980s and this evolution came into mainstream after global pandemic. Working from home allows a broader diversification of optimization of resources which includes labour skills, machinery skills etc. This paper studies how a sudden change can affect the emotional social wellbeing of people. During Pandemic increase in the productivity of employees is observed despite being at home and facing enormous constraints employees are able to perform well constantly across industries. This paper tries to find out the impact of the several factors on employees during WFH.

Thematic analysis was conducted in the paper. This study highlights the importance of Work-life balance as a source of satisfaction among employees. Pandemic 2020 has witnessed the impact of WFH on work life balance, this study is an attempt to identify the definitions, importance, evolution, antecedents and the impact of WFH on overall performance of employees. Research suggests curation of job patterns in this emergency which can minimize the work pressure by achieving maximum efficiency with deterministic values and sustainability in the long run.

TO STUDY THE IMPACT OF WORK FROM HOME ON FACULTY OF HIGHER EDUCATION-BANGALORE

Prof. Shurlly Tiwari[1], Ms. Priyanka Gautam[2] & Ms. Pratibha[3]

ABSTRACT:

Work from home is an arrangement where people do their work outside their traditional workplace settings. The concept of WFH and its impact was realized in 1970s, but it became the main stream during global pandemic-2020, Professional workforce was forced to start work from home. It is also a new acronym in the world of education. Now a day's college and school are no longer the only teaching place for teachers to teach, after pandemic many teachers considering work from home. Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

Errors, if any, are purely unintentional and readers are requested to communicate such errors to the editors or publishers to avoid discrepancies in future.

About the Conference

Contemporary management issues often trigger in us the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices that facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time of pandemic where it is important for all organisations world-wide to embrace the continuous changes in technology, economy, environment, and government policies across all sectors while remaining focused on the organisational mission and goals to remain competitive. The rise in technology adoption by businesses and consumers, economic fallout of the pandemic across the word, the rise of China as a global belligerent force and government policies moving towards a more nationalist agenda are some of the more recent changes that confront businesses and management today.

This conference will be a platform for industry practitioners, academicians, entrepreneurs and research scholars to come to together, to learn, share and discuss current and emerging topics in management with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants. The event has inspirational keynote speakers, practitioner-led workshop sessions, and mutually beneficial networking opportunities.

We invite original papers from interested professionals and researchers to present and participate in the conference in response to the uncertain and complex pandemic scenario and to interconnect all these issues with business sustainability and excellence.

CONTEMPORARY ISSUES IN MANAGEMENT

ABSTRACT PROCEEDINGS

INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE

88, Chambenahalli, Near Dommasandra Circle Sarjapura Road, Bangalore Karnataka

February 2021

Message from Conference Chair

Greetings from International School of Management Excellence! (ISME)

On behalf of ISME Conference Committee, I am honored and delighted to welcome you to our 9th International Conference on 'Contemporary Issues in Management - CIM-21'.

We are living in a world of disruption and drastic changes with different countries being in different parts of the economic cycle which is closely linked to the vaccination cycle. The aim of this conference is to discuss issues relevant to the present time of the pandemic, where it is important for all organizations to embrace the changes in technology, economy, environment and government policies to remain productive and competitive.

This conference will be a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with 2 international keynote speakers,4 eminent speakers at the panel discussion on 'Research frontiers in e-business in the new era' and multiple tracks for paper presentations.

The conference will bring out the latest thoughts and deliberations to enhance management practices. The abstracts for the conference that were earlier accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment

Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector

Track 3: Functional areas of business

Track 4: Management of technology

Track 5: Redefining management education

I am thankful to the conference organizing committee, the Track chairs, Session chairs and the numerous faculty and student volunteers and our knowledge partners for supporting the conference.

Most of all, I thank you participants for enriching the annual conference with your presence. I hope you will enjoy the conference, get new ideas and make new friends with numerous opportunities for networking.

Best Regards,

Dr Rony G Kurien,

Dean and Conference Chair

ABSTRACT:

The business environment is in a constant state of flux characterized by increased competition, uncertainty and restructuring to incorporate more effective work models to sustain growth. Organizations are required to leverage employee knowledge and capabilities to ensure sustained competitive advantage. In this process, leaders are required to be the facilitators of knowledge creation and transmission within the organization. Knowledge creation and management is relevant for the workers themselves and for the organizations. In this sense, this paper aims to discuss the role and effectiveness of spiritual and servant leadership in knowledge creation in organizations under the influence of mindfulness. This study also views knowledge creation and management as the dynamic set of activities undertaken by organizations to optimally use the knowledge within the boundaries of the organization. These processes are further linked to complex human involvement and interactions

The relevance of altering leadership dimensions in reaction to paradigm shifts in business processes and workforce management becomes an important study to be undertaken. In this context, the researchers have conducted primary research to explore the relationship between leadership styles and knowledge creation in the organizations. The study looks at both spiritual and service leadership and their influence on knowledge creation strategies in organizations. On the basis of their study the researchers have proposed a model to explore the effectiveness of spiritual and servant leadership styles on knowledge creation at the individual level.

ABSTRACT:

The price fluctuations due to the time lag between the start of the sowing and the harvest of the agricultural produce results in huge distress to farmers. Price fixation in India happens basis the Demand and supply for the produce and basis the Minimum Support Price fixed by the Government from time to time. Durable products can be stored till the desired price is arrived, but in case of Perishable products storing is not an option that can be considered coupled with the lack of availability in required infrastructure. With the current policy changes from the Government of India, contract farming is looked as a means of handling risk on Price fluctuations which enables the farmers and buyers to decide the quantity, quality and price of the agricultural produce even before sowing stage.

This paper is an attempt to highlight the various Models of Contract Farming existing in India along with their prospects and challenges to farmers. Basis the analysis of these models it is very evident that Bargaining power of the corporates are much better when compared to farmers which would put the farmers to test at each stage of execution of the contract farming, which resulted in the need for a new Hybrid model which requires direct intervention from the statutory bodies. This Hybrid model would enable the farmers to have a balanced execution of the contract resulting in the win-win situation for both the farmers and corporates.

Keywords: Price Fluctuations, Contract Farming, Support Price and Agricultural produce.

A STUDY TO EXAMINE THE FACTORS INFLUENCING MOBILE BANKING ADOPTION IN INDIA

Prof. Raja Sankaran[1], Mohammed Yousuf[2], Vannala Lavanya[3]

[2]E Mail ID: yusufunu1999@gmail.com
[3]E Mail ID: lavanyavannala@gmail.com

ABSTRACT:

Purpose: The purpose of the study was to examine the factors influencing adoption of mobile banking in India. For this study, four factors namely, Perceived Usefulness, Perceived Ease of Use, Habit, trust were used to determine the consumer perception on mobile banking in India.

Methodology/Approach: An online survey was used to collect data from 113 consumers using mobile banking in India. IBM SPSS was used to test the conceptual model and to validate and statistically analyze the results.

Findings: The factors Perceived Usefulness and Trust were found to be significant on behavioral intention, whereas Perceived Ease of Use and Habit were found not to be significant.

Implications: Banking and Financial organization can use the results from the study to strategize and to attract consumers to adopt m-banking in India.

Keywords: m-banking, Perceived Usefulness, Perceived Ease of Use.

PRIVATE EQUITY AND VENTURE CAPITAL – PREAMBLE

ABSTRACT:

Private equity investment can offer very strong returns in comparison to any stock market returns or public market investment opportunity. Private equity invests in companies which are not listed in the recognized stock exchange. Every business comes across six stages of the life cycle which include; Development, Start-up, early-stage growth, expansion, maturity, and decline/crisis stage. PE firms invest in the initial three stages. In today's fast-moving world with technological changes very great business plan may hit by various events and successes of companies. Private equity not only invests in companies, but they also provide management support and assist in the overall success of companies. The present study discussed on Birth of US Private equity, Indian Private Equity major players, steps in venture capital funding.

Keywords: Venture capital, Private Equity.

ADOPTING THE UNCERTAINITY: AN INTEGRATIVE LITERATURE REVIEW ON WORK FROM HOME

Prof. Shurlly Tiwari[1], Mr. Rishikesh[2], Ms. Khusboo[3] & Ms. Ishita[4]

ABSTRACT:

Things become revolutionary when people get out of their comfort zone and adapt to the other side of the coin. The concept of remote working was introduced in the early 1980s and this evolution came into mainstream after global pandemic. Working from home allows a broader diversification of optimization of resources which includes labour skills, machinery skills etc. This paper studies how a sudden change can affect the emotional social wellbeing of people. During Pandemic increase in the productivity of employees is observed despite being at home and facing enormous constraints employees are able to perform well constantly across industries. This paper tries to find out the impact of the several factors on employees during WFH.

Thematic analysis was conducted in the paper. This study highlights the importance of Work-life balance as a source of satisfaction among employees. Pandemic 2020 has witnessed the impact of WFH on work life balance, this study is an attempt to identify the definitions, importance, evolution, antecedents and the impact of WFH on overall performance of employees. Research suggests curation of job patterns in this emergency which can minimize the work pressure by achieving maximum efficiency with deterministic values and sustainability in the long run.

Keywords: Work from Home, Pandemic, Employee Performance

TO STUDY THE IMPACT OF WORK FROM HOME ON FACULTY OF HIGHER EDUCATION-BANGALORE

Prof. Shurlly Tiwari[1], Ms. Priyanka Gautam[2] & Ms. Pratibha[3]

ABSTRACT:

Work from home is an arrangement where people do their work outside their traditional workplace settings. The concept of WFH and its impact was realized in 1970s, but it became the main stream during global pandemic-2020, Professional workforce was forced to start work from home. It is also a new acronym in the world of education. Now a day's college and school are no longer the only teaching place for teachers to teach, after pandemic many teachers considering work from home. Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

About the Conference

Contemporary management issues often trigger in us the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices that facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time of pandemic where it is important for all organisations world-wide to embrace the continuous changes in technology, economy, environment, and government policies across all sectors while remaining focused on the organisational mission and goals to remain competitive. The rise in technology adoption by businesses and consumers, economic fallout of the pandemic across the word, the rise of China as a global belligerent force and government policies moving towards a more nationalist agenda are some of the more recent changes that confront businesses and management today.

This conference will be a platform for industry practitioners, academicians, entrepreneurs and research scholars to come to together, to learn, share and discuss current and emerging topics in management with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants. The event has inspirational keynote speakers, practitioner-led workshop sessions, and mutually beneficial networking opportunities.

We invite original papers from interested professionals and researchers to present and participate in the conference in response to the uncertain and complex pandemic scenario and to interconnect all these issues with business sustainability and excellence.

CONTEMPORARY ISSUES IN MANAGEMENT

ABSTRACT PROCEEDINGS

INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE

88, Chambenahalli, Near Dommasandra Circle Sarjapura Road, Bangalore Karnataka

February 2021

Message from Conference Chair

Greetings from International School of Management Excellence! (ISME)

On behalf of ISME Conference Committee, I am honored and delighted to welcome you to our 9th International Conference on 'Contemporary Issues in Management - CIM-21'.

We are living in a world of disruption and drastic changes with different countries being in different parts of the economic cycle which is closely linked to the vaccination cycle. The aim of this conference is to discuss issues relevant to the present time of the pandemic, where it is important for all organizations to embrace the changes in technology, economy, environment and government policies to remain productive and competitive.

This conference will be a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with 2 international keynote speakers,4 eminent speakers at the panel discussion on 'Research frontiers in e-business in the new era' and multiple tracks for paper presentations.

The conference will bring out the latest thoughts and deliberations to enhance management practices. The abstracts for the conference that were earlier accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment

Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector

Track 3: Functional areas of business

Track 4: Management of technology

Track 5: Redefining management education

I am thankful to the conference organizing committee, the Track chairs, Session chairs and the numerous faculty and student volunteers and our knowledge partners for supporting the conference.

Most of all, I thank you participants for enriching the annual conference with your presence. I hope you will enjoy the conference, get new ideas and make new friends with numerous opportunities for networking.

Best Regards,

Dr Rony G Kurien,

Dean and Conference Chair

ABSTRACT:

The business environment is in a constant state of flux characterized by increased competition, uncertainty and restructuring to incorporate more effective work models to sustain growth. Organizations are required to leverage employee knowledge and capabilities to ensure sustained competitive advantage. In this process, leaders are required to be the facilitators of knowledge creation and transmission within the organization. Knowledge creation and management is relevant for the workers themselves and for the organizations. In this sense, this paper aims to discuss the role and effectiveness of spiritual and servant leadership in knowledge creation in organizations under the influence of mindfulness. This study also views knowledge creation and management as the dynamic set of activities undertaken by organizations to optimally use the knowledge within the boundaries of the organization. These processes are further linked to complex human involvement and interactions

The relevance of altering leadership dimensions in reaction to paradigm shifts in business processes and workforce management becomes an important study to be undertaken. In this context, the researchers have conducted primary research to explore the relationship between leadership styles and knowledge creation in the organizations. The study looks at both spiritual and service leadership and their influence on knowledge creation strategies in organizations. On the basis of their study the researchers have proposed a model to explore the effectiveness of spiritual and servant leadership styles on knowledge creation at the individual level.

Keywords: Spiritual Leadership, Servant Leadership, Knowledge Creation, Mindfulness.

USING PIOTROSKI F-SCORE FOR ASSESSING FINANCIAL HEALTH: EVIDENCE FROM LEADING INDIAN PRIVATE BANKS

S. Rangapriya[1], and Dr.J. Meenakumari[2]

[1]*E Mail ID: rangapriyas.isme20@gmail.com*
[2]*E Mail ID: meenakumari@isme.in*

ABSTRACT:

This research investigates the efficacy of Piotroski F-score to screen firms with good financial health and to identify early signs of financial distress in Indian banking stocks. This study complements existing empirical evidence which indicate that the venerable model can provide valuable insight for investment decision making and risk management.

The evidence is drawn from valuation signals across leading private banks in India for a period ranging from 2014-2020. Piotroski F-score evaluates companies with a discrete number between zero and nine, the score facilitates determination of financial strength of the company. Higher score indicates better financial health and vice versa. The F-score is calculated as a sum of criteria which evaluates profitability signals, leverage and liquidity, sources of funds and operating efficiencies. In this study, each of these ratios have been analyzed to gain valuable insight on the banks (company-level). Analysis of Variance of various ratios, ascertains intensity of relationship across banks (industry-level). This can help manage exposure in the portfolio as per the economic environment. The Piotroski F-score evaluates the generic financial health of the firm and indicates the direction in which the firm is headed. By studying individual factors, relative strength can be assessed. Piotroski F-score ranged between 0-7 for all the banks under study, indicating that none of them were a 'compelling buy' (score 8 or 9) over the seven-year horizon. Some banks have consistently shown depleting F-score over at least 3 years, this can be interpreted as a signal of financial distress. It is evident that consistent monitoring of F-score empowers pro-active risk management.

This work attempts to introduce Piotroski F-score as an integral valuation metric in evaluating Indian banking stocks. F-score can be used for initial screening; it's consistent monitoring can facilitate optimized returns at risk-adjusted levels.

CENTRALBANK DIGITAL CURRENCY (CBDC) CAN IT REPLACE NOTES AND COINS IN INDIA

Dwijendra Kumar Kashyap[1] and Dr.J. Meenakumari[2]

ABSTRACT:

In golden old days when notes and coins were still to become medium of exchange, barter system was prevalent. Many modern analysts feel that the system was free from the complexities in managing modern day's Monetary Policy or issues in International Trade, and therefore had its own advantages. However, with the growth of economies and trade relationship amongst countries, notes and coins emerged as means of exchange with global acceptability of currency unit of some countries in foreign trade. Major disruption in the present system of use of currencies in settlement of goods and services is glaring in the form of digital currencies, popularly known as Crypto Currencies or bitcoin. In this paper, effort has been made to understand need of Digital Currency from Central Banks (CBDC). The paper is an attempt to explain possibility of CBDC as replacement of actual currency, advantages and disadvantages for India if we use digital currency and possible impact on monetary policy.

In India, crypto currency is illegal either as means of exchange or as commodity for storage. A study of major crypto currencies around the world in brief will give idea of its disruptive nature in modern world. Efforts in other countries to introduce CBDC so far will also give idea of how far the world has moved to introduce digital currency as legal object. Further, study on basic nature of currency and digital currency and possible technologies for introduction of CBDC in India will give us idea of how far CBDC can replace usage of currency. The study will also look into aspects related to CBDC which can help in India's goal of universal financial inclusion.

The study will help in understanding the nature, method and usage of CBDC in Indian context and desirability and success of CBDC as replacement of actual currency.

Keywords: Central Bank Digital Currency (CBDC), Crypto currency, Disruptive technology, Bitcoin

the unintended intrusion from the digital malicious practices - all are the additional significant risks and challenges, as the probability for the occurrence of these events have increased exponentially due to the latest work arrangements. This paper attempts to evaluate the current risk mitigation strategies and analyse the gaps in the current system. The aim is to effectively manage the upcoming threats and risks in the long-term implementation of the current working (WFH) scenarios. The overall objective of the paper is to (1) analyse the present-day risks (2) evaluate the contemporary ideas that could be modified into solid framework for better risk mitigation strategies in long-term (3) what to anticipate in the future risk analysis and management processes related to IT Project Management.

ABSTRACT:

The global perspective of human life drastically changed after the spread of COVID-19. The world reduced itself, to a digital cocoon. Education, work, commerce, shopping, industry, sales - all walks of life, transformed mostly into a digital mode. The IT (Information Technology) and ITES (IT Enabled services) saw a tremendous transformation in the operational aspects. 'WFH (Work from Home)' enabled the resources to work from their preferred locations. These factors increased the risk of data management and data security. The security of the network and the personal devices used to handle the sensitive and confidential data aggregated the risk factors in project management. The significant challenges faced by the IT sector project management were (1)Global Travel restrictions (2) Forecast of Global Recession in near future and resultant minimization of budget allocated to new projects (3)Negative growth Impact from multiple domains, resulting in reduction of new projects and reducing the scope for existing ones (4)Initial adaptation glitches due to the quantum leap in the digital channels (5)Manage constant fluctuating attitudes and anxieties of employees on personal aspects, job security, drastic change in work environment(6) Unprecedented and unpredictable exorbitant influence of macro environment in the routine enterprise activities. The chances of non-availability of critical resource due to health issues, the network issues faced in the remote locations, the unpredictable exposure of data - all these were contributing elements that increased the risk management complexity. In future, many IT companies have decided to operate mainly in the WFH mode as the operational expenses are drastically reduced. The implementation of efficient and effective risk management strategies become crucial considering the long-term implementation of 'not from office' operating model. The trust of the multinational clients, commitment of meeting the deadlines, maintaining the confidentiality and sensitivity of data, protecting

Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

About the Conference

Contemporary management issues often trigger in us the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices that facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time of pandemic where it is important for all organisations world-wide to embrace the continuous changes in technology, economy, environment, and government policies across all sectors while remaining focused on the organisational mission and goals to remain competitive. The rise in technology adoption by businesses and consumers, economic fallout of the pandemic across the word, the rise of China as a global belligerent force and government policies moving towards a more nationalist agenda are some of the more recent changes that confront businesses and management today.

This conference will be a platform for industry practitioners, academicians, entrepreneurs and research scholars to come to together, to learn, share and discuss current and emerging topics in management with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants. The event has inspirational keynote speakers, practitioner-led workshop sessions, and mutually beneficial networking opportunities.

We invite original papers from interested professionals and researchers to present and participate in the conference in response to the uncertain and complex pandemic scenario and to interconnect all these issues with business sustainability and excellence.

February 2021

Message from Conference Chair

Greetings from International School of Management Excellence! (ISME)

On behalf of ISME Conference Committee, I am honored and delighted to welcome you to our 9th International Conference on 'Contemporary Issues in Management - CIM-21'.

We are living in a world of disruption and drastic changes with different countries being in different parts of the economic cycle which is closely linked to the vaccination cycle. The aim of this conference is to discuss issues relevant to the present time of the pandemic, where it is important for all organizations to embrace the changes in technology, economy, environment and government policies to remain productive and competitive.

This conference will be a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with 2 international keynote speakers,4 eminent speakers at the panel discussion on 'Research frontiers in e-business in the new era' and multiple tracks for paper presentations.

The conference will bring out the latest thoughts and deliberations to enhance management practices. The abstracts for the conference that were earlier accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment

Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector

Track 3: Functional areas of business

Track 4: Management of technology

Track 5: Redefining management education

I am thankful to the conference organizing committee, the Track chairs, Session chairs and the numerous faculty and student volunteers and our knowledge partners for supporting the conference.

Most of all, I thank you participants for enriching the annual conference with your presence. I hope you will enjoy the conference, get new ideas and make new friends with numerous opportunities for networking.

Best Regards,

Dr Rony G Kurien,

Dean and Conference Chair

AN EXAMINATION OF THE ROLE OF SPIRITUAL LEADERSHIP AND SERVANT LEADERSHIP ON KNOWLEDGE CREATION UNDER THE MEDITATING INFLUENCE OF MINDFULNESS

Ms. Preetha Suresh[1] and Dr. M Ramesh Kumar[2]

[1]E Mail ID: preethas.isme20@gmail.com
[2]E Mail ID: ramesh@isme.in

ABSTRACT:

The business environment is in a constant state of flux characterized by increased competition, uncertainty and restructuring to incorporate more effective work models to sustain growth. Organizations are required to leverage employee knowledge and capabilities to ensure sustained competitive advantage. In this process, leaders are required to be the facilitators of knowledge creation and transmission within the organization. Knowledge creation and management is relevant for the workers themselves and for the organizations. In this sense, this paper aims to discuss the role and effectiveness of spiritual and servant leadership in knowledge creation in organizations under the influence of mindfulness. This study also views knowledge creation and management as the dynamic set of activities undertaken by organizations to optimally use the knowledge within the boundaries of the organization. These processes are further linked to complex human involvement and interactions

The relevance of altering leadership dimensions in reaction to paradigm shifts in business processes and workforce management becomes an important study to be undertaken. In this context, the researchers have conducted primary research to explore the relationship between leadership styles and knowledge creation in the organizations. The study looks at both spiritual and service leadership and their influence on knowledge creation strategies in organizations. On the basis of their study the researchers have proposed a model to explore the effectiveness of spiritual and servant leadership styles on knowledge creation at the individual level.

Keywords: Spiritual Leadership, Servant Leadership, Knowledge Creation, Mindfulness.

USING PIOTROSKI F-SCORE FOR ASSESSING FINANCIAL HEALTH: EVIDENCE FROM LEADING INDIAN PRIVATE BANKS

S. Rangapriya[1], and Dr.J. Meenakumari[2]

[1]E Mail ID: rangapriyas.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

This research investigates the efficacy of Piotroski F-score to screen firms with good financial health and to identify early signs of financial distress in Indian banking stocks. This study complements existing empirical evidence which indicate that the venerable model can provide valuable insight for investment decision making and risk management.

The evidence is drawn from valuation signals across leading private banks in India for a period ranging from 2014-2020. Piotroski F-score evaluates companies with a discrete number between zero and nine, the score facilitates determination of financial strength of the company. Higher score indicates better financial health and vice versa. The F-score is calculated as a sum of criteria which evaluates profitability signals, leverage and liquidity, sources of funds and operating efficiencies. In this study, each of these ratios have been analyzed to gain valuable insight on the banks (company-level). Analysis of Variance of various ratios, ascertains intensity of relationship across banks (industry-level). This can help manage exposure in the portfolio as per the economic environment. The Piotroski F-score evaluates the generic financial health of the firm and indicates the direction in which the firm is headed. By studying individual factors, relative strength can be assessed. Piotroski F-score ranged between 0-7 for all the banks under study, indicating that none of them were a 'compelling buy' (score 8 or 9) over the seven-year horizon. Some banks have consistently shown depleting F-score over at least 3 years, this can be interpreted as a signal of financial distress. It is evident that consistent monitoring of F-score empowers pro-active risk management.

This work attempts to introduce Piotroski F-score as an integral valuation metric in evaluating Indian banking stocks. F-score can be used for initial screening; it's consistent monitoring can facilitate optimized returns at risk-adjusted levels.

Keywords: Piotroski, Indian Private Banks, F-score, Valuation, Risk Management

CENTRALBANK DIGITAL CURRENCY (CBDC) CAN IT REPLACE NOTES AND COINS IN INDIA

Dwijendra Kumar Kashyap[1] and Dr.J. Meenakumari[2]

ABSTRACT:

In golden old days when notes and coins were still to become medium of exchange, barter system was prevalent. Many modern analysts feel that the system was free from the complexities in managing modern day's Monetary Policy or issues in International Trade, and therefore had its own advantages. However, with the growth of economies and trade relationship amongst countries, notes and coins emerged as means of exchange with global acceptability of currency unit of some countries in foreign trade. Major disruption in the present system of use of currencies in settlement of goods and services is glaring in the form of digital currencies, popularly known as Crypto Currencies or bitcoin. In this paper, effort has been made to understand need of Digital Currency from Central Banks (CBDC). The paper is an attempt to explain possibility of CBDC as replacement of actual currency, advantages and disadvantages for India if we use digital currency and possible impact on monetary policy.

In India, crypto currency is illegal either as means of exchange or as commodity for storage. A study of major crypto currencies around the world in brief will give idea of its disruptive nature in modern world. Efforts in other countries to introduce CBDC so far will also give idea of how far the world has moved to introduce digital currency as legal object. Further, study on basic nature of currency and digital currency and possible technologies for introduction of CBDC in India will give us idea of how far CBDC can replace usage of currency. The study will also look into aspects related to CBDC which can help in India's goal of universal financial inclusion.

The study will help in understanding the nature, method and usage of CBDC in Indian context and desirability and success of CBDC as replacement of actual currency.

Keywords: Central Bank Digital Currency (CBDC), Crypto currency, Disruptive technology, Bitcoin

the unintended intrusion from the digital malicious practices - all are the additional significant risks and challenges, as the probability for the occurrence of these events have increased exponentially due to the latest work arrangements. This paper attempts to evaluate the current risk mitigation strategies and analyse the gaps in the current system. The aim is to effectively manage the upcoming threats and risks in the long-term implementation of the current working (WFH) scenarios. The overall objective of the paper is to (1) analyse the present-day risks (2) evaluate the contemporary ideas that could be modified into solid framework for better risk mitigation strategies in long-term (3) what to anticipate in the future risk analysis and management processes related to IT Project Management.

ABSTRACT:

The global perspective of human life drastically changed after the spread of COVID-19. The world reduced itself, to a digital cocoon. Education, work, commerce, shopping, industry, sales - all walks of life, transformed mostly into a digital mode. The IT (Information Technology) and ITES (IT Enabled services) saw a tremendous transformation in the operational aspects. 'WFH (Work from Home)' enabled the resources to work from their preferred locations. These factors increased the risk of data management and data security. The security of the network and the personal devices used to handle the sensitive and confidential data aggregated the risk factors in project management. The significant challenges faced by the IT sector project management were (1)Global Travel restrictions (2) Forecast of Global Recession in near future and resultant minimization of budget allocated to new projects (3)Negative growth Impact from multiple domains, resulting in reduction of new projects and reducing the scope for existing ones (4)Initial adaptation glitches due to the quantum leap in the digital channels (5)Manage constant fluctuating attitudes and anxieties of employees on personal aspects, job security, drastic change in work environment(6) Unprecedented and unpredictable exorbitant influence of macro environment in the routine enterprise activities. The chances of non-availability of critical resource due to health issues, the network issues faced in the remote locations, the unpredictable exposure of data - all these were contributing elements that increased the risk management complexity. In future, many IT companies have decided to operate mainly in the WFH mode as the operational expenses are drastically reduced. The implementation of efficient and effective risk management strategies become crucial considering the long-term implementation of 'not from office' operating model. The trust of the multinational clients, commitment of meeting the deadlines, maintaining the confidentiality and sensitivity of data, protecting

A STUDY ON EXISTING CONTRACT FARMING MODELS IN INDIS AND FRAMING MODELS IN INDIA AND FRAMING A HYBRID MODEL

Narayana B[1] and Dr. J. Meenakumari[2]

[1]E Mail ID: narayanab.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

The price fluctuations due to the time lag between the start of the sowing and the harvest of the agricultural produce results in huge distress to farmers. Price fixation in India happens basis the Demand and supply for the produce and basis the Minimum Support Price fixed by the Government from time to time. Durable products can be stored till the desired price is arrived, but in case of Perishable products storing is not an option that can be considered coupled with the lack of availability in required infrastructure. With the current policy changes from the Government of India, contract farming is looked as a means of handling risk on Price fluctuations which enables the farmers and buyers to decide the quantity, quality and price of the agricultural produce even before sowing stage.

This paper is an attempt to highlight the various Models of Contract Farming existing in India along with their prospects and challenges to farmers. Basis the analysis of these models it is very evident that Bargaining power of the corporates are much better when compared to farmers which would put the farmers to test at each stage of execution of the contract farming, which resulted in the need for a new Hybrid model which requires direct intervention from the statutory bodies. This Hybrid model would enable the farmers to have a balanced execution of the contract resulting in the win-win situation for both the farmers and corporates.

Keywords: Price Fluctuations, Contract Farming, Support Price and Agricultural produce.

A STUDY TO EXAMINE THE FACTORS INFLUENCING MOBILE BANKING ADOPTION IN INDIA

Prof. Raja Sankaran[1], Mohammed Yousuf[2], Vannala Lavanya[3]

[2]E Mail ID: yusufunul999@gmail.com
[3]E Mail ID: lavanyavannala@gmail.com

ABSTRACT:

Purpose: The purpose of the study was to examine the factors influencing adoption of mobile banking in India. For this study, four factors namely, Perceived Usefulness, Perceived Ease of Use, Habit, trust were used to determine the consumer perception on mobile banking in India.

Methodology/Approach: An online survey was used to collect data from 113 consumers using mobile banking in India. IBM SPSS was used to test the conceptual model and to validate and statistically analyze the results.

Findings: The factors Perceived Usefulness and Trust were found to be significant on behavioral intention, whereas Perceived Ease of Use and Habit were found not to be significant.

Implications: Banking and Financial organization can use the results from the study to strategize and to attract consumers to adopt m-banking in India.

Keywords: m-banking, Perceived Usefulness, Perceived Ease of Use.

PRIVATE EQUITY AND VENTURE CAPITAL – PREAMBLE

Palash Khatri[1], Sudindra V R[2]

[1]E Mail ID: palashk.isme1921@gmail.com
[2]E Mail ID: sudindravr@isme.in

ABSTRACT:

Private equity investment can offer very strong returns in comparison to any stock market returns or public market investment opportunity. Private equity invests in companies which are not listed in the recognized stock exchange. Every business comes across six stages of the life cycle which include; Development, Start-up, early-stage growth, expansion, maturity, and decline/crisis stage. PE firms invest in the initial three stages. In today's fast-moving world with technological changes very great business plan may hit by various events and successes of companies. Private equity not only invests in companies, but they also provide management support and assist in the overall success of companies. The present study discussed on Birth of US Private equity, Indian Private Equity major players, steps in venture capital funding.

Keywords: Venture capital, Private Equity.

ADOPTING THE UNCERTAINITY: AN INTEGRATIVE LITERATURE REVIEW ON WORK FROM HOME

Prof. Shurlly Tiwari[1], Mr. Rishikesh[2], Ms. Khusboo[3] & Ms. Ishita[4]

ABSTRACT:

Things become revolutionary when people get out of their comfort zone and adapt to the other side of the coin. The concept of remote working was introduced in the early 1980s and this evolution came into mainstream after global pandemic. Working from home allows a broader diversification of optimization of resources which includes labour skills, machinery skills etc. This paper studies how a sudden change can affect the emotional social wellbeing of people. During Pandemic increase in the productivity of employees is observed despite being at home and facing enormous constraints employees are able to perform well constantly across industries. This paper tries to find out the impact of the several factors on employees during WFH.

Thematic analysis was conducted in the paper. This study highlights the importance of Work-life balance as a source of satisfaction among employees. Pandemic 2020 has witnessed the impact of WFH on work life balance, this study is an attempt to identify the definitions, importance, evolution, antecedents and the impact of WFH on overall performance of employees. Research suggests curation of job patterns in this emergency which can minimize the work pressure by achieving maximum efficiency with deterministic values and sustainability in the long run.

TO STUDY THE IMPACT OF WORK FROM HOME ON FACULTY OF HIGHER EDUCATION-BANGALORE

Prof. Shurlly Tiwari[1], Ms. Priyanka Gautam[2] & Ms. Pratibha[3]

ABSTRACT:

Work from home is an arrangement where people do their work outside their traditional workplace settings. The concept of WFH and its impact was realized in 1970s, but it became the main stream during global pandemic-2020, Professional workforce was forced to start work from home. It is also a new acronym in the world of education. Now a day's college and school are no longer the only teaching place for teachers to teach, after pandemic many teachers considering work from home. Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

AN EXAMINATION OF THE ROLE OF SPIRITUAL LEADERSHIP AND SERVANT LEADERSHIP ON KNOWLEDGE CREATION UNDER THE MEDITATING INFLUENCE OF MINDFULNESS

Ms. Preetha Suresh[1] and Dr. M Ramesh Kumar[2]

[1]E Mail ID: preethas.isme20@gmail.com
[2]E Mail ID: ramesh@isme.in

ABSTRACT:

The business environment is in a constant state of flux characterized by increased competition, uncertainty and restructuring to incorporate more effective work models to sustain growth. Organizations are required to leverage employee knowledge and capabilities to ensure sustained competitive advantage. In this process, leaders are required to be the facilitators of knowledge creation and transmission within the organization. Knowledge creation and management is relevant for the workers themselves and for the organizations. In this sense, this paper aims to discuss the role and effectiveness of spiritual and servant leadership in knowledge creation in organizations under the influence of mindfulness. This study also views knowledge creation and management as the dynamic set of activities undertaken by organizations to optimally use the knowledge within the boundaries of the organization. These processes are further linked to complex human involvement and interactions

The relevance of altering leadership dimensions in reaction to paradigm shifts in business processes and workforce management becomes an important study to be undertaken. In this context, the researchers have conducted primary research to explore the relationship between leadership styles and knowledge creation in the organizations. The study looks at both spiritual and service leadership and their influence on knowledge creation strategies in organizations. On the basis of their study the researchers have proposed a model to explore the effectiveness of spiritual and servant leadership styles on knowledge creation at the individual level.

Keywords: Spiritual Leadership, Servant Leadership, Knowledge Creation, Mindfulness.

USING PIOTROSKI F-SCORE FOR ASSESSING FINANCIAL HEALTH: EVIDENCE FROM LEADING INDIAN PRIVATE BANKS

S. Rangapriya[1], and Dr.J. Meenakumari[2]

[1]E Mail ID: rangapriyas.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

This research investigates the efficacy of Piotroski F-score to screen firms with good financial health and to identify early signs of financial distress in Indian banking stocks. This study complements existing empirical evidence which indicate that the venerable model can provide valuable insight for investment decision making and risk management.

The evidence is drawn from valuation signals across leading private banks in India for a period ranging from 2014-2020. Piotroski F-score evaluates companies with a discrete number between zero and nine, the score facilitates determination of financial strength of the company. Higher score indicates better financial health and vice versa. The F-score is calculated as a sum of criteria which evaluates profitability signals, leverage and liquidity, sources of funds and operating efficiencies. In this study, each of these ratios have been analyzed to gain valuable insight on the banks (company-level). Analysis of Variance of various ratios, ascertains intensity of relationship across banks (industry-level). This can help manage exposure in the portfolio as per the economic environment. The Piotroski F-score evaluates the generic financial health of the firm and indicates the direction in which the firm is headed. By studying individual factors, relative strength can be assessed. Piotroski F-score ranged between 0-7 for all the banks under study, indicating that none of them were a 'compelling buy' (score 8 or 9) over the seven-year horizon. Some banks have consistently shown depleting F-score over at least 3 years, this can be interpreted as a signal of financial distress. It is evident that consistent monitoring of F-score empowers pro-active risk management.

This work attempts to introduce Piotroski F-score as an integral valuation metric in evaluating Indian banking stocks. F-score can be used for initial screening; it's consistent monitoring can facilitate optimized returns at risk-adjusted levels.

CENTRALBANK DIGITAL CURRENCY (CBDC) CAN IT REPLACE NOTES AND COINS IN INDIA

Dwijendra Kumar Kashyap[1] and Dr.J. Meenakumari[2]

ABSTRACT:

In golden old days when notes and coins were still to become medium of exchange, barter system was prevalent. Many modern analysts feel that the system was free from the complexities in managing modern day's Monetary Policy or issues in International Trade, and therefore had its own advantages. However, with the growth of economies and trade relationship amongst countries, notes and coins emerged as means of exchange with global acceptability of currency unit of some countries in foreign trade. Major disruption in the present system of use of currencies in settlement of goods and services is glaring in the form of digital currencies, popularly known as Crypto Currencies or bitcoin. In this paper, effort has been made to understand need of Digital Currency from Central Banks (CBDC). The paper is an attempt to explain possibility of CBDC as replacement of actual currency, advantages and disadvantages for India if we use digital currency and possible impact on monetary policy.

In India, crypto currency is illegal either as means of exchange or as commodity for storage. A study of major crypto currencies around the world in brief will give idea of its disruptive nature in modern world. Efforts in other countries to introduce CBDC so far will also give idea of how far the world has moved to introduce digital currency as legal object. Further, study on basic nature of currency and digital currency and possible technologies for introduction of CBDC in India will give us idea of how far CBDC can replace usage of currency. The study will also look into aspects related to CBDC which can help in India's goal of universal financial inclusion.

The study will help in understanding the nature, method and usage of CBDC in Indian context and desirability and success of CBDC as replacement of actual currency.

Keywords: Central Bank Digital Currency (CBDC), Crypto currency, Disruptive technology, Bitcoin

the unintended intrusion from the digital malicious practices - all are the additional significant risks and challenges, as the probability for the occurrence of these events have increased exponentially due to the latest work arrangements. This paper attempts to evaluate the current risk mitigation strategies and analyse the gaps in the current system. The aim is to effectively manage the upcoming threats and risks in the long-term implementation of the current working (WFH) scenarios. The overall objective of the paper is to (1) analyse the present-day risks (2) evaluate the contemporary ideas that could be modified into solid framework for better risk mitigation strategies in long-term (3) what to anticipate in the future risk analysis and management processes related to IT Project Management.

ABSTRACT:

The global perspective of human life drastically changed after the spread of COVID-19. The world reduced itself, to a digital cocoon. Education, work, commerce, shopping, industry, sales - all walks of life, transformed mostly into a digital mode. The IT (Information Technology) and ITES (IT Enabled services) saw a tremendous transformation in the operational aspects. 'WFH (Work from Home)' enabled the resources to work from their preferred locations. These factors increased the risk of data management and data security. The security of the network and the personal devices used to handle the sensitive and confidential data aggregated the risk factors in project management. The significant challenges faced by the IT sector project management were (1)Global Travel restrictions (2) Forecast of Global Recession in near future and resultant minimization of budget allocated to new projects (3)Negative growth Impact from multiple domains, resulting in reduction of new projects and reducing the scope for existing ones (4)Initial adaptation glitches due to the quantum leap in the digital channels (5)Manage constant fluctuating attitudes and anxieties of employees on personal aspects, job security, drastic change in work environment(6) Unprecedented and unpredictable exorbitant influence of macro environment in the routine enterprise activities. The chances of non-availability of critical resource due to health issues, the network issues faced in the remote locations, the unpredictable exposure of data - all these were contributing elements that increased the risk management complexity. In future, many IT companies have decided to operate mainly in the WFH mode as the operational expenses are drastically reduced. The implementation of efficient and effective risk management strategies become crucial considering the long-term implementation of 'not from office' operating model. The trust of the multinational clients, commitment of meeting the deadlines, maintaining the confidentiality and sensitivity of data, protecting

A STUDY ON EXISTING CONTRACT FARMING MODELS IN INDIS AND FRAMING MODELS IN INDIA AND FRAMING A HYBRID MODEL

Narayana B[1] and Dr. J. Meenakumari[2]

[1]E Mail ID: narayanab.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

The price fluctuations due to the time lag between the start of the sowing and the harvest of the agricultural produce results in huge distress to farmers. Price fixation in India happens basis the Demand and supply for the produce and basis the Minimum Support Price fixed by the Government from time to time. Durable products can be stored till the desired price is arrived, but in case of Perishable products storing is not an option that can be considered coupled with the lack of availability in required infrastructure. With the current policy changes from the Government of India, contract farming is looked as a means of handling risk on Price fluctuations which enables the farmers and buyers to decide the quantity, quality and price of the agricultural produce even before sowing stage.

This paper is an attempt to highlight the various Models of Contract Farming existing in India along with their prospects and challenges to farmers. Basis the analysis of these models it is very evident that Bargaining power of the corporates are much better when compared to farmers which would put the farmers to test at each stage of execution of the contract farming, which resulted in the need for a new Hybrid model which requires direct intervention from the statutory bodies. This Hybrid model would enable the farmers to have a balanced execution of the contract resulting in the win-win situation for both the farmers and corporates.

Keywords: Price Fluctuations, Contract Farming, Support Price and Agricultural produce.

A STUDY TO EXAMINE THE FACTORS INFLUENCING MOBILE BANKING ADOPTION IN INDIA

Prof. Raja Sankaran[1], Mohammed Yousuf[2], Vannala Lavanya[3]

[2]E Mail ID: yusufunu1999@gmail.com
[3]E Mail ID: lavanyavannala@gmail.com

ABSTRACT:

Purpose: The purpose of the study was to examine the factors influencing adoption of mobile banking in India. For this study, four factors namely, Perceived Usefulness, Perceived Ease of Use, Habit, trust were used to determine the consumer perception on mobile banking in India.

Methodology/Approach: An online survey was used to collect data from 113 consumers using mobile banking in India. IBM SPSS was used to test the conceptual model and to validate and statistically analyze the results.

Findings: The factors Perceived Usefulness and Trust were found to be significant on behavioral intention, whereas Perceived Ease of Use and Habit were found not to be significant.

Implications: Banking and Financial organization can use the results from the study to strategize and to attract consumers to adopt m-banking in India.

Keywords: m-banking, Perceived Usefulness, Perceived Ease of Use.

PRIVATE EQUITY AND VENTURE CAPITAL – PREAMBLE

Palash Khatri[1], Sudindra V R[2]

[1]*E Mail ID: palashk.isme1921@gmail.com*

[2]*E Mail ID: sudindravr@isme.in*

ABSTRACT:

Private equity investment can offer very strong returns in comparison to any stock market returns or public market investment opportunity. Private equity invests in companies which are not listed in the recognized stock exchange. Every business comes across six stages of the life cycle which include; Development, Start-up, early-stage growth, expansion, maturity, and decline/crisis stage. PE firms invest in the initial three stages. In today's fast-moving world with technological changes very great business plan may hit by various events and successes of companies. Private equity not only invests in companies, but they also provide management support and assist in the overall success of companies. The present study discussed on Birth of US Private equity, Indian Private Equity major players, steps in venture capital funding.

Keywords: Venture capital, Private Equity.

ADOPTING THE UNCERTAINITY: AN INTEGRATIVE LITERATURE REVIEW ON WORK FROM HOME

Prof. Shurlly Tiwari[1], Mr. Rishikesh[2], Ms. Khusboo[3] & Ms. Ishita[4]

ABSTRACT:

Things become revolutionary when people get out of their comfort zone and adapt to the other side of the coin. The concept of remote working was introduced in the early 1980s and this evolution came into mainstream after global pandemic. Working from home allows a broader diversification of optimization of resources which includes labour skills, machinery skills etc. This paper studies how a sudden change can affect the emotional social wellbeing of people. During Pandemic increase in the productivity of employees is observed despite being at home and facing enormous constraints employees are able to perform well constantly across industries. This paper tries to find out the impact of the several factors on employees during WFH.

Thematic analysis was conducted in the paper. This study highlights the importance of Work-life balance as a source of satisfaction among employees. Pandemic 2020 has witnessed the impact of WFH on work life balance, this study is an attempt to identify the definitions, importance, evolution, antecedents and the impact of WFH on overall performance of employees. Research suggests curation of job patterns in this emergency which can minimize the work pressure by achieving maximum efficiency with deterministic values and sustainability in the long run.

TO STUDY THE IMPACT OF WORK FROM HOME ON FACULTY OF HIGHER EDUCATION-BANGALORE

Prof. Shurlly Tiwari[1], Ms. Priyanka Gautam[2] & Ms. Pratibha[3]

ABSTRACT:

Work from home is an arrangement where people do their work outside their traditional workplace settings. The concept of WFH and its impact was realized in 1970s, but it became the main stream during global pandemic-2020, Professional workforce was forced to start work from home. It is also a new acronym in the world of education. Now a day's college and school are no longer the only teaching place for teachers to teach, after pandemic many teachers considering work from home. Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

About the Conference

Contemporary management issues often trigger in us the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices that facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time of pandemic where it is important for all organisations world-wide to embrace the continuous changes in technology, economy, environment, and government policies across all sectors while remaining focused on the organisational mission and goals to remain competitive. The rise in technology adoption by businesses and consumers, economic fallout of the pandemic across the word, the rise of China as a global belligerent force and government policies moving towards a more nationalist agenda are some of the more recent changes that confront businesses and management today.

This conference will be a platform for industry practitioners, academicians, entrepreneurs and research scholars to come to together, to learn, share and discuss current and emerging topics in management with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants. The event has inspirational keynote speakers, practitioner-led workshop sessions, and mutually beneficial networking opportunities.

We invite original papers from interested professionals and researchers to present and participate in the conference in response to the uncertain and complex pandemic scenario and to interconnect all these issues with business sustainability and excellence.

CONTEMPORARY ISSUES IN MANAGEMENT

ABSTRACT PROCEEDINGS

INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE

88, Chambenahalli, Near Dommasandra Circle Sarjapura Road, Bangalore Karnataka

February 2021

Message from Conference Chair

Greetings from International School of Management Excellence! (ISME)

On behalf of ISME Conference Committee, I am honored and delighted to welcome you to our 9th International Conference on 'Contemporary Issues in Management - CIM-21'.

We are living in a world of disruption and drastic changes with different countries being in different parts of the economic cycle which is closely linked to the vaccination cycle. The aim of this conference is to discuss issues relevant to the present time of the pandemic, where it is important for all organizations to embrace the changes in technology, economy, environment and government policies to remain productive and competitive.

This conference will be a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with 2 international keynote speakers,4 eminent speakers at the panel discussion on 'Research frontiers in e-business in the new era' and multiple tracks for paper presentations.

The conference will bring out the latest thoughts and deliberations to enhance management practices. The abstracts for the conference that were earlier accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment

Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector

Track 3: Functional areas of business

Track 4: Management of technology

Track 5: Redefining management education

I am thankful to the conference organizing committee, the Track chairs, Session chairs and the numerous faculty and student volunteers and our knowledge partners for supporting the conference.

Most of all, I thank you participants for enriching the annual conference with your presence. I hope you will enjoy the conference, get new ideas and make new friends with numerous opportunities for networking.

Best Regards,

Dr Rony G Kurien,

Dean and Conference Chair

USING PIOTROSKI F-SCORE FOR ASSESSING FINANCIAL HEALTH: EVIDENCE FROM LEADING INDIAN PRIVATE BANKS

S. Rangapriya[1], and Dr.J. Meenakumari[2]

[1]E Mail ID: rangapriyas.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

This research investigates the efficacy of Piotroski F-score to screen firms with good financial health and to identify early signs of financial distress in Indian banking stocks. This study complements existing empirical evidence which indicate that the venerable model can provide valuable insight for investment decision making and risk management.

The evidence is drawn from valuation signals across leading private banks in India for a period ranging from 2014-2020. Piotroski F-score evaluates companies with a discrete number between zero and nine, the score facilitates determination of financial strength of the company. Higher score indicates better financial health and vice versa. The F-score is calculated as a sum of criteria which evaluates profitability signals, leverage and liquidity, sources of funds and operating efficiencies. In this study, each of these ratios have been analyzed to gain valuable insight on the banks (company-level). Analysis of Variance of various ratios, ascertains intensity of relationship across banks (industry-level). This can help manage exposure in the portfolio as per the economic environment. The Piotroski F-score evaluates the generic financial health of the firm and indicates the direction in which the firm is headed. By studying individual factors, relative strength can be assessed. Piotroski F-score ranged between 0-7 for all the banks under study, indicating that none of them were a 'compelling buy' (score 8 or 9) over the seven-year horizon. Some banks have consistently shown depleting F-score over at least 3 years, this can be interpreted as a signal of financial distress. It is evident that consistent monitoring of F-score empowers pro-active risk management.

This work attempts to introduce Piotroski F-score as an integral valuation metric in evaluating Indian banking stocks. F-score can be used for initial screening; it's consistent monitoring can facilitate optimized returns at risk-adjusted levels.

CENTRALBANK DIGITAL CURRENCY (CBDC) CAN IT REPLACE NOTES AND COINS IN INDIA

Dwijendra Kumar Kashyap[1] and Dr.J. Meenakumari[2]

ABSTRACT:

In golden old days when notes and coins were still to become medium of exchange, barter system was prevalent. Many modern analysts feel that the system was free from the complexities in managing modern day's Monetary Policy or issues in International Trade, and therefore had its own advantages. However, with the growth of economies and trade relationship amongst countries, notes and coins emerged as means of exchange with global acceptability of currency unit of some countries in foreign trade. Major disruption in the present system of use of currencies in settlement of goods and services is glaring in the form of digital currencies, popularly known as Crypto Currencies or bitcoin. In this paper, effort has been made to understand need of Digital Currency from Central Banks (CBDC). The paper is an attempt to explain possibility of CBDC as replacement of actual currency, advantages and disadvantages for India if we use digital currency and possible impact on monetary policy.

In India, crypto currency is illegal either as means of exchange or as commodity for storage. A study of major crypto currencies around the world in brief will give idea of its disruptive nature in modern world. Efforts in other countries to introduce CBDC so far will also give idea of how far the world has moved to introduce digital currency as legal object. Further, study on basic nature of currency and digital currency and possible technologies for introduction of CBDC in India will give us idea of how far CBDC can replace usage of currency. The study will also look into aspects related to CBDC which can help in India's goal of universal financial inclusion.

The study will help in understanding the nature, method and usage of CBDC in Indian context and desirability and success of CBDC as replacement of actual currency.

Keywords: Central Bank Digital Currency (CBDC), Crypto currency, Disruptive technology, Bitcoin

ABSTRACT:

The global perspective of human life drastically changed after the spread of COVID-19. The world reduced itself, to a digital cocoon. Education, work, commerce, shopping, industry, sales - all walks of life, transformed mostly into a digital mode. The IT (Information Technology) and ITES (IT Enabled services) saw a tremendous transformation in the operational aspects. 'WFH (Work from Home)' enabled the resources to work from their preferred locations. These factors increased the risk of data management and data security. The security of the network and the personal devices used to handle the sensitive and confidential data aggregated the risk factors in project management. The significant challenges faced by the IT sector project management were (1)Global Travel restrictions (2) Forecast of Global Recession in near future and resultant minimization of budget allocated to new projects (3)Negative growth Impact from multiple domains, resulting in reduction of new projects and reducing the scope for existing ones (4)Initial adaptation glitches due to the quantum leap in the digital channels (5)Manage constant fluctuating attitudes and anxieties of employees on personal aspects, job security, drastic change in work environment(6) Unprecedented and unpredictable exorbitant influence of macro environment in the routine enterprise activities. The chances of non-availability of critical resource due to health issues, the network issues faced in the remote locations, the unpredictable exposure of data - all these were contributing elements that increased the risk management complexity. In future, many IT companies have decided to operate mainly in the WFH mode as the operational expenses are drastically reduced. The implementation of efficient and effective risk management strategies become crucial considering the long-term implementation of 'not from office' operating model. The trust of the multinational clients, commitment of meeting the deadlines, maintaining the confidentiality and sensitivity of data, protecting

A STUDY ON EXISTING CONTRACT FARMING MODELS IN INDIS AND FRAMING MODELS IN INDIA AND FRAMING A HYBRID MODEL

Narayana B[1] and Dr. J. Meenakumari[2]

[1]E Mail ID: narayanab.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

The price fluctuations due to the time lag between the start of the sowing and the harvest of the agricultural produce results in huge distress to farmers. Price fixation in India happens basis the Demand and supply for the produce and basis the Minimum Support Price fixed by the Government from time to time. Durable products can be stored till the desired price is arrived, but in case of Perishable products storing is not an option that can be considered coupled with the lack of availability in required infrastructure. With the current policy changes from the Government of India, contract farming is looked as a means of handling risk on Price fluctuations which enables the farmers and buyers to decide the quantity, quality and price of the agricultural produce even before sowing stage.

This paper is an attempt to highlight the various Models of Contract Farming existing in India along with their prospects and challenges to farmers. Basis the analysis of these models it is very evident that Bargaining power of the corporates are much better when compared to farmers which would put the farmers to test at each stage of execution of the contract farming, which resulted in the need for a new Hybrid model which requires direct intervention from the statutory bodies. This Hybrid model would enable the farmers to have a balanced execution of the contract resulting in the win-win situation for both the farmers and corporates.

A STUDY TO EXAMINE THE FACTORS INFLUENCING MOBILE BANKING ADOPTION IN INDIA

Prof. Raja Sankaran[1], Mohammed Yousuf[2], Vannala Lavanya[3]

[2]E Mail ID: yusufunu1999@gmail.com
[3]E Mail ID: lavanyavannala@gmail.com

ABSTRACT:

Purpose: The purpose of the study was to examine the factors influencing adoption of mobile banking in India. For this study, four factors namely, Perceived Usefulness, Perceived Ease of Use, Habit, trust were used to determine the consumer perception on mobile banking in India.

Methodology/Approach: An online survey was used to collect data from 113 consumers using mobile banking in India. IBM SPSS was used to test the conceptual model and to validate and statistically analyze the results.

Findings: The factors Perceived Usefulness and Trust were found to be significant on behavioral intention, whereas Perceived Ease of Use and Habit were found not to be significant.

Implications: Banking and Financial organization can use the results from the study to strategize and to attract consumers to adopt m-banking in India.

Keywords: m-banking, Perceived Usefulness, Perceived Ease of Use.

PRIVATE EQUITY AND VENTURE CAPITAL – PREAMBLE

Palash Khatri[1], Sudindra V R[2]

[1]E Mail ID: palashk.isme1921@gmail.com
[2]E Mail ID: sudindravr@isme.in

ABSTRACT:

Private equity investment can offer very strong returns in comparison to any stock market returns or public market investment opportunity. Private equity invests in companies which are not listed in the recognized stock exchange. Every business comes across six stages of the life cycle which include; Development, Start-up, early-stage growth, expansion, maturity, and decline/crisis stage. PE firms invest in the initial three stages. In today's fast-moving world with technological changes very great business plan may hit by various events and successes of companies. Private equity not only invests in companies, but they also provide management support and assist in the overall success of companies. The present study discussed on Birth of US Private equity, Indian Private Equity major players, steps in venture capital funding.

ADOPTING THE UNCERTAINITY: AN INTEGRATIVE LITERATURE REVIEW ON WORK FROM HOME

Prof. Shurlly Tiwari[1], Mr. Rishikesh[2], Ms. Khusboo[3] & Ms. Ishita[4]

ABSTRACT:

Things become revolutionary when people get out of their comfort zone and adapt to the other side of the coin. The concept of remote working was introduced in the early 1980s and this evolution came into mainstream after global pandemic. Working from home allows a broader diversification of optimization of resources which includes labour skills, machinery skills etc. This paper studies how a sudden change can affect the emotional social wellbeing of people. During Pandemic increase in the productivity of employees is observed despite being at home and facing enormous constraints employees are able to perform well constantly across industries. This paper tries to find out the impact of the several factors on employees during WFH.

Thematic analysis was conducted in the paper. This study highlights the importance of Work-life balance as a source of satisfaction among employees. Pandemic 2020 has witnessed the impact of WFH on work life balance, this study is an attempt to identify the definitions, importance, evolution, antecedents and the impact of WFH on overall performance of employees. Research suggests curation of job patterns in this emergency which can minimize the work pressure by achieving maximum efficiency with deterministic values and sustainability in the long run.

TO STUDY THE IMPACT OF WORK FROM HOME ON FACULTY OF HIGHER EDUCATION-BANGALORE

Prof. Shurlly Tiwari[1], Ms. Priyanka Gautam[2] & Ms. Pratibha[3]

ABSTRACT:

Work from home is an arrangement where people do their work outside their traditional workplace settings. The concept of WFH and its impact was realized in 1970s, but it became the main stream during global pandemic-2020, Professional workforce was forced to start work from home. It is also a new acronym in the world of education. Now a day's college and school are no longer the only teaching place for teachers to teach, after pandemic many teachers considering work from home. Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

About the Conference

Contemporary management issues often trigger in us the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices that facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time of pandemic where it is important for all organisations world-wide to embrace the continuous changes in technology, economy, environment, and government policies across all sectors while remaining focused on the organisational mission and goals to remain competitive. The rise in technology adoption by businesses and consumers, economic fallout of the pandemic across the word, the rise of China as a global belligerent force and government policies moving towards a more nationalist agenda are some of the more recent changes that confront businesses and management today.

This conference will be a platform for industry practitioners, academicians, entrepreneurs and research scholars to come to together, to learn, share and discuss current and emerging topics in management with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants. The event has inspirational keynote speakers, practitioner-led workshop sessions, and mutually beneficial networking opportunities.

We invite original papers from interested professionals and researchers to present and participate in the conference in response to the uncertain and complex pandemic scenario and to interconnect all these issues with business sustainability and excellence.

CONTEMPORARY ISSUES IN MANAGEMENT

ABSTRACT PROCEEDINGS

INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE

88, Chambenahalli, Near Dommasandra Circle Sarjapura Road, Bangalore Karnataka

February 2021

Message from Conference Chair

Greetings from International School of Management Excellence! (ISME)

On behalf of ISME Conference Committee, I am honored and delighted to welcome you to our 9th International Conference on 'Contemporary Issues in Management - CIM-21'.

We are living in a world of disruption and drastic changes with different countries being in different parts of the economic cycle which is closely linked to the vaccination cycle. The aim of this conference is to discuss issues relevant to the present time of the pandemic, where it is important for all organizations to embrace the changes in technology, economy, environment and government policies to remain productive and competitive.

This conference will be a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with 2 international keynote speakers,4 eminent speakers at the panel discussion on 'Research frontiers in e-business in the new era' and multiple tracks for paper presentations.

The conference will bring out the latest thoughts and deliberations to enhance management practices. The abstracts for the conference that were earlier accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment

Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector

Track 3: Functional areas of business

Track 4: Management of technology

Track 5: Redefining management education

I am thankful to the conference organizing committee, the Track chairs, Session chairs and the numerous faculty and student volunteers and our knowledge partners for supporting the conference.

Most of all, I thank you participants for enriching the annual conference with your presence. I hope you will enjoy the conference, get new ideas and make new friends with numerous opportunities for networking.

Best Regards,

Dr Rony G Kurien,

Dean and Conference Chair

ABSTRACT:

The business environment is in a constant state of flux characterized by increased competition, uncertainty and restructuring to incorporate more effective work models to sustain growth. Organizations are required to leverage employee knowledge and capabilities to ensure sustained competitive advantage. In this process, leaders are required to be the facilitators of knowledge creation and transmission within the organization. Knowledge creation and management is relevant for the workers themselves and for the organizations. In this sense, this paper aims to discuss the role and effectiveness of spiritual and servant leadership in knowledge creation in organizations under the influence of mindfulness. This study also views knowledge creation and management as the dynamic set of activities undertaken by organizations to optimally use the knowledge within the boundaries of the organization. These processes are further linked to complex human involvement and interactions

The relevance of altering leadership dimensions in reaction to paradigm shifts in business processes and workforce management becomes an important study to be undertaken. In this context, the researchers have conducted primary research to explore the relationship between leadership styles and knowledge creation in the organizations. The study looks at both spiritual and service leadership and their influence on knowledge creation strategies in organizations. On the basis of their study the researchers have proposed a model to explore the effectiveness of spiritual and servant leadership styles on knowledge creation at the individual level.

ABSTRACT:

The price fluctuations due to the time lag between the start of the sowing and the harvest of the agricultural produce results in huge distress to farmers. Price fixation in India happens basis the Demand and supply for the produce and basis the Minimum Support Price fixed by the Government from time to time. Durable products can be stored till the desired price is arrived, but in case of Perishable products storing is not an option that can be considered coupled with the lack of availability in required infrastructure. With the current policy changes from the Government of India, contract farming is looked as a means of handling risk on Price fluctuations which enables the farmers and buyers to decide the quantity, quality and price of the agricultural produce even before sowing stage.

This paper is an attempt to highlight the various Models of Contract Farming existing in India along with their prospects and challenges to farmers. Basis the analysis of these models it is very evident that Bargaining power of the corporates are much better when compared to farmers which would put the farmers to test at each stage of execution of the contract farming, which resulted in the need for a new Hybrid model which requires direct intervention from the statutory bodies. This Hybrid model would enable the farmers to have a balanced execution of the contract resulting in the win-win situation for both the farmers and corporates.

A STUDY TO EXAMINE THE FACTORS INFLUENCING MOBILE BANKING ADOPTION IN INDIA

Prof. Raja Sankaran[1], Mohammed Yousuf[2], Vannala Lavanya[3]

[2]E Mail ID: yusufunu1999@gmail.com
[3]E Mail ID: lavanyavannala@gmail.com

ABSTRACT:

Purpose: The purpose of the study was to examine the factors influencing adoption of mobile banking in India. For this study, four factors namely, Perceived Usefulness, Perceived Ease of Use, Habit, trust were used to determine the consumer perception on mobile banking in India.

Methodology/Approach: An online survey was used to collect data from 113 consumers using mobile banking in India. IBM SPSS was used to test the conceptual model and to validate and statistically analyze the results.

Findings: The factors Perceived Usefulness and Trust were found to be significant on behavioral intention, whereas Perceived Ease of Use and Habit were found not to be significant.

Implications: Banking and Financial organization can use the results from the study to strategize and to attract consumers to adopt m-banking in India.

Keywords: m-banking, Perceived Usefulness, Perceived Ease of Use.

PRIVATE EQUITY AND VENTURE CAPITAL – PREAMBLE

ABSTRACT:

Private equity investment can offer very strong returns in comparison to any stock market returns or public market investment opportunity. Private equity invests in companies which are not listed in the recognized stock exchange. Every business comes across six stages of the life cycle which include; Development, Start-up, early-stage growth, expansion, maturity, and decline/crisis stage. PE firms invest in the initial three stages. In today's fast-moving world with technological changes very great business plan may hit by various events and successes of companies. Private equity not only invests in companies, but they also provide management support and assist in the overall success of companies. The present study discussed on Birth of US Private equity, Indian Private Equity major players, steps in venture capital funding.

Keywords: Venture capital, Private Equity.

ADOPTING THE UNCERTAINITY: AN INTEGRATIVE LITERATURE REVIEW ON WORK FROM HOME

Prof. Shurlly Tiwari[1], Mr. Rishikesh[2], Ms. Khusboo[3] & Ms. Ishita[4]

ABSTRACT:

Things become revolutionary when people get out of their comfort zone and adapt to the other side of the coin. The concept of remote working was introduced in the early 1980s and this evolution came into mainstream after global pandemic. Working from home allows a broader diversification of optimization of resources which includes labour skills, machinery skills etc. This paper studies how a sudden change can affect the emotional social wellbeing of people. During Pandemic increase in the productivity of employees is observed despite being at home and facing enormous constraints employees are able to perform well constantly across industries. This paper tries to find out the impact of the several factors on employees during WFH.

Thematic analysis was conducted in the paper. This study highlights the importance of Work-life balance as a source of satisfaction among employees. Pandemic 2020 has witnessed the impact of WFH on work life balance, this study is an attempt to identify the definitions, importance, evolution, antecedents and the impact of WFH on overall performance of employees. Research suggests curation of job patterns in this emergency which can minimize the work pressure by achieving maximum efficiency with deterministic values and sustainability in the long run.

TO STUDY THE IMPACT OF WORK FROM HOME ON FACULTY OF HIGHER EDUCATION-BANGALORE

Prof. Shurlly Tiwari[1], Ms. Priyanka Gautam[2] & Ms. Pratibha[3]

ABSTRACT:

Work from home is an arrangement where people do their work outside their traditional workplace settings. The concept of WFH and its impact was realized in 1970s, but it became the main stream during global pandemic-2020, Professional workforce was forced to start work from home. It is also a new acronym in the world of education. Now a day's college and school are no longer the only teaching place for teachers to teach, after pandemic many teachers considering work from home. Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

About the Conference

Contemporary management issues often trigger in us the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices that facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time of pandemic where it is important for all organisations world-wide to embrace the continuous changes in technology, economy, environment, and government policies across all sectors while remaining focused on the organisational mission and goals to remain competitive. The rise in technology adoption by businesses and consumers, economic fallout of the pandemic across the word, the rise of China as a global belligerent force and government policies moving towards a more nationalist agenda are some of the more recent changes that confront businesses and management today.

This conference will be a platform for industry practitioners, academicians, entrepreneurs and research scholars to come to together, to learn, share and discuss current and emerging topics in management with thought leaders, technologists, and learning experts. This would be a great knowledge sharing event for a diverse audience embracing international and national participants. The event has inspirational keynote speakers, practitioner-led workshop sessions, and mutually beneficial networking opportunities.

We invite original papers from interested professionals and researchers to present and participate in the conference in response to the uncertain and complex pandemic scenario and to interconnect all these issues with business sustainability and excellence.

CONTEMPORARY ISSUES IN MANAGEMENT

ABSTRACT PROCEEDINGS

INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE

88, Chambenahalli, Near Dommasandra Circle Sarjapura Road, Bangalore Karnataka

February 2021

Message from Conference Chair

Greetings from International School of Management Excellence! (ISME)

On behalf of ISME Conference Committee, I am honored and delighted to welcome you to our 9th International Conference on 'Contemporary Issues in Management - CIM-21'.

We are living in a world of disruption and drastic changes with different countries being in different parts of the economic cycle which is closely linked to the vaccination cycle. The aim of this conference is to discuss issues relevant to the present time of the pandemic, where it is important for all organizations to embrace the changes in technology, economy, environment and government policies to remain productive and competitive.

This conference will be a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with 2 international keynote speakers,4 eminent speakers at the panel discussion on 'Research frontiers in e-business in the new era' and multiple tracks for paper presentations.

The conference will bring out the latest thoughts and deliberations to enhance management practices. The abstracts for the conference that were earlier accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment

Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector

Track 3: Functional areas of business

Track 4: Management of technology

Track 5: Redefining management education

I am thankful to the conference organizing committee, the Track chairs, Session chairs and the numerous faculty and student volunteers and our knowledge partners for supporting the conference.

Most of all, I thank you participants for enriching the annual conference with your presence. I hope you will enjoy the conference, get new ideas and make new friends with numerous opportunities for networking.

Best Regards,

Dr Rony G Kurien,

Dean and Conference Chair

ABSTRACT:

The business environment is in a constant state of flux characterized by increased competition, uncertainty and restructuring to incorporate more effective work models to sustain growth. Organizations are required to leverage employee knowledge and capabilities to ensure sustained competitive advantage. In this process, leaders are required to be the facilitators of knowledge creation and transmission within the organization. Knowledge creation and management is relevant for the workers themselves and for the organizations. In this sense, this paper aims to discuss the role and effectiveness of spiritual and servant leadership in knowledge creation in organizations under the influence of mindfulness. This study also views knowledge creation and management as the dynamic set of activities undertaken by organizations to optimally use the knowledge within the boundaries of the organization. These processes are further linked to complex human involvement and interactions

The relevance of altering leadership dimensions in reaction to paradigm shifts in business processes and workforce management becomes an important study to be undertaken. In this context, the researchers have conducted primary research to explore the relationship between leadership styles and knowledge creation in the organizations. The study looks at both spiritual and service leadership and their influence on knowledge creation strategies in organizations. On the basis of their study the researchers have proposed a model to explore the effectiveness of spiritual and servant leadership styles on knowledge creation at the individual level.

Keywords: Spiritual Leadership, Servant Leadership, Knowledge Creation, Mindfulness.

USING PIOTROSKI F-SCORE FOR ASSESSING FINANCIAL HEALTH: EVIDENCE FROM LEADING INDIAN PRIVATE BANKS

S. Rangapriya[1], and Dr.J. Meenakumari[2]

[1]E Mail ID: rangapriyas.isme20@gmail.com
[2]E Mail ID: meenakumari@isme.in

ABSTRACT:

This research investigates the efficacy of Piotroski F-score to screen firms with good financial health and to identify early signs of financial distress in Indian banking stocks. This study complements existing empirical evidence which indicate that the venerable model can provide valuable insight for investment decision making and risk management.

The evidence is drawn from valuation signals across leading private banks in India for a period ranging from 2014-2020. Piotroski F-score evaluates companies with a discrete number between zero and nine, the score facilitates determination of financial strength of the company. Higher score indicates better financial health and vice versa. The F-score is calculated as a sum of criteria which evaluates profitability signals, leverage and liquidity, sources of funds and operating efficiencies. In this study, each of these ratios have been analyzed to gain valuable insight on the banks (company-level). Analysis of Variance of various ratios, ascertains intensity of relationship across banks (industry-level). This can help manage exposure in the portfolio as per the economic environment. The Piotroski F-score evaluates the generic financial health of the firm and indicates the direction in which the firm is headed. By studying individual factors, relative strength can be assessed. Piotroski F-score ranged between 0-7 for all the banks under study, indicating that none of them were a 'compelling buy' (score 8 or 9) over the seven-year horizon. Some banks have consistently shown depleting F-score over at least 3 years, this can be interpreted as a signal of financial distress. It is evident that consistent monitoring of F-score empowers pro-active risk management.

This work attempts to introduce Piotroski F-score as an integral valuation metric in evaluating Indian banking stocks. F-score can be used for initial screening; it's consistent monitoring can facilitate optimized returns at risk-adjusted levels.

CENTRALBANK DIGITAL CURRENCY (CBDC) CAN IT REPLACE NOTES AND COINS IN INDIA

Dwijendra Kumar Kashyap[1] and Dr.J. Meenakumari[2]

ABSTRACT:

In golden old days when notes and coins were still to become medium of exchange, barter system was prevalent. Many modern analysts feel that the system was free from the complexities in managing modern day's Monetary Policy or issues in International Trade, and therefore had its own advantages. However, with the growth of economies and trade relationship amongst countries, notes and coins emerged as means of exchange with global acceptability of currency unit of some countries in foreign trade. Major disruption in the present system of use of currencies in settlement of goods and services is glaring in the form of digital currencies, popularly known as Crypto Currencies or bitcoin. In this paper, effort has been made to understand need of Digital Currency from Central Banks (CBDC). The paper is an attempt to explain possibility of CBDC as replacement of actual currency, advantages and disadvantages for India if we use digital currency and possible impact on monetary policy.

In India, crypto currency is illegal either as means of exchange or as commodity for storage. A study of major crypto currencies around the world in brief will give idea of its disruptive nature in modern world. Efforts in other countries to introduce CBDC so far will also give idea of how far the world has moved to introduce digital currency as legal object. Further, study on basic nature of currency and digital currency and possible technologies for introduction of CBDC in India will give us idea of how far CBDC can replace usage of currency. The study will also look into aspects related to CBDC which can help in India's goal of universal financial inclusion.

The study will help in understanding the nature, method and usage of CBDC in Indian context and desirability and success of CBDC as replacement of actual currency.

Keywords: Central Bank Digital Currency (CBDC), Crypto currency, Disruptive technology, Bitcoin

the unintended intrusion from the digital malicious practices - all are the additional significant risks and challenges, as the probability for the occurrence of these events have increased exponentially due to the latest work arrangements. This paper attempts to evaluate the current risk mitigation strategies and analyse the gaps in the current system. The aim is to effectively manage the upcoming threats and risks in the long-term implementation of the current working (WFH) scenarios. The overall objective of the paper is to (1) analyse the present-day risks (2) evaluate the contemporary ideas that could be modified into solid framework for better risk mitigation strategies in long-term (3) what to anticipate in the future risk analysis and management processes related to IT Project Management.

ABSTRACT:

The global perspective of human life drastically changed after the spread of COVID-19. The world reduced itself, to a digital cocoon. Education, work, commerce, shopping, industry, sales - all walks of life, transformed mostly into a digital mode. The IT (Information Technology) and ITES (IT Enabled services) saw a tremendous transformation in the operational aspects. 'WFH (Work from Home)' enabled the resources to work from their preferred locations. These factors increased the risk of data management and data security. The security of the network and the personal devices used to handle the sensitive and confidential data aggregated the risk factors in project management. The significant challenges faced by the IT sector project management were (1)Global Travel restrictions (2) Forecast of Global Recession in near future and resultant minimization of budget allocated to new projects (3)Negative growth Impact from multiple domains, resulting in reduction of new projects and reducing the scope for existing ones (4)Initial adaptation glitches due to the quantum leap in the digital channels (5)Manage constant fluctuating attitudes and anxieties of employees on personal aspects, job security, drastic change in work environment(6) Unprecedented and unpredictable exorbitant influence of macro environment in the routine enterprise activities. The chances of non-availability of critical resource due to health issues, the network issues faced in the remote locations, the unpredictable exposure of data - all these were contributing elements that increased the risk management complexity. In future, many IT companies have decided to operate mainly in the WFH mode as the operational expenses are drastically reduced. The implementation of efficient and effective risk management strategies become crucial considering the long-term implementation of 'not from office' operating model. The trust of the multinational clients, commitment of meeting the deadlines, maintaining the confidentiality and sensitivity of data, protecting

Online teaching is a new reality which teachers are facing now with the help of new technology but in this, we forget about their wellbeing by which their efficiency gets affected.

The purpose of this study is to identify the impact of WFH on the efficiency and quality of teaching and identifying the job satisfaction level and experience of teachers.

In this study, structured interview is conducted. Total of 60 respondents are approached but able to conduct interviews of 35 faculty members of higher education (Management & Engineering).

This study analyses the levels of efficiency, quality of education provided, level of stress and productivity among faculties. The findings provide us an understanding of the challenges that they are facing, and how this structure benefits them.

This study will also give a new perspective and approach to the management of academic institutes, about work management strategies for teachers. It will also help in data analysis by finding correlations, weighted means, and percentage calculations.

Keywords: Work from home, Online teaching, efficiency, quality education.

ALTERED CONSUMER BUYING BEHAVIOR DUE TO COVID-19

Lucita Deruz[1], N.S.V. Supreetha[2], Rema Viswanathan[3]

ABSTRACT:

COVID-19 has changed the world profoundly affecting the way people buy goods amongst many things as observed by us. In real time, the virus is reshaping the hygiene product market, quickly accelerating long-term patterns in just few months. This study explores the change in buying behavior of consumers towards product categories such as FMCG products, groceries, COVID essentials, apparels, etc. from offline to online. The objective of this study is to identify the main segment of consumers who are exhibiting changes in shopping behavior in the COVID-19 era. The findings of this study can enable small businesses to modify their selling ways so as to cater effectively to the relevant segments. The methodology used is survey method via online questionnaires. The questionnaire focused on retrieving information related to how this group of consumers purchase actions, their hygiene, mindset, consumption has changed since the onset of the pandemic and during lockdown. A total of 100 responses were received from people belonging to various walks of life and cross-tabulation analysis was performed on the responses gathered.

The data collected from the questionnaire was cross tabulated with different demographics like age, gender, income in order to determine the target segment being affected by the shift. The results of cross-tabulation showed that the change in consumer behavior mainly in females, with income ranging between 20,000 Rs to 30,000 Rs. and belonging to the age group 18-27. Majority moved to online shopping sites like amazon and Big Basket from offline shopping options like Kirana stores or D-Mart. Even online consumption of the non-essential items like apparels, electronics and other purchases such as belts, toys etc. has increased in this particular segment during the pandemic period. The income vs consumption cross-tabulation also proved that the younger generation of women are spending more online for Covid essentials than what they were spending offline, therefore showing a major leaning towards hygiene and health related

products. Looking at the age and income group, we concluded that millennial women have been mostly affected. Factors such as the fear of contracting the virus, government regulations and Doctor's advice have further encouraged the shift. Based on the conclusion derived through our research it is essential that small businesses need to adapt to the change and incorporate online selling as a way to hold their ground in this changing economy while also keeping in mind the affected segment. Limitations of the study include smaller samples and online survey method that does not allow in-depth understanding of consumer behavior. Further research on the impact of Covid-19 on different classes in rural areas and across different towns and cities in India would further enhance the results of this study.

Keywords: Consumer buying behavior, COVID-19, online shopping, consumption, offline shopping, small business

Part of the Communications in Computer and Information Science book series (CCIS,volume 1483)

Abstract

This study explores the enterprise systems technology solutions and various phases of its evolution that triggered through the wide adoption of product development practices and process involvement, the significance of enterprise systems and various technology evolution that enhanced the dynamics of the enterprise computing systems, with an improved performance, scalability are

discussed. The emergence of hypervisor and virtualization platform solutions benefited the enterprise organizations to scale their infrastructure and application portfolio to meet the dynamic business needs without major challenges. Over the last few years web based cloud platform adoption is booming, that offers enterprise computing solutions “as a service” with subscription based pay as you utilize pricing model that brings nearly no CAPEX to avail the solution and enabled with the high-availability, scalability, elasticity, security and governance. More recently, with the proliferation in the industry ecosystem, customer demands across the board, and wide range of technology solutions adoption and frequent innovations, led us to, yet another industry revolution 4.0 - which references to various digital transformation paradigms and other pioneering solutions i.e., automation, artificial intelligence, machine learning etc., through this descriptive study paper assessed the key factors to realize AI, probable way to adopt AI, use cases, inferences, competitive advantages, current and futuristic perspectives and opportunities to address the contiguous inevitable challenges through adoption of artificial intelligence; further discussed on the emergence of AI, benefits, gaps and recommendations to achieve it, are explained in detail.

ABSTRACT

The study aims to understand the knowledge structure of the evolving segment of FinTech credit. The study performs a bibliometric analysis of peer-reviewed articles published from 2010 to 2021. The study conducts citation analysis of articles, journals, and authors to establish the knowledge base of the scholarly work on FinTech credit. The study undertakes keyword analysis, co-author analysis, and co-citation analysis to highlight the intellectual structure of FinTech credit. The bibliographic coupling aids in recognizing the research front on FinTech credit and presents the way forward to future scholars.

The key findings are the following:

- Majority of the studies on FinTech credit have focused on the markets of China, the UK, and the USA. The reasons for focusing on these three markets are (i) the public availability of FinTech credit data and (ii) the willingness of the FinTech firms in these regions to share the data. China leads the pack because it provides strong incentives to its scholars in terms of research grants. Further, the authorship analysis reveals that Chinese scholars have developed a strong collaboration network, which has led to more studies on the FinTech credit market in China.
- The most influential studies on FinTech credit have focused on the FinTech ecosystem, mobile banking, P2P lending, or crowdfunding.
- The co-citation analysis reveals that past studies have focused on the following three themes, i.e. (i) Factors that motivate consumers to adopt technological products and services, (ii) Attributes of borrowers and lenders that impact the fund-raising in FinTech credit platforms, and (iii) Transformation of FinTech market over the years.

Keywords: *Bibliometric Analysis, Co-Citation Analysis, Fintech Ecosystem, Mobile Banking, P2P Lending, Crowdfunding.*

An Exploratory analysis of Machine Learning adaptability in Big Data Analytics Environments: A Data Aggregation in the age of Big Data and the Internet of Things

***Abstract*— The paper discusses a new concept combining the potentialities of Big Data processing as well as machine learning developed for security monitoring of mobile Internet of Things. The structure of the security monitoring system is considered as a most effective and useful element to create a new viewpoint of mobile IoT. This article focuses implementation of machine learning in online education. Thus mobile IoT has found successful application in few areas such as security monitoring in public places, transport management,medicine, smart houses, industrial production, electrical consumption, and robotics. All the mathematical foundations along with issues related to this have been considered in this study. In order to solve the classification task, several machine learning mechanisms have been mentioned in this paper. Large organizations are incorporating data-driven actions, and decision making in organizational function. The role of data aggregation is effective here achieving the business objectives. Vast amount of raw data can be processed linearly through data aggregation. This article describes the interaction of data aggregation through wireless networking assuming its effectiveness in online education. Data aggregation in machine learning is highlighted based on evidence based data.**

The purpose of this research article is to investigate the machine learning adaptability in big data analytics environments with the approach of IoT. In order to collect accurate data, the researcher has taken the help of a secondarydata collection method. It has helped the researcher to find out the valid information about mobile IoT. In addition, qualitativemethods have been adapted to malaise the collected data within a systematic way. Moreover, this study will help the readers to understand the value of mobile IoT helping in machine learning adaptability in big data analytics.

Keywords*— *Big Data, IoT, Machine learning, data analytics,data aggregation, integration of ML, ML adaptability

I. INTRODUCTION

Presently, the entire society is affected by a sudden health emergency, and it has changed the way of living. Covid-19 has explored fragility in all the fields including heath, economy, and also in the education sector. Important tools and techniques that are helping to combat the situation are ICT (Information and Communication technologies). It has allowed us to carry out most of the work securely, and remotely. In this article the integration of ML, AI, and Big data analysis in online education is illustrated focusing on student learning. ML as the part of AI is incorporated in the education model to manage the performance of the students. Key objective of this study is to emphasize Machine learning and big data analysis improving academic activities. The study describes machine learning adaptability in the education sector identifying the IoT environment. Different phases of the ML implementation can be useful to assume its importance in the upcoming days.

II. LITERATURE REVIEW

A. Integration of Machine Learning, and Big Data

For system integration, and new technology a particular model can be followed (shown in Figure 1) that represents the circulation of large amounts of data emphasizing interaction, and different activities in the academic sector. It is not direct; therefore it is common there providing information in big data analysis. This model shows the activetime on the platform.

978-1-6654-6643-1/22/$31.00 ©2022 IEEE

2022 2nd International Conference on Innovative Practices in Technology and Management (ICIPTM) | 978-1-6654-6643-1/22/$31.00 ©2022 IEEE | DOI: 10.1109/ICIPTM54933.2022.9753921

Authorized licensed use limited to: AMITY University. Downloaded on June 15,2022 at 15:45:16 UTC from IEEE Xplore. Restrictions apply.

Along with that it helps to note the usual connection schedule of the students. These data are stored within the database of different academic and administrative systems. This crucial information allows us toacquire the analysis covering greater variables including big data architecture in the processing charge [1].

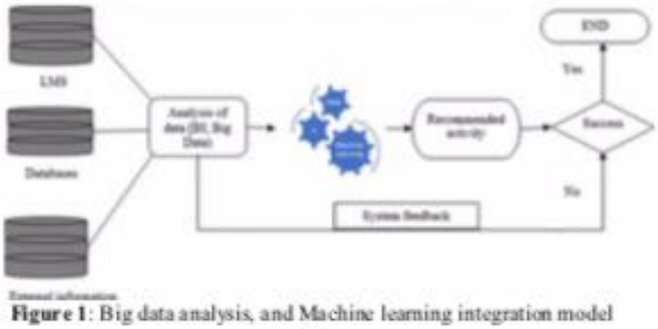

Figure 1: Big data analysis, and Machine learning integration model [3]

The framework of big data analysis is responsive inthe initial phase extracting data from multiple sources, and these obtained data may be unstructured, and structured.Once it collects all the necessary data it is possessed in a useful way to obtain the knowledge that creates artificial intelligence through ML. Machine learning is found responsible in recognizing important patterns of its analysis,and then it performs in the classification. Those patterns are represented as significant characteristics in each group.

Major objective is to find the strategies, and technique knowing the requirements of each group, and the capable system improving the way of presented activities. Furthermore, it helps to enhance the learning ways recommending the activities to academicians, and students according to their requirements. After giving the important recommendations, ML enters into an important stage of result analysis. In order to accomplish this system emphasizes to analyse the grades that the participants obtain with the recommended activities in a disciplined way. If it represents a positive outcome, the process ends at that stage,and it goes back to the initial stage of the entire system [4]. Ifthe system recognizes that there is no significant improvement in the performance it integrates the data into the analysis phase where it starts to process again to obtain asatisfactory result.

Machine learning core consist specific learning algorithmthat evolves continuously to improve the assigned tasks. By accurate structure, and proper data, these eventually produce important data of recognition, and the pattern of predictive modelling. The machine learning procedure the data procession is just like exercise that is in tune. There are multiple programming language of machine learning such as Python, Scala, Java that are used as comprehensive tools of machine learning. Big data is the data consisting observation, measurement, words, or numbers. It indicates vast set of data including both unstructured, and structured. Cloud network, web scraping, and mix initiate systems are several measures to integrate machine learning with big data analytics.

B. Online education model applying ML and Big data

The development of big data analytics has explored countless possibilities to hold educational attainment that creates the best opportunities for the people to access qualityeducation regardless of the time, and place of the student. Indeed, it incorporates the access alternatives in finding the gap between the teaching and learning procedure. The application of ML and Big data analysis has set the model inthe education sector concerning the situation of pandemic. Online education displays the modality of distance education developing the digital education, and now it has come to be known as the virtual classroom to the students accessing through the internet connection and using various technological tools in the learning, and teaching processes [3].

It is helpful to create the acronym us learning model that includes the interaction time. Online education has emerged from the unexpected social distancing. Though it was prevalent before this time, the huge necessity is assumed in this period. Before implementing the ML, and big data analysis in the education sector the core characteristics of online education must be known. Interactive model through application of ML creates best integration between the teachers, and fellow students including the required content into it. The best feature of ML application in the online education model is that it creates the education network regardless, the time and place of the education, and this is the key focus of the implementation here. Asynchronous, and synchronous, it allows numbers of students to participate in a particular activity at the same time. Online education with significant implementation of ML accesses the available resources without the need of physical appearance.

C. Machine Learning adaptability in Online Education

ML is the simulation, and maintenance of human intelligence through the machine. Generally, the bestdiscipline tries to set a capable system of reasoning, and learning power as a common human being. This systemfocuses on the learning process from the experience of having the capabilities to solve the problems within certain conditions. Contrasting the information it carries out the logical tasks. Typically, Machine learning is capable of analyzing huge volumes of data through pattern, and trend identification, therefore it helps to formulate the predictions automatically, accurately, and quickly.

ML makes the learning procedure smarter by integrating predictive analysis, and other techniques within its application depending on the daily use pattern. It helps in language processing, suggest tagging on specific terms, recognizing the images, or algorithms, and also it provides recommendations that can be important for better system

Authorized licensed use limited to: AMITY University. Downloaded on June 15,2022 at 15:45:16 UTC from IEEE Xplore. Restrictions apply.

integration. Real time navigation and optimization of the traffic are important parts of machine learning. With various important techniques it is going to be used in the education sector widely. As the acute part of the artificial intelligence machine learning creates the actual function in the computer giving it a special learning ability. Computational area is used to store important knowledge for strategic purposes [9]. Deeper layers denote more significant strategies to adapt the ML for online education. The possibilities of the machine learning implementation within online education is greater, and the demand for it is increasing day-by-day. ML is the combination of systematic computer learning that relies on memorizing, learning, and communicating operations.

III. Prepare Your Paper Before Styling

For development of this article the necessary informationhas been collected from secondary sources. This article is focused on the application of Machine learning in online education in India. Secondary qualitative analysis helps to specify the environment of machine learning, and big data analysis application and integration in a disciplinary way. It is considered helpful to determine the way that it is ideal to integrate the technologies. As another instance the data analysis is important to understand the conjugation of ML, big data analysis in IoT implementation. The participation of the secondary data in this article has emerged as crucial tutorials in finding the relevance and evaluation of ICT focusing ML, AL, and Big data analysis.

IV. Discussion

A. *Identification of the IoT environment*

In this article two modalities of the study are described- the first is face-to-face that meets with the modalities of the traditional way. In it the learning depends on the experience, and methods applied by the responsible academic person/teacher. Students emerge as the spectator of their own learning, and it is complied with the previously prepared schedule [6]. Additionally, the teacher appears as the entity to help in determining learning content, and learning procedures. The next model is the online education observed over a decade. The evaluation has taken place through the virtual education model integrating through information technology. Technological structure of the machine learning implementation is crucial here. Platform of online education is moulded by technological implementation considering relevant information. Table 1 explores the analysis about the increasing use of machine learning in the near future. Data volume will continue to be increased, and migrated to the cloud. It shows that 60% of the machine learning process, and big data analysis is going to be applied by the year 2025[2]. It is developed based on the world population, and categorizing it in public cloud, consumer, and in enterprise. Therefore individuals have the potential to follow the growth in the near future. The percentage of clouds in different categories indicates the way of data procession through machine learning. Physical growth of own data is signified providing agility, ease of use, and scalability. The future of machine learning can be assumed through it.

TABLE I. Exponential Increase Of Data By Funding (Source Inspired By [5])

Funding in different categories	Amount (Billion US Dollar)
Application of ML	28.5
ML platforms	14.4
Smart robots	7.5
Platforms of computer vision	7.4
Language processing	6.5
Computer vision (CV) application	4.4
Recommendation engines	2.8
Virtual assistants	2.4
Speech recognition	1.1
Gesture control	0.7

Not only presently, ML, and AI applications are associated with the open-structure program, and it provides affordable solutions. From the amount of funding in different categories, the potential increase can be predicted easily. Following these mentioned categories, the inclusion of Machine learning in the education sector is trying to find the ability with significant advice of the experts [4].

TABLE II. Percentage Of Skills Of Different IoT Techniques

Different Skills	Percentage of Skills
Application of ML	28.5
ML platforms	14.4
Smart robots	7.5
Platforms of computer vision	7.4
Language processing	6.5
Computer vision (CV) application	4.4
Recommendation engines	2.8
Virtual assistants	2.4
Speech recognition	1.1
Gesture control	0.7

Table 2 indicates the high demand of CDOs, and data scientists, though the market is already high concerning the crisis in pandemic time. Skills of big data analytics are 44% that will be helpful for the skill gap in the education sector. Technological structure will be helpful carrying the mobility of machine learning. It will be helpful to find the best solution regarding ML application.

B. *ML implementation phases*

Authorized licensed use limited to: AMITY University. Downloaded on June 15,2022 at 15:45:16 UTC from IEEE Xplore. Restrictions apply.

Before including the technological solution, it is crucial to indicate the objective that would be solved through machine learning. It includes diverse goals such as, reduction of churn, improvement of conversation, enhancement of the consumer satisfaction. Elements of optimization should be clarified in order to fulfil the original goal. Figure 2 depicts different phases of machine learning, and its interaction method with each other.

Figure 2: Different phases of ML implementation [3]

C. *IoT based data aggregation*

Data aggregation and integration with the existing objects of the environment get the amity by IoT. With technological advancement use of electronic devices such as cell phones, or similar apparatuses associated with IoT [10]. In the education sector the data can be aggregated through IoT to find the best response. It is primarily based on the data analysis process identifying different patterns, and it helps to modify the learning teaching behaviour through application of IoT in a disciplined manner [11]. Knowledge engineering of ML depends on the necessary use to expertise the system. Scalability, error tolerance, transforming network regulation reduces the redundancy in wireless sensor networks.

Through wireless networking the efficiencies of the data integration can be improved consisting of infinite smart sensors.

D. *Automated Exploratory Data Analysis in ML*

Exploratory data analysis is the process of data exploration to understand different aspects of information. It is a crucial step before performing machine learning tasks. In this case, ithelps to identify clear mistakes and it distinguishes exceptions in datasets. Along with that, it can uncover significant components and discover designs insideinformation. As per the views of Zhai and Chen (2018), exploratory data analysis helps to improve understanding of variables by extracting averages, minimum, mean, and maximum values, and others. In the machine learning process, EDP has a major contribution to provide real-time data and analyze appropriate information. In this case, EDATK (Automated EDA Toolkit) can increase the value ofEDA in ML process.

There are some features of EDATK and those are it can reduce the issues of usage process. As per the words of Drosos *et al.* (2020), running automated exploratory data analysis over a pandas data frame is just one line of code. Along with that, EDATK, through giving a folder location, can build an HTML report that represents tables and other visuals in a clean manner. In addition to that, through target column parameter, it specifies to include visual layers in a supervised Machine Learning Setup.

V. CONCLUSION AND FUTURE DIRECTION

This article provides significant data about machine learning, and big data emphasizing deep learning. Discussion exemplifies a broad set of ML and Big data analysis invirtual, online, or hybrid models of education. This article allows ML in becoming ideal assistance for both-the teachers, and the students. Discussion of this study will help to develop the learning model, improving it in a desirable way. The future of data aggregation and wireless networkingin IoT will be increased concerning its growing usage in different fields such as financial sector, educational sector, and health sector. Therefore significant responsibilities of themachine learning implementation can be found through responsible activities here. The research would be able to give better understanding to the readers, and those related participants of the research work.

***Abstract*- Mental stress is a normal and frequent phenomenon in human beings. Earlier stress recognition is critical for avoiding these negative impacts since prolonged stress has an adverse impact on mental health leading to anxiety, loss of sleep, or headache. Making utilize of physiological data gathered from a wearable device, present study attempts to simplify the procedure of psychological stress determination, which helps to distinguish the persons suffering from stress over healthy one. We tested our method using a dataset that was made accessible to the public. The precision of forecasting exact stress state was applied to make comparisons among effectiveness of numerous techniques of artificial intelligence (AI), including Artificial Neural Networks (ANN), Fusions of ANN with Support Vector Machines (SVM), Stack Classifying method, and Radial-basis Function (RF) Networks. The study included 3-class stress categorization method in which, results shown greatest accurate rating of 99.920percent by Stack Classifier, while RF provided the lowest preciseness of 84.462percent. Study outcome infer that the suggested models are efficient in detecting mental stress over time and show that physiological indicators could be highly relevant in identifying mental stress.**

Keywords: Mental health, Artificial neural networking, Stress identification, Machine learning, Artificial intelligence

I. INTRODUCTION

Integration of many operations, including as identification, sensing, networking, and processing, is the basis of IoT (Internet of Things). It enables substantial technological breakthroughs and value-added services that tailor how people engage with various " The sudden outbreak of corona virus-pandemic has placed mental well-being of people in deep trouble; these people might experience increased levels of stress, depressed mood, traumatic stress disorder, or indeed suicidal tendencies [1]. Middle East respiratory syndrome breakout in 2015 as well as COVID pandemic have both been the subject of current studies which has revealed a substantial risk of mental disorders [2,3]. Utilizing ideal computing methods to large data is essential for achieving individualized mental health support as a long-term objective. When intensely disturbed persons possess relatively lower stress resilience and other susceptibility traits, like a general inclination for mental discomfort along with poor self-control, their mental health risks are amplified [4]. It is crucial to identify and recognize these people in beginning phases of stressful onset in order to avoid the emergence of more severe long-term psychological issues like traumatic disorder, depression, and suicidal thoughts. Nonetheless, because of existing shortage of biological markers, subjectiveness of humans, and distinctive, personalized traits of ailment that are non-viewable by clinical psychologists, mental disorders are challenging to identify and also harder to forecast [5]. Presently, for psychological illnesses, data-base guidelines are primarily used to classify the clinical features of related problems [6].

In these situations, one of the most major consequences, especially artificial intelligence (AI) and machine learning (ML) are employed which have a capacity of earlier recognition with forecasting of mental health problems, that can lead to long-term psychiatric problems [7-10]. AI is a sort of technology that has been called a "digitalized revolution," with combination of various technological categories [11,12]. Though many well-known societal components are prepared to accept the possibilities of AI, cautiousness is still a common theme in health, particularly in psychology field. Despite apparent issues, AI technologies in medical science are constantly expanding and helping people to manage with stress, despair, as well as other psychological issues as they become more prevalent in clinical practice [13]. While AI technology is increasingly used in healthcare for purposes related to physical wellness, the field of psychological health seems to have been reluctant to accept AI [14,15]. Patient comments and statement records that are subjective and

qualitative are frequently used as clinical evidence in the psychology field. Nevertheless, AI continues to offer many advantages as a forecasting model in variety of fields [16-18]. AI has the capacity to fundamentally alter diagnosed and addressed mental disorders [19]. The greatest way to completely express a comprehensive mental health of individuals is through their distinct physio-psycho-social makeup [20]. But there exists a limited grasp of the way such social, psychological, and physiological systems connect with one another. Pathogenesis of psychological disorder exhibits significant variety, wherein, the discovery of biomarkers might make it possible to define such conditions more precisely and objectively. Utilizing AI approaches enables the creation of improved pre-diagnostic screening devices as well as risk models to assess a propensity of person or risk of acquiring mental disorder [9].

A technique which has an ability of assessing stress levels from signals produced by a wearable equipment could assist in developing intriguing real-life situations. Psychological stress may play a key role in the development of several ailments. Whenever it relates to the prompt identification of stress, this system is crucial for informing the consumer about raised stress levels, ensuring that they are conscious of stress situation and can avoid future issues. This work intends to utilize the physiological signals that found to be valid predictors of stress-level in psychology [21] and to propose various approaches relevant for the study goal. This stress determining method will be very useful in creating systems that could identify stress as well as undertake precautionary measures or send warnings well in advance so that user could take necessary steps. Investigators may gain from stress determination by getting a more vibrant and complete picture of how technology affects its consumers. Additionally, consumers may benefit from it, since they can incorporate novel apps into their professional and personal lives life based on their degree of stress.

II. Literature Review

According to [22], AI assists in identifying diseases earlier by improving diagnostic methods of diseases. They are known to optimize medicating/therapeutic dosages, and discover new remedies. Rapid pattern analysis of massive datasets is one of key strengths of AI. Most effective applications of pattern determination in healthcare system are in the fields of: radiology, carcinoma diagnosis, and ophthalmology, wherein AI algorithms could evaluate image data for anomalies or subtlety that are practically invisible from eyes as well as from skilled physicians. The utilization of smart technologies to help healthcare decision-making is rising, even though it is uncertain that they will ever entirely replace physicians.

A study by [23] indicated that mood assessment using AI incorporated techniques, like ML (machine learning) and DL (deep learning), can help to identify early indications of depression and raised suicide thoughts, particularly during in COVID crisis. According to the authors, objects or character identification, image detection processes, and examining face changes can help to diagnose possible initial signs of depression.

[24] examined the effectiveness of face expressions, imagery, emotion chatbots, and conversation in social networking sites to identify emotions and psychological well-being. Numerous ML approaches were utilized to distinguish emotional responses from text processing namely Naive-Bayes, SVM, LSTM, RNN, Logistic Regression, etc.; ANN is employed for extraction of features and classifying images in order to determine emotions from face expressions. Study findings concluded that a variety of AI and ML approaches may aid in the identification and study of emotion, and thereby depression, in addition to research-related problems.

A study conducted by [25] explored the use of AI chatbots, particularly in relation to psychological health of post-pandemic era. An intensive literature by authors applied a design scientific method to establish the problem description, define the goals of targeted solutions, and to suggest a well-designed outline for upcoming mental health chatbots. Outcome of study highlighted the importance of taking into account ethical concerns, governance, objective-oriented design, and AI-based technologies while creating novel psychological chatbots.

[26] looked into the effects of AI, who found that mental health is varied by generation and skill level, wherein, less-skilled employees as well as older workers (those over 60 years of age) typically being more favorably impacted. Overtime work and workplace atmosphere have a moderating function in this regard.

Regarding large-scale heart rate prediction, [27] employed CNN on the Wearable Stress and Affect Detection dataset by comparing the results with various traditional ML approaches. Parallel to this, [28] classified bio indicators to several state-of-mind classes by using a various bio signal, and utilized CNN model to categorize blood volume pulse, ECG and EMG.

Through sequentially categorizing distinct emotional states by employing CNN approaches, [21] used a variety of feature-based and CNN models for multiple-targeted affect determination.

III. Methodology

This section provides a concise overview of models which have been assessed in the study

A. Dataset

A dataset which is employed in present study is 'Wearables Stress-effect Detection (WSD)' type- a mode of multiple form, that comprises of 3 emotional conditions namely: pleasure, stress, and neutrality. 15 participants were exposed to various settings for gathering data, in which, the sensor output from wrists and chest wearable devices was continually recorded [21]. Targeted labelling was divided into 3 categories: "Neutral," "Stress," and "Pleasure." By giving them a reading things and table, the neutral condition was observed for 20 min. in an effort to create a neutrality affective status. For amusement criterion, 11 comic videos have been played for 392 secs. to the participants. By compelling every participant to give speech in front of a jury with no prior notice and making them to know that while they

Authorized licensed use limited to: AMITY University. Downloaded on May 22,2023 at 15:41:38 UTC from IEEE Xplore. Restrictions apply.

would speak in front of an audience, stress was imposed to them. Then, without making any mistakes, they had to keep counting from 2023 to 0 in stages of 17, failing which they had to restart over at 2023. This session took place for five mins.

WSD comprised of data from 2 sources of wearing devices like: a) wrist and b) chest. Study utilized data solely from wearing of chest because of differences in records from wrists one. It had eight variables, namely: body temperature, respiratory rate, electronic design automation, ECG, EMG and 3 axes of acceleration. For analysis, just 10percent of randomly selected samples of particular person was retrieved, because of huge data quantity, comprising about 2.3 mill. entries of information to be examined with. Data was split so that 70percent of dataset was utilized for training, while 30percent was utilized for testing after being adjusted with a mean centered at '0' and a unit std. deviation. All samples were carried out in stratiform to ensure that targeted labelling portions remained identical in the testing as well as training sets.

B. Artificial Neural Network (ANN)

ANN is a controlled learning system influenced by biology that resembles biological neurons [28]. Biologically in neurons, the electrical impulses are acquired by dendrites from other neuronal axons. Contrarily, in ANN, this function is carried out by numeric value that are recorded from layers of input to output when crossing by one or more layers of hidden one. Constituents of latter layers could be thought as a self-learned feature space of artificial network. A weight summation of constituents for layer '*l*' is determined before being crossed through an activating function to plot from one layer '*l*' to '*l*+1'. The choice of precise no. of hidden neurons as well as layers is not supported by any theory. To find the best hyperparameters besides, to reduce variance and bias, utilization of hit and trial strategy could be made. Coping with non-linear information requires the use of at least one hidden layer. Figure. 3.1 depicts the conceptual design of an ANN algorithm.

Whenever regression needs to be done, only one neuron is employed in output layer. For categorization, the no. of input layer neurons is determined by the no. of variables or forecasters in dataset, while the no. of targeted factors determines the no. of neurons in output layer. Activation functions (AF) are essential for capturing non-linear data, without of which, the link among input and output would be limited to a linear eqn. with a large no. of parameters, irrespective of how many hidden layers are present [29].

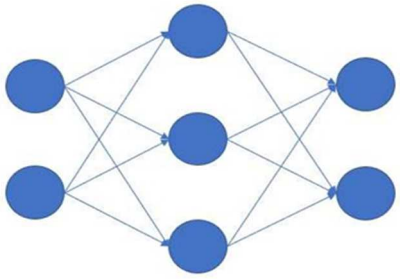

Figure 1. ANN design

Rectified Linear Unit (RLU) and activation function (AF) SoftMax (S. Max) have both been utilized in present experiment. The piece - wise RLU function, indicated by R(x), which generates '0' for a non-positive value and restores similar for positive input values. Contrasting to sigmoid and tanh AF, RLU converges more rapidly. S. Max, represented with s(x), is utilized by providing classes-specific probabilities since it sums all output values to one, making it simple to compute class-specific probabilities. The formulae for RLU and S. Max AF are as follows, considering K to be the no. of classes and x to be input:

$$R(x) = \max\{0, x\} \quad (1)$$

$$S(x)i = \frac{e^{xi}}{\sum_{i=0}^{K-1} e^{xi}} \quad (2)$$

Generally, ANN has an optimizing issue. We used micro batches to train ANN by applying stochastic gradient descent. The gradients of loss function (LF) w.r.t. weights are computed through backpropagation using the Chain rule of derivatives. This is accomplished by utilizing cross-entropy LF, a most typical categorization issue. LF will be of extremely higher value if we are confident/likely to forecast the wrong class, whereas, it will have a relatively low value if probably, we are confident to forecast the right class [30,31]. To discover optimal response, gradient descent iteratively updates weights in the path of diminishing loss.

$$L(Y, \hat{Y}) = -\sum_{i=0}^{k-1} Y_i \, log \, log \, (\hat{Y_i}) \quad (3)$$

In above formula, Y_i is the binary true value of ith class and $\hat{Y_i}$ is the forecasted category-wise probabilities for that class. An aggregate of those loss of mini batch is the value which is put into gradient descent. Although normalizing data prior passing to an ANN is usually preferable, there is a possibility that variation will be introduced while backpropagation [32]. Hence, in order to regulate the variability prior sending it to activation, batch normalizing process is applied wherein, 2 novel parameters namely mean and variance are learned during ANN training by utilizing current batch.

$$W_j = \gamma_j \left[\frac{wj - \mu j}{\sqrt{\sigma j}} \right] + \beta j \quad (4)$$

For the purpose of ANN training with a single hidden layer and thirty-two neurons, we employed Keras architecture with TensorFlow as the backing. SoftMax is used for

Authorized licensed use limited to: AMITY University. Downloaded on May 22,2023 at 15:41:38 UTC from IEEE Xplore. Restrictions apply.

activating the output layer and RLU is used for activating hidden layer. The 4096-batch size had been chosen, and ANN was trained for twenty times.

C. Fusion of ANN with Support Vector Machine (SVM)

SVM is an approach whose hyperplane borderline functioning divides the classes by a maximal margin [33]. Determining the deciding border with certain breadth among different classes is preferred to just determining the plane that separates the classes [34]. Rather than using a Gaussian kernel, a linear kernel was utilized in the study, owing to the magnitude of dataset. ANN model with prior-training as described previously was employed initially and the values of hided layers were put into linear-kernel SVM. However, we trained a single SVM model rather than employing multiple SVM with various kernels for every feature spacing subgroup. Figure. 3.2 depicts the schematic of hybrid algorithm.

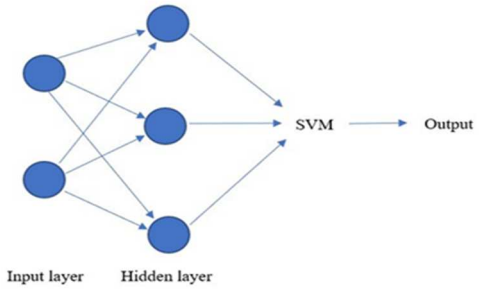

Figure 2. Fusional ANN-SVM

Through training this hybrid approach using ANN-learned features, the benefits of SVM could be utilized. In order to make finalized forecasts, we employed Keras architecture by initially passing inputting layer to hided one, that has thirty-two neurons, and then employing similar hided layer unit as input for SVM, that has been done utilizing sci-kit learning module.

D. Stack Classifier

A study by [34] implemented KNN (k = nine), Linear Discriminating Analyzer, DT, AdaBoost, and R-forest Classifiers [21]. Rather than polling or aggregating the outcomes, we created an ensemble of such methods and passed the outputs of every model to an ANN as finalized predictor. A supervised ML algorithm - KNN could be applied for classification and regression issues. Based on the distance between data point and nearby group, this method predicts the category to which data point relates [35]. Since it makes reference to the training set rather than modelling a function, this method seems to be an illustration of a "lazy learner." K-NN falls within the category of non-parameterized techniques [36].

Another supervised ML approach is linear discriminant analysis (LDA), that finds the strongest linear combination of factors (predictive) to effectively distinguish between 2 targeted categories. Primary goal of this model is to reduce the dimensions of a higher-dimensional space by projecting its attributes onto a space of lesser-dimension [37]. It generates a decisional plane that optimizes between-class variability and reduces variability of within - classes. LDA relies on Bayes theory, which presumes that data points of every class remain regularly dispersed.

AdaBoost is a stimulating method that seeks to strengthen a group of weaker classifiers. The weight summation of outputs from previous learning algorithms serves as finalized output of classifier [38]. It has been revealed that efficiency of Decision tree (DT) on binary classifying issues is improved with AdaBoost [39]. The method is receptive to anomalies and noise data. A tree-based approach is a DT, which is structurally comprised of an internal node, branches, as well as leaf node. It will stand in for a feature, a decision rule, and an output, accordingly. A root node of DT is its highest node [40]. Depending on attribute value, algorithm learns to categorize. DT divides the training data set recursively till every section is made up entirely of samples from a single class [41]. A series of fundamental tests, each of which evaluates a numerical value vs a threshold value, are effectively incorporated by DT.

A series of randomized DT are created by RF Classifier, an ensemble approach, using sampling from training dataset that have been randomly chosen. The votes from various DT are then combined to forecast finalized class [42]. Every DT in RF is made using a randomized subset of characteristics. Initially, class-wise probability was determined after each single model had been trained. The input of this ANN has fifteen units because there are five models and three categories, as illustrated in Figure. 3.3. For ANN training and to reduce cross-entropy LF, stochastic gradient descent involving micro-batches was used. For output layer, SoftMax AF was employed.

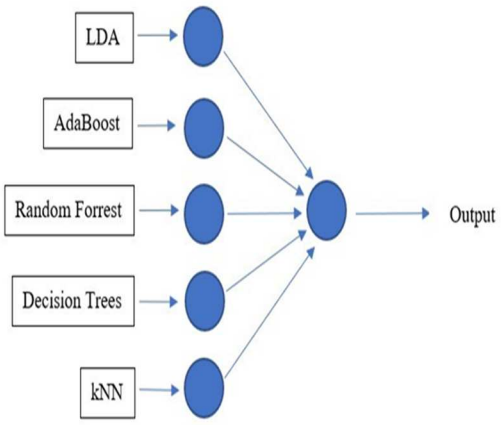

Figure 3. Stack Classifier

E. Radial-basis Function (RF)

RF system consists of solitude hidden layer, in which each of predictions are located in input layer, similar to that of ANN [43]. In RF, the Radial-based functioning that serves as an AF, receives the calculated descriptive length among

Authorized licensed use limited to: AMITY University. Downloaded on May 22,2023 at 15:41:38 UTC from IEEE Xplore. Restrictions apply.

input as well as a hided node [44]. This layer produces a dispersion with a means and a std. deviation as its output. When input is located at center, the activation increases; however, it decreases when input is further apart. Such activations are weighted summed for output layer to get class-wise probabilities needed for categorization.

$$h(x/l) = //x - l//_2 \quad (5)$$

$$G(x) = \frac{e^{2\frac{-1(x-\mu)2}{\sigma 2}}}{\sigma\sqrt{2\pi}} \quad (6)$$

These values of hidden nodes, that become contrasted with input vector, are chosen at randomly from training data set. The no. of samples to be taken will rely upon that hidden neurons we select. A cluster technique such as K-Means (K-Me) may be used to choose these nodes at random or to determine the center of every cluster. K-Me. was employed to locate the centers (represented by l). For output layer, S. Max AF was employed. Following our earlier methodology, RF networking was trained by utilizing Gradient Descent with thirty-two hidden units. In Figure. 3.4, RF network is shown schematically.

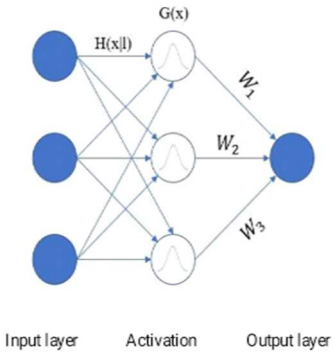

Figure 4. Radial-basis functioning system

IV. Analysis And Findings

ANN, fusion of ANN and SVM, Stack Classifying, and RF are the approaches known to be assessed in this study as shown in Figure 4.1. The effectiveness of each model was assessed using its precision to predict proper targeted label from the testing dataset. Accurateness has been the primary parameter employed by all prior articles on WSD to assess the effectiveness of their categorization systems. Table 4.1 displays the outcomes of models employed in this study.

TABLE I. Output of overall models

Models	Preciseness (in percentage)
ANN	90.580
Stack Classifier	99.921
ANN -SVM	91.482
Radial-basis Function (RF)	84.462

It is clear that Stack Classifying method achieved the highest precision of 99.921percent from all models. Further, RBF network was of higher computational-cost because in addition to backpropagation, K - me. strategy needed to be used for locating the centers of various clusters. RF networking has the lengthier training time with poorest accuracy (84.462percent) among all models as studied in this research. The suggested ANNSVM performed somewhat better than ANN, demonstrating that utilizing learnt attributes across hidden layers for a fusional ANNSVM system was successful in boosting model efficacy of investigation. The preciseness is raised from 90.580 to 91.482percent, indicating that ANN fusion with SVM can more accurately categorize around 6,200 additional data points. Fig.4.1 compares each of the evaluated models, while, Table 4.2 displays the stacking classifier's confusion matrix.

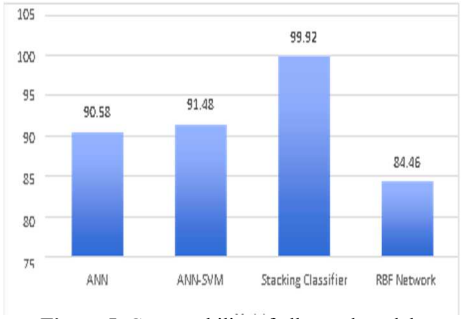

Figure 5. Comparability of all tested models

TABLE II. Stack Classifying Confusion Matrix

	Forecast neutrality	Forecast pleasure	Forecast stress
Real neutrality	369,761	11	59
Real pleasure	30116868	116,868	177
Real stress	88	132	209,066

V. Conclusion

Taking advantage of physiological information gathered from wearables, this research aims to illustrate how DNN and tree-based ML models can be used to create resilient and effective approaches for stress determination with the help of signal-data collection. In this study, we present 4 distinct NN models for neutrality, stressful, and pleasure classes of stress on the publicly accessible WSD dataset. The strategies used in this research include ANN, ANNSVM fusion, Stack Classifying method, and RF network. We developed a fusion of previously unutilized ANN-SVM, RF Networking and Stack Classifying method for WSD. With a classifying accuracy of 99.92percent, Stack approach yielded most remarkable outputs, while RF system provided outcomes with an accuracy of 84.46percent.

Numerous AI algorithms possess the potential to determine mental stress. To combat chronic stress onset, AI models may be employed for developing a continual tracking wearable equipment, that can identify stress level of an individual and send out warnings if it remains elevated for an extended period of time. Considering each person, irrespective of whether he is a learner or job holding person, managing the stress is vital. The information from a wearable device may be utilized by our suggested categorization algorithms to produce a reasonable forecast.

Rather than employing structured surveys in future, additional research could be accomplished by considering the personal reports of respondents in which, WSD dataset

Authorized licensed use limited to: AMITY University. Downloaded on May 22,2023 at 15:41:38 UTC from IEEE Xplore. Restrictions apply.

features might be used as a referral. Moreover, AI strategies may be created to accurately categorize the various effect levels (such as less, medium and higher stress) in optimal way. The physiological data could be integrated with other various techniques, such as audio records and facial signs, to produce a novel dataset for determining stress more accurately, because it contains almost all the features needed to cause stress in humans.

About Alliance University

Alliance University was founded with an ambition to serve society with education and research and promote a global outlook that defines the future trajectory of its students.

Since its inception in 2010, Alliance University has been a forerunner in higher education, calling out to the new generation of scholars, engineers, scientists, artists, people in business, social reformers helping to shape and transform societies and communities through and beyond, around the world.

Currently, that trailblazing spirit makes Alliance University, one of the most sought-after universities in the world, featuring top-ranked academic programmes such as Alliance School of Business, Alliance College of Engineering and Design, Alliance School of Law, and Alliance Ascent College, and newly commencing Alliance School of Liberal Arts.

Nestled in the serenity of 'green' campus in Bengaluru, Alliance University is a leader in global education, with world-class infrastructure, state of the art laboratories, international visiting

faculty, exchange programmes with leading universities in the US, UK, and European Union, and linkages with Research Labs across the world.

Alliance University takes its role as an instrument of transformational impact seriously and has a vast network of alumni who have gone on to succeed across professions, from the sciences to the arts and government, throughout the world. Education at Alliance University is designed to inspire our students to become critical thinkers and to lead and change the world.

Rated among the best private universities in India, Alliance University provides a rigorous, demanding education to a diverse student community. The University has baccalaureate concentrations, postgraduate offerings, doctoral degree programmes, and several professional certificate programmes that channel its students' creativity to further knowledge and twenty-first-century skills, challenge the status quo, and deliver impact.

Alliance University counts among its faculty, top talents, recipients of the highest scholastic honors from around the world, and visionaries committed to informing and innovating the current paradigms and pushing the envelope to make a better world, going beyond what might be expected of a university.

About the Conference

Academic disciplines have exercised a dominant influence in the way we perceive, reflect, and seek to understand reality. The methods of enquiry, until the recent times, have been influenced by respective disciplines.

However, recent developments in the academic discourse are not on disciplinary silos but on breaking down the rigid boundaries between disciplines and bringing in more fluidity and permeability. The current conference on "Transcending Boundaries" takes up the challenge of transcending disciplinary boundaries at the contemporary juncture and creating new knowledge, which stands at an alchemical meeting point of several disciplines. We invite young researchers from all disciplines, who can think innovatively.

Alliance University Bangalore, India is playing host to this gathering of thoughts and innovative ideas yet again with modern technology to distil best thoughts of the most brilliant minds. This two-day event aims to engage, stimulate, and provoke

discussions on different issues touching upon humanity and planet earth in general and the challenges that we might face in the coming decades.

Visit Alliance, be part of the conference, share your thoughts, be heard, etch your footprints on the sands of time and be part of history.

Message from Pro-Chancellor

Promoting student research is a very important aspect in today's times. Helping students develop a research mindset, collaborate with peers, faculty, researchers across domains is imperative to holistic development. *The Alliance Students International Conference (ASICON) 2023* is an earnest attempt to bring students from various educational institutions to transcend disciplinary boundaries through innovation as a central theme. The book, a compilation of resrarch abstracts from students on a wide range of areas, makes for an appealing read.

I extend my heartfelt congratulations to the members on the editorial board and would like to extend my deepest wishes to the Student researchers for developing an exploratory outlook and wish them the very best.

Best Wishes
Abhay G. Chebbi
Pro-Chancellor
Alliance University

Message from Vice Chancellor

It gives me immense pleasure and deep satisfaction that Alliance Students International Conference, ASICON 2023, organized by Alliance University has come out with compilation of research work in the form of edited book version titled "Transcending Disciplinary Boundaries Through Innovation" which is comprised of the research work undertaken by students from various institutions. I am sure that the Conference will help the participating students attain marvelous heights in terms of research projects and activities.

I wish the readers intellectual stimulation through this compilation.

Prof (Dr.) Anubha Singh
Vice Chancellor
Alliance University, Bengaluru

Message from Chief Editor

Transcending Disciplinary Boundaries through Innovation

Academic disciplines thus far, have exercised a dominant influence in the way we perceive, reflect, enquire and seek to understand reality. However, recent developments in the academic discourse are not on disciplinary silos but on breaking down the rigid boundaries between disciplines and bringing in more fluidity and permeability. This conference on "Transcending Boundaries" takes up the challenge of transcending disciplinary boundaries at the contemporary juncture and creating new knowledge, which stands at an alchemical meeting point of several disciplines.

The objective is to inspire young researchers who can think innovatively and present their views with proper research choosing from a wide array of tracks. The aim is to engage, stimulate, and provoke discussions on different issues beyond academics and disciplines, applying their Intelligence, social and adversity quotient, touching upon humanity and planet earth in general and the challenges that we might face in the coming decades.

Alliance University Bangalore, India is playing host to this gathering of thoughts and innovative ideas yet again with modern technology to distil best thoughts of the most brilliant minds.

Welcome all young and innovative minds to Alliance University, the host of ASICON-2023.

Dr. Punith Cariappa
Chief Editor-ASICON
Alliance University

Keynote Speaker

Dr. Bengt Gustavasson

Dr. Bengt Gustavasson is a retired professor from Stockholm School of Business, Stockholm University, Sweden

Doctoral thesis: The Transcendent Organization. A treatise on consciousness in organizations.

Research: Among others: papers on organizational consciousness and business ethics. Sir Ratan Tata Research Fellow at Indian Institute of Management, Calcutta resulting in book Transition or Transcendence? A study of Indian Managerial Values; paper on Microeconomics. Tutor for undergraduate, graduate and doctoral students.

Teaching: Among others: Business ethics, Learning and unlearning organizations, Qualitative Methods. Book: Kunskapande Metoder (in Swedish "Knowledge creating Methods"). Examiner doctoral theses, among others several from India.

Today I want to speak to you about the power of knowledge and the idea of transcendence.

As young people, you are at a stage in your lives where you are seeking to learn and grow, to expand your understanding of the world around you and to discover your place in it. This is a wonderful and exciting time, and one that is full of potential and possibility.

But as you embark on this journey of learning and discovery, it is important to remember that knowledge is not an end in itself. It is not something that you acquire simply for the sake of having it, but rather a means to an end. The true value of knowledge lies in what you do with it, how you use it to make a positive impact on the world around you. So, as you seek to acquire knowledge, strive to do so with a sense of purpose and direction. Ask yourself what you want to achieve with your knowledge, and how you can use it to make a difference in the world.

At the same time, it is also important to keep in mind the idea of transcendence. This refers to the idea of rising above or going beyond the limits of your current understanding and experiences. It is about striving to reach a higher plane of understanding and enlightenment, to see the world in a different and more expansive way. To achieve transcendence, you must be willing to challenge your own preconceptions and to embrace new ideas and perspectives. You must be open to learning from others and to seeing the world through their eyes. And you must be willing to take risks and to venture beyond your comfort zone.

In conclusion, I encourage you to embrace the power of knowledge and to strive for transcendence in your pursuit of learning and growth. Remember that the true value of knowledge lies in what you do with it, and that by striving for transcendence, you can open yourself up to new and exciting possibilities.

Keynote Speaker

Dr. Enrico Bonadio

Dr Enrico Bonadio teaches, researches and advises in the field of intellectual property (IP) law. He is currently Reader in Intellectual Property (IP) Law at City, University of London. A frequent visitor to many universities and research centres around the world, Enrico has research interests in several IP areas, including the protection of non-conventional forms of creativity. He has attracted funds from a variety of institutions, including the European Commission, Australian Research Council, UK Research and Innovation, UK Economic and Social Research Council, and the UK Higher Education Innovation Funding. Enrico works with various international organisations and governments on IP issues and regularly joins training and technical assistance missions organised by World Intellectual Property Organisation. He frequently appears in the media as IP expert, and has been in private practice since 1999, working as IP lawyer for top-tier international law firms.

Artificial Intelligence as Inventor: Exploring the Consequences for Patent Law

Patent law has traditionally developed with human inventors in mind. At the same time, the use of inventive AI systems raises a range of novel issues which the existing patent framework may not be able to accommodate easily. There is no consensus over whether a machine can be designated as inventor. Who

would be the owner of the patent where AI has generated the invention with little or no human intervention? Who would be liable for AI-induced infringement in cases where machines act "autonomously"? Moreover, it is unclear whether the proliferation of AI-generated inventions should require us to re-evaluate core patent concepts such as inventive step and novelty in the long run. In this contribution, we have navigated through this complex relationship and explored the various issues that AI raises in the patent context in light of recent EPO and UK decisions.

Artificial Intelligence as Producer and Consumer of Copyright Works: Evaluating the Consequences of Algorithmic Creativity

Artificial intelligence (AI) has been the subject of a great deal of academic interest in recent times; it has captured the attention of copyright lawyers fascinated by the thought of machines creating works of art, music and literature. There is no doubt that, as has often happened in the past during previous waves of technological advances, AI platforms—and especially, machine learning—have brought with them new opportunities as well as challenges.

Machine learning is an AI application enabling programs to learn and progress automatically from experience. Its main feature is accessing data and often using it for the purpose of creating outputs, including music, literature, movies and art. Amounts of data are observed and analysed by the machine, which enables the latter to learn and then make creative decisions leading to final outputs that, as precise works of art, are often not foreseeable by the people who developed and started the initial program. Such a process is characterised by the absence of substantial human intervention or assistance after the program is operated, and by the use of algorithms—namely a sequence of instructions aimed at solving a problem or performing a computation. It can

be deemed "algorithmic creativity", or the way by which AI/machines create new works.

Against this background, the article delves into thorny legal and policy issues. Is an AI-created work protected by copyright? Should it be? Who would be viewed as the author? Who should own such a work? These questions are the focus of the first part of this article: "AI as producer". In the second part, "AI as consumer", our analysis shifts to the questions of whether and to what extent the use of data fed into the system, for example to train the algorithms, may amount to copyright infringement, or may in certain circumstances be exempted under fair use, fair dealing or similar doctrines. In the third part we consider possible legal regimes for dealing with machine produced works including alternatives to copyright, such as a public domain scenario and a sui generis system. Finally, we provide our conclusions.

Keynote Speaker

Dr. Francesco Zonta
Laboratory of Computational Biology – Co-PI
Shanghai Institute for Advanced Immunochemical Studies
ShanghaiTech University

A Theoretical Physicist. During his Ph.D. in Physics (Padova University, Italy, 2003-2007), while working on the statistical and topological properties of polymers, he started to be more and more exposed to and interested in biological systems.

In his earlier career as a Post Doc and Young Researcher at the Venetian Institute of Molecular Medicine (Padova, Italy, 2007-2015), he had been working in the field of Computational Biology and in particular on the study of mutations of connexin proteins that lead to rare genetic diseases. In these years he became familiar with most of the methods of Molecular Simulations at different scales, Quantum Mechanics, Classical Molecular Dynamics, Coarse-Grained systems, etc.

In 2015 he joined Shanghai Tech University as a Research Associate Professor and Director of the Bioinformatic and Computation Platform. In 2018, he became Co-PI of the Laboratory of Computational Biology, together with Prof. Michael Levitt (Nobel Laureate in Chemistry in 2013).

His research focused on therapeutic antibodies, in particular modeling of antibody-antigen interaction and in silico screening and design of new antibodies, and the development of multi-scale models for biological systems.

Since 2020 he has been extensively working with Prof. Levitt on modeling the spread of the COVID-19 virus in the population.

Modelling COVID Diffusion in the Population

The counts of confirmed cases and deaths in isolated SARS-CoV-2 outbreaks follow the Gompertz growth function for locations of very different sizes. This lack of dependence on region size leads us to hypothesize that virus spread depends on the universal properties of the network of social interactions. We test this hypothesis by simulating the propagation of a virus on networks of different topologies or connectivities. Our main finding is that we can reproduce the Gompertz growth observed for many early outbreaks with a simple virus spread model on a scale-free network, in which nodes with many more neighbors than average are common. Nodes that have very many neighbors are infected early in the outbreak and then spread the infection very rapidly. When these nodes are no longer infectious, the remaining nodes that have most neighbors take over and continue to spread the infection. In this way, the rate of spread is fastest at the very start and slows down immediately. Geometrically we see that the "surface" of the epidemic, the number of susceptible nodes in contact with the infected nodes, starts to rapidly decrease very early in the epidemic and as soon as the larger nodes have been infected. In our simulation, the speed and impact of an outbreak depend on three parameters: the average number of contacts each node makes, the probability of being infected by a neighbor, and the probability of recovery. Intelligent interventions to reduce the impact of future outbreaks need to focus on these critical parameters in order to minimize economic and social collateral damage.

Keynote Speaker

Prof. Gabriele Goretti

Associate Professor, Jiangnan University – School of Design (China)

Visiting Professor Alliance University – School of Liberal Arts (India)

Visiting professor at Politecnico di Milano Design Department

Former researcher at University of Florence (Italy)

Former Coordinator Fashion Design Department of IED Isituto Europeo di Design Florence - Milan (Italy)

Prof. Goretti is an Architect, Design Researcher in product and fashion design strategy and luxury goods market. At the Jiangnan University in Wuxi (China) he is co-leading the Brand Future Experience Design lab.

From 2007 to 2017 Research fellow

Post-doc researcher at DIDA Department of University of Florence.

Senior researcher within joint research Labs in between Academia and advanced craftsmanship SMES

Professor in fashion design and product design

PhD in Industrial design, Environment and History

His professional profile is focusing on relationships between design strategies and advanced manufacturing processes.

Design Innovation and Craftsmanship Values: Case Studies in Product Design in Italy

Keywords: genius loci, craftsmanship, manufacturing, digitalization, sustainability

The Latin term genius loci identifies the "spirit" or intrinsic identity of a place or a community. Mediterranean cultures represent a strategic cradle for quality and manufacturing know-how, based on historical processes and cross-cultural connections. Among them, design and fashion production stands as a wealth of interesting savoir-faire, often unknown to the customers even if it plays a centric role in the final perceived quality of the product.

On the other hand, the contemporary design and fashion supply chain is part of the Global Value Chains (GVCs), the organization of international production, trade and investments where different stages of the production process are located across different countries. Moreover, authentic genius loci is often replaced by place as a fluidly-applied value-add signifier often not properly expressed or extremely simplified.

The Italian manufacturing districts are part of this global system. These clusters are composed of a constellation of SMEs, characterised by an articulated productive differentiation and a collaborative structure based on exchange and trust mechanisms in which the craftsmanship component strongly affects the competitive advantage of companies (Rullani, 2014). This helps to define a specific production model (Becattini, 2004) capable of transferring the cultural aspects of the territory and the intangible values of Made in Italy into a product recognisable for its solid and meaningful aesthetics (Morace and Lanzone, 2010). The value framework resulting from the connection between creativity, culture and territorial specificities cannot be considered inseparable from the production phenomena and ancient traditions of processing certain materials. This is expressed in the prominent role that product and process design have

always played in Italian productive contexts, whose constitutive characteristic consists in the endogenous capacity to constitute links between technical and humanistic thought (Celaschi, 2017), translating them into a strategic value that makes Italian design and production dynamics a form of cultural production.

The profound changes proposed by the digital transformation are strongly affecting the business models of SMEs (Matarazzo et alii, 2021), causing substantial changes in the organisation of design and production processes, as well as in relations with suppliers and customers. Thus, the need has emerged for Italian craft SMEs to undergo structural and organisational renovations to acquire and generate value by preserving their specific, distinctive and original knowledge and projecting it into a global logic that enhances their difference. Heritage thus begins to be interpreted by some leading companies as the added value of products and services, as a synthesis of a subset of symbolic intangible attributes (Mosca, 2017). The main instrument of this type of strategy can be found in the historical archive from which a series of further closely related opportunities can be derived.

Some leading SMEs have therefore embarked on a path of reconstruction between the material dimension of artefacts and the intangible dimension of knowledge and skills, enhancing corporate identity and heritage. In this path, digital archives have assumed a priority role in the interaction between Crafts Heritage and contemporary creativity to inspire the design of new products, trigger new projects, and preserve and transmit the (evolving) memory and knowledge. Archives thus become tools for the use and application of historicised knowledge in everyday design activities, which thus become knowledge-centred (Lupo, 2019).

Although Italian SMEs show that they have become aware of the opportunities inherent in digital transformation in terms of efficiency, cost reduction and labour flexibility, the situation

in Italy is somewhat uneven, and there is still a poor spread of digitalisation skills. It is also worth noting that the digital transformation of SME manufacturing districts is characterised by some common factors: technological innovation in production processes through technology transfer from other production contexts (e.g. automotive or fashion); values of craftsmanship safeguarded while implementing technological innovation in/on the supply chain; improvements in planning, production, time-to-market, material procurement, traceability and certification of product authenticity; and involvement of the end user in the communication of production values and product customisation services.

The tangible and intangible value of Craft Heritage is now recognised, nationally and internationally, as a driver for developing more cohesive societies attentive to the SDGs of Agenda 2030 (Sachs et alii, 2022). In particular, the European Commission has implemented over the last two decades many initiatives to enhance these processes, such as the European Cultural Agenda (European Commission, 2018), Creative Europe (European Commission, 2021a) and more recently also, the New European Bauhaus initiative (European Commission, 2021b); the latter is of relevant interest because it aims at strengthening the links between the world of culture-creativity and that of production, science and technology, in order to lead the ecological transition indicated by the European Green Deal (European Commission, 2019) and Next Generation EU1 (Symbola Foundation, 2020). From this point of view, the Craft Heritage represents a resource of absolute importance because it is renewable, implementable and combinable again. The more it is used, the more it increases.

The company Savio Firmino has been operating since 1941 in the Florentine area in the furniture and home details sector, first as an artisan workshop and then as an SME, progressively differentiating its products with the consolidation of international reference markets. In 2013 Savio Firmino started a long process

of restructuring and reorganising production through a joint University-Enterprise Research and Development Laboratory to experiment with the opportunities offered by the digitalisation of manufacturing processes, safeguarding craftsmanship as the primary source of success. The technical-scientific and economic-productive transformation that digital tools could bring was perceptible; thus, faced with the ever-tighter pace imposed by global competitiveness, the need emerged to recover craftsmanship knowledge in order to enhance it by introducing it into digital innovation processes.

The innovation program's first step involved digitising the company's historical archive through product reverse engineering techniques. A 'digital twin' was then obtained – starting from physical objects – i.e. a digital model ready to be reinterpreted, elaborated and fed into contemporary creative and production processes. Thanks to these research experiences, it was possible to elaborate design methods and tools to develop a codified digitisation procedure using 3D scanning for historical company components consisting of highly artistic, handcrafted elements and other industrialisable (serial) components.

In the first phase, the introduction of the digital archive made it possible to: improve time-to-market and thus an adequate reaction to market demands; co-ordinate the dialogue and interaction between company departments and external suppliers; obtain a taxonomy of the most industrialised handicrafts and processes in the supply chain; create a 'platform of knowledge and know-how' to be shared within the company. The SME's digital archive of products and components was preparatory to design and production optimisation with the help of 3D modelling, parametric software and additive manufacturing processes. Subsequently, having the business knowledge organised and digitised in the form of an archive allowed the products to be placed within virtual contexts making, use of advanced augmented reality and virtual reality tools to enable applications aimed at

product customisation and user-friendly solutions for interior design and high-end contract and residential applications.

Another interesting case studies is offered by Baldi Company, a SME which developed a digital archive of components and assemblies in bronze e crystal. The brand operates within classic interiors proposing decorative home details, as a typical example of Florence (Italy) craftsmanship tradition.

Through 3D scanning and parametric software, the company digitalized the company production archive generating forms which could work as a base for redesign strategies and as a knowledge-based catalogue to train new generations of designers and craftsmen.

Keynote Speaker

Roberto Donà

Roberto Donà is an academic and a business practitioner with a long experience in China. He is a Professor of Practice in Management at IBSS, the business school of Xi'An Jiaotong Liverpool University in Suzhou, where he serves also the Associate Dean for Corporate Affairs. He is also Honorary Professor at School of Innovation and Entrepreneurship of University of Chinese Academy of Science.

Roberto has a strong international exposure having worked in Russia, Bulgaria, Argentina, USA and China. Since the beginning of his career, he worked also as management consultant for both domestic and international companies serving in several board positions. In May 2021 he has been elected Board Member of the EUCC (European Chamber of Commerce) Shanghai.

Currently he is also chairman and independent director in a company listed at the Catalyst market in Singapore and founder of an Italian startup registered as innovative Italian enterprise.

Entrepreneurship, Management and Leadership

This article aims to investigate some relationships between entrepreneurship, management, and leadership in order to identify which keywords may be useful in the agendas of scholars.

Despite the fact that entrepreneurship and management appear to be two distinct concepts, in the new competitive landscape, both new and well-established enterprises compete in a global and digital environment with an increasing dynamic and intensified competition, and thus companies of any age or size are forced to develop more entrepreneurial strategies in order to compete and survive.

What are the forces driving this new competitive landscape and the futures of many businesses?

The first is that emerging economies are becoming increasingly important in determining future growth, owing to the growing importance of the service sector.

The changes in the world's population are the second driver influencing the future. Life expectancy is rising, and as a result, there is a potential problem of aging. This is a concern from a demographic standpoint, but from a commercial standpoint, it means there are new industries, new sectors, new clients, and new products that may be offered.

Technology is the third driving force in the future. We are only at the beginning of a great technical progress, and this development indicates that future company models will be entirely different from current ones, necessitating a new wave of entrepreneurship within existing organizations. New tech giants have recently disrupted several industries, and huge organizations are now aware of this and maybe prepared to play a role in the changing world.

The final driving force in the future is urbanization. More and more people are living, and will continue to reside, in urban regions rather than rural areas, raising concerns about sustainability and necessitating changes in business models that prioritize sustainability from both an environmental and purely business standpoint.

All of the aforementioned forces are pushing us to define new leadership characteristics because being a leader entails not only influencing followers to achieve common goals, but also creating, sharing, and implementing a vision, facilitating change, making faster decisions, building relationships, controlling the climate, and mentoring and coaching future leaders.

What are the directions based on these basic assumptions? We can see that three major directions are guiding the work of numerous academic researchers. The first is a historical shift in the analysis of prospective leaders' characteristics. The second is the rising relevance of something which we might define as "not just technical skills". Finally, the complexity and dynamic of the corporate world necessitate interdisciplinarity.

The historical shifts of the traits of the leader moved from a great man approach to the current studies, with more focus on the ability to adapt to the situations and to the relationship with the followers. This shift identifies different key traits of leaders and, among the others, there are intelligence, self-confidence, determination, integrity and sociability.

As a result, leadership study is becoming increasingly multidisciplinary, merging information from several fields such as behaviorism, psychology, philosophy, and life science, because modern leaders must also be authentic, servant, ethical, and transformative.

Furthermore, future leaders must be able to operate outside of their comfort zone in order to detect new competitive landscapes as a result of the aforementioned dynamic. This explains why managerial entrepreneurial studies are conducted.

A transdisciplinary approach is essential for identifying answers to emerging and very complex global challenges, such as climate change and sustainability, which are related not just to management but also to science, technology, art, and creativity.

For example, one particularly fascinating area of study is the so-called "design driven strategy" and the growing importance of creating new goods in light of the factors outlined above and the corresponding emergent difficulties.

Finally, what are the issues that future leaders will face and which must be acknowledged in management research?

There are two viewpoints to consider: the strategic context and the people.

The issues in the strategic context are related to the ability to challenge the status quo, adapt to technology, and enable creativity.

The second viewpoint is about individuals and how to prepare them for a changing world. If, as some analysts predict, many jobs of the future have yet to be invented, it is the responsibility of scholars to lay the groundwork for that understanding by demonstrating how to leverage existing competencies and experiences to be upskilled and reskilled, to manage truly diverse teams, and to focus on doing good.

Entrepreneurship, management, and leadership are all concerned with the conception and implementation of new sustainable business models, and the complexity and uncertainty of the future necessitate a new research agenda that is less concerned with analyzing the past and more concerned with going beyond predefined conceptual models: an agenda in which innovation and interdisciplinarity will be central.

Keynote Speaker

Dr. Pavan Soni

Dr. Pavan Soni is an Innovation Evangelist by profession and a teacher by passion. He is the founder of Inflexion Point, offering programs on Design Thinking, Strategic Acumen, and Consulting Skills. He is the author of the book, Design Your Thinking, published by Penguin Random House in 2020. The book was one of the five books shortlisted for the '2021 BBLF CK Prahalad Best Business Book Award'. In 18 months of its release, the book has become a National Best Seller.

Apart from being an Adjunct Faculty at ISB Hyderabad and IIM Bangalore, Pavan is a columnist at Mint, YourStory, Inc42, Entrepreneur and People Matters. He authors a monthly newsletter, Inflexion Point, which has been in circulation since 2008 and reaches to over 20,000 enthusiasts across the world.

He was the only Indian to be shortlisted for the prestigious 'FT & McKinsey Bracken Bower Award for the Best Business Book of the Year 2016'. He has been invited five times to speak at the TEDx, and is featured as one of the '100 Digital Influencers of 2020' by YourStory.

He is a Gold Medalist from MBM Engineering College Jodhpur, and did his PGDIE from NITIE Mumbai. He finished his Doctoral Studies from IIM Bangalore in the domain of innovation management. He is passionate about fitness, spirituality, guitar, chess, reading and writing.

The boundaries between goods and services, consumers and producers, government and citizens, norms and exigencies, and virtual and real are fast getting blurred. In this boundaryless world you can't afford to have mental barriers. You must think seamlessly and act fearlessly. You must learn to look around the corners, study weak signals, pivot without regret, and learn to throw caution to the wind. May you shape your thinking faster than you are forced to. The talk and the ensuing conference is all about nudging you to think differently in this new normal.

EXAMINING THE RELATIONSHIP AMONG M-SERVICE QUALITY, CUSTOMER PERCEIVED VALUE (CPV) PLANNED BUYING BEHAVIOUR IN M-COMMERCE APPLICATION BASED SERVICES

Rohit Kumar, Dr. Sanjeev Padashetty S
Alliance University

Abstract

Consumer buying behaviour is the locus of marketing research over decades. In the current era of IT revolution Mobile – Commerce application plays vital role in planned buying behaviour of the customer. Importance of Mobile – Commerce application arises because the businesses have tendencies to reach their customers through mobile services lately (Shin and Kim, 2008). Developments in smart phones and wireless communication technology with the support of internet have increased the level of mobile commerce in current era. To remain competitive in the marketplace; measuring consumer perceived value (CPV) in planned buying behaviour in M-Commerce application-based service is crucial. The purposes of this study are to construct an instrument to evaluate service quality of mobile App-based services and have a further discussion of the relationships among service quality, customer perceived value, customer satisfaction, and planned buying behaviour. Structural equation modelling and multiple regression analysis were used to analyse the data collected from mobile application users in South Bengaluru (India). A pilot study of n = 47 samples was conducted to understand the model fitment and construct formation and later the main study was conducted with a sample size of n = 222 that established a significant relationship among all the six constructs.

CLIENT PERSPECTIVES ON CRITICAL SUCCESS FACTORS FOR PROJECT TEAM MANAGEMENT IN ONLINE I.T. OUTSOURCING PROJECTS

Kabir Pary
Alliance University

Abstract

Organisations are growingly using online IT outsourcing resources for their projects. Changed work demographics due to Covid-19 pandemic including great resignation, quiet quitting and moonlighting also accelerated this growth. Online outsourcing benefits organisations with access to talented global workers and reduction in project, administration, and compliance costs. Online IT outsourcing is distinct due to their unique usage of resources that are acquired for short term and not bound by the organisational frameworks. The project team management is resource intensive, but its focus on project success of online IT outsourcing is not systematically explored. This paper addresses this gap and summarises the critical success factors for project team management based on a qualitative content analysis of client review comments from a major online outsourcing platform. Shared understanding, technical competence, shared ownership, and open communication are the critical success factors identified. Impact of Covid-19 on these is also explored. This study would help project personnel and organisations that are engaging in online IT outsourcing resources to focus on the critical team success factors for maximising the project success. It would also enhance the project management literature where there is lack of online IT outsourcing knowledge.

Paper ID: ASICON 219

IDEAL SELF (IS) INCREASES THE LONGEVITY IN LEADER FOLLOWER RELATIONSHIP AND RELATIVE DEPRIVATION (RD) IS THE DRIVER OF IS

Rashmi R Shet

Alliance University

Abstract

Relative Deprivation is one of the most researched areas with almost exploring the not so positive effects. This study is an attempt to explore the positive side of the Relative Deprivation. It is a unique study exploring two major concepts (RD and Ideal Self) and their interdependence. The study tried exploring how can IS lead to the long-term relationship between the leader & the follower in an organisation and whether RD is the main driver for the IS. The research is based on a survey method to derive a representative picture of the attitudes and characteristics of a large group. The results from study revealed that IS acts as a motivational, inspirational aspect, which induces job involvement and OCB behaviours amongst followers, thereby increasing their well-being, and leading to long-term relationship between leader and follower. The most interesting part of the entire research was, the negative feeling, RD becoming the main trigger for the development of IS. This study can help organisations to motivate their employees to follow their ideal selves for a productive workplace.

Paper ID: ASICON 221

EXPLORING PEOPLE ANALYTICS IMPLEMENTATION: DEFINING A CONDUCIVE STATE

Arjun Ajit
Alliance University

Abstract

The application of people analytics in organisations has generated much discussion in academia and Industry. Yet, the number of businesses who successfully use it could be far greater. In this work, an attempt was made to establish the relationship between some of the factors that could lead to the intention to use HR Analytics in an organisation. The study examined the combined effects of a few organisational and individual elements that can encourage adoption of HR analytics. The paper also presents real-world cases of HR Analytics usage and how organisations have benefitted from it. The study followed a step-by-step procedure, were initially, the Corporate Ethical value, which is an organisational component, was evaluated. Then, the moderating impact of the Ethical culture of an organisation on employees' psychological contracts was determined. The third aspect used is an individual's "Illusion of Control," a psychological phenomenon. Then, under the moderating influence of the perceived advantages of people analytics, an employee's problem-solving attitude toward using analytics in HR processes was evaluated. The model developed at the end of the study describes the relations between the four aforementioned elements and how it can encourage the "Intention to use HR analytics" in the workplace. A questionnaire method was used to determine the relationship between the mentioned factors.

LIVING UNDER ARMED FORCES SPECIAL POWERS ACT (AFSPA) AND MEDIA COVERAGE: A CASE STUDY OF HUMAN RIGHTS VIOLATIONS IN NAGALAND

Ishita Maity
Alliance University

Abstract

The armed Forces (Special Powers) Act (AFSPA) was enacted and enforced in most of the North-East States in India in 1958 due to internal disturbance in the region. Under the AFSPA, army personnel assume huge power to control and regulate peace in the region. The northeast region of India is having high literacy rate, culture is highly modernised, westernised and has a liberal society compared to other part of India. In fact, women enjoy their freedom to participate at all levels and are highly emancipated. At the same time, governed by AFSPA, they also experience human right violations. This paper will trace out all such human rights violations portrayed by the northeast people living in Nagaland such as harassment, torture, interrogation, extra-judicial execution, rape etc. committed by the Army personnel. It has been noticed that most human rights violations do not attract media coverage at the national level. Some of the cases were highlighted by the local print media and through social media but most of the news was suppressed. This paper by adopting content analysis as the method will trace human rights violations carried out by the army forces against women in Nagaland from Pre and Post Covid phases between the pre-Covid phase will cover 2017-2019 and post-Covid phase from 2021-2022.

The objective of the study is to find out why and how human rights violence against women is selectively showcased or underrepresented in front of the nation as well as the inner contradiction between regional print media and national print media in the representation of

the situation. The finding of the study is that cultural and ideological (conservative) difference between the army and the northeast people stands one of the major reasons for human rights violations against women and the army's dominant position restrict media to highlight human rights violations at the national level.

IMPACT OF AI TECHNOLOGIES ON SUPPLY CHAIN INNOVATION AND PERFORMANCE IN HEALTHCARE AND FINTECH FIRMS IN INDIA

Karthi Mani, Dr. George Essaew
Alliance University

Abstract

In the era of digital world, the mere challenge for any business is to sustain global competition. One of the explicit solutions to stay in the competitive market is to create or adopt newer innovations and technologies for products, services, and the business processes. Product innovation is the lifeblood of firms competing in dynamic environments (Zablit, 2010). Adoption of technologies and processes are also playing a crucial role for the success and existence of the organizations. The era of Artificial Intelligence (AI) begun in the early 1950 (Turing), 1956 (John McCarthy) and in the same decade the Technology Push generation of innovation also got rolled up, followed by the Need Pull or Market Pull generation of Innovation in the mid of 1960s (Kotsemir, Meissner 2013). The application of AI is extended to ecommerce, healthcare, retail Sector, manufacturing, self-driving cars, business marketing, intelligent manufacturing (B Li, 2017), finance (Bahrammizaee, 2010), robotics, and natural language processing. Based on the literature review from 2010 onwards there is limited studies which focused on the AI Technologies and its impact on the supply chain innovation and performance. This paper aims in trying to study the relationship among AI Technologies, supply chain innovation and performance. The data collected from 230 respondents from healthcare and fintech forms in India is analysed and the findings are provided as a contribution to the knowledge area. The limitations, prospects to extend this study in the future are also discussed.

A LITERATURE REVIEW TO ANALYSE GLOBAL SUPPLY CHAIN MANAGEMENT & COMPETITIVE ADVANTAGE IN INDUSTRY 5.0 ERA

Santosh Zambre
Alliance University

Abstract

Since the natural resources sector is heavily reliant on customer service, today's competitiveness and business requirements demands a drastic and reasonable change in the industry supply chain management. The industry supply chain management concept includes understanding new issues encountered by the industry, analysing the best practices, and then using the outcomes of those practices to deal with global business requirements and competitiveness in the Industry 5.0 era. For businesses throughout the world, modern supply chain management is more of a question of survival than anything else. This concept examines the potential for supply chain management to achieve a competitive advantage in the Industry 5.0 era. Currently, the supply chain management is centralized on the need of the customer, but it also includes challenges and accountability problems. As a result, the stakes are higher than ever. A company's ability to compete in other sectors hinges on its ability to run an efficient supply chain. Hence, this study aims to determine the competitive advantage that may be gained in the business via the implementation of an effective Supply change management strategy in the Industry 5.0 Era. When researching supply chain management techniques in the business, the study focused on how these practices were implemented, investigated the most successful and best practices used in other industries, and compared the ideal practice to the existing reality to conclude. We assume that supply chain management may assist a firm get a

competitive edge in the market. As the industry's requirements and expectation change, this study attempts to come up with a supply chain management model in Industry 5.0 era that considers the best practices that are already in place in other supply chain management-focused businesses.

Paper ID: ASICON 240

AESTHETICS, RELIGION, CULTURE, FOOD

Tias Maity
Alliance University

Abstract

Food is a necessary part of life. Without food no organism can survive. But for humans' food has been more than a need, it has been a way to assert one's individuality, assert one's religion and preference of food also speaks a lot about the culture within which one has grown in. Thus, it has been at the centre of cultural significance and distinction. Even a little geographical shift has the capacity to bring forward new ingredients to cook with and for consumption. Notwithstanding the various ways the same ingredient is consumed. The purpose of this paper is to put food at the centre of our cultural readings. It is food that has been the most primitive form of socio-cultural marker and the reading of food consumption and preparation will bring out an interesting pattern of outlook and creativity as seen globally. The beliefs and religious connotations related to food has been innumerable. With every political upheaval or change the nature of food consumed and been made available has also changed. From the famous Margarete Thatcher quote 'Let them have cake!' which enumerates the capitalistic turn and the consequent mentality of the people in power, to the present age of banning of certain food products on religious grounds, food has been at the centre of strife and debate in social, political, and economic spheres over the ages. What does such conflicts related to food say about the cultures that have been shaped over the years? Despite India being known as a predominantly vegetarian country according to statistics over 71% of the population eats meat, fish, or poultry products. Of which 53% are Hindus who are non-vegetarian. In such a situation, the intention of my paper is to look at how and if food is a basis of our knowledge of reality and if consumption pattern has any historical consciousness that drives food choices. Humans are

predominantly dependent on their eyes for experiencing reality. Yet when one cooks, he/she cooks with all their sensory organs. Food is the only object that is experienced with all our senses. In such a scenario is it possible to look at food as the only phenomenon that can be a way to fully comprehend reality? If aesthetics is related to our senses, then food becomes a part of aesthetics. Food integrates within its creativity, originality, and an ample space to experiment; everything that goes into the creation of art. It consistently moves away from 'plastic art' to the realm of what I want to term 'actual art'. Despite the development of 3D printing, when it comes to food the printing is done by inputting actual food ingredients to create the final printing. Apart from the moral issue of killing of animals, the idea of synthetic meat products provides huge consideration for the future. Prior to synthetic meat we already had the development of hybrid vegetables, and injection of various foreign substances in food. How do we reconcile with such phenomena? It is from here that I want to put forward a definition of aesthetics and argue about the possibility of food being the primary conception of what we now understand as art.

KUDUMBASHREE, THE SUCCESS STORY OF WOMEN EMPOWERMENT THROUGH LOCAL SELF GOVERNMENT

Shyni KP
Alliance University

Abstract

As the nation is celebrating 30th year of 73rd and 74th constitutional amendment which is called as one of the silent revolutions that India has seen, its only rightful on ones' part to acknowledge its contribution to the country. The Panchayath Raj and Municipalities Amendment Act has not only enforced India's Federal structure multi-fold by instituting a three-tier system of governance. This Act has played a major role in ensuing economic reforms through local governance, one such example being Kerala Governments women empowerment scheme, named, "Kudumbasree". This organisation, set up in the 1997, works through a network of women, and is considered today as one of the best models for poverty eradication. It has won many accolades since its inception internationally and nationally including the National Award for Best convergence model under Pradhan Mantri Awas Yojana (urban) Awards in 2022.

This scheme is one of the largest women's networks in the world, essentially a community network covering the whole of the state. The three-tier system involves Neighbourhood groups at primary levels, Area Development Societies at ward level and Community Development Societies at the local government level. The network thus works to bring to the forefront the needs of the people at all walks of the society aiming at citizen-centric governance.

The researcher through this article tries to bring the importance of decentralisation. It assumes Kudumbasree programme as one of the best practices adapted by the State of Kerala through women empowerment and attempts to assess how this novel concept has changed the social and economic structure of a state and the lives involved in it.

TERAHTAALI AND ITS CULTURAL SIGNIFICANCE IN THE CONTEMPORARY FOLK DANCE COMMUNITY OF RAJASTHAN

Ashly Ann Binu
Alliance University

Abstract

Art and culture are two interconnected factors of a community. The cultural exposure witnessed through the art forms plays a significant role in exhibiting the elements of beliefs and identity of a particular geographical space. Folk dances play an intense role in delivering the thoughts, beliefs and rituals of a community that formulates an art form. With the elements of music, dance and performance, folk dance acts as a path for acquiring and learning the diverse culture of a specific community. It helps in the representation of the pride and expression of a society.

Rajasthan is well known for its beauty and cultural significance among other communities of India. It possesses different type of folk dances and one among them is the *TerahTaali*. *TerahTaali i*s a Rajasthan folk dance performed by women. One of the major significant aspects of this folk dance is the use of the thirteen cymbals that are used in the body parts of the female performers. The thirteen cymbals used for the performance are one of the major attractions of the performance. The use of a wide variety of instruments such as Manjeera and other instruments adds an impact to the performance. This research paper will focus on how *TerahTaali* is playing a crucial role in identifying and impacting the culture of contemporary Rajasthan culture.

POSSIBILITY OF GREEN ENERGY IN INDIA: A DREAM OR A REALITY!

Pramath Adiga
Alliance University

Abstract

India's aim is to become the powerhouse of growth and development with its sheer size and enormous potential in the field of industry but with environ-cared atmosphere. But it is achievable only when it has productive energy to back-up. As noted in already announced government policy, India targets to achieve net zero carbon-emission by 2070 and strives to meet half of its electricity needs from renewable resources by the end of 2030. It has put an imperative on India to achieve new energy demand with low-carbon emission but with more use of renewable sources. It is easier said than done as it needs to move with more care and circumspection, otherwise its ambition may lead to haywire. To move to green energy, it requires step by step investment in green-energy projects. Once green energy movement gains its hold, the consumption of energy being produced by conventional methods begins to reduce its grip in the industrial sector. The reduction in the use of conventional methods gets side-lined; the rate of air pollution, worsening global warming and harm to the environment starts to decrease. It provides a base to green energy advancement. What is needed the most is proper vision and wherewithal to bring it into force in constructive sense.

Paper ID: ASICON 253

FOOD WASTE AND ITS IMPACT ON THE ENVIRONMENT

Kavitha Christo Nelson
Alliance University

Abstract

Global hunger is a major concern and while India ranks 103 out of 119 countries in Global Hunger Index 2018 and trying to combat malnutrition in one arena, food waste or food loss has become another major concern. Food is an essential part of one's sustenance, but the food is wasted or lost intentionally or unintentionally in every part of the world and goes to the landfill where India is one amongst wasting the most food produced in the world. Food waste happens at all stages from farm produce to food processors, in supermarkets, and at individual consumer levels. Food waste is associated with the use of natural resources, from the land used for agriculture to groundwater, human resources, and capital consumed to produce such food. Giving importance to the sustainability of food, the article banks on the Sustainable Development Goals 12.3 of 2030 as food waste or food loss is associated with the nutritional, social, economic, and environmental impact on greenhouse gas emissions and climate change. The article spotlights the initiatives of India and other countries that tried to reduce food waste by mapping the environment with sustainable measures on surplus food produce and their preventive measures to reduce food loss.

SOCIAL JUSTICE: WITH SPECIAL REFERENCE TO THE INDIGENOUS COMMUNITY OF SUNDARBANS

Aldrina Rimpa Gomes
Alliance University

Abstract

This article analyses social justice as a radical phenomenon in its most comprehensive sense. The three wings of the State i.e., the legislature, executive and judiciary, is monitored to achieve the ends of social justice. Thus, to acknowledge in its broader facets and to achieve the common good by distributing the resources and benefits to all without any form of discrimination, the rule of law as a potent machinery is guiding to protect the weaker sections of the society. The Preamble of the Constitution of India uses the term 'social justice' and ensures that there is no discrimination and promote egalitarian society where equal opportunities are to be afforded to the citizens. To attain these objectives the States are required to follow the Directive Principles of the State Policies, to strive towards promoting welfare to the citizens, by securing and protecting them to achieve the ends of social justice by removing the superior and inferior considerations. The paper has critically examined the impact of denial towards social justice of the indigenous group of the Sundarbans and how the problems of social classification and discrimination has intervened in their upliftment.

CRIME AND DECRIMINALISATION: AN ETHOS OF SOCIAL CONFORMITY

K Makesh Krishna, Dr. Syed Umarhathab, R. Ramesh Kannan
Manonmanium Sunderanar University

Abstract

Crime is "an intentional act or omission committed in violation of criminal law (s), by a person or group without any defense or justification and sanctioned by the state as a felony or misdemeanour"; certainly, defining and processing an act as crime is the criminalisation of the act. On the other hand, decriminalisation is the process of making the act to not exist in practice or make the practice accepted by society at large. For example, untouchability, bribery, commercial sex work, begging, alcoholism, drug abuse, etc. The Indian criminal justice system has enough laws to control crime and criminal activities, although the implementation of laws and social conformity of Indian citizen do not meet each other at many points of time. The social conformity is well taken for raid by citizen in the name of adjustment, adaptability or acceptability ending with high tolerance without natural happiness. Now the people were ready to accept certain unlawful act as a normal phenomenon because it's an order of the day. This paper is based on the mixed methodology and conceptual research using content analysis method. This paper will discuss on ethos of social conformity and real-time problem and practices via crime and decriminalisation of select acts.

USE OF TECHNOLOGY IN CRIMINAL INVESTIGATION

Divya Panickar, Nupur C Adawadkar
Alliance University

Abstract

The world that we have been living in has been completely transformed as a result of technological advancements. When we first open our eyes in the morning, technology is already at work, and it continues to do so throughout the day. The impact that technology has had on every facet of life has been profound. Since the technological world moves at such a breakneck pace, it is necessary for our law enforcement agencies to ramp up their use of technology to conduct effective criminal investigations and stay abreast of developing trends. Even if the police force has already adopted a great deal of technology advancement, there is still an ongoing requirement for further improvements. There is a widespread misunderstanding that forensics can only be conducted in lab settings. When it comes to comprehending the circumstances surrounding an investigation and gathering evidence, forensics can be of tremendous aid. In a similar manner, digital forensics involves the analysis of electronic evidence that was gathered over the course of an inquiry. In order to achieve accurate results in either aspect of forensics, a significant amount of technology is required. Not only can they be helpful in a criminal investigation, but they can also be used in an internal inquiry for a civil case. Crimes might be investigated to restore public trust in law enforcement and the criminal justice system. The nation's crime laboratories could also benefit from the use of artificial intelligence in the analysis of complex DNA mixes and other similar tasks. It is possible that AI technology will be able to offer law enforcement with situational awareness and context, which will help improve police well-being

by allowing for more informed reactions to potentially harmful circumstances. This paper focuses on various kinds of technological advancements used as a part of criminal investigation and its future in the criminal justice system.

BIRDS AND ITS IMPACT ON THE ENVIRONMENT: A CRIMINO-ORNITHOLOGICAL EXPLANATIONS

K Makesh Krishna, Dr. Syed Umarhathab, R. Ramesh Kannan
Manonmanium Sunderanar University

Abstract

Green criminology is the contemporary field that deals with the issues and destruction of natural environment, animals, and birds including human negligence. When natural atmosphere is damaged the first animal to be affected in the biodiversity are birds especially the little birds such as sparrow, pigeon, kingfisher and etc. It disturbs the eco-system ending in the biodiversity issues leadings to global warming and deforestation. This paper is intended to cover the role of birds in the biodiversity and the factors that make birds extinct such as pollution (all forms), development of untested cyber space (mobile phone singles) and devices, deforestation, loss of habitat, glass collisions, spout hunting, etc. Birds perform several ecological roles for ecosystem functioning and generate great benefits for human being in most of the circumstances. However, environmental disturbances, mostly due to anthropogenic actions, have caused a decrease of bird diversity and can lead to the loss of their functions in the remaining habitats. The major objective of the study is to appreciate the role of birds in biodiversity conservation. This paper is based on the mixed methodology and conceptual research using content analysis method. This paper will discuss the factors that incline mitigation of the birds and aftermath effect of the bird's diversity. Finally, the authors suggest some policy recommendations and workable solutions to overcome and mitigate the problems.

THE LAW ON CSR IN INDIA: AN ANALYSIS OF ITS COMPLIANCE BY COMPANIES THROUGH CORPORATE DISCLOSURES

Neelanjan Barat, Dr.Rashmi K S
Alliance University

Abstract

Based on an evaluation of qualitative content on the self-reported Corporate Social Responsibility -related declarations by the eligible companies for the 2021-22 fiscal year, this article assesses the situation with the compliances for the regulatory framework regulating corporations in the country. This analysis intends to reveal findings which are important in terms of answering the queries on compliance by the various enterprise with Indian Corporate Social Responsibility provisions. Most significantly, this article reveals that many firms are not submitting with the expenditures as well as its other legal requirements. Many firms showcase a mere 'tick-box compliance' approach, with possible indications of circumventing the law for fulfilling self-interests. In particular, government companies mainly undertake Corporate Social Responsibility activities in response to the national and state governments' directions. This article calls for the inclusion of systematic and thorough procedures in firms' Corporate Social Responsibility operations to promote accountability and transparency. This article also advocates for the formation and expansion of a specialised and independent regulatory watchdog to audit, observe, and examine firms' Corporate Social Responsibility operations. The article intends to provide an effective solution to ease the process and thereof creating an atmosphere of effective compliance and their monitoring to achieve the goals as envisioned for Corporate Social Responsibility.

A STUDY ON THE IMPACT OF LOSS OF SALES IN THE NOKIA COMPANY

Harsha V, Lamberg, Juha-Antti, M Sofiah, Ahmed Alibage
Acharya Bangalore B School

Abstract

Nokia was long associated with the mobile phone industry, but as the era of smartphones came, the prior market leader found itself in a precarious position. Company failures are frequently attributed in the literature on strategy and business history to the cognitive biases of the senior management team, organisational competency gaps, and radically altered competitive environments. However, none of these internal corporate traits would manifest themselves until the business was unable to adjust to a changing competitive climate. In this study, we studied the complex interplay between firm-external and firm-internal factors by evaluating the decline of the Nokia Corporation from its position as the market leader in the global mobile phone industry from 1999 to 2021. We show that despite having the technological capacity to attack its rivals and the time to respond to market developments, Nokia was unable to do so despite having the necessary organisational structure. Nokia's architecture was created to equip the company for dealing with market upheavals. By pointing out the difficulties with organisational adaptability and quick decision-making, we explain this contradiction. As a result, we suggest a direction toward organisational routine-based strategic consistency and architectural coherence. We would investigate how and why Nokia Corporation made several poorly timed decisions that made its situation worse rather than creating a strategic response that successfully countered the dangers presented by Apple and Google in the smartphone business. We focus on important organisational and technological design decisions that, when combined, established adequate definitions for the demise of the mobile phone industry. Our

comprehension of strategic failure improves when we concentrate on decisions rather than characteristics (such as fear or arrogance). The use of historical philosophy and oral history techniques as effective entry points for this kind of inquiry. We intend to investigate the reduction in demand for the sales in the present situation because they are not up to date. A financial analysis of the data connected to the market's decline of the Nokia dataset was obtained from Kaggle and trends from 1999 to 2001 were examined. The study results show that Nokia Corporation made several decisions that worsened its predicament rather than devising a viable tactical response to the dangers presented by Apple and Google in the smartphone market. In addition, significant technological and organisational design decisions created a convincing enough basis for the mobile phone business to be abandoned. We get a deeper understanding of strategic failure by emphasizing choices rather than characteristics (such as arrogance or fear). We also stress the value of using oral history methods and historical philosophy as sound theoretical foundations for this investigation. The study discovered that Nokia sales were declining as technology developed.

Paper ID: ASICON 206

CUSTOMER ENGAGEMENT IN SOCIAL MEDIA FOR GEN Z AND MILLENNIALS

Tulsi Patro, Dr. Shampa Nandi
International College of Management and Excellence

Abstract

Customer engagement is all about building a relationship between the firm and the customer to cultivate brand loyalty and awareness. In the current scenario sales growth, competencies and profitability are getting enhanced by customer engagement. Many reports have suggested that customer engagement is strongly related to Word-of-Mouth (WOM) and E-WOM. Customer engagement is about the customer's state of mind which is evaluated based on the classification: - Vigor, Dedication, and Absorption. Further, people from different generations have different buying behaviour. In today's world the two generations namely Millennials (1981-96), and Gen Z (1977-2012) have become the most remarkable in using social media platforms, so we should focus on these two segments about their involvement in social media platform and enhance the positive E-WOM through their interaction, reviews, comments in social media. As such no empirical study has been done on millennials and Gen Z. For which in this report a survey has been conducted with some questioners that focus on the two-generation segments. Data analysis has been done with the help of SPSS with a sample size of 150 and keeping consideration about customer engagement classification. The study found that all three dimensions give a positive response to E-WOM.

Paper ID: ASICON 207

TRANSCENDING DISCIPLINARY BOUNDARIES THROUGH TECHNOLOGICAL INNOVATION: A SOCIOLOGICAL STUDY ON CULTURE AND RELIGION

Shreya Nandi
University of Kalyani

Abstract

With the widening era of globalisation, the study explores on how the transcending disciplinary boundaries are getting expanded increasingly based on Culture and Religion through technological innovation. Firstly, it emphasises on the term "Transcending disciplinary boundaries" means all the boundaries of our societal aspects are not only concentrated at one constrict place where all of them are generally working in a united manner. It enhances in a much broader disciplinary sights, forming new knowledge, concepts, and perspectives with the innovation of technology. Here, technology plays a crucial role because now it has become a cup of tea for the existence of humans in everyday social life. Secondly, the paper elucidates how culture and religion is interdependent upon each other. It also analyses how the cultures and religions of different societies are blended like a 'Salad-bowl' where the masses are adopting notions and beliefs. This process has been observed to be melting in a society to the extent that people wants everything at one single location. However, such societal phenomena are creating a lag because they such conceptions are part of a non-material culture and exists abstractly, which we cannot touch and change, and this is the way 'Cultural-lag' is formed. Thirdly, it focuses on how the innovation creates a dominant role upon the dimensions in our society and how the technology also governing the society

through the concept of 'Surveillance'. Finally, this paper will engage in a comprehensive discussion and focus on the extent upon the significance of these social phenomena through innovation in further scenarios.

Paper ID: ASICON 213

A REVIEW STUDY OF THE DIALOGIC SELF AS A SELF-LANGUAGE FOR TRANSFORMATION THROUGH ENHANCING SELF- AWARENESS

Kiran Mai Yanamala
Presidency University

Abstract

Dialogic self-theory proposed by Herbert (T, 2012), is an approach to dialogue or talking to oneself, which establishes a link between the surroundings or society and the self. According to Herbert (Hermans H. J., 2018), the self is an extension of the society while the society influences the deepest regions of one's self and identity. Following the same logic, self-sabotage, self-cure, self-radicalisation, self-government, self-nationalisation, and self-internationalisation are the phenomena which assume that self is an extension of society.

Based on such assumptions, three levels of inclusiveness are identified in the self, a democratic self in personal (I as an individual), social (I as a member of a group), and global (I as a human being).

This article is a self-work and a practical process work facilitated by Kantha Rao (VN, June 2021) on us as part of his professional coaching work similar in organisation space. The process work brings out the practical application of dialogic self-Theory (DST). The article highlights the relation between the nature of voices and the journey of self-transformation, which is when the learner gains the dialogic competency to disrupt ambiguity. This dialogic knowledge accounts for enhanced self-awareness. (Emotional Intelligence -personal skills).

The process work is based on interventions made using Self Inquiry & Witness Consciousness. Five sequential learning modules like Self Awareness (Personal competency); learning about Creating

Collaborative cultures (Competition Vs Collaboration – Udai Pareek); Learning one's motive profiles (McClelland); Working with Opposites (Dialogical Self Theory, Process philosophy, Cogenetic logic and lastly with Discovering grounds for common futures (Weisbord); were used to explore the same. The study reveals that there is a scope for enhanced emotional intelligence, which helps in self-transformation, which can lead to transformation in individuals and organisations through a guided continuous process.

Paper ID: ASICON 214

A STUDY ON TRANSPORTATION PROCESS: A CASE STUDY AT GRASIM INDUSTRIES

Indumathi R, Anup Kumar Shukla, Bharath
Presidency College

Abstract

The Indian chemical industry is ranked 12th largest in the world, growing at more than 12.5% yearly. The USD 80 billion Indian chemical industry comprises basic chemicals, and its products, petrochemicals, fertilizers, paints, gases, and pharmaceuticals. The country has the potential and aptitude to become the top two exporters of specialty chemicals from developing country together with China, given that India has the necessary capabilities in chemistry and engineering fields. Grasim Industries is one such company that is significantly contributing towards Indian economy. Grasim Industries is focusing on supply chain process to reduce resource use, especially water and chemicals, in different stages to make it sustainable and resilient. The process starts with the raw materials that chemical companies purchase from suppliers and converts them into chemical products. These chemical products are then distributed to distributors who sell the chemicals to customers in various industries. The study focuses on understanding the issues and problems associated with transportation at Grasim Industries.

Paper ID: ASICON 215

MY LEADER KNOWS BEST: MARITIME AGREEMENTS LEADING TO INTERNATIONAL DISAGREEMENTS

Ritika Kapoor
Alliance University

Abstract

India and Sri Lanka share a profound cultural and historical connectedness. With 'Tamilness' as a shared identity, the fisher folk of the two nations is more like siblings at sea. However, this relationship witnessed a degradation following the demarcation of the Palk Bay region in 1974. India and Sri Lanka entered into an International Maritime Boundary Line Agreement owing to an overlap of their respective territorial waters. While this was made to seem like a genuine act of concern for India's maritime sovereignty, the process involved complexities ranging from manipulation of the delineation principle, ceding of the Katchatheevu Island to Sri Lanka, to non-ratification of the Agreement leading to questions on its constitutionality. While this agreement, in fact, awarded India with a larger share of international waters vis-à-vis Sri Lanka's (1.02:1), along with protecting the interests of its fisher-folk, the island was ceded to the Sri Lankans despite historical records proving India's sovereignty over that space. Seemingly, this wasn't enough for the Indian citizenry to condone, that another agreement was signed with the nautical neighbour in 1976. This very settlement drew much flak from the countrymen, particularly the Tamil Nadu fishing community, who were now abridged of their fishing rights in the region. Consequently, livelihood concerns of the fishing communities find significant mention in the dissertation on two key facets: (i) the Indian fisher-folk having faced a curtailment of their fishing rights attributable to the 1976 Agreement; and (ii) the Sri Lankan fisher-folk fearing a dearth of marine resources on

their side of the Palk Bay with incessant poaching by mechanised Indian trawlers. Extensive use of unsustainable fishing techniques, with bottom trawling emerging as the widely used method due to its high catch and rummaging feature, has waned the marine health of the Palk Bay region. This paper delves into a critical analysis of the aforementioned issues through employment of extensive academic literature. Exploration of such secondary data has been validated by author's unstructured interviews with maritime and foreign policy experts including senior Indian Navy and Indian Coast Guard officers, former Chief of the Sri Lankan Navy, authorities at the Sri Lanka High Commission in New Delhi, researchers at public policy think-tanks, former defence attachés as well as journalists at the national dailies. Decisively, deep-rooted ties must stand unhindered particularly in the ways of disputes expressly caused by an island of merely 285 acres in size. Overall conflict resolution and subsequent welfare advancement calls for conjoint enactment of policies intended at mutually consistent motivations. The ulterior aim of this study is to construct policies that would deliver verdicts that are fair and just to the disputing parties, tension de-escalating in tenor and conscious and protective of the ecology. Though this research cannot claim to have attained this goal optimally, its academic enrichment is indeed scholastically empowering, and aims to transcend boundaries in more than one way through its wide expanse across multiple academic disciplines.

Paper ID: ASICON 220

EXPLORING THE NEED OF EARLY CHILDHOOD EDUCATION CENTERS FOR CHILDREN OF PRISONERS IN NEPAL

Brinda Bhattacharya
Tata Institute of Social Sciences

Abstract

Children of Prisoners are usually the invisible population, sadly who are because of the falls backs of the existing penal system, are deprived of their basic rights when they are born to their mothers in prison or when they accompany their mothers to prisons. Amongst their other rights, early childhood education holds a lot of importance as the early years of children are crucial for learning. Globally many studies have been conducted to understand the need for and importance of early childhood education centers for the children of prisoners in prison. Many countries have specific age groups up until which they allow children in prisons with their mothers, and they have specific legislations and programs too. Sadly, such kind of studies have not been seen in Nepal and neither has there been presence of any legislation or program addressing the same. Hence this qualitative research has tried to explore the need of early childhood education centers for children of prisoners residing in the prisons of Kathmandu and nearby places with their mothers in Nepal using the explorative design. For data collection all stakeholders working with the children of prisoners were the universe and after purposive sampling, a semi-structured interview guide was used to collect data from thirteen respondents who were working with children of prisoners in various capacities. A grounded theory approach was used to note down the preliminary findings. Under the objectives to explore the need, understand requirement for sensitisation of staff, explore importance of training the human resources and reviewing present policies the research found out that

prison environment is not conducive for children and there should be early childhood education centers that provide an alternative environment. There was a need to train the prison staff in child friendly behavior and assure that teachers/volunteers at such centers are trained. The Nepal Government was seen not to have any provisions in the matter and their participation along with investment in this issue was seen necessary. Lastly the study found that NGOs and the government should work together to understand the need of children of prisoners when it came to education and ensure in the future that the children are not deprived of this fundamental rights.

Paper ID: ASICON 222

IMPACT OF EMPLOYEE ENGAGEMENT ON EMPLOYEE WORK PERFORMANCE AND WELL BEING

Farzana Ahamed, Dr. Shurlly Tiwari
International School of Management Excellence

Abstract

Employee engagement has become a buzz world during the past decade. Modern organisations make use of its motivated workers both as a tool and business partner. In such a scenario, employee engagement becomes critical in the context of employee work performance and well-being at work.

In the context of intense competition between businesses, one of the key areas which HR managers need to cater to is the physical and emotional health of their employees. Hence, employee engagement becomes key to competitive advantage. The study examines the idea of employee engagement and explore factors that can contribute to employee engagement. Employee work engagement is a satisfying and pleasant state that is typically characterised by vigor, dedication, and immersion. Contrarily, job embeddedness encapsulates elements of a person's commitment to their employment and can be defined as including ties, views of person-environment fit, and the costs associated with quitting. There has not been any attempt made to separate them empirically despite some strong similarities in the constructions in their theoretical backgrounds. Thus, the primary research question will drive the study whether employee engagement has an impact on employees work performance, their work productivity, leadership, and wellbeing. A sample size of 250 employees was collected from service sector and SPSS was implemented to prove it statistically.

Paper ID: ASICON 223

EMPLOYEE ENGAGEMENT AND PSYCHOLOGICAL WELL BEING: A STUDY ON IT EMPLOYEES

Nistha Singh, Shurlly Tiwari
International School of Management Excellence

Abstract

Employee engagement and psychological well-being are two distinct dimensions that the study seeks to combine. Literature states that finding interest in employee well-being on a worldwide scale is challenging, but some literary evidence suggests that employee engagement is increasing in several nations. Additionally, there is a significant interest in well-being at the national government level, as evidenced by reports like the Foresight Report on Mental Capital (2019) and Well-Being and Dame Carol Black's Report on Health (2022). According to Robertson's study (2020), stress and poor health are just 'the tip of the iceberg' in terms of psychological well-being and fail to consider the possible financial profits that could be made through an improvement in the well-being for individuals and organisations. For instance, over a one-year period, there was a significant increase (from 26 to 40 percent) in the percentage of employers implementing an employee well-being strategy (CIPD, 2007). A data of 200 employees from the reputed organisations was collected and was studied statistically. A positive relation is observed between the two variables.

FACTORS INFLUENCING PRODUCT RETURNS IN ONLINE APPAREL SHOPPING IN BANGALORE (GEN Z): A QUALITATIVE STUDY

Anantha Lakshmi Devi
International School of Management Excellence

Abstract

The Internet has given an opportunity to purchase an array of products and services easily from E-commerce websites. E-commerce has been booming after Covid-19, enabling individuals to purchase anything online. Online shopping makes it easy for customers to order multiple sizes or colours of the same item to ensure they'll find one that fits. Consumers tend to return more items when they shop online - a mode of shopping that makes it easier to toss items into the virtual basket, but difficult to visualize how they look and fit in person. The growth in online shopping is an opportunity, but the resulting product return is a challenge. That paper attempts to find an answer to the question 'Why do consumers return products?' It could be something atomic that the companies have overlooked in an individual order. Sometimes, however, the matter is more serious and requires immediate action. This study aims to analyse the factors influencing product returns in online shopping and explore customers' opinions on product returns. This qualitative study used in-depth interviews for data collection. The population for the study is a student community (Gen Z) in Bangalore.

CASTE FEELINGS AND SCHOOL STUDENTS: AN EMPIRICAL STUDY IN TIRUNELVELI CITY

Name: Sai Krishna A, Dr. R. Sivakumar
Manonmaniam Sundaranar University

Abstract

Caste is one of the primary issues in this developing society. The Indian caste system is a complex social structure wherein social roles like one's professional choices gets limited based on what a previous generation had performed, contributing directly to restricted social mobility and fixed status hierarchies. Such social roles also define the way people get identified with members of the same caste. The caste group also make their own social norms to protect their identities. The more one identifies with the group the more they would work to make sure that group norms are protected. In this paper, we were interested in examining the consequences of caste-norm violations and how a member of the case group, for instance, a student's status gets mentally represented. It is assumed that although the students are influenced by elders in the society, the people of the modern era also take faith, pride, and arrogance towards their caste. This behaviour slowly affects and makes the school students' perception towards the pride of caste. Because of this behaviour, they are distanced from other students and remain close with members if their caste. In some instances, they also degrades the other caste names. This type of behaviour will lead to distance them from society and live within a narrow circle. Through this paper analysis how school students are sustained with the caste feelings, how they developed their caste feelings and their involvement towards caste feelings.

Paper ID: ASICON 236

A STUDY ON THE IMPACT OF PRODUCTIVITY ON FOUR DAYS A WEEK OF WORK

Bhagyashree Hazare, Shikha Agarwal, Anand U
Alliance University

Abstract

Employees are more energised and driven to do their obligations at the office when they have a healthy work-life balance. A motivated worker is more effective and productive. They typically have a cheerful outlook on their work, which is quite likely to benefit the entire team. Higher stress levels have been linked to lower productivity in studies. Stress causes a person's cortisol levels to increase, putting them in a fight, flight, or freeze mode and lowering their productivity at work. Burnout will result from persistent stress. People who can balance their job and personal lives can take time off from one to accommodate the other. This lessens the stress and shame that employees experience from having to constantly sacrifice one element of their lives for the other. People frequently need guidance on how to achieve work-life balance because they are so used to working excessive hours and putting other facets of their lives on the back burner. When an employee overworks himself to the point where they are unable or unwilling to work, burnout occurs. Anxiety, despair, weariness, a reduction in attention span, or difficulty thinking are all signs of burnout and all hurt productivity. Work-related stress and other factors play a significant role in mental health issues. Employees may completely "check out" of work because of having too much work to do, not enough downtime, and a poor work-life balance. The enhancement of mental and physical health and wellness, as well as increased employee productivity, will result from achieving a healthy work-life balance.

THE EFFECT OF PERCEIVED ORGANISATIONAL SUPPORT, PERCEIVED SUPERIOR SUPPORT, AND ORGANISATIONAL COMMITMENT ON EMPLOYEES' WILLINGNESS TO RETURN TO WORK

Hima Devaraj
Alliance University

Abstract

With the onset of the pandemic, the work model and significance of employee's presence and having satisfied employees at work has drastically changed for organisations. Organisations have tried and tested different working models, drove their employees through the challenges that came with it, and managed in what could be said was an ongoing dynamic change for all stakeholders involved. But as the pandemic has settled more and more, organisations are now willing to return to the previous models. However, being used to the current models, employees may find it challenging to return to the models that were used prior to the pandemic. This paper thus focuses on the impact of factors like, perceived organisational support, perceived superior support, and organisational commitment on employees' willingness to return to work. We assume that organisations input on improving these factors has a positive influence on getting their employees to return to work. The paper would also aim to give an insight into if not these factors, what are the factors that would get them to return to work (office environment). Different sectors of work, industries were considered for this study to find the impact and preference of research factors.

FIRM INNOVATIVENESS, QUALITY ORIENTATION AND FIRM PERFORMANCE: A REVIEW IN THE CONTEXT OF SMES

Om Sharma, Dr. George Easaw
Alliance University

Abstract

This paper is a review of literature on parameters like Quality-Orientation (QO), impact of Quality Management Tools and techniques (QMTT) and Firm Innovativeness on firm performance. It identifies the importance of usage of tools and techniques for each principal of Quality Management for better firm performance and usage of emerging technology. "Quality Orientation (QO) is a construct that describes a firm's philosophical commitment for developing and maintaining a competitive advantage, based upon quality focus and customer expectations" (Miles, Russell, Arnold 1995). Firm innovation in general is defined as an intent to understand and describe innovation by using "economic-rationalistic models". We also review the generalizability of QMTT and firm Innovativeness as mediating constructs on firm performance. This study covers both arguments above orientation on quality and firm innovativeness. Future implications on quantification of firm innovativeness for further research.

A STUDY ON GEN-Z WOMEN BUYING PREFERENCE TOWARDS THE SELECTION OF APPAREL BRANDS

Tanneru Gowtham, Gauri Prasad, Rasika K
CMS Business School

Abstract

Aesthetics become a major part in the Women's clothing industry. One may think of clothing as a full set of expressions that captures one's entire personality. Nearly all women have an innate desire to seem lovely, attractive, and magnificent. The scope of the study is to address the buying behaviour of the apparels and their perception towards brands, such as quality, comfort, style. Cost and quality are the most important factors in buying of apparels, companies need to use different technologies to achieve these attributes.

This research project focuses on applying in manufacturing of apparels and designing them according to personality. As personality is very important element in the minds of the customer, we need to understand the apparel behaviour of the customer. Every organisation wants to have a competitive advantage to sustain and increase the sales in the apparel industry and by designing apparels using psychological elements. Now the trend is changing to customisation and personalisation of products. After collection of data, and doing some analysis, it is proven that there is significant relation between personality of a person and their apparel buying behaviour. Brands need to do more research about the about the psychological aspect of the customer which ultimately leads to better customer satisfaction.

Paper ID: ASICON 232

PERCEIVED ORGANISATIONAL POLITICS AND ITS EFFECT ON EMPLOYEE ATTRITION

Diya Lal, Manisha Balwan, Sushant Kumar
Alliance University

Abstract

This research was conducted to find out if any relation exists between Perceived Organisational Politics (POP) and employee attrition. The variables that were used for the purpose of this research were employee well-being, perceived organisational justice, organisational commitment, and job stress. Employee attrition was the dependent variable in the study and the other variables were the independent variables. Literature review was done by reviewing various peer-reviewed journals and articles published by numerous authors. The methodology used for the study was a mixed method of research. We collected quantitative data from over 50 employees working in various organisations around India in different sectors through a structured questionnaire and qualitative data was collected through interviews and one-on-one conversations as well as telephonic interviews with the employees.

The study reveals that both POP and job stress were the most prominent reasons for employees leaving the organisation. Even though the other variables had some impact on employee attrition, they were not close to the impact POP and job stress had.

The recommendations we suggested included keeping away from favouritism or any form of partiality in a workplace environment to give employees the impression that everyone is equal, and rewards and recognition goes to people that truly deserve it. Another recommendation was to monitor employees on a continuous basis to

find out disengagement symptoms. This is to ensure early precautions can be taken to avoid employees feeling any sort of work stress that could lead to disengagement at work.

RETURNING ORDERS IN E-COMMERCE – A STUDY USING PREDICTIVE ANALYTICS

Revanth A, Dr. Ratchana Rajendran
International School of Management Excellence

Abstract

The emergence of e-commerce has been a major driver to the global economy. As such, it is essential for e-commerce businesses to accurately predict customer behaviour and anticipate their performance.

Predictive analytics is a powerful tool that enables companies to accurately predict customer behaviour and anticipate their business performance. It offers a powerful tool to improve the accuracy of returning orders in e-commerce. By analysing customer behaviour, predictive analytics can identify patterns in customer purchase behaviour and return patterns, as well as the underlying causes of these patterns. This information can then be used to implement strategies to reduce returns and increase customer satisfaction.

This paper examines how predictive analytics can be used to improve the accuracy of returning orders in e-commerce. It provides an overview of the current state of predictive analytics in e-commerce and describes the benefits that predictive analytics can bring to the industry. The paper then discusses how predictive analytics can be used to identify and analyse customer behaviours, such as the types of items returned, the frequency of returns, and the reasons for returns. Finally, the paper outlines the strategies, techniques, and tools used to implement predictive analytics in e-commerce, and evaluates the effectiveness of these strategies.

WILL WORKAHOLISM LEAD TO MOONLIGHTING?

Divyashree J
Alliance University

Abstract

Organisational boundaries have become increasingly blurred while conventional organisational careers turn out to be less attractive in todays' economy. By working simultaneously in numerous jobs at different companies, moonlighting individuals may gain experience, inspiration, and significance from their work that is difficult to obtain in their primary positions. However, moonlighting may also come with issues that obscure the beneficial contributions of IT organisational managers adopt severe limits to moonlighting because they believe it may lower employees' engagement at work. However, there is still little information available on the topic of moonlighting, which is more nuanced than first thought. Most recent research on moonlighting treats this practise as a variable, concentrating on its causes and effects. So, we know that there are many people who are workaholic. This research paper will tell the important components that affects workaholism and which one is more affective that leads them to moonlighting. The data analysis used in the research paper has been done using SPSS output of the responses collected from more than 40 members. The form circulated to the members were of different questions based on workaholism and their individual day to day activities along with the feelings.

Paper ID: ASICON 234

EFFECTS OF PERFORMANCE MANAGEMENT SYSTEM ON EMPLOYEE WELL-BEING

Sam Paul Osbourne, Spriha Tyagi, Vanshita Choudhary
Alliance University

Abstract

This paper examines how various performance management systems employed by businesses impact the wellbeing of employees who are naturally perfectionists and workaholics. To keep track of the employees working in an organisation, the organisation uses performance management system (PMS). The main purpose of performance management system is to track the skill gaps of each individual working in an organisation. Key factors in occupational and organisational psychology studies on employee health and well-being include work engagement, workaholism, and burnout. The explanation is that research on all three has shown that they can accurately predict employee well-being measures including positive affect, life satisfaction, and job satisfaction. A workaholic is a person whose demand for work is causing visible disruption or interference with his physical health, personal satisfaction, and interpersonal relationships, as well as with his normal social functioning. The triggers of workplace stress and the effect they have on employees' performance become critical in the corporate world. Prior research in this field is limited to the causes of workplace stress and how it affects workers' productivity, but our research is aimed at how different performance management system in an organisation affect wellbeing when workaholism and perfectionism comes into the picture. The main aim is to find out what are the different performance factors which are responsible for affecting employee well-being in organisation and its impact on the wellbeing of employees who are naturally perfectionists and workaholics.

Using a performance management system, a business can plan, track, and evaluate employee goals and job performance and can help them to make sure the factors does not affect the employees. We discovered that there are different factors like Management by Objective, Budget Driven and others which are affecting the wellbeing of the employee and budget-driven performance management systems had a detrimental impact on employee wellbeing. These findings suggest that performance management practises may have an impact on workers' vitality and health, which may affect their motivation and willingness to continue working in the field. This research suggests, organisations should create goals and build their systems such that employees don't feel overly pressured to work.

Paper ID: ASICON 235

IS MULTITASKING AT WORK HAMPERING MENTAL WELLBEING

Akansha Jha, J. Nandhini, Tanisha Sharma
Alliance University

Abstract

Multi-tasking in the workplace is the ability of an individual to work on multiple tasks at the same time. It is becoming increasingly common in today's fast-paced business environment, as employers seek to maximise the efficiency and productivity of their workforce. Multi-tasking helps individuals focus their attention on the most important tasks, while also allowing them to complete smaller tasks in a timely manner. This can help to reduce stress levels, as employees can manage their workloads more effectively. Furthermore, multi-tasking can help to increase the overall quality of work, as it allows employees to be more creative and efficient when dealing with different tasks. Ultimately, multi-tasking in the workplace can help to improve the overall performance of an organisation. To effectively implement multi-tasking in the workplace, employers should ensure that their employees understand the importance of the practice. They should provide training and support to help employees become more familiar with the concept and its associated benefits. Furthermore, employers should create a culture of collaboration and openness, in which employees are encouraged to share ideas and work together on tasks. Finally, employers should set realistic goals for their employees and provide them with the necessary resources to help them reach those goals. With these steps in place, employers can ensure that their workforce is well-equipped to multi-task efficiently. Through this paper we intend to understand is multitasking an effective method in work without hampering mental well-being.

A REVIEW OF RESEARCH STUDIES ON RENEWABLE ENERGY AND GREEN FINANCE FOR SUSTAINABLE DEVELOPMENT

Hemant Kumar Sah, Dr. Kapil Arora
Alliance University

Abstract

Energy is considered a critical area of study to environmental and sustainability concern around the world. It comes in the form of traditional and modern sources such as fossil fuels, hydropower, solar energy, wind energy, tidal energy, biomass energy, etc. The continuous uses of fossil fuel are experienced in the world to fulfill energy demand and promote economic growth since the last two centuries. The higher dependency on traditional sources of energy consumption has resulted in various problems. Burning of fossil fuels is now become a prime culprits of carbon emission and climate change that are primarily affecting developing and least developed countries. Further, transition from fossil fuel to clean energy generation has also gathered attention on the international dialogue. The development of renewable energy sources is a better substitute from traditional sources of energy, and it is now become a key agenda among policymakers and the government. Such projects are initially capital intensive and required sufficient investment for set up. The investment requirement is facilitated through green finance. Green finance act as a financing mechanism to support environmentally friendly project and helps to mitigate emissions. This paper provides a review of relevant study on renewable energy development and green finance available on the literature which were accessed through Google scholar and Scopus database. The review highlights the important factor of renewable energy development and green finance adoption by the countries, technologies and policy consideration, and its effect on regional to international level for promote sustainable development.

PERFORMANCE LEVEL AND CORPORATE SOCIAL RESPONSIBILITY (CSR): A VIEW FROM THE COMMUNITY, EMPLOYEES, AND CUSTOMERS

Meghana K R, Anusha A M, M R Suji Raga Priya
Dayananda Sagar Business School

Abstract

CSR is an extremely important factor in determining how consumers see a company's brand, how appealing the firm is to customers, workers, and investors. Knowing how to assess corporate social responsibility (CSR) performance has become crucial as more businesses put CSR at the forefront of their corporate communications and strategies. Research also demonstrates a close relationship between CSR and business success. At the highest level, such assessment enables firms to make more informed decisions on which programmes to support, to improve the effectiveness of their CSR activities, and to engage stakeholders (including shareholders) in the work. This study investigates the empirical relationship between corporate social responsibility (CSR) and the level of business success from the perspective of Indian multinational enterprises. This study also investigates the effectiveness of a company's reputation as a mediator of CSR-performance linkages. 250 responses from top executives and managers who work for international firms in India made up the final data collection. A theoretical model was first constructed based on the strategic paradigm available in the literature, and then hierarchical regression analysis was used to investigate the notable connections that were discovered. The findings show that when applied to external stakeholders, corporate social responsibility does have an impact on a firm's performance. An effective framework for comprehending corporate social performance includes both organizational agendas

and societal impact objectives. Additionally, studies have shown that the strength of this impact varies across well-known businesses with favourable reputations and those with unfavourable reputations.

Paper ID: ASICON 230

TIME BANDITRY AT WORKPLACE: SOCIAL MODELLING, WORK-LIFE BALANCE, BUSINESS ETHICS AS INFLUENCERS OF TIME THEFT AND OVERALL IMPACT ON ORGANISATIONAL IDENTIFICATION

Skandh Saxena, Harsimran Kaur, Gundreddy Venkateshh
Alliance University

Abstract

The act of stealing time from an employer at work, or time theft, can have detrimental effects on both the individual employee and the company. Few professionals believe that time theft is the primary cause of unethical business activities, bad social influences at work, and a decline in the sense of belongingness of the employees of a specific organisation. To understand the relationships between the factors, this study intends to investigate the effects of social modelling, work-life balance, and business ethics on time theft and the overall impact on organisational identification. A review of pertinent literature and an analysis of survey data gathered from workers at a sizable organisation were used to carry out the study. The study's findings revealed information about the variables and their substantial influence. The results show that using effective social modelling by managers and organisational tactics, business ethics can have a favourable impact on time theft. Therefore, while developing policies that are acceptable for the wellbeing of the workforce and the organisation, this research can be considered. Therefore, after the study we can understand that it is false to say that employees' inability to balance their professional and personal lives is the cause of time theft. If other academics investigate other factors more thoroughly, we may be able to identify the factors that really impact time theft at work.

Paper ID: ASICON 261

DEPOSIT OF MONEY AS A PRE-CONDITION FOR BAIL- JUDICIAL TRENDS

Mamatha R, Prof. Mahantesh.G.S
Alliance University

Abstract

"He does not stay in jail because he is guilty, He does not stay in jail because any sentence has been passed, He does not stay in jail because he is any more likely to flee before trial, He stays in jail for one reason only – because he is poor...." Justices Bagavathi.

Every citizen of India has a fundamental right to freedom guaranteed under Article 21 of the Indian Constitution, which specifically states, "No person shall be deprived of his life or personal liberty except according to procedure established by law." The issue of undertrial prisoners is a very serious one impacting the right to life and personal liberty. Bail is the process of release from jail or before arrest. Bail in law means procurement of release from prison of a person awaiting trial or an appeal, by the deposit of security to ensure his submission at the required time to legal authority. Many a times the judge's order the monetary value of the security known as the bail, or more accurately, the bail bond, is set by the court having jurisdiction over the prisoner. This bail system causes discrimination against the poor since the poor would not be able to furnish bail on account of their poverty while the wealthier persons otherwise similarly situated would be able to secure their freedom because they can afford to furnish bail. Due to poverty, they stay in jail for many years, and this violates their right to life. Law does not allow the concept of money for bail but has been practiced by the courts in India. This paper tries to analysis the problem of deposit of money to the court in exchange of their freedom and role of the superior court in protecting the fundamental freedoms of the citizens.

AN OBSERVATORY STUDY ON THE STATE OF WOMEN'S PERSONAL SAFETY INFRASTRUCTURE IN INDIAN CITIES

Shivankur Ghosh
CMS Business School

Abstract

As students of management, we are taught to implement what we study, and the application of the same is supposed to thereby create value. It is with this intention that I have decided to conduct my study on women's safety, which is a key indicator of an economy's standard of living because it measures quality of life and delves into Maslow's hierarchy of needs. If Maslow's theory of needs is taken at face value, safety and security are the second level of human needs. It deals with crucial subject matter and can be used to determine the condition of a state or economy. In this context, this study aims at understanding how safe women feel based on multiple demographic factors, such as: 1. Domicile, (tier-1/tier-2 cities or otherwise) 2. Level of household income, 3. Current age group, and 4. Access to personal safety tools. This study intends to recognise the current situation of women's personal safety in the tier-1 cities of India and suggest possible solutions thereto. This study has been conducted over a small sample set (400 individuals) across Tier-1, Tier-2, and other cities across India, via a survey using a questionnaire and a smaller focus group, from the same sample set.

Paper ID: ASICON 201

INTIMATE PARTNER VIOLENCE AMONG BENGALI WOMEN OF WEST BENGAL: A QUALITATIVE STUDY

Suchismita Ghosh, Cyril John
Christ (Deemed to be University)

Abstract

Intimate Partner Violence (IPV) among women is one of the suppressed yet boiling topics of the hour. The violence women go through is known to all, starting from their families to the doctors to whom they seek help, but there are no voices against the practice. Previous studies on IPV are limited to immigrants and the lower caste people of India. Women of West Bengal have been studied quite a few times, mainly regarding their condition, marital rape, domestic violence, and abuse. Therefore, the research will give a clear picture of the situation of women. It is a descriptive qualitative study; the investigation is conducted based on a case study approach with in-depth interviews to understand women's psychological and emotional states. A total of five Bengali participants were included in the study who were undergoing treatment for mood disorders in West Bengal. Thematic analysis of the data revealed a better understanding of the women undergoing IPV. The paper highlights West Bengal women's mental and physical states who have endured such pain over the years. It depicts women subjected to IPV over the years and its impact on their physical and mental health. The data has been validated using Intergenerational transmission theory, systems theory, and power theory. Contrary to what is assumed, the study results show that women know their rights and are aware of the services they can avail of but do not tap the services primarily because of the mindset of society.

VACCINE DIPLOMACY A SOFT POWER STRATEGY OF INDIA: A COMPREHENSIVE STUDY ON INDIA'S VACCINE DIPLOMACY AND ITS IMPACT ON INDIAN FOREIGN POLICY

Siddharth SB
Kumaraguru College of Liberal Arts and Science

Abstract

For more than two years, Covid-19 left the whole globe in disbelief and is still causing worry in several nations. Covid 19 has had an influence on economies and powerful nations, but these effects have also foreshadowed the challenges and issues that the third-world countries have faced; among these issues is the lack of medical supplies, technology, personnel, drugs, and vaccines. During the pandemic, the trade in vaccines attracted attention and was considered a soft power strategy to influence governments. India, one of the world's top producers of Covid vaccines, has contributed significantly to the global vaccine trade and has worked to make vaccinations accessible to all people worldwide. The Government of India adopted it as part of its efforts to exert soft power on other countries. Such actions were expected to enhance India's reputation internationally. India has engaged in extensive trade with industrialised nations while keeping developing nations' needs in mind. Through this vaccination trade, India has impacted many other countries. This paper covers the vaccine trade in general and focuses on the vaccine trade between India, Jamaica, and Guyana. The paper's focus is also on the political and economic challenges India encountered as a result of these exports and how they affected India's foreign policy.

WHY LEADERS FAIL? THE CONCEPT OF LEADERSHIP FAILURE

Dhuruvan SL
Kumaraguru College of Liberal Arts and Science

Abstract

Leadership in an organisation is the process of influencing people to work towards the attainment of organisational goals. Leadership has evolved over years and the meaning of leadership has transcended beyond just providing direction and control. Leaders now act as motivators and changemakers who are goal-oriented to obtain desirable results for both the company and its employees. Leadership is a well-researched area highlighting on the positive and constructive aspects of a successful leader in a successful company. Future leaders will use these research outcomes in the areas of human behaviour and cognition to guide them to their goals and achieve efficiency. For many decades the research in leadership has taken this one-sided view, leaving the failures of a leader and the consequences in the dark. Understanding the concept of leadership failure will help us develop effective leaders for the future. Recent corporate failures and scandals have been related to leadership failures. Leadership failure occurs due to various factors involving the person, the company, the environment, and the employees. The paper aims to describe the dark side of leadership as an important concept to be explored in leadership. The paper will define leadership failure; identify the causes and consequences; and ideate strategies to manage leadership failure. The paper has an in-depth, critical, and contextual analysis of the mainstream literature available.

COMPARISON OF LEVEL OF WELLBEING IN UNDERGRADUATE STUDENTS OF CALCUTTA UNIVERSITY, INDIA

Debasmita Roychoudhury, Riddhi Chakraborty, Dr. Tinni Dutta
Muralidhar Girls College, Kolkata

Abstract

The concept of well-being refers to optimal psychological functioning and experience. In early 1948 the World Health Organization stated that mental health is more than the absence of mental illness, but it was not until recently that psychologist began to systematically study the causes, correlates and consequences of flourishing mental health and states of well-being. Studies on well-being is needed as the society and the problems the society faces are becoming complex problems, the rates of depression, anxiety, stress, and burnout is increasing. Moreover, the pandemic has made the situations worsen further. Literature points that the stress levels among the college-going students have always been high. This can be because they come under this huge amount of societal pressure of identity development and if fail to confirm with the expectations, they start considering themselves as failures. This eventually can lead to several maladjustments among their behaviours and thoughts. The current study explored into a level of wellbeing of Psychology students with students of other disciplines. The objective was to explore the role of Psychoeducation among college students in enhancing their wellbeing. A sample of n=40, belonging to age group 19-21 was studied using a PGIWBM scale. The study concludes that there is a significant role that Psychoeducation plays in the level of wellbeing among students.

A STUDY ON STUDENTS PREFERENCE TOWARDS EDTECH OVER TRADITIONAL LEARNING METHODS

Sagi Sampi, Amit Kamadollishettaru , Jabez M, Prof. Noor Firdoos
RV Institute of Management

Abstract

The emergence of educational technology in India has given a boost in the learning methodology of students allowing them to use technology in the classrooms. More and more people started using technology for their learning needs owing to technology advances and its ubiquitous nature. This applied aspect of technology in the field of education, well known as educational technology, provides the finest output for both teachers and learners. Hence it is essential that students and in-service teachers be they elementary, primary, secondary, or higher secondary level teachers, be introduced to educational technology. During covid-19, educational institution has understood the importance of educational technology and those who were already in edtech space saw a huge enrolments and scope. Users realised that this technology helps students to learn and understand at their own place which saves their time. It facilitates them to be more productive rather than wasting their time in travelling to reach their educational institutions. EdTech has not only helped students but also the teachers in delivering quality content and saving their time by recording their classes once, which students can watch any number of times, according to their flexibility and convenience. There is a huge scope for EdTech in the coming years as India is a developing country. EdTech is gaining prominence these days and it has a huge potential in coming years but there are some exceptions to it as some of the learning/courses needs traditional approach and EdTech will not replace traditional learning 100%, interaction could not be better as it will be in the offline space. The survey revealed

that most of the students experience edtech platforms and have taken courses externally as well, but they prefer traditional learning. Nearly 70% to 80% of them believe EdTech could replace traditional learning in near future.

DIGITAL DEXTERITY AND ITS IMPACTS ON INDIVIDUAL ATTITUDE

Rashmi Prasad, Meghna Padte
Alliance University

Abstract

Digital dexterity can be understood as an individual or group's ability to adapt to newer technologies, particularly technologies that are designed in improving efficiency and driving improved outcomes. Workforces those possess digital dexterity are open to adapt new tools, overcoming their initial discomforts to master them. In this research, we have focused on the individual perspective affecting the attitude towards using technology. We have collected the views of Indian IT industry professionals concerning digital dexterity (N = 100), and we used regression, correlation, ANOVA, and reliability analysis to find the results. We have argued that the factors like personality traits, perceived curiosity, technology anxiety and perceived organisational support has impacts on the attitude towards using technology. In doing so, first we have conceptualised the theoretical framework: the technology acceptance model in analyzing individuals' behavior towards technology. Second, we studied the previous work done by the researchers. Third, we analysed our data through statistical analysis tool i.e., SPSS software. Our results suggest that only personality traits do not have an impact on the outcome variable and other factors like technology anxiety, perceived curiosity and perceived organisational support has impacts on the attitude towards using technology.

POLICY MAKING AND CONCEPTUAL DISTORTION OF RELIGIOUS CONVERSION IN INDIA

Hiranmayi Rajeev, Prof. Keerthiraj
Alliance University

Abstract

Conversion is the most debated, yet the most incomprehensible concept in India. This fact applies to all levels of debate from policy circles and intellectual gatherings to the murmuring of the common folk. At the same time, conversion appears as a justified act and an abhorrence. On the one hand this issue raises the question of supremacy of any one religion and on the other hand it raises the question of right path for enlightenment. This conceptual contradiction contributed and is still contributing to a lot of socio-legal problems in India.

Hence, this paper focuses on understanding the conceptual contradictions and gaps in understanding the concept of religious conversion in India. The paper also looks into the study of comparative theology in order to verify whether the study can help understand religious communities better, in order to curb the conceptual gaps. An analysis of Gandhi and Nehru's views on religion is considered in order to illustrate how different interpretations of the same concept can lead to a conceptual gap between two individuals or community. Then the paper closely analysis on a larger group of 50 individuals through online survey, representing the religious communities of India, in order to illustrate the thought process and understanding of the common people on the concept of religious conversion. According to the study made and results found through this paper, policy suggestions have been put forward.

A STUDY ON CUSTOMER PREFERENCES TOWARDS ELECTRIC VEHICLES IN KARNATAKA

Srujana S, Kaparthi Bhavana, Prof. Noor Firdoos
RV Institute of Management

Abstract

Electric cars (EVs) are becoming increasingly popular, which might help reduce issues like pollution, global warming, and dependence on oil. Electric vehicles (EVs) are gaining a lot of attention these days. The path to their commercial success is not simple, though. Despite many governments utilising rigorous promotional measures, the current market penetration of EVs is very low. In this study, the findings of a comprehensive data gathering exercise—a survey with 192 respondents—conducted in Karnataka, India, are presented.

In order to provide direction to decision-makers and offer direction for prospect research, this study tries to explore into the consumer preferences for EVs. We quickly go over the modelling approaches utilised in a few different areas. Review of consumer preferences for aspects of money, technology, infrastructure, and policy are made. Consumer choice categorisation was then completed, with the results thoroughly discussed. These categories included socioeconomic diversity, psychological influences, mobility, social influence, etc. We cover the research agenda for creating consumer-friendly EV courses in our final section and offer suggestions for additional study.

'THE GOD INSTINCT': EXPLORING BELIEF IN FREUDIAN AND JUNGIAN PSYCHOLOGY

Fazeeha Rashmin, Isha Kumavat
Alliance University

Abstract

Our brain uses belief to interpret the outside environment. Evidence from literature show that the well-being of people is closely related to the ideas of belief. It seems that both ancient and contemporary civilisations still hold a strong belief in God or another transcendent being. These ideas appear to lessen suffering among people and promote stability in tumultuous times.

Why do people believe, though? What source does it have?

Famous psychologists Freud and Jung addressed similar problems but arrived at very different conclusions. It seems that although for Freud religion is a sign of psychological illness, for Jung the absence of religion is the root of all adult psychological diseases, according to Victor White, Jung's correspondent. Both left behind a wealth of theories, particularly on the "unconscious" and "myth-making" tendencies of individuals, which this study attempts to analyse in light of recent developments in psychology and neuroscience to support the claim that religious belief is an innate tendency of the human mind. It would accomplish this by analysing the research on the biological bases for religious belief and comprehending religious coping. It is hoped that by being understanding and knowledgeable about people's sources of meaning, which are typically anchored in religion, a secular therapist who holds different beliefs from his or her patient will nevertheless be beneficial.

THE INEVITABLE ASPECT OF HUMAN INTELLIGENCE IN CRIMINOLOGY IN THE ERA OF ARTIFICIAL INTELLIGENCE

Saranya Unni R
VIT University

Abstract

Artificial Intelligence or AI is a branch of computer science that deals with constructing smart machines that are competent enough to perform tasks that typically requires human intelligence. The Robot that was developed in Saudi Arabia was given the citizenship, of late. Criminology is a multi-disciplinary approach to better understand the crime concept in general. In consonance with the present trends in the Artificial Intelligence, these emerging trends call up for certain questions before us. The extent of applicability for the artificial intelligence in the legal field is questionable. These significant questions that pour in several questions for consideration, being :1) Is there any possibility for human intelligence to be replaced by artificial intelligence soon? 2)What is the one major drawback that artificial intelligence protracts before us, especially in the field of criminology. On the other hand, artificial intelligence cannot be overlooked as a concept that finds no relevance at all. The Indian legal experts welcome the usage of artificial intelligence, but in a more innovative way by balancing the interest of faster disposal of cases and human expertise. The paper provides answer for these relevant questions. The paper concludes with the observation that, the role played by human intelligence is far more relevant than the role played by the artificial intelligence.

A THEORY OF CHANGE - THEORETICAL LINKING OF GESTALT'S PRINCIPLES AND PARADOXICAL THEORY OF CHANGE TO BRING ABOUT INDIVIDUAL AND ORGANISATIONAL DEVELOPMENT

Indu Suresh
Alliance University

Abstract

A theoretical linking of Gestalt's Psychological Principles and the Theories of Gestalt's Therapy can be adopted to understand the development of an individual or organisation by emphasising the Paradoxical Theory of Change. The Paradoxical Theory of Change states that, "Change occurs when one becomes what he is, not when he tries to become what he is not. Change does not take place through a coercive attempt by the individual or by another person to change him, but it does take place if one takes the time and effort to be what he is--to be fully invested in his current positions." (Arnold Beisser, Gestalt Journal Press)

Gestalt Therapy (Perls, Hefferline and Goodman, 1951) focuses on a broad view of people and their relationships with one another. It understands individuals' function as "configurational wholes" implies the carefully thought-out integration of parts rather than the mere summation of parts. The concept that 'the configurational whole is always different from the sum of its individual parts' forms the backbone of linking The Paradoxical Theory of Change with Gestalt's Therapy to bring about organisational and individual development.

It is assumed that circumventing the natural tendencies of the mind through a brief explanation of the same using Gestalt's Psychological Principles and adopting a change mechanism by

helping individuals focus on the 'here and now awareness' rather than 'there and then' thinking. Such an approach is assumed to benefit organisational development. We aim to explain why the concept of an individual as an 'aggregate' is better and perhaps more instrumental in understanding his/her psyche rather than investigating the 'separate elements or traits' that constitute his/her personality. This approach contributes to the realms of global diversity and inclusion which form essential tools of globalisation by improving the interpersonal and analytical skills of individuals of an organisation and hence the overall growth of an organisation.

A STUDY ON NARCO-ANALYSIS AS A TOOL FOR INVESTIGATION IN FORENSIC SCIENCE

Meghana Gade, Palak Gupta
Alliance University

Abstract

Criminal interrogation techniques have adapted to some extent due to the advancement of technology in various aspects of our existence. Narco-analysis is one such technique that assists in this endeavour. The term "narco-analysis" refers to a statement produced by the accused using a particular scientific technique that may be utilised as part of the evidence against him. Although the Indian Evidence Act, the principal statute governing the acceptance of evidence in a court of law, is silent on narco-analysis, critics have long argued that such a test violates the constitution's guarantee of fundamental rights that individuals are entitled. Numerous constitutional scholars and jurists contend that the narco-analysis technique violates the Constitution's Article 20 (3) right against self-incrimination. Hence, narco-analysis as a practice involves a slew of medical, ethical, and legal concerns. The primary purpose of this paper is to examine the constitutionality of such tests by examining various documents based on the tests, as well as their utility in the investigative process and the onslaught of judicial interpretations of the notion. This paper aims to explore the concept of narco-analysis, its background and history in India. We will also assess the use of narco-analysis tests as a tool for investigation in India, and the application of the same tool in different countries to understand the aspects of social justice. This paper finally analyses the validity of the same.

BLURRING THE CULTURAL AND RELIGIOUS BOUNDARIES

Vibha Kottam, Daasari Laasya Shree Chowdary, Vaishnavi Vedhmurthi Hiremath
Alliance University

Abstract

In modern society, people of different cultures and religions are observed to come together and interact with each other blurring the age old cultural and religious boundaries. We have come a long way from the days where interacting with other cultures was looked down upon. With each generation we see people from different backgrounds coming closer and putting up a united front. This is in no way a perfect world where there is no discrimination or differences between people but through the decade's people have started becoming less resistant to change and more open minded. Practices that have been considered unnatural and unethical earlier like LGBTQIA+, inter-cultural marriages and live in relationships have been more accepted both socially and legally. This paper is an empirical and doctrinal research which focuses on how people and cultures have evolved in the past few years, how innovation has paved way for both social and intellectual development of people from different cultures and how people are deviating from the status quo. The main aim of the paper is to highlight how cultural and religious boundaries have been faded through innovation.

Paper ID: ASICON 259

AN ANALYSIS OF FORENSIC TECHNOLOGY AND APPLICABILITY OF INDIAN CRIMINAL JUSTICE SYSTEM

S. Sownthara Barani, B.Subha
Alliance University

Abstract

The evolution of the various crimes calls for the employment of improved investigation techniques for delivering better and accurate justice. The applicability of the forensic science plays an important role in the investigation and interrogation, especially, regarding the crime and criminal process. In India, the application of forensic methods is at a very rudimentary stage with those conventional methods, like narco-analysis, polygraph examination and BEAP test, they even result in violates the individuals' human rights. Many a times, application of such techniques which induces testimonial compulsion also infringes Article 20(3) of the Indian Constitution. Forensic evidence plays a major role in the criminal investigation and aids the court by provide with the accurate information in solving the various disputes. In Indian legal system, the forensic investigation should be modernised so that speedy remedies and justice to victims of heinous crimes may be provided. This is important because the present legal system in India is possessed with personal liberty and freedom and the dilution of evidence due to weakness in the criminal justice.

EFFECTS OF SOCIAL MEDIA ON HUMAN BEHAVIOUR AND ECONOMY: A LEGAL ANALYSIS

H S Sharadhi, Namitha Ramesh, Riddhi S Bhora
BMS College of Law

Abstract

This paper assumes that the seriousness of the incorporation of social media in daily lives have a deleterious and adverse impacts on the working of the economy. If, on one hand the social media and its disciplinary is considered as a bigger disciplinary, it not only transcends the other multidisciplinary fields but also transgresses into the other tabulates and dominates the daily lives of mankind. The aim of this paper is to provide substantive evidence of how the working force and power of the working mass is depleting and ends on a note on how closely the impact of social media is associated with the economy. This research paper deals with the effects of social media on psychology which has an impact on the economy. We assume, contrary to belief that "psychology is micro economical in nature". Psychology directly or indirectly does affect the economy in the long run. Social media usage and economic growth are correlated because it has been discovered that regions with lower social media usage experience faster economic growth. In several studies, productivity has been employed as a criterion to assess economic growth. If social media leads to a decrease in productivity, the economic growth of a region will slacken. It will be proved that social media and economic development are negatively correlated because economic development has been higher in areas with lower social media activity. Studies have also been done on the detrimental

effects of social media on the economy. Studies have examined the connection between social media's effects on productivity and the expansion of the economy.

INDIA AFTER 75 YEARS: DIGITALISING THE COUNTRY, ONE YEAR AT A TIME

Gayathri Prasad, Ayush C, Dr. Puja Raj
Alliance University

Abstract

India's history is full of milestones and achievements that help us to understand how far it has come over the past 75 years. India has been a major source of development in the field of science and technology for many years. From the invention of Indian eyeglasses in 13th century AD to its involvement in modern-day space programs and satellites, India has made remarkable contributions to global technology. From independence to economic liberalisation, from the Green Revolution to globalisation, from IT boom to innovation hubs, there have been many changes in India since its foundation. But what stands out most is the fact that India has managed to keep pace with technology and innovation even as it has evolved in terms of social structure and political systems, India is making great strides in the digital space as compared to past years. There has been a steep rise in mobile internet users and apps, which is resulting into a drastic shift from traditional methods of communication.

In this article, we will discuss some of these changes and their impact on India's development over time. We will also talk about some key developments that have taken place during the last few years and their impact on digitalising India as a whole.

Paper ID: ASICON 248

75 YEARS OF INDIA'S INDEPENDENCE: HOW FAR INDIA ADVANCED IN ECONOMIC EXPANSION

Immidisetty Navya, J.Gaurav, Abishek James
Alliance University

Abstract

One of the largest democracies in the world is the democracy in India. For several years, India was under the British administration, which helped the country understand the need for freedom. India attained independence on August 15, 1947, after much struggle and sacrifice. Despite these efforts, however, India still faced many problems, including poverty, inequality, and illiteracy, which created more barriers to India's economic development.

India has come a long way since gaining its independence more than 75 years ago. India has successfully maintained its democracy while developing a sizable economy. It has also developed into one of the top hubs for science and technology.

The split, which resulted in the creation of Pakistan and cleared the way for various cultures and religions, was one of the most important events to occur after Independence.

India has also seen a massive surge in the literacy rate and in today's world, we see that the top companies CEO are Indians which is a true sight of development. Several MNCs have been established and its growth has contributed to the growth of the country's economy.

India currently holds a prominent position on the global stage and presents a significant threat to other developing nations. We can observe how far India has advanced over the past 75 years. This

paper will deal with the research on the advancement and economic development of India pertaining to the aspects of science and technology, education, and culture.

ANALYSIS AND APPLICATION OF VOICE PRINTS IN CRIMINOLOGICAL AND SECURITY SYSTEM

Bhavya B
Alliance University

Abstract

Voice profiling is the science used to analyse an individual persona and characteristics based on their vocal patterns and characteristics. It is becoming an important tool in criminology as it aids in crime detection, crime investigation, forensics, and security. Voice profiling is an effective biometric medium and has the potential to revolutionise the way criminals are identified and tracked. It can help law enforcement agencies in identifying the suspects more accurately. In addition to that it can provide additional evidence for criminal cases. In the paper, the greater emphasis is on its role and application in criminological system and security system-oriented voice verification. This prominence is explored and analysed in regard of its reliability and security of voice verification. The voice biometrics has limitations in the context of security and crime reduction. The research paper identified technical and non-technical hurdles involved in the usage of this technology. It focused attention on to the human dimensions in the design of system. It also evaluated the necessity of it being gauged under strict conditions prior to its deployment into the systems. The realistic expectations, design requirements and technical limitations of the use of voice forensics in the field for criminological and security applications are outlined in the paper.

About Alliance University

Alliance University was founded with an ambition to serve society with education and research and promote a global outlook that defines the future trajectory of its students.

Since its inception in 2010, Alliance University has been a forerunner in higher education, calling out to the new generation of scholars, engineers, scientists, artists, people in business, social reformers helping to shape and transform societies and communities through and beyond, around the world.

Currently, that trailblazing spirit makes Alliance University, one of the most sought-after universities in the world, featuring top-ranked academic programmes such as Alliance School of Business, Alliance College of Engineering and Design, Alliance School of Law, and Alliance Ascent College, and newly commencing Alliance School of Liberal Arts.

Nestled in the serenity of 'green' campus in Bengaluru, Alliance University is a leader in global education, with world-class infrastructure, state of the art laboratories, international visiting

faculty, exchange programmes with leading universities in the US, UK, and European Union, and linkages with Research Labs across the world.

Alliance University takes its role as an instrument of transformational impact seriously and has a vast network of alumni who have gone on to succeed across professions, from the sciences to the arts and government, throughout the world. Education at Alliance University is designed to inspire our students to become critical thinkers and to lead and change the world.

Rated among the best private universities in India, Alliance University provides a rigorous, demanding education to a diverse student community. The University has baccalaureate concentrations, postgraduate offerings, doctoral degree programmes, and several professional certificate programmes that channel its students' creativity to further knowledge and twenty-first-century skills, challenge the status quo, and deliver impact.

Alliance University counts among its faculty, top talents, recipients of the highest scholastic honors from around the world, and visionaries committed to informing and innovating the current paradigms and pushing the envelope to make a better world, going beyond what might be expected of a university.

About the Conference

Academic disciplines have exercised a dominant influence in the way we perceive, reflect, and seek to understand reality. The methods of enquiry, until the recent times, have been influenced by respective disciplines.

However, recent developments in the academic discourse are not on disciplinary silos but on breaking down the rigid boundaries between disciplines and bringing in more fluidity and permeability. The current conference on "Transcending Boundaries" takes up the challenge of transcending disciplinary boundaries at the contemporary juncture and creating new knowledge, which stands at an alchemical meeting point of several disciplines. We invite young researchers from all disciplines, who can think innovatively.

Alliance University Bangalore, India is playing host to this gathering of thoughts and innovative ideas yet again with modern technology to distil best thoughts of the most brilliant minds. This two-day event aims to engage, stimulate, and provoke

discussions on different issues touching upon humanity and planet earth in general and the challenges that we might face in the coming decades.

Visit Alliance, be part of the conference, share your thoughts, be heard, etch your footprints on the sands of time and be part of history.

Message from Pro-Chancellor

Promoting student research is a very important aspect in today's times. Helping students develop a research mindset, collaborate with peers, faculty, researchers across domains is imperative to holistic development. *The Alliance Students International Conference (ASICON) 2023* is an earnest attempt to bring students from various educational institutions to transcend disciplinary boundaries through innovation as a central theme. The book, a compilation of resrarch abstracts from students on a wide range of areas, makes for an appealing read.

I extend my heartfelt congratulations to the members on the editorial board and would like to extend my deepest wishes to the Student researchers for developing an exploratory outlook and wish them the very best.

Best Wishes
Abhay G. Chebbi
Pro-Chancellor
Alliance University

Message from Vice Chancellor

It gives me immense pleasure and deep satisfaction that Alliance Students International Conference, ASICON 2023, organized by Alliance University has come out with compilation of research work in the form of edited book version titled "Transcending Disciplinary Boundaries Through Innovation" which is comprised of the research work undertaken by students from various institutions. I am sure that the Conference will help the participating students attain marvelous heights in terms of research projects and activities.

I wish the readers intellectual stimulation through this compilation.

Prof (Dr.) Anubha Singh
Vice Chancellor
Alliance University, Bengaluru

Message from Chief Editor

Transcending Disciplinary Boundaries through Innovation

Academic disciplines thus far, have exercised a dominant influence in the way we perceive, reflect, enquire and seek to understand reality. However, recent developments in the academic discourse are not on disciplinary silos but on breaking down the rigid boundaries between disciplines and bringing in more fluidity and permeability. This conference on "Transcending Boundaries" takes up the challenge of transcending disciplinary boundaries at the contemporary juncture and creating new knowledge, which stands at an alchemical meeting point of several disciplines.

The objective is to inspire young researchers who can think innovatively and present their views with proper research choosing from a wide array of tracks. The aim is to engage, stimulate, and provoke discussions on different issues beyond academics and disciplines, applying their Intelligence, social and adversity quotient, touching upon humanity and planet earth in general and the challenges that we might face in the coming decades.

Alliance University Bangalore, India is playing host to this gathering of thoughts and innovative ideas yet again with modern technology to distil best thoughts of the most brilliant minds.

Welcome all young and innovative minds to Alliance University, the host of ASICON-2023.

Dr. Punith Cariappa

Keynote Speaker

Dr. Bengt Gustavasson

Dr. Bengt Gustavasson is a retired professor from Stockholm School of Business, Stockholm University, Sweden

Doctoral thesis: The Transcendent Organization. A treatise on consciousness in organizations.

Research: Among others: papers on organizational consciousness and business ethics. Sir Ratan Tata Research Fellow at Indian Institute of Management, Calcutta resulting in book Transition or Transcendence? A study of Indian Managerial Values; paper on Microeconomics. Tutor for undergraduate, graduate and doctoral students.

Teaching: Among others: Business ethics, Learning and unlearning organizations, Qualitative Methods. Book: Kunskapande Metoder (in Swedish "Knowledge creating Methods"). Examiner doctoral theses, among others several from India.

Today I want to speak to you about the power of knowledge and the idea of transcendence.

As young people, you are at a stage in your lives where you are seeking to learn and grow, to expand your understanding of the world around you and to discover your place in it. This is a wonderful and exciting time, and one that is full of potential and possibility.

But as you embark on this journey of learning and discovery, it is important to remember that knowledge is not an end in itself. It is not something that you acquire simply for the sake of having it, but rather a means to an end. The true value of knowledge lies in what you do with it, how you use it to make a positive impact on the world around you. So, as you seek to acquire knowledge, strive to do so with a sense of purpose and direction. Ask yourself what you want to achieve with your knowledge, and how you can use it to make a difference in the world.

At the same time, it is also important to keep in mind the idea of transcendence. This refers to the idea of rising above or going beyond the limits of your current understanding and experiences. It is about striving to reach a higher plane of understanding and enlightenment, to see the world in a different and more expansive way. To achieve transcendence, you must be willing to challenge your own preconceptions and to embrace new ideas and perspectives. You must be open to learning from others and to seeing the world through their eyes. And you must be willing to take risks and to venture beyond your comfort zone.

In conclusion, I encourage you to embrace the power of knowledge and to strive for transcendence in your pursuit of learning and growth. Remember that the true value of knowledge lies in what you do with it, and that by striving for transcendence, you can open yourself up to new and exciting possibilities.

Keynote Speaker

Dr. Enrico Bonadio

Dr Enrico Bonadio teaches, researches and advises in the field of intellectual property (IP) law. He is currently Reader in Intellectual Property (IP) Law at City, University of London. A frequent visitor to many universities and research centres around the world, Enrico has research interests in several IP areas, including the protection of non-conventional forms of creativity. He has attracted funds from a variety of institutions, including the European Commission, Australian Research Council, UK Research and Innovation, UK Economic and Social Research Council, and the UK Higher Education Innovation Funding. Enrico works with various international organisations and governments on IP issues and regularly joins training and technical assistance missions organised by World Intellectual Property Organisation. He frequently appears in the media as IP expert, and has been in private practice since 1999, working as IP lawyer for top-tier international law firms.

Artificial Intelligence as Inventor: Exploring the Consequences for Patent Law

Patent law has traditionally developed with human inventors in mind. At the same time, the use of inventive AI systems raises a range of novel issues which the existing patent framework may not be able to accommodate easily. There is no consensus over whether a machine can be designated as inventor. Who

would be the owner of the patent where AI has generated the invention with little or no human intervention? Who would be liable for AI-induced infringement in cases where machines act "autonomously"? Moreover, it is unclear whether the proliferation of AI-generated inventions should require us to re-evaluate core patent concepts such as inventive step and novelty in the long run. In this contribution, we have navigated through this complex relationship and explored the various issues that AI raises in the patent context in light of recent EPO and UK decisions.

Artificial Intelligence as Producer and Consumer of Copyright Works: Evaluating the Consequences of Algorithmic Creativity

Artificial intelligence (AI) has been the subject of a great deal of academic interest in recent times; it has captured the attention of copyright lawyers fascinated by the thought of machines creating works of art, music and literature. There is no doubt that, as has often happened in the past during previous waves of technological advances, AI platforms—and especially, machine learning—have brought with them new opportunities as well as challenges.

Machine learning is an AI application enabling programs to learn and progress automatically from experience. Its main feature is accessing data and often using it for the purpose of creating outputs, including music, literature, movies and art. Amounts of data are observed and analysed by the machine, which enables the latter to learn and then make creative decisions leading to final outputs that, as precise works of art, are often not foreseeable by the people who developed and started the initial program. Such a process is characterised by the absence of substantial human intervention or assistance after the program is operated, and by the use of algorithms—namely a sequence of instructions aimed at solving a problem or performing a computation. It can

be deemed "algorithmic creativity", or the way by which AI/machines create new works.

Against this background, the article delves into thorny legal and policy issues. Is an AI-created work protected by copyright? Should it be? Who would be viewed as the author? Who should own such a work? These questions are the focus of the first part of this article: "AI as producer". In the second part, "AI as consumer", our analysis shifts to the questions of whether and to what extent the use of data fed into the system, for example to train the algorithms, may amount to copyright infringement, or may in certain circumstances be exempted under fair use, fair dealing or similar doctrines. In the third part we consider possible legal regimes for dealing with machine produced works including alternatives to copyright, such as a public domain scenario and a sui generis system. Finally, we provide our conclusions.

Keynote Speaker

Dr. Francesco Zonta
Laboratory of Computational Biology – Co-PI
Shanghai Institute for Advanced Immunochemical Studies
ShanghaiTech University

A Theoretical Physicist. During his Ph.D. in Physics (Padova University, Italy, 2003-2007), while working on the statistical and topological properties of polymers, he started to be more and more exposed to and interested in biological systems.

In his earlier career as a Post Doc and Young Researcher at the Venetian Institute of Molecular Medicine (Padova, Italy, 2007-2015), he had been working in the field of Computational Biology and in particular on the study of mutations of connexin proteins that lead to rare genetic diseases. In these years he became familiar with most of the methods of Molecular Simulations at different scales, Quantum Mechanics, Classical Molecular Dynamics, Coarse-Grained systems, etc.

In 2015 he joined Shanghai Tech University as a Research Associate Professor and Director of the Bioinformatic and Computation Platform. In 2018, he became Co-PI of the Laboratory of Computational Biology, together with Prof. Michael Levitt (Nobel Laureate in Chemistry in 2013).

His research focused on therapeutic antibodies, in particular modeling of antibody-antigen interaction and in silico screening and design of new antibodies, and the development of multi-scale models for biological systems.

Since 2020 he has been extensively working with Prof. Levitt on modeling the spread of the COVID-19 virus in the population.

Modelling COVID Diffusion in the Population

The counts of confirmed cases and deaths in isolated SARS-CoV-2 outbreaks follow the Gompertz growth function for locations of very different sizes. This lack of dependence on region size leads us to hypothesize that virus spread depends on the universal properties of the network of social interactions. We test this hypothesis by simulating the propagation of a virus on networks of different topologies or connectivities. Our main finding is that we can reproduce the Gompertz growth observed for many early outbreaks with a simple virus spread model on a scale-free network, in which nodes with many more neighbors than average are common. Nodes that have very many neighbors are infected early in the outbreak and then spread the infection very rapidly. When these nodes are no longer infectious, the remaining nodes that have most neighbors take over and continue to spread the infection. In this way, the rate of spread is fastest at the very start and slows down immediately. Geometrically we see that the "surface" of the epidemic, the number of susceptible nodes in contact with the infected nodes, starts to rapidly decrease very early in the epidemic and as soon as the larger nodes have been infected. In our simulation, the speed and impact of an outbreak depend on three parameters: the average number of contacts each node makes, the probability of being infected by a neighbor, and the probability of recovery. Intelligent interventions to reduce the impact of future outbreaks need to focus on these critical parameters in order to minimize economic and social collateral damage.

Keynote Speaker

Prof. Gabriele Goretti

Associate Professor, Jiangnan University – School of Design (China)

Visiting Professor Alliance University – School of Liberal Arts (India)

Visiting professor at Politecnico di Milano Design Department

Former researcher at University of Florence (Italy)

Former Coordinator Fashion Design Department of IED Isituto Europeo di Design Florence - Milan (Italy)

Prof. Goretti is an Architect, Design Researcher in product and fashion design strategy and luxury goods market. At the Jiangnan University in Wuxi (China) he is co-leading the Brand Future Experience Design lab.

From 2007 to 2017 Research fellow

Post-doc researcher at DIDA Department of University of Florence.

Senior researcher within joint research Labs in between Academia and advanced craftsmanship SMES

Professor in fashion design and product design

PhD in Industrial design, Environment and History

His professional profile is focusing on relationships between design strategies and advanced manufacturing processes.

Design Innovation and Craftsmanship Values: Case Studies in Product Design in Italy

Keywords: genius loci, craftsmanship, manufacturing, digitalization, sustainability

The Latin term genius loci identifies the "spirit" or intrinsic identity of a place or a community. Mediterranean cultures represent a strategic cradle for quality and manufacturing know-how, based on historical processes and cross-cultural connections. Among them, design and fashion production stands as a wealth of interesting savoir-faire, often unknown to the customers even if it plays a centric role in the final perceived quality of the product.

On the other hand, the contemporary design and fashion supply chain is part of the Global Value Chains (GVCs), the organization of international production, trade and investments where different stages of the production process are located across different countries. Moreover, authentic genius loci is often replaced by place as a fluidly-applied value-add signifier often not properly expressed or extremely simplified.

The Italian manufacturing districts are part of this global system. These clusters are composed of a constellation of SMEs, characterised by an articulated productive differentiation and a collaborative structure based on exchange and trust mechanisms in which the craftsmanship component strongly affects the competitive advantage of companies (Rullani, 2014). This helps to define a specific production model (Becattini, 2004) capable of transferring the cultural aspects of the territory and the intangible values of Made in Italy into a product recognisable for its solid and meaningful aesthetics (Morace and Lanzone, 2010). The value framework resulting from the connection between creativity, culture and territorial specificities cannot be considered inseparable from the production phenomena and ancient traditions of processing certain materials. This is expressed in the prominent role that product and process design have

always played in Italian productive contexts, whose constitutive characteristic consists in the endogenous capacity to constitute links between technical and humanistic thought (Celaschi, 2017), translating them into a strategic value that makes Italian design and production dynamics a form of cultural production.

The profound changes proposed by the digital transformation are strongly affecting the business models of SMEs (Matarazzo et alii, 2021), causing substantial changes in the organisation of design and production processes, as well as in relations with suppliers and customers. Thus, the need has emerged for Italian craft SMEs to undergo structural and organisational renovations to acquire and generate value by preserving their specific, distinctive and original knowledge and projecting it into a global logic that enhances their difference. Heritage thus begins to be interpreted by some leading companies as the added value of products and services, as a synthesis of a subset of symbolic intangible attributes (Mosca, 2017). The main instrument of this type of strategy can be found in the historical archive from which a series of further closely related opportunities can be derived.

Some leading SMEs have therefore embarked on a path of reconstruction between the material dimension of artefacts and the intangible dimension of knowledge and skills, enhancing corporate identity and heritage. In this path, digital archives have assumed a priority role in the interaction between Crafts Heritage and contemporary creativity to inspire the design of new products, trigger new projects, and preserve and transmit the (evolving) memory and knowledge. Archives thus become tools for the use and application of historicised knowledge in everyday design activities, which thus become knowledge-centred (Lupo, 2019).

Although Italian SMEs show that they have become aware of the opportunities inherent in digital transformation in terms of efficiency, cost reduction and labour flexibility, the situation

in Italy is somewhat uneven, and there is still a poor spread of digitalisation skills. It is also worth noting that the digital transformation of SME manufacturing districts is characterised by some common factors: technological innovation in production processes through technology transfer from other production contexts (e.g. automotive or fashion); values of craftsmanship safeguarded while implementing technological innovation in/on the supply chain; improvements in planning, production, time-to-market, material procurement, traceability and certification of product authenticity; and involvement of the end user in the communication of production values and product customisation services.

The tangible and intangible value of Craft Heritage is now recognised, nationally and internationally, as a driver for developing more cohesive societies attentive to the SDGs of Agenda 2030 (Sachs et alii, 2022). In particular, the European Commission has implemented over the last two decades many initiatives to enhance these processes, such as the European Cultural Agenda (European Commission, 2018), Creative Europe (European Commission, 2021a) and more recently also, the New European Bauhaus initiative (European Commission, 2021b); the latter is of relevant interest because it aims at strengthening the links between the world of culture-creativity and that of production, science and technology, in order to lead the ecological transition indicated by the European Green Deal (European Commission, 2019) and Next Generation EU1 (Symbola Foundation, 2020). From this point of view, the Craft Heritage represents a resource of absolute importance because it is renewable, implementable and combinable again. The more it is used, the more it increases.

The company Savio Firmino has been operating since 1941 in the Florentine area in the furniture and home details sector, first as an artisan workshop and then as an SME, progressively differentiating its products with the consolidation of international reference markets. In 2013 Savio Firmino started a long process

of restructuring and reorganising production through a joint University-Enterprise Research and Development Laboratory to experiment with the opportunities offered by the digitalisation of manufacturing processes, safeguarding craftsmanship as the primary source of success. The technical-scientific and economic-productive transformation that digital tools could bring was perceptible; thus, faced with the ever-tighter pace imposed by global competitiveness, the need emerged to recover craftsmanship knowledge in order to enhance it by introducing it into digital innovation processes.

The innovation program's first step involved digitising the company's historical archive through product reverse engineering techniques. A 'digital twin' was then obtained – starting from physical objects – i.e. a digital model ready to be reinterpreted, elaborated and fed into contemporary creative and production processes. Thanks to these research experiences, it was possible to elaborate design methods and tools to develop a codified digitisation procedure using 3D scanning for historical company components consisting of highly artistic, handcrafted elements and other industrialisable (serial) components.

In the first phase, the introduction of the digital archive made it possible to: improve time-to-market and thus an adequate reaction to market demands; co-ordinate the dialogue and interaction between company departments and external suppliers; obtain a taxonomy of the most industrialised handicrafts and processes in the supply chain; create a 'platform of knowledge and know-how' to be shared within the company. The SME's digital archive of products and components was preparatory to design and production optimisation with the help of 3D modelling, parametric software and additive manufacturing processes. Subsequently, having the business knowledge organised and digitised in the form of an archive allowed the products to be placed within virtual contexts making, use of advanced augmented reality and virtual reality tools to enable applications aimed at

product customisation and user-friendly solutions for interior design and high-end contract and residential applications.

Another interesting case studies is offered by Baldi Company, a SME which developed a digital archive of components and assemblies in bronze e crystal. The brand operates within classic interiors proposing decorative home details, as a typical example of Florence (Italy) craftsmanship tradition.

Through 3D scanning and parametric software, the company digitalized the company production archive generating forms which could work as a base for redesign strategies and as a knowledge-based catalogue to train new generations of designers and craftsmen.

Keynote Speaker

Roberto Donà

Roberto Donà is an academic and a business practitioner with a long experience in China. He is a Professor of Practice in Management at IBSS, the business school of Xi'An Jiaotong Liverpool University in Suzhou, where he serves also the Associate Dean for Corporate Affairs. He is also Honorary Professor at School of Innovation and Entrepreneurship of University of Chinese Academy of Science.

Roberto has a strong international exposure having worked in Russia, Bulgaria, Argentina, USA and China. Since the beginning of his career, he worked also as management consultant for both domestic and international companies serving in several board positions. In May 2021 he has been elected Board Member of the EUCC (European Chamber of Commerce) Shanghai.

Currently he is also chairman and independent director in a company listed at the Catalyst market in Singapore and founder of an Italian startup registered as innovative Italian enterprise.

Entrepreneurship, Management and Leadership

This article aims to investigate some relationships between entrepreneurship, management, and leadership in order to identify which keywords may be useful in the agendas of scholars.

Despite the fact that entrepreneurship and management appear to be two distinct concepts, in the new competitive landscape, both new and well-established enterprises compete in a global and digital environment with an increasing dynamic and intensified competition, and thus companies of any age or size are forced to develop more entrepreneurial strategies in order to compete and survive.

What are the forces driving this new competitive landscape and the futures of many businesses?

The first is that emerging economies are becoming increasingly important in determining future growth, owing to the growing importance of the service sector.

The changes in the world's population are the second driver influencing the future. Life expectancy is rising, and as a result, there is a potential problem of aging. This is a concern from a demographic standpoint, but from a commercial standpoint, it means there are new industries, new sectors, new clients, and new products that may be offered.

Technology is the third driving force in the future. We are only at the beginning of a great technical progress, and this development indicates that future company models will be entirely different from current ones, necessitating a new wave of entrepreneurship within existing organizations. New tech giants have recently disrupted several industries, and huge organizations are now aware of this and maybe prepared to play a role in the changing world.

The final driving force in the future is urbanization. More and more people are living, and will continue to reside, in urban regions rather than rural areas, raising concerns about sustainability and necessitating changes in business models that prioritize sustainability from both an environmental and purely business standpoint.

All of the aforementioned forces are pushing us to define new leadership characteristics because being a leader entails not only influencing followers to achieve common goals, but also creating, sharing, and implementing a vision, facilitating change, making faster decisions, building relationships, controlling the climate, and mentoring and coaching future leaders.

What are the directions based on these basic assumptions? We can see that three major directions are guiding the work of numerous academic researchers. The first is a historical shift in the analysis of prospective leaders' characteristics. The second is the rising relevance of something which we might define as "not just technical skills". Finally, the complexity and dynamic of the corporate world necessitate interdisciplinarity.

The historical shifts of the traits of the leader moved from a great man approach to the current studies, with more focus on the ability to adapt to the situations and to the relationship with the followers. This shift identifies different key traits of leaders and, among the others, there are intelligence, self-confidence, determination, integrity and sociability.

As a result, leadership study is becoming increasingly multidisciplinary, merging information from several fields such as behaviorism, psychology, philosophy, and life science, because modern leaders must also be authentic, servant, ethical, and transformative.

Furthermore, future leaders must be able to operate outside of their comfort zone in order to detect new competitive landscapes as a result of the aforementioned dynamic. This explains why managerial entrepreneurial studies are conducted.

A transdisciplinary approach is essential for identifying answers to emerging and very complex global challenges, such as climate change and sustainability, which are related not just to management but also to science, technology, art, and creativity.

For example, one particularly fascinating area of study is the so-called "design driven strategy" and the growing importance of creating new goods in light of the factors outlined above and the corresponding emergent difficulties.

Finally, what are the issues that future leaders will face and which must be acknowledged in management research?

There are two viewpoints to consider: the strategic context and the people.

The issues in the strategic context are related to the ability to challenge the status quo, adapt to technology, and enable creativity.

The second viewpoint is about individuals and how to prepare them for a changing world. If, as some analysts predict, many jobs of the future have yet to be invented, it is the responsibility of scholars to lay the groundwork for that understanding by demonstrating how to leverage existing competencies and experiences to be upskilled and reskilled, to manage truly diverse teams, and to focus on doing good.

Entrepreneurship, management, and leadership are all concerned with the conception and implementation of new sustainable business models, and the complexity and uncertainty of the future necessitate a new research agenda that is less concerned with analyzing the past and more concerned with going beyond predefined conceptual models: an agenda in which innovation and interdisciplinarity will be central.

Keynote Speaker

Dr. Pavan Soni

Dr. Pavan Soni is an Innovation Evangelist by profession and a teacher by passion. He is the founder of Inflexion Point, offering programs on Design Thinking, Strategic Acumen, and Consulting Skills. He is the author of the book, Design Your Thinking, published by Penguin Random House in 2020. The book was one of the five books shortlisted for the '2021 BBLF CK Prahalad Best Business Book Award'. In 18 months of its release, the book has become a National Best Seller.

Apart from being an Adjunct Faculty at ISB Hyderabad and IIM Bangalore, Pavan is a columnist at Mint, YourStory, Inc42, Entrepreneur and People Matters. He authors a monthly newsletter, Inflexion Point, which has been in circulation since 2008 and reaches to over 20,000 enthusiasts across the world.

He was the only Indian to be shortlisted for the prestigious 'FT & McKinsey Bracken Bower Award for the Best Business Book of the Year 2016'. He has been invited five times to speak at the TEDx, and is featured as one of the '100 Digital Influencers of 2020' by YourStory.

He is a Gold Medalist from MBM Engineering College Jodhpur, and did his PGDIE from NITIE Mumbai. He finished his Doctoral Studies from IIM Bangalore in the domain of innovation management. He is passionate about fitness, spirituality, guitar, chess, reading and writing.

The boundaries between goods and services, consumers and producers, government and citizens, norms and exigencies, and virtual and real are fast getting blurred. In this boundaryless world you can't afford to have mental barriers. You must think seamlessly and act fearlessly. You must learn to look around the corners, study weak signals, pivot without regret, and learn to throw caution to the wind. May you shape your thinking faster than you are forced to. The talk and the ensuing conference is all about nudging you to think differently in this new normal.

EXAMINING THE RELATIONSHIP AMONG M-SERVICE QUALITY, CUSTOMER PERCEIVED VALUE (CPV) PLANNED BUYING BEHAVIOUR IN M-COMMERCE APPLICATION BASED SERVICES

Rohit Kumar, Dr. Sanjeev Padashetty S
Alliance University

Abstract

Consumer buying behaviour is the locus of marketing research over decades. In the current era of IT revolution Mobile – Commerce application plays vital role in planned buying behaviour of the customer. Importance of Mobile – Commerce application arises because the businesses have tendencies to reach their customers through mobile services lately (Shin and Kim, 2008). Developments in smart phones and wireless communication technology with the support of internet have increased the level of mobile commerce in current era. To remain competitive in the marketplace; measuring consumer perceived value (CPV) in planned buying behaviour in M-Commerce application-based service is crucial. The purposes of this study are to construct an instrument to evaluate service quality of mobile App-based services and have a further discussion of the relationships among service quality, customer perceived value, customer satisfaction, and planned buying behaviour. Structural equation modelling and multiple regression analysis were used to analyse the data collected from mobile application users in South Bengaluru (India). A pilot study of n = 47 samples was conducted to understand the model fitment and construct formation and later the main study was conducted with a sample size of n = 222 that established a significant relationship among all the six constructs.

CLIENT PERSPECTIVES ON CRITICAL SUCCESS FACTORS FOR PROJECT TEAM MANAGEMENT IN ONLINE I.T. OUTSOURCING PROJECTS

Kabir Pary
Alliance University

Abstract

Organisations are growingly using online IT outsourcing resources for their projects. Changed work demographics due to Covid-19 pandemic including great resignation, quiet quitting and moonlighting also accelerated this growth. Online outsourcing benefits organisations with access to talented global workers and reduction in project, administration, and compliance costs. Online IT outsourcing is distinct due to their unique usage of resources that are acquired for short term and not bound by the organisational frameworks. The project team management is resource intensive, but its focus on project success of online IT outsourcing is not systematically explored. This paper addresses this gap and summarises the critical success factors for project team management based on a qualitative content analysis of client review comments from a major online outsourcing platform. Shared understanding, technical competence, shared ownership, and open communication are the critical success factors identified. Impact of Covid-19 on these is also explored. This study would help project personnel and organisations that are engaging in online IT outsourcing resources to focus on the critical team success factors for maximising the project success. It would also enhance the project management literature where there is lack of online IT outsourcing knowledge.

IDEAL SELF (IS) INCREASES THE LONGEVITY IN LEADER FOLLOWER RELATIONSHIP AND RELATIVE DEPRIVATION (RD) IS THE DRIVER OF IS

Rashmi R Shet

Alliance University

Abstract

Relative Deprivation is one of the most researched areas with almost exploring the not so positive effects. This study is an attempt to explore the positive side of the Relative Deprivation. It is a unique study exploring two major concepts (RD and Ideal Self) and their interdependence. The study tried exploring how can IS lead to the long-term relationship between the leader & the follower in an organisation and whether RD is the main driver for the IS. The research is based on a survey method to derive a representative picture of the attitudes and characteristics of a large group. The results from study revealed that IS acts as a motivational, inspirational aspect, which induces job involvement and OCB behaviours amongst followers, thereby increasing their well-being, and leading to long-term relationship between leader and follower. The most interesting part of the entire research was, the negative feeling, RD becoming the main trigger for the development of IS. This study can help organisations to motivate their employees to follow their ideal selves for a productive workplace.

Paper ID: ASICON 221

EXPLORING PEOPLE ANALYTICS IMPLEMENTATION: DEFINING A CONDUCIVE STATE

Arjun Ajit
Alliance University

Abstract

The application of people analytics in organisations has generated much discussion in academia and Industry. Yet, the number of businesses who successfully use it could be far greater. In this work, an attempt was made to establish the relationship between some of the factors that could lead to the intention to use HR Analytics in an organisation. The study examined the combined effects of a few organisational and individual elements that can encourage adoption of HR analytics. The paper also presents real-world cases of HR Analytics usage and how organisations have benefitted from it. The study followed a step-by-step procedure, were initially, the Corporate Ethical value, which is an organisational component, was evaluated. Then, the moderating impact of the Ethical culture of an organisation on employees' psychological contracts was determined. The third aspect used is an individual's "Illusion of Control," a psychological phenomenon. Then, under the moderating influence of the perceived advantages of people analytics, an employee's problem-solving attitude toward using analytics in HR processes was evaluated. The model developed at the end of the study describes the relations between the four aforementioned elements and how it can encourage the "Intention to use HR analytics" in the workplace. A questionnaire method was used to determine the relationship between the mentioned factors.

Paper ID: ASICON 226

LIVING UNDER ARMED FORCES SPECIAL POWERS ACT (AFSPA) AND MEDIA COVERAGE: A CASE STUDY OF HUMAN RIGHTS VIOLATIONS IN NAGALAND

Ishita Maity
Alliance University

Abstract

The armed Forces (Special Powers) Act (AFSPA) was enacted and enforced in most of the North-East States in India in 1958 due to internal disturbance in the region. Under the AFSPA, army personnel assume huge power to control and regulate peace in the region. The northeast region of India is having high literacy rate, culture is highly modernised, westernised and has a liberal society compared to other part of India. In fact, women enjoy their freedom to participate at all levels and are highly emancipated. At the same time, governed by AFSPA, they also experience human right violations. This paper will trace out all such human rights violations portrayed by the northeast people living in Nagaland such as harassment, torture, interrogation, extra-judicial execution, rape etc. committed by the Army personnel. It has been noticed that most human rights violations do not attract media coverage at the national level. Some of the cases were highlighted by the local print media and through social media but most of the news was suppressed. This paper by adopting content analysis as the method will trace human rights violations carried out by the army forces against women in Nagaland from Pre and Post Covid phases between the pre-Covid phase will cover 2017-2019 and post-Covid phase from 2021-2022.

The objective of the study is to find out why and how human rights violence against women is selectively showcased or underrepresented in front of the nation as well as the inner contradiction between regional print media and national print media in the representation of

the situation. The finding of the study is that cultural and ideological (conservative) difference between the army and the northeast people stands one of the major reasons for human rights violations against women and the army's dominant position restrict media to highlight human rights violations at the national level.

Paper ID: ASICON 228

IMPACT OF AI TECHNOLOGIES ON SUPPLY CHAIN INNOVATION AND PERFORMANCE IN HEALTHCARE AND FINTECH FIRMS IN INDIA

Karthi Mani, Dr. George Essaew
Alliance University

Abstract

In the era of digital world, the mere challenge for any business is to sustain global competition. One of the explicit solutions to stay in the competitive market is to create or adopt newer innovations and technologies for products, services, and the business processes. Product innovation is the lifeblood of firms competing in dynamic environments (Zablit, 2010). Adoption of technologies and processes are also playing a crucial role for the success and existence of the organizations. The era of Artificial Intelligence (AI) begun in the early 1950 (Turing), 1956 (John McCarthy) and in the same decade the Technology Push generation of innovation also got rolled up, followed by the Need Pull or Market Pull generation of Innovation in the mid of 1960s (Kotsemir, Meissner 2013). The application of AI is extended to ecommerce, healthcare, retail Sector, manufacturing, self-driving cars, business marketing, intelligent manufacturing (B Li, 2017), finance (Bahrammizaee, 2010), robotics, and natural language processing. Based on the literature review from 2010 onwards there is limited studies which focused on the AI Technologies and its impact on the supply chain innovation and performance. This paper aims in trying to study the relationship among AI Technologies, supply chain innovation and performance. The data collected from 230 respondents from healthcare and fintech forms in India is analysed and the findings are provided as a contribution to the knowledge area. The limitations, prospects to extend this study in the future are also discussed.

A LITERATURE REVIEW TO ANALYSE GLOBAL SUPPLY CHAIN MANAGEMENT & COMPETITIVE ADVANTAGE IN INDUSTRY 5.0 ERA

Santosh Zambre
Alliance University

Abstract

Since the natural resources sector is heavily reliant on customer service, today's competitiveness and business requirements demands a drastic and reasonable change in the industry supply chain management. The industry supply chain management concept includes understanding new issues encountered by the industry, analysing the best practices, and then using the outcomes of those practices to deal with global business requirements and competitiveness in the Industry 5.0 era. For businesses throughout the world, modern supply chain management is more of a question of survival than anything else. This concept examines the potential for supply chain management to achieve a competitive advantage in the Industry 5.0 era. Currently, the supply chain management is centralized on the need of the customer, but it also includes challenges and accountability problems. As a result, the stakes are higher than ever. A company's ability to compete in other sectors hinges on its ability to run an efficient supply chain. Hence, this study aims to determine the competitive advantage that may be gained in the business via the implementation of an effective Supply change management strategy in the Industry 5.0 Era. When researching supply chain management techniques in the business, the study focused on how these practices were implemented, investigated the most successful and best practices used in other industries, and compared the ideal practice to the existing reality to conclude. We assume that supply chain management may assist a firm get a

competitive edge in the market. As the industry's requirements and expectation change, this study attempts to come up with a supply chain management model in Industry 5.0 era that considers the best practices that are already in place in other supply chain management-focused businesses.

Paper ID: ASICON 240

AESTHETICS, RELIGION, CULTURE, FOOD

Tias Maity
Alliance University

Abstract

Food is a necessary part of life. Without food no organism can survive. But for humans' food has been more than a need, it has been a way to assert one's individuality, assert one's religion and preference of food also speaks a lot about the culture within which one has grown in. Thus, it has been at the centre of cultural significance and distinction. Even a little geographical shift has the capacity to bring forward new ingredients to cook with and for consumption. Notwithstanding the various ways the same ingredient is consumed. The purpose of this paper is to put food at the centre of our cultural readings. It is food that has been the most primitive form of socio-cultural marker and the reading of food consumption and preparation will bring out an interesting pattern of outlook and creativity as seen globally. The beliefs and religious connotations related to food has been innumerable. With every political upheaval or change the nature of food consumed and been made available has also changed. From the famous Margarete Thatcher quote 'Let them have cake!' which enumerates the capitalistic turn and the consequent mentality of the people in power, to the present age of banning of certain food products on religious grounds, food has been at the centre of strife and debate in social, political, and economic spheres over the ages. What does such conflicts related to food say about the cultures that have been shaped over the years? Despite India being known as a predominantly vegetarian country according to statistics over 71% of the population eats meat, fish, or poultry products. Of which 53% are Hindus who are non-vegetarian. In such a situation, the intention of my paper is to look at how and if food is a basis of our knowledge of reality and if consumption pattern has any historical consciousness that drives food choices. Humans are

predominantly dependent on their eyes for experiencing reality. Yet when one cooks, he/she cooks with all their sensory organs. Food is the only object that is experienced with all our senses. In such a scenario is it possible to look at food as the only phenomenon that can be a way to fully comprehend reality? If aesthetics is related to our senses, then food becomes a part of aesthetics. Food integrates within its creativity, originality, and an ample space to experiment; everything that goes into the creation of art. It consistently moves away from 'plastic art' to the realm of what I want to term 'actual art'. Despite the development of 3D printing, when it comes to food the printing is done by inputting actual food ingredients to create the final printing. Apart from the moral issue of killing of animals, the idea of synthetic meat products provides huge consideration for the future. Prior to synthetic meat we already had the development of hybrid vegetables, and injection of various foreign substances in food. How do we reconcile with such phenomena? It is from here that I want to put forward a definition of aesthetics and argue about the possibility of food being the primary conception of what we now understand as art.

KUDUMBASHREE, THE SUCCESS STORY OF WOMEN EMPOWERMENT THROUGH LOCAL SELF GOVERNMENT

Shyni KP
Alliance University

Abstract

As the nation is celebrating 30th year of 73rd and 74th constitutional amendment which is called as one of the silent revolutions that India has seen, its only rightful on ones' part to acknowledge its contribution to the country. The Panchayath Raj and Municipalities Amendment Act has not only enforced India's Federal structure multi-fold by instituting a three-tier system of governance. This Act has played a major role in ensuing economic reforms through local governance, one such example being Kerala Governments women empowerment scheme, named, "Kudumbasree". This organisation, set up in the 1997, works through a network of women, and is considered today as one of the best models for poverty eradication. It has won many accolades since its inception internationally and nationally including the National Award for Best convergence model under Pradhan Mantri Awas Yojana (urban) Awards in 2022.

This scheme is one of the largest women's networks in the world, essentially a community network covering the whole of the state. The three-tier system involves Neighbourhood groups at primary levels, Area Development Societies at ward level and Community Development Societies at the local government level. The network thus works to bring to the forefront the needs of the people at all walks of the society aiming at citizen-centric governance.

The researcher through this article tries to bring the importance of decentralisation. It assumes Kudumbasree programme as one of the best practices adapted by the State of Kerala through women empowerment and attempts to assess how this novel concept has changed the social and economic structure of a state and the lives involved in it.

TERAHTAALI AND ITS CULTURAL SIGNIFICANCE IN THE CONTEMPORARY FOLK DANCE COMMUNITY OF RAJASTHAN

Ashly Ann Binu
Alliance University

Abstract

Art and culture are two interconnected factors of a community. The cultural exposure witnessed through the art forms plays a significant role in exhibiting the elements of beliefs and identity of a particular geographical space. Folk dances play an intense role in delivering the thoughts, beliefs and rituals of a community that formulates an art form. With the elements of music, dance and performance, folk dance acts as a path for acquiring and learning the diverse culture of a specific community. It helps in the representation of the pride and expression of a society.

Rajasthan is well known for its beauty and cultural significance among other communities of India. It possesses different type of folk dances and one among them is the *TerahTaali*. *TerahTaali i*s a Rajasthan folk dance performed by women. One of the major significant aspects of this folk dance is the use of the thirteen cymbals that are used in the body parts of the female performers. The thirteen cymbals used for the performance are one of the major attractions of the performance. The use of a wide variety of instruments such as Manjeera and other instruments adds an impact to the performance. This research paper will focus on how *TerahTaali* is playing a crucial role in identifying and impacting the culture of contemporary Rajasthan culture.

POSSIBILITY OF GREEN ENERGY IN INDIA: A DREAM OR A REALITY!

Pramath Adiga
Alliance University

Abstract

India's aim is to become the powerhouse of growth and development with its sheer size and enormous potential in the field of industry but with environ-cared atmosphere. But it is achievable only when it has productive energy to back-up. As noted in already announced government policy, India targets to achieve net zero carbon-emission by 2070 and strives to meet half of its electricity needs from renewable resources by the end of 2030. It has put an imperative on India to achieve new energy demand with low-carbon emission but with more use of renewable sources. It is easier said than done as it needs to move with more care and circumspection, otherwise its ambition may lead to haywire. To move to green energy, it requires step by step investment in green-energy projects. Once green energy movement gains its hold, the consumption of energy being produced by conventional methods begins to reduce its grip in the industrial sector. The reduction in the use of conventional methods gets side-lined; the rate of air pollution, worsening global warming and harm to the environment starts to decrease. It provides a base to green energy advancement. What is needed the most is proper vision and wherewithal to bring it into force in constructive sense.

Paper ID: ASICON 253

FOOD WASTE AND ITS IMPACT ON THE ENVIRONMENT

Kavitha Christo Nelson
Alliance University

Abstract

Global hunger is a major concern and while India ranks 103 out of 119 countries in Global Hunger Index 2018 and trying to combat malnutrition in one arena, food waste or food loss has become another major concern. Food is an essential part of one's sustenance, but the food is wasted or lost intentionally or unintentionally in every part of the world and goes to the landfill where India is one amongst wasting the most food produced in the world. Food waste happens at all stages from farm produce to food processors, in supermarkets, and at individual consumer levels. Food waste is associated with the use of natural resources, from the land used for agriculture to groundwater, human resources, and capital consumed to produce such food. Giving importance to the sustainability of food, the article banks on the Sustainable Development Goals 12.3 of 2030 as food waste or food loss is associated with the nutritional, social, economic, and environmental impact on greenhouse gas emissions and climate change. The article spotlights the initiatives of India and other countries that tried to reduce food waste by mapping the environment with sustainable measures on surplus food produce and their preventive measures to reduce food loss.

SOCIAL JUSTICE: WITH SPECIAL REFERENCE TO THE INDIGENOUS COMMUNITY OF SUNDARBANS

Aldrina Rimpa Gomes
Alliance University

Abstract

This article analyses social justice as a radical phenomenon in its most comprehensive sense. The three wings of the State i.e., the legislature, executive and judiciary, is monitored to achieve the ends of social justice. Thus, to acknowledge in its broader facets and to achieve the common good by distributing the resources and benefits to all without any form of discrimination, the rule of law as a potent machinery is guiding to protect the weaker sections of the society. The Preamble of the Constitution of India uses the term 'social justice' and ensures that there is no discrimination and promote egalitarian society where equal opportunities are to be afforded to the citizens. To attain these objectives the States are required to follow the Directive Principles of the State Policies, to strive towards promoting welfare to the citizens, by securing and protecting them to achieve the ends of social justice by removing the superior and inferior considerations. The paper has critically examined the impact of denial towards social justice of the indigenous group of the Sundarbans and how the problems of social classification and discrimination has intervened in their upliftment.

Paper ID: ASICON 257

CRIME AND DECRIMINALISATION: AN ETHOS OF SOCIAL CONFORMITY

K Makesh Krishna, Dr. Syed Umarhathab, R. Ramesh Kannan
Manonmanium Sunderanar University

Abstract

Crime is "an intentional act or omission committed in violation of criminal law (s), by a person or group without any defense or justification and sanctioned by the state as a felony or misdemeanour"; certainly, defining and processing an act as crime is the criminalisation of the act. On the other hand, decriminalisation is the process of making the act to not exist in practice or make the practice accepted by society at large. For example, untouchability, bribery, commercial sex work, begging, alcoholism, drug abuse, etc. The Indian criminal justice system has enough laws to control crime and criminal activities, although the implementation of laws and social conformity of Indian citizen do not meet each other at many points of time. The social conformity is well taken for raid by citizen in the name of adjustment, adaptability or acceptability ending with high tolerance without natural happiness. Now the people were ready to accept certain unlawful act as a normal phenomenon because it's an order of the day. This paper is based on the mixed methodology and conceptual research using content analysis method. This paper will discuss on ethos of social conformity and real-time problem and practices via crime and decriminalisation of select acts.

Paper ID: ASICON 256

USE OF TECHNOLOGY IN CRIMINAL INVESTIGATION

Divya Panickar, Nupur C Adawadkar
Alliance University

Abstract

The world that we have been living in has been completely transformed as a result of technological advancements. When we first open our eyes in the morning, technology is already at work, and it continues to do so throughout the day. The impact that technology has had on every facet of life has been profound. Since the technological world moves at such a breakneck pace, it is necessary for our law enforcement agencies to ramp up their use of technology to conduct effective criminal investigations and stay abreast of developing trends. Even if the police force has already adopted a great deal of technology advancement, there is still an ongoing requirement for further improvements. There is a widespread misunderstanding that forensics can only be conducted in lab settings. When it comes to comprehending the circumstances surrounding an investigation and gathering evidence, forensics can be of tremendous aid. In a similar manner, digital forensics involves the analysis of electronic evidence that was gathered over the course of an inquiry. In order to achieve accurate results in either aspect of forensics, a significant amount of technology is required. Not only can they be helpful in a criminal investigation, but they can also be used in an internal inquiry for a civil case. Crimes might be investigated to restore public trust in law enforcement and the criminal justice system. The nation's crime laboratories could also benefit from the use of artificial intelligence in the analysis of complex DNA mixes and other similar tasks. It is possible that AI technology will be able to offer law enforcement with situational awareness and context, which will help improve police well-being

by allowing for more informed reactions to potentially harmful circumstances. This paper focuses on various kinds of technological advancements used as a part of criminal investigation and its future in the criminal justice system.

BIRDS AND ITS IMPACT ON THE ENVIRONMENT: A CRIMINO-ORNITHOLOGICAL EXPLANATIONS

K Makesh Krishna, Dr. Syed Umarhathab, R. Ramesh Kannan
Manonmanium Sunderanar University

Abstract

Green criminology is the contemporary field that deals with the issues and destruction of natural environment, animals, and birds including human negligence. When natural atmosphere is damaged the first animal to be affected in the biodiversity are birds especially the little birds such as sparrow, pigeon, kingfisher and etc. It disturbs the eco-system ending in the biodiversity issues leadings to global warming and deforestation. This paper is intended to cover the role of birds in the biodiversity and the factors that make birds extinct such as pollution (all forms), development of untested cyber space (mobile phone singles) and devices, deforestation, loss of habitat, glass collisions, spout hunting, etc. Birds perform several ecological roles for ecosystem functioning and generate great benefits for human being in most of the circumstances. However, environmental disturbances, mostly due to anthropogenic actions, have caused a decrease of bird diversity and can lead to the loss of their functions in the remaining habitats. The major objective of the study is to appreciate the role of birds in biodiversity conservation. This paper is based on the mixed methodology and conceptual research using content analysis method. This paper will discuss the factors that incline mitigation of the birds and aftermath effect of the bird's diversity. Finally, the authors suggest some policy recommendations and workable solutions to overcome and mitigate the problems.

THE LAW ON CSR IN INDIA: AN ANALYSIS OF ITS COMPLIANCE BY COMPANIES THROUGH CORPORATE DISCLOSURES

Neelanjan Barat, Dr.Rashmi K S
Alliance University

Abstract

Based on an evaluation of qualitative content on the self-reported Corporate Social Responsibility -related declarations by the eligible companies for the 2021-22 fiscal year, this article assesses the situation with the compliances for the regulatory framework regulating corporations in the country. This analysis intends to reveal findings which are important in terms of answering the queries on compliance by the various enterprise with Indian Corporate Social Responsibility provisions. Most significantly, this article reveals that many firms are not submitting with the expenditures as well as its other legal requirements. Many firms showcase a mere 'tick-box compliance' approach, with possible indications of circumventing the law for fulfilling self-interests. In particular, government companies mainly undertake Corporate Social Responsibility activities in response to the national and state governments' directions. This article calls for the inclusion of systematic and thorough procedures in firms' Corporate Social Responsibility operations to promote accountability and transparency. This article also advocates for the formation and expansion of a specialised and independent regulatory watchdog to audit, observe, and examine firms' Corporate Social Responsibility operations. The article intends to provide an effective solution to ease the process and thereof creating an atmosphere of effective compliance and their monitoring to achieve the goals as envisioned for Corporate Social Responsibility.

A STUDY ON THE IMPACT OF LOSS OF SALES IN THE NOKIA COMPANY

Harsha V, Lamberg, Juha-Antti, M Sofiah, Ahmed Alibage
Acharya Bangalore B School

Abstract

Nokia was long associated with the mobile phone industry, but as the era of smartphones came, the prior market leader found itself in a precarious position. Company failures are frequently attributed in the literature on strategy and business history to the cognitive biases of the senior management team, organisational competency gaps, and radically altered competitive environments. However, none of these internal corporate traits would manifest themselves until the business was unable to adjust to a changing competitive climate. In this study, we studied the complex interplay between firm-external and firm-internal factors by evaluating the decline of the Nokia Corporation from its position as the market leader in the global mobile phone industry from 1999 to 2021. We show that despite having the technological capacity to attack its rivals and the time to respond to market developments, Nokia was unable to do so despite having the necessary organisational structure. Nokia's architecture was created to equip the company for dealing with market upheavals. By pointing out the difficulties with organisational adaptability and quick decision-making, we explain this contradiction. As a result, we suggest a direction toward organisational routine-based strategic consistency and architectural coherence. We would investigate how and why Nokia Corporation made several poorly timed decisions that made its situation worse rather than creating a strategic response that successfully countered the dangers presented by Apple and Google in the smartphone business. We focus on important organisational and technological design decisions that, when combined, established adequate definitions for the demise of the mobile phone industry. Our

comprehension of strategic failure improves when we concentrate on decisions rather than characteristics (such as fear or arrogance). The use of historical philosophy and oral history techniques as effective entry points for this kind of inquiry. We intend to investigate the reduction in demand for the sales in the present situation because they are not up to date. A financial analysis of the data connected to the market's decline of the Nokia dataset was obtained from Kaggle and trends from 1999 to 2001 were examined. The study results show that Nokia Corporation made several decisions that worsened its predicament rather than devising a viable tactical response to the dangers presented by Apple and Google in the smartphone market. In addition, significant technological and organisational design decisions created a convincing enough basis for the mobile phone business to be abandoned. We get a deeper understanding of strategic failure by emphasizing choices rather than characteristics (such as arrogance or fear). We also stress the value of using oral history methods and historical philosophy as sound theoretical foundations for this investigation. The study discovered that Nokia sales were declining as technology developed.

Paper ID: ASICON 206

CUSTOMER ENGAGEMENT IN SOCIAL MEDIA FOR GEN Z AND MILLENNIALS

Tulsi Patro, Dr. Shampa Nandi
International College of Management and Excellence

Abstract

Customer engagement is all about building a relationship between the firm and the customer to cultivate brand loyalty and awareness. In the current scenario sales growth, competencies and profitability are getting enhanced by customer engagement. Many reports have suggested that customer engagement is strongly related to Word-of-Mouth (WOM) and E-WOM. Customer engagement is about the customer's state of mind which is evaluated based on the classification: - Vigor, Dedication, and Absorption. Further, people from different generations have different buying behaviour. In today's world the two generations namely Millennials (1981-96), and Gen Z (1977-2012) have become the most remarkable in using social media platforms, so we should focus on these two segments about their involvement in social media platform and enhance the positive E-WOM through their interaction, reviews, comments in social media. As such no empirical study has been done on millennials and Gen Z. For which in this report a survey has been conducted with some questioners that focus on the two-generation segments. Data analysis has been done with the help of SPSS with a sample size of 150 and keeping consideration about customer engagement classification. The study found that all three dimensions give a positive response to E-WOM.

Paper ID: ASICON 207

TRANSCENDING DISCIPLINARY BOUNDARIES THROUGH TECHNOLOGICAL INNOVATION: A SOCIOLOGICAL STUDY ON CULTURE AND RELIGION

Shreya Nandi
University of Kalyani

Abstract

With the widening era of globalisation, the study explores on how the transcending disciplinary boundaries are getting expanded increasingly based on Culture and Religion through technological innovation. Firstly, it emphasises on the term "Transcending disciplinary boundaries" means all the boundaries of our societal aspects are not only concentrated at one constrict place where all of them are generally working in a united manner. It enhances in a much broader disciplinary sights, forming new knowledge, concepts, and perspectives with the innovation of technology. Here, technology plays a crucial role because now it has become a cup of tea for the existence of humans in everyday social life. Secondly, the paper elucidates how culture and religion is interdependent upon each other. It also analyses how the cultures and religions of different societies are blended like a 'Salad-bowl' where the masses are adopting notions and beliefs. This process has been observed to be melting in a society to the extent that people wants everything at one single location. However, such societal phenomena are creating a lag because they such conceptions are part of a non-material culture and exists abstractly, which we cannot touch and change, and this is the way 'Cultural-lag' is formed. Thirdly, it focuses on how the innovation creates a dominant role upon the dimensions in our society and how the technology also governing the society

through the concept of 'Surveillance'. Finally, this paper will engage in a comprehensive discussion and focus on the extent upon the significance of these social phenomena through innovation in further scenarios.

Paper ID: ASICON 213

A REVIEW STUDY OF THE DIALOGIC SELF AS A SELF-LANGUAGE FOR TRANSFORMATION THROUGH ENHANCING SELF- AWARENESS

Kiran Mai Yanamala
Presidency University

Abstract

Dialogic self-theory proposed by Herbert (T, 2012), is an approach to dialogue or talking to oneself, which establishes a link between the surroundings or society and the self. According to Herbert (Hermans H. J., 2018), the self is an extension of the society while the society influences the deepest regions of one's self and identity. Following the same logic, self-sabotage, self-cure, self-radicalisation, self-government, self-nationalisation, and self-internationalisation are the phenomena which assume that self is an extension of society.

Based on such assumptions, three levels of inclusiveness are identified in the self, a democratic self in personal (I as an individual), social (I as a member of a group), and global (I as a human being).

This article is a self-work and a practical process work facilitated by Kantha Rao (VN, June 2021) on us as part of his professional coaching work similar in organisation space. The process work brings out the practical application of dialogic self-Theory (DST). The article highlights the relation between the nature of voices and the journey of self-transformation, which is when the learner gains the dialogic competency to disrupt ambiguity. This dialogic knowledge accounts for enhanced self-awareness. (Emotional Intelligence -personal skills).

The process work is based on interventions made using Self Inquiry & Witness Consciousness. Five sequential learning modules like Self Awareness (Personal competency); learning about Creating

Collaborative cultures (Competition Vs Collaboration – Udai Pareek); Learning one's motive profiles (McClelland); Working with Opposites (Dialogical Self Theory, Process philosophy, Cogenetic logic and lastly with Discovering grounds for common futures (Weisbord); were used to explore the same. The study reveals that there is a scope for enhanced emotional intelligence, which helps in self-transformation, which can lead to transformation in individuals and organisations through a guided continuous process.

Paper ID: ASICON 214

A STUDY ON TRANSPORTATION PROCESS: A CASE STUDY AT GRASIM INDUSTRIES

Indumathi R, Anup Kumar Shukla, Bharath
Presidency College

Abstract

The Indian chemical industry is ranked 12th largest in the world, growing at more than 12.5% yearly. The USD 80 billion Indian chemical industry comprises basic chemicals, and its products, petrochemicals, fertilizers, paints, gases, and pharmaceuticals. The country has the potential and aptitude to become the top two exporters of specialty chemicals from developing country together with China, given that India has the necessary capabilities in chemistry and engineering fields. Grasim Industries is one such company that is significantly contributing towards Indian economy. Grasim Industries is focusing on supply chain process to reduce resource use, especially water and chemicals, in different stages to make it sustainable and resilient. The process starts with the raw materials that chemical companies purchase from suppliers and converts them into chemical products. These chemical products are then distributed to distributors who sell the chemicals to customers in various industries. The study focuses on understanding the issues and problems associated with transportation at Grasim Industries.

Paper ID: ASICON 215

MY LEADER KNOWS BEST: MARITIME AGREEMENTS LEADING TO INTERNATIONAL DISAGREEMENTS

Ritika Kapoor
Alliance University

Abstract

India and Sri Lanka share a profound cultural and historical connectedness. With 'Tamilness' as a shared identity, the fisher folk of the two nations is more like siblings at sea. However, this relationship witnessed a degradation following the demarcation of the Palk Bay region in 1974. India and Sri Lanka entered into an International Maritime Boundary Line Agreement owing to an overlap of their respective territorial waters. While this was made to seem like a genuine act of concern for India's maritime sovereignty, the process involved complexities ranging from manipulation of the delineation principle, ceding of the Katchatheevu Island to Sri Lanka, to non-ratification of the Agreement leading to questions on its constitutionality. While this agreement, in fact, awarded India with a larger share of international waters vis-à-vis Sri Lanka's (1.02:1), along with protecting the interests of its fisher-folk, the island was ceded to the Sri Lankans despite historical records proving India's sovereignty over that space. Seemingly, this wasn't enough for the Indian citizenry to condone, that another agreement was signed with the nautical neighbour in 1976. This very settlement drew much flak from the countrymen, particularly the Tamil Nadu fishing community, who were now abridged of their fishing rights in the region. Consequently, livelihood concerns of the fishing communities find significant mention in the dissertation on two key facets: (i) the Indian fisher-folk having faced a curtailment of their fishing rights attributable to the 1976 Agreement; and (ii) the Sri Lankan fisher-folk fearing a dearth of marine resources on

their side of the Palk Bay with incessant poaching by mechanised Indian trawlers. Extensive use of unsustainable fishing techniques, with bottom trawling emerging as the widely used method due to its high catch and rummaging feature, has waned the marine health of the Palk Bay region. This paper delves into a critical analysis of the aforementioned issues through employment of extensive academic literature. Exploration of such secondary data has been validated by author's unstructured interviews with maritime and foreign policy experts including senior Indian Navy and Indian Coast Guard officers, former Chief of the Sri Lankan Navy, authorities at the Sri Lanka High Commission in New Delhi, researchers at public policy think-tanks, former defence attachés as well as journalists at the national dailies. Decisively, deep-rooted ties must stand unhindered particularly in the ways of disputes expressly caused by an island of merely 285 acres in size. Overall conflict resolution and subsequent welfare advancement calls for conjoint enactment of policies intended at mutually consistent motivations. The ulterior aim of this study is to construct policies that would deliver verdicts that are fair and just to the disputing parties, tension de-escalating in tenor and conscious and protective of the ecology. Though this research cannot claim to have attained this goal optimally, its academic enrichment is indeed scholastically empowering, and aims to transcend boundaries in more than one way through its wide expanse across multiple academic disciplines.

EXPLORING THE NEED OF EARLY CHILDHOOD EDUCATION CENTERS FOR CHILDREN OF PRISONERS IN NEPAL

Brinda Bhattacharya
Tata Institute of Social Sciences

Abstract

Children of Prisoners are usually the invisible population, sadly who are because of the falls backs of the existing penal system, are deprived of their basic rights when they are born to their mothers in prison or when they accompany their mothers to prisons. Amongst their other rights, early childhood education holds a lot of importance as the early years of children are crucial for learning. Globally many studies have been conducted to understand the need for and importance of early childhood education centers for the children of prisoners in prison. Many countries have specific age groups up until which they allow children in prisons with their mothers, and they have specific legislations and programs too. Sadly, such kind of studies have not been seen in Nepal and neither has there been presence of any legislation or program addressing the same. Hence this qualitative research has tried to explore the need of early childhood education centers for children of prisoners residing in the prisons of Kathmandu and nearby places with their mothers in Nepal using the explorative design. For data collection all stakeholders working with the children of prisoners were the universe and after purposive sampling, a semi-structured interview guide was used to collect data from thirteen respondents who were working with children of prisoners in various capacities. A grounded theory approach was used to note down the preliminary findings. Under the objectives to explore the need, understand requirement for sensitisation of staff, explore importance of training the human resources and reviewing present policies the research found out that

prison environment is not conducive for children and there should be early childhood education centers that provide an alternative environment. There was a need to train the prison staff in child friendly behavior and assure that teachers/volunteers at such centers are trained. The Nepal Government was seen not to have any provisions in the matter and their participation along with investment in this issue was seen necessary. Lastly the study found that NGOs and the government should work together to understand the need of children of prisoners when it came to education and ensure in the future that the children are not deprived of this fundamental rights.

IMPACT OF EMPLOYEE ENGAGEMENT ON EMPLOYEE WORK PERFORMANCE AND WELL BEING

Farzana Ahamed, Dr. Shurlly Tiwari
International School of Management Excellence

Abstract

Employee engagement has become a buzz world during the past decade. Modern organisations make use of its motivated workers both as a tool and business partner. In such a scenario, employee engagement becomes critical in the context of employee work performance and well-being at work.

In the context of intense competition between businesses, one of the key areas which HR managers need to cater to is the physical and emotional health of their employees. Hence, employee engagement becomes key to competitive advantage. The study examines the idea of employee engagement and explore factors that can contribute to employee engagement. Employee work engagement is a satisfying and pleasant state that is typically characterised by vigor, dedication, and immersion. Contrarily, job embeddedness encapsulates elements of a person's commitment to their employment and can be defined as including ties, views of person-environment fit, and the costs associated with quitting. There has not been any attempt made to separate them empirically despite some strong similarities in the constructions in their theoretical backgrounds. Thus, the primary research question will drive the study whether employee engagement has an impact on employees work performance, their work productivity, leadership, and wellbeing. A sample size of 250 employees was collected from service sector and SPSS was implemented to prove it statistically.

Paper ID: ASICON 223

EMPLOYEE ENGAGEMENT AND PSYCHOLOGICAL WELL BEING: A STUDY ON IT EMPLOYEES

Nistha Singh, Shurlly Tiwari
International School of Management Excellence

Abstract

Employee engagement and psychological well-being are two distinct dimensions that the study seeks to combine. Literature states that finding interest in employee well-being on a worldwide scale is challenging, but some literary evidence suggests that employee engagement is increasing in several nations. Additionally, there is a significant interest in well-being at the national government level, as evidenced by reports like the Foresight Report on Mental Capital (2019) and Well-Being and Dame Carol Black's Report on Health (2022). According to Robertson's study (2020), stress and poor health are just 'the tip of the iceberg' in terms of psychological well-being and fail to consider the possible financial profits that could be made through an improvement in the well-being for individuals and organisations. For instance, over a one-year period, there was a significant increase (from 26 to 40 percent) in the percentage of employers implementing an employee well-being strategy (CIPD, 2007). A data of 200 employees from the reputed organisations was collected and was studied statistically. A positive relation is observed between the two variables.

FACTORS INFLUENCING PRODUCT RETURNS IN ONLINE APPAREL SHOPPING IN BANGALORE (GEN Z): A QUALITATIVE STUDY

Anantha Lakshmi Devi
International School of Management Excellence

Abstract

The Internet has given an opportunity to purchase an array of products and services easily from E-commerce websites. E-commerce has been booming after Covid-19, enabling individuals to purchase anything online. Online shopping makes it easy for customers to order multiple sizes or colours of the same item to ensure they'll find one that fits. Consumers tend to return more items when they shop online - a mode of shopping that makes it easier to toss items into the virtual basket, but difficult to visualize how they look and fit in person. The growth in online shopping is an opportunity, but the resulting product return is a challenge. That paper attempts to find an answer to the question 'Why do consumers return products?' It could be something atomic that the companies have overlooked in an individual order. Sometimes, however, the matter is more serious and requires immediate action. This study aims to analyse the factors influencing product returns in online shopping and explore customers' opinions on product returns. This qualitative study used in-depth interviews for data collection. The population for the study is a student community (Gen Z) in Bangalore.

CASTE FEELINGS AND SCHOOL STUDENTS: AN EMPIRICAL STUDY IN TIRUNELVELI CITY

Name: Sai Krishna A, Dr. R. Sivakumar
Manonmaniam Sundaranar University

Abstract

Caste is one of the primary issues in this developing society. The Indian caste system is a complex social structure wherein social roles like one's professional choices gets limited based on what a previous generation had performed, contributing directly to restricted social mobility and fixed status hierarchies. Such social roles also define the way people get identified with members of the same caste. The caste group also make their own social norms to protect their identities. The more one identifies with the group the more they would work to make sure that group norms are protected. In this paper, we were interested in examining the consequences of caste-norm violations and how a member of the case group, for instance, a student's status gets mentally represented. It is assumed that although the students are influenced by elders in the society, the people of the modern era also take faith, pride, and arrogance towards their caste. This behaviour slowly affects and makes the school students' perception towards the pride of caste. Because of this behaviour, they are distanced from other students and remain close with members if their caste. In some instances, they also degrades the other caste names. This type of behaviour will lead to distance them from society and live within a narrow circle. Through this paper analysis how school students are sustained with the caste feelings, how they developed their caste feelings and their involvement towards caste feelings.

Paper ID: ASICON 236

A STUDY ON THE IMPACT OF PRODUCTIVITY ON FOUR DAYS A WEEK OF WORK

Bhagyashree Hazare, Shikha Agarwal, Anand U
Alliance University

Abstract

Employees are more energised and driven to do their obligations at the office when they have a healthy work-life balance. A motivated worker is more effective and productive. They typically have a cheerful outlook on their work, which is quite likely to benefit the entire team. Higher stress levels have been linked to lower productivity in studies. Stress causes a person's cortisol levels to increase, putting them in a fight, flight, or freeze mode and lowering their productivity at work. Burnout will result from persistent stress. People who can balance their job and personal lives can take time off from one to accommodate the other. This lessens the stress and shame that employees experience from having to constantly sacrifice one element of their lives for the other. People frequently need guidance on how to achieve work-life balance because they are so used to working excessive hours and putting other facets of their lives on the back burner. When an employee overworks himself to the point where they are unable or unwilling to work, burnout occurs. Anxiety, despair, weariness, a reduction in attention span, or difficulty thinking are all signs of burnout and all hurt productivity. Work-related stress and other factors play a significant role in mental health issues. Employees may completely "check out" of work because of having too much work to do, not enough downtime, and a poor work-life balance. The enhancement of mental and physical health and wellness, as well as increased employee productivity, will result from achieving a healthy work-life balance.

THE EFFECT OF PERCEIVED ORGANISATIONAL SUPPORT, PERCEIVED SUPERIOR SUPPORT, AND ORGANISATIONAL COMMITMENT ON EMPLOYEES' WILLINGNESS TO RETURN TO WORK

Hima Devaraj
Alliance University

Abstract

With the onset of the pandemic, the work model and significance of employee's presence and having satisfied employees at work has drastically changed for organisations. Organisations have tried and tested different working models, drove their employees through the challenges that came with it, and managed in what could be said was an ongoing dynamic change for all stakeholders involved. But as the pandemic has settled more and more, organisations are now willing to return to the previous models. However, being used to the current models, employees may find it challenging to return to the models that were used prior to the pandemic. This paper thus focuses on the impact of factors like, perceived organisational support, perceived superior support, and organisational commitment on employees' willingness to return to work. We assume that organisations input on improving these factors has a positive influence on getting their employees to return to work. The paper would also aim to give an insight into if not these factors, what are the factors that would get them to return to work (office environment). Different sectors of work, industries were considered for this study to find the impact and preference of research factors.

Paper ID: ASICON 208

FIRM INNOVATIVENESS, QUALITY ORIENTATION AND FIRM PERFORMANCE: A REVIEW IN THE CONTEXT OF SMES

Om Sharma, Dr. George Easaw
Alliance University

Abstract

This paper is a review of literature on parameters like Quality-Orientation (QO), impact of Quality Management Tools and techniques (QMTT) and Firm Innovativeness on firm performance. It identifies the importance of usage of tools and techniques for each principal of Quality Management for better firm performance and usage of emerging technology. "Quality Orientation (QO) is a construct that describes a firm's philosophical commitment for developing and maintaining a competitive advantage, based upon quality focus and customer expectations" (Miles, Russell, Arnold 1995). Firm innovation in general is defined as an intent to understand and describe innovation by using "economic-rationalistic models". We also review the generalizability of QMTT and firm Innovativeness as mediating constructs on firm performance. This study covers both arguments above orientation on quality and firm innovativeness. Future implications on quantification of firm innovativeness for further research.

A STUDY ON GEN-Z WOMEN BUYING PREFERENCE TOWARDS THE SELECTION OF APPAREL BRANDS

Tanneru Gowtham, Gauri Prasad, Rasika K
CMS Business School

Abstract

Aesthetics become a major part in the Women's clothing industry. One may think of clothing as a full set of expressions that captures one's entire personality. Nearly all women have an innate desire to seem lovely, attractive, and magnificent. The scope of the study is to address the buying behaviour of the apparels and their perception towards brands, such as quality, comfort, style. Cost and quality are the most important factors in buying of apparels, companies need to use different technologies to achieve these attributes.

This research project focuses on applying in manufacturing of apparels and designing them according to personality. As personality is very important element in the minds of the customer, we need to understand the apparel behaviour of the customer. Every organisation wants to have a competitive advantage to sustain and increase the sales in the apparel industry and by designing apparels using psychological elements. Now the trend is changing to customisation and personalisation of products. After collection of data, and doing some analysis, it is proven that there is significant relation between personality of a person and their apparel buying behaviour. Brands need to do more research about the about the psychological aspect of the customer which ultimately leads to better customer satisfaction.

Paper ID: ASICON 232

PERCEIVED ORGANISATIONAL POLITICS AND ITS EFFECT ON EMPLOYEE ATTRITION

Diya Lal, Manisha Balwan, Sushant Kumar
Alliance University

Abstract

This research was conducted to find out if any relation exists between Perceived Organisational Politics (POP) and employee attrition. The variables that were used for the purpose of this research were employee well-being, perceived organisational justice, organisational commitment, and job stress. Employee attrition was the dependent variable in the study and the other variables were the independent variables. Literature review was done by reviewing various peer-reviewed journals and articles published by numerous authors. The methodology used for the study was a mixed method of research. We collected quantitative data from over 50 employees working in various organisations around India in different sectors through a structured questionnaire and qualitative data was collected through interviews and one-on-one conversations as well as telephonic interviews with the employees.

The study reveals that both POP and job stress were the most prominent reasons for employees leaving the organisation. Even though the other variables had some impact on employee attrition, they were not close to the impact POP and job stress had.

The recommendations we suggested included keeping away from favouritism or any form of partiality in a workplace environment to give employees the impression that everyone is equal, and rewards and recognition goes to people that truly deserve it. Another recommendation was to monitor employees on a continuous basis to

find out disengagement symptoms. This is to ensure early precautions can be taken to avoid employees feeling any sort of work stress that could lead to disengagement at work.

RETURNING ORDERS IN E-COMMERCE – A STUDY USING PREDICTIVE ANALYTICS

Revanth A, Dr. Ratchana Rajendran
International School of Management Excellence

Abstract

The emergence of e-commerce has been a major driver to the global economy. As such, it is essential for e-commerce businesses to accurately predict customer behaviour and anticipate their performance.

Predictive analytics is a powerful tool that enables companies to accurately predict customer behaviour and anticipate their business performance. It offers a powerful tool to improve the accuracy of returning orders in e-commerce. By analysing customer behaviour, predictive analytics can identify patterns in customer purchase behaviour and return patterns, as well as the underlying causes of these patterns. This information can then be used to implement strategies to reduce returns and increase customer satisfaction.

This paper examines how predictive analytics can be used to improve the accuracy of returning orders in e-commerce. It provides an overview of the current state of predictive analytics in e-commerce and describes the benefits that predictive analytics can bring to the industry. The paper then discusses how predictive analytics can be used to identify and analyse customer behaviours, such as the types of items returned, the frequency of returns, and the reasons for returns. Finally, the paper outlines the strategies, techniques, and tools used to implement predictive analytics in e-commerce, and evaluates the effectiveness of these strategies.

WILL WORKAHOLISM LEAD TO MOONLIGHTING?

Divyashree J
Alliance University

Abstract

Organisational boundaries have become increasingly blurred while conventional organisational careers turn out to be less attractive in todays' economy. By working simultaneously in numerous jobs at different companies, moonlighting individuals may gain experience, inspiration, and significance from their work that is difficult to obtain in their primary positions. However, moonlighting may also come with issues that obscure the beneficial contributions of IT organisational managers adopt severe limits to moonlighting because they believe it may lower employees' engagement at work. However, there is still little information available on the topic of moonlighting, which is more nuanced than first thought. Most recent research on moonlighting treats this practise as a variable, concentrating on its causes and effects. So, we know that there are many people who are workaholic. This research paper will tell the important components that affects workaholism and which one is more affective that leads them to moonlighting. The data analysis used in the research paper has been done using SPSS output of the responses collected from more than 40 members. The form circulated to the members were of different questions based on workaholism and their individual day to day activities along with the feelings.

Paper ID: ASICON 234

EFFECTS OF PERFORMANCE MANAGEMENT SYSTEM ON EMPLOYEE WELL-BEING

Sam Paul Osbourne, Spriha Tyagi, Vanshita Choudhary
Alliance University

Abstract

This paper examines how various performance management systems employed by businesses impact the wellbeing of employees who are naturally perfectionists and workaholics. To keep track of the employees working in an organisation, the organisation uses performance management system (PMS). The main purpose of performance management system is to track the skill gaps of each individual working in an organisation. Key factors in occupational and organisational psychology studies on employee health and well-being include work engagement, workaholism, and burnout. The explanation is that research on all three has shown that they can accurately predict employee well-being measures including positive affect, life satisfaction, and job satisfaction. A workaholic is a person whose demand for work is causing visible disruption or interference with his physical health, personal satisfaction, and interpersonal relationships, as well as with his normal social functioning. The triggers of workplace stress and the effect they have on employees' performance become critical in the corporate world. Prior research in this field is limited to the causes of workplace stress and how it affects workers' productivity, but our research is aimed at how different performance management system in an organisation affect wellbeing when workaholism and perfectionism comes into the picture. The main aim is to find out what are the different performance factors which are responsible for affecting employee well-being in organisation and its impact on the wellbeing of employees who are naturally perfectionists and workaholics.

Using a performance management system, a business can plan, track, and evaluate employee goals and job performance and can help them to make sure the factors does not affect the employees. We discovered that there are different factors like Management by Objective, Budget Driven and others which are affecting the wellbeing of the employee and budget-driven performance management systems had a detrimental impact on employee wellbeing. These findings suggest that performance management practises may have an impact on workers' vitality and health, which may affect their motivation and willingness to continue working in the field. This research suggests, organisations should create goals and build their systems such that employees don't feel overly pressured to work.

Paper ID: ASICON 235

IS MULTITASKING AT WORK HAMPERING MENTAL WELLBEING

Akansha Jha, J. Nandhini, Tanisha Sharma
Alliance University

Abstract

Multi-tasking in the workplace is the ability of an individual to work on multiple tasks at the same time. It is becoming increasingly common in today's fast-paced business environment, as employers seek to maximise the efficiency and productivity of their workforce. Multi-tasking helps individuals focus their attention on the most important tasks, while also allowing them to complete smaller tasks in a timely manner. This can help to reduce stress levels, as employees can manage their workloads more effectively. Furthermore, multi-tasking can help to increase the overall quality of work, as it allows employees to be more creative and efficient when dealing with different tasks. Ultimately, multi-tasking in the workplace can help to improve the overall performance of an organisation. To effectively implement multi-tasking in the workplace, employers should ensure that their employees understand the importance of the practice. They should provide training and support to help employees become more familiar with the concept and its associated benefits. Furthermore, employers should create a culture of collaboration and openness, in which employees are encouraged to share ideas and work together on tasks. Finally, employers should set realistic goals for their employees and provide them with the necessary resources to help them reach those goals. With these steps in place, employers can ensure that their workforce is well-equipped to multi-task efficiently. Through this paper we intend to understand is multitasking an effective method in work without hampering mental well-being.

Paper ID: ASICON 216

A REVIEW OF RESEARCH STUDIES ON RENEWABLE ENERGY AND GREEN FINANCE FOR SUSTAINABLE DEVELOPMENT

Hemant Kumar Sah, Dr. Kapil Arora
Alliance University

Abstract

Energy is considered a critical area of study to environmental and sustainability concern around the world. It comes in the form of traditional and modern sources such as fossil fuels, hydropower, solar energy, wind energy, tidal energy, biomass energy, etc. The continuous uses of fossil fuel are experienced in the world to fulfill energy demand and promote economic growth since the last two centuries. The higher dependency on traditional sources of energy consumption has resulted in various problems. Burning of fossil fuels is now become a prime culprits of carbon emission and climate change that are primarily affecting developing and least developed countries. Further, transition from fossil fuel to clean energy generation has also gathered attention on the international dialogue. The development of renewable energy sources is a better substitute from traditional sources of energy, and it is now become a key agenda among policymakers and the government. Such projects are initially capital intensive and required sufficient investment for set up. The investment requirement is facilitated through green finance. Green finance act as a financing mechanism to support environmentally friendly project and helps to mitigate emissions. This paper provides a review of relevant study on renewable energy development and green finance available on the literature which were accessed through Google scholar and Scopus database. The review highlights the important factor of renewable energy development and green finance adoption by the countries, technologies and policy consideration, and its effect on regional to international level for promote sustainable development.

Paper ID: ASICON 227

PERFORMANCE LEVEL AND CORPORATE SOCIAL RESPONSIBILITY (CSR): A VIEW FROM THE COMMUNITY, EMPLOYEES, AND CUSTOMERS

Meghana K R, Anusha A M, M R Suji Raga Priya
Dayananda Sagar Business School

Abstract

CSR is an extremely important factor in determining how consumers see a company's brand, how appealing the firm is to customers, workers, and investors. Knowing how to assess corporate social responsibility (CSR) performance has become crucial as more businesses put CSR at the forefront of their corporate communications and strategies. Research also demonstrates a close relationship between CSR and business success. At the highest level, such assessment enables firms to make more informed decisions on which programmes to support, to improve the effectiveness of their CSR activities, and to engage stakeholders (including shareholders) in the work. This study investigates the empirical relationship between corporate social responsibility (CSR) and the level of business success from the perspective of Indian multinational enterprises. This study also investigates the effectiveness of a company's reputation as a mediator of CSR-performance linkages. 250 responses from top executives and managers who work for international firms in India made up the final data collection. A theoretical model was first constructed based on the strategic paradigm available in the literature, and then hierarchical regression analysis was used to investigate the notable connections that were discovered. The findings show that when applied to external stakeholders, corporate social responsibility does have an impact on a firm's performance. An effective framework for comprehending corporate social performance includes both organizational agendas

and societal impact objectives. Additionally, studies have shown that the strength of this impact varies across well-known businesses with favourable reputations and those with unfavourable reputations.

Paper ID: ASICON 230

TIME BANDITRY AT WORKPLACE: SOCIAL MODELLING, WORK-LIFE BALANCE, BUSINESS ETHICS AS INFLUENCERS OF TIME THEFT AND OVERALL IMPACT ON ORGANISATIONAL IDENTIFICATION

Skandh Saxena, Harsimran Kaur, Gundreddy Venkateshh
Alliance University

Abstract

The act of stealing time from an employer at work, or time theft, can have detrimental effects on both the individual employee and the company. Few professionals believe that time theft is the primary cause of unethical business activities, bad social influences at work, and a decline in the sense of belongingness of the employees of a specific organisation. To understand the relationships between the factors, this study intends to investigate the effects of social modelling, work-life balance, and business ethics on time theft and the overall impact on organisational identification. A review of pertinent literature and an analysis of survey data gathered from workers at a sizable organisation were used to carry out the study. The study's findings revealed information about the variables and their substantial influence. The results show that using effective social modelling by managers and organisational tactics, business ethics can have a favourable impact on time theft. Therefore, while developing policies that are acceptable for the wellbeing of the workforce and the organisation, this research can be considered. Therefore, after the study we can understand that it is false to say that employees' inability to balance their professional and personal lives is the cause of time theft. If other academics investigate other factors more thoroughly, we may be able to identify the factors that really impact time theft at work.

Paper ID: ASICON 261

DEPOSIT OF MONEY AS A PRE-CONDITION FOR BAIL- JUDICIAL TRENDS

Mamatha R, Prof. Mahantesh.G.S
Alliance University

Abstract

"He does not stay in jail because he is guilty, He does not stay in jail because any sentence has been passed, He does not stay in jail because he is any more likely to flee before trial, He stays in jail for one reason only – because he is poor...." Justices Bagavathi.

Every citizen of India has a fundamental right to freedom guaranteed under Article 21 of the Indian Constitution, which specifically states, "No person shall be deprived of his life or personal liberty except according to procedure established by law." The issue of undertrial prisoners is a very serious one impacting the right to life and personal liberty. Bail is the process of release from jail or before arrest. Bail in law means procurement of release from prison of a person awaiting trial or an appeal, by the deposit of security to ensure his submission at the required time to legal authority. Many a times the judge's order the monetary value of the security known as the bail, or more accurately, the bail bond, is set by the court having jurisdiction over the prisoner. This bail system causes discrimination against the poor since the poor would not be able to furnish bail on account of their poverty while the wealthier persons otherwise similarly situated would be able to secure their freedom because they can afford to furnish bail. Due to poverty, they stay in jail for many years, and this violates their right to life. Law does not allow the concept of money for bail but has been practiced by the courts in India. This paper tries to analysis the problem of deposit of money to the court in exchange of their freedom and role of the superior court in protecting the fundamental freedoms of the citizens.

AN OBSERVATORY STUDY ON THE STATE OF WOMEN'S PERSONAL SAFETY INFRASTRUCTURE IN INDIAN CITIES

Shivankur Ghosh
CMS Business School

Abstract

As students of management, we are taught to implement what we study, and the application of the same is supposed to thereby create value. It is with this intention that I have decided to conduct my study on women's safety, which is a key indicator of an economy's standard of living because it measures quality of life and delves into Maslow's hierarchy of needs. If Maslow's theory of needs is taken at face value, safety and security are the second level of human needs. It deals with crucial subject matter and can be used to determine the condition of a state or economy. In this context, this study aims at understanding how safe women feel based on multiple demographic factors, such as: 1. Domicile, (tier-1/tier-2 cities or otherwise) 2. Level of household income, 3. Current age group, and 4. Access to personal safety tools. This study intends to recognise the current situation of women's personal safety in the tier-1 cities of India and suggest possible solutions thereto. This study has been conducted over a small sample set (400 individuals) across Tier-1, Tier-2, and other cities across India, via a survey using a questionnaire and a smaller focus group, from the same sample set.

Paper ID: ASICON 201

INTIMATE PARTNER VIOLENCE AMONG BENGALI WOMEN OF WEST BENGAL: A QUALITATIVE STUDY

Suchismita Ghosh, Cyril John
Christ (Deemed to be University)

Abstract

Intimate Partner Violence (IPV) among women is one of the suppressed yet boiling topics of the hour. The violence women go through is known to all, starting from their families to the doctors to whom they seek help, but there are no voices against the practice. Previous studies on IPV are limited to immigrants and the lower caste people of India. Women of West Bengal have been studied quite a few times, mainly regarding their condition, marital rape, domestic violence, and abuse. Therefore, the research will give a clear picture of the situation of women. It is a descriptive qualitative study; the investigation is conducted based on a case study approach with in-depth interviews to understand women's psychological and emotional states. A total of five Bengali participants were included in the study who were undergoing treatment for mood disorders in West Bengal. Thematic analysis of the data revealed a better understanding of the women undergoing IPV. The paper highlights West Bengal women's mental and physical states who have endured such pain over the years. It depicts women subjected to IPV over the years and its impact on their physical and mental health. The data has been validated using Intergenerational transmission theory, systems theory, and power theory. Contrary to what is assumed, the study results show that women know their rights and are aware of the services they can avail of but do not tap the services primarily because of the mindset of society.

VACCINE DIPLOMACY A SOFT POWER STRATEGY OF INDIA: A COMPREHENSIVE STUDY ON INDIA'S VACCINE DIPLOMACY AND ITS IMPACT ON INDIAN FOREIGN POLICY

Siddharth SB
Kumaraguru College of Liberal Arts and Science

Abstract

For more than two years, Covid-19 left the whole globe in disbelief and is still causing worry in several nations. Covid 19 has had an influence on economies and powerful nations, but these effects have also foreshadowed the challenges and issues that the third-world countries have faced; among these issues is the lack of medical supplies, technology, personnel, drugs, and vaccines. During the pandemic, the trade in vaccines attracted attention and was considered a soft power strategy to influence governments. India, one of the world's top producers of Covid vaccines, has contributed significantly to the global vaccine trade and has worked to make vaccinations accessible to all people worldwide. The Government of India adopted it as part of its efforts to exert soft power on other countries. Such actions were expected to enhance India's reputation internationally. India has engaged in extensive trade with industrialised nations while keeping developing nations' needs in mind. Through this vaccination trade, India has impacted many other countries. This paper covers the vaccine trade in general and focuses on the vaccine trade between India, Jamaica, and Guyana. The paper's focus is also on the political and economic challenges India encountered as a result of these exports and how they affected India's foreign policy.

Paper ID: ASICON 203

WHY LEADERS FAIL? THE CONCEPT OF LEADERSHIP FAILURE

Dhuruvan SL
Kumaraguru College of Liberal Arts and Science

Abstract

Leadership in an organisation is the process of influencing people to work towards the attainment of organisational goals. Leadership has evolved over years and the meaning of leadership has transcended beyond just providing direction and control. Leaders now act as motivators and changemakers who are goal-oriented to obtain desirable results for both the company and its employees. Leadership is a well-researched area highlighting on the positive and constructive aspects of a successful leader in a successful company. Future leaders will use these research outcomes in the areas of human behaviour and cognition to guide them to their goals and achieve efficiency. For many decades the research in leadership has taken this one-sided view, leaving the failures of a leader and the consequences in the dark. Understanding the concept of leadership failure will help us develop effective leaders for the future. Recent corporate failures and scandals have been related to leadership failures. Leadership failure occurs due to various factors involving the person, the company, the environment, and the employees. The paper aims to describe the dark side of leadership as an important concept to be explored in leadership. The paper will define leadership failure; identify the causes and consequences; and ideate strategies to manage leadership failure. The paper has an in-depth, critical, and contextual analysis of the mainstream literature available.

COMPARISON OF LEVEL OF WELLBEING IN UNDERGRADUATE STUDENTS OF CALCUTTA UNIVERSITY, INDIA

Debasmita Roychoudhury, Riddhi Chakraborty, Dr. Tinni Dutta
Muralidhar Girls College, Kolkata

Abstract

The concept of well-being refers to optimal psychological functioning and experience. In early 1948 the World Health Organization stated that mental health is more than the absence of mental illness, but it was not until recently that psychologist began to systematically study the causes, correlates and consequences of flourishing mental health and states of well-being. Studies on well-being is needed as the society and the problems the society faces are becoming complex problems, the rates of depression, anxiety, stress, and burnout is increasing. Moreover, the pandemic has made the situations worsen further. Literature points that the stress levels among the college-going students have always been high. This can be because they come under this huge amount of societal pressure of identity development and if fail to confirm with the expectations, they start considering themselves as failures. This eventually can lead to several maladjustments among their behaviours and thoughts. The current study explored into a level of wellbeing of Psychology students with students of other disciplines. The objective was to explore the role of Psychoeducation among college students in enhancing their wellbeing. A sample of n=40, belonging to age group 19-21 was studied using a PGIWBM scale. The study concludes that there is a significant role that Psychoeducation plays in the level of wellbeing among students.

Paper ID: ASICON 217

A STUDY ON STUDENTS PREFERENCE TOWARDS EDTECH OVER TRADITIONAL LEARNING METHODS

Sagi Sampi, Amit Kamadollishettaru , Jabez M, Prof. Noor Firdoos
RV Institute of Management

Abstract

The emergence of educational technology in India has given a boost in the learning methodology of students allowing them to use technology in the classrooms. More and more people started using technology for their learning needs owing to technology advances and its ubiquitous nature. This applied aspect of technology in the field of education, well known as educational technology, provides the finest output for both teachers and learners. Hence it is essential that students and in-service teachers be they elementary, primary, secondary, or higher secondary level teachers, be introduced to educational technology. During covid-19, educational institution has understood the importance of educational technology and those who were already in edtech space saw a huge enrolments and scope. Users realised that this technology helps students to learn and understand at their own place which saves their time. It facilitates them to be more productive rather than wasting their time in travelling to reach their educational institutions. EdTech has not only helped students but also the teachers in delivering quality content and saving their time by recording their classes once, which students can watch any number of times, according to their flexibility and convenience. There is a huge scope for EdTech in the coming years as India is a developing country. EdTech is gaining prominence these days and it has a huge potential in coming years but there are some exceptions to it as some of the learning/courses needs traditional approach and EdTech will not replace traditional learning 100%, interaction could not be better as it will be in the offline space. The survey revealed

that most of the students experience edtech platforms and have taken courses externally as well, but they prefer traditional learning. Nearly 70% to 80% of them believe EdTech could replace traditional learning in near future.

DIGITAL DEXTERITY AND ITS IMPACTS ON INDIVIDUAL ATTITUDE

Rashmi Prasad, Meghna Padte
Alliance University

Abstract

Digital dexterity can be understood as an individual or group's ability to adapt to newer technologies, particularly technologies that are designed in improving efficiency and driving improved outcomes. Workforces those possess digital dexterity are open to adapt new tools, overcoming their initial discomforts to master them. In this research, we have focused on the individual perspective affecting the attitude towards using technology. We have collected the views of Indian IT industry professionals concerning digital dexterity (N = 100), and we used regression, correlation, ANOVA, and reliability analysis to find the results. We have argued that the factors like personality traits, perceived curiosity, technology anxiety and perceived organisational support has impacts on the attitude towards using technology. In doing so, first we have conceptualised the theoretical framework: the technology acceptance model in analyzing individuals' behavior towards technology. Second, we studied the previous work done by the researchers. Third, we analysed our data through statistical analysis tool i.e., SPSS software. Our results suggest that only personality traits do not have an impact on the outcome variable and other factors like technology anxiety, perceived curiosity and perceived organisational support has impacts on the attitude towards using technology.

POLICY MAKING AND CONCEPTUAL DISTORTION OF RELIGIOUS CONVERSION IN INDIA

Hiranmayi Rajeev, Prof. Keerthiraj
Alliance University

Abstract

Conversion is the most debated, yet the most incomprehensible concept in India. This fact applies to all levels of debate from policy circles and intellectual gatherings to the murmuring of the common folk. At the same time, conversion appears as a justified act and an abhorrence. On the one hand this issue raises the question of supremacy of any one religion and on the other hand it raises the question of right path for enlightenment. This conceptual contradiction contributed and is still contributing to a lot of socio-legal problems in India.

Hence, this paper focuses on understanding the conceptual contradictions and gaps in understanding the concept of religious conversion in India. The paper also looks into the study of comparative theology in order to verify whether the study can help understand religious communities better, in order to curb the conceptual gaps. An analysis of Gandhi and Nehru's views on religion is considered in order to illustrate how different interpretations of the same concept can lead to a conceptual gap between two individuals or community. Then the paper closely analysis on a larger group of 50 individuals through online survey, representing the religious communities of India, in order to illustrate the thought process and understanding of the common people on the concept of religious conversion. According to the study made and results found through this paper, policy suggestions have been put forward.

A STUDY ON CUSTOMER PREFERENCES TOWARDS ELECTRIC VEHICLES IN KARNATAKA

Srujana S, Kaparthi Bhavana, Prof. Noor Firdoos
RV Institute of Management

Abstract

Electric cars (EVs) are becoming increasingly popular, which might help reduce issues like pollution, global warming, and dependence on oil. Electric vehicles (EVs) are gaining a lot of attention these days. The path to their commercial success is not simple, though. Despite many governments utilising rigorous promotional measures, the current market penetration of EVs is very low. In this study, the findings of a comprehensive data gathering exercise—a survey with 192 respondents—conducted in Karnataka, India, are presented.

In order to provide direction to decision-makers and offer direction for prospect research, this study tries to explore into the consumer preferences for EVs. We quickly go over the modelling approaches utilised in a few different areas. Review of consumer preferences for aspects of money, technology, infrastructure, and policy are made. Consumer choice categorisation was then completed, with the results thoroughly discussed. These categories included socioeconomic diversity, psychological influences, mobility, social influence, etc. We cover the research agenda for creating consumer-friendly EV courses in our final section and offer suggestions for additional study.

'THE GOD INSTINCT': EXPLORING BELIEF IN FREUDIAN AND JUNGIAN PSYCHOLOGY

Fazeeha Rashmin, Isha Kumavat
Alliance University

Abstract

Our brain uses belief to interpret the outside environment. Evidence from literature show that the well-being of people is closely related to the ideas of belief. It seems that both ancient and contemporary civilisations still hold a strong belief in God or another transcendent being. These ideas appear to lessen suffering among people and promote stability in tumultuous times.

Why do people believe, though? What source does it have?

Famous psychologists Freud and Jung addressed similar problems but arrived at very different conclusions. It seems that although for Freud religion is a sign of psychological illness, for Jung the absence of religion is the root of all adult psychological diseases, according to Victor White, Jung's correspondent. Both left behind a wealth of theories, particularly on the "unconscious" and "myth-making" tendencies of individuals, which this study attempts to analyse in light of recent developments in psychology and neuroscience to support the claim that religious belief is an innate tendency of the human mind. It would accomplish this by analysing the research on the biological bases for religious belief and comprehending religious coping. It is hoped that by being understanding and knowledgeable about people's sources of meaning, which are typically anchored in religion, a secular therapist who holds different beliefs from his or her patient will nevertheless be beneficial.

THE INEVITABLE ASPECT OF HUMAN INTELLIGENCE IN CRIMINOLOGY IN THE ERA OF ARTIFICIAL INTELLIGENCE

Saranya Unni R
VIT University

Abstract

Artificial Intelligence or AI is a branch of computer science that deals with constructing smart machines that are competent enough to perform tasks that typically requires human intelligence. The Robot that was developed in Saudi Arabia was given the citizenship, of late. Criminology is a multi-disciplinary approach to better understand the crime concept in general. In consonance with the present trends in the Artificial Intelligence, these emerging trends call up for certain questions before us. The extent of applicability for the artificial intelligence in the legal field is questionable. These significant questions that pour in several questions for consideration, being :1) Is there any possibility for human intelligence to be replaced by artificial intelligence soon? 2)What is the one major drawback that artificial intelligence protracts before us, especially in the field of criminology. On the other hand, artificial intelligence cannot be overlooked as a concept that finds no relevance at all. The Indian legal experts welcome the usage of artificial intelligence, but in a more innovative way by balancing the interest of faster disposal of cases and human expertise. The paper provides answer for these relevant questions. The paper concludes with the observation that, the role played by human intelligence is far more relevant than the role played by the artificial intelligence.

A THEORY OF CHANGE - THEORETICAL LINKING OF GESTALT'S PRINCIPLES AND PARADOXICAL THEORY OF CHANGE TO BRING ABOUT INDIVIDUAL AND ORGANISATIONAL DEVELOPMENT

Indu Suresh
Alliance University

Abstract

A theoretical linking of Gestalt's Psychological Principles and the Theories of Gestalt's Therapy can be adopted to understand the development of an individual or organisation by emphasising the Paradoxical Theory of Change. The Paradoxical Theory of Change states that, "Change occurs when one becomes what he is, not when he tries to become what he is not. Change does not take place through a coercive attempt by the individual or by another person to change him, but it does take place if one takes the time and effort to be what he is--to be fully invested in his current positions." (Arnold Beisser, Gestalt Journal Press)

Gestalt Therapy (Perls, Hefferline and Goodman, 1951) focuses on a broad view of people and their relationships with one another. It understands individuals' function as "configurational wholes" implies the carefully thought-out integration of parts rather than the mere summation of parts. The concept that 'the configurational whole is always different from the sum of its individual parts' forms the backbone of linking The Paradoxical Theory of Change with Gestalt's Therapy to bring about organisational and individual development.

It is assumed that circumventing the natural tendencies of the mind through a brief explanation of the same using Gestalt's Psychological Principles and adopting a change mechanism by

helping individuals focus on the 'here and now awareness' rather than 'there and then' thinking. Such an approach is assumed to benefit organisational development. We aim to explain why the concept of an individual as an 'aggregate' is better and perhaps more instrumental in understanding his/her psyche rather than investigating the 'separate elements or traits' that constitute his/her personality. This approach contributes to the realms of global diversity and inclusion which form essential tools of globalisation by improving the interpersonal and analytical skills of individuals of an organisation and hence the overall growth of an organisation.

A STUDY ON NARCO-ANALYSIS AS A TOOL FOR INVESTIGATION IN FORENSIC SCIENCE

Meghana Gade, Palak Gupta
Alliance University

Abstract

Criminal interrogation techniques have adapted to some extent due to the advancement of technology in various aspects of our existence. Narco-analysis is one such technique that assists in this endeavour. The term "narco-analysis" refers to a statement produced by the accused using a particular scientific technique that may be utilised as part of the evidence against him. Although the Indian Evidence Act, the principal statute governing the acceptance of evidence in a court of law, is silent on narco-analysis, critics have long argued that such a test violates the constitution's guarantee of fundamental rights that individuals are entitled. Numerous constitutional scholars and jurists contend that the narco-analysis technique violates the Constitution's Article 20 (3) right against self-incrimination. Hence, narco-analysis as a practice involves a slew of medical, ethical, and legal concerns. The primary purpose of this paper is to examine the constitutionality of such tests by examining various documents based on the tests, as well as their utility in the investigative process and the onslaught of judicial interpretations of the notion. This paper aims to explore the concept of narco-analysis, its background and history in India. We will also assess the use of narco-analysis tests as a tool for investigation in India, and the application of the same tool in different countries to understand the aspects of social justice. This paper finally analyses the validity of the same.

BLURRING THE CULTURAL AND RELIGIOUS BOUNDARIES

Vibha Kottam, Daasari Laasya Shree Chowdary, Vaishnavi Vedhmurthi Hiremath
Alliance University

Abstract

In modern society, people of different cultures and religions are observed to come together and interact with each other blurring the age old cultural and religious boundaries. We have come a long way from the days where interacting with other cultures was looked down upon. With each generation we see people from different backgrounds coming closer and putting up a united front. This is in no way a perfect world where there is no discrimination or differences between people but through the decade's people have started becoming less resistant to change and more open minded. Practices that have been considered unnatural and unethical earlier like LGBTQIA+, inter-cultural marriages and live in relationships have been more accepted both socially and legally. This paper is an empirical and doctrinal research which focuses on how people and cultures have evolved in the past few years, how innovation has paved way for both social and intellectual development of people from different cultures and how people are deviating from the status quo. The main aim of the paper is to highlight how cultural and religious boundaries have been faded through innovation.

Paper ID: ASICON 259

AN ANALYSIS OF FORENSIC TECHNOLOGY AND APPLICABILITY OF INDIAN CRIMINAL JUSTICE SYSTEM

S. Sownthara Barani, B.Subha
Alliance University

Abstract

The evolution of the various crimes calls for the employment of improved investigation techniques for delivering better and accurate justice. The applicability of the forensic science plays an important role in the investigation and interrogation, especially, regarding the crime and criminal process. In India, the application of forensic methods is at a very rudimentary stage with those conventional methods, like narco-analysis, polygraph examination and BEAP test, they even result in violates the individuals' human rights. Many a times, application of such techniques which induces testimonial compulsion also infringes Article 20(3) of the Indian Constitution. Forensic evidence plays a major role in the criminal investigation and aids the court by provide with the accurate information in solving the various disputes. In Indian legal system, the forensic investigation should be modernised so that speedy remedies and justice to victims of heinous crimes may be provided. This is important because the present legal system in India is possessed with personal liberty and freedom and the dilution of evidence due to weakness in the criminal justice.

EFFECTS OF SOCIAL MEDIA ON HUMAN BEHAVIOUR AND ECONOMY: A LEGAL ANALYSIS

H S Sharadhi, Namitha Ramesh, Riddhi S Bhora
BMS College of Law

Abstract

This paper assumes that the seriousness of the incorporation of social media in daily lives have a deleterious and adverse impacts on the working of the economy. If, on one hand the social media and its disciplinary is considered as a bigger disciplinary, it not only transcends the other multidisciplinary fields but also transgresses into the other tabulates and dominates the daily lives of mankind. The aim of this paper is to provide substantive evidence of how the working force and power of the working mass is depleting and ends on a note on how closely the impact of social media is associated with the economy. This research paper deals with the effects of social media on psychology which has an impact on the economy. We assume, contrary to belief that "psychology is micro economical in nature". Psychology directly or indirectly does affect the economy in the long run. Social media usage and economic growth are correlated because it has been discovered that regions with lower social media usage experience faster economic growth. In several studies, productivity has been employed as a criterion to assess economic growth. If social media leads to a decrease in productivity, the economic growth of a region will slacken. It will be proved that social media and economic development are negatively correlated because economic development has been higher in areas with lower social media activity. Studies have also been done on the detrimental

effects of social media on the economy. Studies have examined the connection between social media's effects on productivity and the expansion of the economy.

INDIA AFTER 75 YEARS: DIGITALISING THE COUNTRY, ONE YEAR AT A TIME

Gayathri Prasad, Ayush C, Dr. Puja Raj
Alliance University

Abstract

India's history is full of milestones and achievements that help us to understand how far it has come over the past 75 years. India has been a major source of development in the field of science and technology for many years. From the invention of Indian eyeglasses in 13th century AD to its involvement in modern-day space programs and satellites, India has made remarkable contributions to global technology. From independence to economic liberalisation, from the Green Revolution to globalisation, from IT boom to innovation hubs, there have been many changes in India since its foundation. But what stands out most is the fact that India has managed to keep pace with technology and innovation even as it has evolved in terms of social structure and political systems, India is making great strides in the digital space as compared to past years. There has been a steep rise in mobile internet users and apps, which is resulting into a drastic shift from traditional methods of communication.

In this article, we will discuss some of these changes and their impact on India's development over time. We will also talk about some key developments that have taken place during the last few years and their impact on digitalising India as a whole.

Paper ID: ASICON 248

75 YEARS OF INDIA'S INDEPENDENCE: HOW FAR INDIA ADVANCED IN ECONOMIC EXPANSION

Immidisetty Navya, J.Gaurav, Abishek James
Alliance University

Abstract

One of the largest democracies in the world is the democracy in India. For several years, India was under the British administration, which helped the country understand the need for freedom. India attained independence on August 15, 1947, after much struggle and sacrifice. Despite these efforts, however, India still faced many problems, including poverty, inequality, and illiteracy, which created more barriers to India's economic development.

India has come a long way since gaining its independence more than 75 years ago. India has successfully maintained its democracy while developing a sizable economy. It has also developed into one of the top hubs for science and technology.

The split, which resulted in the creation of Pakistan and cleared the way for various cultures and religions, was one of the most important events to occur after Independence.

India has also seen a massive surge in the literacy rate and in today's world, we see that the top companies CEO are Indians which is a true sight of development. Several MNCs have been established and its growth has contributed to the growth of the country's economy.

India currently holds a prominent position on the global stage and presents a significant threat to other developing nations. We can observe how far India has advanced over the past 75 years. This

paper will deal with the research on the advancement and economic development of India pertaining to the aspects of science and technology, education, and culture.

ANALYSIS AND APPLICATION OF VOICE PRINTS IN CRIMINOLOGICAL AND SECURITY SYSTEM

Bhavya B
Alliance University

Abstract

Voice profiling is the science used to analyse an individual persona and characteristics based on their vocal patterns and characteristics. It is becoming an important tool in criminology as it aids in crime detection, crime investigation, forensics, and security. Voice profiling is an effective biometric medium and has the potential to revolutionise the way criminals are identified and tracked. It can help law enforcement agencies in identifying the suspects more accurately. In addition to that it can provide additional evidence for criminal cases. In the paper, the greater emphasis is on its role and application in criminological system and security system-oriented voice verification. This prominence is explored and analysed in regard of its reliability and security of voice verification. The voice biometrics has limitations in the context of security and crime reduction. The research paper identified technical and non-technical hurdles involved in the usage of this technology. It focused attention on to the human dimensions in the design of system. It also evaluated the necessity of it being gauged under strict conditions prior to its deployment into the systems. The realistic expectations, design requirements and technical limitations of the use of voice forensics in the field for criminological and security applications are outlined in the paper.

ABOUT THE CONFERENCE

Contemporary management issues often trigger the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices to facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time where all organisations worldwide must embrace continuous changes in technology, economy, environment, and government policies to remain competitive.The rise in digital adoption, the economic fallout of the pandemic worldwide, the rise of China as an aggressive global force, our government policies moving towards a more nationalist agenda, and growing geo-political tensions worldwide are some recent issues which confront businesses and management.

This conference is a platform for industry practitioners, academicians, entrepreneurs, and research scholars to come together to learn, share and discuss current emerging topics in management with thought leaders, technologists, and learning experts. The conference is a great knowledge-sharing event for a diverse audience embracing international and national participants. The event has renowned keynote speakers, practitioner-led workshop sessions, and offers an excellent networking platform.

The conference includes original research papers from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

CIM-23 Organizing Committee

MESSAGE FROM CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore!

On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 11th International Conference on 'Contemporary Issues in Management - CIM-23'.

We live in a world of disruption and drastic changes with different countries in different stages of the economic cycle. This conference aims to discuss issues relevant to the present time like mass layoffs by major MNCs and penetration of AI tools in our lives. All organizations must embrace the changes in technology, economy, environment and government policies to remain productive and competitive

This conference is a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with eminent international and national keynote speakers. Industry experts are a part of the panel discussion on 'Great Resignation to Grand Layoffs: The Contemporary HR Landscape'. We are delighted to share that CIM-23 has received papers from reputed institutions like Indian Institute of Technology Delhi (IITD), Tata Institute of Social Sciences (TISS), National Institute of Industrial Engineering, Mumbai (NITIE) and Symbiosis, Pune and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference.

Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,
Dr Rony G Kurien
Dean and Conference Chair

TABLE OF CONTENTS

S. No.	Title	Page. No.
TRACK 1 - POLITICAL AND ECONOMIC ENVIRONMENT		
1	INTEGRATED REPORTING AND ITS IMPACT ON FIRM VALUE: AN EVIDENCE OF INDIAN COMPANIES **Ms.Maya.Patil & Dr.Geetha.Rajaram**	3
2	HOW A CHINESE TAKEOVER OF TAIWAN WILL EFFECT FOREIGN DIRECT INVESTMENTS **Dr. Rainer Wehner**	4
3	COMPETENCIES OF BOARD MEMBERS IN ANNUAL REPORTS OF STANDARD & POOR'S BOMBAY STOCK EXCHANGE SENSEX ORGANIZATIONS **Amit Kumar & Shanmuganathan Janardhanan (Late)**	5
4	PRACTICAL WISDOM IN DECISION MAKING OF WOMEN'S COLLECTIVES IN SRI LANKA **G D V RupikaSenadheera**	6
TRACK 2 - BUSINESS EXCELLENCE & SUSTAINABILITY: MANUFACTURING, SERVICES AND AGRICULTURAL SECTOR		
5	DEVELOPED PARAMETERS OF MANUFACTURING CAPABILITY MATURITY MODEL INTEGRATION FOR SUSTAINABLE GROWTH IN INDUSTRIES **Dilip Kumar Gayen**	9
6	RENEWABLE ENERGY IN CORPORATE AND AGRICULTURAL SECTOR **Manjushri.U, Likhitha.S.Kumar & Priya.T.B**	10
7	DISRUPTIVE STRATEGIES FOR SUPPLY CHAIN DISRUPTIONS **Dr Sridharan.A & Dr Sunita Kumar**	11
8	STUDY ON THE POST COVID CHALLENGE TOWARDS STARTUPS IN INDIA **Dr.A.Ravi & Dr.Gokul.G**	12
9	A STUDY OF CONSUMERS' BEHAVIOUR IN BUYING VEGETABLES AND FRUITS DURING THE COVID PANDEMIC **Ravella Prem Sai, Soundarya Shetty & Dr. S. Shyam Prasad**	13

TRACK 3 - FUNCTIONAL AREAS OF BUSINESS		
10	COVID-19 SUPPORTED E-COMMERCE: IDENTIFYING AND MODELLING THE ENABLERS OF ONLINE PURCHASE USING ISM- MICMAC ANALYSIS **Dr Meenakshi Sharma, Ms Preeti Aneja &** **Prof. Pramod Kumar Painuly**	17
11	IMPACT OF DEMOGRAHIC VARIABLES ON E- WALLET USAGE WITH REFERENCE TO METAMORPHOSING OF ECONOMY **Prabhat Agarwal & Dr. Lovely Srivastava**	18
12	CHALLENGES AND STRATEGIES IN GREEN MARKETING **Dr. P. Vanishree Sah**	19
13	A STUDY ON ROLE & IMPACT OF AUGUMENT REALITY (AR) ON SEARCH ENGINE OPTIMISATION (SEO) **Aparna M Joshi**	20
14	DETERMINANTS OF CUSTOMER BEHAVIOUR INTENTION TO USE ELECTRIC SCOOTERS IN INDIA: UTAUT2 MODEL-AN EMPIRICAL ANALYSIS **Gagandeep Kudlu Srinivas & Raghu Yadaganti**	21
15	IMPACT OF DISCOVERY COMMERCE ON ACHIEVING COMPETITIVE PARITY **Pranav Ajay Kumar & Roy Matthew**	22
16	FACTORS INFLUENCING THE USAGE OF SMART HOME TECHNOLOGY IN INDIA **Srinath S, Justin Joy, Ravinder Kumar Verma &** **Manish Kumar Shrivastava**	23
17	DIGITALIZATION - A STRATAGEM FOR RURAL RETAILERS **Ms. Tanuja B & Dr. Shampa Nandi**	24
18	CONTINUOUS INTENTION TO USE AND FREQUENCY OF USE – APPLICATION OF UTAUT2 AND MULTI-GROUP ANALYSIS WITH INDIAN HOME-GROWN DIGITAL WALLET **Palanisamy Ganesan & Anita S Mane**	25
19	IMPACT OF SOCIO-DEMOGRAPHIC VARIABLES ON THE PURCHASE INTENTION OF ORGANIC FOOD PRODUCTS **Roopashree B R & Dr. Rizwana**	26
20	ETHICAL MARKETING IN CURRENT TIMES: SOCIAL RESPONSIBILITY IN INDIAN CONTEXT **Dr.Mohammed Farooq Pasha & Jayashree Urs R**	27

21	UTAUT & UTAUT2 MODEL - A DESCRIPTIVE ANALYSIS OF THEORETICAL CONCEPTS BASED ON THE LITERATURE REVIEW **Remya Nair**	28
22	A STUDY OF FACTORS INFLUENCING PURCHASE INTENTION IN THE CONTEXT OF INFLUENCER MARKETING **Samuel Vero Viegas & Haritha S**	29
23	DETECTION OF SPAM TWEETS IN TWITTER **P.S.S.N.Chandra & Prof Stuti Agarwal**	30
24	MANAGEMENT INSTITUTIONS' INTENTION TOWARDS THE DIGITAL MARKETING – USING TECHNOLOGY ACCEPTANCE MODEL (TAM) **Mr. Prakasha T M & Dr. Vijaya Baskaran R**	31
25	CONSUMER BEHAVIOUR TOWARDS FUNCTIONAL FOOD IN INDIA – A LITERATURE REVIEW **Rekha Raghavan & Dr. Veena K N**	32
26	CROSS-SECTION OF EXPECTED STOCK RETURN: A PERSPECTIVE FROM SYSTEMATIC AND UNSYSTEMATIC RISK FACTORS IN INDIAN STOCK MARKET **Karkaria Dusmanta**	33
27	EXPONENTIAL MOVING AVERAGE STRATEGY VS. BUY-HOLD STRATEGY: EVIDENCE FROM INDIAN STOCK MARKETS **Rangapriya Saivasan & Dr. Madhavi Lokhande**	34
28	CSR SPENDING AND ITS RELATIONSHIP WITH SHARE PRICES (WITH SPECIAL REFERENCE TO TOP CONSUMER FOOD COMPANIES IN LIGHT OF COMPANIES ACT 2013) **Ms. Saniya Marwah**	35
29	FORECASTING THE CRYPTOCURRENCY PRICES – A MACHINE LEARNING APPROACH **Dr. Deepa Venugopal, Dr. S T Nambi & Hemchand N**	36
30	AN EVALUATION OF INVESTMENT PATTERN OF GOVERNMENT OF KARNATAKA EMPLOYEES IN SELECT FINANCIAL SECURITIES **Premalatha K P & Dr. S J Manjunath**	37
31	LONG-RUN PERFORMANCE OF INITIAL PUBLIC OFFERINGS OF SMALL AND MEDIUM ENTERPRISES IN AN EMERGING MARKET **Parveen Siwach, Prasanth Kumar R & Vikas Gupta**	38

32	SENTIMENT ANALYSIS OF LENDERS MOTIVATION TO USE A PEER-TO-PEER (P2P) LENDING PLATFORM: LENDENCLUB.COM **Sagar Gupta, Rony Kurien, Anshul Saxena, Pradeep Pendse & Jayant Mahajan**	39
33	IMPACT OF MONETARY POLICY ON MOTIVATION TO USE PEER-TO-PEER LENDING PLATFORMS IN INDIA **Sagar Gupta, Kedar Vishnu, Pradeep Pendse, Rony Kurien & Jayant Mahajan**	40
34	CREDIT SCORE RATING PROCESS USING BWM OF SELECT SMES IN INDIA **Vidya CM & Dr. Geetha Rajaram**	41
35	IMPACT OF FINANCIAL DRIVERS ON FIRM PERFORMANCE: A STUDY ON EMERGING ECONOMY **Damini Kumari & Harshita Gupta**	42
36	IMPACT OF CORPORATE SOCIAL IRRESPONSIBILITY ON MANAGEMENT EFFICIENCY- EVIDENCE FROM EMERGING MARKET **Harshita Gupta & Prof. Shveta Singh Professor**	43
37	FINANCIAL DISTRESS PREDICTION USING ALTMAN Z SCORE AND STOCK PRICES - A CASE OF NSE-LISTED INDIAN MANUFACTURING COMPANIES **Dr Ratchana R & Sudindra V.R**	44
38	THE IMPACT OF TECHNOLOGY ON EMPLOYMENT AND MOTIVATION OF EMPLOYEES IN THEIR PROFESSIONAL AND PERSONAL LIFE **Rajesh Ranjan, Rishikant Yadav & D.K Srivastava**	45
39	MEDIATION OF PERSONALITY IN THE RELATIONSHIP BETWEEN ORGANISATIONAL ROLES AND MOTIVATION: A STUDY ON ASHA WORKERS **Mrs. Shilpa R & Dr. Harold Andrew Patrick**	46
40	SIGNIFICANCE OF HUMAN ERROR INPHARMACEUTICAL INDUSTRIES **Prasun Chakraborty & Jyoti Joshi Pant**	47
41	DOES ORGANIZATIONAL CULTURE INFLUENCES THE APPROPRIATENESS OF SOCIALISATION TACTICS ADOPTED? A STUDY IN SERVICE SECTOR **Harold Andrew Patrick, Pawan Kumar Sharma, Jacqueline Kareem & Napolean Prabakaran**	48

42	SHIFT WORK DYNAMICS AND ITS IMPACT ON EMPLOYEE WELLBEING IN THE MANUFACTURING SECTOR **Afseer Majeed**	49
43	DETERMINANT OF CULTURAL ORIENTATION OF IT MANAGERS IN INDIA - AN EMPIRICAL ANALYSIS **Lolana Reddy, Chetna Jha & Sujyothi**	50
44	EFFECTIVENESS OF JOB CRAFTING INTERVENTION: A VALIDATION STUDY **Anub Kurian & Dr. Andrew Harold Patrick**	51
45	IMPACT OF EMOTIONAL INTELLIGENCE, PERSONALITY TRAITS, RISK PERCEPTION AND BEHAVIOURAL BIASES ON INVESTMENT DECISIONS **Dr. S. Johnsi**	52
46	A LEADERS' ROLE INFLUENCING THE WORK CHARACTERISTICS OF VIRTUAL TEAMS CONTRIBUTING TO EMPLOYEE PERFORMANCE – A BEHAVIORAL PRESPECTIVE **Gouri R Javali & Dr. Madhu BK**	53
47	MAPPING THE RELATIONSHIP BETWEEN APPRAISER AND APPRAISEE IN AFFECTING THE EMPLOYEE PRODUCTIVITY IN IT INDUSTRY: A MODERATING IMPACT OF PROFESSIONAL DEVELOPMENT **Beena.M.T & Dr.Irshad Nazeer**	54
48	WHAT FUELS INTRAPRENEURIAL INTENTIONS AND BEHAVIOUR? - AN EMPIRICAL STUDY FROM SELECT INDIAN SMES **Sujatha M.S & Ujjal Mukherjee**	55
49	EMPLOYER BRANDING AND TALENT MANAGEMENT USING HR ANALYTICS' CONCEPTS AND APPLICATIONS **Sriram Prabhakar & Dr. S. Jayaprakash**	56
50	THE SOCLE OF HIGH PERFORMANCE ENGAGEMENT IN ORGANIZATIONAL EXCELLENCE **Dr Sindhu Shantha Nair, Dr K. A. Thomas & Smritika S.P**	57
51	THE IMPACT OF EMOTIONAL INTELLIGENCE ON WORK-LIFE BALANCE IN START-UPS IN HYDERABAD **Jyothika Vemu & Prof. Dr. Sindhu Shantha Nair**	58

52	HAPPINESS AT WORKPLACE AS A MEDIATOR OF THE RELATIONSHIP BETWEEN HIGH PERFORMANCE WORK SYSTEM AND TURNOVER INTENTION: EMPIRICAL EVIDENCE FROM HOSPITALITY AND TOURISM INDUSTRY **Prof Shurlly Tiwari & Dr.Ujjal Mukherjee**	59
53	TALENT MANAGEMENT PRACTICES, ROLE OF PERCEIVED ORGANIZATIONAL SUPPORT IMPACTING EMPLOYEE ENGAGEMENT **Dr. Pooja Nagpal**	60
54	ISSUES AND CHALLENGES IN GLOBAL ORGANIC FOOD SUPPLY CHAIN: DISRUPTION AND RECOVERY STRATEGIES **Ekta Salunkhe & Dr. Pratap Pawar**	61
55	ADAPTATION OF TRAVELLING SALESMAN AND VEHICLE ROUTING PROBLEM USING MICROSOFT EXCEL - OPEN SOLVER TO AN INDIAN LOGISTICS SERVICE PROVIDER **M. Janarthanan, Dr. Sreerengan V.R & Justin Joy**	62

INTEGRATED REPORTING AND ITS IMPACT ON FIRM VALUE: AN EVIDENCE OF INDIAN COMPANIES

Ms.Maya.Patil
Research Scholar, International School of Management Excellence,
Research Centre, Affiliated to the University of Mysore
mayap.isme20@gmail.com

Dr.Geetha.Rajaram
Research Guide, International School of Management Excellence,
Research Centre, Affiliated to the University of Mysore
rajaram.geetha@gmail.com

Abstract

There is a clear shift in the way companies report their performance to the stakeholders. Integrated Reporting (<IR>) is a corporate reporting reform practices followed by many big companies all over the world. They are moving from more profitable companies to more responsible companies in terms of preserving the resources for future generation. The companies are accountable for protection of natural resources, society at large apart from other capitals, like financial & manufacturing capital. The objective of this paper is to check the compliance of Integrated Reporting Framework (IRF) of select Indian companies. For this the content analysis is done to cover all the content elements and the six capitals of sample companies. Analysis is done in 2 stages. One is content element analysis according to IRF, secondly analyzing the impact of IRDI on firm value. Spss; 29 version has been used to analyze the data of six companies of 4 sectors for 3 years from 2018-2021, since IR practices were made a part of voluntary disclosure since 2017 by SEBI circular for top 500 companies. Out of 7 content elements organizational overview has maximum score of 96.33% and strategic has got good score of 95.75% in the period of pandemic. All the companies had more focus on strategy to overcome the challenges of Covid-19. Another objective is analyzed by descriptive statistics and correlation, model summary, multi co linearity. A regression model is developed for the same. Tobin's Q is taken as a proxy for firm value and is considered dependent variable. The independent variables are the IRDI score, ROE, Size by market capitalization & ROCE. A regression model is developed to estimate unknown value of dependent variable (Tobins Q) using the known values of independent variables.

Keywords: Stakeholders, Firm value, Tobin's Q, IIRC, Integrated Reporting Disclosure Index (IRDI)

HOW A CHINESE TAKEOVER OF TAIWAN WILL EFFECT FOREIGN DIRECT INVESTMENTS

Dr. Rainer Wehner
Technical University of Applied Sciences
Würzburg-Schweinfurt
rainer.wehner@thws.de

Abstract

Over the past decades, China has gradually increased its geopolitical influence. Besides the Belt and Road Initiative, that diversified Chinas economic and political relations with many countries in the western world, Beijing has vowed to bring Taiwan back under Chinese control. That could provoke a massive conflict, because the U.S. President has made clear, the U.S. stand by Taiwan and will retaliate in the case of a forced attempt. Based on this scenario the purpose of this paper is an analysis of the consequences for the inflow of Foreign Direct Investments (FDIs) into Taiwan. For that reason, the author examined the published literature of the last years and analysed the Chinese – Taiwanese political and economic relationship. Furthermore, he researched the impact of such hostile takeovers on FDIs in similar situations to draw assumptions for an eventual conflict. It became apparent that the reactions of foreign direct investors vary, depending on the intensity of the conflict. Therefore, different scenarios of a Chinese takeover need to be drawn into conclusion. Based on the available data the major findings show that at the beginning of the conflict FDIs drop dramatically because the investors withdraw their money. Depending on the extent of the conflict, the destruction of the country and the impact on future economic prospects, the money will slowly flow back after a certain period of time.

COMPETENCIES OF BOARD MEMBERS IN ANNUAL REPORTS OF STANDARD & POOR'S BOMBAY STOCK EXCHANGE SENSEX ORGANIZATIONS

Amit Kumar
Research Scholar, GITAM University

Shanmuganathan Janardhanan (Late)
GITAM University

Abstract

While the importance of the right competencies of leaders in large organizations is well understood in practice, limited research exists about competencies of board members, especially in the Indian context. With this critical need, this paper attempts to provide a competency model, framework and a competency dictionary. The competency definitions in the dictionary are based on competency descriptions of board members of S&P (Standard & Poor's) BSE (Bombay Stock Exchange) Sensex organizations. Taking advantage of government guidelines that require listed organizations to disclose competencies of board members, annual reports of 30 Sensex organizations are subjected to qualitative analysis. A total of 246 competencies are identified. These are further analyzed to determine themes amongst those competencies that have been detailed by these organizations. A competency model of eight competencies, a competency framework & dictionary are developed by providing competency definitions for generic, specific & unique competencies through thematic analysis of competency descriptions. The research provides a method for leaders in organizations, specifically NRC (Nomination & Remuneration Committee) members in boards on Indian listed organizations, to identify, define & use the right competency requirements for board members. The research method also paves the way for future study of larger organization groups.

PRACTICAL WISDOM IN DECISION MAKING OF WOMEN'S COLLECTIVES IN SRI LANKA

Professor G D V RupikaSenadheera,
Department of Business Administration,
Faculty of Management Studies and Commerce, University of Sri Jayewardenepura, Nugegoda, Sri Lanka

Abstract

The aim of this paper is to present the practical wisdom of decision making of women's collectives in rural villages in Sri Lanka. It's built on the corporative society concept and selfsufficient membership organization that is run solely by underprivileged women in Sri Lanka. With a view to get a deeper understanding of the practical wisdom in decision making of women's bank collective, a qualitative methodology was adopted. The study's objectives are accomplished via a review of the literature, a theme analysis, in-depth interviews, and observations. Primary data came from in-depth interviews with 10 leading characters of Sri Lankan Women's collectives. Findings of this study reveal that the women's thinking and their maximizing and satisficing behaviors of decision making are based on different social meanings of their day to day life experiences and mutual understanding of their group members in terms of trust, honesty, equity and equality. Further deep analysis also reveals that every decision has integrated with the utilitarian perspective of ethics that mean their decisions always concerned for greater good for greater number of people in the group. And also women's collectives would be beneficial to enhance women's decision making power in the field of financial handling, insurance services, community development initiatives, cultural events, and business networking opportunities, disaster relief initiatives, and health and educational services as well. As a result of this behavior support women's for self-motivation, self-discipline, teamwork, and leadership skills in addition to the aforementioned value-added activities. Subsequently, the women's collectives have significantly helped to improve the socio-economic situation and empower women within the household and without their isolation of them through greater social interaction. And also this study will assist readers in learning about the idea of women's collectives practice by ground level and how it benefits the growth of women's lives, their families, and the whole nation.

BUSINESS EXCELLENCE & SUSTAINABILITY: MANUFACTURING, SERVICES AND AGRICULTURAL SECTOR

DEVELOPED PARAMETERS OF MANUFACTURING CAPABILITY MATURITY MODEL INTEGRATION FOR SUSTAINABLE GROWTH IN INDUSTRIES

Dilip Kumar Gayen
Research Scholar, GD Goenka University
Head Manufacturing & BE in East West Info solutions

Abstract

The post Covid pandemic has immensely impacted the manufacturing industries globally in the sustainable performance and progressive growth. Limited studies and researches are conducted worldwide by various scholars, industry's technical experts on manufacturing techniques for the sustainable manufacturing growth and business progression through the capability maturity model with customer's satisfaction in changed & challenging circumstances. During the evolution of Industry 4.0 & 5.0 techniques in manufacturing, the process is changing in the global manufacturing techniques & technology and performance of companies on the perspective of investment in the digitally controlled production through smart factories. In this study the objectives, the sustainable growth in manufacturing companies through a capability Maturity Model on Manufacturing is formulated by identifying the parameters and sub parameters at various Levels of maturity for sustainability in system standardization & performance. The maturity parameters & elements designed as a guideline for the manufacturing and operation heads to follow and implement this maturity & sustainable model for smart manufacturing, an efficient production structure and Future of Factory.

Keywords: Capability Maturity Model Integration (CMMI), Manufacturing Capability Maturity Model Integration (M-CMMI), Future of factory (FoF), Operational Excellence (OpEx), Smart Manufacturing (SM).

RENEWABLE ENERGY IN CORPORATE AND AGRICULTURAL SECTOR

Student of B.Com, KLE Society's Degree College

Abstract

The world is focusing on saving environment and mother earth, it is very important to create awareness among the people to go eco-friendly. As we know that the electric era is taking a great move from the past decade and has reduced the use of petrol and other fossil fuels. It is important to note that the fossil fuel and non-renewable source of energy is in the stage of being verge and the world is making efforts to reduce the use of non-renewable source of energy, since the availability of fossil fuels is limited and cannot be used in some remote areas. But, renewable source of energy has eliminated all the loopholes associated with the conventional source of energy and made it convenient and safe for use. This paper reports the use of renewable source of energy and its implementation in the field of corporate and in the agricultural sector. Virtually, the corporates are involved in promoting eco-friendly products and taking initiative for creating the awareness to plant saplings. The renewable energy has the potential to solve all the problems faced by the developing countries. This paper also explains the policies implemented in the recent decade to overcome the hurdles and ensures the enhancement of renewable energy for future.

Keywords: Non-conventional source, Transition, Corporate Social Responsibility, solar power plants, wind mills.

DISRUPTIVE STRATEGIES FOR SUPPLY CHAIN DISRUPTIONS

Dr Sridharan.A
Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sridharan.a@christuniversity.in

Dr Sunita Kumar
Associate Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sunita.kumar@christuniversity.in

Abstract

Supply chain disruption happens when forces, both internal and external affect the business's capability to get material, produce finished goods and dispatch them to the end consumers. This breakdown in supply chain could be due to bullwhip in marketing demand or suppliers' inability to meet demand or even natural calamities like monsoon or outbreak of pandemic or even the failure of logistic providers to meet transportation demands. Whatever be the reason, it will affect the business's top line and bottom line and the image of brand due to its non-availability in the shelves of retail outlets. It will become a case of "out of sight, out of mind" of consumers. According to Concord Monitor, toilet paper ran out of retail outlets as consumers panicked and the sale went up by 213% in March, 2020 over the same period in 2019. This is a classical case of demand overruns. When the ship Ever Given ran aground on 23rd March, '2021 in the Suez Canal, a total of 367 ships were caught in this traffic jam for a period of six days. Businesses lost billions of dollars as supply chain of raw materials and even finished goods were not delivered on time.

The year was 1962 and it saw the birth two big chain stores in United States of America, the one which is very successful one, Walmart and the other K-Mart. While Walmart continues to thrive and run successful business, K Mart folded in the year 2002 and later merged with Sears Group. There were many reasons for K Mart failure, but two things stand out, one being absorption of technology like internet and the other being smart supply chain operations like cross-docking, low inventories, that are being employed by Walmart. While disruptions are always there in businesses, this research paper explores on disruptive technologies that are available and which can be employed by businesses for their successes or at least reduce the dysfunctions.

STUDY ON THE POST COVID CHALLENGE TOWARDS STARTUPS IN INDIA

Dr.A.Ravi
Professor & Director,
RJS Institute of Management Studies, Bengaluru
draravi65@gmail.com

Dr.Gokul.G
Assistant Professor,
RJS Institute of Management Studies, Bengaluru
gokul4edge@gmail.com

Abstract

The COVID-19 outbreak and the prolonged period of shutdown wreaked mayhem for the new businesses that were beginning operations in India. Restrictions on the movement of goods and people leading to an increase in both supply and demand side risk, a lack of investors willing to continue investing in the firm, and the looming threat of a global recession are all factors that have made it exceedingly difficult for Indian start-ups to remain in business. However, in addition to difficulties that pose a direct danger to the very existence of start-up businesses, the pandemic has also brought about potentially fruitful opportunities for expansion. Given the lack of certainty regarding the development of a treatment for the disease in the near future, a number of different industries have generated a significant amount of revenue, and the opportunities presented by this situation appear to be sustainable. This article is a sincere attempt to elaborately highlight the challenges that Indian start-ups are currently facing and also the opportunities that they can bank on. The pandemic has affected various industries in a variety of different ways. The start-up ecosystem, which has never seen anything like this before, has its fair share of winners and losers as a result of this unique circumstance.

A STUDY OF CONSUMERS' BEHAVIOUR IN BUYING VEGETABLES AND FRUITS DURING THE COVID PANDEMIC

Ravella Prem Sai
PGDM Student,
International School of Management Excellence, Bangalore

Soundarya Shetty
PGDM Student,
International School of Management Excellence, Bangalore

Dr. S. Shyam Prasad
Professor,
International School of Management Excellence, Bangalore

Abstract

This study aims to investigate the behavior of consumers in buying vegetables and fruits during the COVID-19 pandemic. The COVID-19 pandemic has caused a major shift in consumers' behavior and the way they purchase their daily necessities. With the increase in health concerns, the demand for healthy and fresh food, especially fruits and vegetables, has increased. The data for this research was collected during the end of the first quarter of 2022 when the pandemic was subsiding. The concept discussed in this article and the findings thereof will add value to the literature, besides its relevance to academicians, the results of this study are also important to practitioners. The findings of the study revealed that regarding vegetables and fruits, offline is the choice of purchase over online. Retail store images do not play a decisive role in purchasing vegetables and fruits. variety, freshness, and economy have become major factors for consumers. The store image does not matter.

Abstract

The lifestyle changes induced to control the pandemic have impacted daily life and have brought notable difference in consumer behavior (Sheth, 2020). Everybody looks for convenience, customization, inclusion of latest trends, multi-channel engagement and alignment with the goal of healthy living. Around 80% of companies agree that customers would go online in the new normal and their new business model should be digitized to be economically viable, the businesses must examine how customer behavior is evolving, as well as identify the factors that make online shopping possible and how they interact with one another. Doing so will aid managers in developing strategies that will help them remain competitive in the new normal. Two brainstorming sessions were held; in the first, the experts were given relevant literature to help them discover the elements that encourage online shopping. With the help of expert opinion, SSIM was utilized to determine the contextual relationships between the sixteen identified online purchasing factors. To recommend the pair-wise comparison, the same 40 experts from the panel were consulted. These 16 variables were probably used to assess the and to construct a driver-dependence relationship among these drivers using interpretative structural modelling with MICMAC analysis.

Abstract

With the advent of Demonetization in Indian Economy on 8th November, 2016 there has been the upcoming of "Metamorphosing of Economy". Indian Economy is undergoing some radical changes post demonetization era as now the culture of 'Cashless Economy' is gaining much importance. With the introduction of "Digital India" program in 2015; two different concepts i.e., 'Technology' & 'Bank' finally got combined and "Digital Banking" came into existence. The objective of this paper is to show the impact of various determinants viz. ease of use, trust, security, time saving and convenience on the usage of e-wallets in city of Allahabad. The study is based upon both primary & secondary data. The primary data is collected from 209 respondents with the help of 'Structured Questionnaire' framed by following the "5 points Likert Scale" technique. This study is both analytical & descriptive in nature. The collected primary data is being analysed with the help of Microsoft Excel and SPSS. The statistical tools used to interpret the data are Regression Analysis and ANOVA technique. The present study has highlighted that between age & ease of use factor affecting e-wallet usage there has been no relationship. At the same time this study also highlights that there is significant but negative relationship between age along with trust, security & time saving & significant positive relationship between age and convenience factors affecting the e-wallet usage. This paper also shows that there has been a significant but negative relationship between diverse income groups with ease of use & security factors affecting the e-wallet usage. At the same time study also reveals that there has been significant positive relationship between diverse income groups with trust, security & time saving factors affecting the e-wallet usage.

Keywords: Demonetization, Cashless Economy, Metamorphosing of Economy, Digital Banking, E-wallet.

CHALLENGES AND STRATEGIES IN GREEN MARKETING

Dr. P. Vanishree Sah

A STUDY ON ROLE & IMPACT OF AUGUMENT REALITY (AR) ON SEARCH ENGINE OPTIMISATION (SEO)

Aparna M Joshi
Head of the Department & Associate Professor,
Department of Commerce, The National College Autonomous,
Affiliated to Bengaluru University
aparnamj.09@gmail.com

Abstract

Augmented reality (AR) mobile app advertising offers new opportunities for interactive consumer engagement to boost advertising effectiveness and elicit positive consumer responses. In this study, I investigate the role of escapism by analyzing its antecedents and consequences. We aim to shed light on how AR mobile app advertising can be used to enhance escapism experiences by considering two psychological mechanisms of mental imagery: narrative transportation (in response to ad storytelling) and spatial immersion. Search Engine Optimization(SEO) refers to the process by which search engines "crawl" content to see how effective it willbe to attract traffic. Search engines will assess a number of things in a website (such askeywords, tags, and link titles) and rank it for its capacity to attract organic traffic based on avariety of factors. The consequences of escapism experiences include positive social media sharing, purchase intentions through brand attitudes, and new brand engagement via AR mobile app advertising. Prior brand preference does not affect the relationship between escapism and consumer responses after exposure to immersive AR advertising. My findings have meaningful implications for how industry practitioners can enhance escapism in the context of AR mobile app advertising.

Keywords: Augmented reality; Search engine optimization, purchase intention; ranking; engage customer

DETERMINANTS OF CUSTOMER BEHAVIOUR INTENTION TO USE ELECTRIC SCOOTERS IN INDIA: UTAUT2 MODEL-AN EMPIRICAL ANALYSIS

Gagandeep Kudlu Srinivas
B.Com, PES University, India
gagandeep.fin@gmail.com

Raghu Yadaganti
Research Scholar, Krishna University,
Assistant Professor, PES University, India
raghuy@pes.edu

Abstract

The Research focuses on understanding what factors are impacting the customer purchase intention and usage behaviour of Electric scooters in India by applying the UTAUT2 Model. The study uses a quantitative approach by using a questionnaire. The Findings show that PE, SI, HM and EC of the UTAUT2 Model are directly and positively impacting the Behaviour Intention of customers to use Electric Scooters. EE, FC, PV and TR UTAUT2 Models are directly and negatively impacting the behaviour Intention to use Electric Scooters. The study is quantitative in nature and focuses on in-depth knowledge of factors influencing customer behaviour and intention to use Electric Scooters in India. However, the study cannot be representative of an enormous country like India. Academics and Electric Scooter retailers can consider this in future research

The studies provide information on the factors necessary for promoting Electric Scooters in India. These studies can be useful for Electric Scooter retailers who are looking forward to promoting Electric Scooters in India. Earlier studies in this context of E – Scooters usage have tried to use technology adoption models. Hence, these studies have not been capable to capture the fundamental nature of the impact of Environmentally Friendly on technology adoption in the Indian context. A lot of the analyses are performed used to find the relationship between independent and dependent factors but not explored to understand the relationship between the independent factors and the combination of independent factors' impact on dependent factors. In this research, we used Structural Equation Model (SEM) by using LISREL.

Keywords: Customer behavior intention, Electric Scooters, UTAUT2 Model.

IMPACT OF DISCOVERY COMMERCE ON ACHIEVING COMPETITIVE PARITY

Pranav Ajay Kumar
Student, CHRIST (Deemed to be University)
pranava.kumar@bba.christuniversity.in

Roy Matthew
Associate Professor, CHRIST (Deemed to be University)
roy.mathew@christuniversity.in

Abstract

Discovery Commerce is the hyper-personalisation of the point of purchase and point of sale of a product or service online. Companies may use these platforms to curate specific offerings on social platforms by essentially, guiding a customer to a product. The goal of discovery commerce is to bring the concept of window shopping to social platforms like Facebook, Instagram and YouTube. This paper attempts to evaluate the impact of discovery commerce platforms in achieving competitive parity between Direct-to-Consumer and Business-to-Consumer (B2C) brands. A secondary objective is to develop strategies for B2C brands to compete with Direct-to-Consumer (D2C) brands using discovery commerce platforms. Alejandro et al. (2020) states the point of purchase that a general population uses to acquire their goods greatly affects their consumption of goods and overall social status. The work of Bonet et al. (2005) concludes that logistical relationships across the value chain leads to vertical competition. The online nature of Direct-to-Consumer companies may provide a significant competitive advantage to them over Business-to-Consumer companies. This study is descriptive in nature. The data collected from Amazon Vendor Central consists of primary data. A Discovery Commerce campaign was launched for the 'hair care' product category of a B2C brand along with extensive SEO efforts. This was done to identify the impact of the marketing efforts followed by D2C brands which have given them an edge on e-commerce platforms. This includes changes to product titles, images and descriptions of product listings on e-commerce platforms to observe an increase/decrease in sales and visibility. Neo-marketing efforts like SEO and Discovery Commerce campaigns have a significant impact on the sales and discovery of traditional brands who have an omni-channel presence. Across all categories of the optimised products, Glance Views have increased by an average of 320%.

Keywords: Discovery commerce, search engine optimisation, glance views, e-commerce.

FACTORS INFLUENCING THE USAGE OF SMART HOME TECHNOLOGY IN INDIA

Srinath S
Christ University. Bangalore

Ravinder Kumar Verma
OP Jindal Global University, Sonipat

Manish Kumar Shrivastava
Christ University Bangalore

Abstract

This paper explores the roles of perceived risk, performance and after-sale service, and demographics in the usage of smart home technology (SHT). Despite the push for digital technologies, smart homes still face challenges related to their limited use. We adopted a mixed methods approach and collected data from 133 respondents and 1244 users' responses from secondary sources. This research adopted the perceived risk framework and thematic analysis to explain the usage barriers of smart home technology. Our research supports the perceived risk factors relationships, such as privacy, performance, financial, psychological and perceived risk role as a resister. This research explains the post-adoption challenges of individual concerns related to the performance, after-sales services, and complexity of digital technologies. The use of IoT-enabled devices is influenced by users' demographics and cost and security concerns. This research has practical implications for understanding the factors associated with using IoT-enabled smart homes in India.

Abstract

This study aims to bridge the gap by examining the process of digitalization in rural retailing. To reach rural consumers, rural retailers are crucial. They serve as a conduit between producers and customers. Since rural retailers contribute significantly to the GDP, it is essential to retain them. The competition from organized retail and urban counterparts is extremely difficult for rural retailers. This paper focuses on how digitalization helps Rural Retailers to retain in business. Its relationship to rural retailing was examined through the Study TOE Framework. Additionally, it intends to inform Rural Retailers about the various channels of distribution they might use as a result of digitization. Secondary data was used in this study, which used a qualitative methodology and information gathered from websites and academic articles. The study concludes on the integration of TOE model framework, rural retailer's digitalization, and the adoption of digital distribution channels.

Keywords: Digitalization, Technology, Organization, Environment, Innovative Channels.

CONTINUOUS INTENTION TO USE AND FREQUENCY OF USE – APPLICATION OF UTAUT2 AND MULTI-GROUP ANALYSIS WITH INDIAN HOME-GROWN DIGITAL WALLET

Palanisamy Ganesan,
Professor and Director,
Marketing Area, NSB Academy, Bangalore

Anita S Mane
Associate Professor,
R M Dhariwal Sinhgad Management School, Kondhapuri, Pune

The mobile wallet transaction was INR 532 billion in value and INR 1630 million in volume during FY2017 (Deloitte, 2017). During Q1-2021, the volume and value are INR 1.13 billion and INR 411.75 billion respectively (Worldline, 2021). The research questions for this paper are: (a) what are significant UTATU2 factors affect the continuous intention to use home-grown digital wallet? (b) is the prevention behaviour influence the continuous intention to use the selected home-grown digital wallet? and (c) are there significant difference between (i) two different group of age and (ii) two male and female customers in the continuous intention to use? The study provides an insight on the continuous intention to use the Indian home-grown mobile wallet. The mobile wallet users' experience on an average of more than six month that means users have learned and become a familiar of mobile wallet for their purchase through directly or ecommerce as well as transaction of money for other purposes. Thus, Habit become the important predictor for the continued intention to use Abdul-Halim et al (2022) and frequency of use of Indian home grown mobile wallet. The users feel that the simplicity in using mobile wallet for any type of transaction without hassle and assistance from any other individual that results in the positive effect of effort expectancy on continued intention to use and this finding in line with the study by Ramos (2021) with food delivery apps during Covid19. Hedonic Motivation strongly influence the continued intention to use mobile wallet, thus the users see there is hedonic value of continuous use of mobile wallet in terms of positive feeling and pleasant experience when they use mobile wallet (Ly et al 2022). Thus, the research question one is answered through the Habit, Effort Expectancy and Hedonic Motivation are the significant constructs compared to other four strongly and positively predict the user's continued intention of mobile wallet. The role of preventive behaviour with UTAUT2 constructs highlights that the preventive behaviour plays no role in predicting continuous intention to use of mobile wallet. The limitation is that all constructs of Prevention Motivation Theory employed which result high predicting power on CIU.

Keywords: UTAUT2, Continuous Intention to Use, Frequency of Use, SEM, Multi-Group Analysis

IMPACT OF SOCIO-DEMOGRAPHIC VARIABLES ON THE PURCHASE INTENTION OF ORGANIC FOOD PRODUCTS

Roopashree B R
Research Scholar, MSRIT, Bengaluru, India
roopapraveen2004@gmail.com

Dr. Rizwana
Associate Professor and Research Supervisor,
MSRIT, Bengaluru, India
rizumehar@gmail.com

An encouraging sign that people are becoming increasingly aware of the negative health effects of these highly polluted and poisoned food items. Organic food products in India are expected to develop considerably during the projected period due to a variety of factors, including the availability of organic food goods on the internet and a shift in consumer preference toward organic food. According to certain researchers, sociodemographic factors play a role in purchasing decisions There is a need to explore the influence of demographic variables on purchasing behaviour because of inconsistent findings in the literature. Research of this type is descriptive in nature and aims to evaluate the influence of socio-demographics on the purchase intentions of the target audience for organic food items. The target audience was given a well-structured questionnaire, which included six sociodemographic questions based on logical reasoning and three questions on purchase intention based on Chiew Shi Wee & et al, 2014 and Anupam Singh, Priyanka Verma,2017. A 150-target audience sample was selected with a 10% margin of error and a 95% confidence interval and 121 valid responses were chosen for the study. We utilised the snowball-sampling strategy because we invited people to fill out the survey and then pass it on to their friends and relatives. Findings of the study indicate purchase decisions are influenced by income. Thus, it is possible that the amount of organic food purchased correlates directly with a person's income (i.e., the higher the income in schooling, according to the statistics. Organic goods are more likely to be purchased by those with higher education levels. This might be because more educated clients are more health-conscious and aware of the advantages of buying organic foods, which could lead to an increase in sales of organic products. In both industrialised and developing countries, several studies have found that a wide range of factors impact people's decisions to buy organic food. Demographic variables such as gender, education, and money, independent of the country in which they take place (developed or developing) will have greater influence on purchase of organic food products.

Keywords: Socio demographic Variables, Purchase intention, Purchase decision and Organic food product

Abstract

It is often said that Marketing and ethics cannot go together. Those supporting the argument always have a long list of marketing activities from various companies which make even a die-hard marketing fellow feel guilty about his/her profession. On the other hand, critics of the argument can also come up with numerous marketing activities from various companies which can make the worst critic of marketing activities doubt his/her own criticism. So where does the debate goes from here. It only intensifies as more and more companies in every category of products and services are always making efforts to increase their market share through marketing strategies which they call innovation oriented but others call unethical thereby generating arguments within them as well as in the minds and hearts of consumers as well as potential consumers. This paper looks at the consumer perception about the degree of ethics in marketing followed by companies across all categories of products and services and its impact on the society on the one hand and company growth on the other hand.

UTAUT & UTAUT2 MODEL - A DESCRIPTIVE ANALYSIS OF THEORETICAL CONCEPTS BASED ON THE LITERATURE REVIEW

Remya Nair
Research Scholar (Registered with University of Mysore).
International School of Management Excellence, Bangalore
(A recognized research center of University of Mysore), India
Email:remya.sanju.nair@gmail.com

Abstract

UTAUT or Unified theory of acceptance and Use of technology is the technology adoption model proposed by Venkat et all (2003). This is a descriptive paper analysing both UTAUT as well as UTAUT2 based on Literature review. The research papers published from 1989 to 2020 are analysed and included in this paper. The concepts of the UTAUT as well as UTAUT2 are explained in detail. The other models that contributed for the development of UTAUT model are also mentioned in this paper.. The theoretical model of UTAUT suggests that the actual use of technology is determined by behavioural intention. The apparent prospect of adopting the technology is dependent on the direct influence of four key constructs - performance expectancy, effort expectancy, social influence, and facilitating conditions. The effect of predictors are moderated by factors like age, gender, experience and voluntary willingness to use. To provide a holistic understanding of technology acceptance, the researchers can set the objective for creating a unified theory of technology acceptance by incorporating key constructs, theory enabling the model to predict behavioural intention and use. The UTAUT theory has been utilized to explore human-computer interaction. In the field of research, UTAUT has contributed immensely to the literature. The model provides insight into technology acceptance by assessing prominent technology acceptance theories, which offer distinct perspectives on the subject. UTAUT demonstrates that proposed factors account for 70 percent of the variance in use intention, offering stronger predictive power compared to the rest of the models that examine technology acceptance. The collaborative impact of constructs with personal and demographic factors establishes the complexity of the technology acceptance process, which is in turn dependent on individuals' age, gender and experience. The Practical Implications, Applications of UTAUT model, Limitations of UTAUT model are explained in detail in this paper.

Keywords: UTAUT, Technology adoption, Effort Expectancy, Performance expectancy, motivation

A STUDY OF FACTORS INFLUENCING PURCHASE INTENTION IN THE CONTEXT OF INFLUENCER MARKETING

Samuel Vero Viegas
PGDM Student,
International School of Management Excellence, Bangalore

Haritha S
Assistant Professor,
International School of Management Excellence, Bangalore
haritha@isme.in

Abstract

Influencer marketing is rapidly growing throughout the globe, which has led marketers to view it as a crucial component of their available marketing alternatives.The internet offers a marketplace and a channel for reaching potential customers. Utilizing influencers in the marketing campaign is one of the best strategies to do this. The aim of this study is to find out the factors affecting the perception of the consumers on influencer marketing and find out how demographic variables moderate between independent variables and consumer perception on influencer marketing. The influencing factors considered for this study are trustworthiness, knowledge, homophily, attitude and likability. Quantitative method is used, whereby a self-administered questionnaires were distributed to obtain data using convenience sampling. Statistical Package for the Social Sciences (SPSS) were used to analyze data collected. Linear regression analysis was used to assess the impact of the influencing factors on purchase intention. The findings indicate that a significant amount of relationship between all the independent variables toward purchase intention and hierarchical linear regression was used to prove that demographic variable such as household income, gender and employment moderates purchase intention in influencer marketing.

DETECTION OF SPAM TWEETS IN TWITTER

P.S.S.N.Chandra
PGDM Student,
International School of Management Excellence, Bangalore

Prof Stuti Agarwal
Assistant Professor,
International School of Management Excellence, Bangalore

Abstract

The world of Online Social Network (OSNs) like Facebook, WhatsApp, Twitter, Instagram etc has gained a lot of popular these days. These platforms not only help in sharing information, photos or videos, but also connects the world. Unfortunately, these platforms can be manipulated in various ways one of them being spam. To get a cyber-crime free world, detection of spam plays an important role. Many organizations are working towards Spam Detection to ensure cyber safety and enhance user experience. In this paper focus on one of the OSNs namely Twitter. There is a challenge in classifying the tweets (Spam/Ham) and identifying the spam tweets in twitter. Though a lot of naive methods are available, there is no major evidence from literature of enhanced methods to classify and identify them. Timely identification of spam tweets is required to enhance users experience and to thrive for spam-free environment. In this literature, an effort has been made to detect spam using the tweet metadata and tweet content by leveraging advanced machine learning algorithms. The model has been validated in couple of ways to ensure the robustness of the results.

Abstract

Digital marketing is inevitable for any form of business. It pays way to reach a mass audience at any given time. The degree of digital acceptance by organisations and the knowledge and ability of organisations to use the platform to its total capacity play a significant role in attaining competitive advantage. This study aims to understand the factors influencing the digital marketing acceptance of business schools using the technology acceptance model (TAM). The well Structures questionnaire was designed in consultation with an expert panel comprising industry experts and academicians. 143 responses were collected through personal interviews and mail surveys. Stratified random sampling was used to select the respondents for the study. Collected data were all analysed using descriptive statistics and inferential statistics. The conceptual model developed for the study was tested using structural equation modelling. Results showed that perceived ease of use had got a positive and significant impact on perceived usefulness, and perceived usefulness has got a positive influence on attitude and intention of using digital marketing. The attitude was found to have a significant positive impact on the intention to use. This study also showed that experience strengthens the positive relationship between attitude and intention to use. This study extends the technology acceptance model by adding experience as a moderator variable in the relationship between attitude and intention to use. The insight from this study would help educational institutions strategize their digital requirement.

Abstract

Globally, consumer behaviour facets of Functional food as a health food option has been widely researched since late 1980s, coined in Japan first. In India, the concept has gained traction only since last decade; studies regarding market and consumer aspects are scattered and limited. Considering this gap, a need for an extensive literature review encapsulating studied variables and adopted methodology was felt. This would be a first extensive literature review study consisting of academic research published for exclusive India consumer market being done. This study has been undertaken through a systematic database search to synthesise the studies done since year 2000 to 2022. The objective of this review is to uncover the research variables, find gaps and present future research opportunities. A total of 23 research papers have been considered after focussing on consumer behaviour aspects aiding or deterring acceptance of Functional food in India after careful assessment through the inclusion and exclusion criteria. It is found that factors such as socio-demographic, psychographic and product attributes play an important role in the acceptance of products. A general confusion regarding Functional food benefits, health claims, product knowledge and awareness seems to exist giving rise to credibility issues and credence. It is now even more important to conduct research in this field to determine factors of consumer acceptance of Functional food.

CROSS-SECTION OF EXPECTED STOCK RETURN: A PERSPECTIVE FROM SYSTEMATIC AND UNSYSTEMATIC RISK FACTORS IN INDIAN STOCK MARKET

Karkaria Dusmanta
Research Scholar
Pondicherry University

Abstract

This article evaluates the cross-section of expected stock return between systematic and unsystematic risk as well as re assessment of size and value effects in the Indian stock market through a Fama-French risk-capture model. The top 487 companies in the S&P BSE 500 index were studied from July 2002 to March 2021. In this article we found that small firms with higher risk give higher monthly average returns whereas large firms with higher risk give lower monthly average returns on the size-SD sorted portfolio. Size is the most prominent stock anomaly, with a monthly average mean excess return of 5.2% in the Indian context. Fama-MacBeth cross-sectional regression does not explain the one-factor, three-factor, and augment FFTF* asset pricing models, whereas the GRS model fitness test does for the Fama-French Three Factor (FF3F), and augment Fama-French pricing models. More importantly, this study discovered that stocks/portfolios with higher abnormal returns carry higher risk, in addition to size and value anomalies having a significant impact on the Indian equity market. As an investor cannot avoid size and value anomalies before investing in a stock market an emerging market like India, regardless of whatever the situation, whether it is a financial crisis, the COVID-19 pandemic, or any other natural calamity or disaster these two stock anomalies play a prominent role in the Indian equity market. This study has strong implications for financial consultants, mutual fund managers, investment strategists, individual and institutional investors, the market practitioners who want to beat the market and earn an abnormal return on their investment in the Indian equity market.

Abstract

Industry practitioners are always in search of effective investment strategies in their endeavor to achieve portfolio optimization. Moving averages have long been coveted by many such decision -makers. In this research work, a comparison between the 'buy-hold' strategy and the quant-trading strategy using exponential moving averages' is carried out. This study examines the profitability of implementing an Exponential Moving Average (EMA) cross-over strategy in the Indian stock market over the period 2010 – 2022. To facilitate the experiments, Nifty50 (^NSEI), Nifty500 (^CRSLDX), and NiftyMidcap50 (^NSEMDCP50) indices are considered. This work contributes to the existing quantitative trading and technical analysis literature. It is a pioneering effort to implement a moving average strategy on an equal weighted portfolio constituting different indices with a universe of stocks with varied characteristics. The results indicate that there is an outperformance of the moving average strategy (average yearly returns: 10.79%) over the buy-hold strategy (average yearly returns:8.42%) for the aforesaid period and dataset. The study also finds that the moving average strategy is capable of identifying market directions and movement reasonably well, which facilitates the generation of profitable returns. The study iterates the validity of technical analysis techniques to identify trade signals effectively, however, the marginal outperformance also emphasizes choosing a trading rule that optimizes transaction costs and taxes to ensure that such profitability sustains.

CSR SPENDING AND ITS RELATIONSHIP WITH SHARE PRICES (WITH SPECIAL REFERENCE TO TOP CONSUMER FOOD COMPANIES IN LIGHT OF COMPANIES ACT 2013)

Ms. Saniya Marwah
Department of Management Studies,
Rukmini Devi Institute of Advanced Studies, Affiliated to GGSIPU, India
marwahsaniya@gmail.com

Abstract

For the purpose of making the firms accountable and responsible towards its stakeholders, Companies Act 2013 has introduced mandatory contribution of 2% of average net profit towards Corporate Social Responsibility. In the present study, the relationship between Mandatory CSR spending and Share Prices has been studied for top consumer food companies listed on NSE. The study can help us to know that whether this compulsory move by the Government is a burden on the companies or not. Share Prices have been taken as they reflect the wealth of the shareholders and also an impression of investor's confidence. The results depict positive and strong relationship between compulsory CSR Spending and share prices for all companies.

Keywords: Corporate social responsibility, CSR spending, Share Prices, Consumer Food companies, Companies Act 2013.

FORECASTING THE CRYPTOCURRENCY PRICES – A MACHINE LEARNING APPROACH

Abstract

Crypto currency is a non-centralized digital currency that is exchanged between peers without the need of a central government. Understanding the relationships among crypto currencies is important for policymakers and investors. It helps the former to come out with strong action plans to guide the financial markets and latter to take vice investment decisions which can utilize crypto currencies to be a part of portfolio construction. Crypto currency operates with block chain technology with a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. Accurate forecasting of the crypto currency prices is a major challenge for the traders and investors. This can be attributed to the high volatility and dynamism prevailing in the crypto space. Predicting the crypto currency prices and forecasting the future price movement, helps the investors to take appropriate investment decision, improves profitability and hence decrease possible losses. This research tries to forecast the prices of 20 most traded crypto currencies using Machine Learning. The price movement of these crypto currencies for the period from 1st April 2018 to 31st March 2021 is taken for the study. Secondary data is analysed to show the yearly returns, rate of growth, risk factor, average daily returns, and compound annual growth rate of prices of crypto currency during the study period and was validated. Machine learning algorithms build a mathematical model which helps to make predictions or decision of the future price movements of crypto currencies studied. This was carried out using WEKA Software.

AN EVALUATION OF INVESTMENT PATTERN OF GOVERNMENT OF KARNATAKA EMPLOYEES IN SELECT FINANCIAL SECURITIES

Premalatha K P
Assistant Professor
CMS-BS Jain University, Bangalore

Dr. S J Manjunath
BN BIMS, University of Mysore, Mysore

Abstract

The growth of a developing economy is driven by the capital market investments which are financed through domestic savings by households and institutions. Economic surveys suggest for stimulation of investment incentivising policies to recover the economic slowdown in respect of savings and investments ratio in India. An attempt is made to understand the investment pattern of government of Karnataka employees as they receive regular income which can be well utilised by routing it to an effective investment channel. The study examined the influence of demographic factors on their investment preference and their overall investment pattern. It is found out that age and experience impacts their investment pattern and large amount of their funds are routed to less risk securities like bank deposits, insurance and post office schemes and investors have shown least preference towards equity and debt instruments.

Abstract

The study aims to analyze the long-run performance of SME IPOs and investigate IPO specific, company specific, and market specific variables that influences the performance overtime. This article utilizes information of 383 listed firms at Indian SME platform from 2012 to 2020. Based on the reduced sample size, the article uses only 12 month of trading data for the computation of returns. The article uses event time methods to examine company performance through market adjusted excess returns (MAERs), cumulative abnormal returns (CARs), and buy & hold returns (BHARs) based on the equally weighted and value weighted portfolios. Furthermore, the study employs calendar time portfolios with Fama-French three factor model and Carhart four factor model to have more robust results. Similarly, the study uses the cross-sectional OLS regression to analyze numerous factors that influence the performance of SMEs IPOs. Using 12 months BHAR, result shows the IPO over performance of both equally weighted and value weighted portfolios and the positive alpha of calendar-time portfolios validates the results for the same duration. While previous research shows the IPOs underperformance at global stage, the current findings of IPO over performance are in line with those of other Asian countries including China, Malaysia, and Korea. Similarly, the result shows the significant impact of issue size, oversubscription, debt to asset ratio, profitability, hot market, listing gains, underwriter reputation and underpricing on the long run performance of Indian SME IPOs.

Abstract

Peer-To-Peer lending platforms are becoming a good investment avenue for lenders to invest their money in borrowers, who need money for a different purpose. As lending and borrowing of money is facilitated by the P2P lending platform, it becomes necessary for the platform to understand the users and accordingly fine tune the 'User Interface' (UI) and 'User Experience' (UX) of the platform. For lending and borrowing to take place through a platform it is necessary to have an 'n' number of lenders who are ready to lend money to an 'x' number of borrowers. This study is specifically done to understand lenders' motivation to use P2P lending platforms. This is a unique research work as sentiment analysis of lenders' motivation to use these platforms has not been explored earlier. The sentiment analysis technique was used to examine lenders' sentiments towards the use of P2P lending platforms. The research results show that, ~ 70 percent of lenders showed motivation to use P2P lending platforms as an investment avenue in the future. As the P2P lending platforms are relatively new more research can be carried out in future.

Keywords: P2P lending, sentiment analysis, topic modelling, motivation to use.

Abstract

Digitalization is becoming one of the essential instruments for reducing transaction costs and increasing efficiency. RBI is promoting digitalization to bring more reforms in the finance sector. 2019 Onwards, RBI has implemented an expansionary monetary policy by lowering the interest rate, increasing investment, and aggregate demand, thus leading to an increase in the equilibrium output. Financial Technology abbreviated as "FinTech" includes subdomains like Peer-To-Peer lending which is becoming increasingly popular for lending and borrowing without the active role of banks. The positive impact of this kind of platform called 'Zopa' on the money supply in the United Kingdom was observed in 2005 during the early stages of the global recession. This paper examines the relationship between changes in monetary policy and the motivation of lenders and borrowers to use P2P lending platforms. Our study consists of time series data from 2011-2022. The research findings show that the contraction in monetary policy has helped the P2P lending platforms to expand their business. An increase in repo rate (RR), Cash Reserve Ratio (CRR), and Statutory Liquidity Ratio (SLR) motivated lenders and demotivated borrowers to use P2P lending platforms. Whereas reduced reverse repo rate (RRR) demotivated lenders, and motivated borrowers to use these platforms. The paper contributes to the existing literature for analysing the linkages between P2P platforms and money supply in the economy.

Abstract

SMEs can be found in a variety of sectors in India, such as manufacturing, retail, and services. They contribute significantly to the economic growth of the nation and form the foundation of the Indian economy, contributing about 40% of its GDP and employing around 110 million people. The sector is considered the second-largest employer after agriculture. SMEs in India face many hurdles in availing of credit due to information asymmetry, limited credit history, and complex application processes. When determining whether to offer loans or other forms of credit to small and medium-sized businesses (SMEs), financial institutions may encounter several difficulties. This paper attempts to research the parameters on which the creditworthiness of SMEs in various sectors can be analyzed. The factors to be considered in the analysis of creditworthiness and the weightage to be given to each parameter. For the research two sectors have been identified: the sectors for capital goods and consumer durables. In the capital goods industry, three listed SMEs and Consumer durables two listed SMEs are identified for the study. The data for all the companies are analyzed for three financial years. The research finding helps to identify comprehensively the parameters for credit scores and the weights attached to each parameter which help in arriving at the credit scores for SMEs in each sector. Using MCDM, financial organizations can solve their difficulties (multi-criteria decision-making model). The financial industry is changing drastically. Payments, loans, insurance, and wealth management are all being changed by digital technologies.

IMPACT OF FINANCIAL DRIVERS ON FIRM PERFORMANCE: A STUDY ON EMERGING ECONOMY

Damini Kumari
Independent Researcher,
Department of Commerce, Delhi School of Economics,
University of Delhi, India

Harshita Gupta
Independent researcher,
Department of Commerce and Business Studies,
Jamia Millia Islamia, New Delhi, India

Abstract

The study explores the impact of R&D expenses, leverage, and firm size on the managerial efficiency of the firm as reflected by its performance. We also analyze the industrywise effects of the selected factors on the firm performance of a developing country. The disaggregation analysis includes five industries: automobiles and parts, chemicals, construction and matter, industrial metals and mining, and oil and gas. Using the data set of Indian firms for ten years, our empirical analysis indicates that expenditure on research-related activities does not affect the performance of firms in the industries mentioned above. In contrast, leverage has a consistently negative effect on firm performance in all industries except the oil and gas industry. Further, we find that firm size has a differential impact on the firms' return on assets in these industries. Our results are robust to heteroskedasticity and multi-collinearity issues.

IMPACT OF CORPORATE SOCIAL IRRESPONSIBILITY ON MANAGEMENT EFFICIENCY- EVIDENCE FROM EMERGING MARKET

Harshita Gupta
Research Scholar
Department of Management Studies, Indian Institute of Technology, Delhi, India
harshita2381995@gmail.com

Prof. Shveta Singh Professor
Department of Management Studies,
Indian Institute of Technology Delhi, India.

Abstract

The purpose of the study is to analyse the relationship between corporate social irresponsibility (CSiR) and management efficiency as proxied by asset turnover ratio. The study examines a sample of Indian manufacturing firms from 2007-2016 with 1,113 observations using a comprehensive dataset from RepRisk and Bloomberg® to run a system generalized method of moments (GMM) estimation. We find that CSiR positively affects management efficiency and the effective utilization of assets in generating sales. For domestically focused manufacturing companies in emerging economies, where there is less demand or stakeholder expectation, corporate irresponsibility may not be as important a deciding factor, especially if the target market is highly price sensitive. However, managers should heed caution before divulging in CSiR activities for the consequences can be damaging in the long run. The study's grounding in an emerging market setting, such as India, sparks a discussion on a contextualized understanding of negative aspects of corporate behavior in evaluating management efficiency of the firm.

FINANCIAL DISTRESS PREDICTION USING ALTMAN Z SCORE AND STOCK PRICES - A CASE OF NSE-LISTED INDIAN MANUFACTURING COMPANIES

Dr Ratchana R
Assistant Professor,
International School of Management Excellence, Bangalore
Email: ratchana@isme.in

Sudindra V. R.
Assistant Professor,
International School of Management Excellence, Bangalore
Email: sudindravr@isme.in

Abstract

The Altman Z-Score Model has been employed to predict financial distress since its original conception in 1968. The model is perceived to be detailed in its methodology for assessing financial failure because it is predicated on values available in a company's financial statements as well as principles established by influences extraneous to the firm's operations. The share price of a business is viewed as a mirror image of its economic position, with its real worth being an attribute well within the framework as a whole. This study aims to investigate the internal dynamics of the Altman Z-Score model and examines its potential as a predictive factor of bankruptcy. It also examines the link between a firm's Altman Z-Score and its mean share value to establish if a causative link exists between these two factors within the Indian Manufacturing Sector and used randomly chosen 20 samples from the sector specifically mentioned for the 5-year period from 2018 to 2022. The research highlights a significant relationship between a company's share price and its Z score, and investors can evaluate these Zeta (ζ) index scores based on key financial parameters before attempting to make any well-informed investment choices in distressed businesses with incredibly low Z-scores that appear on the brink of bankruptcy or insolvency.

Abstract

The impact of Information Technology on workplaces, individuals and society as a whole has increased dramatically during the last two decades of the 21st century. This period has seen maturation in the field of digital computing, combined with the use of telecommunications technology, in order to link many computers into what a very large single network is 'virtually', the Internet. Data has become widely accessible, and readily inter-related. Implementation of new technology has led to many changes in the workplace. This paper aims to study the impact of technology on various Job-related factors. Four factors shortlisted for the study i.e. Job Performance, Well Being, Work Motivation and Person Organization Fit. Which Job factor is getting affected to maximum extent with the introduction of technology? The study was done with the help of questionnaire based on Likert scale. Data was collected from 162 employees of various organization. Convenience sampling method was used. Data was analyzed through SPSS Software and excel to find out that Work Motivation is the most impacted factor by introduction of new technology, followed by Job Performance, PO Fit and Well Being.

harold.patrick@jainuniversity.ac.in

Abstract

The ASHA workers at the community level work for primary healthcare services of the Nation, especially in the rural areas where they are providing non-stop services. In spite they are not paid properly, neglected, not recognized are becoming invisible to the nation at large, It is their personality and the roles of an organization that influenced ASHAs to get motivated to perform their roles and responsibilities. The study's main aim is to analyze the mediation of personality in the relationship between organizational roles and motivation. The study is descriptive in research with a sample size of 140 ASHAs for 10 PHC centers in Bangalore and these are identified on the basis of the Convenience Sampling method. The study is both qualitative and quantitative in nature and the data is collected through primary sources by using a questionnaire method and focus group discussion. Data were analyzed by using SPSS and & Smart PLS. The study reveals that there is a complete mediation effect of Personality on the relationship between Organisational roles and Motivation. The findings of the study are useful for Government and PHC centers to redesign their policies and strategies to create recognition and reduce the difficulties and challenges of ASHA workers.

Abstract

Error is an inherent part of human nature. Currently, the term human error is widely used in pharmaceutical industries. It originated in the realm of quality and safety in the manufacturing process. Human error poses a challenge to Safety, Integrity, Strength, Purity, and Quality (SISPQ). Due to regulatory agencies, investigations into human error are in high demand in the pharmaceutical industry. From a quality perspective, consistent efforts are being made to control human error at every level. In this current research paper aims, we aim to explore the relevance and significance of Human Error in the pharmaceutical industries through an extensive review of the literature.

Keywords: Human error, Human factor, SISPQ, Training, Compliance, Pharmaceutical industry

Abstract

Socialisation of newcomers in an organisation has always been a key activity. Multiple components of socialisation have been examined over time, and research into this has used a variety of approaches. Initially, it was thought to be the process by which organisations acculturate newcomers. However, much current research views it as a nurturing process, in which the role of the new player is far more essential and organisations can merely adapt the activity. The essence of socialising in the workplace cannot be overstated, because of being the most important aspects of establishing and preserving organisational culture. Newcomers with more than 18 months to less than 24 months of experience in a given company were surveyed. Results from Bengaluru's service industry were included. in the study. As an instrumentation tool, a thorough, standardised Questionnaire was adapted and 304 employees completed it, using a basic, random selection procedure. Descriptive statistics, Bivariate Correlations, and Regression were the statistical approaches used. We investigated and examined two possibilities. The findings back up the theory that corporate culture and socialisation strategies are linked.

SHIFT WORK DYNAMICS AND ITS IMPACT ON EMPLOYEE WELLBEING IN THE MANUFACTURING SECTOR

Afseer Majeed PhD
Lecturer - Business Management,
Explore Educational Institute, Dubai – UAE
academic@exploreeducation.ae

Abstract

In the modern world of industrialisation, productivity is the critical variable defining the success of any organisation. Shift work is a tried and proven system to boost productivity, especially in a manufacturing environment. UAE is a country where the manufacturing sector is proliferating, and more and more employees are undergoing shift working schedules. This research analyses the effect of shift work on employees' well-being in the UAE manufacturing industry. The study is conducted between employees from various companies who are regularly doing shift work. This study is quantitative research to see how the employees perceive the shift work and how it affects their productivity in the long run. The data was collected through the questionnaire method, analysed statistically with the help of a certified statistician and derived the conclusion. Some of the larger issues that may arise for employees who work shifts are the disruptions to sleep patterns and fatigue. Working non-traditional hours can make it difficult for employees to get enough sleep, leading to fatigue and decreased productivity. This has been linked to an increased risk of certain health problems, such as heart disease, diabetes, and gastrointestinal issues. On the other side, shift work can make it difficult for employees to maintain a healthy work-life balance, as it can interfere with their ability to participate in social activities and spend time with family and friends. This study's outcome suggests that shift work has to be carried out in an organisation in conjugation with other supporting programs that can help employees balance their professional and personal needs; by doing so, companies can reap productivity for the long term while keeping the employee's well-being at optimum level.

Abstract

This paper examines the cultural orientation of IT managers in India. It looks at the cultural values, beliefs and behaviors that affect IT management in India and how these cultural orientations are shaping the development of the Indian Information Technology (IT) industry. The paper also identifies the key aspects of Indian culture and their implications for IT management in India. It further examines the challenges faced by IT managers in India when working in a culturally diverse environment, and provides recommendations to ensure successful IT management in India. Finally, the paper discusses the importance of cultural orientation for successful IT management in India to ensure that the IT industry remains competitive in the global market. The Information Technology (IT) sector in India has been growing rapidly in recent years, with many multinational companies setting up offices in the country. This has, in turn, created a requirement for IT managers to be culturally aware and sensitive to the needs of the Indian market. This paper aims to provide a comprehensive overview of the cultural orientation of IT managers in India. The paper begins by discussing the cultural differences between India and other countries, and how they impact IT management. It then looks at the various aspects of cultural orientation, such as language, religion, gender roles, and social norms. Finally, it provides practical advice and suggestions for IT managers in India, including how to effectively communicate with employees and customers, and how to create a culturally-inclusive work environment. The paper concludes by noting that cultural orientation is an essential component of successful IT management in India, and that IT managers should take the time to understand the cultural context in which they are operating.

Abstract

Managing people at workplace via the top-down approach fails to facilitate the individuals' Flourishing and work engagement. As the teams/ organisations/ institutions becomes bigger, the more generic the job description and job roles become. Hence the construct of Job Crafting plays a vital role in curating meaningful jobs aligned to an individual's core. Job Crafting facilitates a bottom-up approach where individuals relook at their job design, and make minor tweaks at cognitive, tasks and relations aspects of job. This study examined the effectiveness of job crafting intervention. The participants in the experiment group were a homogenous mix of individuals at jobs working at a same entity. The study was done using a quasi-experiment design methodology where we followed a pre-test and post-test approach to measure Job Crafting levels. The treatment here is the Job Crafting Intervention is a 3.5 hours long workshop structured session. The level of Job Crafting was measured before the start of the workshop (Timeline T1) where individuals are not informed on what is measured. Three weeks after the intervention the Job Crafting levels was measured again using the standards Job Crafting scale. The impact was intervention was analysed using a T- test on the pre and post levels. The intervention showed a significant positive effect on levels of Job Crafting. A mean difference of 4.2 to 4.8 (6-point scale) was observed after the experiment respectively on pre and post Job Crafting levels. A slight positive correlation was found after the intervention (~.3 Pearson correlation). All the results were shown significant through the statistical tests. The study proved that the developed Job Crafting intervention was effective in increasing Job Crafting levels among employees. Towards the end of the intervention, an open-ended question was asked, and the responses showed that the intervention had a positive impact among the participants and helped them to relook at their existing job with more meaning.

IMPACT OF EMOTIONAL INTELLIGENCE, PERSONALITY TRAITS, RISK PERCEPTION AND BEHAVIOURAL BIASES ON INVESTMENT DECISIONS

Dr.S.Johnsi
Associate Professor,
DJ Academy for Managerial Excellence, Coimbatore
johnsi.s@djacademy.ac.in

Abstract

The main objective of this study is to analyse the impact of Emotional Intelligence, Personality Traits, Risk Perception and Behavioral Biases on Investment Decisions and to measure the mediating effect of selected variables on Investment Decisions. The study depends on primary data and a well-structured questionnaire is used for this purpose. Multi-stage sampling technique has been adopted to determine the sample for the study. A model using PLS-SEM is tested to examine the impact of personality traits, emotional intelligence, risk perception, behavioural biases and investment decision making. Structural Equation Modeling (SEM) is used to explain the relationship between multiple variables and the structure of inter relationships among various constructs is examined. The result of the mediating effect is confirmed by SOBEL's test. The current study also indicates that emotional intelligence was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Cognitive dissonance was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Herding was found to have a significant positive relationship with equity exposure. So, it is concluded from the study that emotional intelligence and behavioural biases have a major impact on the investment decisions.

A LEADERS' ROLE INFLUENCING THE WORK CHARACTERISTICS OF VIRTUAL TEAMS CONTRIBUTING TO EMPLOYEE PERFORMANCE – A BEHAVIORAL PRESPECTIVE

Gouri R Javali
PhD Scholar, Faculty of Management and Commerce
Ramaiah University of Applied Sciences, Bengaluru

Dr. Madhu BK
Assistant Professor, Faculty of Management and Commerce
Ramaiah University of Applied Sciences, Bengaluru
madhubk.mba08@gmail.com

Abstract

Employee performance is crucial for the success of any organization and the augmenting prominence of leaders' role to enhance employee performance of virtual teams has inspired the call for this study. The study aims to analyze and propose an integrated framework justifying the leader's behavior accounting to work characteristics contributing to employee performance in virtual teams of mid-sized- IT Industries in Bengaluru. The study is empirical in nature. Web-based survey and direct interview is conducted using questionnaire resulting in 180 responses from virtual team who are software professionals from IT Industry. The gathered data is analyzed subsequently by means of both descriptive and inferential statistics with the software IBM SPSS 20. The outcomes of the study show positive and significant relationship between leadership behaviors and work characteristics resulting in enhanced employee performance of virtual teams. The study offers experiential evidence and support the theory of leadership behaviors which postulates that the employee performance can be optimized when the leaders exhibit high degrees of task and relation-oriented leader behaviors accounting work characteristics in virtual environment. The managerial implications of the study and the potential avenues for future studies are discussed at the end of the paper.

The contribution of the workforce to the outcome produced by the organisation is crucial. When a firm works in a competitive market, employee performance becomes especially important. A crucial element that contributes to the organization's ultimate existence is employee motivation. Increasing staff productivity is an issue for businesses throughout the sector. People who work in organisational research are interested in methods for improving employee performance. Improving employee productivity requires a just and fair system of rewards that can be both tangible and intangible. The main aim of the current study is to map the relationship between appraiser and appraisee in affecting employee productivity in the IT industry. Furthermore, the study analyses whether professional development moderates the impact of the appraiser-appraisee relationship on employee productivity. For this purpose, primary data is collected from various mid-level employees of a firm utilising a quantitative questionnaire technique in order to understand their opinions of the relationship between the Appraiser and Appraisee in affecting employee productivity in the IT industry. Because a quantitative technique is used, a positivist research paradigm is most suited to achieving the study's objectives. In addition, the current study used a descriptive research design and a simple random sampling technique to gather data from 200 mid-level employees. The findings of the study suggested that in highly competitive circumstances, businesses work hard to establish a fair balance between employees' job performance and the success of the firm. Aspects for employee rewards and recognition are among the most crucial elements that may guarantee that many businesses recognise the effectiveness of their workforce. Employee empowerment has therefore become a key factor in determining the range and calibre of services offered to customers, and low staff productivity has been cited as a challenge to providing services. The findings of the study also revealed that the Appraiser-appraisee relationship has a significant impact on employee productivity and professional development and moderates the association between the appraiser-appraisee relationship and employee productivity. The current study results are essential for the management, the team leaders, the administrators and the HR professionals in comprehending the behaviour of their employees and accordingly adjusting the performance appraisal strategies to enhance the motivation and professional development capabilities.

Intrapreneurship is a much sought-after strategy in developing innovativeness and new business venturing capabilities of organizations, which is termed corporate entrepreneurship. While large organizations have well-designed processes and policies to develop corporate entrepreneurship, such defined policies and procedures are rare among small and medium enterprises (SMEs). The present study is to find the influencing factors such as passion for work, entrepreneurial behaviour of managers on intrapreneurial intentions and behaviour among the employees of SMEs. Also, the negative influence of organizational cynicism on intrapreneurial intentions and behaviour is found in this study. A pilot study was conducted through unstructured interviews among a few entrepreneurs, intrapreneurial and non – intrapreneurial employees to determine the variables of the present study. A total of 301 samples were collected from 13 SMEs which are into the service sector by distributing questionnaires based on valid instruments. Passion towards work is found to have a positive influence on intrapreneurial intentions. Also, organizational cynicism has a negative influence on intrapreneurial intentions and intrapreneurial behaviour. Additionally, the entrepreneurial behaviour of managers is found to have a positive influence on intrapreneurial intentions and intrapreneurial behaviour.

Abstract

Making wiser decisions about employees to improve performance at the individual and/or organizational levels is the process of HR analytics. HR analytics is a method for determining the correlation between HR practices and organizational performance outcomes such as sales volume or customer satisfaction. Human Resource Analytics was established in 1978 by Jac Fitz-Enz, the pioneer of human capital strategic analysis and performance benchmarking. In this paper, the researcher wants to discuss the concept of HR analytics, its application, impact on talent management, branding, and challenges in its application. The researcher examines secondary data and conducts a thorough literature review to understand the concept and its application across industries and nations, as well as to identify any challenges encountered during deployment and any benefits perceived by various industry professionals. Findings: The study's findings indicate that using HR analytics can help businesses build their brand and gain a competitive edge in today's fiercely competitive business environment while also enhancing workforce and employee productivity. This study has significant implications for both literature and HR analytics. Researchers will know more about the factors that contribute to and the mechanisms by which HR analytics improve organisational performance. The author's second claim is that having access to HR technology both facilitates and precedes HR analytics. Finally, concrete data from the literature demonstrates its influence on branding and organisational success.

Abstract

Employee Engagement is a serious concern for many organizations. Performance is quintessential but it lags without engagement. The values and codes for performance and engagement demand to be pronounced and established consistently to develop high performance engagement. Engagement issues and performance lags call to be discussed with transparency to initiate a proactive approach in the lag and lead, of performance engagement. High Performance Engagement, is an amalgamation of employee engagement and performance excellence to accomplish goals and stretch goals, with commitment and passion, beyond compliance. The study aimed to establish the socle of high performance engagement for organizational excellence Using a quantitative method, this study empirically verified the essence of high performance engagement from managers (N=350) in corporate companies. The results indicate that among the dimensions of high performance engagement, the employee-centric approach was perceived as the highest socle of high performance engagement (with a mean of 81.17) and performance strategies were perceived as the lowest (with a mean of 70.01) among the rest. The results evidence that employee focused approach is the predominant dimension for the socle of high performance engagement as perceived by the managers and motivation is the preponderated determinant of high performance in organizations. The results are indicative of an employee-centered approach rather than job centered approach, for organizational performance excellence with latitude on team synergy, and autonomy on performance strategies.

THE IMPACT OF EMOTIONAL INTELLIGENCE ON WORK-LIFE BALANCE IN START-UPS IN HYDERABAD

Jyothika Vemu
Student, PGDM
International School of Management Excellence, Bangalore

Prof. Dr. Sindhu Shantha Nair
Professor
International School of Management Excellence, Bangalore

Abstract

Work–life balance is a concept that includes prioritization between work (career and goals) and lifestyle (health, pleasure, leisure, family, and spiritual development). In broader terms that include "lifestyle balance" and "lifestyle choices". Many companies strongly support their employee's work-life balance through appropriate measures in order to improve employees' loyalty towards the company which fetches the company with better work life and a chance to recruit new employees. The flexibility in working times is the measure and it also influences the employee's private lives, with this there can be an increase in job satisfaction by reducing work stress. This in return helps in employee well-being. A start-up is a new business venture that aims to solve a problem, meet a need, or create value by offering innovative products, services, and solutions. Start-ups typically have limited resources, but have a strong focus on growth and a long-term vision. They are risk-takers. This paper studies the impact of EI on WLB in start-ups in Hyderabad. the work-life balance in start-ups can vary depending on the culture and size of the company. Some start-ups may have a more relaxed approach, while others may require a lot of work hours from their employees.

Keywords: Emotional Intelligence, Work-life balance, Job satisfaction, start-ups, and employee Well-being.

HAPPINESS AT WORKPLACE AS A MEDIATOR OF THE RELATIONSHIP BETWEEN HIGH PERFORMANCE WORK SYSTEM AND TURNOVER INTENTION: EMPIRICAL EVIDENCE FROM HOSPITALITY AND TOURISM INDUSTRY

Prof Shurlly Tiwari
Assistant Professor
International School of Management Excellence, Bangalore

Dr.Ujjal Mukherjee
Professor
Jain (Deemed-to-be-University)

Abstract

This research aims to identify the influence of a high-performance work system and happiness at the workplace on turnover intention among employees in the tourism and hospitality industry. The researcher surveyed a sample of more than 450 hotel workers to test a model that relates the following variables: high-performance work system, happiness at the workplace, and turnover intention. Data were analyzed by using structural equation modeling and Amos 24 version. Research confirmed that a high-performance work system positively influences employees' turnover intention, and there is an impact of happiness at the workplace on decreasing the employees' turnover intention. This study unlocks the relationship between the three variables HPWS, HAW &. From the managerial point of view, the hospitality industry should prioritize the investment in HPWS and HAW as it directly impacts the employees' turnover intention, directly affecting the business's baseline.

Keywords: High-performance work system, happiness at the workplace, turnover intention, hospitality employees

TALENT MANAGEMENT PRACTICES, ROLE OF PERCEIVED ORGANIZATIONAL SUPPORT IMPACTING EMPLOYEE ENGAGEMENT

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence ISME, Bangalore, India
pooja.nagpaal@gmail.com

Abstract

Employees are most valued assets of any organizations paving a path to success. Talent are the ability, skill and knowledge that employee brings to the organization to effectively perform their job well to achieve the organizational goals. In the current world of "Talent War" talent management is not limited to just acquiring a right talent but rather on deployment, development, engagement and retention of its employees. This study analyzes the drivers of talent management practices and perceived organizational support impacting employee engagement. The study comprises an analysis of data of 457 respondents from IT sector companies from IT hub of Bangalore, India. The result indicates talent management practices and perceived organizational support have a direct influence on employee engagement. The findings imply on theory and practice specifically in enhancing employee engagement using various talent management practices along with perceived organizational support. The study found scope for future research in comparing various sectors using additional independent variables in a longitudinal manner.

Abstract

The research paper aims to deliberate the issues and challenges leading to disruption of global supply chain with special reference to Organic foods and agri-business. The paper also summarizes the global supply chain scenario. The production and supply chain management issues & challenges of the current situation are discussed in the paper and effectively proposes strategies to be incorporated in policies making of Organic Food for strengthening the resilience and sustainability of the system at global level as the authors believe that it is important for current and future food managers and policymakers to understand the current system, structure, institutions, economic, social and environmental forces at play in each sector. The aim of this study was to clarify the ideas of Organic food supply chains and the organic production of food products to indicate some major issues and challenges and suggest their relevant recovery strategies. The paper assess methodological framework consists primarily of a systematic data collection from relevant government/ institutional databases and/or reports (i.e., APEDA, Statistica, IBEF, IFOAM and FiBL). Data were considered eligible for inclusion in the analysis if they were useful to assess in particular: (i) Organic -food demand globally, (ii) the effects on the Organic food supply chain services.The research paper discovers almost 9 recovery strategies such as support from the government, decentralisation of the distribution channels, Block chain technology, Integrated certification process etc for curbing the disruption in the organic food supply globally. In the end, the supply chain should respond and overcome the challenging situation in the organic food supply chain management.

Abstract

This study aims to structure an approach to optimize the distribution process in logistics operations for a Nagpur-based small-scale 3PL service provider and in the process to propose a model for companies in the logistics domain to follow. With an uncertain customer demand, the process of finding the best possible route becomes intricate. A methodology that reduces travel time, distance, transportation costs, inventory carrying costs, and administration costs had to be developed. Two generic requirements are considered in the study. Firstly, a single truck or carrying vehicle delivering to multiple customers. Secondly, a set of fleets traveling to multiple destinations with capacity constraints. For assessing logistics and supply chain difficulties, spreadsheet tools, particularly Microsoft Excel is used with Solver add-in. This study proposes a model to reduce the distance travelled, by which over utilization of resources can be considerably reduced aiming to control the carbon footprint for a sustainable logistics.

lavanyav@srmist.edu.in

Abstract

Many large companies are trying to revamp their commercial organization and prepare themselves for the future. Technology is changing the way consumers live. It is also changing the way customers operate, presenting new opportunities and new competitors. Technology, mobility and the internet have generated empowered customers who are more demanding and move faster. They don't look for a product. Instead, they look for a reliable advisor and an experience in each service. Traditional CPG businesses have had to adapt by combining the physical, offline and the digital, creating new services that we had not previously imagined and new sales capabilities, changing the way of connecting with customers. The objective of this paper is to help you understand how to bring together all commercial services and customer contact points in an innovative, direct, efficient and close way that improves services and drives growth. It also lays emphasis on the impacts on back-office operations like Order-To-Cash, Procure-To-Pay, Logistics, etc. One can learn about the necessary tools, processes and capabilities to support mutual teams to manage business transformation from a traditional sales model to a "digitally enabled" model by ensuring process and structure consistency, standardization, and excellence, while driving customer service improvement and top-line growth.

Shashank M
New Horizon College of Engineering

Abstract

The advertising industries have started to use AI technology to identify the trends in the market and enables them to use it to predict the future trends in the market take decisions, make budgets and helps identify their target market. AI has a huge impact on quality of any work done as it is done in a better and effective way comparatively to humans. As seen, that AI can dig deep into all types of data simultaneously with different timelines of data hence understanding the customer ideology, mind-set and preference at the best. The advertising industry is always developing. Because of technology developments like artificial intelligence (AI), greater targeting, and dynamic creativity, the way customers connect with companies is changing. In order to interact with audiences more effectively, advertisers can use machine learning. AI enables improved audience targeting and segmentation for advertisers acquired by strata sampling with individual experiences.

The purpose of this research is to understand the implementation of artificial intelligence in the advertising industry, and what impact Artificial intelligence have on advertising industry. Examining the acquired samples from the survey demonstrates that AI is frequently employed in the marketing sector, even though the applications are at the operational level. AI has an impact on each element of the advertising mix, having an effect on both how successfully consumers are supplied and how effectively advertising is organised and managed. In addition, paper also presents the understanding the role of AI in different types of advertising of toothpaste under FMCG products.

THE IMPACT OF HYBRID WORKING ON GEN Z AND TALENT MANAGEMENT

Sindu Akilesh
Head of Department
Department of Management New Horizon College Kasturinagar
sindu.nandakumar@gmail.com

Abstract

The year 2020 will never be overlooked within the history of this world. The widespread was uncommon in ways no one seem have ever envisioned. Inside fair six months of its approach, individuals all around the globe were constrained to sit at domestic. This research article points to move forward the information on Gen Z as workers inside workforce and within the working environment, as well as on the most thematic patterns that drive the investigate on the subject. The research study focuses on HR analytics, used and how the suitable candidates in a short period are identified and better decisions are made during recruitment thereby contributing to the company's growth. The study focuses on how the hybrid work mode has affected the employee's leadership and Talents for the organization. The main core areas of research study focused around Gen z, Workplace Management, attitudes and Career Planning. The study focuses on the need of and further development in the work force on the major aspects of this generation and the labor market. The investigation has gone into rethink the culture of a work force that is no longer confined to an office full –time. The study has shown that most Gen z employees prefer Work from home despite companies calling back to office. How the employee's talents can be enhanced through remote working mode is also being analyzed.

Abstract

The current available modern technology has made possible for us to have many more volunteers to participate in the conservation of our environment and help in the sustainable development. This allows for providing opportunities to people to contribute to the society. This has brought around an expanding number of versatile phone-based citizen science ventures that are outlined to get to these gadget highlights as well as to reach diverse client bunches, over distinctive venture lengths, and with diverse points and objectives. Here by integrating machine learning and predictive analysis, we can bring to life the basic idea of having people volunteer in these programs to help the environment. The Sainik application will help in accommodating all these ideas to fulfill the desire to help preserve our environment. It also provides people especially the youth to contribute to the safekeeping of our environment. Our experiments show that number of people volunteering have reduced by 1% in last 5 years and it is our goal to help improve that statistic. The major reason for this is not the lack of willingness of people to volunteer but the lack information of events requiring such help for both the organizers and the volunteers. The main purpose of this application is to help the environment while providing opportunities to the public and building a better place.

Abstract

Cyber Defense for any organisation has become a priority these days where the world is moving towards virtual communications and business happening among organisations globally. Critical areas to focus are breach detection and breach response. Taking a proactive approach to cyber security (CS) will enable us to avoid damaging and disruptive cyber attacks. Cyber attacks target the IT resources, leading to a tarnished and irreparable organisational image, loss of valuable data added with unproductive downtime. Organisations with proper cyber defense techniques will be able to conduct continuous business while facing persistent threats and sophisticated attacks. Availability of low cost powerful handheld devices coupled with low cost high speed data has led to deeper penetration of the internet. Changes in global scenarios dictated by pandemic are acting as catalysts for work from home , flourishing e-commerce and other mobile-app based delivery systems. Aggressive promotion of digital payments led by new age fintech startups, digital push by government incentivisation of digital payments, e-governance all together have fueled the exponential growth of the internet. However, this growth has also brought a plethora of cyber, ransomware and phishing attacks etc. Global data shows exponential growth of cyber attacks in this period of pandemic. Safeguarding intellectual property and Personal Identifiable Data (PID) in an organisation is very important. This paper discusses proactive implementation of various Cyber defense tools and methodologies for safeguarding IT assets and in turn mitigate cyber risks. These methodologies help organisations improve network integrity and availability, rectify numerous flaws, including misconfiguration of the security settings, analysing security gaps and vulnerabilities and taking remedial actions. This paper discusses the various steps and implementation of frameworks, methodologies undertaken by authors to ensure the three triads of Confidentiality, Integrity and Availability of information and also brings the importance of third party audits and certifications of the organisation in the field of information security.

Abstract

For a person to be physically, psychologically, and socially healthy, having a positive outlook on life is essential. Money alone won't make your life peaceful unless you also have peace of mind. In today's competitive society, when everyone is racing to the finish line, many other considerations are being carelessly disregarded. Stress, worry, and other issues among others all harm mental health. In order to address the aforementioned issue, this research suggests early detection and assistance for problems encountered in identifying a person's mental state. The system consists of 2 modules namely - 1) Facial Emotion Detection 2) Assistance. The output of all the models is combined and by further analysis, the final outcome is given in the form of prediction of the user's state of mind and also further assistance to enhance their mood.

Abstract

Quality plays a very vital role in signifying the credibility of the service provider. Academic institutions act as educational service providers to the students. The mushrooming of management institutes in India created an issue of question of quality mark and recognition. This necessitated gaining a Quality seal for the management institutes. Accreditation for an institute paves a mark of credibility. NAAC, NBA, NRIF are the accreditation bodies in India. The quality assurance governing bodies judge certain parameters for the institutes and proceed for gradation. This gradation embarks as a quality status symbol for these institutes. There are different criteria for gradation. One of the important aspects in these parameters is the faculty contribution in research. This research paper intends to explore the research environment provided to the faculties by the management institutes. It aims to examine the support extended by the institution through different aspects.. The constraints faced by teaching fraternity in pursuing research are examined and suggestions to overcome them are provided. The data is collected by both, primary and secondary sources. Primary source includes survey schedule (Google form) and secondary includes the journals, books, and websites. The support system from institution in terms of Allowance/ (travel), registration fees, Publication fees, Conference/seminar/FDPs, leave or outstation duty is explored. The responses for attributes like, managing time for research activities with other additional responsibilities, financial and non -financial support from institution are explored. 48.19 percent of respondents are of opinion that, research activities become very stressful, as managing time with other routine academic/ official work becomes a challenging task. This is managed many a times by sacrificing family time, sleepless nights and extending work hours. The research environment in management institutes seems to be on a lower note. The fair recruitment policies, optimum staff retention and support from management institutes will definitely change the research scenario.

Abstract

It was presumed that teaching effectiveness, self-efficacy, and continuous professional development have the power to change professional commitment owing to their cumulative nature in terms of thinking, acts, and realities. These ideas were also supported by previous research which advocated continuous professional development as a classical source of professional commitment because continuous professional development has the power to change oneself with strategies that facilitate the transfer of training throughout the life of a professional. This study examines the relationship between leadership style, self-efficacy, and professional development in higher education institutes in India. The study instrument used for this research is a questionnaire which was shared through an online medium. The population for the study consisted of academicians from higher educational institutes. The study's major finding indicates that the gender of academicians does not differ in leadership practices, self-efficacy or professional development. There is a positive relationship between leadership practices and self-efficacy and professional development.

Keywords: Leadership style, self-efficacy, professional development

THE USE OF TECHNOLOGY TO ASSESS STUDENT PERFORMANCE IN HIGHER EDUCATION INSTITUTIONS

Abstract

The purpose of this paper is to review existing literature on the application of technology-based student assessment processes, with a particular focus on artificial intelligence-based student assessment practices. We gained a deeper understanding of the current trends in student assessment processes as a result of this. The literature reveals a number of possibilities for incorporating digital assessment into educational systems. Secondary research also demonstrated the possibility of integrating artificial intelligence (AI) into students' teaching and learning processes. However, there is a gap between theory and implementation in Indian higher education. In order to gain a better understanding of how real users perceive technology and AI-based student assessment, a qualitative study was conducted. Participants in the study were stakeholders in the Indian management education system. Faculty and students from Indian management institutions of national importance as well as affiliated and autonomous institutions was included in the study. The study revealed faculty and students' perceptions regarding the challenges and benefits of digital and artificial intelligence-based student assessment processes. Based on the findings of this research management and policy makers can address inhibitions expressed by faculty and students before considering the digitization of student assessment processes.

Abstract

This study is to find out the effectiveness of different methods of teaching on the learning outcome of the students based on Bloom's Taxonomy. Questionnaires were used to collect data from students on their experience with the use of the Case Study method. The case study teaching method has a higher rate in both empirical and perceived effectiveness of the learning outcome based on Bloom's Taxonomy. The Socratic Method of teaching is a shared dialogue between the teacher and the students in which both are responsible for pushing the dialogue through questioning. The "teacher," or leader of the dialogue, asks probing questions in an effort to expose the values and beliefs which frame and support the thoughts and statements of the participants in the inquiry [Rob Reich, 2003]. The study conducted measures the effectiveness and its intersectionality between education and business (Business Studies) and has been widely used in higher education institutions especially the management studies to facilitate effective learning across a variety of subjects like Marketing, Human Resource Management, Organizational Behaviour, Financial Management, and Business Management, etc. The study has found that the Case Method is useful for most of the subjects in Management, especially Marketing, Human Resource Management, Finance, and Business Ethics. It is also observed that the Case Method helps in remembering the knowledge created through their actions and behaviour.

Key Words: Case Method, Socratic Method, Project Based Learning, Bloom's Taxonomy, Learning Outcome, E-pathshala, Collaborative Skills

ABOUT INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE (ISME), BANGALORE

ISME is a leading business school offering excellent education through a student-focused culture of excellence, international outlook, entrepreneurial thinking and industry alignment. It was founded in 2006 by alumni from Carnegie Mellon University, Purdue, and Wharton, USA. ISME has always been at the forefront of quality education, with the vision of nurturing holistic, socially responsible and competent professionals. ISME has been ranked as one of the top B-Schools in Bangalore and top 1% B-Schools in India.

At present ISME offers undergraduate, postgraduate and Doctoral programs in Management. Our lush green campus at Sarjapur Main Road is an ideal ambience for study and research. The Institute constantly endeavours to expose its students to various methods of learning, like industry visits, interaction with industry experts, participation in seminars, case study etc. so that they become successful in their journey as they move from campus to the next phase of their career."

ABOUT THE CONFERENCE

Contemporary management issues often trigger the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices to facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time where all organisations worldwide must embrace continuous changes in technology, economy, environment, and government policies to remain competitive.The rise in digital adoption, the economic fallout of the pandemic worldwide, the rise of China as an aggressive global force, our government policies moving towards a more nationalist agenda, and growing geo-political tensions worldwide are some recent issues which confront businesses and management.

This conference is a platform for industry practitioners, academicians, entrepreneurs, and research scholars to come together to learn, share and discuss current emerging topics in management with thought leaders, technologists, and learning experts. The conference is a great knowledge-sharing event for a diverse audience embracing international and national participants. The event has renowned keynote speakers, practitioner-led workshop sessions, and offers an excellent networking platform.

The conference includes original research papers from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

CIM-23 Organizing Committee

MESSAGE FROM CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore!

On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 11th International Conference on 'Contemporary Issues in Management - CIM-23'.

We live in a world of disruption and drastic changes with different countries in different stages of the economic cycle. This conference aims to discuss issues relevant to the present time like mass layoffs by major MNCs and penetration of AI tools in our lives. All organizations must embrace the changes in technology, economy, environment and government policies to remain productive and competitive

This conference is a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with eminent international and national keynote speakers. Industry experts are a part of the panel discussion on 'Great Resignation to Grand Layoffs: The Contemporary HR Landscape'. We are delighted to share that CIM-23 has received papers from reputed institutions like Indian Institute of Technology Delhi (IITD), Tata Institute of Social Sciences (TISS), National Institute of Industrial Engineering, Mumbai (NITIE) and Symbiosis, Pune and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference.

Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,
Dr Rony G Kurien
Dean and Conference Chair

Research Centre, Affiliated to the University of Mysore
mayap.isme20@gmail.com

Dr.Geetha.Rajaram
Research Guide, International School of Management Excellence,
Research Centre, Affiliated to the University of Mysore
rajaram.geetha@gmail.com

Abstract

There is a clear shift in the way companies report their performance to the stakeholders. Integrated Reporting (<IR>) is a corporate reporting reform practices followed by many big companies all over the world. They are moving from more profitable companies to more responsible companies in terms of preserving the resources for future generation. The companies are accountable for protection of natural resources, society at large apart from other capitals, like financial & manufacturing capital. The objective of this paper is to check the compliance of Integrated Reporting Framework (IRF) of select Indian companies. For this the content analysis is done to cover all the content elements and the six capitals of sample companies. Analysis is done in 2 stages. One is content element analysis according to IRF, secondly analyzing the impact of IRDI on firm value. Spss; 29 version has been used to analyze the data of six companies of 4 sectors for 3 years from 2018-2021, since IR practices were made a part of voluntary disclosure since 2017 by SEBI circular for top 500 companies. Out of 7 content elements organizational overview has maximum score of 96.33% and strategic has got good score of 95.75% in the period of pandemic. All the companies had more focus on strategy to overcome the challenges of Covid-19. Another objective is analyzed by descriptive statistics and correlation, model summary, multi co linearity. A regression model is developed for the same. Tobin's Q is taken as a proxy for firm value and is considered dependent variable. The independent variables are the IRDI score, ROE, Size by market capitalization & ROCE. A regression model is developed to estimate unknown value of dependent variable (Tobins Q) using the known values of independent variables.

Keywords: Stakeholders, Firm value, Tobin's Q, IIRC, Integrated Reporting Disclosure Index (IRDI)

HOW A CHINESE TAKEOVER OF TAIWAN WILL EFFECT FOREIGN DIRECT INVESTMENTS

Dr. Rainer Wehner
Technical University of Applied Sciences
Würzburg-Schweinfurt
rainer.wehner@thws.de

Abstract

Over the past decades, China has gradually increased its geopolitical influence. Besides the Belt and Road Initiative, that diversified Chinas economic and political relations with many countries in the western world, Beijing has vowed to bring Taiwan back under Chinese control. That could provoke a massive conflict, because the U.S. President has made clear, the U.S. stand by Taiwan and will retaliate in the case of a forced attempt. Based on this scenario the purpose of this paper is an analysis of the consequences for the inflow of Foreign Direct Investments (FDIs) into Taiwan. For that reason, the author examined the published literature of the last years and analysed the Chinese – Taiwanese political and economic relationship. Furthermore, he researched the impact of such hostile takeovers on FDIs in similar situations to draw assumptions for an eventual conflict. It became apparent that the reactions of foreign direct investors vary, depending on the intensity of the conflict. Therefore, different scenarios of a Chinese takeover need to be drawn into conclusion. Based on the available data the major findings show that at the beginning of the conflict FDIs drop dramatically because the investors withdraw their money. Depending on the extent of the conflict, the destruction of the country and the impact on future economic prospects, the money will slowly flow back after a certain period of time.

COMPETENCIES OF BOARD MEMBERS IN ANNUAL REPORTS OF STANDARD & POOR'S BOMBAY STOCK EXCHANGE SENSEX ORGANIZATIONS

Amit Kumar
Research Scholar, GITAM University

Shanmuganathan Janardhanan (Late)
GITAM University

Abstract

While the importance of the right competencies of leaders in large organizations is well understood in practice, limited research exists about competencies of board members, especially in the Indian context. With this critical need, this paper attempts to provide a competency model, framework and a competency dictionary. The competency definitions in the dictionary are based on competency descriptions of board members of S&P (Standard & Poor's) BSE (Bombay Stock Exchange) Sensex organizations. Taking advantage of government guidelines that require listed organizations to disclose competencies of board members, annual reports of 30 Sensex organizations are subjected to qualitative analysis. A total of 246 competencies are identified. These are further analyzed to determine themes amongst those competencies that have been detailed by these organizations. A competency model of eight competencies, a competency framework & dictionary are developed by providing competency definitions for generic, specific & unique competencies through thematic analysis of competency descriptions. The research provides a method for leaders in organizations, specifically NRC (Nomination & Remuneration Committee) members in boards on Indian listed organizations, to identify, define & use the right competency requirements for board members. The research method also paves the way for future study of larger organization groups.

PRACTICAL WISDOM IN DECISION MAKING OF WOMEN'S COLLECTIVES IN SRI LANKA

Professor G D V RupikaSenadheera,
Department of Business Administration,
Faculty of Management Studies and Commerce, University of Sri Jayewardenepura, Nugegoda, Sri Lanka

Abstract

The aim of this paper is to present the practical wisdom of decision making of women's collectives in rural villages in Sri Lanka. It's built on the corporative society concept and selfsufficient membership organization that is run solely by underprivileged women in Sri Lanka. With a view to get a deeper understanding of the practical wisdom in decision making of women's bank collective, a qualitative methodology was adopted. The study's objectives are accomplished via a review of the literature, a theme analysis, in-depth interviews, and observations. Primary data came from in-depth interviews with 10 leading characters of Sri Lankan Women's collectives. Findings of this study reveal that the women's thinking and their maximizing and satisficing behaviors of decision making are based on different social meanings of their day to day life experiences and mutual understanding of their group members in terms of trust, honesty, equity and equality. Further deep analysis also reveals that every decision has integrated with the utilitarian perspective of ethics that mean their decisions always concerned for greater good for greater number of people in the group. And also women's collectives would be beneficial to enhance women's decision making power in the field of financial handling, insurance services, community development initiatives, cultural events, and business networking opportunities, disaster relief initiatives, and health and educational services as well. As a result of this behavior support women's for self-motivation, self-discipline, teamwork, and leadership skills in addition to the aforementioned value-added activities. Subsequently, the women's collectives have significantly helped to improve the socio-economic situation and empower women within the household and without their isolation of them through greater social interaction. And also this study will assist readers in learning about the idea of women's collectives practice by ground level and how it benefits the growth of women's lives, their families, and the whole nation.

KeyWords: Community Driven Project, Decision making, Economic Development, Empowerment, Women's collectives

BUSINESS EXCELLENCE & SUSTAINABILITY: MANUFACTURING, SERVICES AND AGRICULTURAL SECTOR

DEVELOPED PARAMETERS OF MANUFACTURING CAPABILITY MATURITY MODEL INTEGRATION FOR SUSTAINABLE GROWTH IN INDUSTRIES

Dilip Kumar Gayen
Research Scholar, GD Goenka University
Head Manufacturing & BE in East West Info solutions

Abstract

The post Covid pandemic has immensely impacted the manufacturing industries globally in the sustainable performance and progressive growth. Limited studies and researches are conducted worldwide by various scholars, industry's technical experts on manufacturing techniques for the sustainable manufacturing growth and business progression through the capability maturity model with customer's satisfaction in changed & challenging circumstances. During the evolution of Industry 4.0 & 5.0 techniques in manufacturing, the process is changing in the global manufacturing techniques & technology and performance of companies on the perspective of investment in the digitally controlled production through smart factories. In this study the objectives, the sustainable growth in manufacturing companies through a capability Maturity Model on Manufacturing is formulated by identifying the parameters and sub parameters at various Levels of maturity for sustainability in system standardization & performance. The maturity parameters & elements designed as a guideline for the manufacturing and operation heads to follow and implement this maturity & sustainable model for smart manufacturing, an efficient production structure and Future of Factory.

Keywords: Capability Maturity Model Integration (CMMI), Manufacturing Capability Maturity Model Integration (M-CMMI), Future of factory (FoF), Operational Excellence (OpEx), Smart Manufacturing (SM).

RENEWABLE ENERGY IN CORPORATE AND AGRICULTURAL SECTOR

Abstract

The world is focusing on saving environment and mother earth, it is very important to create awareness among the people to go eco-friendly. As we know that the electric era is taking a great move from the past decade and has reduced the use of petrol and other fossil fuels. It is important to note that the fossil fuel and non-renewable source of energy is in the stage of being verge and the world is making efforts to reduce the use of non-renewable source of energy, since the availability of fossil fuels is limited and cannot be used in some remote areas. But, renewable source of energy has eliminated all the loopholes associated with the conventional source of energy and made it convenient and safe for use. This paper reports the use of renewable source of energy and its implementation in the field of corporate and in the agricultural sector. Virtually, the corporates are involved in promoting eco-friendly products and taking initiative for creating the awareness to plant saplings. The renewable energy has the potential to solve all the problems faced by the developing countries. This paper also explains the policies implemented in the recent decade to overcome the hurdles and ensures the enhancement of renewable energy for future.

Keywords: Non-conventional source, Transition, Corporate Social Responsibility, solar power plants, wind mills.

DISRUPTIVE STRATEGIES FOR SUPPLY CHAIN DISRUPTIONS

Dr Sridharan.A
Professor, School of Business and Management,

sunita.kumar@christuniversity.in

Abstract

Supply chain disruption happens when forces, both internal and external affect the business's capability to get material, produce finished goods and dispatch them to the end consumers. This breakdown in supply chain could be due to bullwhip in marketing demand or suppliers' inability to meet demand or even natural calamities like monsoon or outbreak of pandemic or even the failure of logistic providers to meet transportation demands. Whatever be the reason, it will affect the business's top line and bottom line and the image of brand due to its non-availability in the shelves of retail outlets. It will become a case of "out of sight, out of mind" of consumers. According to Concord Monitor, toilet paper ran out of retail outlets as consumers panicked and the sale went up by 213% in March, 2020 over the same period in 2019. This is a classical case of demand overruns. When the ship Ever Given ran aground on 23rd March, '2021 in the Suez Canal, a total of 367 ships were caught in this traffic jam for a period of six days. Businesses lost billions of dollars as supply chain of raw materials and even finished goods were not delivered on time.

The year was 1962 and it saw the birth two big chain stores in United States of America, the one which is very successful one, Walmart and the other K-Mart. While Walmart continues to thrive and run successful business, K Mart folded in the year 2002 and later merged with Sears Group. There were many reasons for K Mart failure, but two things stand out, one being absorption of technology like internet and the other being smart supply chain operations like cross-docking, low inventories, that are being employed by Walmart. While disruptions are always there in businesses, this research paper explores on disruptive technologies that are available and which can be employed by businesses for their successes or at least reduce the dysfunctions.

Abstract

The COVID-19 outbreak and the prolonged period of shutdown wreaked mayhem for the new businesses that were beginning operations in India. Restrictions on the movement of goods and people leading to an increase in both supply and demand side risk, a lack of investors willing to continue investing in the firm, and the looming threat of a global recession are all factors that have made it exceedingly difficult for Indian start-ups to remain in business. However, in addition to difficulties that pose a direct danger to the very existence of start-up businesses, the pandemic has also brought about potentially fruitful opportunities for expansion. Given the lack of certainty regarding the development of a treatment for the disease in the near future, a number of different industries have generated a significant amount of revenue, and the opportunities presented by this situation appear to be sustainable. This article is a sincere attempt to elaborately highlight the challenges that Indian start-ups are currently facing and also the opportunities that they can bank on. The pandemic has affected various industries in a variety of different ways. The start-up ecosystem, which has never seen anything like this before, has its fair share of winners and losers as a result of this unique circumstance.

A STUDY OF CONSUMERS' BEHAVIOUR IN BUYING VEGETABLES AND FRUITS DURING THE COVID PANDEMIC

Ravella Prem Sai
PGDM Student,
International School of Management Excellence, Bangalore

Soundarya Shetty
PGDM Student,
International School of Management Excellence, Bangalore

Dr. S. Shyam Prasad
Professor,
International School of Management Excellence, Bangalore

Abstract

This study aims to investigate the behavior of consumers in buying vegetables and fruits during the COVID-19 pandemic. The COVID-19 pandemic has caused a major shift in consumers' behavior and the way they purchase their daily necessities. With the increase in health concerns, the demand for healthy and fresh food, especially fruits and vegetables, has increased. The data for this research was collected during the end of the first quarter of 2022 when the pandemic was subsiding. The concept discussed in this article and the findings thereof will add value to the literature, besides its relevance to academicians, the results of this study are also important to practitioners. The findings of the study revealed that regarding vegetables and fruits, offline is the choice of purchase over online. Retail store images do not play a decisive role in purchasing vegetables and fruits. variety, freshness, and economy have become major factors for consumers. The store image does not matter.

Keywords: Consumer Behavior, Covid 19, Fruits and Vegetables, Buying Habits

Abstract

The lifestyle changes induced to control the pandemic have impacted daily life and have brought notable difference in consumer behavior (Sheth, 2020). Everybody looks for convenience, customization, inclusion of latest trends, multi-channel engagement and alignment with the goal of healthy living. Around 80% of companies agree that customers would go online in the new normal and their new business model should be digitized to be economically viable, the businesses must examine how customer behavior is evolving, as well as identify the factors that make online shopping possible and how they interact with one another. Doing so will aid managers in developing strategies that will help them remain competitive in the new normal. Two brainstorming sessions were held; in the first, the experts were given relevant literature to help them discover the elements that encourage online shopping. With the help of expert opinion, SSIM was utilized to determine the contextual relationships between the sixteen identified online purchasing factors. To recommend the pair-wise comparison, the same 40 experts from the panel were consulted. These 16 variables were probably used to assess the and to construct a driver-dependence relationship among these drivers using interpretative structural modelling with MICMAC analysis.

Keywords: Covid-19,Online purchase, ISM-MICMAC analysis, shift in consumer behaviour

IMPACT OF DEMOGRAHIC VARIABLES ON E- WALLET USAGE WITH REFERENCE TO METAMORPHOSING OF ECONOMY

Abstract

With the advent of Demonetization in Indian Economy on 8th November, 2016 there has been the upcoming of "Metamorphosing of Economy". Indian Economy is undergoing some radical changes post demonetization era as now the culture of 'Cashless Economy' is gaining much importance. With the introduction of "Digital India" program in 2015; two different concepts i.e., 'Technology' & 'Bank' finally got combined and "Digital Banking" came into existence. The objective of this paper is to show the impact of various determinants viz. ease of use, trust, security, time saving and convenience on the usage of e-wallets in city of Allahabad. The study is based upon both primary & secondary data. The primary data is collected from 209 respondents with the help of 'Structured Questionnaire' framed by following the "5 points Likert Scale" technique. This study is both analytical & descriptive in nature. The collected primary data is being analysed with the help of Microsoft Excel and SPSS. The statistical tools used to interpret the data are Regression Analysis and ANOVA technique. The present study has highlighted that between age & ease of use factor affecting e-wallet usage there has been no relationship. At the same time this study also highlights that there is significant but negative relationship between age along with trust, security & time saving & significant positive relationship between age and convenience factors affecting the e-wallet usage. This paper also shows that there has been a significant but negative relationship between diverse income groups with ease of use & security factors affecting the e-wallet usage. At the same time study also reveals that there has been significant positive relationship between diverse income groups with trust, security & time saving factors affecting the e-wallet usage.

Keywords: Demonetization, Cashless Economy, Metamorphosing of Economy, Digital Banking, E-wallet.

CHALLENGES AND STRATEGIES IN GREEN MARKETING

Dr. P. Vanishree Sah
Associate Professor, H&S Department,
CVR College of Engineering, Ibrahimpatnam.
pvanishree@gmail.com

Abstract

In today's environment the terms like eco-friendly and green marketing are being used widely. Environmental issues like global warming and climate changes are creating lot of threats to the society. The society has become more cautious towards harmful effects of the technological advancements. Due to this awareness, eco-friendly and green products are gaining more popularity. Green Marketing has emerged as a trending concept in sustainable development of the economy. This paper analysis the challenges and strategies involved in the process of Green Marketing.

A STUDY ON ROLE & IMPACT OF AUGUMENT REALITY (AR) ON SEARCH ENGINE OPTIMISATION (SEO)

Aparna M Joshi
Head of the Department & Associate Professor,
Department of Commerce, The National College Autonomous,
Affiliated to Bengaluru University
aparnamj.09@gmail.com

Abstract

Augmented reality (AR) mobile app advertising offers new opportunities for interactive consumer engagement to boost advertising effectiveness and elicit positive consumer responses. In this study, I investigate the role of escapism by analyzing its antecedents and consequences. We aim to shed light on how AR mobile app advertising can be used to enhance escapism experiences by considering two psychological mechanisms of mental imagery: narrative transportation (in response to ad storytelling) and spatial immersion. Search Engine Optimization(SEO) refers to the process by which search engines "crawl" content to see how effective it willbe to attract traffic. Search engines will assess a number of things in a website (such askeywords, tags, and link titles) and rank it for its capacity to attract organic traffic based on avariety of factors. The consequences of escapism experiences include positive social media sharing, purchase intentions through brand attitudes, and new brand engagement via AR mobile app advertising. Prior brand preference does not affect the relationship between escapism and consumer responses after exposure to immersive AR advertising. My findings have meaningful implications for how industry practitioners can enhance escapism in the context of AR mobile app advertising.

DETERMINANTS OF CUSTOMER BEHAVIOUR INTENTION TO USE ELECTRIC SCOOTERS IN INDIA: UTAUT2 MODEL-AN EMPIRICAL ANALYSIS

Gagandeep Kudlu Srinivas
B.Com, PES University, India
gagandeep.fin@gmail.com

Raghu Yadaganti
Research Scholar, Krishna University,
Assistant Professor, PES University, India
raghuy@pes.edu

Abstract

The Research focuses on understanding what factors are impacting the customer purchase intention and usage behaviour of Electric scooters in India by applying the UTAUT2 Model. The study uses a quantitative approach by using a questionnaire. The Findings show that PE, SI, HM and EC of the UTAUT2 Model are directly and positively impacting the Behaviour Intention of customers to use Electric Scooters. EE, FC, PV and TR UTAUT2 Models are directly and negatively impacting the behaviour Intention to use Electric Scooters. The study is quantitative in nature and focuses on in-depth knowledge of factors influencing customer behaviour and intention to use Electric Scooters in India. However, the study cannot be representative of an enormous country like India. Academics and Electric Scooter retailers can consider this in future research

The studies provide information on the factors necessary for promoting Electric Scooters in India. These studies can be useful for Electric Scooter retailers who are looking forward to promoting Electric Scooters in India. Earlier studies in this context of E – Scooters usage have tried to use technology adoption models. Hence, these studies have not been capable to capture the fundamental nature of the impact of Environmentally Friendly on technology adoption in the Indian context. A lot of the analyses are performed used to find the relationship between independent and dependent factors but not explored to understand the relationship between the independent factors and the combination of independent factors' impact on dependent factors. In this research, we used Structural Equation Model (SEM) by using LISREL.

Keywords: Customer behavior intention, Electric Scooters, UTAUT2 Model.

IMPACT OF DISCOVERY COMMERCE ON ACHIEVING COMPETITIVE PARITY

Pranav Ajay Kumar
Student, CHRIST (Deemed to be University)
pranava.kumar@bba.christuniversity.in

Roy Matthew
Associate Professor, CHRIST (Deemed to be University)
roy.mathew@christuniversity.in

Abstract

Discovery Commerce is the hyper-personalisation of the point of purchase and point of sale of a product or service online. Companies may use these platforms to curate specific offerings on social platforms by essentially, guiding a customer to a product. The goal of discovery commerce is to bring the concept of window shopping to social platforms like Facebook, Instagram and YouTube. This paper attempts to evaluate the impact of discovery commerce platforms in achieving competitive parity between Direct-to-Consumer and Business-to-Consumer (B2C) brands. A secondary objective is to develop strategies for B2C brands to compete with Direct-to-Consumer (D2C) brands using discovery commerce platforms. Alejandro et al. (2020) states the point of purchase that a general population uses to acquire their goods greatly affects their consumption of goods and overall social status. The work of Bonet et al. (2005) concludes that logistical relationships across the value chain leads to vertical competition. The online nature of Direct-to-Consumer companies may provide a significant competitive advantage to them over Business-to-Consumer companies. This study is descriptive in nature. The data collected from Amazon Vendor Central consists of primary data. A Discovery Commerce campaign was launched for the 'hair care' product category of a B2C brand along with extensive SEO efforts. This was done to identify the impact of the marketing efforts followed by D2C brands which have given them an edge on e-commerce platforms. This includes changes to product titles, images and descriptions of product listings on e-commerce platforms to observe an increase/decrease in sales and visibility. Neo-marketing efforts like SEO and Discovery Commerce campaigns have a significant impact on the sales and discovery of traditional brands who have an omni-channel presence. Across all categories of the optimised products, Glance Views have increased by an average of 320%.

Keywords: Discovery commerce, search engine optimisation, glance views, e-commerce.

FACTORS INFLUENCING THE USAGE OF SMART HOME TECHNOLOGY IN INDIA

Srinath S
Christ University. Bangalore

Christ University Bangalore

Ravinder Kumar Verma
OP Jindal Global University, Sonipat

Manish Kumar Shrivastava
Christ University Bangalore

Abstract

This paper explores the roles of perceived risk, performance and after-sale service, and demographics in the usage of smart home technology (SHT). Despite the push for digital technologies, smart homes still face challenges related to their limited use. We adopted a mixed methods approach and collected data from 133 respondents and 1244 users' responses from secondary sources. This research adopted the perceived risk framework and thematic analysis to explain the usage barriers of smart home technology. Our research supports the perceived risk factors relationships, such as privacy, performance, financial, psychological and perceived risk role as a resister. This research explains the post-adoption challenges of individual concerns related to the performance, after-sales services, and complexity of digital technologies. The use of IoT-enabled devices is influenced by users' demographics and cost and security concerns. This research has practical implications for understanding the factors associated with using IoT-enabled smart homes in India.

shampanandi12345@gmail.com

Abstract

This study aims to bridge the gap by examining the process of digitalization in rural retailing. To reach rural consumers, rural retailers are crucial. They serve as a conduit between producers and customers. Since rural retailers contribute significantly to the GDP, it is essential to retain them. The competition from organized retail and urban counterparts is extremely difficult for rural retailers. This paper focuses on how digitalization helps Rural Retailers to retain in business. Its relationship to rural retailing was examined through the Study TOE Framework. Additionally, it intends to inform Rural Retailers about the various channels of distribution they might use as a result of digitization. Secondary data was used in this study, which used a qualitative methodology and information gathered from websites and academic articles. The study concludes on the integration of TOE model framework, rural retailer's digitalization, and the adoption of digital distribution channels.

Keywords: Digitalization, Technology, Organization, Environment, Innovative Channels.

CONTINUOUS INTENTION TO USE AND FREQUENCY OF USE – APPLICATION OF UTAUT2 AND MULTI-GROUP ANALYSIS WITH INDIAN HOME-GROWN DIGITAL WALLET

Palanisamy Ganesan,
Professor and Director,
Marketing Area, NSB Academy, Bangalore

Anita S Mane
Associate Professor,
R M Dhariwal Sinhgad Management School, Kondhapuri, Pune

The mobile wallet transaction was INR 532 billion in value and INR 1630 million in volume during FY2017 (Deloitte, 2017). During Q1-2021, the volume and value are INR 1.13 billion and INR 411.75 billion respectively (Worldline, 2021). The research questions for this paper are: (a) what are significant UTATU2 factors affect the continuous intention to use home-grown digital wallet? (b) is the prevention behaviour influence the continuous intention to use the selected home-grown digital wallet? and (c) are there significant difference between (i) two different group of age and (ii) two male and female customers in the continuous intention to use? The study provides an insight on the continuous intention to use the Indian home-grown mobile wallet. The mobile wallet users' experience on an average of more than six month that means users have learned and become a familiar of mobile wallet for their purchase through directly or ecommerce as well as transaction of money for other purposes. Thus, Habit become the important predictor for the continued intention to use Abdul-Halim et al (2022) and frequency of use of Indian home grown mobile wallet. The users feel that the simplicity in using mobile wallet for any type of transaction without hassle and assistance from any other individual that results in the positive effect of effort expectancy on continued intention to use and this finding in line with the study by Ramos (2021) with food delivery apps during Covid19. Hedonic Motivation strongly influence the continued intention to use mobile wallet, thus the users see there is hedonic value of continuous use of mobile wallet in terms of positive feeling and pleasant experience when they use mobile wallet (Ly et al 2022). Thus, the research question one is answered through the Habit, Effort Expectancy and Hedonic Motivation are the significant constructs compared to other four strongly and positively predict the user's continued intention of mobile wallet. The role of preventive behaviour with UTAUT2 constructs highlights that the preventive behaviour plays no role in predicting continuous intention to use of mobile wallet. The limitation is that all constructs of Prevention Motivation Theory employed which result high predicting power on CIU.

Keywords: UTAUT2, Continuous Intention to Use, Frequency of Use, SEM, Multi-Group Analysis

IMPACT OF SOCIO-DEMOGRAPHIC VARIABLES ON THE PURCHASE INTENTION OF ORGANIC FOOD PRODUCTS

Roopashree B R
Research Scholar, MSRIT, Bengaluru, India
roopapraveen2004@gmail.com

Dr. Rizwana
Associate Professor and Research Supervisor,
MSRIT, Bengaluru, India
rizumehar@gmail.com

An encouraging sign that people are becoming increasingly aware of the negative health effects of these highly polluted and poisoned food items. Organic food products in India are expected to develop considerably during the projected period due to a variety of factors, including the availability of organic food goods on the internet and a shift in consumer preference toward organic food. According to certain researchers, sociodemographic factors play a role in purchasing decisions There is a need to explore the influence of demographic variables on purchasing behaviour because of inconsistent findings in the literature. Research of this type is descriptive in nature and aims to evaluate the influence of socio-demographics on the purchase intentions of the target audience for organic food items. The target audience was given a well-structured questionnaire, which included six sociodemographic questions based on logical reasoning and three questions on purchase intention based on Chiew Shi Wee & et al, 2014 and Anupam Singh, Priyanka Verma,2017. A 150-target audience sample was selected with a 10% margin of error and a 95% confidence interval and 121 valid responses were chosen for the study. We utilised the snowball-sampling strategy because we invited people to fill out the survey and then pass it on to their friends and relatives. Findings of the study indicate purchase decisions are influenced by income. Thus, it is possible that the amount of organic food purchased correlates directly with a person's income (i.e., the higher the income in schooling, according to the statistics. Organic goods are more likely to be purchased by those with higher education levels. This might be because more educated clients are more health-conscious and aware of the advantages of buying organic foods, which could lead to an increase in sales of organic products. In both industrialised and developing countries, several studies have found that a wide range of factors impact people's decisions to buy organic food. Demographic variables such as gender, education, and money, independent of the country in which they take place (developed or developing) will have greater influence on purchase of organic food products.

Keywords: Socio demographic Variables, Purchase intention, Purchase decision and Organic food product

ETHICAL MARKETING IN CURRENT TIMES: SOCIAL RESPONSIBILITY IN INDIAN CONTEXT

Dr.Mohammed Farooq Pasha
Assistant Professor of Commerce and Management,
Government First Grade College Kengeri, Bangalore.
farooqpasha2OO2@gmail.com

Jayashree Urs R
Assistant Professor of Commerce and Management,
Arihant Group of Institutions Thalaghattapura Bangalore.
jay.np@rediffmail.com

Abstract

It is often said that Marketing and ethics cannot go together. Those supporting the argument always have a long list of marketing activities from various companies which make even a die-hard marketing fellow feel guilty about his/her profession. On the other hand, critics of the argument can also come up with numerous marketing activities from various companies which can make the worst critic of marketing activities doubt his/her own criticism. So where does the debate goes from here. It only intensifies as more and more companies in every category of products and services are always making efforts to increase their market share through marketing strategies which they call innovation oriented but others call unethical thereby generating arguments within them as well as in the minds and hearts of consumers as well as potential consumers. This paper looks at the consumer perception about the degree of ethics in marketing followed by companies across all categories of products and services and its impact on the society on the one hand and company growth on the other hand.

Keywords: Criticism, Ethics, Innovation, Marketing and Society

UTAUT & UTAUT2 MODEL - A DESCRIPTIVE ANALYSIS OF THEORETICAL CONCEPTS BASED ON THE LITERATURE REVIEW

Remya Nair
Research Scholar (Registered with University of Mysore).
International School of Management Excellence, Bangalore
(A recognized research center of University of Mysore), India
Email:remya.sanju.nair@gmail.com

Abstract

UTAUT or Unified theory of acceptance and Use of technology is the technology adoption model proposed by Venkat et all (2003). This is a descriptive paper analysing both UTAUT as well as UTAUT2 based on Literature review. The research papers published from 1989 to 2020 are analysed and included in this paper. The concepts of the UTAUT as well as UTAUT2 are explained in detail. The other models that contributed for the development of UTAUT model are also mentioned in this paper.. The theoretical model of UTAUT suggests that the actual use of technology is determined by behavioural intention. The apparent prospect of adopting the technology is dependent on the direct influence of four key constructs - performance expectancy, effort expectancy, social influence, and facilitating conditions. The effect of predictors are moderated by factors like age, gender, experience and voluntary willingness to use. To provide a holistic understanding of technology acceptance, the researchers can set the objective for creating a unified theory of technology acceptance by incorporating key constructs, theory enabling the model to predict behavioural intention and use. The UTAUT theory has been utilized to explore human-computer interaction. In the field of research, UTAUT has contributed immensely to the literature. The model provides insight into technology acceptance by assessing prominent technology acceptance theories, which offer distinct perspectives on the subject. UTAUT demonstrates that proposed factors account for 70 percent of the variance in use intention, offering stronger predictive power compared to the rest of the models that examine technology acceptance. The collaborative impact of constructs with personal and demographic factors establishes the complexity of the technology acceptance process, which is in turn dependent on individuals' age, gender and experience. The Practical Implications, Applications of UTAUT model, Limitations of UTAUT model are explained in detail in this paper.

Keywords: UTAUT, Technology adoption, Effort Expectancy, Performance expectancy, motivation

A STUDY OF FACTORS INFLUENCING PURCHASE INTENTION IN THE CONTEXT OF INFLUENCER MARKETING

Samuel Vero Viegas

Haritha S
Assistant Professor,
International School of Management Excellence, Bangalore
haritha@isme.in

Abstract

Influencer marketing is rapidly growing throughout the globe, which has led marketers to view it as a crucial component of their available marketing alternatives.The internet offers a marketplace and a channel for reaching potential customers. Utilizing influencers in the marketing campaign is one of the best strategies to do this. The aim of this study is to find out the factors affecting the perception of the consumers on influencer marketing and find out how demographic variables moderate between independent variables and consumer perception on influencer marketing. The influencing factors considered for this study are trustworthiness, knowledge, homophily, attitude and likability. Quantitative method is used, whereby a self-administered questionnaires were distributed to obtain data using convenience sampling. Statistical Package for the Social Sciences (SPSS) were used to analyze data collected. Linear regression analysis was used to assess the impact of the influencing factors on purchase intention. The findings indicate that a significant amount of relationship between all the independent variables toward purchase intention and hierarchical linear regression was used to prove that demographic variable such as household income, gender and employment moderates purchase intention in influencer marketing.

DETECTION OF SPAM TWEETS IN TWITTER

P.S.S.N.Chandra
PGDM Student,
International School of Management Excellence, Bangalore

Prof Stuti Agarwal
Assistant Professor,
International School of Management Excellence, Bangalore

Abstract

The world of Online Social Network (OSNs) like Facebook, WhatsApp, Twitter, Instagram etc has gained a lot of popular these days. These platforms not only help in sharing information, photos or videos, but also connects the world. Unfortunately, these platforms can be manipulated in various ways one of them being spam. To get a cyber-crime free world, detection of spam plays an important role. Many organizations are working towards Spam Detection to ensure cyber safety and enhance user experience. In this paper focus on one of the OSNs namely Twitter. There is a challenge in classifying the tweets (Spam/Ham) and identifying the spam tweets in twitter. Though a lot of naive methods are available, there is no major evidence from literature of enhanced methods to classify and identify them. Timely identification of spam tweets is required to enhance users experience and to thrive for spam-free environment. In this literature, an effort has been made to detect spam using the tweet metadata and tweet content by leveraging advanced machine learning algorithms. The model has been validated in couple of ways to ensure the robustness of the results.

A recognized research center of University of Mysore

Abstract

Digital marketing is inevitable for any form of business. It pays way to reach a mass audience at any given time. The degree of digital acceptance by organisations and the knowledge and ability of organisations to use the platform to its total capacity play a significant role in attaining competitive advantage. This study aims to understand the factors influencing the digital marketing acceptance of business schools using the technology acceptance model (TAM). The well Structures questionnaire was designed in consultation with an expert panel comprising industry experts and academicians. 143 responses were collected through personal interviews and mail surveys. Stratified random sampling was used to select the respondents for the study. Collected data were all analysed using descriptive statistics and inferential statistics. The conceptual model developed for the study was tested using structural equation modelling. Results showed that perceived ease of use had got a positive and significant impact on perceived usefulness, and perceived usefulness has got a positive influence on attitude and intention of using digital marketing. The attitude was found to have a significant positive impact on the intention to use. This study also showed that experience strengthens the positive relationship between attitude and intention to use. This study extends the technology acceptance model by adding experience as a moderator variable in the relationship between attitude and intention to use. The insight from this study would help educational institutions strategize their digital requirement.

Abstract

Globally, consumer behaviour facets of Functional food as a health food option has been widely researched since late 1980s, coined in Japan first. In India, the concept has gained traction only since last decade; studies regarding market and consumer aspects are scattered and limited. Considering this gap, a need for an extensive literature review encapsulating studied variables and adopted methodology was felt. This would be a first extensive literature review study consisting of academic research published for exclusive India consumer market being done. This study has been undertaken through a systematic database search to synthesise the studies done since year 2000 to 2022. The objective of this review is to uncover the research variables, find gaps and present future research opportunities. A total of 23 research papers have been considered after focussing on consumer behaviour aspects aiding or deterring acceptance of Functional food in India after careful assessment through the inclusion and exclusion criteria. It is found that factors such as socio-demographic, psychographic and product attributes play an important role in the acceptance of products. A general confusion regarding Functional food benefits, health claims, product knowledge and awareness seems to exist giving rise to credibility issues and credence. It is now even more important to conduct research in this field to determine factors of consumer acceptance of Functional food.

CROSS-SECTION OF EXPECTED STOCK RETURN: A PERSPECTIVE FROM SYSTEMATIC AND UNSYSTEMATIC RISK FACTORS IN INDIAN STOCK MARKET

Karkaria Dusmanta
Research Scholar
Pondicherry University

Abstract

This article evaluates the cross-section of expected stock return between systematic and unsystematic risk as well as re assessment of size and value effects in the Indian stock market through a Fama-French risk-capture model. The top 487 companies in the S&P BSE 500 index were studied from July 2002 to March 2021. In this article we found that small firms with higher risk give higher monthly average returns whereas large firms with higher risk give lower monthly average returns on the size-SD sorted portfolio. Size is the most prominent stock anomaly, with a monthly average mean excess return of 5.2% in the Indian context. Fama-MacBeth cross-sectional regression does not explain the one-factor, three-factor, and augment FFTF* asset pricing models, whereas the GRS model fitness test does for the Fama-French Three Factor (FF3F), and augment Fama-French pricing models. More importantly, this study discovered that stocks/portfolios with higher abnormal returns carry higher risk, in addition to size and value anomalies having a significant impact on the Indian equity market. As an investor cannot avoid size and value anomalies before investing in a stock market an emerging market like India, regardless of whatever the situation, whether it is a financial crisis, the COVID-19 pandemic, or any other natural calamity or disaster these two stock anomalies play a prominent role in the Indian equity market. This study has strong implications for financial consultants, mutual fund managers, investment strategists, individual and institutional investors, the market practitioners who want to beat the market and earn an abnormal return on their investment in the Indian equity market.

al.madhavi@gmail.com

Abstract

Industry practitioners are always in search of effective investment strategies in their endeavor to achieve portfolio optimization. Moving averages have long been coveted by many such decision -makers. In this research work, a comparison between the 'buy-hold' strategy and the quant-trading strategy using exponential moving averages' is carried out. This study examines the profitability of implementing an Exponential Moving Average (EMA) cross-over strategy in the Indian stock market over the period 2010 – 2022. To facilitate the experiments, Nifty50 (^NSEI), Nifty500 (^CRSLDX), and NiftyMidcap50 (^NSEMDCP50) indices are considered. This work contributes to the existing quantitative trading and technical analysis literature. It is a pioneering effort to implement a moving average strategy on an equal weighted portfolio constituting different indices with a universe of stocks with varied characteristics. The results indicate that there is an outperformance of the moving average strategy (average yearly returns: 10.79%) over the buy-hold strategy (average yearly returns:8.42%) for the aforesaid period and dataset. The study also finds that the moving average strategy is capable of identifying market directions and movement reasonably well, which facilitates the generation of profitable returns. The study iterates the validity of technical analysis techniques to identify trade signals effectively, however, the marginal outperformance also emphasizes choosing a trading rule that optimizes transaction costs and taxes to ensure that such profitability sustains.

CSR SPENDING AND ITS RELATIONSHIP WITH SHARE PRICES (WITH SPECIAL REFERENCE TO TOP CONSUMER FOOD COMPANIES IN LIGHT OF COMPANIES ACT 2013)

Ms. Saniya Marwah
Department of Management Studies,
Rukmini Devi Institute of Advanced Studies, Affiliated to GGSIPU, India
marwahsaniya@gmail.com

Abstract

For the purpose of making the firms accountable and responsible towards its stakeholders, Companies Act 2013 has introduced mandatory contribution of 2% of average net profit towards Corporate Social Responsibility. In the present study, the relationship between Mandatory CSR spending and Share Prices has been studied for top consumer food companies listed on NSE. The study can help us to know that whether this compulsory move by the Government is a burden on the companies or not. Share Prices have been taken as they reflect the wealth of the shareholders and also an impression of investor's confidence. The results depict positive and strong relationship between compulsory CSR Spending and share prices for all companies.

Keywords: Corporate social responsibility, CSR spending, Share Prices, Consumer Food companies, Companies Act 2013.

FORECASTING THE CRYPTOCURRENCY PRICES – A MACHINE LEARNING APPROACH

Abstract

Crypto currency is a non-centralized digital currency that is exchanged between peers without the need of a central government. Understanding the relationships among crypto currencies is important for policymakers and investors. It helps the former to come out with strong action plans to guide the financial markets and latter to take vice investment decisions which can utilize crypto currencies to be a part of portfolio construction. Crypto currency operates with block chain technology with a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. Accurate forecasting of the crypto currency prices is a major challenge for the traders and investors. This can be attributed to the high volatility and dynamism prevailing in the crypto space. Predicting the crypto currency prices and forecasting the future price movement, helps the investors to take appropriate investment decision, improves profitability and hence decrease possible losses. This research tries to forecast the prices of 20 most traded crypto currencies using Machine Learning. The price movement of these crypto currencies for the period from 1st April 2018 to 31st March 2021 is taken for the study. Secondary data is analysed to show the yearly returns, rate of growth, risk factor, average daily returns, and compound annual growth rate of prices of crypto currency during the study period and was validated. Machine learning algorithms build a mathematical model which helps to make predictions or decision of the future price movements of crypto currencies studied. This was carried out using WEKA Software.

AN EVALUATION OF INVESTMENT PATTERN OF GOVERNMENT OF KARNATAKA EMPLOYEES IN SELECT FINANCIAL SECURITIES

Premalatha K P
Assistant Professor
CMS-BS Jain University, Bangalore

Dr. S J Manjunath
BN BIMS, University of Mysore, Mysore

Abstract

The growth of a developing economy is driven by the capital market investments which are financed through domestic savings by households and institutions. Economic surveys suggest for stimulation of investment incentivising policies to recover the economic slowdown in respect of savings and investments ratio in India. An attempt is made to understand the investment pattern of government of Karnataka employees as they receive regular income which can be well utilised by routing it to an effective investment channel. The study examined the influence of demographic factors on their investment preference and their overall investment pattern. It is found out that age and experience impacts their investment pattern and large amount of their funds are routed to less risk securities like bank deposits, insurance and post office schemes and investors have shown least preference towards equity and debt instruments.

Abstract

The study aims to analyze the long-run performance of SME IPOs and investigate IPO specific, company specific, and market specific variables that influences the performance overtime. This article utilizes information of 383 listed firms at Indian SME platform from 2012 to 2020. Based on the reduced sample size, the article uses only 12 month of trading data for the computation of returns. The article uses event time methods to examine company performance through market adjusted excess returns (MAERs), cumulative abnormal returns (CARs), and buy & hold returns (BHARs) based on the equally weighted and value weighted portfolios. Furthermore, the study employs calendar time portfolios with Fama-French three factor model and Carhart four factor model to have more robust results. Similarly, the study uses the cross-sectional OLS regression to analyze numerous factors that influence the performance of SMEs IPOs. Using 12 months BHAR, result shows the IPO over performance of both equally weighted and value weighted portfolios and the positive alpha of calendar-time portfolios validates the results for the same duration. While previous research shows the IPOs underperformance at global stage, the current findings of IPO over performance are in line with those of other Asian countries including China, Malaysia, and Korea. Similarly, the result shows the significant impact of issue size, oversubscription, debt to asset ratio, profitability, hot market, listing gains, underwriter reputation and underpricing on the long run performance of Indian SME IPOs.

Abstract

Peer-To-Peer lending platforms are becoming a good investment avenue for lenders to invest their money in borrowers, who need money for a different purpose. As lending and borrowing of money is facilitated by the P2P lending platform, it becomes necessary for the platform to understand the users and accordingly fine tune the 'User Interface' (UI) and 'User Experience' (UX) of the platform. For lending and borrowing to take place through a platform it is necessary to have an 'n' number of lenders who are ready to lend money to an 'x' number of borrowers. This study is specifically done to understand lenders' motivation to use P2P lending platforms. This is a unique research work as sentiment analysis of lenders' motivation to use these platforms has not been explored earlier. The sentiment analysis technique was used to examine lenders' sentiments towards the use of P2P lending platforms. The research results show that, ~ 70 percent of lenders showed motivation to use P2P lending platforms as an investment avenue in the future. As the P2P lending platforms are relatively new more research can be carried out in future.

Keywords: P2P lending, sentiment analysis, topic modelling, motivation to use.

Abstract

Digitalization is becoming one of the essential instruments for reducing transaction costs and increasing efficiency. RBI is promoting digitalization to bring more reforms in the finance sector. 2019 Onwards, RBI has implemented an expansionary monetary policy by lowering the interest rate, increasing investment, and aggregate demand, thus leading to an increase in the equilibrium output. Financial Technology abbreviated as "FinTech" includes subdomains like Peer-To-Peer lending which is becoming increasingly popular for lending and borrowing without the active role of banks. The positive impact of this kind of platform called 'Zopa' on the money supply in the United Kingdom was observed in 2005 during the early stages of the global recession. This paper examines the relationship between changes in monetary policy and the motivation of lenders and borrowers to use P2P lending platforms. Our study consists of time series data from 2011-2022. The research findings show that the contraction in monetary policy has helped the P2P lending platforms to expand their business. An increase in repo rate (RR), Cash Reserve Ratio (CRR), and Statutory Liquidity Ratio (SLR) motivated lenders and demotivated borrowers to use P2P lending platforms. Whereas reduced reverse repo rate (RRR) demotivated lenders, and motivated borrowers to use these platforms. The paper contributes to the existing literature for analysing the linkages between P2P platforms and money supply in the economy.

Abstract

SMEs can be found in a variety of sectors in India, such as manufacturing, retail, and services. They contribute significantly to the economic growth of the nation and form the foundation of the Indian economy, contributing about 40% of its GDP and employing around 110 million people. The sector is considered the second-largest employer after agriculture. SMEs in India face many hurdles in availing of credit due to information asymmetry, limited credit history, and complex application processes. When determining whether to offer loans or other forms of credit to small and medium-sized businesses (SMEs), financial institutions may encounter several difficulties. This paper attempts to research the parameters on which the creditworthiness of SMEs in various sectors can be analyzed. The factors to be considered in the analysis of creditworthiness and the weightage to be given to each parameter. For the research two sectors have been identified: the sectors for capital goods and consumer durables. In the capital goods industry, three listed SMEs and Consumer durables two listed SMEs are identified for the study. The data for all the companies are analyzed for three financial years. The research finding helps to identify comprehensively the parameters for credit scores and the weights attached to each parameter which help in arriving at the credit scores for SMEs in each sector. Using MCDM, financial organizations can solve their difficulties (multi-criteria decision-making model). The financial industry is changing drastically. Payments, loans, insurance, and wealth management are all being changed by digital technologies.

Abstract

The study explores the impact of R&D expenses, leverage, and firm size on the managerial efficiency of the firm as reflected by its performance. We also analyze the industrywise effects of the selected factors on the firm performance of a developing country. The disaggregation analysis includes five industries: automobiles and parts, chemicals, construction and matter, industrial metals and mining, and oil and gas. Using the data set of Indian firms for ten years, our empirical analysis indicates that expenditure on research-related activities does not affect the performance of firms in the industries mentioned above. In contrast, leverage has a consistently negative effect on firm performance in all industries except the oil and gas industry. Further, we find that firm size has a differential impact on the firms' return on assets in these industries. Our results are robust to heteroskedasticity and multi-collinearity issues.

Department of Management Studies, Indian Institute of Technology, Delhi, India
harshita2381995@gmail.com

Prof. Shveta Singh Professor
Department of Management Studies,
Indian Institute of Technology Delhi, India.

Abstract

The purpose of the study is to analyse the relationship between corporate social irresponsibility (CSiR) and management efficiency as proxied by asset turnover ratio. The study examines a sample of Indian manufacturing firms from 2007-2016 with 1,113 observations using a comprehensive dataset from RepRisk and Bloomberg® to run a system generalized method of moments (GMM) estimation. We find that CSiR positively affects management efficiency and the effective utilization of assets in generating sales. For domestically focused manufacturing companies in emerging economies, where there is less demand or stakeholder expectation, corporate irresponsibility may not be as important a deciding factor, especially if the target market is highly price sensitive. However, managers should heed caution before divulging in CSiR activities for the consequences can be damaging in the long run. The study's grounding in an emerging market setting, such as India, sparks a discussion on a contextualized understanding of negative aspects of corporate behavior in evaluating management efficiency of the firm.

Abstract

The Altman Z-Score Model has been employed to predict financial distress since its original conception in 1968. The model is perceived to be detailed in its methodology for assessing financial failure because it is predicated on values available in a company's financial statements as well as principles established by influences extraneous to the firm's operations. The share price of a business is viewed as a mirror image of its economic position, with its real worth being an attribute well within the framework as a whole. This study aims to investigate the internal dynamics of the Altman Z-Score model and examines its potential as a predictive factor of bankruptcy. It also examines the link between a firm's Altman Z-Score and its mean share value to establish if a causative link exists between these two factors within the Indian Manufacturing Sector and used randomly chosen 20 samples from the sector specifically mentioned for the 5-year period from 2018 to 2022. The research highlights a significant relationship between a company's share price and its Z score, and investors can evaluate these Zeta (ζ) index scores based on key financial parameters before attempting to make any well-informed investment choices in distressed businesses with incredibly low Z-scores that appear on the brink of bankruptcy or insolvency.

Abstract

The impact of Information Technology on workplaces, individuals and society as a whole has increased dramatically during the last two decades of the 21st century. This period has seen maturation in the field of digital computing, combined with the use of telecommunications technology, in order to link many computers into what a very large single network is 'virtually', the Internet. Data has become widely accessible, and readily inter-related. Implementation of new technology has led to many changes in the workplace. This paper aims to study the impact of technology on various Job-related factors. Four factors shortlisted for the study i.e. Job Performance, Well Being, Work Motivation and Person Organization Fit. Which Job factor is getting affected to maximum extent with the introduction of technology? The study was done with the help of questionnaire based on Likert scale. Data was collected from 162 employees of various organization. Convenience sampling method was used. Data was analyzed through SPSS Software and excel to find out that Work Motivation is the most impacted factor by introduction of new technology, followed by Job Performance, PO Fit and Well Being.

Abstract

The ASHA workers at the community level work for primary healthcare services of the Nation, especially in the rural areas where they are providing non-stop services. In spite they are not paid properly, neglected, not recognized are becoming invisible to the nation at large, It is their personality and the roles of an organization that influenced ASHAs to get motivated to perform their roles and responsibilities. The study's main aim is to analyze the mediation of personality in the relationship between organizational roles and motivation. The study is descriptive in research with a sample size of 140 ASHAs for 10 PHC centers in Bangalore and these are identified on the basis of the Convenience Sampling method. The study is both qualitative and quantitative in nature and the data is collected through primary sources by using a questionnaire method and focus group discussion. Data were analyzed by using SPSS and & Smart PLS. The study reveals that there is a complete mediation effect of Personality on the relationship between Organisational roles and Motivation. The findings of the study are useful for Government and PHC centers to redesign their policies and strategies to create recognition and reduce the difficulties and challenges of ASHA workers.

Abstract

Error is an inherent part of human nature. Currently, the term human error is widely used in pharmaceutical industries. It originated in the realm of quality and safety in the manufacturing process. Human error poses a challenge to Safety, Integrity, Strength, Purity, and Quality (SISPQ). Due to regulatory agencies, investigations into human error are in high demand in the pharmaceutical industry. From a quality perspective, consistent efforts are being made to control human error at every level. In this current research paper aims, we aim to explore the relevance and significance of Human Error in the pharmaceutical industries through an extensive review of the literature.

Abstract

Socialisation of newcomers in an organisation has always been a key activity. Multiple components of socialisation have been examined over time, and research into this has used a variety of approaches. Initially, it was thought to be the process by which organisations acculturate newcomers. However, much current research views it as a nurturing process, in which the role of the new player is far more essential and organisations can merely adapt the activity. The essence of socialising in the workplace cannot be overstated, because of being the most important aspects of establishing and preserving organisational culture. Newcomers with more than 18 months to less than 24 months of experience in a given company were surveyed. Results from Bengaluru's service industry were included. in the study. As an instrumentation tool, a thorough, standardised Questionnaire was adapted and 304 employees completed it, using a basic, random selection procedure. Descriptive statistics, Bivariate Correlations, and Regression were the statistical approaches used. We investigated and examined two possibilities. The findings back up the theory that corporate culture and socialisation strategies are linked.

SHIFT WORK DYNAMICS AND ITS IMPACT ON EMPLOYEE WELLBEING IN THE MANUFACTURING SECTOR

Afseer Majeed PhD
Lecturer - Business Management,
Explore Educational Institute, Dubai – UAE
academic@exploreeducation.ae

Abstract

In the modern world of industrialisation, productivity is the critical variable defining the success of any organisation. Shift work is a tried and proven system to boost productivity, especially in a manufacturing environment. UAE is a country where the manufacturing sector is proliferating, and more and more employees are undergoing shift working schedules. This research analyses the effect of shift work on employees' well-being in the UAE manufacturing industry. The study is conducted between employees from various companies who are regularly doing shift work. This study is quantitative research to see how the employees perceive the shift work and how it affects their productivity in the long run. The data was collected through the questionnaire method, analysed statistically with the help of a certified statistician and derived the conclusion. Some of the larger issues that may arise for employees who work shifts are the disruptions to sleep patterns and fatigue. Working non-traditional hours can make it difficult for employees to get enough sleep, leading to fatigue and decreased productivity. This has been linked to an increased risk of certain health problems, such as heart disease, diabetes, and gastrointestinal issues. On the other side, shift work can make it difficult for employees to maintain a healthy work-life balance, as it can interfere with their ability to participate in social activities and spend time with family and friends. This study's outcome suggests that shift work has to be carried out in an organisation in conjugation with other supporting programs that can help employees balance their professional and personal needs; by doing so, companies can reap productivity for the long term while keeping the employee's well-being at optimum level.

Keywords: Shift work, Employee well-being, the Manufacturing sect

DETERMINANT OF CULTURAL ORIENTATION OF IT MANAGERS IN INDIA - AN EMPIRICAL ANALYSIS

Abstract

This paper examines the cultural orientation of IT managers in India. It looks at the cultural values, beliefs and behaviors that affect IT management in India and how these cultural orientations are shaping the development of the Indian Information Technology (IT) industry. The paper also identifies the key aspects of Indian culture and their implications for IT management in India. It further examines the challenges faced by IT managers in India when working in a culturally diverse environment, and provides recommendations to ensure successful IT management in India. Finally, the paper discusses the importance of cultural orientation for successful IT management in India to ensure that the IT industry remains competitive in the global market. The Information Technology (IT) sector in India has been growing rapidly in recent years, with many multinational companies setting up offices in the country. This has, in turn, created a requirement for IT managers to be culturally aware and sensitive to the needs of the Indian market. This paper aims to provide a comprehensive overview of the cultural orientation of IT managers in India. The paper begins by discussing the cultural differences between India and other countries, and how they impact IT management. It then looks at the various aspects of cultural orientation, such as language, religion, gender roles, and social norms. Finally, it provides practical advice and suggestions for IT managers in India, including how to effectively communicate with employees and customers, and how to create a culturally-inclusive work environment. The paper concludes by noting that cultural orientation is an essential component of successful IT management in India, and that IT managers should take the time to understand the cultural context in which they are operating.

Abstract

Managing people at workplace via the top-down approach fails to facilitate the individuals' Flourishing and work engagement. As the teams/ organisations/ institutions becomes bigger, the more generic the job description and job roles become. Hence the construct of Job Crafting plays a vital role in curating meaningful jobs aligned to an individual's core. Job Crafting facilitates a bottom-up approach where individuals relook at their job design, and make minor tweaks at cognitive, tasks and relations aspects of job. This study examined the effectiveness of job crafting intervention. The participants in the experiment group were a homogenous mix of individuals at jobs working at a same entity. The study was done using a quasi-experiment design methodology where we followed a pre-test and post-test approach to measure Job Crafting levels. The treatment here is the Job Crafting Intervention is a 3.5 hours long workshop structured session. The level of Job Crafting was measured before the start of the workshop (Timeline T1) where individuals are not informed on what is measured. Three weeks after the intervention the Job Crafting levels was measured again using the standards Job Crafting scale. The impact was intervention was analysed using a T- test on the pre and post levels. The intervention showed a significant positive effect on levels of Job Crafting. A mean difference of 4.2 to 4.8 (6-point scale) was observed after the experiment respectively on pre and post Job Crafting levels. A slight positive correlation was found after the intervention (~.3 Pearson correlation). All the results were shown significant through the statistical tests. The study proved that the developed Job Crafting intervention was effective in increasing Job Crafting levels among employees. Towards the end of the intervention, an open-ended question was asked, and the responses showed that the intervention had a positive impact among the participants and helped them to relook at their existing job with more meaning.

Keywords: Intervention, Job Crafting, Experiment methodology, meaningful work

IMPACT OF EMOTIONAL INTELLIGENCE, PERSONALITY TRAITS, RISK PERCEPTION AND BEHAVIOURAL BIASES ON INVESTMENT DECISIONS

Dr.S.Johnsi
Associate Professor,
DJ Academy for Managerial Excellence, Coimbatore
johnsi.s@djacademy.ac.in

Abstract

The main objective of this study is to analyse the impact of Emotional Intelligence, Personality Traits, Risk Perception and Behavioral Biases on Investment Decisions and to measure the mediating effect of selected variables on Investment Decisions. The study depends on primary data and a well-structured questionnaire is used for this purpose. Multi-stage sampling technique has been adopted to determine the sample for the study. A model using PLS-SEM is tested to examine the impact of personality traits, emotional intelligence, risk perception, behavioural biases and investment decision making. Structural Equation Modeling (SEM) is used to explain the relationship between multiple variables and the structure of inter relationships among various constructs is examined. The result of the mediating effect is confirmed by SOBEL's test. The current study also indicates that emotional intelligence was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Cognitive dissonance was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Herding was found to have a significant positive relationship with equity exposure. So, it is concluded from the study that emotional intelligence and behavioural biases have a major impact on the investment decisions.

A LEADERS' ROLE INFLUENCING THE WORK CHARACTERISTICS OF VIRTUAL TEAMS CONTRIBUTING TO EMPLOYEE PERFORMANCE – A BEHAVIORAL PRESPECTIVE

Gouri R Javali
PhD Scholar, Faculty of Management and Commerce
Ramaiah University of Applied Sciences, Bengaluru

Dr. Madhu BK
Assistant Professor, Faculty of Management and Commerce
Ramaiah University of Applied Sciences, Bengaluru
madhubk.mba08@gmail.com

Abstract

Employee performance is crucial for the success of any organization and the augmenting prominence of leaders' role to enhance employee performance of virtual teams has inspired the call for this study. The study aims to analyze and propose an integrated framework justifying the leader's behavior accounting to work characteristics contributing to employee performance in virtual teams of mid-sized- IT Industries in Bengaluru. The study is empirical in nature. Web-based survey and direct interview is conducted using questionnaire resulting in 180 responses from virtual team who are software professionals from IT Industry. The gathered data is analyzed subsequently by means of both descriptive and inferential statistics with the software IBM SPSS 20. The outcomes of the study show positive and significant relationship between leadership behaviors and work characteristics resulting in enhanced employee performance of virtual teams. The study offers experiential evidence and support the theory of leadership behaviors which postulates that the employee performance can be optimized when the leaders exhibit high degrees of task and relation-oriented leader behaviors accounting work characteristics in virtual environment. The managerial implications of the study and the potential avenues for future studies are discussed at the end of the paper.

The contribution of the workforce to the outcome produced by the organisation is crucial. When a firm works in a competitive market, employee performance becomes especially important. A crucial element that contributes to the organization's ultimate existence is employee motivation. Increasing staff productivity is an issue for businesses throughout the sector. People who work in organisational research are interested in methods for improving employee performance. Improving employee productivity requires a just and fair system of rewards that can be both tangible and intangible. The main aim of the current study is to map the relationship between appraiser and appraisee in affecting employee productivity in the IT industry. Furthermore, the study analyses whether professional development moderates the impact of the appraiser-appraisee relationship on employee productivity. For this purpose, primary data is collected from various mid-level employees of a firm utilising a quantitative questionnaire technique in order to understand their opinions of the relationship between the Appraiser and Appraisee in affecting employee productivity in the IT industry. Because a quantitative technique is used, a positivist research paradigm is most suited to achieving the study's objectives. In addition, the current study used a descriptive research design and a simple random sampling technique to gather data from 200 mid-level employees. The findings of the study suggested that in highly competitive circumstances, businesses work hard to establish a fair balance between employees' job performance and the success of the firm. Aspects for employee rewards and recognition are among the most crucial elements that may guarantee that many businesses recognise the effectiveness of their workforce. Employee empowerment has therefore become a key factor in determining the range and calibre of services offered to customers, and low staff productivity has been cited as a challenge to providing services. The findings of the study also revealed that the Appraiser-appraisee relationship has a significant impact on employee productivity and professional development and moderates the association between the appraiser-appraisee relationship and employee productivity. The current study results are essential for the management, the team leaders, the administrators and the HR professionals in comprehending the behaviour of their employees and accordingly adjusting the performance appraisal strategies to enhance the motivation and professional development capabilities.

Intrapreneurship is a much sought-after strategy in developing innovativeness and new business venturing capabilities of organizations, which is termed corporate entrepreneurship. While large organizations have well-designed processes and policies to develop corporate entrepreneurship, such defined policies and procedures are rare among small and medium enterprises (SMEs). The present study is to find the influencing factors such as passion for work, entrepreneurial behaviour of managers on intrapreneurial intentions and behaviour among the employees of SMEs. Also, the negative influence of organizational cynicism on intrapreneurial intentions and behaviour is found in this study. A pilot study was conducted through unstructured interviews among a few entrepreneurs, intrapreneurial and non – intrapreneurial employees to determine the variables of the present study. A total of 301 samples were collected from 13 SMEs which are into the service sector by distributing questionnaires based on valid instruments. Passion towards work is found to have a positive influence on intrapreneurial intentions. Also, organizational cynicism has a negative influence on intrapreneurial intentions and intrapreneurial behaviour. Additionally, the entrepreneurial behaviour of managers is found to have a positive influence on intrapreneurial intentions and intrapreneurial behaviour.

Abstract

Making wiser decisions about employees to improve performance at the individual and/or organizational levels is the process of HR analytics. HR analytics is a method for determining the correlation between HR practices and organizational performance outcomes such as sales volume or customer satisfaction. Human Resource Analytics was established in 1978 by Jac Fitz-Enz, the pioneer of human capital strategic analysis and performance benchmarking. In this paper, the researcher wants to discuss the concept of HR analytics, its application, impact on talent management, branding, and challenges in its application. The researcher examines secondary data and conducts a thorough literature review to understand the concept and its application across industries and nations, as well as to identify any challenges encountered during deployment and any benefits perceived by various industry professionals. Findings: The study's findings indicate that using HR analytics can help businesses build their brand and gain a competitive edge in today's fiercely competitive business environment while also enhancing workforce and employee productivity. This study has significant implications for both literature and HR analytics. Researchers will know more about the factors that contribute to and the mechanisms by which HR analytics improve organisational performance. The author's second claim is that having access to HR technology both facilitates and precedes HR analytics. Finally, concrete data from the literature demonstrates its influence on branding and organisational success.

Abstract

Employee Engagement is a serious concern for many organizations. Performance is quintessential but it lags without engagement. The values and codes for performance and engagement demand to be pronounced and established consistently to develop high performance engagement. Engagement issues and performance lags call to be discussed with transparency to initiate a proactive approach in the lag and lead, of performance engagement. High Performance Engagement, is an amalgamation of employee engagement and performance excellence to accomplish goals and stretch goals, with commitment and passion, beyond compliance. The study aimed to establish the socle of high performance engagement for organizational excellence Using a quantitative method, this study empirically verified the essence of high performance engagement from managers (N=350) in corporate companies. The results indicate that among the dimensions of high performance engagement, the employee-centric approach was perceived as the highest socle of high performance engagement (with a mean of 81.17) and performance strategies were perceived as the lowest (with a mean of 70.01) among the rest. The results evidence that employee focused approach is the predominant dimension for the socle of high performance engagement as perceived by the managers and motivation is the preponderated determinant of high performance in organizations. The results are indicative of an employee-centered approach rather than job centered approach, for organizational performance excellence with latitude on team synergy, and autonomy on performance strategies.

THE IMPACT OF EMOTIONAL INTELLIGENCE ON WORK-LIFE BALANCE IN START-UPS IN HYDERABAD

Jyothika Vemu
Student, PGDM
International School of Management Excellence, Bangalore

Prof. Dr. Sindhu Shantha Nair
Professor
International School of Management Excellence, Bangalore

Abstract

Work–life balance is a concept that includes prioritization between work (career and goals) and lifestyle (health, pleasure, leisure, family, and spiritual development). In broader terms that include "lifestyle balance" and "lifestyle choices". Many companies strongly support their employee's work-life balance through appropriate measures in order to improve employees' loyalty towards the company which fetches the company with better work life and a chance to recruit new employees. The flexibility in working times is the measure and it also influences the employee's private lives, with this there can be an increase in job satisfaction by reducing work stress. This in return helps in employee well-being. A start-up is a new business venture that aims to solve a problem, meet a need, or create value by offering innovative products, services, and solutions. Start-ups typically have limited resources, but have a strong focus on growth and a long-term vision. They are risk-takers. This paper studies the impact of EI on WLB in start-ups in Hyderabad. the work-life balance in start-ups can vary depending on the culture and size of the company. Some start-ups may have a more relaxed approach, while others may require a lot of work hours from their employees.

Keywords: Emotional Intelligence, Work-life balance, Job satisfaction, start-ups, and employee Well-being.

HAPPINESS AT WORKPLACE AS A MEDIATOR OF THE RELATIONSHIP BETWEEN HIGH PERFORMANCE WORK SYSTEM AND TURNOVER INTENTION: EMPIRICAL EVIDENCE FROM HOSPITALITY AND TOURISM INDUSTRY

Prof Shurlly Tiwari
Assistant Professor
International School of Management Excellence, Bangalore

Dr.Ujjal Mukherjee
Professor
Jain (Deemed-to-be-University)

Abstract

This research aims to identify the influence of a high-performance work system and happiness at the workplace on turnover intention among employees in the tourism and hospitality industry. The researcher surveyed a sample of more than 450 hotel workers to test a model that relates the following variables: high-performance work system, happiness at the workplace, and turnover intention. Data were analyzed by using structural equation modeling and Amos 24 version. Research confirmed that a high-performance work system positively influences employees' turnover intention, and there is an impact of happiness at the workplace on decreasing the employees' turnover intention. This study unlocks the relationship between the three variables HPWS, HAW &. From the managerial point of view, the hospitality industry should prioritize the investment in HPWS and HAW as it directly impacts the employees' turnover intention, directly affecting the business's baseline.

Keywords: High-performance work system, happiness at the workplace, turnover intention, hospitality employees

TALENT MANAGEMENT PRACTICES, ROLE OF PERCEIVED ORGANIZATIONAL SUPPORT IMPACTING EMPLOYEE ENGAGEMENT

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence ISME, Bangalore, India
pooja.nagpaal@gmail.com

Abstract

Employees are most valued assets of any organizations paving a path to success. Talent are the ability, skill and knowledge that employee brings to the organization to effectively perform their job well to achieve the organizational goals. In the current world of "Talent War" talent management is not limited to just acquiring a right talent but rather on deployment, development, engagement and retention of its employees. This study analyzes the drivers of talent management practices and perceived organizational support impacting employee engagement. The study comprises an analysis of data of 457 respondents from IT sector companies from IT hub of Bangalore, India. The result indicates talent management practices and perceived organizational support have a direct influence on employee engagement. The findings imply on theory and practice specifically in enhancing employee engagement using various talent management practices along with perceived organizational support. The study found scope for future research in comparing various sectors using additional independent variables in a longitudinal manner.

pvpawar.raj@gmail.com

Abstract

The research paper aims to deliberate the issues and challenges leading to disruption of global supply chain with special reference to Organic foods and agri-business. The paper also summarizes the global supply chain scenario. The production and supply chain management issues & challenges of the current situation are discussed in the paper and effectively proposes strategies to be incorporated in policies making of Organic Food for strengthening the resilience and sustainability of the system at global level as the authors believe that it is important for current and future food managers and policymakers to understand the current system, structure, institutions, economic, social and environmental forces at play in each sector. The aim of this study was to clarify the ideas of Organic food supply chains and the organic production of food products to indicate some major issues and challenges and suggest their relevant recovery strategies. The paper assess methodological framework consists primarily of a systematic data collection from relevant government/ institutional databases and/or reports (i.e., APEDA, Statistica, IBEF, IFOAM and FiBL). Data were considered eligible for inclusion in the analysis if they were useful to assess in particular: (i) Organic -food demand globally, (ii) the effects on the Organic food supply chain services.The research paper discovers almost 9 recovery strategies such as support from the government, decentralisation of the distribution channels, Block chain technology, Integrated certification process etc for curbing the disruption in the organic food supply globally. In the end, the supply chain should respond and overcome the challenging situation in the organic food supply chain management.

Department of Lean Operations and System
Christ (Deemed to be University)

Abstract

This study aims to structure an approach to optimize the distribution process in logistics operations for a Nagpur-based small-scale 3PL service provider and in the process to propose a model for companies in the logistics domain to follow. With an uncertain customer demand, the process of finding the best possible route becomes intricate. A methodology that reduces travel time, distance, transportation costs, inventory carrying costs, and administration costs had to be developed. Two generic requirements are considered in the study. Firstly, a single truck or carrying vehicle delivering to multiple customers. Secondly, a set of fleets traveling to multiple destinations with capacity constraints. For assessing logistics and supply chain difficulties, spreadsheet tools, particularly Microsoft Excel is used with Solver add-in. This study proposes a model to reduce the distance travelled, by which over utilization of resources can be considerably reduced aiming to control the carbon footprint for a sustainable logistics.

Abstract

Many large companies are trying to revamp their commercial organization and prepare themselves for the future. Technology is changing the way consumers live. It is also changing the way customers operate, presenting new opportunities and new competitors. Technology, mobility and the internet have generated empowered customers who are more demanding and move faster. They don't look for a product. Instead, they look for a reliable advisor and an experience in each service. Traditional CPG businesses have had to adapt by combining the physical, offline and the digital, creating new services that we had not previously imagined and new sales capabilities, changing the way of connecting with customers. The objective of this paper is to help you understand how to bring together all commercial services and customer contact points in an innovative, direct, efficient and close way that improves services and drives growth. It also lays emphasis on the impacts on back-office operations like Order-To-Cash, Procure-To-Pay, Logistics, etc. One can learn about the necessary tools, processes and capabilities to support mutual teams to manage business transformation from a traditional sales model to a "digitally enabled" model by ensuring process and structure consistency, standardization, and excellence, while driving customer service improvement and top-line growth.

IMPACT OF ARTIFICIAL INTELLIGENCE ON ADVERTISEMENTS WITH RESPECT TO FMCG PRODUCTS

Dr Rose Kavitha
Professor, New Horizon College of Engineering

Deepa S
New Horizon College of Engineering

Shashank M
New Horizon College of Engineering

Abstract

The advertising industries have started to use AI technology to identify the trends in the market and enables them to use it to predict the future trends in the market take decisions, make budgets and helps identify their target market. AI has a huge impact on quality of any work done as it is done in a better and effective way comparatively to humans. As seen, that AI can dig deep into all types of data simultaneously with different timelines of data hence understanding the customer ideology, mind-set and preference at the best. The advertising industry is always developing. Because of technology developments like artificial intelligence (AI), greater targeting, and dynamic creativity, the way customers connect with companies is changing. In order to interact with audiences more effectively, advertisers can use machine learning. AI enables improved audience targeting and segmentation for advertisers acquired by strata sampling with individual experiences.

The purpose of this research is to understand the implementation of artificial intelligence in the advertising industry, and what impact Artificial intelligence have on advertising industry. Examining the acquired samples from the survey demonstrates that AI is frequently employed in the marketing sector, even though the applications are at the operational level. AI has an impact on each element of the advertising mix, having an effect on both how successfully consumers are supplied and how effectively advertising is organised and managed. In addition, paper also presents the understanding the role of AI in different types of advertising of toothpaste under FMCG products.

THE IMPACT OF HYBRID WORKING ON GEN Z AND TALENT MANAGEMENT

Sindu Akilesh
Head of Department
Department of Management New Horizon College Kasturinagar
sindu.nandakumar@gmail.com

Abstract

The year 2020 will never be overlooked within the history of this world. The widespread was uncommon in ways no one seem have ever envisioned. Inside fair six months of its approach, individuals all around the globe were constrained to sit at domestic. This research article points to move forward the information on Gen Z as workers inside workforce and within the working environment, as well as on the most thematic patterns that drive the investigate on the subject. The research study focuses on HR analytics, used and how the suitable candidates in a short period are identified and better decisions are made during recruitment thereby contributing to the company's growth. The study focuses on how the hybrid work mode has affected the employee's leadership and Talents for the organization. The main core areas of research study focused around Gen z, Workplace Management, attitudes and Career Planning. The study focuses on the need of and further development in the work force on the major aspects of this generation and the labor market. The investigation has gone into rethink the culture of a work force that is no longer confined to an office full –time. The study has shown that most Gen z employees prefer Work from home despite companies calling back to office. How the employee's talents can be enhanced through remote working mode is also being analyzed.

Abstract

The current available modern technology has made possible for us to have many more volunteers to participate in the conservation of our environment and help in the sustainable development. This allows for providing opportunities to people to contribute to the society. This has brought around an expanding number of versatile phone-based citizen science ventures that are outlined to get to these gadget highlights as well as to reach diverse client bunches, over distinctive venture lengths, and with diverse points and objectives. Here by integrating machine learning and predictive analysis, we can bring to life the basic idea of having people volunteer in these programs to help the environment. The Sainik application will help in accommodating all these ideas to fulfill the desire to help preserve our environment. It also provides people especially the youth to contribute to the safekeeping of our environment. Our experiments show that number of people volunteering have reduced by 1% in last 5 years and it is our goal to help improve that statistic. The major reason for this is not the lack of willingness of people to volunteer but the lack information of events requiring such help for both the organizers and the volunteers. The main purpose of this application is to help the environment while providing opportunities to the public and building a better place.

Abstract

Cyber Defense for any organisation has become a priority these days where the world is moving towards virtual communications and business happening among organisations globally. Critical areas to focus are breach detection and breach response. Taking a proactive approach to cyber security (CS) will enable us to avoid damaging and disruptive cyber attacks. Cyber attacks target the IT resources, leading to a tarnished and irreparable organisational image, loss of valuable data added with unproductive downtime. Organisations with proper cyber defense techniques will be able to conduct continuous business while facing persistent threats and sophisticated attacks. Availability of low cost powerful handheld devices coupled with low cost high speed data has led to deeper penetration of the internet. Changes in global scenarios dictated by pandemic are acting as catalysts for work from home , flourishing e-commerce and other mobile-app based delivery systems. Aggressive promotion of digital payments led by new age fintech startups, digital push by government incentivisation of digital payments, e-governance all together have fueled the exponential growth of the internet. However, this growth has also brought a plethora of cyber, ransomware and phishing attacks etc. Global data shows exponential growth of cyber attacks in this period of pandemic. Safeguarding intellectual property and Personal Identifiable Data (PID) in an organisation is very important. This paper discusses proactive implementation of various Cyber defense tools and methodologies for safeguarding IT assets and in turn mitigate cyber risks. These methodologies help organisations improve network integrity and availability, rectify numerous flaws, including misconfiguration of the security settings, analysing security gaps and vulnerabilities and taking remedial actions. This paper discusses the various steps and implementation of frameworks, methodologies undertaken by authors to ensure the three triads of Confidentiality, Integrity and Availability of information and also brings the importance of third party audits and certifications of the organisation in the field of information security.

Abstract

For a person to be physically, psychologically, and socially healthy, having a positive outlook on life is essential. Money alone won't make your life peaceful unless you also have peace of mind. In today's competitive society, when everyone is racing to the finish line, many other considerations are being carelessly disregarded. Stress, worry, and other issues among others all harm mental health. In order to address the aforementioned issue, this research suggests early detection and assistance for problems encountered in identifying a person's mental state. The system consists of 2 modules namely - 1) Facial Emotion Detection 2) Assistance. The output of all the models is combined and by further analysis, the final outcome is given in the form of prediction of the user's state of mind and also further assistance to enhance their mood.

Abstract

Quality plays a very vital role in signifying the credibility of the service provider. Academic institutions act as educational service providers to the students. The mushrooming of management institutes in India created an issue of question of quality mark and recognition. This necessitated gaining a Quality seal for the management institutes. Accreditation for an institute paves a mark of credibility. NAAC, NBA, NRIF are the accreditation bodies in India. The quality assurance governing bodies judge certain parameters for the institutes and proceed for gradation. This gradation embarks as a quality status symbol for these institutes. There are different criteria for gradation. One of the important aspects in these parameters is the faculty contribution in research. This research paper intends to explore the research environment provided to the faculties by the management institutes. It aims to examine the support extended by the institution through different aspects.. The constraints faced by teaching fraternity in pursuing research are examined and suggestions to overcome them are provided. The data is collected by both, primary and secondary sources. Primary source includes survey schedule (Google form) and secondary includes the journals, books, and websites. The support system from institution in terms of Allowance/ (travel), registration fees, Publication fees, Conference/seminar/FDPs, leave or outstation duty is explored. The responses for attributes like, managing time for research activities with other additional responsibilities, financial and non -financial support from institution are explored. 48.19 percent of respondents are of opinion that, research activities become very stressful, as managing time with other routine academic/ official work becomes a challenging task. This is managed many a times by sacrificing family time, sleepless nights and extending work hours. The research environment in management institutes seems to be on a lower note. The fair recruitment policies, optimum staff retention and support from management institutes will definitely change the research scenario.

cbvk123@gmail.com

Abstract

It was presumed that teaching effectiveness, self-efficacy, and continuous professional development have the power to change professional commitment owing to their cumulative nature in terms of thinking, acts, and realities. These ideas were also supported by previous research which advocated continuous professional development as a classical source of professional commitment because continuous professional development has the power to change oneself with strategies that facilitate the transfer of training throughout the life of a professional. This study examines the relationship between leadership style, self-efficacy, and professional development in higher education institutes in India. The study instrument used for this research is a questionnaire which was shared through an online medium. The population for the study consisted of academicians from higher educational institutes. The study's major finding indicates that the gender of academicians does not differ in leadership practices, self-efficacy or professional development. There is a positive relationship between leadership practices and self-efficacy and professional development.

Keywords: Leadership style, self-efficacy, professional development

Abstract

The purpose of this paper is to review existing literature on the application of technology-based student assessment processes, with a particular focus on artificial intelligence-based student assessment practices. We gained a deeper understanding of the current trends in student assessment processes as a result of this. The literature reveals a number of possibilities for incorporating digital assessment into educational systems. Secondary research also demonstrated the possibility of integrating artificial intelligence (AI) into students' teaching and learning processes. However, there is a gap between theory and implementation in Indian higher education. In order to gain a better understanding of how real users perceive technology and AI-based student assessment, a qualitative study was conducted. Participants in the study were stakeholders in the Indian management education system. Faculty and students from Indian management institutions of national importance as well as affiliated and autonomous institutions was included in the study. The study revealed faculty and students' perceptions regarding the challenges and benefits of digital and artificial intelligence-based student assessment processes. Based on the findings of this research management and policy makers can address inhibitions expressed by faculty and students before considering the digitization of student assessment processes.

Abstract

This study is to find out the effectiveness of different methods of teaching on the learning outcome of the students based on Bloom's Taxonomy. Questionnaires were used to collect data from students on their experience with the use of the Case Study method. The case study teaching method has a higher rate in both empirical and perceived effectiveness of the learning outcome based on Bloom's Taxonomy. The Socratic Method of teaching is a shared dialogue between the teacher and the students in which both are responsible for pushing the dialogue through questioning. The "teacher," or leader of the dialogue, asks probing questions in an effort to expose the values and beliefs which frame and support the thoughts and statements of the participants in the inquiry [Rob Reich, 2003]. The study conducted measures the effectiveness and its intersectionality between education and business (Business Studies) and has been widely used in higher education institutions especially the management studies to facilitate effective learning across a variety of subjects like Marketing, Human Resource Management, Organizational Behaviour, Financial Management, and Business Management, etc. The study has found that the Case Method is useful for most of the subjects in Management, especially Marketing, Human Resource Management, Finance, and Business Ethics. It is also observed that the Case Method helps in remembering the knowledge created through their actions and behaviour.

Key Words: Case Method, Socratic Method, Project Based Learning, Bloom's Taxonomy, Learning Outcome, E-pathshala, Collaborative Skills

ABOUT INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE (ISME), BANGALORE

ISME is a leading business school offering excellent education through a student-focused culture of excellence, international outlook, entrepreneurial thinking and industry alignment. It was founded in 2006 by alumni from Carnegie Mellon University, Purdue, and Wharton, USA. ISME has always been at the forefront of quality education, with the vision of nurturing holistic, socially responsible and competent professionals. ISME has been ranked as one of the top B-Schools in Bangalore and top 1% B-Schools in India.

At present ISME offers undergraduate, postgraduate and Doctoral programs in Management. Our lush green campus at Sarjapur Main Road is an ideal ambience for study and research. The Institute constantly endeavours to expose its students to various methods of learning, like industry visits, interaction with industry experts, participation in seminars, case study etc. so that they become successful in their journey as they move from campus to the next phase of their career."

ABOUT THE CONFERENCE

Contemporary management issues often trigger the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices to facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time where all organisations worldwide must embrace continuous changes in technology, economy, environment, and government policies to remain competitive.The rise in digital adoption, the economic fallout of the pandemic worldwide, the rise of China as an aggressive global force, our government policies moving towards a more nationalist agenda, and growing geo-political tensions worldwide are some recent issues which confront businesses and management.

This conference is a platform for industry practitioners, academicians, entrepreneurs, and research scholars to come together to learn, share and discuss current emerging topics in management with thought leaders, technologists, and learning experts. The conference is a great knowledge-sharing event for a diverse audience embracing international and national participants. The event has renowned keynote speakers, practitioner-led workshop sessions, and offers an excellent networking platform.

The conference includes original research papers from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

CIM-23 Organizing Committee

MESSAGE FROM CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore!

On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 11th International Conference on 'Contemporary Issues in Management - CIM-23'.

We live in a world of disruption and drastic changes with different countries in different stages of the economic cycle. This conference aims to discuss issues relevant to the present time like mass layoffs by major MNCs and penetration of AI tools in our lives. All organizations must embrace the changes in technology, economy, environment and government policies to remain productive and competitive

This conference is a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with eminent international and national keynote speakers. Industry experts are a part of the panel discussion on 'Great Resignation to Grand Layoffs: The Contemporary HR Landscape'. We are delighted to share that CIM-23 has received papers from reputed institutions like Indian Institute of Technology Delhi (IITD), Tata Institute of Social Sciences (TISS), National Institute of Industrial Engineering, Mumbai (NITIE) and Symbiosis, Pune and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference.

Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,
Dr Rony G Kurien

Dr.Geetha.Rajaram
Research Guide, International School of Management Excellence,
Research Centre, Affiliated to the University of Mysore
rajaram.geetha@gmail.com

Abstract

There is a clear shift in the way companies report their performance to the stakeholders. Integrated Reporting (<IR>) is a corporate reporting reform practices followed by many big companies all over the world. They are moving from more profitable companies to more responsible companies in terms of preserving the resources for future generation. The companies are accountable for protection of natural resources, society at large apart from other capitals, like financial & manufacturing capital. The objective of this paper is to check the compliance of Integrated Reporting Framework (IRF) of select Indian companies. For this the content analysis is done to cover all the content elements and the six capitals of sample companies. Analysis is done in 2 stages. One is content element analysis according to IRF, secondly analyzing the impact of IRDI on firm value. Spss; 29 version has been used to analyze the data of six companies of 4 sectors for 3 years from 2018-2021, since IR practices were made a part of voluntary disclosure since 2017 by SEBI circular for top 500 companies. Out of 7 content elements organizational overview has maximum score of 96.33% and strategic has got good score of 95.75% in the period of pandemic. All the companies had more focus on strategy to overcome the challenges of Covid-19. Another objective is analyzed by descriptive statistics and correlation, model summary, multi co linearity. A regression model is developed for the same. Tobin's Q is taken as a proxy for firm value and is considered dependent variable. The independent variables are the IRDI score, ROE, Size by market capitalization & ROCE. A regression model is developed to estimate unknown value of dependent variable (Tobins Q) using the known values of independent variables.

Keywords: Stakeholders, Firm value, Tobin's Q, IIRC, Integrated Reporting Disclosure Index (IRDI)

HOW A CHINESE TAKEOVER OF TAIWAN WILL EFFECT FOREIGN DIRECT INVESTMENTS

Dr. Rainer Wehner
Technical University of Applied Sciences
Würzburg-Schweinfurt
rainer.wehner@thws.de

Abstract

Over the past decades, China has gradually increased its geopolitical influence. Besides the Belt and Road Initiative, that diversified Chinas economic and political relations with many countries in the western world, Beijing has vowed to bring Taiwan back under Chinese control. That could provoke a massive conflict, because the U.S. President has made clear, the U.S. stand by Taiwan and will retaliate in the case of a forced attempt. Based on this scenario the purpose of this paper is an analysis of the consequences for the inflow of Foreign Direct Investments (FDIs) into Taiwan. For that reason, the author examined the published literature of the last years and analysed the Chinese – Taiwanese political and economic relationship. Furthermore, he researched the impact of such hostile takeovers on FDIs in similar situations to draw assumptions for an eventual conflict. It became apparent that the reactions of foreign direct investors vary, depending on the intensity of the conflict. Therefore, different scenarios of a Chinese takeover need to be drawn into conclusion. Based on the available data the major findings show that at the beginning of the conflict FDIs drop dramatically because the investors withdraw their money. Depending on the extent of the conflict, the destruction of the country and the impact on future economic prospects, the money will slowly flow back after a certain period of time.

COMPETENCIES OF BOARD MEMBERS IN ANNUAL REPORTS OF STANDARD & POOR'S BOMBAY STOCK EXCHANGE SENSEX ORGANIZATIONS

Amit Kumar
Research Scholar, GITAM University

Shanmuganathan Janardhanan (Late)
GITAM University

Abstract

While the importance of the right competencies of leaders in large organizations is well understood in practice, limited research exists about competencies of board members, especially in the Indian context. With this critical need, this paper attempts to provide a competency model, framework and a competency dictionary. The competency definitions in the dictionary are based on competency descriptions of board members of S&P (Standard & Poor's) BSE (Bombay Stock Exchange) Sensex organizations. Taking advantage of government guidelines that require listed organizations to disclose competencies of board members, annual reports of 30 Sensex organizations are subjected to qualitative analysis. A total of 246 competencies are identified. These are further analyzed to determine themes amongst those competencies that have been detailed by these organizations. A competency model of eight competencies, a competency framework & dictionary are developed by providing competency definitions for generic, specific & unique competencies through thematic analysis of competency descriptions. The research provides a method for leaders in organizations, specifically NRC (Nomination & Remuneration Committee) members in boards on Indian listed organizations, to identify, define & use the right competency requirements for board members. The research method also paves the way for future study of larger organization groups.

PRACTICAL WISDOM IN DECISION MAKING OF WOMEN'S COLLECTIVES IN SRI LANKA

Professor G D V RupikaSenadheera,
Department of Business Administration,
Faculty of Management Studies and Commerce, University of Sri Jayewardenepura, Nugegoda, Sri Lanka

Abstract

The aim of this paper is to present the practical wisdom of decision making of women's collectives in rural villages in Sri Lanka. It's built on the corporative society concept and selfsufficient membership organization that is run solely by underprivileged women in Sri Lanka. With a view to get a deeper understanding of the practical wisdom in decision making of women's bank collective, a qualitative methodology was adopted. The study's objectives are accomplished via a review of the literature, a theme analysis, in-depth interviews, and observations. Primary data came from in-depth interviews with 10 leading characters of Sri Lankan Women's collectives. Findings of this study reveal that the women's thinking and their maximizing and satisficing behaviors of decision making are based on different social meanings of their day to day life experiences and mutual understanding of their group members in terms of trust, honesty, equity and equality. Further deep analysis also reveals that every decision has integrated with the utilitarian perspective of ethics that mean their decisions always concerned for greater good for greater number of people in the group. And also women's collectives would be beneficial to enhance women's decision making power in the field of financial handling, insurance services, community development initiatives, cultural events, and business networking opportunities, disaster relief initiatives, and health and educational services as well. As a result of this behavior support women's for self-motivation, self-discipline, teamwork, and leadership skills in addition to the aforementioned value-added activities. Subsequently, the women's collectives have significantly helped to improve the socio-economic situation and empower women within the household and without their isolation of them through greater social interaction. And also this study will assist readers in learning about the idea of women's collectives practice by ground level and how it benefits the growth of women's lives, their families, and the whole nation.

KeyWords: Community Driven Project, Decision making, Economic Development, Empowerment, Women's collectives

BUSINESS EXCELLENCE & SUSTAINABILITY: MANUFACTURING, SERVICES AND AGRICULTURAL SECTOR

DEVELOPED PARAMETERS OF MANUFACTURING CAPABILITY MATURITY MODEL INTEGRATION FOR SUSTAINABLE GROWTH IN INDUSTRIES

Dilip Kumar Gayen
Research Scholar, GD Goenka University
Head Manufacturing & BE in East West Info solutions

Abstract

The post Covid pandemic has immensely impacted the manufacturing industries globally in the sustainable performance and progressive growth. Limited studies and researches are conducted worldwide by various scholars, industry's technical experts on manufacturing techniques for the sustainable manufacturing growth and business progression through the capability maturity model with customer's satisfaction in changed & challenging circumstances. During the evolution of Industry 4.0 & 5.0 techniques in manufacturing, the process is changing in the global manufacturing techniques & technology and performance of companies on the perspective of investment in the digitally controlled production through smart factories. In this study the objectives, the sustainable growth in manufacturing companies through a capability Maturity Model on Manufacturing is formulated by identifying the parameters and sub parameters at various Levels of maturity for sustainability in system standardization & performance. The maturity parameters & elements designed as a guideline for the manufacturing and operation heads to follow and implement this maturity & sustainable model for smart manufacturing, an efficient production structure and Future of Factory.

Keywords: Capability Maturity Model Integration (CMMI), Manufacturing Capability Maturity Model Integration (M-CMMI), Future of factory (FoF), Operational Excellence (OpEx), Smart Manufacturing (SM).

RENEWABLE ENERGY IN CORPORATE AND AGRICULTURAL SECTOR

Likhitha.S.Kumar
Student of B.Com, KLE Society's Degree College

Priya.T.B
Student of B.Com, KLE Society's Degree College

Abstract

The world is focusing on saving environment and mother earth, it is very important to create awareness among the people to go eco-friendly. As we know that the electric era is taking a great move from the past decade and has reduced the use of petrol and other fossil fuels. It is important to note that the fossil fuel and non-renewable source of energy is in the stage of being verge and the world is making efforts to reduce the use of non-renewable source of energy, since the availability of fossil fuels is limited and cannot be used in some remote areas. But, renewable source of energy has eliminated all the loopholes associated with the conventional source of energy and made it convenient and safe for use. This paper reports the use of renewable source of energy and its implementation in the field of corporate and in the agricultural sector. Virtually, the corporates are involved in promoting eco-friendly products and taking initiative for creating the awareness to plant saplings. The renewable energy has the potential to solve all the problems faced by the developing countries. This paper also explains the policies implemented in the recent decade to overcome the hurdles and ensures the enhancement of renewable energy for future.

Keywords: Non-conventional source, Transition, Corporate Social Responsibility, solar power plants, wind mills.

DISRUPTIVE STRATEGIES FOR SUPPLY CHAIN DISRUPTIONS

Dr Sridharan.A
Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sridharan.a@christuniversity.in

Dr Sunita Kumar
Associate Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sunita.kumar@christuniversity.in

Abstract

Supply chain disruption happens when forces, both internal and external affect the business's capability to get material, produce finished goods and dispatch them to the end consumers. This breakdown in supply chain could be due to bullwhip in marketing demand or suppliers' inability to meet demand or even natural calamities like monsoon or outbreak of pandemic or even the failure of logistic providers to meet transportation demands. Whatever be the reason, it will affect the business's top line and bottom line and the image of brand due to its non-availability in the shelves of retail outlets. It will become a case of "out of sight, out of mind" of consumers. According to Concord Monitor, toilet paper ran out of retail outlets as consumers panicked and the sale went up by 213% in March, 2020 over the same period in 2019. This is a classical case of demand overruns. When the ship Ever Given ran aground on 23rd March, '2021 in the Suez Canal, a total of 367 ships were caught in this traffic jam for a period of six days. Businesses lost billions of dollars as supply chain of raw materials and even finished goods were not delivered on time.

The year was 1962 and it saw the birth two big chain stores in United States of America, the one which is very successful one, Walmart and the other K-Mart. While Walmart continues to thrive and run successful business, K Mart folded in the year 2002 and later merged with Sears Group. There were many reasons for K Mart failure, but two things stand out, one being absorption of technology like internet and the other being smart supply chain operations like cross-docking, low inventories, that are being employed by Walmart. While disruptions are always there in businesses, this research paper explores on disruptive technologies that are available and which can be employed by businesses for their successes or at least reduce the dysfunctions.

Keywords: Supply Chain, Disruptive Technology, Consumers, Raw Materials, Finished Goods, Walmart, Cross Docking, Internet

STUDY ON THE POST COVID CHALLENGE TOWARDS STARTUPS IN INDIA

Dr.A.Ravi
Professor & Director,
RJS Institute of Management Studies, Bengaluru
draravi65@gmail.com

Dr.Gokul.G
Assistant Professor,
RJS Institute of Management Studies, Bengaluru
gokul4edge@gmail.com

Abstract

The COVID-19 outbreak and the prolonged period of shutdown wreaked mayhem for the new businesses that were beginning operations in India. Restrictions on the movement of goods and people leading to an increase in both supply and demand side risk, a lack of investors willing to continue investing in the firm, and the looming threat of a global recession are all factors that have made it exceedingly difficult for Indian start-ups to remain in business. However, in addition to difficulties that pose a direct danger to the very existence of start-up businesses, the pandemic has also brought about potentially fruitful opportunities for expansion. Given the lack of certainty regarding the development of a treatment for the disease in the near future, a number of different industries have generated a significant amount of revenue, and the opportunities presented by this situation appear to be sustainable. This article is a sincere attempt to elaborately highlight the challenges that Indian start-ups are currently facing and also the opportunities that they can bank on. The pandemic has affected various industries in a variety of different ways. The start-up ecosystem, which has never seen anything like this before, has its fair share of winners and losers as a result of this unique circumstance.

A STUDY OF CONSUMERS' BEHAVIOUR IN BUYING VEGETABLES AND FRUITS DURING THE COVID PANDEMIC

Ravella Prem Sai
PGDM Student,
International School of Management Excellence, Bangalore

Soundarya Shetty
PGDM Student,
International School of Management Excellence, Bangalore

Dr. S. Shyam Prasad
Professor,
International School of Management Excellence, Bangalore

Abstract

This study aims to investigate the behavior of consumers in buying vegetables and fruits during the COVID-19 pandemic. The COVID-19 pandemic has caused a major shift in consumers' behavior and the way they purchase their daily necessities. With the increase in health concerns, the demand for healthy and fresh food, especially fruits and vegetables, has increased. The data for this research was collected during the end of the first quarter of 2022 when the pandemic was subsiding. The concept discussed in this article and the findings thereof will add value to the literature, besides its relevance to academicians, the results of this study are also important to practitioners. The findings of the study revealed that regarding vegetables and fruits, offline is the choice of purchase over online. Retail store images do not play a decisive role in purchasing vegetables and fruits. variety, freshness, and economy have become major factors for consumers. The store image does not matter.

Keywords: Consumer Behavior, Covid 19, Fruits and Vegetables, Buying Habits

Prof. Pramod Kumar Painuly
University of Petroleum & Energy Studies, Dehradun
pkpainuly@ddn.upes.ac.in

Abstract

The lifestyle changes induced to control the pandemic have impacted daily life and have brought notable difference in consumer behavior (Sheth, 2020). Everybody looks for convenience, customization, inclusion of latest trends, multi-channel engagement and alignment with the goal of healthy living. Around 80% of companies agree that customers would go online in the new normal and their new business model should be digitized to be economically viable, the businesses must examine how customer behavior is evolving, as well as identify the factors that make online shopping possible and how they interact with one another. Doing so will aid managers in developing strategies that will help them remain competitive in the new normal. Two brainstorming sessions were held; in the first, the experts were given relevant literature to help them discover the elements that encourage online shopping. With the help of expert opinion, SSIM was utilized to determine the contextual relationships between the sixteen identified online purchasing factors. To recommend the pair-wise comparison, the same 40 experts from the panel were consulted. These 16 variables were probably used to assess the and to construct a driver-dependence relationship among these drivers using interpretative structural modelling with MICMAC analysis.

Keywords: Covid-19,Online purchase, ISM-MICMAC analysis, shift in consumer behaviour

IMPACT OF DEMOGRAHIC VARIABLES ON E- WALLET USAGE WITH REFERENCE TO METAMORPHOSING OF ECONOMY

Prabhat Agarwal

Abstract

With the advent of Demonetization in Indian Economy on 8th November, 2016 there has been the upcoming of "Metamorphosing of Economy". Indian Economy is undergoing some radical changes post demonetization era as now the culture of 'Cashless Economy' is gaining much importance. With the introduction of "Digital India" program in 2015; two different concepts i.e., 'Technology' & 'Bank' finally got combined and "Digital Banking" came into existence. The objective of this paper is to show the impact of various determinants viz. ease of use, trust, security, time saving and convenience on the usage of e-wallets in city of Allahabad. The study is based upon both primary & secondary data. The primary data is collected from 209 respondents with the help of 'Structured Questionnaire' framed by following the "5 points Likert Scale" technique. This study is both analytical & descriptive in nature. The collected primary data is being analysed with the help of Microsoft Excel and SPSS. The statistical tools used to interpret the data are Regression Analysis and ANOVA technique. The present study has highlighted that between age & ease of use factor affecting e-wallet usage there has been no relationship. At the same time this study also highlights that there is significant but negative relationship between age along with trust, security & time saving & significant positive relationship between age and convenience factors affecting the e-wallet usage. This paper also shows that there has been a significant but negative relationship between diverse income groups with ease of use & security factors affecting the e-wallet usage. At the same time study also reveals that there has been significant positive relationship between diverse income groups with trust, security & time saving factors affecting the e-wallet usage.

Keywords: Demonetization, Cashless Economy, Metamorphosing of Economy, Digital Banking, E-wallet.

CHALLENGES AND STRATEGIES IN GREEN MARKETING

Dr. P. Vanishree Sah
Associate Professor, H&S Department,
CVR College of Engineering, Ibrahimpatnam.
pvanishree@gmail.com

Abstract

In today's environment the terms like eco-friendly and green marketing are being used widely. Environmental issues like global warming and climate changes are creating lot of threats to the society. The society has become more cautious towards harmful effects of the technological advancements. Due to this awareness, eco-friendly and green products are gaining more popularity. Green Marketing has emerged as a trending concept in sustainable development of the economy. This paper analysis the challenges and strategies involved in the process of Green Marketing.

A STUDY ON ROLE & IMPACT OF AUGUMENT REALITY (AR) ON SEARCH ENGINE OPTIMISATION (SEO)

Aparna M Joshi
Head of the Department & Associate Professor,
Department of Commerce, The National College Autonomous,
Affiliated to Bengaluru University
aparnamj.09@gmail.com

Abstract

Augmented reality (AR) mobile app advertising offers new opportunities for interactive consumer engagement to boost advertising effectiveness and elicit positive consumer responses. In this study, I investigate the role of escapism by analyzing its antecedents and consequences. We aim to shed light on how AR mobile app advertising can be used to enhance escapism experiences by considering two psychological mechanisms of mental imagery: narrative transportation (in response to ad storytelling) and spatial immersion. Search Engine Optimization(SEO) refers to the process by which search engines "crawl" content to see how effective it willbe to attract traffic. Search engines will assess a number of things in a website (such askeywords, tags, and link titles) and rank it for its capacity to attract organic traffic based on avariety of factors. The consequences of escapism experiences include positive social media sharing, purchase intentions through brand attitudes, and new brand engagement via AR mobile app advertising. Prior brand preference does not affect the relationship between escapism and consumer responses after exposure to immersive AR advertising. My findings have meaningful implications for how industry practitioners can enhance escapism in the context of AR mobile app advertising.

Raghu Yadaganti
Research Scholar, Krishna University,
Assistant Professor, PES University, India
raghuy@pes.edu

Abstract

The Research focuses on understanding what factors are impacting the customer purchase intention and usage behaviour of Electric scooters in India by applying the UTAUT2 Model. The study uses a quantitative approach by using a questionnaire. The Findings show that PE, SI, HM and EC of the UTAUT2 Model are directly and positively impacting the Behaviour Intention of customers to use Electric Scooters. EE, FC, PV and TR UTAUT2 Models are directly and negatively impacting the behaviour Intention to use Electric Scooters. The study is quantitative in nature and focuses on in-depth knowledge of factors influencing customer behaviour and intention to use Electric Scooters in India. However, the study cannot be representative of an enormous country like India. Academics and Electric Scooter retailers can consider this in future research

The studies provide information on the factors necessary for promoting Electric Scooters in India. These studies can be useful for Electric Scooter retailers who are looking forward to promoting Electric Scooters in India. Earlier studies in this context of E – Scooters usage have tried to use technology adoption models. Hence, these studies have not been capable to capture the fundamental nature of the impact of Environmentally Friendly on technology adoption in the Indian context. A lot of the analyses are performed used to find the relationship between independent and dependent factors but not explored to understand the relationship between the independent factors and the combination of independent factors' impact on dependent factors. In this research, we used Structural Equation Model (SEM) by using LISREL.

Keywords: Customer behavior intention, Electric Scooters, UTAUT2 Model.

IMPACT OF DISCOVERY COMMERCE ON ACHIEVING COMPETITIVE PARITY

Pranav Ajay Kumar
Student, CHRIST (Deemed to be University)
pranava.kumar@bba.christuniversity.in

Roy Matthew
Associate Professor, CHRIST (Deemed to be University)
roy.mathew@christuniversity.in

Abstract

Discovery Commerce is the hyper-personalisation of the point of purchase and point of sale of a product or service online. Companies may use these platforms to curate specific offerings on social platforms by essentially, guiding a customer to a product. The goal of discovery commerce is to bring the concept of window shopping to social platforms like Facebook, Instagram and YouTube. This paper attempts to evaluate the impact of discovery commerce platforms in achieving competitive parity between Direct-to-Consumer and Business-to-Consumer (B2C) brands. A secondary objective is to develop strategies for B2C brands to compete with Direct-to-Consumer (D2C) brands using discovery commerce platforms. Alejandro et al. (2020) states the point of purchase that a general population uses to acquire their goods greatly affects their consumption of goods and overall social status. The work of Bonet et al. (2005) concludes that logistical relationships across the value chain leads to vertical competition. The online nature of Direct-to-Consumer companies may provide a significant competitive advantage to them over Business-to-Consumer companies. This study is descriptive in nature. The data collected from Amazon Vendor Central consists of primary data. A Discovery Commerce campaign was launched for the 'hair care' product category of a B2C brand along with extensive SEO efforts. This was done to identify the impact of the marketing efforts followed by D2C brands which have given them an edge on e-commerce platforms. This includes changes to product titles, images and descriptions of product listings on e-commerce platforms to observe an increase/decrease in sales and visibility. Neo-marketing efforts like SEO and Discovery Commerce campaigns have a significant impact on the sales and discovery of traditional brands who have an omni-channel presence. Across all categories of the optimised products, Glance Views have increased by an average of 320%.

Keywords: Discovery commerce, search engine optimisation, glance views, e-commerce.

FACTORS INFLUENCING THE USAGE OF SMART HOME TECHNOLOGY IN INDIA

Srinath S

Manish Kumar Shrivastava
Christ University Bangalore

Abstract

This paper explores the roles of perceived risk, performance and after-sale service, and demographics in the usage of smart home technology (SHT). Despite the push for digital technologies, smart homes still face challenges related to their limited use. We adopted a mixed methods approach and collected data from 133 respondents and 1244 users' responses from secondary sources. This research adopted the perceived risk framework and thematic analysis to explain the usage barriers of smart home technology. Our research supports the perceived risk factors relationships, such as privacy, performance, financial, psychological and perceived risk role as a resister. This research explains the post-adoption challenges of individual concerns related to the performance, after-sales services, and complexity of digital technologies. The use of IoT-enabled devices is influenced by users' demographics and cost and security concerns. This research has practical implications for understanding the factors associated with using IoT-enabled smart homes in India.

Keywords: Smart Home, Internet of Things, Perceived risk factors, Demographics, Mixed methods.

DIGITALIZATION - A STRATAGEM FOR RURAL RETAILERS

Ms. Tanuja B
Research Scholar, International School of Management Excellence, Bangalore

tanujab.isme20@gmail.com

Dr. Shampa Nandi
Professor in Analytics & Marketing, International School of Management Excellence, Bangalore
A recognized research center of University of Mysore
shampanandi12345@gmail.com

Abstract

This study aims to bridge the gap by examining the process of digitalization in rural retailing. To reach rural consumers, rural retailers are crucial. They serve as a conduit between producers and customers. Since rural retailers contribute significantly to the GDP, it is essential to retain them. The competition from organized retail and urban counterparts is extremely difficult for rural retailers. This paper focuses on how digitalization helps Rural Retailers to retain in business. Its relationship to rural retailing was examined through the Study TOE Framework. Additionally, it intends to inform Rural Retailers about the various channels of distribution they might use as a result of digitization. Secondary data was used in this study, which used a qualitative methodology and information gathered from websites and academic articles. The study concludes on the integration of TOE model framework, rural retailer's digitalization, and the adoption of digital distribution channels.

Keywords: Digitalization, Technology, Organization, Environment, Innovative Channels.

CONTINUOUS INTENTION TO USE AND FREQUENCY OF USE – APPLICATION OF UTAUT2 AND MULTI-GROUP ANALYSIS WITH INDIAN HOME-GROWN DIGITAL WALLET

Palanisamy Ganesan,
Professor and Director,
Marketing Area, NSB Academy, Bangalore

Anita S Mane
Associate Professor,
R M Dhariwal Sinhgad Management School, Kondhapuri, Pune

The mobile wallet transaction was INR 532 billion in value and INR 1630 million in volume during FY2017 (Deloitte, 2017). During Q1-2021, the volume and value are INR 1.13 billion and INR 411.75 billion respectively (Worldline, 2021). The research questions for this paper are: (a) what are significant UTATU2 factors affect the continuous intention to use home-grown digital wallet? (b) is the prevention behaviour influence the continuous intention to use the selected home-grown digital wallet? and (c) are there significant difference between (i) two different group of age and (ii) two male and female customers in the continuous intention to use? The study provides an insight on the continuous intention to use the Indian home-grown mobile wallet. The mobile wallet users' experience on an average of more than six month that means users have learned and become a familiar of mobile wallet for their purchase through directly or ecommerce as well as transaction of money for other purposes. Thus, Habit become the important predictor for the continued intention to use Abdul-Halim et al (2022) and frequency of use of Indian home grown mobile wallet. The users feel that the simplicity in using mobile wallet for any type of transaction without hassle and assistance from any other individual that results in the positive effect of effort expectancy on continued intention to use and this finding in line with the study by Ramos (2021) with food delivery apps during Covid19. Hedonic Motivation strongly influence the continued intention to use mobile wallet, thus the users see there is hedonic value of continuous use of mobile wallet in terms of positive feeling and pleasant experience when they use mobile wallet (Ly et al 2022). Thus, the research question one is answered through the Habit, Effort Expectancy and Hedonic Motivation are the significant constructs compared to other four strongly and positively predict the user's continued intention of mobile wallet. The role of preventive behaviour with UTAUT2 constructs highlights that the preventive behaviour plays no role in predicting continuous intention to use of mobile wallet. The limitation is that all constructs of Prevention Motivation Theory employed which result high predicting power on CIU.

Keywords: UTAUT2, Continuous Intention to Use, Frequency of Use, SEM, Multi-Group Analysis

IMPACT OF SOCIO-DEMOGRAPHIC VARIABLES ON THE PURCHASE INTENTION OF ORGANIC FOOD PRODUCTS

Roopashree B R
Research Scholar, MSRIT, Bengaluru, India
roopapraveen2004@gmail.com

Dr. Rizwana
Associate Professor and Research Supervisor,
MSRIT, Bengaluru, India
rizumehar@gmail.com

An encouraging sign that people are becoming increasingly aware of the negative health effects of these highly polluted and poisoned food items. Organic food products in India are expected to develop considerably during the projected period due to a variety of factors, including the availability of organic food goods on the internet and a shift in consumer preference toward organic food. According to certain researchers, sociodemographic factors play a role in purchasing decisions There is a need to explore the influence of demographic variables on purchasing behaviour because of inconsistent findings in the literature. Research of this type is descriptive in nature and aims to evaluate the influence of socio-demographics on the purchase intentions of the target audience for organic food items. The target audience was given a well-structured questionnaire, which included six sociodemographic questions based on logical reasoning and three questions on purchase intention based on Chiew Shi Wee & et al, 2014 and Anupam Singh, Priyanka Verma,2017. A 150-target audience sample was selected with a 10% margin of error and a 95% confidence interval and 121 valid responses were chosen for the study. We utilised the snowball-sampling strategy because we invited people to fill out the survey and then pass it on to their friends and relatives. Findings of the study indicate purchase decisions are influenced by income. Thus, it is possible that the amount of organic food purchased correlates directly with a person's income (i.e., the higher the income in schooling, according to the statistics. Organic goods are more likely to be purchased by those with higher education levels. This might be because more educated clients are more health-conscious and aware of the advantages of buying organic foods, which could lead to an increase in sales of organic products. In both industrialised and developing countries, several studies have found that a wide range of factors impact people's decisions to buy organic food. Demographic variables such as gender, education, and money, independent of the country in which they take place (developed or developing) will have greater influence on purchase of organic food products.

Keywords: Socio demographic Variables, Purchase intention, Purchase decision and Organic food product

ETHICAL MARKETING IN CURRENT TIMES: SOCIAL RESPONSIBILITY IN INDIAN CONTEXT

Dr.Mohammed Farooq Pasha
Assistant Professor of Commerce and Management,
Government First Grade College Kengeri, Bangalore.
farooqpasha2OO2@gmail.com

Jayashree Urs R
Assistant Professor of Commerce and Management,
Arihant Group of Institutions Thalaghattapura Bangalore.
jay.np@rediffmail.com

Abstract

It is often said that Marketing and ethics cannot go together. Those supporting the argument always have a long list of marketing activities from various companies which make even a die-hard marketing fellow feel guilty about his/her profession. On the other hand, critics of the argument can also come up with numerous marketing activities from various companies which can make the worst critic of marketing activities doubt his/her own criticism. So where does the debate goes from here. It only intensifies as more and more companies in every category of products and services are always making efforts to increase their market share through marketing strategies which they call innovation oriented but others call unethical thereby generating arguments within them as well as in the minds and hearts of consumers as well as potential consumers. This paper looks at the consumer perception about the degree of ethics in marketing followed by companies across all categories of products and services and its impact on the society on the one hand and company growth on the other hand.

Keywords: Criticism, Ethics, Innovation, Marketing and Society

UTAUT & UTAUT2 MODEL - A DESCRIPTIVE ANALYSIS OF THEORETICAL CONCEPTS BASED ON THE LITERATURE REVIEW

Remya Nair
Research Scholar (Registered with University of Mysore).
International School of Management Excellence, Bangalore
(A recognized research center of University of Mysore), India
Email:remya.sanju.nair@gmail.com

Abstract

UTAUT or Unified theory of acceptance and Use of technology is the technology adoption model proposed by Venkat et all (2003). This is a descriptive paper analysing both UTAUT as well as UTAUT2 based on Literature review. The research papers published from 1989 to 2020 are analysed and included in this paper. The concepts of the UTAUT as well as UTAUT2 are explained in detail. The other models that contributed for the development of UTAUT model are also mentioned in this paper.. The theoretical model of UTAUT suggests that the actual use of technology is determined by behavioural intention. The apparent prospect of adopting the technology is dependent on the direct influence of four key constructs - performance expectancy, effort expectancy, social influence, and facilitating conditions. The effect of predictors are moderated by factors like age, gender, experience and voluntary willingness to use. To provide a holistic understanding of technology acceptance, the researchers can set the objective for creating a unified theory of technology acceptance by incorporating key constructs, theory enabling the model to predict behavioural intention and use. The UTAUT theory has been utilized to explore human-computer interaction. In the field of research, UTAUT has contributed immensely to the literature. The model provides insight into technology acceptance by assessing prominent technology acceptance theories, which offer distinct perspectives on the subject. UTAUT demonstrates that proposed factors account for 70 percent of the variance in use intention, offering stronger predictive power compared to the rest of the models that examine technology acceptance. The collaborative impact of constructs with personal and demographic factors establishes the complexity of the technology acceptance process, which is in turn dependent on individuals' age, gender and experience. The Practical Implications, Applications of UTAUT model, Limitations of UTAUT model are explained in detail in this paper.

Keywords: UTAUT, Technology adoption, Effort Expectancy, Performance expectancy, motivation

A STUDY OF FACTORS INFLUENCING PURCHASE INTENTION IN THE CONTEXT OF INFLUENCER MARKETING

Samuel Vero Viegas

haritha@isme.in

Abstract

Influencer marketing is rapidly growing throughout the globe, which has led marketers to view it as a crucial component of their available marketing alternatives.The internet offers a marketplace and a channel for reaching potential customers. Utilizing influencers in the marketing campaign is one of the best strategies to do this. The aim of this study is to find out the factors affecting the perception of the consumers on influencer marketing and find out how demographic variables moderate between independent variables and consumer perception on influencer marketing. The influencing factors considered for this study are trustworthiness, knowledge, homophily, attitude and likability. Quantitative method is used, whereby a self-administered questionnaires were distributed to obtain data using convenience sampling. Statistical Package for the Social Sciences (SPSS) were used to analyze data collected. Linear regression analysis was used to assess the impact of the influencing factors on purchase intention. The findings indicate that a significant amount of relationship between all the independent variables toward purchase intention and hierarchical linear regression was used to prove that demographic variable such as household income, gender and employment moderates purchase intention in influencer marketing.

DETECTION OF SPAM TWEETS IN TWITTER

P.S.S.N.Chandra
PGDM Student,
International School of Management Excellence, Bangalore

Prof Stuti Agarwal
Assistant Professor,
International School of Management Excellence, Bangalore

Abstract

The world of Online Social Network (OSNs) like Facebook, WhatsApp, Twitter, Instagram etc has gained a lot of popular these days. These platforms not only help in sharing information, photos or videos, but also connects the world. Unfortunately, these platforms can be manipulated in various ways one of them being spam. To get a cyber-crime free world, detection of spam plays an important role. Many organizations are working towards Spam Detection to ensure cyber safety and enhance user experience. In this paper focus on one of the OSNs namely Twitter. There is a challenge in classifying the tweets (Spam/Ham) and identifying the spam tweets in twitter. Though a lot of naive methods are available, there is no major evidence from literature of enhanced methods to classify and identify them. Timely identification of spam tweets is required to enhance users experience and to thrive for spam-free environment. In this literature, an effort has been made to detect spam using the tweet metadata and tweet content by leveraging advanced machine learning algorithms. The model has been validated in couple of ways to ensure the robustness of the results.

Abstract

Digital marketing is inevitable for any form of business. It pays way to reach a mass audience at any given time. The degree of digital acceptance by organisations and the knowledge and ability of organisations to use the platform to its total capacity play a significant role in attaining competitive advantage. This study aims to understand the factors influencing the digital marketing acceptance of business schools using the technology acceptance model (TAM). The well Structures questionnaire was designed in consultation with an expert panel comprising industry experts and academicians. 143 responses were collected through personal interviews and mail surveys. Stratified random sampling was used to select the respondents for the study. Collected data were all analysed using descriptive statistics and inferential statistics. The conceptual model developed for the study was tested using structural equation modelling. Results showed that perceived ease of use had got a positive and significant impact on perceived usefulness, and perceived usefulness has got a positive influence on attitude and intention of using digital marketing. The attitude was found to have a significant positive impact on the intention to use. This study also showed that experience strengthens the positive relationship between attitude and intention to use. This study extends the technology acceptance model by adding experience as a moderator variable in the relationship between attitude and intention to use. The insight from this study would help educational institutions strategize their digital requirement.

Abstract

Globally, consumer behaviour facets of Functional food as a health food option has been widely researched since late 1980s, coined in Japan first. In India, the concept has gained traction only since last decade; studies regarding market and consumer aspects are scattered and limited. Considering this gap, a need for an extensive literature review encapsulating studied variables and adopted methodology was felt. This would be a first extensive literature review study consisting of academic research published for exclusive India consumer market being done. This study has been undertaken through a systematic database search to synthesise the studies done since year 2000 to 2022. The objective of this review is to uncover the research variables, find gaps and present future research opportunities. A total of 23 research papers have been considered after focussing on consumer behaviour aspects aiding or deterring acceptance of Functional food in India after careful assessment through the inclusion and exclusion criteria. It is found that factors such as socio-demographic, psychographic and product attributes play an important role in the acceptance of products. A general confusion regarding Functional food benefits, health claims, product knowledge and awareness seems to exist giving rise to credibility issues and credence. It is now even more important to conduct research in this field to determine factors of consumer acceptance of Functional food.

Keywords: Functional Food, India market, consumer behaviour, acceptance, barriers

CROSS-SECTION OF EXPECTED STOCK RETURN: A PERSPECTIVE FROM SYSTEMATIC AND UNSYSTEMATIC RISK FACTORS IN INDIAN STOCK MARKET

Karkaria Dusmanta
Research Scholar
Pondicherry University

Abstract

This article evaluates the cross-section of expected stock return between systematic and unsystematic risk as well as re assessment of size and value effects in the Indian stock market through a Fama-French risk-capture model. The top 487 companies in the S&P BSE 500 index were studied from July 2002 to March 2021. In this article we found that small firms with higher risk give higher monthly average returns whereas large firms with higher risk give lower monthly average returns on the size-SD sorted portfolio. Size is the most prominent stock anomaly, with a monthly average mean excess return of 5.2% in the Indian context. Fama-MacBeth cross-sectional regression does not explain the one-factor, three-factor, and augment FFTF* asset pricing models, whereas the GRS model fitness test does for the Fama-French Three Factor (FF3F), and augment Fama-French pricing models. More importantly, this study discovered that stocks/portfolios with higher abnormal returns carry higher risk, in addition to size and value anomalies having a significant impact on the Indian equity market. As an investor cannot avoid size and value anomalies before investing in a stock market an emerging market like India, regardless of whatever the situation, whether it is a financial crisis, the COVID-19 pandemic, or any other natural calamity or disaster these two stock anomalies play a prominent role in the Indian equity market. This study has strong implications for financial consultants, mutual fund managers, investment strategists, individual and institutional investors, the market practitioners who want to beat the market and earn an abnormal return on their investment in the Indian equity market.

al.madhavi@gmail.com

Abstract

Industry practitioners are always in search of effective investment strategies in their endeavor to achieve portfolio optimization. Moving averages have long been coveted by many such decision -makers. In this research work, a comparison between the 'buy-hold' strategy and the quant-trading strategy using exponential moving averages' is carried out. This study examines the profitability of implementing an Exponential Moving Average (EMA) cross-over strategy in the Indian stock market over the period 2010 – 2022. To facilitate the experiments, Nifty50 (^NSEI), Nifty500 (^CRSLDX), and NiftyMidcap50 (^NSEMDCP50) indices are considered. This work contributes to the existing quantitative trading and technical analysis literature. It is a pioneering effort to implement a moving average strategy on an equal weighted portfolio constituting different indices with a universe of stocks with varied characteristics. The results indicate that there is an outperformance of the moving average strategy (average yearly returns: 10.79%) over the buy-hold strategy (average yearly returns:8.42%) for the aforesaid period and dataset. The study also finds that the moving average strategy is capable of identifying market directions and movement reasonably well, which facilitates the generation of profitable returns. The study iterates the validity of technical analysis techniques to identify trade signals effectively, however, the marginal outperformance also emphasizes choosing a trading rule that optimizes transaction costs and taxes to ensure that such profitability sustains.

CSR SPENDING AND ITS RELATIONSHIP WITH SHARE PRICES (WITH SPECIAL REFERENCE TO TOP CONSUMER FOOD COMPANIES IN LIGHT OF COMPANIES ACT 2013)

Ms. Saniya Marwah
Department of Management Studies,
Rukmini Devi Institute of Advanced Studies, Affiliated to GGSIPU, India
marwahsaniya@gmail.com

Abstract

For the purpose of making the firms accountable and responsible towards its stakeholders, Companies Act 2013 has introduced mandatory contribution of 2% of average net profit towards Corporate Social Responsibility. In the present study, the relationship between Mandatory CSR spending and Share Prices has been studied for top consumer food companies listed on NSE. The study can help us to know that whether this compulsory move by the Government is a burden on the companies or not. Share Prices have been taken as they reflect the wealth of the shareholders and also an impression of investor's confidence. The results depict positive and strong relationship between compulsory CSR Spending and share prices for all companies.

Keywords: Corporate social responsibility, CSR spending, Share Prices, Consumer Food companies, Companies Act 2013.

FORECASTING THE CRYPTOCURRENCY PRICES – A MACHINE LEARNING APPROACH

Abstract

Crypto currency is a non-centralized digital currency that is exchanged between peers without the need of a central government. Understanding the relationships among crypto currencies is important for policymakers and investors. It helps the former to come out with strong action plans to guide the financial markets and latter to take vice investment decisions which can utilize crypto currencies to be a part of portfolio construction. Crypto currency operates with block chain technology with a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. Accurate forecasting of the crypto currency prices is a major challenge for the traders and investors. This can be attributed to the high volatility and dynamism prevailing in the crypto space. Predicting the crypto currency prices and forecasting the future price movement, helps the investors to take appropriate investment decision, improves profitability and hence decrease possible losses. This research tries to forecast the prices of 20 most traded crypto currencies using Machine Learning. The price movement of these crypto currencies for the period from 1st April 2018 to 31st March 2021 is taken for the study. Secondary data is analysed to show the yearly returns, rate of growth, risk factor, average daily returns, and compound annual growth rate of prices of crypto currency during the study period and was validated. Machine learning algorithms build a mathematical model which helps to make predictions or decision of the future price movements of crypto currencies studied. This was carried out using WEKA Software.

AN EVALUATION OF INVESTMENT PATTERN OF GOVERNMENT OF KARNATAKA EMPLOYEES IN SELECT FINANCIAL SECURITIES

Premalatha K P
Assistant Professor
CMS-BS Jain University, Bangalore

Dr. S J Manjunath
BN BIMS, University of Mysore, Mysore

Abstract

The growth of a developing economy is driven by the capital market investments which are financed through domestic savings by households and institutions. Economic surveys suggest for stimulation of investment incentivising policies to recover the economic slowdown in respect of savings and investments ratio in India. An attempt is made to understand the investment pattern of government of Karnataka employees as they receive regular income which can be well utilised by routing it to an effective investment channel. The study examined the influence of demographic factors on their investment preference and their overall investment pattern. It is found out that age and experience impacts their investment pattern and large amount of their funds are routed to less risk securities like bank deposits, insurance and post office schemes and investors have shown least preference towards equity and debt instruments.

O.P. Jindal Global University

Abstract

The study aims to analyze the long-run performance of SME IPOs and investigate IPO specific, company specific, and market specific variables that influences the performance overtime. This article utilizes information of 383 listed firms at Indian SME platform from 2012 to 2020. Based on the reduced sample size, the article uses only 12 month of trading data for the computation of returns. The article uses event time methods to examine company performance through market adjusted excess returns (MAERs), cumulative abnormal returns (CARs), and buy & hold returns (BHARs) based on the equally weighted and value weighted portfolios. Furthermore, the study employs calendar time portfolios with Fama-French three factor model and Carhart four factor model to have more robust results. Similarly, the study uses the cross-sectional OLS regression to analyze numerous factors that influence the performance of SMEs IPOs. Using 12 months BHAR, result shows the IPO over performance of both equally weighted and value weighted portfolios and the positive alpha of calendar-time portfolios validates the results for the same duration. While previous research shows the IPOs underperformance at global stage, the current findings of IPO over performance are in line with those of other Asian countries including China, Malaysia, and Korea. Similarly, the result shows the significant impact of issue size, oversubscription, debt to asset ratio, profitability, hot market, listing gains, underwriter reputation and underpricing on the long run performance of Indian SME IPOs.

Abstract

Peer-To-Peer lending platforms are becoming a good investment avenue for lenders to invest their money in borrowers, who need money for a different purpose. As lending and borrowing of money is facilitated by the P2P lending platform, it becomes necessary for the platform to understand the users and accordingly fine tune the 'User Interface' (UI) and 'User Experience' (UX) of the platform. For lending and borrowing to take place through a platform it is necessary to have an 'n' number of lenders who are ready to lend money to an 'x' number of borrowers. This study is specifically done to understand lenders' motivation to use P2P lending platforms. This is a unique research work as sentiment analysis of lenders' motivation to use these platforms has not been explored earlier. The sentiment analysis technique was used to examine lenders' sentiments towards the use of P2P lending platforms. The research results show that, ~ 70 percent of lenders showed motivation to use P2P lending platforms as an investment avenue in the future. As the P2P lending platforms are relatively new more research can be carried out in future.

Keywords: P2P lending, sentiment analysis, topic modelling, motivation to use.

Abstract

Digitalization is becoming one of the essential instruments for reducing transaction costs and increasing efficiency. RBI is promoting digitalization to bring more reforms in the finance sector. 2019 Onwards, RBI has implemented an expansionary monetary policy by lowering the interest rate, increasing investment, and aggregate demand, thus leading to an increase in the equilibrium output. Financial Technology abbreviated as "FinTech" includes subdomains like Peer-To-Peer lending which is becoming increasingly popular for lending and borrowing without the active role of banks. The positive impact of this kind of platform called 'Zopa' on the money supply in the United Kingdom was observed in 2005 during the early stages of the global recession. This paper examines the relationship between changes in monetary policy and the motivation of lenders and borrowers to use P2P lending platforms. Our study consists of time series data from 2011-2022. The research findings show that the contraction in monetary policy has helped the P2P lending platforms to expand their business. An increase in repo rate (RR), Cash Reserve Ratio (CRR), and Statutory Liquidity Ratio (SLR) motivated lenders and demotivated borrowers to use P2P lending platforms. Whereas reduced reverse repo rate (RRR) demotivated lenders, and motivated borrowers to use these platforms. The paper contributes to the existing literature for analysing the linkages between P2P platforms and money supply in the economy.

Abstract

SMEs can be found in a variety of sectors in India, such as manufacturing, retail, and services. They contribute significantly to the economic growth of the nation and form the foundation of the Indian economy, contributing about 40% of its GDP and employing around 110 million people. The sector is considered the second-largest employer after agriculture. SMEs in India face many hurdles in availing of credit due to information asymmetry, limited credit history, and complex application processes. When determining whether to offer loans or other forms of credit to small and medium-sized businesses (SMEs), financial institutions may encounter several difficulties. This paper attempts to research the parameters on which the creditworthiness of SMEs in various sectors can be analyzed. The factors to be considered in the analysis of creditworthiness and the weightage to be given to each parameter. For the research two sectors have been identified: the sectors for capital goods and consumer durables. In the capital goods industry, three listed SMEs and Consumer durables two listed SMEs are identified for the study. The data for all the companies are analyzed for three financial years. The research finding helps to identify comprehensively the parameters for credit scores and the weights attached to each parameter which help in arriving at the credit scores for SMEs in each sector. Using MCDM, financial organizations can solve their difficulties (multi-criteria decision-making model). The financial industry is changing drastically. Payments, loans, insurance, and wealth management are all being changed by digital technologies.

IMPACT OF FINANCIAL DRIVERS ON FIRM PERFORMANCE: A STUDY ON EMERGING ECONOMY

Damini Kumari
Independent Researcher,
Department of Commerce, Delhi School of Economics,
University of Delhi, India

Harshita Gupta
Independent researcher,
Department of Commerce and Business Studies,
Jamia Millia Islamia, New Delhi, India

Abstract

The study explores the impact of R&D expenses, leverage, and firm size on the managerial efficiency of the firm as reflected by its performance. We also analyze the industrywise effects of the selected factors on the firm performance of a developing country. The disaggregation analysis includes five industries: automobiles and parts, chemicals, construction and matter, industrial metals and mining, and oil and gas. Using the data set of Indian firms for ten years, our empirical analysis indicates that expenditure on research-related activities does not affect the performance of firms in the industries mentioned above. In contrast, leverage has a consistently negative effect on firm performance in all industries except the oil and gas industry. Further, we find that firm size has a differential impact on the firms' return on assets in these industries. Our results are robust to heteroskedasticity and multi-collinearity issues.

Keywords: Firm performance, R&D expenses, Leverage, Firm Size 1 Independent researcher, Department of Commerce, Delhi School of Economics, University of Delhi

IMPACT OF CORPORATE SOCIAL IRRESPONSIBILITY ON MANAGEMENT EFFICIENCY- EVIDENCE FROM EMERGING MARKET

Harshita Gupta

Prof. Shveta Singh Professor
Department of Management Studies,
Indian Institute of Technology Delhi, India.

Abstract

The purpose of the study is to analyse the relationship between corporate social irresponsibility (CSiR) and management efficiency as proxied by asset turnover ratio. The study examines a sample of Indian manufacturing firms from 2007-2016 with 1,113 observations using a comprehensive dataset from RepRisk and Bloomberg® to run a system generalized method of moments (GMM) estimation. We find that CSiR positively affects management efficiency and the effective utilization of assets in generating sales. For domestically focused manufacturing companies in emerging economies, where there is less demand or stakeholder expectation, corporate irresponsibility may not be as important a deciding factor, especially if the target market is highly price sensitive. However, managers should heed caution before divulging in CSiR activities for the consequences can be damaging in the long run. The study's grounding in an emerging market setting, such as India, sparks a discussion on a contextualized understanding of negative aspects of corporate behavior in evaluating management efficiency of the firm.

FINANCIAL DISTRESS PREDICTION USING ALTMAN Z SCORE AND STOCK PRICES - A CASE OF NSE-LISTED INDIAN MANUFACTURING COMPANIES

Dr Ratchana R
Assistant Professor,
International School of Management Excellence, Bangalore
Email: ratchana@isme.in

Sudindra V. R.
Assistant Professor,
International School of Management Excellence, Bangalore
Email: sudindravr@isme.in

Abstract

The Altman Z-Score Model has been employed to predict financial distress since its original conception in 1968. The model is perceived to be detailed in its methodology for assessing financial failure because it is predicated on values available in a company's financial statements as well as principles established by influences extraneous to the firm's operations. The share price of a business is viewed as a mirror image of its economic position, with its real worth being an attribute well within the framework as a whole. This study aims to investigate the internal dynamics of the Altman Z-Score model and examines its potential as a predictive factor of bankruptcy. It also examines the link between a firm's Altman Z-Score and its mean share value to establish if a causative link exists between these two factors within the Indian Manufacturing Sector and used randomly chosen 20 samples from the sector specifically mentioned for the 5-year period from 2018 to 2022. The research highlights a significant relationship between a company's share price and its Z score, and investors can evaluate these Zeta (ζ) index scores based on key financial parameters before attempting to make any well-informed investment choices in distressed businesses with incredibly low Z-scores that appear on the brink of bankruptcy or insolvency.

Abstract

The impact of Information Technology on workplaces, individuals and society as a whole has increased dramatically during the last two decades of the 21st century. This period has seen maturation in the field of digital computing, combined with the use of telecommunications technology, in order to link many computers into what a very large single network is 'virtually', the Internet. Data has become widely accessible, and readily inter-related. Implementation of new technology has led to many changes in the workplace. This paper aims to study the impact of technology on various Job-related factors. Four factors shortlisted for the study i.e. Job Performance, Well Being, Work Motivation and Person Organization Fit. Which Job factor is getting affected to maximum extent with the introduction of technology? The study was done with the help of questionnaire based on Likert scale. Data was collected from 162 employees of various organization. Convenience sampling method was used. Data was analyzed through SPSS Software and excel to find out that Work Motivation is the most impacted factor by introduction of new technology, followed by Job Performance, PO Fit and Well Being.

harold.patrick@jainuniversity.ac.in

Abstract

The ASHA workers at the community level work for primary healthcare services of the Nation, especially in the rural areas where they are providing non-stop services. In spite they are not paid properly, neglected, not recognized are becoming invisible to the nation at large, It is their personality and the roles of an organization that influenced ASHAs to get motivated to perform their roles and responsibilities. The study's main aim is to analyze the mediation of personality in the relationship between organizational roles and motivation. The study is descriptive in research with a sample size of 140 ASHAs for 10 PHC centers in Bangalore and these are identified on the basis of the Convenience Sampling method. The study is both qualitative and quantitative in nature and the data is collected through primary sources by using a questionnaire method and focus group discussion. Data were analyzed by using SPSS and & Smart PLS. The study reveals that there is a complete mediation effect of Personality on the relationship between Organisational roles and Motivation. The findings of the study are useful for Government and PHC centers to redesign their policies and strategies to create recognition and reduce the difficulties and challenges of ASHA workers.

Abstract

Error is an inherent part of human nature. Currently, the term human error is widely used in pharmaceutical industries. It originated in the realm of quality and safety in the manufacturing process. Human error poses a challenge to Safety, Integrity, Strength, Purity, and Quality (SISPQ). Due to regulatory agencies, investigations into human error are in high demand in the pharmaceutical industry. From a quality perspective, consistent efforts are being made to control human error at every level. In this current research paper aims, we aim to explore the relevance and significance of Human Error in the pharmaceutical industries through an extensive review of the literature.

Abstract

Socialisation of newcomers in an organisation has always been a key activity. Multiple components of socialisation have been examined over time, and research into this has used a variety of approaches. Initially, it was thought to be the process by which organisations acculturate newcomers. However, much current research views it as a nurturing process, in which the role of the new player is far more essential and organisations can merely adapt the activity. The essence of socialising in the workplace cannot be overstated, because of being the most important aspects of establishing and preserving organisational culture. Newcomers with more than 18 months to less than 24 months of experience in a given company were surveyed. Results from Bengaluru's service industry were included. in the study. As an instrumentation tool, a thorough, standardised Questionnaire was adapted and 304 employees completed it, using a basic, random selection procedure. Descriptive statistics, Bivariate Correlations, and Regression were the statistical approaches used. We investigated and examined two possibilities. The findings back up the theory that corporate culture and socialisation strategies are linked.

SHIFT WORK DYNAMICS AND ITS IMPACT ON EMPLOYEE WELLBEING IN THE MANUFACTURING SECTOR

Afseer Majeed PhD
Lecturer - Business Management,
Explore Educational Institute, Dubai – UAE
academic@exploreeducation.ae

Abstract

In the modern world of industrialisation, productivity is the critical variable defining the success of any organisation. Shift work is a tried and proven system to boost productivity, especially in a manufacturing environment. UAE is a country where the manufacturing sector is proliferating, and more and more employees are undergoing shift working schedules. This research analyses the effect of shift work on employees' well-being in the UAE manufacturing industry. The study is conducted between employees from various companies who are regularly doing shift work. This study is quantitative research to see how the employees perceive the shift work and how it affects their productivity in the long run. The data was collected through the questionnaire method, analysed statistically with the help of a certified statistician and derived the conclusion. Some of the larger issues that may arise for employees who work shifts are the disruptions to sleep patterns and fatigue. Working non-traditional hours can make it difficult for employees to get enough sleep, leading to fatigue and decreased productivity. This has been linked to an increased risk of certain health problems, such as heart disease, diabetes, and gastrointestinal issues. On the other side, shift work can make it difficult for employees to maintain a healthy work-life balance, as it can interfere with their ability to participate in social activities and spend time with family and friends. This study's outcome suggests that shift work has to be carried out in an organisation in conjugation with other supporting programs that can help employees balance their professional and personal needs; by doing so, companies can reap productivity for the long term while keeping the employee's well-being at optimum level.

Abstract

This paper examines the cultural orientation of IT managers in India. It looks at the cultural values, beliefs and behaviors that affect IT management in India and how these cultural orientations are shaping the development of the Indian Information Technology (IT) industry. The paper also identifies the key aspects of Indian culture and their implications for IT management in India. It further examines the challenges faced by IT managers in India when working in a culturally diverse environment, and provides recommendations to ensure successful IT management in India. Finally, the paper discusses the importance of cultural orientation for successful IT management in India to ensure that the IT industry remains competitive in the global market. The Information Technology (IT) sector in India has been growing rapidly in recent years, with many multinational companies setting up offices in the country. This has, in turn, created a requirement for IT managers to be culturally aware and sensitive to the needs of the Indian market. This paper aims to provide a comprehensive overview of the cultural orientation of IT managers in India. The paper begins by discussing the cultural differences between India and other countries, and how they impact IT management. It then looks at the various aspects of cultural orientation, such as language, religion, gender roles, and social norms. Finally, it provides practical advice and suggestions for IT managers in India, including how to effectively communicate with employees and customers, and how to create a culturally-inclusive work environment. The paper concludes by noting that cultural orientation is an essential component of successful IT management in India, and that IT managers should take the time to understand the cultural context in which they are operating.

Abstract

Managing people at workplace via the top-down approach fails to facilitate the individuals' Flourishing and work engagement. As the teams/ organisations/ institutions becomes bigger, the more generic the job description and job roles become. Hence the construct of Job Crafting plays a vital role in curating meaningful jobs aligned to an individual's core. Job Crafting facilitates a bottom-up approach where individuals relook at their job design, and make minor tweaks at cognitive, tasks and relations aspects of job. This study examined the effectiveness of job crafting intervention. The participants in the experiment group were a homogenous mix of individuals at jobs working at a same entity. The study was done using a quasi-experiment design methodology where we followed a pre-test and post-test approach to measure Job Crafting levels. The treatment here is the Job Crafting Intervention is a 3.5 hours long workshop structured session. The level of Job Crafting was measured before the start of the workshop (Timeline T1) where individuals are not informed on what is measured. Three weeks after the intervention the Job Crafting levels was measured again using the standards Job Crafting scale. The impact was intervention was analysed using a T- test on the pre and post levels. The intervention showed a significant positive effect on levels of Job Crafting. A mean difference of 4.2 to 4.8 (6-point scale) was observed after the experiment respectively on pre and post Job Crafting levels. A slight positive correlation was found after the intervention (~.3 Pearson correlation). All the results were shown significant through the statistical tests. The study proved that the developed Job Crafting intervention was effective in increasing Job Crafting levels among employees. Towards the end of the intervention, an open-ended question was asked, and the responses showed that the intervention had a positive impact among the participants and helped them to relook at their existing job with more meaning.

IMPACT OF EMOTIONAL INTELLIGENCE, PERSONALITY TRAITS, RISK PERCEPTION AND BEHAVIOURAL BIASES ON INVESTMENT DECISIONS

Dr.S.Johnsi
Associate Professor,
DJ Academy for Managerial Excellence, Coimbatore
johnsi.s@djacademy.ac.in

Abstract

The main objective of this study is to analyse the impact of Emotional Intelligence, Personality Traits, Risk Perception and Behavioral Biases on Investment Decisions and to measure the mediating effect of selected variables on Investment Decisions. The study depends on primary data and a well-structured questionnaire is used for this purpose. Multi-stage sampling technique has been adopted to determine the sample for the study. A model using PLS-SEM is tested to examine the impact of personality traits, emotional intelligence, risk perception, behavioural biases and investment decision making. Structural Equation Modeling (SEM) is used to explain the relationship between multiple variables and the structure of inter relationships among various constructs is examined. The result of the mediating effect is confirmed by SOBEL's test. The current study also indicates that emotional intelligence was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Cognitive dissonance was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Herding was found to have a significant positive relationship with equity exposure. So, it is concluded from the study that emotional intelligence and behavioural biases have a major impact on the investment decisions.

madhubk.mba08@gmail.com

Abstract

Employee performance is crucial for the success of any organization and the augmenting prominence of leaders' role to enhance employee performance of virtual teams has inspired the call for this study. The study aims to analyze and propose an integrated framework justifying the leader's behavior accounting to work characteristics contributing to employee performance in virtual teams of mid-sized- IT Industries in Bengaluru. The study is empirical in nature. Web-based survey and direct interview is conducted using questionnaire resulting in 180 responses from virtual team who are software professionals from IT Industry. The gathered data is analyzed subsequently by means of both descriptive and inferential statistics with the software IBM SPSS 20. The outcomes of the study show positive and significant relationship between leadership behaviors and work characteristics resulting in enhanced employee performance of virtual teams. The study offers experiential evidence and support the theory of leadership behaviors which postulates that the employee performance can be optimized when the leaders exhibit high degrees of task and relation-oriented leader behaviors accounting work characteristics in virtual environment. The managerial implications of the study and the potential avenues for future studies are discussed at the end of the paper.

MAPPING THE RELATIONSHIP BETWEEN APPRAISER AND APPRAISEE IN AFFECTING THE EMPLOYEE PRODUCTIVITY IN IT INDUSTRY: A MODERATING IMPACT OF PROFESSIONAL DEVELOPMENT

Beena. M.T
Research Scholar,
International School of Management Excellence, Bangalore
A recognized research center of University of Mysore

Dr. Irshad Nazeer
Research Supervisor,
International School of Management Excellence, Bangalore
A recognized research center of University of Mysore

The contribution of the workforce to the outcome produced by the organisation is crucial. When a firm works in a competitive market, employee performance becomes especially important. A crucial element that contributes to the organization's ultimate existence is employee motivation. Increasing staff productivity is an issue for businesses throughout the sector. People who work in organisational research are interested in methods for improving employee performance. Improving employee productivity requires a just and fair system of rewards that can be both tangible and intangible. The main aim of the current study is to map the relationship between appraiser and appraisee in affecting employee productivity in the IT industry. Furthermore, the study analyses whether professional development moderates the impact of the appraiser-appraisee relationship on employee productivity. For this purpose, primary data is collected from various mid-level employees of a firm utilising a quantitative questionnaire technique in order to understand their opinions of the relationship between the Appraiser and Appraisee in affecting employee productivity in the IT industry. Because a quantitative technique is used, a positivist research paradigm is most suited to achieving the study's objectives. In addition, the current study used a descriptive research design and a simple random sampling technique to gather data from 200 mid-level employees. The findings of the study suggested that in highly competitive circumstances, businesses work hard to establish a fair balance between employees' job performance and the success of the firm. Aspects for employee rewards and recognition are among the most crucial elements that may guarantee that many businesses recognise the effectiveness of their workforce. Employee empowerment has therefore become a key factor in determining the range and calibre of services offered to customers, and low staff productivity has been cited as a challenge to providing services. The findings of the study also revealed that the Appraiser-appraisee relationship has a significant impact on employee productivity and professional development and moderates the association between the appraiser-appraisee relationship and employee productivity. The current study results are essential for the management, the team leaders, the administrators and the HR professionals in comprehending the behaviour of their employees and accordingly adjusting the performance appraisal strategies to enhance the motivation and professional development capabilities.

Intrapreneurship is a much sought-after strategy in developing innovativeness and new business venturing capabilities of organizations, which is termed corporate entrepreneurship. While large organizations have well-designed processes and policies to develop corporate entrepreneurship, such defined policies and procedures are rare among small and medium enterprises (SMEs). The present study is to find the influencing factors such as passion for work, entrepreneurial behaviour of managers on intrapreneurial intentions and behaviour among the employees of SMEs. Also, the negative influence of organizational cynicism on intrapreneurial intentions and behaviour is found in this study. A pilot study was conducted through unstructured interviews among a few entrepreneurs, intrapreneurial and non – intrapreneurial employees to determine the variables of the present study. A total of 301 samples were collected from 13 SMEs which are into the service sector by distributing questionnaires based on valid instruments. Passion towards work is found to have a positive influence on intrapreneurial intentions. Also, organizational cynicism has a negative influence on intrapreneurial intentions and intrapreneurial behaviour. Additionally, the entrepreneurial behaviour of managers is found to have a positive influence on intrapreneurial intentions and intrapreneurial behaviour.

Abstract

Making wiser decisions about employees to improve performance at the individual and/or organizational levels is the process of HR analytics. HR analytics is a method for determining the correlation between HR practices and organizational performance outcomes such as sales volume or customer satisfaction. Human Resource Analytics was established in 1978 by Jac Fitz-Enz, the pioneer of human capital strategic analysis and performance benchmarking. In this paper, the researcher wants to discuss the concept of HR analytics, its application, impact on talent management, branding, and challenges in its application. The researcher examines secondary data and conducts a thorough literature review to understand the concept and its application across industries and nations, as well as to identify any challenges encountered during deployment and any benefits perceived by various industry professionals. Findings: The study's findings indicate that using HR analytics can help businesses build their brand and gain a competitive edge in today's fiercely competitive business environment while also enhancing workforce and employee productivity. This study has significant implications for both literature and HR analytics. Researchers will know more about the factors that contribute to and the mechanisms by which HR analytics improve organisational performance. The author's second claim is that having access to HR technology both facilitates and precedes HR analytics. Finally, concrete data from the literature demonstrates its influence on branding and organisational success.

Abstract

Employee Engagement is a serious concern for many organizations. Performance is quintessential but it lags without engagement. The values and codes for performance and engagement demand to be pronounced and established consistently to develop high performance engagement. Engagement issues and performance lags call to be discussed with transparency to initiate a proactive approach in the lag and lead, of performance engagement. High Performance Engagement, is an amalgamation of employee engagement and performance excellence to accomplish goals and stretch goals, with commitment and passion, beyond compliance. The study aimed to establish the socle of high performance engagement for organizational excellence Using a quantitative method, this study empirically verified the essence of high performance engagement from managers (N=350) in corporate companies. The results indicate that among the dimensions of high performance engagement, the employee-centric approach was perceived as the highest socle of high performance engagement (with a mean of 81.17) and performance strategies were perceived as the lowest (with a mean of 70.01) among the rest. The results evidence that employee focused approach is the predominant dimension for the socle of high performance engagement as perceived by the managers and motivation is the preponderated determinant of high performance in organizations. The results are indicative of an employee-centered approach rather than job centered approach, for organizational performance excellence with latitude on team synergy, and autonomy on performance strategies.

THE IMPACT OF EMOTIONAL INTELLIGENCE ON WORK-LIFE BALANCE IN START-UPS IN HYDERABAD

Jyothika Vemu
Student, PGDM
International School of Management Excellence, Bangalore

Prof. Dr. Sindhu Shantha Nair
Professor
International School of Management Excellence, Bangalore

Abstract

Work–life balance is a concept that includes prioritization between work (career and goals) and lifestyle (health, pleasure, leisure, family, and spiritual development). In broader terms that include "lifestyle balance" and "lifestyle choices". Many companies strongly support their employee's work-life balance through appropriate measures in order to improve employees' loyalty towards the company which fetches the company with better work life and a chance to recruit new employees. The flexibility in working times is the measure and it also influences the employee's private lives, with this there can be an increase in job satisfaction by reducing work stress. This in return helps in employee well-being. A start-up is a new business venture that aims to solve a problem, meet a need, or create value by offering innovative products, services, and solutions. Start-ups typically have limited resources, but have a strong focus on growth and a long-term vision. They are risk-takers. This paper studies the impact of EI on WLB in start-ups in Hyderabad. the work-life balance in start-ups can vary depending on the culture and size of the company. Some start-ups may have a more relaxed approach, while others may require a lot of work hours from their employees.

Keywords: Emotional Intelligence, Work-life balance, Job satisfaction, start-ups, and employee Well-being.

HAPPINESS AT WORKPLACE AS A MEDIATOR OF THE RELATIONSHIP BETWEEN HIGH PERFORMANCE WORK SYSTEM AND TURNOVER INTENTION: EMPIRICAL EVIDENCE FROM HOSPITALITY AND TOURISM INDUSTRY

Prof Shurlly Tiwari
Assistant Professor
International School of Management Excellence, Bangalore

Dr.Ujjal Mukherjee
Professor
Jain (Deemed-to-be-University)

Abstract

This research aims to identify the influence of a high-performance work system and happiness at the workplace on turnover intention among employees in the tourism and hospitality industry. The researcher surveyed a sample of more than 450 hotel workers to test a model that relates the following variables: high-performance work system, happiness at the workplace, and turnover intention. Data were analyzed by using structural equation modeling and Amos 24 version. Research confirmed that a high-performance work system positively influences employees' turnover intention, and there is an impact of happiness at the workplace on decreasing the employees' turnover intention. This study unlocks the relationship between the three variables HPWS, HAW &. From the managerial point of view, the hospitality industry should prioritize the investment in HPWS and HAW as it directly impacts the employees' turnover intention, directly affecting the business's baseline.

Keywords: High-performance work system, happiness at the workplace, turnover intention, hospitality employees

TALENT MANAGEMENT PRACTICES, ROLE OF PERCEIVED ORGANIZATIONAL SUPPORT IMPACTING EMPLOYEE ENGAGEMENT

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence ISME, Bangalore, India
pooja.nagpaal@gmail.com

Abstract

Employees are most valued assets of any organizations paving a path to success. Talent are the ability, skill and knowledge that employee brings to the organization to effectively perform their job well to achieve the organizational goals. In the current world of "Talent War" talent management is not limited to just acquiring a right talent but rather on deployment, development, engagement and retention of its employees. This study analyzes the drivers of talent management practices and perceived organizational support impacting employee engagement. The study comprises an analysis of data of 457 respondents from IT sector companies from IT hub of Bangalore, India. The result indicates talent management practices and perceived organizational support have a direct influence on employee engagement. The findings imply on theory and practice specifically in enhancing employee engagement using various talent management practices along with perceived organizational support. The study found scope for future research in comparing various sectors using additional independent variables in a longitudinal manner.

Abstract

The research paper aims to deliberate the issues and challenges leading to disruption of global supply chain with special reference to Organic foods and agri-business. The paper also summarizes the global supply chain scenario. The production and supply chain management issues & challenges of the current situation are discussed in the paper and effectively proposes strategies to be incorporated in policies making of Organic Food for strengthening the resilience and sustainability of the system at global level as the authors believe that it is important for current and future food managers and policymakers to understand the current system, structure, institutions, economic, social and environmental forces at play in each sector. The aim of this study was to clarify the ideas of Organic food supply chains and the organic production of food products to indicate some major issues and challenges and suggest their relevant recovery strategies. The paper assess methodological framework consists primarily of a systematic data collection from relevant government/ institutional databases and/or reports (i.e., APEDA, Statistica, IBEF, IFOAM and FiBL). Data were considered eligible for inclusion in the analysis if they were useful to assess in particular: (i) Organic -food demand globally, (ii) the effects on the Organic food supply chain services.The research paper discovers almost 9 recovery strategies such as support from the government, decentralisation of the distribution channels, Block chain technology, Integrated certification process etc for curbing the disruption in the organic food supply globally. In the end, the supply chain should respond and overcome the challenging situation in the organic food supply chain management.

Abstract

This study aims to structure an approach to optimize the distribution process in logistics operations for a Nagpur-based small-scale 3PL service provider and in the process to propose a model for companies in the logistics domain to follow. With an uncertain customer demand, the process of finding the best possible route becomes intricate. A methodology that reduces travel time, distance, transportation costs, inventory carrying costs, and administration costs had to be developed. Two generic requirements are considered in the study. Firstly, a single truck or carrying vehicle delivering to multiple customers. Secondly, a set of fleets traveling to multiple destinations with capacity constraints. For assessing logistics and supply chain difficulties, spreadsheet tools, particularly Microsoft Excel is used with Solver add-in. This study proposes a model to reduce the distance travelled, by which over utilization of resources can be considerably reduced aiming to control the carbon footprint for a sustainable logistics.

Abstract

Many large companies are trying to revamp their commercial organization and prepare themselves for the future. Technology is changing the way consumers live. It is also changing the way customers operate, presenting new opportunities and new competitors. Technology, mobility and the internet have generated empowered customers who are more demanding and move faster. They don't look for a product. Instead, they look for a reliable advisor and an experience in each service. Traditional CPG businesses have had to adapt by combining the physical, offline and the digital, creating new services that we had not previously imagined and new sales capabilities, changing the way of connecting with customers. The objective of this paper is to help you understand how to bring together all commercial services and customer contact points in an innovative, direct, efficient and close way that improves services and drives growth. It also lays emphasis on the impacts on back-office operations like Order-To-Cash, Procure-To-Pay, Logistics, etc. One can learn about the necessary tools, processes and capabilities to support mutual teams to manage business transformation from a traditional sales model to a "digitally enabled" model by ensuring process and structure consistency, standardization, and excellence, while driving customer service improvement and top-line growth.

Abstract

The advertising industries have started to use AI technology to identify the trends in the market and enables them to use it to predict the future trends in the market take decisions, make budgets and helps identify their target market. AI has a huge impact on quality of any work done as it is done in a better and effective way comparatively to humans. As seen, that AI can dig deep into all types of data simultaneously with different timelines of data hence understanding the customer ideology, mind-set and preference at the best. The advertising industry is always developing. Because of technology developments like artificial intelligence (AI), greater targeting, and dynamic creativity, the way customers connect with companies is changing. In order to interact with audiences more effectively, advertisers can use machine learning. AI enables improved audience targeting and segmentation for advertisers acquired by strata sampling with individual experiences.

The purpose of this research is to understand the implementation of artificial intelligence in the advertising industry, and what impact Artificial intelligence have on advertising industry. Examining the acquired samples from the survey demonstrates that AI is frequently employed in the marketing sector, even though the applications are at the operational level. AI has an impact on each element of the advertising mix, having an effect on both how successfully consumers are supplied and how effectively advertising is organised and managed. In addition, paper also presents the understanding the role of AI in different types of advertising of toothpaste under FMCG products.

THE IMPACT OF HYBRID WORKING ON GEN Z AND TALENT MANAGEMENT

Sindu Akilesh
Head of Department
Department of Management New Horizon College Kasturinagar
sindu.nandakumar@gmail.com

Abstract

The year 2020 will never be overlooked within the history of this world. The widespread was uncommon in ways no one seem have ever envisioned. Inside fair six months of its approach, individuals all around the globe were constrained to sit at domestic. This research article points to move forward the information on Gen Z as workers inside workforce and within the working environment, as well as on the most thematic patterns that drive the investigate on the subject. The research study focuses on HR analytics, used and how the suitable candidates in a short period are identified and better decisions are made during recruitment thereby contributing to the company's growth. The study focuses on how the hybrid work mode has affected the employee's leadership and Talents for the organization. The main core areas of research study focused around Gen z, Workplace Management, attitudes and Career Planning. The study focuses on the need of and further development in the work force on the major aspects of this generation and the labor market. The investigation has gone into rethink the culture of a work force that is no longer confined to an office full –time. The study has shown that most Gen z employees prefer Work from home despite companies calling back to office. How the employee's talents can be enhanced through remote working mode is also being analyzed.

Keywords: Attitude, Career Planning, Gen z , HR analytics ,Leadership, Talent Management, Workplace Management.

Abstract

The current available modern technology has made possible for us to have many more volunteers to participate in the conservation of our environment and help in the sustainable development. This allows for providing opportunities to people to contribute to the society. This has brought around an expanding number of versatile phone-based citizen science ventures that are outlined to get to these gadget highlights as well as to reach diverse client bunches, over distinctive venture lengths, and with diverse points and objectives. Here by integrating machine learning and predictive analysis, we can bring to life the basic idea of having people volunteer in these programs to help the environment. The Sainik application will help in accommodating all these ideas to fulfill the desire to help preserve our environment. It also provides people especially the youth to contribute to the safekeeping of our environment. Our experiments show that number of people volunteering have reduced by 1% in last 5 years and it is our goal to help improve that statistic. The major reason for this is not the lack of willingness of people to volunteer but the lack information of events requiring such help for both the organizers and the volunteers. The main purpose of this application is to help the environment while providing opportunities to the public and building a better place.

Abstract

Cyber Defense for any organisation has become a priority these days where the world is moving towards virtual communications and business happening among organisations globally. Critical areas to focus are breach detection and breach response. Taking a proactive approach to cyber security (CS) will enable us to avoid damaging and disruptive cyber attacks. Cyber attacks target the IT resources, leading to a tarnished and irreparable organisational image, loss of valuable data added with unproductive downtime. Organisations with proper cyber defense techniques will be able to conduct continuous business while facing persistent threats and sophisticated attacks. Availability of low cost powerful handheld devices coupled with low cost high speed data has led to deeper penetration of the internet. Changes in global scenarios dictated by pandemic are acting as catalysts for work from home , flourishing e-commerce and other mobile-app based delivery systems. Aggressive promotion of digital payments led by new age fintech startups, digital push by government incentivisation of digital payments, e-governance all together have fueled the exponential growth of the internet. However, this growth has also brought a plethora of cyber, ransomware and phishing attacks etc. Global data shows exponential growth of cyber attacks in this period of pandemic. Safeguarding intellectual property and Personal Identifiable Data (PID) in an organisation is very important. This paper discusses proactive implementation of various Cyber defense tools and methodologies for safeguarding IT assets and in turn mitigate cyber risks. These methodologies help organisations improve network integrity and availability, rectify numerous flaws, including misconfiguration of the security settings, analysing security gaps and vulnerabilities and taking remedial actions. This paper discusses the various steps and implementation of frameworks, methodologies undertaken by authors to ensure the three triads of Confidentiality, Integrity and Availability of information and also brings the importance of third party audits and certifications of the organisation in the field of information security.

Abstract

For a person to be physically, psychologically, and socially healthy, having a positive outlook on life is essential. Money alone won't make your life peaceful unless you also have peace of mind. In today's competitive society, when everyone is racing to the finish line, many other considerations are being carelessly disregarded. Stress, worry, and other issues among others all harm mental health. In order to address the aforementioned issue, this research suggests early detection and assistance for problems encountered in identifying a person's mental state. The system consists of 2 modules namely - 1) Facial Emotion Detection 2) Assistance. The output of all the models is combined and by further analysis, the final outcome is given in the form of prediction of the user's state of mind and also further assistance to enhance their mood.

Abstract

Quality plays a very vital role in signifying the credibility of the service provider. Academic institutions act as educational service providers to the students. The mushrooming of management institutes in India created an issue of question of quality mark and recognition. This necessitated gaining a Quality seal for the management institutes. Accreditation for an institute paves a mark of credibility. NAAC, NBA, NRIF are the accreditation bodies in India. The quality assurance governing bodies judge certain parameters for the institutes and proceed for gradation. This gradation embarks as a quality status symbol for these institutes. There are different criteria for gradation. One of the important aspects in these parameters is the faculty contribution in research. This research paper intends to explore the research environment provided to the faculties by the management institutes. It aims to examine the support extended by the institution through different aspects.. The constraints faced by teaching fraternity in pursuing research are examined and suggestions to overcome them are provided. The data is collected by both, primary and secondary sources. Primary source includes survey schedule (Google form) and secondary includes the journals, books, and websites. The support system from institution in terms of Allowance/ (travel), registration fees, Publication fees, Conference/seminar/FDPs, leave or outstation duty is explored. The responses for attributes like, managing time for research activities with other additional responsibilities, financial and non -financial support from institution are explored. 48.19 percent of respondents are of opinion that, research activities become very stressful, as managing time with other routine academic/ official work becomes a challenging task. This is managed many a times by sacrificing family time, sleepless nights and extending work hours. The research environment in management institutes seems to be on a lower note. The fair recruitment policies, optimum staff retention and support from management institutes will definitely change the research scenario.

cbvk123@gmail.com

Abstract

It was presumed that teaching effectiveness, self-efficacy, and continuous professional development have the power to change professional commitment owing to their cumulative nature in terms of thinking, acts, and realities. These ideas were also supported by previous research which advocated continuous professional development as a classical source of professional commitment because continuous professional development has the power to change oneself with strategies that facilitate the transfer of training throughout the life of a professional. This study examines the relationship between leadership style, self-efficacy, and professional development in higher education institutes in India. The study instrument used for this research is a questionnaire which was shared through an online medium. The population for the study consisted of academicians from higher educational institutes. The study's major finding indicates that the gender of academicians does not differ in leadership practices, self-efficacy or professional development. There is a positive relationship between leadership practices and self-efficacy and professional development.

Abstract

The purpose of this paper is to review existing literature on the application of technology-based student assessment processes, with a particular focus on artificial intelligence-based student assessment practices. We gained a deeper understanding of the current trends in student assessment processes as a result of this. The literature reveals a number of possibilities for incorporating digital assessment into educational systems. Secondary research also demonstrated the possibility of integrating artificial intelligence (AI) into students' teaching and learning processes. However, there is a gap between theory and implementation in Indian higher education. In order to gain a better understanding of how real users perceive technology and AI-based student assessment, a qualitative study was conducted. Participants in the study were stakeholders in the Indian management education system. Faculty and students from Indian management institutions of national importance as well as affiliated and autonomous institutions was included in the study. The study revealed faculty and students' perceptions regarding the challenges and benefits of digital and artificial intelligence-based student assessment processes. Based on the findings of this research management and policy makers can address inhibitions expressed by faculty and students before considering the digitization of student assessment processes.

Dr. Sudipta Majumdar
Associate Professor
Faculty of Management Studies, ICFAI University Jharkhand
sudiptam16@iujharkhand.edu.in

Abstract

This study is to find out the effectiveness of different methods of teaching on the learning outcome of the students based on Bloom's Taxonomy. Questionnaires were used to collect data from students on their experience with the use of the Case Study method. The case study teaching method has a higher rate in both empirical and perceived effectiveness of the learning outcome based on Bloom's Taxonomy. The Socratic Method of teaching is a shared dialogue between the teacher and the students in which both are responsible for pushing the dialogue through questioning. The "teacher," or leader of the dialogue, asks probing questions in an effort to expose the values and beliefs which frame and support the thoughts and statements of the participants in the inquiry [Rob Reich, 2003]. The study conducted measures the effectiveness and its intersectionality between education and business (Business Studies) and has been widely used in higher education institutions especially the management studies to facilitate effective learning across a variety of subjects like Marketing, Human Resource Management, Organizational Behaviour, Financial Management, and Business Management, etc. The study has found that the Case Method is useful for most of the subjects in Management, especially Marketing, Human Resource Management, Finance, and Business Ethics. It is also observed that the Case Method helps in remembering the knowledge created through their actions and behaviour.

Key Words: Case Method, Socratic Method, Project Based Learning, Bloom's Taxonomy, Learning Outcome, E-pathshala, Collaborative Skills

ABOUT INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE (ISME), BANGALORE

ISME is a leading business school offering excellent education through a student-focused culture of excellence, international outlook, entrepreneurial thinking and industry alignment. It was founded in 2006 by alumni from Carnegie Mellon University, Purdue, and Wharton, USA. ISME has always been at the forefront of quality education, with the vision of nurturing holistic, socially responsible and competent professionals. ISME has been ranked as one of the top B-Schools in Bangalore and top 1% B-Schools in India.

At present ISME offers undergraduate, postgraduate and Doctoral programs in Management. Our lush green campus at Sarjapur Main Road is an ideal ambience for study and research. The Institute constantly endeavours to expose its students to various methods of learning, like industry visits, interaction with industry experts, participation in seminars, case study etc. so that they become successful in their journey as they move from campus to the next phase of their career."

ABOUT THE CONFERENCE

Contemporary management issues often trigger the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices to facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time where all organisations worldwide must embrace continuous changes in technology, economy, environment, and government policies to remain competitive.The rise in digital adoption, the economic fallout of the pandemic worldwide, the rise of China as an aggressive global force, our government policies moving towards a more nationalist agenda, and growing geo-political tensions worldwide are some recent issues which confront businesses and management.

This conference is a platform for industry practitioners, academicians, entrepreneurs, and research scholars to come together to learn, share and discuss current emerging topics in management with thought leaders, technologists, and learning experts. The conference is a great knowledge-sharing event for a diverse audience embracing international and national participants. The event has renowned keynote speakers, practitioner-led workshop sessions, and offers an excellent networking platform.

The conference includes original research papers from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

CIM-23 Organizing Committee

MESSAGE FROM CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore!

On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 11th International Conference on 'Contemporary Issues in Management - CIM-23'.

We live in a world of disruption and drastic changes with different countries in different stages of the economic cycle. This conference aims to discuss issues relevant to the present time like mass layoffs by major MNCs and penetration of AI tools in our lives. All organizations must embrace the changes in technology, economy, environment and government policies to remain productive and competitive

This conference is a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with eminent international and national keynote speakers. Industry experts are a part of the panel discussion on 'Great Resignation to Grand Layoffs: The Contemporary HR Landscape'. We are delighted to share that CIM-23 has received papers from reputed institutions like Indian Institute of Technology Delhi (IITD), Tata Institute of Social Sciences (TISS), National Institute of Industrial Engineering, Mumbai (NITIE) and Symbiosis, Pune and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference.

Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,
Dr Rony G Kurien
Dean and Conference Chair

TABLE OF CONTENTS

S. No.	Title	Page. No.
TRACK 1 - POLITICAL AND ECONOMIC ENVIRONMENT		
1	INTEGRATED REPORTING AND ITS IMPACT ON FIRM VALUE: AN EVIDENCE OF INDIAN COMPANIES **Ms.Maya.Patil & Dr.Geetha.Rajaram**	3
2	HOW A CHINESE TAKEOVER OF TAIWAN WILL EFFECT FOREIGN DIRECT INVESTMENTS **Dr. Rainer Wehner**	4
3	COMPETENCIES OF BOARD MEMBERS IN ANNUAL REPORTS OF STANDARD & POOR'S BOMBAY STOCK EXCHANGE SENSEX ORGANIZATIONS **Amit Kumar & Shanmuganathan Janardhanan (Late)**	5
4	PRACTICAL WISDOM IN DECISION MAKING OF WOMEN'S COLLECTIVES IN SRI LANKA **G D V RupikaSenadheera**	6
TRACK 2 - BUSINESS EXCELLENCE & SUSTAINABILITY: MANUFACTURING, SERVICES AND AGRICULTURAL SECTOR		
5	DEVELOPED PARAMETERS OF MANUFACTURING CAPABILITY MATURITY MODEL INTEGRATION FOR SUSTAINABLE GROWTH IN INDUSTRIES **Dilip Kumar Gayen**	9
6	RENEWABLE ENERGY IN CORPORATE AND AGRICULTURAL SECTOR **Manjushri.U, Likhitha.S.Kumar & Priya.T.B**	10
7	DISRUPTIVE STRATEGIES FOR SUPPLY CHAIN DISRUPTIONS **Dr Sridharan.A & Dr Sunita Kumar**	11
8	STUDY ON THE POST COVID CHALLENGE TOWARDS STARTUPS IN INDIA **Dr.A.Ravi & Dr.Gokul.G**	12
9	A STUDY OF CONSUMERS' BEHAVIOUR IN BUYING VEGETABLES AND FRUITS DURING THE COVID PANDEMIC **Ravella Prem Sai, Soundarya Shetty & Dr. S. Shyam Prasad**	13

TRACK 3 - FUNCTIONAL AREAS OF BUSINESS		
10	COVID-19 SUPPORTED E-COMMERCE: IDENTIFYING AND MODELLING THE ENABLERS OF ONLINE PURCHASE USING ISM- MICMAC ANALYSIS **Dr Meenakshi Sharma, Ms Preeti Aneja &** **Prof. Pramod Kumar Painuly**	17
11	IMPACT OF DEMOGRAHIC VARIABLES ON E- WALLET USAGE WITH REFERENCE TO METAMORPHOSING OF ECONOMY **Prabhat Agarwal & Dr. Lovely Srivastava**	18
12	CHALLENGES AND STRATEGIES IN GREEN MARKETING **Dr. P. Vanishree Sah**	19
13	A STUDY ON ROLE & IMPACT OF AUGUMENT REALITY (AR) ON SEARCH ENGINE OPTIMISATION (SEO) **Aparna M Joshi**	20
14	DETERMINANTS OF CUSTOMER BEHAVIOUR INTENTION TO USE ELECTRIC SCOOTERS IN INDIA: UTAUT2 MODEL-AN EMPIRICAL ANALYSIS **Gagandeep Kudlu Srinivas & Raghu Yadaganti**	21
15	IMPACT OF DISCOVERY COMMERCE ON ACHIEVING COMPETITIVE PARITY **Pranav Ajay Kumar & Roy Matthew**	22
16	FACTORS INFLUENCING THE USAGE OF SMART HOME TECHNOLOGY IN INDIA **Srinath S, Justin Joy, Ravinder Kumar Verma &** **Manish Kumar Shrivastava**	23
17	DIGITALIZATION - A STRATAGEM FOR RURAL RETAILERS **Ms. Tanuja B & Dr. Shampa Nandi**	24
18	CONTINUOUS INTENTION TO USE AND FREQUENCY OF USE – APPLICATION OF UTAUT2 AND MULTI-GROUP ANALYSIS WITH INDIAN HOME-GROWN DIGITAL WALLET **Palanisamy Ganesan & Anita S Mane**	25
19	IMPACT OF SOCIO-DEMOGRAPHIC VARIABLES ON THE PURCHASE INTENTION OF ORGANIC FOOD PRODUCTS **Roopashree B R & Dr. Rizwana**	26
20	ETHICAL MARKETING IN CURRENT TIMES: SOCIAL RESPONSIBILITY IN INDIAN CONTEXT **Dr.Mohammed Farooq Pasha & Jayashree Urs R**	27

21	UTAUT & UTAUT2 MODEL - A DESCRIPTIVE ANALYSIS OF THEORETICAL CONCEPTS BASED ON THE LITERATURE REVIEW **Remya Nair**	28
22	A STUDY OF FACTORS INFLUENCING PURCHASE INTENTION IN THE CONTEXT OF INFLUENCER MARKETING **Samuel Vero Viegas & Haritha S**	29
23	DETECTION OF SPAM TWEETS IN TWITTER **P.S.S.N.Chandra & Prof Stuti Agarwal**	30
24	MANAGEMENT INSTITUTIONS' INTENTION TOWARDS THE DIGITAL MARKETING – USING TECHNOLOGY ACCEPTANCE MODEL (TAM) **Mr. Prakasha T M & Dr. Vijaya Baskaran R**	31
25	CONSUMER BEHAVIOUR TOWARDS FUNCTIONAL FOOD IN INDIA – A LITERATURE REVIEW **Rekha Raghavan & Dr. Veena K N**	32
26	CROSS-SECTION OF EXPECTED STOCK RETURN: A PERSPECTIVE FROM SYSTEMATIC AND UNSYSTEMATIC RISK FACTORS IN INDIAN STOCK MARKET **Karkaria Dusmanta**	33
27	EXPONENTIAL MOVING AVERAGE STRATEGY VS. BUY-HOLD STRATEGY: EVIDENCE FROM INDIAN STOCK MARKETS **Rangapriya Saivasan & Dr. Madhavi Lokhande**	34
28	CSR SPENDING AND ITS RELATIONSHIP WITH SHARE PRICES (WITH SPECIAL REFERENCE TO TOP CONSUMER FOOD COMPANIES IN LIGHT OF COMPANIES ACT 2013) **Ms. Saniya Marwah**	35
29	FORECASTING THE CRYPTOCURRENCY PRICES – A MACHINE LEARNING APPROACH **Dr. Deepa Venugopal, Dr. S T Nambi & Hemchand N**	36
30	AN EVALUATION OF INVESTMENT PATTERN OF GOVERNMENT OF KARNATAKA EMPLOYEES IN SELECT FINANCIAL SECURITIES **Premalatha K P & Dr. S J Manjunath**	37
31	LONG-RUN PERFORMANCE OF INITIAL PUBLIC OFFERINGS OF SMALL AND MEDIUM ENTERPRISES IN AN EMERGING MARKET **Parveen Siwach, Prasanth Kumar R & Vikas Gupta**	38

32	SENTIMENT ANALYSIS OF LENDERS MOTIVATION TO USE A PEER-TO-PEER (P2P) LENDING PLATFORM: LENDENCLUB.COM **Sagar Gupta, Rony Kurien, Anshul Saxena, Pradeep Pendse & Jayant Mahajan**	39
33	IMPACT OF MONETARY POLICY ON MOTIVATION TO USE PEER-TO-PEER LENDING PLATFORMS IN INDIA **Sagar Gupta, Kedar Vishnu, Pradeep Pendse, Rony Kurien & Jayant Mahajan**	40
34	CREDIT SCORE RATING PROCESS USING BWM OF SELECT SMES IN INDIA **Vidya CM & Dr. Geetha Rajaram**	41
35	IMPACT OF FINANCIAL DRIVERS ON FIRM PERFORMANCE: A STUDY ON EMERGING ECONOMY **Damini Kumari & Harshita Gupta**	42
36	IMPACT OF CORPORATE SOCIAL IRRESPONSIBILITY ON MANAGEMENT EFFICIENCY- EVIDENCE FROM EMERGING MARKET **Harshita Gupta & Prof. Shveta Singh Professor**	43
37	FINANCIAL DISTRESS PREDICTION USING ALTMAN Z SCORE AND STOCK PRICES - A CASE OF NSE-LISTED INDIAN MANUFACTURING COMPANIES **Dr Ratchana R & Sudindra V.R**	44
38	THE IMPACT OF TECHNOLOGY ON EMPLOYMENT AND MOTIVATION OF EMPLOYEES IN THEIR PROFESSIONAL AND PERSONAL LIFE **Rajesh Ranjan, Rishikant Yadav & D.K Srivastava**	45
39	MEDIATION OF PERSONALITY IN THE RELATIONSHIP BETWEEN ORGANISATIONAL ROLES AND MOTIVATION: A STUDY ON ASHA WORKERS **Mrs. Shilpa R & Dr. Harold Andrew Patrick**	46
40	SIGNIFICANCE OF HUMAN ERROR INPHARMACEUTICAL INDUSTRIES **Prasun Chakraborty & Jyoti Joshi Pant**	47
41	DOES ORGANIZATIONAL CULTURE INFLUENCES THE APPROPRIATENESS OF SOCIALISATION TACTICS ADOPTED? A STUDY IN SERVICE SECTOR **Harold Andrew Patrick, Pawan Kumar Sharma, Jacqueline Kareem & Napolean Prabakaran**	48

42	SHIFT WORK DYNAMICS AND ITS IMPACT ON EMPLOYEE WELLBEING IN THE MANUFACTURING SECTOR **Afseer Majeed**	49
43	DETERMINANT OF CULTURAL ORIENTATION OF IT MANAGERS IN INDIA - AN EMPIRICAL ANALYSIS **Lolana Reddy, Chetna Jha & Sujyothi**	50
44	EFFECTIVENESS OF JOB CRAFTING INTERVENTION: A VALIDATION STUDY **Anub Kurian & Dr. Andrew Harold Patrick**	51
45	IMPACT OF EMOTIONAL INTELLIGENCE, PERSONALITY TRAITS, RISK PERCEPTION AND BEHAVIOURAL BIASES ON INVESTMENT DECISIONS **Dr. S. Johnsi**	52
46	A LEADERS' ROLE INFLUENCING THE WORK CHARACTERISTICS OF VIRTUAL TEAMS CONTRIBUTING TO EMPLOYEE PERFORMANCE – A BEHAVIORAL PRESPECTIVE **Gouri R Javali & Dr. Madhu BK**	53
47	MAPPING THE RELATIONSHIP BETWEEN APPRAISER AND APPRAISEE IN AFFECTING THE EMPLOYEE PRODUCTIVITY IN IT INDUSTRY: A MODERATING IMPACT OF PROFESSIONAL DEVELOPMENT **Beena.M.T & Dr.Irshad Nazeer**	54
48	WHAT FUELS INTRAPRENEURIAL INTENTIONS AND BEHAVIOUR? - AN EMPIRICAL STUDY FROM SELECT INDIAN SMES **Sujatha M.S & Ujjal Mukherjee**	55
49	EMPLOYER BRANDING AND TALENT MANAGEMENT USING HR ANALYTICS' CONCEPTS AND APPLICATIONS **Sriram Prabhakar & Dr. S. Jayaprakash**	56
50	THE SOCLE OF HIGH PERFORMANCE ENGAGEMENT IN ORGANIZATIONAL EXCELLENCE **Dr Sindhu Shantha Nair, Dr K. A. Thomas & Smritika S.P**	57
51	THE IMPACT OF EMOTIONAL INTELLIGENCE ON WORK-LIFE BALANCE IN START-UPS IN HYDERABAD **Jyothika Vemu & Prof. Dr. Sindhu Shantha Nair**	58

Abstract

There is a clear shift in the way companies report their performance to the stakeholders. Integrated Reporting (<IR>) is a corporate reporting reform practices followed by many big companies all over the world. They are moving from more profitable companies to more responsible companies in terms of preserving the resources for future generation. The companies are accountable for protection of natural resources, society at large apart from other capitals, like financial & manufacturing capital. The objective of this paper is to check the compliance of Integrated Reporting Framework (IRF) of select Indian companies. For this the content analysis is done to cover all the content elements and the six capitals of sample companies. Analysis is done in 2 stages. One is content element analysis according to IRF, secondly analyzing the impact of IRDI on firm value. Spss; 29 version has been used to analyze the data of six companies of 4 sectors for 3 years from 2018-2021, since IR practices were made a part of voluntary disclosure since 2017 by SEBI circular for top 500 companies. Out of 7 content elements organizational overview has maximum score of 96.33% and strategic has got good score of 95.75% in the period of pandemic. All the companies had more focus on strategy to overcome the challenges of Covid-19. Another objective is analyzed by descriptive statistics and correlation, model summary, multi co linearity. A regression model is developed for the same. Tobin's Q is taken as a proxy for firm value and is considered dependent variable. The independent variables are the IRDI score, ROE, Size by market capitalization & ROCE. A regression model is developed to estimate unknown value of dependent variable (Tobins Q) using the known values of independent variables.

Keywords: Stakeholders, Firm value, Tobin's Q, IIRC, Integrated Reporting Disclosure Index (IRDI)

HOW A CHINESE TAKEOVER OF TAIWAN WILL EFFECT FOREIGN DIRECT INVESTMENTS

Dr. Rainer Wehner
Technical University of Applied Sciences
Würzburg-Schweinfurt
rainer.wehner@thws.de

Abstract

Over the past decades, China has gradually increased its geopolitical influence. Besides the Belt and Road Initiative, that diversified Chinas economic and political relations with many countries in the western world, Beijing has vowed to bring Taiwan back under Chinese control. That could provoke a massive conflict, because the U.S. President has made clear, the U.S. stand by Taiwan and will retaliate in the case of a forced attempt. Based on this scenario the purpose of this paper is an analysis of the consequences for the inflow of Foreign Direct Investments (FDIs) into Taiwan. For that reason, the author examined the published literature of the last years and analysed the Chinese – Taiwanese political and economic relationship. Furthermore, he researched the impact of such hostile takeovers on FDIs in similar situations to draw assumptions for an eventual conflict. It became apparent that the reactions of foreign direct investors vary, depending on the intensity of the conflict. Therefore, different scenarios of a Chinese takeover need to be drawn into conclusion. Based on the available data the major findings show that at the beginning of the conflict FDIs drop dramatically because the investors withdraw their money. Depending on the extent of the conflict, the destruction of the country and the impact on future economic prospects, the money will slowly flow back after a certain period of time.

COMPETENCIES OF BOARD MEMBERS IN ANNUAL REPORTS OF STANDARD & POOR'S BOMBAY STOCK EXCHANGE SENSEX ORGANIZATIONS

Amit Kumar
Research Scholar, GITAM University

Shanmuganathan Janardhanan (Late)
GITAM University

Abstract

While the importance of the right competencies of leaders in large organizations is well understood in practice, limited research exists about competencies of board members, especially in the Indian context. With this critical need, this paper attempts to provide a competency model, framework and a competency dictionary. The competency definitions in the dictionary are based on competency descriptions of board members of S&P (Standard & Poor's) BSE (Bombay Stock Exchange) Sensex organizations. Taking advantage of government guidelines that require listed organizations to disclose competencies of board members, annual reports of 30 Sensex organizations are subjected to qualitative analysis. A total of 246 competencies are identified. These are further analyzed to determine themes amongst those competencies that have been detailed by these organizations. A competency model of eight competencies, a competency framework & dictionary are developed by providing competency definitions for generic, specific & unique competencies through thematic analysis of competency descriptions. The research provides a method for leaders in organizations, specifically NRC (Nomination & Remuneration Committee) members in boards on Indian listed organizations, to identify, define & use the right competency requirements for board members. The research method also paves the way for future study of larger organization groups.

PRACTICAL WISDOM IN DECISION MAKING OF WOMEN'S COLLECTIVES IN SRI LANKA

Professor G D V RupikaSenadheera,
Department of Business Administration,
Faculty of Management Studies and Commerce, University of Sri Jayewardenepura, Nugegoda, Sri Lanka

Abstract

The aim of this paper is to present the practical wisdom of decision making of women's collectives in rural villages in Sri Lanka. It's built on the corporative society concept and selfsufficient membership organization that is run solely by underprivileged women in Sri Lanka. With a view to get a deeper understanding of the practical wisdom in decision making of women's bank collective, a qualitative methodology was adopted. The study's objectives are accomplished via a review of the literature, a theme analysis, in-depth interviews, and observations. Primary data came from in-depth interviews with 10 leading characters of Sri Lankan Women's collectives. Findings of this study reveal that the women's thinking and their maximizing and satisficing behaviors of decision making are based on different social meanings of their day to day life experiences and mutual understanding of their group members in terms of trust, honesty, equity and equality. Further deep analysis also reveals that every decision has integrated with the utilitarian perspective of ethics that mean their decisions always concerned for greater good for greater number of people in the group. And also women's collectives would be beneficial to enhance women's decision making power in the field of financial handling, insurance services, community development initiatives, cultural events, and business networking opportunities, disaster relief initiatives, and health and educational services as well. As a result of this behavior support women's for self-motivation, self-discipline, teamwork, and leadership skills in addition to the aforementioned value-added activities. Subsequently, the women's collectives have significantly helped to improve the socio-economic situation and empower women within the household and without their isolation of them through greater social interaction. And also this study will assist readers in learning about the idea of women's collectives practice by ground level and how it benefits the growth of women's lives, their families, and the whole nation.

KeyWords: Community Driven Project, Decision making, Economic Development, Empowerment, Women's collectives

BUSINESS EXCELLENCE & SUSTAINABILITY: MANUFACTURING, SERVICES AND AGRICULTURAL SECTOR

DEVELOPED PARAMETERS OF MANUFACTURING CAPABILITY MATURITY MODEL INTEGRATION FOR SUSTAINABLE GROWTH IN INDUSTRIES

Dilip Kumar Gayen
Research Scholar, GD Goenka University
Head Manufacturing & BE in East West Info solutions

Abstract

The post Covid pandemic has immensely impacted the manufacturing industries globally in the sustainable performance and progressive growth. Limited studies and researches are conducted worldwide by various scholars, industry's technical experts on manufacturing techniques for the sustainable manufacturing growth and business progression through the capability maturity model with customer's satisfaction in changed & challenging circumstances. During the evolution of Industry 4.0 & 5.0 techniques in manufacturing, the process is changing in the global manufacturing techniques & technology and performance of companies on the perspective of investment in the digitally controlled production through smart factories. In this study the objectives, the sustainable growth in manufacturing companies through a capability Maturity Model on Manufacturing is formulated by identifying the parameters and sub parameters at various Levels of maturity for sustainability in system standardization & performance. The maturity parameters & elements designed as a guideline for the manufacturing and operation heads to follow and implement this maturity & sustainable model for smart manufacturing, an efficient production structure and Future of Factory.

Keywords: Capability Maturity Model Integration (CMMI), Manufacturing Capability Maturity Model Integration (M-CMMI), Future of factory (FoF), Operational Excellence (OpEx), Smart Manufacturing (SM).

RENEWABLE ENERGY IN CORPORATE AND AGRICULTURAL SECTOR

Abstract

The world is focusing on saving environment and mother earth, it is very important to create awareness among the people to go eco-friendly. As we know that the electric era is taking a great move from the past decade and has reduced the use of petrol and other fossil fuels. It is important to note that the fossil fuel and non-renewable source of energy is in the stage of being verge and the world is making efforts to reduce the use of non-renewable source of energy, since the availability of fossil fuels is limited and cannot be used in some remote areas. But, renewable source of energy has eliminated all the loopholes associated with the conventional source of energy and made it convenient and safe for use. This paper reports the use of renewable source of energy and its implementation in the field of corporate and in the agricultural sector. Virtually, the corporates are involved in promoting eco-friendly products and taking initiative for creating the awareness to plant saplings. The renewable energy has the potential to solve all the problems faced by the developing countries. This paper also explains the policies implemented in the recent decade to overcome the hurdles and ensures the enhancement of renewable energy for future.

Keywords: Non-conventional source, Transition, Corporate Social Responsibility, solar power plants, wind mills.

DISRUPTIVE STRATEGIES FOR SUPPLY CHAIN DISRUPTIONS

Dr Sridharan.A
Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sridharan.a@christuniversity.in

Dr Sunita Kumar
Associate Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sunita.kumar@christuniversity.in

Abstract

Supply chain disruption happens when forces, both internal and external affect the business's capability to get material, produce finished goods and dispatch them to the end consumers. This breakdown in supply chain could be due to bullwhip in marketing demand or suppliers' inability to meet demand or even natural calamities like monsoon or outbreak of pandemic or even the failure of logistic providers to meet transportation demands. Whatever be the reason, it will affect the business's top line and bottom line and the image of brand due to its non-availability in the shelves of retail outlets. It will become a case of "out of sight, out of mind" of consumers. According to Concord Monitor, toilet paper ran out of retail outlets as consumers panicked and the sale went up by 213% in March, 2020 over the same period in 2019. This is a classical case of demand overruns. When the ship Ever Given ran aground on 23rd March, '2021 in the Suez Canal, a total of 367 ships were caught in this traffic jam for a period of six days. Businesses lost billions of dollars as supply chain of raw materials and even finished goods were not delivered on time.

The year was 1962 and it saw the birth two big chain stores in United States of America, the one which is very successful one, Walmart and the other K-Mart. While Walmart continues to thrive and run successful business, K Mart folded in the year 2002 and later merged with Sears Group. There were many reasons for K Mart failure, but two things stand out, one being absorption of technology like internet and the other being smart supply chain operations like cross-docking, low inventories, that are being employed by Walmart. While disruptions are always there in businesses, this research paper explores on disruptive technologies that are available and which can be employed by businesses for their successes or at least reduce the dysfunctions.

Keywords: Supply Chain, Disruptive Technology, Consumers, Raw Materials, Finished Goods, Walmart, Cross Docking, Internet

STUDY ON THE POST COVID CHALLENGE TOWARDS STARTUPS IN INDIA

Dr.A.Ravi
Professor & Director,
RJS Institute of Management Studies, Bengaluru

Dr.Gokul.G
Assistant Professor,
RJS Institute of Management Studies, Bengaluru
gokul4edge@gmail.com

Abstract

The COVID-19 outbreak and the prolonged period of shutdown wreaked mayhem for the new businesses that were beginning operations in India. Restrictions on the movement of goods and people leading to an increase in both supply and demand side risk, a lack of investors willing to continue investing in the firm, and the looming threat of a global recession are all factors that have made it exceedingly difficult for Indian start-ups to remain in business. However, in addition to difficulties that pose a direct danger to the very existence of start-up businesses, the pandemic has also brought about potentially fruitful opportunities for expansion. Given the lack of certainty regarding the development of a treatment for the disease in the near future, a number of different industries have generated a significant amount of revenue, and the opportunities presented by this situation appear to be sustainable. This article is a sincere attempt to elaborately highlight the challenges that Indian start-ups are currently facing and also the opportunities that they can bank on. The pandemic has affected various industries in a variety of different ways. The start-up ecosystem, which has never seen anything like this before, has its fair share of winners and losers as a result of this unique circumstance.

A STUDY OF CONSUMERS' BEHAVIOUR IN BUYING VEGETABLES AND FRUITS DURING THE COVID PANDEMIC

Ravella Prem Sai
PGDM Student,
International School of Management Excellence, Bangalore

Soundarya Shetty
PGDM Student,
International School of Management Excellence, Bangalore

Dr. S. Shyam Prasad
Professor,
International School of Management Excellence, Bangalore

Abstract

This study aims to investigate the behavior of consumers in buying vegetables and fruits during the COVID-19 pandemic. The COVID-19 pandemic has caused a major shift in consumers' behavior and the way they purchase their daily necessities. With the increase in health concerns, the demand for healthy and fresh food, especially fruits and vegetables, has increased. The data for this research was collected during the end of the first quarter of 2022 when the pandemic was subsiding. The concept discussed in this article and the findings thereof will add value to the literature, besides its relevance to academicians, the results of this study are also important to practitioners. The findings of the study revealed that regarding vegetables and fruits, offline is the choice of purchase over online. Retail store images do not play a decisive role in purchasing vegetables and fruits. variety, freshness, and economy have become major factors for consumers. The store image does not matter.

Keywords: Consumer Behavior, Covid 19, Fruits and Vegetables, Buying Habits

Abstract

The lifestyle changes induced to control the pandemic have impacted daily life and have brought notable difference in consumer behavior (Sheth, 2020). Everybody looks for convenience, customization, inclusion of latest trends, multi-channel engagement and alignment with the goal of healthy living. Around 80% of companies agree that customers would go online in the new normal and their new business model should be digitized to be economically viable, the businesses must examine how customer behavior is evolving, as well as identify the factors that make online shopping possible and how they interact with one another. Doing so will aid managers in developing strategies that will help them remain competitive in the new normal. Two brainstorming sessions were held; in the first, the experts were given relevant literature to help them discover the elements that encourage online shopping. With the help of expert opinion, SSIM was utilized to determine the contextual relationships between the sixteen identified online purchasing factors. To recommend the pair-wise comparison, the same 40 experts from the panel were consulted. These 16 variables were probably used to assess the and to construct a driver-dependence relationship among these drivers using interpretative structural modelling with MICMAC analysis.

Abstract

With the advent of Demonetization in Indian Economy on 8th November, 2016 there has been the upcoming of "Metamorphosing of Economy". Indian Economy is undergoing some radical changes post demonetization era as now the culture of 'Cashless Economy' is gaining much importance. With the introduction of "Digital India" program in 2015; two different concepts i.e., 'Technology' & 'Bank' finally got combined and "Digital Banking" came into existence. The objective of this paper is to show the impact of various determinants viz. ease of use, trust, security, time saving and convenience on the usage of e-wallets in city of Allahabad. The study is based upon both primary & secondary data. The primary data is collected from 209 respondents with the help of 'Structured Questionnaire' framed by following the "5 points Likert Scale" technique. This study is both analytical & descriptive in nature. The collected primary data is being analysed with the help of Microsoft Excel and SPSS. The statistical tools used to interpret the data are Regression Analysis and ANOVA technique. The present study has highlighted that between age & ease of use factor affecting e-wallet usage there has been no relationship. At the same time this study also highlights that there is significant but negative relationship between age along with trust, security & time saving & significant positive relationship between age and convenience factors affecting the e-wallet usage. This paper also shows that there has been a significant but negative relationship between diverse income groups with ease of use & security factors affecting the e-wallet usage. At the same time study also reveals that there has been significant positive relationship between diverse income groups with trust, security & time saving factors affecting the e-wallet usage.

Keywords: Demonetization, Cashless Economy, Metamorphosing of Economy, Digital Banking, E-wallet.

CHALLENGES AND STRATEGIES IN GREEN MARKETING

Dr. P. Vanishree Sah

A STUDY ON ROLE & IMPACT OF AUGUMENT REALITY (AR) ON SEARCH ENGINE OPTIMISATION (SEO)

Aparna M Joshi
Head of the Department & Associate Professor,
Department of Commerce, The National College Autonomous,
Affiliated to Bengaluru University
aparnamj.09@gmail.com

Abstract

Augmented reality (AR) mobile app advertising offers new opportunities for interactive consumer engagement to boost advertising effectiveness and elicit positive consumer responses. In this study, I investigate the role of escapism by analyzing its antecedents and consequences. We aim to shed light on how AR mobile app advertising can be used to enhance escapism experiences by considering two psychological mechanisms of mental imagery: narrative transportation (in response to ad storytelling) and spatial immersion. Search Engine Optimization(SEO) refers to the process by which search engines "crawl" content to see how effective it willbe to attract traffic. Search engines will assess a number of things in a website (such askeywords, tags, and link titles) and rank it for its capacity to attract organic traffic based on avariety of factors. The consequences of escapism experiences include positive social media sharing, purchase intentions through brand attitudes, and new brand engagement via AR mobile app advertising. Prior brand preference does not affect the relationship between escapism and consumer responses after exposure to immersive AR advertising. My findings have meaningful implications for how industry practitioners can enhance escapism in the context of AR mobile app advertising.

DETERMINANTS OF CUSTOMER BEHAVIOUR INTENTION TO USE ELECTRIC SCOOTERS IN INDIA: UTAUT2 MODEL-AN EMPIRICAL ANALYSIS

Gagandeep Kudlu Srinivas
B.Com, PES University, India
gagandeep.fin@gmail.com

Raghu Yadaganti
Research Scholar, Krishna University,
Assistant Professor, PES University, India
raghuy@pes.edu

Abstract

The Research focuses on understanding what factors are impacting the customer purchase intention and usage behaviour of Electric scooters in India by applying the UTAUT2 Model. The study uses a quantitative approach by using a questionnaire. The Findings show that PE, SI, HM and EC of the UTAUT2 Model are directly and positively impacting the Behaviour Intention of customers to use Electric Scooters. EE, FC, PV and TR UTAUT2 Models are directly and negatively impacting the behaviour Intention to use Electric Scooters. The study is quantitative in nature and focuses on in-depth knowledge of factors influencing customer behaviour and intention to use Electric Scooters in India. However, the study cannot be representative of an enormous country like India. Academics and Electric Scooter retailers can consider this in future research

The studies provide information on the factors necessary for promoting Electric Scooters in India. These studies can be useful for Electric Scooter retailers who are looking forward to promoting Electric Scooters in India. Earlier studies in this context of E – Scooters usage have tried to use technology adoption models. Hence, these studies have not been capable to capture the fundamental nature of the impact of Environmentally Friendly on technology adoption in the Indian context. A lot of the analyses are performed used to find the relationship between independent and dependent factors but not explored to understand the relationship between the independent factors and the combination of independent factors' impact on dependent factors. In this research, we used Structural Equation Model (SEM) by using LISREL.

Keywords: Customer behavior intention, Electric Scooters, UTAUT2 Model.

IMPACT OF DISCOVERY COMMERCE ON ACHIEVING COMPETITIVE PARITY

Pranav Ajay Kumar
Student, CHRIST (Deemed to be University)
pranava.kumar@bba.christuniversity.in

Roy Matthew
Associate Professor, CHRIST (Deemed to be University)
roy.mathew@christuniversity.in

Abstract

Discovery Commerce is the hyper-personalisation of the point of purchase and point of sale of a product or service online. Companies may use these platforms to curate specific offerings on social platforms by essentially, guiding a customer to a product. The goal of discovery commerce is to bring the concept of window shopping to social platforms like Facebook, Instagram and YouTube. This paper attempts to evaluate the impact of discovery commerce platforms in achieving competitive parity between Direct-to-Consumer and Business-to-Consumer (B2C) brands. A secondary objective is to develop strategies for B2C brands to compete with Direct-to-Consumer (D2C) brands using discovery commerce platforms. Alejandro et al. (2020) states the point of purchase that a general population uses to acquire their goods greatly affects their consumption of goods and overall social status. The work of Bonet et al. (2005) concludes that logistical relationships across the value chain leads to vertical competition. The online nature of Direct-to-Consumer companies may provide a significant competitive advantage to them over Business-to-Consumer companies. This study is descriptive in nature. The data collected from Amazon Vendor Central consists of primary data. A Discovery Commerce campaign was launched for the 'hair care' product category of a B2C brand along with extensive SEO efforts. This was done to identify the impact of the marketing efforts followed by D2C brands which have given them an edge on e-commerce platforms. This includes changes to product titles, images and descriptions of product listings on e-commerce platforms to observe an increase/decrease in sales and visibility. Neo-marketing efforts like SEO and Discovery Commerce campaigns have a significant impact on the sales and discovery of traditional brands who have an omni-channel presence. Across all categories of the optimised products, Glance Views have increased by an average of 320%.

Keywords: Discovery commerce, search engine optimisation, glance views, e-commerce.

FACTORS INFLUENCING THE USAGE OF SMART HOME TECHNOLOGY IN INDIA

Srinath S
Christ University. Bangalore

Ravinder Kumar Verma
OP Jindal Global University, Sonipat

Manish Kumar Shrivastava
Christ University Bangalore

Abstract

This paper explores the roles of perceived risk, performance and after-sale service, and demographics in the usage of smart home technology (SHT). Despite the push for digital technologies, smart homes still face challenges related to their limited use. We adopted a mixed methods approach and collected data from 133 respondents and 1244 users' responses from secondary sources. This research adopted the perceived risk framework and thematic analysis to explain the usage barriers of smart home technology. Our research supports the perceived risk factors relationships, such as privacy, performance, financial, psychological and perceived risk role as a resister. This research explains the post-adoption challenges of individual concerns related to the performance, after-sales services, and complexity of digital technologies. The use of IoT-enabled devices is influenced by users' demographics and cost and security concerns. This research has practical implications for understanding the factors associated with using IoT-enabled smart homes in India.

Abstract

This study aims to bridge the gap by examining the process of digitalization in rural retailing. To reach rural consumers, rural retailers are crucial. They serve as a conduit between producers and customers. Since rural retailers contribute significantly to the GDP, it is essential to retain them. The competition from organized retail and urban counterparts is extremely difficult for rural retailers. This paper focuses on how digitalization helps Rural Retailers to retain in business. Its relationship to rural retailing was examined through the Study TOE Framework. Additionally, it intends to inform Rural Retailers about the various channels of distribution they might use as a result of digitization. Secondary data was used in this study, which used a qualitative methodology and information gathered from websites and academic articles. The study concludes on the integration of TOE model framework, rural retailer's digitalization, and the adoption of digital distribution channels.

CONTINUOUS INTENTION TO USE AND FREQUENCY OF USE – APPLICATION OF UTAUT2 AND MULTI-GROUP ANALYSIS WITH INDIAN HOME-GROWN DIGITAL WALLET

Palanisamy Ganesan,
Professor and Director,
Marketing Area, NSB Academy, Bangalore

Anita S Mane
Associate Professor,
R M Dhariwal Sinhgad Management School, Kondhapuri, Pune

The mobile wallet transaction was INR 532 billion in value and INR 1630 million in volume during FY2017 (Deloitte, 2017). During Q1-2021, the volume and value are INR 1.13 billion and INR 411.75 billion respectively (Worldline, 2021). The research questions for this paper are: (a) what are significant UTATU2 factors affect the continuous intention to use home-grown digital wallet? (b) is the prevention behaviour influence the continuous intention to use the selected home-grown digital wallet? and (c) are there significant difference between (i) two different group of age and (ii) two male and female customers in the continuous intention to use? The study provides an insight on the continuous intention to use the Indian home-grown mobile wallet. The mobile wallet users' experience on an average of more than six month that means users have learned and become a familiar of mobile wallet for their purchase through directly or ecommerce as well as transaction of money for other purposes. Thus, Habit become the important predictor for the continued intention to use Abdul-Halim et al (2022) and frequency of use of Indian home grown mobile wallet. The users feel that the simplicity in using mobile wallet for any type of transaction without hassle and assistance from any other individual that results in the positive effect of effort expectancy on continued intention to use and this finding in line with the study by Ramos (2021) with food delivery apps during Covid19. Hedonic Motivation strongly influence the continued intention to use mobile wallet, thus the users see there is hedonic value of continuous use of mobile wallet in terms of positive feeling and pleasant experience when they use mobile wallet (Ly et al 2022). Thus, the research question one is answered through the Habit, Effort Expectancy and Hedonic Motivation are the significant constructs compared to other four strongly and positively predict the user's continued intention of mobile wallet. The role of preventive behaviour with UTAUT2 constructs highlights that the preventive behaviour plays no role in predicting continuous intention to use of mobile wallet. The limitation is that all constructs of Prevention Motivation Theory employed which result high predicting power on CIU.

Keywords: UTAUT2, Continuous Intention to Use, Frequency of Use, SEM, Multi-Group Analysis

IMPACT OF SOCIO-DEMOGRAPHIC VARIABLES ON THE PURCHASE INTENTION OF ORGANIC FOOD PRODUCTS

Roopashree B R
Research Scholar, MSRIT, Bengaluru, India
roopapraveen2004@gmail.com

Dr. Rizwana
Associate Professor and Research Supervisor,
MSRIT, Bengaluru, India
rizumehar@gmail.com

An encouraging sign that people are becoming increasingly aware of the negative health effects of these highly polluted and poisoned food items. Organic food products in India are expected to develop considerably during the projected period due to a variety of factors, including the availability of organic food goods on the internet and a shift in consumer preference toward organic food. According to certain researchers, sociodemographic factors play a role in purchasing decisions There is a need to explore the influence of demographic variables on purchasing behaviour because of inconsistent findings in the literature. Research of this type is descriptive in nature and aims to evaluate the influence of socio-demographics on the purchase intentions of the target audience for organic food items. The target audience was given a well-structured questionnaire, which included six sociodemographic questions based on logical reasoning and three questions on purchase intention based on Chiew Shi Wee & et al, 2014 and Anupam Singh, Priyanka Verma,2017. A 150-target audience sample was selected with a 10% margin of error and a 95% confidence interval and 121 valid responses were chosen for the study. We utilised the snowball-sampling strategy because we invited people to fill out the survey and then pass it on to their friends and relatives. Findings of the study indicate purchase decisions are influenced by income. Thus, it is possible that the amount of organic food purchased correlates directly with a person's income (i.e., the higher the income in schooling, according to the statistics. Organic goods are more likely to be purchased by those with higher education levels. This might be because more educated clients are more health-conscious and aware of the advantages of buying organic foods, which could lead to an increase in sales of organic products. In both industrialised and developing countries, several studies have found that a wide range of factors impact people's decisions to buy organic food. Demographic variables such as gender, education, and money, independent of the country in which they take place (developed or developing) will have greater influence on purchase of organic food products.

Keywords: Socio demographic Variables, Purchase intention, Purchase decision and Organic food product

ETHICAL MARKETING IN CURRENT TIMES: SOCIAL RESPONSIBILITY IN INDIAN CONTEXT

Dr.Mohammed Farooq Pasha
Assistant Professor of Commerce and Management,

farooqpasha2OO2@gmail.com

Jayashree Urs R
Assistant Professor of Commerce and Management,
Arihant Group of Institutions Thalaghattapura Bangalore.
jay.np@rediffmail.com

Abstract

It is often said that Marketing and ethics cannot go together. Those supporting the argument always have a long list of marketing activities from various companies which make even a die-hard marketing fellow feel guilty about his/her profession. On the other hand, critics of the argument can also come up with numerous marketing activities from various companies which can make the worst critic of marketing activities doubt his/her own criticism. So where does the debate goes from here. It only intensifies as more and more companies in every category of products and services are always making efforts to increase their market share through marketing strategies which they call innovation oriented but others call unethical thereby generating arguments within them as well as in the minds and hearts of consumers as well as potential consumers. This paper looks at the consumer perception about the degree of ethics in marketing followed by companies across all categories of products and services and its impact on the society on the one hand and company growth on the other hand.

Keywords: Criticism, Ethics, Innovation, Marketing and Society

UTAUT & UTAUT2 MODEL - A DESCRIPTIVE ANALYSIS OF THEORETICAL CONCEPTS BASED ON THE LITERATURE REVIEW

Remya Nair
Research Scholar (Registered with University of Mysore).
International School of Management Excellence, Bangalore
(A recognized research center of University of Mysore), India
Email:remya.sanju.nair@gmail.com

Abstract

UTAUT or Unified theory of acceptance and Use of technology is the technology adoption model proposed by Venkat et all (2003). This is a descriptive paper analysing both UTAUT as well as UTAUT2 based on Literature review. The research papers published from 1989 to 2020 are analysed and included in this paper. The concepts of the UTAUT as well as UTAUT2 are explained in detail. The other models that contributed for the development of UTAUT model are also mentioned in this paper.. The theoretical model of UTAUT suggests that the actual use of technology is determined by behavioural intention. The apparent prospect of adopting the technology is dependent on the direct influence of four key constructs - performance expectancy, effort expectancy, social influence, and facilitating conditions. The effect of predictors are moderated by factors like age, gender, experience and voluntary willingness to use. To provide a holistic understanding of technology acceptance, the researchers can set the objective for creating a unified theory of technology acceptance by incorporating key constructs, theory enabling the model to predict behavioural intention and use. The UTAUT theory has been utilized to explore human-computer interaction. In the field of research, UTAUT has contributed immensely to the literature. The model provides insight into technology acceptance by assessing prominent technology acceptance theories, which offer distinct perspectives on the subject. UTAUT demonstrates that proposed factors account for 70 percent of the variance in use intention, offering stronger predictive power compared to the rest of the models that examine technology acceptance. The collaborative impact of constructs with personal and demographic factors establishes the complexity of the technology acceptance process, which is in turn dependent on individuals' age, gender and experience. The Practical Implications, Applications of UTAUT model, Limitations of UTAUT model are explained in detail in this paper.

Keywords: UTAUT, Technology adoption, Effort Expectancy, Performance expectancy, motivation

A STUDY OF FACTORS INFLUENCING PURCHASE INTENTION IN THE CONTEXT OF INFLUENCER MARKETING

Samuel Vero Viegas

haritha@isme.in

Abstract

Influencer marketing is rapidly growing throughout the globe, which has led marketers to view it as a crucial component of their available marketing alternatives.The internet offers a marketplace and a channel for reaching potential customers. Utilizing influencers in the marketing campaign is one of the best strategies to do this. The aim of this study is to find out the factors affecting the perception of the consumers on influencer marketing and find out how demographic variables moderate between independent variables and consumer perception on influencer marketing. The influencing factors considered for this study are trustworthiness, knowledge, homophily, attitude and likability. Quantitative method is used, whereby a self-administered questionnaires were distributed to obtain data using convenience sampling. Statistical Package for the Social Sciences (SPSS) were used to analyze data collected. Linear regression analysis was used to assess the impact of the influencing factors on purchase intention. The findings indicate that a significant amount of relationship between all the independent variables toward purchase intention and hierarchical linear regression was used to prove that demographic variable such as household income, gender and employment moderates purchase intention in influencer marketing.

DETECTION OF SPAM TWEETS IN TWITTER

P.S.S.N.Chandra
PGDM Student,
International School of Management Excellence, Bangalore

Prof Stuti Agarwal
Assistant Professor,
International School of Management Excellence, Bangalore

Abstract

The world of Online Social Network (OSNs) like Facebook, WhatsApp, Twitter, Instagram etc has gained a lot of popular these days. These platforms not only help in sharing information, photos or videos, but also connects the world. Unfortunately, these platforms can be manipulated in various ways one of them being spam. To get a cyber-crime free world, detection of spam plays an important role. Many organizations are working towards Spam Detection to ensure cyber safety and enhance user experience. In this paper focus on one of the OSNs namely Twitter. There is a challenge in classifying the tweets (Spam/Ham) and identifying the spam tweets in twitter. Though a lot of naive methods are available, there is no major evidence from literature of enhanced methods to classify and identify them. Timely identification of spam tweets is required to enhance users experience and to thrive for spam-free environment. In this literature, an effort has been made to detect spam using the tweet metadata and tweet content by leveraging advanced machine learning algorithms. The model has been validated in couple of ways to ensure the robustness of the results.

Abstract

Digital marketing is inevitable for any form of business. It pays way to reach a mass audience at any given time. The degree of digital acceptance by organisations and the knowledge and ability of organisations to use the platform to its total capacity play a significant role in attaining competitive advantage. This study aims to understand the factors influencing the digital marketing acceptance of business schools using the technology acceptance model (TAM). The well Structures questionnaire was designed in consultation with an expert panel comprising industry experts and academicians. 143 responses were collected through personal interviews and mail surveys. Stratified random sampling was used to select the respondents for the study. Collected data were all analysed using descriptive statistics and inferential statistics. The conceptual model developed for the study was tested using structural equation modelling. Results showed that perceived ease of use had got a positive and significant impact on perceived usefulness, and perceived usefulness has got a positive influence on attitude and intention of using digital marketing. The attitude was found to have a significant positive impact on the intention to use. This study also showed that experience strengthens the positive relationship between attitude and intention to use. This study extends the technology acceptance model by adding experience as a moderator variable in the relationship between attitude and intention to use. The insight from this study would help educational institutions strategize their digital requirement.

Abstract

Globally, consumer behaviour facets of Functional food as a health food option has been widely researched since late 1980s, coined in Japan first. In India, the concept has gained traction only since last decade; studies regarding market and consumer aspects are scattered and limited. Considering this gap, a need for an extensive literature review encapsulating studied variables and adopted methodology was felt. This would be a first extensive literature review study consisting of academic research published for exclusive India consumer market being done. This study has been undertaken through a systematic database search to synthesise the studies done since year 2000 to 2022. The objective of this review is to uncover the research variables, find gaps and present future research opportunities. A total of 23 research papers have been considered after focussing on consumer behaviour aspects aiding or deterring acceptance of Functional food in India after careful assessment through the inclusion and exclusion criteria. It is found that factors such as socio-demographic, psychographic and product attributes play an important role in the acceptance of products. A general confusion regarding Functional food benefits, health claims, product knowledge and awareness seems to exist giving rise to credibility issues and credence. It is now even more important to conduct research in this field to determine factors of consumer acceptance of Functional food.

CROSS-SECTION OF EXPECTED STOCK RETURN: A PERSPECTIVE FROM SYSTEMATIC AND UNSYSTEMATIC RISK FACTORS IN INDIAN STOCK MARKET

Karkaria Dusmanta
Research Scholar
Pondicherry University

Abstract

This article evaluates the cross-section of expected stock return between systematic and unsystematic risk as well as re assessment of size and value effects in the Indian stock market through a Fama-French risk-capture model. The top 487 companies in the S&P BSE 500 index were studied from July 2002 to March 2021. In this article we found that small firms with higher risk give higher monthly average returns whereas large firms with higher risk give lower monthly average returns on the size-SD sorted portfolio. Size is the most prominent stock anomaly, with a monthly average mean excess return of 5.2% in the Indian context. Fama-MacBeth cross-sectional regression does not explain the one-factor, three-factor, and augment FFTF* asset pricing models, whereas the GRS model fitness test does for the Fama-French Three Factor (FF3F), and augment Fama-French pricing models. More importantly, this study discovered that stocks/portfolios with higher abnormal returns carry higher risk, in addition to size and value anomalies having a significant impact on the Indian equity market. As an investor cannot avoid size and value anomalies before investing in a stock market an emerging market like India, regardless of whatever the situation, whether it is a financial crisis, the COVID-19 pandemic, or any other natural calamity or disaster these two stock anomalies play a prominent role in the Indian equity market. This study has strong implications for financial consultants, mutual fund managers, investment strategists, individual and institutional investors, the market practitioners who want to beat the market and earn an abnormal return on their investment in the Indian equity market.

Abstract

Industry practitioners are always in search of effective investment strategies in their endeavor to achieve portfolio optimization. Moving averages have long been coveted by many such decision -makers. In this research work, a comparison between the 'buy-hold' strategy and the quant-trading strategy using exponential moving averages' is carried out. This study examines the profitability of implementing an Exponential Moving Average (EMA) cross-over strategy in the Indian stock market over the period 2010 – 2022. To facilitate the experiments, Nifty50 (^NSEI), Nifty500 (^CRSLDX), and NiftyMidcap50 (^NSEMDCP50) indices are considered. This work contributes to the existing quantitative trading and technical analysis literature. It is a pioneering effort to implement a moving average strategy on an equal weighted portfolio constituting different indices with a universe of stocks with varied characteristics. The results indicate that there is an outperformance of the moving average strategy (average yearly returns: 10.79%) over the buy-hold strategy (average yearly returns:8.42%) for the aforesaid period and dataset. The study also finds that the moving average strategy is capable of identifying market directions and movement reasonably well, which facilitates the generation of profitable returns. The study iterates the validity of technical analysis techniques to identify trade signals effectively, however, the marginal outperformance also emphasizes choosing a trading rule that optimizes transaction costs and taxes to ensure that such profitability sustains.

CSR SPENDING AND ITS RELATIONSHIP WITH SHARE PRICES (WITH SPECIAL REFERENCE TO TOP CONSUMER FOOD COMPANIES IN LIGHT OF COMPANIES ACT 2013)

Ms. Saniya Marwah
Department of Management Studies,
Rukmini Devi Institute of Advanced Studies, Affiliated to GGSIPU, India
marwahsaniya@gmail.com

Abstract

For the purpose of making the firms accountable and responsible towards its stakeholders, Companies Act 2013 has introduced mandatory contribution of 2% of average net profit towards Corporate Social Responsibility. In the present study, the relationship between Mandatory CSR spending and Share Prices has been studied for top consumer food companies listed on NSE. The study can help us to know that whether this compulsory move by the Government is a burden on the companies or not. Share Prices have been taken as they reflect the wealth of the shareholders and also an impression of investor's confidence. The results depict positive and strong relationship between compulsory CSR Spending and share prices for all companies.

Keywords: Corporate social responsibility, CSR spending, Share Prices, Consumer Food companies, Companies Act 2013.

FORECASTING THE CRYPTOCURRENCY PRICES – A MACHINE LEARNING APPROACH

Abstract

Crypto currency is a non-centralized digital currency that is exchanged between peers without the need of a central government. Understanding the relationships among crypto currencies is important for policymakers and investors. It helps the former to come out with strong action plans to guide the financial markets and latter to take vice investment decisions which can utilize crypto currencies to be a part of portfolio construction. Crypto currency operates with block chain technology with a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. Accurate forecasting of the crypto currency prices is a major challenge for the traders and investors. This can be attributed to the high volatility and dynamism prevailing in the crypto space. Predicting the crypto currency prices and forecasting the future price movement, helps the investors to take appropriate investment decision, improves profitability and hence decrease possible losses. This research tries to forecast the prices of 20 most traded crypto currencies using Machine Learning. The price movement of these crypto currencies for the period from 1st April 2018 to 31st March 2021 is taken for the study. Secondary data is analysed to show the yearly returns, rate of growth, risk factor, average daily returns, and compound annual growth rate of prices of crypto currency during the study period and was validated. Machine learning algorithms build a mathematical model which helps to make predictions or decision of the future price movements of crypto currencies studied. This was carried out using WEKA Software.

AN EVALUATION OF INVESTMENT PATTERN OF GOVERNMENT OF KARNATAKA EMPLOYEES IN SELECT FINANCIAL SECURITIES

Premalatha K P
Assistant Professor
CMS-BS Jain University, Bangalore

Dr. S J Manjunath
BN BIMS, University of Mysore, Mysore

Abstract

The growth of a developing economy is driven by the capital market investments which are financed through domestic savings by households and institutions. Economic surveys suggest for stimulation of investment incentivising policies to recover the economic slowdown in respect of savings and investments ratio in India. An attempt is made to understand the investment pattern of government of Karnataka employees as they receive regular income which can be well utilised by routing it to an effective investment channel. The study examined the influence of demographic factors on their investment preference and their overall investment pattern. It is found out that age and experience impacts their investment pattern and large amount of their funds are routed to less risk securities like bank deposits, insurance and post office schemes and investors have shown least preference towards equity and debt instruments.

Abstract

The study aims to analyze the long-run performance of SME IPOs and investigate IPO specific, company specific, and market specific variables that influences the performance overtime. This article utilizes information of 383 listed firms at Indian SME platform from 2012 to 2020. Based on the reduced sample size, the article uses only 12 month of trading data for the computation of returns. The article uses event time methods to examine company performance through market adjusted excess returns (MAERs), cumulative abnormal returns (CARs), and buy & hold returns (BHARs) based on the equally weighted and value weighted portfolios. Furthermore, the study employs calendar time portfolios with Fama-French three factor model and Carhart four factor model to have more robust results. Similarly, the study uses the cross-sectional OLS regression to analyze numerous factors that influence the performance of SMEs IPOs. Using 12 months BHAR, result shows the IPO over performance of both equally weighted and value weighted portfolios and the positive alpha of calendar-time portfolios validates the results for the same duration. While previous research shows the IPOs underperformance at global stage, the current findings of IPO over performance are in line with those of other Asian countries including China, Malaysia, and Korea. Similarly, the result shows the significant impact of issue size, oversubscription, debt to asset ratio, profitability, hot market, listing gains, underwriter reputation and underpricing on the long run performance of Indian SME IPOs.

Abstract

Peer-To-Peer lending platforms are becoming a good investment avenue for lenders to invest their money in borrowers, who need money for a different purpose. As lending and borrowing of money is facilitated by the P2P lending platform, it becomes necessary for the platform to understand the users and accordingly fine tune the 'User Interface' (UI) and 'User Experience' (UX) of the platform. For lending and borrowing to take place through a platform it is necessary to have an 'n' number of lenders who are ready to lend money to an 'x' number of borrowers. This study is specifically done to understand lenders' motivation to use P2P lending platforms. This is a unique research work as sentiment analysis of lenders' motivation to use these platforms has not been explored earlier. The sentiment analysis technique was used to examine lenders' sentiments towards the use of P2P lending platforms. The research results show that, ~ 70 percent of lenders showed motivation to use P2P lending platforms as an investment avenue in the future. As the P2P lending platforms are relatively new more research can be carried out in future.

Keywords: P2P lending, sentiment analysis, topic modelling, motivation to use.

Abstract

Digitalization is becoming one of the essential instruments for reducing transaction costs and increasing efficiency. RBI is promoting digitalization to bring more reforms in the finance sector. 2019 Onwards, RBI has implemented an expansionary monetary policy by lowering the interest rate, increasing investment, and aggregate demand, thus leading to an increase in the equilibrium output. Financial Technology abbreviated as "FinTech" includes subdomains like Peer-To-Peer lending which is becoming increasingly popular for lending and borrowing without the active role of banks. The positive impact of this kind of platform called 'Zopa' on the money supply in the United Kingdom was observed in 2005 during the early stages of the global recession. This paper examines the relationship between changes in monetary policy and the motivation of lenders and borrowers to use P2P lending platforms. Our study consists of time series data from 2011-2022. The research findings show that the contraction in monetary policy has helped the P2P lending platforms to expand their business. An increase in repo rate (RR), Cash Reserve Ratio (CRR), and Statutory Liquidity Ratio (SLR) motivated lenders and demotivated borrowers to use P2P lending platforms. Whereas reduced reverse repo rate (RRR) demotivated lenders, and motivated borrowers to use these platforms. The paper contributes to the existing literature for analysing the linkages between P2P platforms and money supply in the economy.

Abstract

SMEs can be found in a variety of sectors in India, such as manufacturing, retail, and services. They contribute significantly to the economic growth of the nation and form the foundation of the Indian economy, contributing about 40% of its GDP and employing around 110 million people. The sector is considered the second-largest employer after agriculture. SMEs in India face many hurdles in availing of credit due to information asymmetry, limited credit history, and complex application processes. When determining whether to offer loans or other forms of credit to small and medium-sized businesses (SMEs), financial institutions may encounter several difficulties. This paper attempts to research the parameters on which the creditworthiness of SMEs in various sectors can be analyzed. The factors to be considered in the analysis of creditworthiness and the weightage to be given to each parameter. For the research two sectors have been identified: the sectors for capital goods and consumer durables. In the capital goods industry, three listed SMEs and Consumer durables two listed SMEs are identified for the study. The data for all the companies are analyzed for three financial years. The research finding helps to identify comprehensively the parameters for credit scores and the weights attached to each parameter which help in arriving at the credit scores for SMEs in each sector. Using MCDM, financial organizations can solve their difficulties (multi-criteria decision-making model). The financial industry is changing drastically. Payments, loans, insurance, and wealth management are all being changed by digital technologies.

Harshita Gupta
Independent researcher,
Department of Commerce and Business Studies,
Jamia Millia Islamia, New Delhi, India

Abstract

The study explores the impact of R&D expenses, leverage, and firm size on the managerial efficiency of the firm as reflected by its performance. We also analyze the industrywise effects of the selected factors on the firm performance of a developing country. The disaggregation analysis includes five industries: automobiles and parts, chemicals, construction and matter, industrial metals and mining, and oil and gas. Using the data set of Indian firms for ten years, our empirical analysis indicates that expenditure on research-related activities does not affect the performance of firms in the industries mentioned above. In contrast, leverage has a consistently negative effect on firm performance in all industries except the oil and gas industry. Further, we find that firm size has a differential impact on the firms' return on assets in these industries. Our results are robust to heteroskedasticity and multi-collinearity issues.

Keywords: Firm performance, R&D expenses, Leverage, Firm Size 1 Independent researcher, Department of Commerce, Delhi School of Economics, University of Delhi

IMPACT OF CORPORATE SOCIAL IRRESPONSIBILITY ON MANAGEMENT EFFICIENCY- EVIDENCE FROM EMERGING MARKET

Harshita Gupta
Research Scholar
Department of Management Studies, Indian Institute of Technology, Delhi, India
harshita2381995@gmail.com

Prof. Shveta Singh Professor
Department of Management Studies,
Indian Institute of Technology Delhi, India.

Abstract

The purpose of the study is to analyse the relationship between corporate social irresponsibility (CSiR) and management efficiency as proxied by asset turnover ratio. The study examines a sample of Indian manufacturing firms from 2007-2016 with 1,113 observations using a comprehensive dataset from RepRisk and Bloomberg® to run a system generalized method of moments (GMM) estimation. We find that CSiR positively affects management efficiency and the effective utilization of assets in generating sales. For domestically focused manufacturing companies in emerging economies, where there is less demand or stakeholder expectation, corporate irresponsibility may not be as important a deciding factor, especially if the target market is highly price sensitive. However, managers should heed caution before divulging in CSiR activities for the consequences can be damaging in the long run. The study's grounding in an emerging market setting, such as India, sparks a discussion on a contextualized understanding of negative aspects of corporate behavior in evaluating management efficiency of the firm.

FINANCIAL DISTRESS PREDICTION USING ALTMAN Z SCORE AND STOCK PRICES - A CASE OF NSE-LISTED INDIAN MANUFACTURING COMPANIES

Dr Ratchana R
Assistant Professor,
International School of Management Excellence, Bangalore
Email: ratchana@isme.in

Sudindra V. R.
Assistant Professor,
International School of Management Excellence, Bangalore
Email: sudindravr@isme.in

Abstract

The Altman Z-Score Model has been employed to predict financial distress since its original conception in 1968. The model is perceived to be detailed in its methodology for assessing financial failure because it is predicated on values available in a company's financial statements as well as principles established by influences extraneous to the firm's operations. The share price of a business is viewed as a mirror image of its economic position, with its real worth being an attribute well within the framework as a whole. This study aims to investigate the internal dynamics of the Altman Z-Score model and examines its potential as a predictive factor of bankruptcy. It also examines the link between a firm's Altman Z-Score and its mean share value to establish if a causative link exists between these two factors within the Indian Manufacturing Sector and used randomly chosen 20 samples from the sector specifically mentioned for the 5-year period from 2018 to 2022. The research highlights a significant relationship between a company's share price and its Z score, and investors can evaluate these Zeta (ζ) index scores based on key financial parameters before attempting to make any well-informed investment choices in distressed businesses with incredibly low Z-scores that appear on the brink of bankruptcy or insolvency.

Keywords: Altman Z-Score Model, Stock Prices, Financial Health, Indian Manufacturing Sector, Prediction Models, Bankruptcy

Abstract

The impact of Information Technology on workplaces, individuals and society as a whole has increased dramatically during the last two decades of the 21st century. This period has seen maturation in the field of digital computing, combined with the use of telecommunications technology, in order to link many computers into what a very large single network is 'virtually', the Internet. Data has become widely accessible, and readily inter-related. Implementation of new technology has led to many changes in the workplace. This paper aims to study the impact of technology on various Job-related factors. Four factors shortlisted for the study i.e. Job Performance, Well Being, Work Motivation and Person Organization Fit. Which Job factor is getting affected to maximum extent with the introduction of technology? The study was done with the help of questionnaire based on Likert scale. Data was collected from 162 employees of various organization. Convenience sampling method was used. Data was analyzed through SPSS Software and excel to find out that Work Motivation is the most impacted factor by introduction of new technology, followed by Job Performance, PO Fit and Well Being.

harold.patrick@jainuniversity.ac.in

Abstract

The ASHA workers at the community level work for primary healthcare services of the Nation, especially in the rural areas where they are providing non-stop services. In spite they are not paid properly, neglected, not recognized are becoming invisible to the nation at large, It is their personality and the roles of an organization that influenced ASHAs to get motivated to perform their roles and responsibilities. The study's main aim is to analyze the mediation of personality in the relationship between organizational roles and motivation. The study is descriptive in research with a sample size of 140 ASHAs for 10 PHC centers in Bangalore and these are identified on the basis of the Convenience Sampling method. The study is both qualitative and quantitative in nature and the data is collected through primary sources by using a questionnaire method and focus group discussion. Data were analyzed by using SPSS and & Smart PLS. The study reveals that there is a complete mediation effect of Personality on the relationship between Organisational roles and Motivation. The findings of the study are useful for Government and PHC centers to redesign their policies and strategies to create recognition and reduce the difficulties and challenges of ASHA workers.

Abstract

Error is an inherent part of human nature. Currently, the term human error is widely used in pharmaceutical industries. It originated in the realm of quality and safety in the manufacturing process. Human error poses a challenge to Safety, Integrity, Strength, Purity, and Quality (SISPQ). Due to regulatory agencies, investigations into human error are in high demand in the pharmaceutical industry. From a quality perspective, consistent efforts are being made to control human error at every level. In this current research paper aims, we aim to explore the relevance and significance of Human Error in the pharmaceutical industries through an extensive review of the literature.

Keywords: Human error, Human factor, SISPQ, Training, Compliance, Pharmaceutical industry

Abstract

Socialisation of newcomers in an organisation has always been a key activity. Multiple components of socialisation have been examined over time, and research into this has used a variety of approaches. Initially, it was thought to be the process by which organisations acculturate newcomers. However, much current research views it as a nurturing process, in which the role of the new player is far more essential and organisations can merely adapt the activity. The essence of socialising in the workplace cannot be overstated, because of being the most important aspects of establishing and preserving organisational culture. Newcomers with more than 18 months to less than 24 months of experience in a given company were surveyed. Results from Bengaluru's service industry were included. in the study. As an instrumentation tool, a thorough, standardised Questionnaire was adapted and 304 employees completed it, using a basic, random selection procedure. Descriptive statistics, Bivariate Correlations, and Regression were the statistical approaches used. We investigated and examined two possibilities. The findings back up the theory that corporate culture and socialisation strategies are linked.

Keywords: Socialisation; Organisational behaviour; Organisational culture; Turnover Intention; Socialisation tactics; Newcomer's adjustment

SHIFT WORK DYNAMICS AND ITS IMPACT ON EMPLOYEE WELLBEING IN THE MANUFACTURING SECTOR

Afseer Majeed PhD
Lecturer - Business Management,
Explore Educational Institute, Dubai – UAE
academic@exploreeducation.ae

Abstract

In the modern world of industrialisation, productivity is the critical variable defining the success of any organisation. Shift work is a tried and proven system to boost productivity, especially in a manufacturing environment. UAE is a country where the manufacturing sector is proliferating, and more and more employees are undergoing shift working schedules. This research analyses the effect of shift work on employees' well-being in the UAE manufacturing industry. The study is conducted between employees from various companies who are regularly doing shift work. This study is quantitative research to see how the employees perceive the shift work and how it affects their productivity in the long run. The data was collected through the questionnaire method, analysed statistically with the help of a certified statistician and derived the conclusion. Some of the larger issues that may arise for employees who work shifts are the disruptions to sleep patterns and fatigue. Working non-traditional hours can make it difficult for employees to get enough sleep, leading to fatigue and decreased productivity. This has been linked to an increased risk of certain health problems, such as heart disease, diabetes, and gastrointestinal issues. On the other side, shift work can make it difficult for employees to maintain a healthy work-life balance, as it can interfere with their ability to participate in social activities and spend time with family and friends. This study's outcome suggests that shift work has to be carried out in an organisation in conjugation with other supporting programs that can help employees balance their professional and personal needs; by doing so, companies can reap productivity for the long term while keeping the employee's well-being at optimum level.

Abstract

This paper examines the cultural orientation of IT managers in India. It looks at the cultural values, beliefs and behaviors that affect IT management in India and how these cultural orientations are shaping the development of the Indian Information Technology (IT) industry. The paper also identifies the key aspects of Indian culture and their implications for IT management in India. It further examines the challenges faced by IT managers in India when working in a culturally diverse environment, and provides recommendations to ensure successful IT management in India. Finally, the paper discusses the importance of cultural orientation for successful IT management in India to ensure that the IT industry remains competitive in the global market. The Information Technology (IT) sector in India has been growing rapidly in recent years, with many multinational companies setting up offices in the country. This has, in turn, created a requirement for IT managers to be culturally aware and sensitive to the needs of the Indian market. This paper aims to provide a comprehensive overview of the cultural orientation of IT managers in India. The paper begins by discussing the cultural differences between India and other countries, and how they impact IT management. It then looks at the various aspects of cultural orientation, such as language, religion, gender roles, and social norms. Finally, it provides practical advice and suggestions for IT managers in India, including how to effectively communicate with employees and customers, and how to create a culturally-inclusive work environment. The paper concludes by noting that cultural orientation is an essential component of successful IT management in India, and that IT managers should take the time to understand the cultural context in which they are operating.

Abstract

Managing people at workplace via the top-down approach fails to facilitate the individuals' Flourishing and work engagement. As the teams/ organisations/ institutions becomes bigger, the more generic the job description and job roles become. Hence the construct of Job Crafting plays a vital role in curating meaningful jobs aligned to an individual's core. Job Crafting facilitates a bottom-up approach where individuals relook at their job design, and make minor tweaks at cognitive, tasks and relations aspects of job. This study examined the effectiveness of job crafting intervention. The participants in the experiment group were a homogenous mix of individuals at jobs working at a same entity. The study was done using a quasi-experiment design methodology where we followed a pre-test and post-test approach to measure Job Crafting levels. The treatment here is the Job Crafting Intervention is a 3.5 hours long workshop structured session. The level of Job Crafting was measured before the start of the workshop (Timeline T1) where individuals are not informed on what is measured. Three weeks after the intervention the Job Crafting levels was measured again using the standards Job Crafting scale. The impact was intervention was analysed using a T- test on the pre and post levels. The intervention showed a significant positive effect on levels of Job Crafting. A mean difference of 4.2 to 4.8 (6-point scale) was observed after the experiment respectively on pre and post Job Crafting levels. A slight positive correlation was found after the intervention (~.3 Pearson correlation). All the results were shown significant through the statistical tests. The study proved that the developed Job Crafting intervention was effective in increasing Job Crafting levels among employees. Towards the end of the intervention, an open-ended question was asked, and the responses showed that the intervention had a positive impact among the participants and helped them to relook at their existing job with more meaning.

IMPACT OF EMOTIONAL INTELLIGENCE, PERSONALITY TRAITS, RISK PERCEPTION AND BEHAVIOURAL BIASES ON INVESTMENT DECISIONS

Dr.S.Johnsi
Associate Professor,
DJ Academy for Managerial Excellence, Coimbatore
johnsi.s@djacademy.ac.in

Abstract

The main objective of this study is to analyse the impact of Emotional Intelligence, Personality Traits, Risk Perception and Behavioral Biases on Investment Decisions and to measure the mediating effect of selected variables on Investment Decisions. The study depends on primary data and a well-structured questionnaire is used for this purpose. Multi-stage sampling technique has been adopted to determine the sample for the study. A model using PLS-SEM is tested to examine the impact of personality traits, emotional intelligence, risk perception, behavioural biases and investment decision making. Structural Equation Modeling (SEM) is used to explain the relationship between multiple variables and the structure of inter relationships among various constructs is examined. The result of the mediating effect is confirmed by SOBEL's test. The current study also indicates that emotional intelligence was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Cognitive dissonance was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Herding was found to have a significant positive relationship with equity exposure. So, it is concluded from the study that emotional intelligence and behavioural biases have a major impact on the investment decisions.

A LEADERS' ROLE INFLUENCING THE WORK CHARACTERISTICS OF VIRTUAL TEAMS CONTRIBUTING TO EMPLOYEE PERFORMANCE – A BEHAVIORAL PRESPECTIVE

Gouri R Javali
PhD Scholar, Faculty of Management and Commerce
Ramaiah University of Applied Sciences, Bengaluru

Dr. Madhu BK
Assistant Professor, Faculty of Management and Commerce
Ramaiah University of Applied Sciences, Bengaluru
madhubk.mba08@gmail.com

Abstract

Employee performance is crucial for the success of any organization and the augmenting prominence of leaders' role to enhance employee performance of virtual teams has inspired the call for this study. The study aims to analyze and propose an integrated framework justifying the leader's behavior accounting to work characteristics contributing to employee performance in virtual teams of mid-sized- IT Industries in Bengaluru. The study is empirical in nature. Web-based survey and direct interview is conducted using questionnaire resulting in 180 responses from virtual team who are software professionals from IT Industry. The gathered data is analyzed subsequently by means of both descriptive and inferential statistics with the software IBM SPSS 20. The outcomes of the study show positive and significant relationship between leadership behaviors and work characteristics resulting in enhanced employee performance of virtual teams. The study offers experiential evidence and support the theory of leadership behaviors which postulates that the employee performance can be optimized when the leaders exhibit high degrees of task and relation-oriented leader behaviors accounting work characteristics in virtual environment. The managerial implications of the study and the potential avenues for future studies are discussed at the end of the paper.

The contribution of the workforce to the outcome produced by the organisation is crucial. When a firm works in a competitive market, employee performance becomes especially important. A crucial element that contributes to the organization's ultimate existence is employee motivation. Increasing staff productivity is an issue for businesses throughout the sector. People who work in organisational research are interested in methods for improving employee performance. Improving employee productivity requires a just and fair system of rewards that can be both tangible and intangible. The main aim of the current study is to map the relationship between appraiser and appraisee in affecting employee productivity in the IT industry. Furthermore, the study analyses whether professional development moderates the impact of the appraiser-appraisee relationship on employee productivity. For this purpose, primary data is collected from various mid-level employees of a firm utilising a quantitative questionnaire technique in order to understand their opinions of the relationship between the Appraiser and Appraisee in affecting employee productivity in the IT industry. Because a quantitative technique is used, a positivist research paradigm is most suited to achieving the study's objectives. In addition, the current study used a descriptive research design and a simple random sampling technique to gather data from 200 mid-level employees. The findings of the study suggested that in highly competitive circumstances, businesses work hard to establish a fair balance between employees' job performance and the success of the firm. Aspects for employee rewards and recognition are among the most crucial elements that may guarantee that many businesses recognise the effectiveness of their workforce. Employee empowerment has therefore become a key factor in determining the range and calibre of services offered to customers, and low staff productivity has been cited as a challenge to providing services. The findings of the study also revealed that the Appraiser-appraisee relationship has a significant impact on employee productivity and professional development and moderates the association between the appraiser-appraisee relationship and employee productivity. The current study results are essential for the management, the team leaders, the administrators and the HR professionals in comprehending the behaviour of their employees and accordingly adjusting the performance appraisal strategies to enhance the motivation and professional development capabilities.

Intrapreneurship is a much sought-after strategy in developing innovativeness and new business venturing capabilities of organizations, which is termed corporate entrepreneurship. While large organizations have well-designed processes and policies to develop corporate entrepreneurship, such defined policies and procedures are rare among small and medium enterprises (SMEs). The present study is to find the influencing factors such as passion for work, entrepreneurial behaviour of managers on intrapreneurial intentions and behaviour among the employees of SMEs. Also, the negative influence of organizational cynicism on intrapreneurial intentions and behaviour is found in this study. A pilot study was conducted through unstructured interviews among a few entrepreneurs, intrapreneurial and non – intrapreneurial employees to determine the variables of the present study. A total of 301 samples were collected from 13 SMEs which are into the service sector by distributing questionnaires based on valid instruments. Passion towards work is found to have a positive influence on intrapreneurial intentions. Also, organizational cynicism has a negative influence on intrapreneurial intentions and intrapreneurial behaviour. Additionally, the entrepreneurial behaviour of managers is found to have a positive influence on intrapreneurial intentions and intrapreneurial behaviour.

Abstract

Making wiser decisions about employees to improve performance at the individual and/or organizational levels is the process of HR analytics. HR analytics is a method for determining the correlation between HR practices and organizational performance outcomes such as sales volume or customer satisfaction. Human Resource Analytics was established in 1978 by Jac Fitz-Enz, the pioneer of human capital strategic analysis and performance benchmarking. In this paper, the researcher wants to discuss the concept of HR analytics, its application, impact on talent management, branding, and challenges in its application. The researcher examines secondary data and conducts a thorough literature review to understand the concept and its application across industries and nations, as well as to identify any challenges encountered during deployment and any benefits perceived by various industry professionals. Findings: The study's findings indicate that using HR analytics can help businesses build their brand and gain a competitive edge in today's fiercely competitive business environment while also enhancing workforce and employee productivity. This study has significant implications for both literature and HR analytics. Researchers will know more about the factors that contribute to and the mechanisms by which HR analytics improve organisational performance. The author's second claim is that having access to HR technology both facilitates and precedes HR analytics. Finally, concrete data from the literature demonstrates its influence on branding and organisational success.

Abstract

Employee Engagement is a serious concern for many organizations. Performance is quintessential but it lags without engagement. The values and codes for performance and engagement demand to be pronounced and established consistently to develop high performance engagement. Engagement issues and performance lags call to be discussed with transparency to initiate a proactive approach in the lag and lead, of performance engagement. High Performance Engagement, is an amalgamation of employee engagement and performance excellence to accomplish goals and stretch goals, with commitment and passion, beyond compliance. The study aimed to establish the socle of high performance engagement for organizational excellence Using a quantitative method, this study empirically verified the essence of high performance engagement from managers (N=350) in corporate companies. The results indicate that among the dimensions of high performance engagement, the employee-centric approach was perceived as the highest socle of high performance engagement (with a mean of 81.17) and performance strategies were perceived as the lowest (with a mean of 70.01) among the rest. The results evidence that employee focused approach is the predominant dimension for the socle of high performance engagement as perceived by the managers and motivation is the preponderated determinant of high performance in organizations. The results are indicative of an employee-centered approach rather than job centered approach, for organizational performance excellence with latitude on team synergy, and autonomy on performance strategies.

THE IMPACT OF EMOTIONAL INTELLIGENCE ON WORK-LIFE BALANCE IN START-UPS IN HYDERABAD

Jyothika Vemu
Student, PGDM
International School of Management Excellence, Bangalore

Prof. Dr. Sindhu Shantha Nair
Professor
International School of Management Excellence, Bangalore

Abstract

Work–life balance is a concept that includes prioritization between work (career and goals) and lifestyle (health, pleasure, leisure, family, and spiritual development). In broader terms that include "lifestyle balance" and "lifestyle choices". Many companies strongly support their employee's work-life balance through appropriate measures in order to improve employees' loyalty towards the company which fetches the company with better work life and a chance to recruit new employees. The flexibility in working times is the measure and it also influences the employee's private lives, with this there can be an increase in job satisfaction by reducing work stress. This in return helps in employee well-being. A start-up is a new business venture that aims to solve a problem, meet a need, or create value by offering innovative products, services, and solutions. Start-ups typically have limited resources, but have a strong focus on growth and a long-term vision. They are risk-takers. This paper studies the impact of EI on WLB in start-ups in Hyderabad. the work-life balance in start-ups can vary depending on the culture and size of the company. Some start-ups may have a more relaxed approach, while others may require a lot of work hours from their employees.

Keywords: Emotional Intelligence, Work-life balance, Job satisfaction, start-ups, and employee Well-being.

HAPPINESS AT WORKPLACE AS A MEDIATOR OF THE RELATIONSHIP BETWEEN HIGH PERFORMANCE WORK SYSTEM AND TURNOVER INTENTION: EMPIRICAL EVIDENCE FROM HOSPITALITY AND TOURISM INDUSTRY

Prof Shurlly Tiwari
Assistant Professor
International School of Management Excellence, Bangalore

Dr.Ujjal Mukherjee
Professor
Jain (Deemed-to-be-University)

Abstract

This research aims to identify the influence of a high-performance work system and happiness at the workplace on turnover intention among employees in the tourism and hospitality industry. The researcher surveyed a sample of more than 450 hotel workers to test a model that relates the following variables: high-performance work system, happiness at the workplace, and turnover intention. Data were analyzed by using structural equation modeling and Amos 24 version. Research confirmed that a high-performance work system positively influences employees' turnover intention, and there is an impact of happiness at the workplace on decreasing the employees' turnover intention. This study unlocks the relationship between the three variables HPWS, HAW &. From the managerial point of view, the hospitality industry should prioritize the investment in HPWS and HAW as it directly impacts the employees' turnover intention, directly affecting the business's baseline.

Keywords: High-performance work system, happiness at the workplace, turnover intention, hospitality employees

TALENT MANAGEMENT PRACTICES, ROLE OF PERCEIVED ORGANIZATIONAL SUPPORT IMPACTING EMPLOYEE ENGAGEMENT

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence ISME, Bangalore, India
pooja.nagpaal@gmail.com

Abstract

Employees are most valued assets of any organizations paving a path to success. Talent are the ability, skill and knowledge that employee brings to the organization to effectively perform their job well to achieve the organizational goals. In the current world of "Talent War" talent management is not limited to just acquiring a right talent but rather on deployment, development, engagement and retention of its employees. This study analyzes the drivers of talent management practices and perceived organizational support impacting employee engagement. The study comprises an analysis of data of 457 respondents from IT sector companies from IT hub of Bangalore, India. The result indicates talent management practices and perceived organizational support have a direct influence on employee engagement. The findings imply on theory and practice specifically in enhancing employee engagement using various talent management practices along with perceived organizational support. The study found scope for future research in comparing various sectors using additional independent variables in a longitudinal manner.

Abstract

The research paper aims to deliberate the issues and challenges leading to disruption of global supply chain with special reference to Organic foods and agri-business. The paper also summarizes the global supply chain scenario. The production and supply chain management issues & challenges of the current situation are discussed in the paper and effectively proposes strategies to be incorporated in policies making of Organic Food for strengthening the resilience and sustainability of the system at global level as the authors believe that it is important for current and future food managers and policymakers to understand the current system, structure, institutions, economic, social and environmental forces at play in each sector. The aim of this study was to clarify the ideas of Organic food supply chains and the organic production of food products to indicate some major issues and challenges and suggest their relevant recovery strategies. The paper assess methodological framework consists primarily of a systematic data collection from relevant government/ institutional databases and/or reports (i.e., APEDA, Statistica, IBEF, IFOAM and FiBL). Data were considered eligible for inclusion in the analysis if they were useful to assess in particular: (i) Organic -food demand globally, (ii) the effects on the Organic food supply chain services.The research paper discovers almost 9 recovery strategies such as support from the government, decentralisation of the distribution channels, Block chain technology, Integrated certification process etc for curbing the disruption in the organic food supply globally. In the end, the supply chain should respond and overcome the challenging situation in the organic food supply chain management.

Abstract

This study aims to structure an approach to optimize the distribution process in logistics operations for a Nagpur-based small-scale 3PL service provider and in the process to propose a model for companies in the logistics domain to follow. With an uncertain customer demand, the process of finding the best possible route becomes intricate. A methodology that reduces travel time, distance, transportation costs, inventory carrying costs, and administration costs had to be developed. Two generic requirements are considered in the study. Firstly, a single truck or carrying vehicle delivering to multiple customers. Secondly, a set of fleets traveling to multiple destinations with capacity constraints. For assessing logistics and supply chain difficulties, spreadsheet tools, particularly Microsoft Excel is used with Solver add-in. This study proposes a model to reduce the distance travelled, by which over utilization of resources can be considerably reduced aiming to control the carbon footprint for a sustainable logistics.

Abstract

Many large companies are trying to revamp their commercial organization and prepare themselves for the future. Technology is changing the way consumers live. It is also changing the way customers operate, presenting new opportunities and new competitors. Technology, mobility and the internet have generated empowered customers who are more demanding and move faster. They don't look for a product. Instead, they look for a reliable advisor and an experience in each service. Traditional CPG businesses have had to adapt by combining the physical, offline and the digital, creating new services that we had not previously imagined and new sales capabilities, changing the way of connecting with customers. The objective of this paper is to help you understand how to bring together all commercial services and customer contact points in an innovative, direct, efficient and close way that improves services and drives growth. It also lays emphasis on the impacts on back-office operations like Order-To-Cash, Procure-To-Pay, Logistics, etc. One can learn about the necessary tools, processes and capabilities to support mutual teams to manage business transformation from a traditional sales model to a "digitally enabled" model by ensuring process and structure consistency, standardization, and excellence, while driving customer service improvement and top-line growth.

Keywords: Digitalization, Business Transformation, Back-Office Operations, Customer service, Standardization, Top-line growth, Commercial organization

IMPACT OF ARTIFICIAL INTELLIGENCE ON ADVERTISEMENTS WITH RESPECT TO FMCG PRODUCTS

Dr Rose Kavitha
Professor, New Horizon College of Engineering

Deepa S

Shashank M
New Horizon College of Engineering

Abstract

The advertising industries have started to use AI technology to identify the trends in the market and enables them to use it to predict the future trends in the market take decisions, make budgets and helps identify their target market. AI has a huge impact on quality of any work done as it is done in a better and effective way comparatively to humans. As seen, that AI can dig deep into all types of data simultaneously with different timelines of data hence understanding the customer ideology, mind-set and preference at the best. The advertising industry is always developing. Because of technology developments like artificial intelligence (AI), greater targeting, and dynamic creativity, the way customers connect with companies is changing. In order to interact with audiences more effectively, advertisers can use machine learning. AI enables improved audience targeting and segmentation for advertisers acquired by strata sampling with individual experiences.

The purpose of this research is to understand the implementation of artificial intelligence in the advertising industry, and what impact Artificial intelligence have on advertising industry. Examining the acquired samples from the survey demonstrates that AI is frequently employed in the marketing sector, even though the applications are at the operational level. AI has an impact on each element of the advertising mix, having an effect on both how successfully consumers are supplied and how effectively advertising is organised and managed. In addition, paper also presents the understanding the role of AI in different types of advertising of toothpaste under FMCG products.

Abstract

The year 2020 will never be overlooked within the history of this world. The widespread was uncommon in ways no one seem have ever envisioned. Inside fair six months of its approach, individuals all around the globe were constrained to sit at domestic. This research article points to move forward the information on Gen Z as workers inside workforce and within the working environment, as well as on the most thematic patterns that drive the investigate on the subject. The research study focuses on HR analytics, used and how the suitable candidates in a short period are identified and better decisions are made during recruitment thereby contributing to the company's growth. The study focuses on how the hybrid work mode has affected the employee's leadership and Talents for the organization. The main core areas of research study focused around Gen z, Workplace Management, attitudes and Career Planning. The study focuses on the need of and further development in the work force on the major aspects of this generation and the labor market. The investigation has gone into rethink the culture of a work force that is no longer confined to an office full –time. The study has shown that most Gen z employees prefer Work from home despite companies calling back to office. How the employee's talents can be enhanced through remote working mode is also being analyzed.

Abstract

The current available modern technology has made possible for us to have many more volunteers to participate in the conservation of our environment and help in the sustainable development. This allows for providing opportunities to people to contribute to the society. This has brought around an expanding number of versatile phone-based citizen science ventures that are outlined to get to these gadget highlights as well as to reach diverse client bunches, over distinctive venture lengths, and with diverse points and objectives. Here by integrating machine learning and predictive analysis, we can bring to life the basic idea of having people volunteer in these programs to help the environment. The Sainik application will help in accommodating all these ideas to fulfill the desire to help preserve our environment. It also provides people especially the youth to contribute to the safekeeping of our environment. Our experiments show that number of people volunteering have reduced by 1% in last 5 years and it is our goal to help improve that statistic. The major reason for this is not the lack of willingness of people to volunteer but the lack information of events requiring such help for both the organizers and the volunteers. The main purpose of this application is to help the environment while providing opportunities to the public and building a better place.

Abstract

Cyber Defense for any organisation has become a priority these days where the world is moving towards virtual communications and business happening among organisations globally. Critical areas to focus are breach detection and breach response. Taking a proactive approach to cyber security (CS) will enable us to avoid damaging and disruptive cyber attacks. Cyber attacks target the IT resources, leading to a tarnished and irreparable organisational image, loss of valuable data added with unproductive downtime. Organisations with proper cyber defense techniques will be able to conduct continuous business while facing persistent threats and sophisticated attacks. Availability of low cost powerful handheld devices coupled with low cost high speed data has led to deeper penetration of the internet. Changes in global scenarios dictated by pandemic are acting as catalysts for work from home , flourishing e-commerce and other mobile-app based delivery systems. Aggressive promotion of digital payments led by new age fintech startups, digital push by government incentivisation of digital payments, e-governance all together have fueled the exponential growth of the internet. However, this growth has also brought a plethora of cyber, ransomware and phishing attacks etc. Global data shows exponential growth of cyber attacks in this period of pandemic. Safeguarding intellectual property and Personal Identifiable Data (PID) in an organisation is very important. This paper discusses proactive implementation of various Cyber defense tools and methodologies for safeguarding IT assets and in turn mitigate cyber risks. These methodologies help organisations improve network integrity and availability, rectify numerous flaws, including misconfiguration of the security settings, analysing security gaps and vulnerabilities and taking remedial actions. This paper discusses the various steps and implementation of frameworks, methodologies undertaken by authors to ensure the three triads of Confidentiality, Integrity and Availability of information and also brings the importance of third party audits and certifications of the organisation in the field of information security.

Abstract

For a person to be physically, psychologically, and socially healthy, having a positive outlook on life is essential. Money alone won't make your life peaceful unless you also have peace of mind. In today's competitive society, when everyone is racing to the finish line, many other considerations are being carelessly disregarded. Stress, worry, and other issues among others all harm mental health. In order to address the aforementioned issue, this research suggests early detection and assistance for problems encountered in identifying a person's mental state. The system consists of 2 modules namely - 1) Facial Emotion Detection 2) Assistance. The output of all the models is combined and by further analysis, the final outcome is given in the form of prediction of the user's state of mind and also further assistance to enhance their mood.

Abstract

Quality plays a very vital role in signifying the credibility of the service provider. Academic institutions act as educational service providers to the students. The mushrooming of management institutes in India created an issue of question of quality mark and recognition. This necessitated gaining a Quality seal for the management institutes. Accreditation for an institute paves a mark of credibility. NAAC, NBA, NRIF are the accreditation bodies in India. The quality assurance governing bodies judge certain parameters for the institutes and proceed for gradation. This gradation embarks as a quality status symbol for these institutes. There are different criteria for gradation. One of the important aspects in these parameters is the faculty contribution in research. This research paper intends to explore the research environment provided to the faculties by the management institutes. It aims to examine the support extended by the institution through different aspects.. The constraints faced by teaching fraternity in pursuing research are examined and suggestions to overcome them are provided. The data is collected by both, primary and secondary sources. Primary source includes survey schedule (Google form) and secondary includes the journals, books, and websites. The support system from institution in terms of Allowance/ (travel), registration fees, Publication fees, Conference/seminar/FDPs, leave or outstation duty is explored. The responses for attributes like, managing time for research activities with other additional responsibilities, financial and non -financial support from institution are explored. 48.19 percent of respondents are of opinion that, research activities become very stressful, as managing time with other routine academic/ official work becomes a challenging task. This is managed many a times by sacrificing family time, sleepless nights and extending work hours. The research environment in management institutes seems to be on a lower note. The fair recruitment policies, optimum staff retention and support from management institutes will definitely change the research scenario.

Abstract

It was presumed that teaching effectiveness, self-efficacy, and continuous professional development have the power to change professional commitment owing to their cumulative nature in terms of thinking, acts, and realities. These ideas were also supported by previous research which advocated continuous professional development as a classical source of professional commitment because continuous professional development has the power to change oneself with strategies that facilitate the transfer of training throughout the life of a professional. This study examines the relationship between leadership style, self-efficacy, and professional development in higher education institutes in India. The study instrument used for this research is a questionnaire which was shared through an online medium. The population for the study consisted of academicians from higher educational institutes. The study's major finding indicates that the gender of academicians does not differ in leadership practices, self-efficacy or professional development. There is a positive relationship between leadership practices and self-efficacy and professional development.

Keywords: Leadership style, self-efficacy, professional development

THE USE OF TECHNOLOGY TO ASSESS STUDENT PERFORMANCE IN HIGHER EDUCATION INSTITUTIONS

Abstract

The purpose of this paper is to review existing literature on the application of technology-based student assessment processes, with a particular focus on artificial intelligence-based student assessment practices. We gained a deeper understanding of the current trends in student assessment processes as a result of this. The literature reveals a number of possibilities for incorporating digital assessment into educational systems. Secondary research also demonstrated the possibility of integrating artificial intelligence (AI) into students' teaching and learning processes. However, there is a gap between theory and implementation in Indian higher education. In order to gain a better understanding of how real users perceive technology and AI-based student assessment, a qualitative study was conducted. Participants in the study were stakeholders in the Indian management education system. Faculty and students from Indian management institutions of national importance as well as affiliated and autonomous institutions was included in the study. The study revealed faculty and students' perceptions regarding the challenges and benefits of digital and artificial intelligence-based student assessment processes. Based on the findings of this research management and policy makers can address inhibitions expressed by faculty and students before considering the digitization of student assessment processes.

Abstract

This study is to find out the effectiveness of different methods of teaching on the learning outcome of the students based on Bloom's Taxonomy. Questionnaires were used to collect data from students on their experience with the use of the Case Study method. The case study teaching method has a higher rate in both empirical and perceived effectiveness of the learning outcome based on Bloom's Taxonomy. The Socratic Method of teaching is a shared dialogue between the teacher and the students in which both are responsible for pushing the dialogue through questioning. The "teacher," or leader of the dialogue, asks probing questions in an effort to expose the values and beliefs which frame and support the thoughts and statements of the participants in the inquiry [Rob Reich, 2003]. The study conducted measures the effectiveness and its intersectionality between education and business (Business Studies) and has been widely used in higher education institutions especially the management studies to facilitate effective learning across a variety of subjects like Marketing, Human Resource Management, Organizational Behaviour, Financial Management, and Business Management, etc. The study has found that the Case Method is useful for most of the subjects in Management, especially Marketing, Human Resource Management, Finance, and Business Ethics. It is also observed that the Case Method helps in remembering the knowledge created through their actions and behaviour.

Key Words: Case Method, Socratic Method, Project Based Learning, Bloom's Taxonomy, Learning Outcome, E-pathshala, Collaborative Skills

ABOUT INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE (ISME), BANGALORE

ISME is a leading business school offering excellent education through a student-focused culture of excellence, international outlook, entrepreneurial thinking and industry alignment. It was founded in 2006 by alumni from Carnegie Mellon University, Purdue, and Wharton, USA. ISME has always been at the forefront of quality education, with the vision of nurturing holistic, socially responsible and competent professionals. ISME has been ranked as one of the top B-Schools in Bangalore and top 1% B-Schools in India.

At present ISME offers undergraduate, postgraduate and Doctoral programs in Management. Our lush green campus at Sarjapur Main Road is an ideal ambience for study and research. The Institute constantly endeavours to expose its students to various methods of learning, like industry visits, interaction with industry experts, participation in seminars, case study etc. so that they become successful in their journey as they move from campus to the next phase of their career."

ABOUT THE CONFERENCE

Contemporary management issues often trigger the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices to facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time where all organisations worldwide must embrace continuous changes in technology, economy, environment, and government policies to remain competitive.The rise in digital adoption, the economic fallout of the pandemic worldwide, the rise of China as an aggressive global force, our government policies moving towards a more nationalist agenda, and growing geo-political tensions worldwide are some recent issues which confront businesses and management.

This conference is a platform for industry practitioners, academicians, entrepreneurs, and research scholars to come together to learn, share and discuss current emerging topics in management with thought leaders, technologists, and learning experts. The conference is a great knowledge-sharing event for a diverse audience embracing international and national participants. The event has renowned keynote speakers, practitioner-led workshop sessions, and offers an excellent networking platform.

The conference includes original research papers from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

CIM-23 Organizing Committee

MESSAGE FROM CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore!

On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 11th International Conference on 'Contemporary Issues in Management - CIM-23'.

We live in a world of disruption and drastic changes with different countries in different stages of the economic cycle. This conference aims to discuss issues relevant to the present time like mass layoffs by major MNCs and penetration of AI tools in our lives. All organizations must embrace the changes in technology, economy, environment and government policies to remain productive and competitive

This conference is a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with eminent international and national keynote speakers. Industry experts are a part of the panel discussion on 'Great Resignation to Grand Layoffs: The Contemporary HR Landscape'. We are delighted to share that CIM-23 has received papers from reputed institutions like Indian Institute of Technology Delhi (IITD), Tata Institute of Social Sciences (TISS), National Institute of Industrial Engineering, Mumbai (NITIE) and Symbiosis, Pune and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference.

Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,
Dr Rony G Kurien
Dean and Conference Chair

mayap.isme20@gmail.com

Dr.Geetha.Rajaram
Research Guide, International School of Management Excellence,
Research Centre, Affiliated to the University of Mysore
rajaram.geetha@gmail.com

Abstract

There is a clear shift in the way companies report their performance to the stakeholders. Integrated Reporting (<IR>) is a corporate reporting reform practices followed by many big companies all over the world. They are moving from more profitable companies to more responsible companies in terms of preserving the resources for future generation. The companies are accountable for protection of natural resources, society at large apart from other capitals, like financial & manufacturing capital. The objective of this paper is to check the compliance of Integrated Reporting Framework (IRF) of select Indian companies. For this the content analysis is done to cover all the content elements and the six capitals of sample companies. Analysis is done in 2 stages. One is content element analysis according to IRF, secondly analyzing the impact of IRDI on firm value. Spss; 29 version has been used to analyze the data of six companies of 4 sectors for 3 years from 2018-2021, since IR practices were made a part of voluntary disclosure since 2017 by SEBI circular for top 500 companies. Out of 7 content elements organizational overview has maximum score of 96.33% and strategic has got good score of 95.75% in the period of pandemic. All the companies had more focus on strategy to overcome the challenges of Covid-19. Another objective is analyzed by descriptive statistics and correlation, model summary, multi co linearity. A regression model is developed for the same. Tobin's Q is taken as a proxy for firm value and is considered dependent variable. The independent variables are the IRDI score, ROE, Size by market capitalization & ROCE. A regression model is developed to estimate unknown value of dependent variable (Tobins Q) using the known values of independent variables.

Keywords: Stakeholders, Firm value, Tobin's Q, IIRC, Integrated Reporting Disclosure Index (IRDI)

HOW A CHINESE TAKEOVER OF TAIWAN WILL EFFECT FOREIGN DIRECT INVESTMENTS

Dr. Rainer Wehner
Technical University of Applied Sciences
Würzburg-Schweinfurt
rainer.wehner@thws.de

Abstract

Over the past decades, China has gradually increased its geopolitical influence. Besides the Belt and Road Initiative, that diversified Chinas economic and political relations with many countries in the western world, Beijing has vowed to bring Taiwan back under Chinese control. That could provoke a massive conflict, because the U.S. President has made clear, the U.S. stand by Taiwan and will retaliate in the case of a forced attempt. Based on this scenario the purpose of this paper is an analysis of the consequences for the inflow of Foreign Direct Investments (FDIs) into Taiwan. For that reason, the author examined the published literature of the last years and analysed the Chinese – Taiwanese political and economic relationship. Furthermore, he researched the impact of such hostile takeovers on FDIs in similar situations to draw assumptions for an eventual conflict. It became apparent that the reactions of foreign direct investors vary, depending on the intensity of the conflict. Therefore, different scenarios of a Chinese takeover need to be drawn into conclusion. Based on the available data the major findings show that at the beginning of the conflict FDIs drop dramatically because the investors withdraw their money. Depending on the extent of the conflict, the destruction of the country and the impact on future economic prospects, the money will slowly flow back after a certain period of time.

COMPETENCIES OF BOARD MEMBERS IN ANNUAL REPORTS OF STANDARD & POOR'S BOMBAY STOCK EXCHANGE SENSEX ORGANIZATIONS

Amit Kumar
Research Scholar, GITAM University

Shanmuganathan Janardhanan (Late)
GITAM University

Abstract

While the importance of the right competencies of leaders in large organizations is well understood in practice, limited research exists about competencies of board members, especially in the Indian context. With this critical need, this paper attempts to provide a competency model, framework and a competency dictionary. The competency definitions in the dictionary are based on competency descriptions of board members of S&P (Standard & Poor's) BSE (Bombay Stock Exchange) Sensex organizations. Taking advantage of government guidelines that require listed organizations to disclose competencies of board members, annual reports of 30 Sensex organizations are subjected to qualitative analysis. A total of 246 competencies are identified. These are further analyzed to determine themes amongst those competencies that have been detailed by these organizations. A competency model of eight competencies, a competency framework & dictionary are developed by providing competency definitions for generic, specific & unique competencies through thematic analysis of competency descriptions. The research provides a method for leaders in organizations, specifically NRC (Nomination & Remuneration Committee) members in boards on Indian listed organizations, to identify, define & use the right competency requirements for board members. The research method also paves the way for future study of larger organization groups.

PRACTICAL WISDOM IN DECISION MAKING OF WOMEN'S COLLECTIVES IN SRI LANKA

Professor G D V RupikaSenadheera,
Department of Business Administration,
Faculty of Management Studies and Commerce, University of Sri Jayewardenepura, Nugegoda, Sri Lanka

Abstract

The aim of this paper is to present the practical wisdom of decision making of women's collectives in rural villages in Sri Lanka. It's built on the corporative society concept and selfsufficient membership organization that is run solely by underprivileged women in Sri Lanka. With a view to get a deeper understanding of the practical wisdom in decision making of women's bank collective, a qualitative methodology was adopted. The study's objectives are accomplished via a review of the literature, a theme analysis, in-depth interviews, and observations. Primary data came from in-depth interviews with 10 leading characters of Sri Lankan Women's collectives. Findings of this study reveal that the women's thinking and their maximizing and satisficing behaviors of decision making are based on different social meanings of their day to day life experiences and mutual understanding of their group members in terms of trust, honesty, equity and equality. Further deep analysis also reveals that every decision has integrated with the utilitarian perspective of ethics that mean their decisions always concerned for greater good for greater number of people in the group. And also women's collectives would be beneficial to enhance women's decision making power in the field of financial handling, insurance services, community development initiatives, cultural events, and business networking opportunities, disaster relief initiatives, and health and educational services as well. As a result of this behavior support women's for self-motivation, self-discipline, teamwork, and leadership skills in addition to the aforementioned value-added activities. Subsequently, the women's collectives have significantly helped to improve the socio-economic situation and empower women within the household and without their isolation of them through greater social interaction. And also this study will assist readers in learning about the idea of women's collectives practice by ground level and how it benefits the growth of women's lives, their families, and the whole nation.

BUSINESS EXCELLENCE & SUSTAINABILITY: MANUFACTURING, SERVICES AND AGRICULTURAL SECTOR

DEVELOPED PARAMETERS OF MANUFACTURING CAPABILITY MATURITY MODEL INTEGRATION FOR SUSTAINABLE GROWTH IN INDUSTRIES

Dilip Kumar Gayen
Research Scholar, GD Goenka University
Head Manufacturing & BE in East West Info solutions

Abstract

The post Covid pandemic has immensely impacted the manufacturing industries globally in the sustainable performance and progressive growth. Limited studies and researches are conducted worldwide by various scholars, industry's technical experts on manufacturing techniques for the sustainable manufacturing growth and business progression through the capability maturity model with customer's satisfaction in changed & challenging circumstances. During the evolution of Industry 4.0 & 5.0 techniques in manufacturing, the process is changing in the global manufacturing techniques & technology and performance of companies on the perspective of investment in the digitally controlled production through smart factories. In this study the objectives, the sustainable growth in manufacturing companies through a capability Maturity Model on Manufacturing is formulated by identifying the parameters and sub parameters at various Levels of maturity for sustainability in system standardization & performance. The maturity parameters & elements designed as a guideline for the manufacturing and operation heads to follow and implement this maturity & sustainable model for smart manufacturing, an efficient production structure and Future of Factory.

Keywords: Capability Maturity Model Integration (CMMI), Manufacturing Capability Maturity Model Integration (M-CMMI), Future of factory (FoF), Operational Excellence (OpEx), Smart Manufacturing (SM).

RENEWABLE ENERGY IN CORPORATE AND AGRICULTURAL SECTOR

Abstract

The world is focusing on saving environment and mother earth, it is very important to create awareness among the people to go eco-friendly. As we know that the electric era is taking a great move from the past decade and has reduced the use of petrol and other fossil fuels. It is important to note that the fossil fuel and non-renewable source of energy is in the stage of being verge and the world is making efforts to reduce the use of non-renewable source of energy, since the availability of fossil fuels is limited and cannot be used in some remote areas. But, renewable source of energy has eliminated all the loopholes associated with the conventional source of energy and made it convenient and safe for use. This paper reports the use of renewable source of energy and its implementation in the field of corporate and in the agricultural sector. Virtually, the corporates are involved in promoting eco-friendly products and taking initiative for creating the awareness to plant saplings. The renewable energy has the potential to solve all the problems faced by the developing countries. This paper also explains the policies implemented in the recent decade to overcome the hurdles and ensures the enhancement of renewable energy for future.

Keywords: Non-conventional source, Transition, Corporate Social Responsibility, solar power plants, wind mills.

DISRUPTIVE STRATEGIES FOR SUPPLY CHAIN DISRUPTIONS

Dr Sridharan.A
Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sridharan.a@christuniversity.in

Dr Sunita Kumar
Associate Professor, School of Business and Management,

sunita.kumar@christuniversity.in

Abstract

Supply chain disruption happens when forces, both internal and external affect the business's capability to get material, produce finished goods and dispatch them to the end consumers. This breakdown in supply chain could be due to bullwhip in marketing demand or suppliers' inability to meet demand or even natural calamities like monsoon or outbreak of pandemic or even the failure of logistic providers to meet transportation demands. Whatever be the reason, it will affect the business's top line and bottom line and the image of brand due to its non-availability in the shelves of retail outlets. It will become a case of "out of sight, out of mind" of consumers. According to Concord Monitor, toilet paper ran out of retail outlets as consumers panicked and the sale went up by 213% in March, 2020 over the same period in 2019. This is a classical case of demand overruns. When the ship Ever Given ran aground on 23rd March, '2021 in the Suez Canal, a total of 367 ships were caught in this traffic jam for a period of six days. Businesses lost billions of dollars as supply chain of raw materials and even finished goods were not delivered on time.

The year was 1962 and it saw the birth two big chain stores in United States of America, the one which is very successful one, Walmart and the other K-Mart. While Walmart continues to thrive and run successful business, K Mart folded in the year 2002 and later merged with Sears Group. There were many reasons for K Mart failure, but two things stand out, one being absorption of technology like internet and the other being smart supply chain operations like cross-docking, low inventories, that are being employed by Walmart. While disruptions are always there in businesses, this research paper explores on disruptive technologies that are available and which can be employed by businesses for their successes or at least reduce the dysfunctions.

Abstract

The COVID-19 outbreak and the prolonged period of shutdown wreaked mayhem for the new businesses that were beginning operations in India. Restrictions on the movement of goods and people leading to an increase in both supply and demand side risk, a lack of investors willing to continue investing in the firm, and the looming threat of a global recession are all factors that have made it exceedingly difficult for Indian start-ups to remain in business. However, in addition to difficulties that pose a direct danger to the very existence of start-up businesses, the pandemic has also brought about potentially fruitful opportunities for expansion. Given the lack of certainty regarding the development of a treatment for the disease in the near future, a number of different industries have generated a significant amount of revenue, and the opportunities presented by this situation appear to be sustainable. This article is a sincere attempt to elaborately highlight the challenges that Indian start-ups are currently facing and also the opportunities that they can bank on. The pandemic has affected various industries in a variety of different ways. The start-up ecosystem, which has never seen anything like this before, has its fair share of winners and losers as a result of this unique circumstance.

A STUDY OF CONSUMERS' BEHAVIOUR IN BUYING VEGETABLES AND FRUITS DURING THE COVID PANDEMIC

Ravella Prem Sai
PGDM Student,
International School of Management Excellence, Bangalore

Soundarya Shetty
PGDM Student,
International School of Management Excellence, Bangalore

Dr. S. Shyam Prasad
Professor,
International School of Management Excellence, Bangalore

Abstract

This study aims to investigate the behavior of consumers in buying vegetables and fruits during the COVID-19 pandemic. The COVID-19 pandemic has caused a major shift in consumers' behavior and the way they purchase their daily necessities. With the increase in health concerns, the demand for healthy and fresh food, especially fruits and vegetables, has increased. The data for this research was collected during the end of the first quarter of 2022 when the pandemic was subsiding. The concept discussed in this article and the findings thereof will add value to the literature, besides its relevance to academicians, the results of this study are also important to practitioners. The findings of the study revealed that regarding vegetables and fruits, offline is the choice of purchase over online. Retail store images do not play a decisive role in purchasing vegetables and fruits. variety, freshness, and economy have become major factors for consumers. The store image does not matter.

Keywords: Consumer Behavior, Covid 19, Fruits and Vegetables, Buying Habits

pkpainuly@ddn.upes.ac.in

Abstract

The lifestyle changes induced to control the pandemic have impacted daily life and have brought notable difference in consumer behavior (Sheth, 2020). Everybody looks for convenience, customization, inclusion of latest trends, multi-channel engagement and alignment with the goal of healthy living. Around 80% of companies agree that customers would go online in the new normal and their new business model should be digitized to be economically viable, the businesses must examine how customer behavior is evolving, as well as identify the factors that make online shopping possible and how they interact with one another. Doing so will aid managers in developing strategies that will help them remain competitive in the new normal. Two brainstorming sessions were held; in the first, the experts were given relevant literature to help them discover the elements that encourage online shopping. With the help of expert opinion, SSIM was utilized to determine the contextual relationships between the sixteen identified online purchasing factors. To recommend the pair-wise comparison, the same 40 experts from the panel were consulted. These 16 variables were probably used to assess the and to construct a driver-dependence relationship among these drivers using interpretative structural modelling with MICMAC analysis.

Keywords: Covid-19,Online purchase, ISM-MICMAC analysis, shift in consumer behaviour

IMPACT OF DEMOGRAHIC VARIABLES ON E- WALLET USAGE WITH REFERENCE TO METAMORPHOSING OF ECONOMY

Abstract

With the advent of Demonetization in Indian Economy on 8th November, 2016 there has been the upcoming of "Metamorphosing of Economy". Indian Economy is undergoing some radical changes post demonetization era as now the culture of 'Cashless Economy' is gaining much importance. With the introduction of "Digital India" program in 2015; two different concepts i.e., 'Technology' & 'Bank' finally got combined and "Digital Banking" came into existence. The objective of this paper is to show the impact of various determinants viz. ease of use, trust, security, time saving and convenience on the usage of e-wallets in city of Allahabad. The study is based upon both primary & secondary data. The primary data is collected from 209 respondents with the help of 'Structured Questionnaire' framed by following the "5 points Likert Scale" technique. This study is both analytical & descriptive in nature. The collected primary data is being analysed with the help of Microsoft Excel and SPSS. The statistical tools used to interpret the data are Regression Analysis and ANOVA technique. The present study has highlighted that between age & ease of use factor affecting e-wallet usage there has been no relationship. At the same time this study also highlights that there is significant but negative relationship between age along with trust, security & time saving & significant positive relationship between age and convenience factors affecting the e-wallet usage. This paper also shows that there has been a significant but negative relationship between diverse income groups with ease of use & security factors affecting the e-wallet usage. At the same time study also reveals that there has been significant positive relationship between diverse income groups with trust, security & time saving factors affecting the e-wallet usage.

Keywords: Demonetization, Cashless Economy, Metamorphosing of Economy, Digital Banking, E-wallet.

CHALLENGES AND STRATEGIES IN GREEN MARKETING

Dr. P. Vanishree Sah
Associate Professor, H&S Department,
CVR College of Engineering, Ibrahimpatnam.
pvanishree@gmail.com

Abstract

In today's environment the terms like eco-friendly and green marketing are being used widely. Environmental issues like global warming and climate changes are creating lot of threats to the society. The society has become more cautious towards harmful effects of the technological advancements. Due to this awareness, eco-friendly and green products are gaining more popularity. Green Marketing has emerged as a trending concept in sustainable development of the economy. This paper analysis the challenges and strategies involved in the process of Green Marketing.

A STUDY ON ROLE & IMPACT OF AUGUMENT REALITY (AR) ON SEARCH ENGINE OPTIMISATION (SEO)

Aparna M Joshi
Head of the Department & Associate Professor,
Department of Commerce, The National College Autonomous,
Affiliated to Bengaluru University
aparnamj.09@gmail.com

Abstract

Augmented reality (AR) mobile app advertising offers new opportunities for interactive consumer engagement to boost advertising effectiveness and elicit positive consumer responses. In this study, I investigate the role of escapism by analyzing its antecedents and consequences. We aim to shed light on how AR mobile app advertising can be used to enhance escapism experiences by considering two psychological mechanisms of mental imagery: narrative transportation (in response to ad storytelling) and spatial immersion. Search Engine Optimization(SEO) refers to the process by which search engines "crawl" content to see how effective it willbe to attract traffic. Search engines will assess a number of things in a website (such askeywords, tags, and link titles) and rank it for its capacity to attract organic traffic based on avariety of factors. The consequences of escapism experiences include positive social media sharing, purchase intentions through brand attitudes, and new brand engagement via AR mobile app advertising. Prior brand preference does not affect the relationship between escapism and consumer responses after exposure to immersive AR advertising. My findings have meaningful implications for how industry practitioners can enhance escapism in the context of AR mobile app advertising.

Keywords: Augmented reality; Search engine optimization, purchase intention; ranking; engage customer

DETERMINANTS OF CUSTOMER BEHAVIOUR INTENTION TO USE ELECTRIC SCOOTERS IN INDIA: UTAUT2 MODEL-AN EMPIRICAL ANALYSIS

Gagandeep Kudlu Srinivas
B.Com, PES University, India
gagandeep.fin@gmail.com

Raghu Yadaganti
Research Scholar, Krishna University,
Assistant Professor, PES University, India
raghuy@pes.edu

Abstract

The Research focuses on understanding what factors are impacting the customer purchase intention and usage behaviour of Electric scooters in India by applying the UTAUT2 Model. The study uses a quantitative approach by using a questionnaire. The Findings show that PE, SI, HM and EC of the UTAUT2 Model are directly and positively impacting the Behaviour Intention of customers to use Electric Scooters. EE, FC, PV and TR UTAUT2 Models are directly and negatively impacting the behaviour Intention to use Electric Scooters. The study is quantitative in nature and focuses on in-depth knowledge of factors influencing customer behaviour and intention to use Electric Scooters in India. However, the study cannot be representative of an enormous country like India. Academics and Electric Scooter retailers can consider this in future research

The studies provide information on the factors necessary for promoting Electric Scooters in India. These studies can be useful for Electric Scooter retailers who are looking forward to promoting Electric Scooters in India. Earlier studies in this context of E – Scooters usage have tried to use technology adoption models. Hence, these studies have not been capable to capture the fundamental nature of the impact of Environmentally Friendly on technology adoption in the Indian context. A lot of the analyses are performed used to find the relationship between independent and dependent factors but not explored to understand the relationship between the independent factors and the combination of independent factors' impact on dependent factors. In this research, we used Structural Equation Model (SEM) by using LISREL.

Keywords: Customer behavior intention, Electric Scooters, UTAUT2 Model.

IMPACT OF DISCOVERY COMMERCE ON ACHIEVING COMPETITIVE PARITY

Pranav Ajay Kumar
Student, CHRIST (Deemed to be University)
pranava.kumar@bba.christuniversity.in

Roy Matthew
Associate Professor, CHRIST (Deemed to be University)
roy.mathew@christuniversity.in

Abstract

Discovery Commerce is the hyper-personalisation of the point of purchase and point of sale of a product or service online. Companies may use these platforms to curate specific offerings on social platforms by essentially, guiding a customer to a product. The goal of discovery commerce is to bring the concept of window shopping to social platforms like Facebook, Instagram and YouTube. This paper attempts to evaluate the impact of discovery commerce platforms in achieving competitive parity between Direct-to-Consumer and Business-to-Consumer (B2C) brands. A secondary objective is to develop strategies for B2C brands to compete with Direct-to-Consumer (D2C) brands using discovery commerce platforms. Alejandro et al. (2020) states the point of purchase that a general population uses to acquire their goods greatly affects their consumption of goods and overall social status. The work of Bonet et al. (2005) concludes that logistical relationships across the value chain leads to vertical competition. The online nature of Direct-to-Consumer companies may provide a significant competitive advantage to them over Business-to-Consumer companies. This study is descriptive in nature. The data collected from Amazon Vendor Central consists of primary data. A Discovery Commerce campaign was launched for the 'hair care' product category of a B2C brand along with extensive SEO efforts. This was done to identify the impact of the marketing efforts followed by D2C brands which have given them an edge on e-commerce platforms. This includes changes to product titles, images and descriptions of product listings on e-commerce platforms to observe an increase/decrease in sales and visibility. Neo-marketing efforts like SEO and Discovery Commerce campaigns have a significant impact on the sales and discovery of traditional brands who have an omni-channel presence. Across all categories of the optimised products, Glance Views have increased by an average of 320%.

Keywords: Discovery commerce, search engine optimisation, glance views, e-commerce.

FACTORS INFLUENCING THE USAGE OF SMART HOME TECHNOLOGY IN INDIA

Srinath S
Christ University. Bangalore

Manish Kumar Shrivastava
Christ University Bangalore

Abstract

This paper explores the roles of perceived risk, performance and after-sale service, and demographics in the usage of smart home technology (SHT). Despite the push for digital technologies, smart homes still face challenges related to their limited use. We adopted a mixed methods approach and collected data from 133 respondents and 1244 users' responses from secondary sources. This research adopted the perceived risk framework and thematic analysis to explain the usage barriers of smart home technology. Our research supports the perceived risk factors relationships, such as privacy, performance, financial, psychological and perceived risk role as a resister. This research explains the post-adoption challenges of individual concerns related to the performance, after-sales services, and complexity of digital technologies. The use of IoT-enabled devices is influenced by users' demographics and cost and security concerns. This research has practical implications for understanding the factors associated with using IoT-enabled smart homes in India.

shampanandi12345@gmail.com

Abstract

This study aims to bridge the gap by examining the process of digitalization in rural retailing. To reach rural consumers, rural retailers are crucial. They serve as a conduit between producers and customers. Since rural retailers contribute significantly to the GDP, it is essential to retain them. The competition from organized retail and urban counterparts is extremely difficult for rural retailers. This paper focuses on how digitalization helps Rural Retailers to retain in business. Its relationship to rural retailing was examined through the Study TOE Framework. Additionally, it intends to inform Rural Retailers about the various channels of distribution they might use as a result of digitization. Secondary data was used in this study, which used a qualitative methodology and information gathered from websites and academic articles. The study concludes on the integration of TOE model framework, rural retailer's digitalization, and the adoption of digital distribution channels.

CONTINUOUS INTENTION TO USE AND FREQUENCY OF USE – APPLICATION OF UTAUT2 AND MULTI-GROUP ANALYSIS WITH INDIAN HOME-GROWN DIGITAL WALLET

Palanisamy Ganesan,
Professor and Director,
Marketing Area, NSB Academy, Bangalore

Anita S Mane
Associate Professor,
R M Dhariwal Sinhgad Management School, Kondhapuri, Pune

The mobile wallet transaction was INR 532 billion in value and INR 1630 million in volume during FY2017 (Deloitte, 2017). During Q1-2021, the volume and value are INR 1.13 billion and INR 411.75 billion respectively (Worldline, 2021). The research questions for this paper are: (a) what are significant UTATU2 factors affect the continuous intention to use home-grown digital wallet? (b) is the prevention behaviour influence the continuous intention to use the selected home-grown digital wallet? and (c) are there significant difference between (i) two different group of age and (ii) two male and female customers in the continuous intention to use? The study provides an insight on the continuous intention to use the Indian home-grown mobile wallet. The mobile wallet users' experience on an average of more than six month that means users have learned and become a familiar of mobile wallet for their purchase through directly or ecommerce as well as transaction of money for other purposes. Thus, Habit become the important predictor for the continued intention to use Abdul-Halim et al (2022) and frequency of use of Indian home grown mobile wallet. The users feel that the simplicity in using mobile wallet for any type of transaction without hassle and assistance from any other individual that results in the positive effect of effort expectancy on continued intention to use and this finding in line with the study by Ramos (2021) with food delivery apps during Covid19. Hedonic Motivation strongly influence the continued intention to use mobile wallet, thus the users see there is hedonic value of continuous use of mobile wallet in terms of positive feeling and pleasant experience when they use mobile wallet (Ly et al 2022). Thus, the research question one is answered through the Habit, Effort Expectancy and Hedonic Motivation are the significant constructs compared to other four strongly and positively predict the user's continued intention of mobile wallet. The role of preventive behaviour with UTAUT2 constructs highlights that the preventive behaviour plays no role in predicting continuous intention to use of mobile wallet. The limitation is that all constructs of Prevention Motivation Theory employed which result high predicting power on CIU.

Keywords: UTAUT2, Continuous Intention to Use, Frequency of Use, SEM, Multi-Group Analysis

IMPACT OF SOCIO-DEMOGRAPHIC VARIABLES ON THE PURCHASE INTENTION OF ORGANIC FOOD PRODUCTS

Roopashree B R
Research Scholar, MSRIT, Bengaluru, India
roopapraveen2004@gmail.com

Dr. Rizwana
Associate Professor and Research Supervisor,
MSRIT, Bengaluru, India
rizumehar@gmail.com

An encouraging sign that people are becoming increasingly aware of the negative health effects of these highly polluted and poisoned food items. Organic food products in India are expected to develop considerably during the projected period due to a variety of factors, including the availability of organic food goods on the internet and a shift in consumer preference toward organic food. According to certain researchers, sociodemographic factors play a role in purchasing decisions There is a need to explore the influence of demographic variables on purchasing behaviour because of inconsistent findings in the literature. Research of this type is descriptive in nature and aims to evaluate the influence of socio-demographics on the purchase intentions of the target audience for organic food items. The target audience was given a well-structured questionnaire, which included six sociodemographic questions based on logical reasoning and three questions on purchase intention based on Chiew Shi Wee & et al, 2014 and Anupam Singh, Priyanka Verma,2017. A 150-target audience sample was selected with a 10% margin of error and a 95% confidence interval and 121 valid responses were chosen for the study. We utilised the snowball-sampling strategy because we invited people to fill out the survey and then pass it on to their friends and relatives. Findings of the study indicate purchase decisions are influenced by income. Thus, it is possible that the amount of organic food purchased correlates directly with a person's income (i.e., the higher the income in schooling, according to the statistics. Organic goods are more likely to be purchased by those with higher education levels. This might be because more educated clients are more health-conscious and aware of the advantages of buying organic foods, which could lead to an increase in sales of organic products. In both industrialised and developing countries, several studies have found that a wide range of factors impact people's decisions to buy organic food. Demographic variables such as gender, education, and money, independent of the country in which they take place (developed or developing) will have greater influence on purchase of organic food products.

Keywords: Socio demographic Variables, Purchase intention, Purchase decision and Organic food product

ETHICAL MARKETING IN CURRENT TIMES: SOCIAL RESPONSIBILITY IN INDIAN CONTEXT

Dr.Mohammed Farooq Pasha
Assistant Professor of Commerce and Management,
Government First Grade College Kengeri, Bangalore.
farooqpasha2OO2@gmail.com

Jayashree Urs R
Assistant Professor of Commerce and Management,
Arihant Group of Institutions Thalaghattapura Bangalore.
jay.np@rediffmail.com

Abstract

It is often said that Marketing and ethics cannot go together. Those supporting the argument always have a long list of marketing activities from various companies which make even a die-hard marketing fellow feel guilty about his/her profession. On the other hand, critics of the argument can also come up with numerous marketing activities from various companies which can make the worst critic of marketing activities doubt his/her own criticism. So where does the debate goes from here. It only intensifies as more and more companies in every category of products and services are always making efforts to increase their market share through marketing strategies which they call innovation oriented but others call unethical thereby generating arguments within them as well as in the minds and hearts of consumers as well as potential consumers. This paper looks at the consumer perception about the degree of ethics in marketing followed by companies across all categories of products and services and its impact on the society on the one hand and company growth on the other hand.

UTAUT & UTAUT2 MODEL - A DESCRIPTIVE ANALYSIS OF THEORETICAL CONCEPTS BASED ON THE LITERATURE REVIEW

Remya Nair
Research Scholar (Registered with University of Mysore).
International School of Management Excellence, Bangalore
(A recognized research center of University of Mysore), India
Email:remya.sanju.nair@gmail.com

Abstract

UTAUT or Unified theory of acceptance and Use of technology is the technology adoption model proposed by Venkat et all (2003). This is a descriptive paper analysing both UTAUT as well as UTAUT2 based on Literature review. The research papers published from 1989 to 2020 are analysed and included in this paper. The concepts of the UTAUT as well as UTAUT2 are explained in detail. The other models that contributed for the development of UTAUT model are also mentioned in this paper.. The theoretical model of UTAUT suggests that the actual use of technology is determined by behavioural intention. The apparent prospect of adopting the technology is dependent on the direct influence of four key constructs - performance expectancy, effort expectancy, social influence, and facilitating conditions. The effect of predictors are moderated by factors like age, gender, experience and voluntary willingness to use. To provide a holistic understanding of technology acceptance, the researchers can set the objective for creating a unified theory of technology acceptance by incorporating key constructs, theory enabling the model to predict behavioural intention and use. The UTAUT theory has been utilized to explore human-computer interaction. In the field of research, UTAUT has contributed immensely to the literature. The model provides insight into technology acceptance by assessing prominent technology acceptance theories, which offer distinct perspectives on the subject. UTAUT demonstrates that proposed factors account for 70 percent of the variance in use intention, offering stronger predictive power compared to the rest of the models that examine technology acceptance. The collaborative impact of constructs with personal and demographic factors establishes the complexity of the technology acceptance process, which is in turn dependent on individuals' age, gender and experience. The Practical Implications, Applications of UTAUT model, Limitations of UTAUT model are explained in detail in this paper.

Keywords: UTAUT, Technology adoption, Effort Expectancy, Performance expectancy, motivation

A STUDY OF FACTORS INFLUENCING PURCHASE INTENTION IN THE CONTEXT OF INFLUENCER MARKETING

Samuel Vero Viegas
PGDM Student,
International School of Management Excellence, Bangalore

Haritha S
Assistant Professor,
International School of Management Excellence, Bangalore
haritha@isme.in

Abstract

Influencer marketing is rapidly growing throughout the globe, which has led marketers to view it as a crucial component of their available marketing alternatives.The internet offers a marketplace and a channel for reaching potential customers. Utilizing influencers in the marketing campaign is one of the best strategies to do this. The aim of this study is to find out the factors affecting the perception of the consumers on influencer marketing and find out how demographic variables moderate between independent variables and consumer perception on influencer marketing. The influencing factors considered for this study are trustworthiness, knowledge, homophily, attitude and likability. Quantitative method is used, whereby a self-administered questionnaires were distributed to obtain data using convenience sampling. Statistical Package for the Social Sciences (SPSS) were used to analyze data collected. Linear regression analysis was used to assess the impact of the influencing factors on purchase intention. The findings indicate that a significant amount of relationship between all the independent variables toward purchase intention and hierarchical linear regression was used to prove that demographic variable such as household income, gender and employment moderates purchase intention in influencer marketing.

DETECTION OF SPAM TWEETS IN TWITTER

P.S.S.N.Chandra
PGDM Student,
International School of Management Excellence, Bangalore

Prof Stuti Agarwal
Assistant Professor,
International School of Management Excellence, Bangalore

Abstract

The world of Online Social Network (OSNs) like Facebook, WhatsApp, Twitter, Instagram etc has gained a lot of popular these days. These platforms not only help in sharing information, photos or videos, but also connects the world. Unfortunately, these platforms can be manipulated in various ways one of them being spam. To get a cyber-crime free world, detection of spam plays an important role. Many organizations are working towards Spam Detection to ensure cyber safety and enhance user experience. In this paper focus on one of the OSNs namely Twitter. There is a challenge in classifying the tweets (Spam/Ham) and identifying the spam tweets in twitter. Though a lot of naive methods are available, there is no major evidence from literature of enhanced methods to classify and identify them. Timely identification of spam tweets is required to enhance users experience and to thrive for spam-free environment. In this literature, an effort has been made to detect spam using the tweet metadata and tweet content by leveraging advanced machine learning algorithms. The model has been validated in couple of ways to ensure the robustness of the results.

Dr. Vijaya Baskaran R
Research Guide,
International School of Management Excellence, Bangalore
A recognized research center of University of Mysore

Abstract

Digital marketing is inevitable for any form of business. It pays way to reach a mass audience at any given time. The degree of digital acceptance by organisations and the knowledge and ability of organisations to use the platform to its total capacity play a significant role in attaining competitive advantage. This study aims to understand the factors influencing the digital marketing acceptance of business schools using the technology acceptance model (TAM). The well Structures questionnaire was designed in consultation with an expert panel comprising industry experts and academicians. 143 responses were collected through personal interviews and mail surveys. Stratified random sampling was used to select the respondents for the study. Collected data were all analysed using descriptive statistics and inferential statistics. The conceptual model developed for the study was tested using structural equation modelling. Results showed that perceived ease of use had got a positive and significant impact on perceived usefulness, and perceived usefulness has got a positive influence on attitude and intention of using digital marketing. The attitude was found to have a significant positive impact on the intention to use. This study also showed that experience strengthens the positive relationship between attitude and intention to use. This study extends the technology acceptance model by adding experience as a moderator variable in the relationship between attitude and intention to use. The insight from this study would help educational institutions strategize their digital requirement.

Abstract

Globally, consumer behaviour facets of Functional food as a health food option has been widely researched since late 1980s, coined in Japan first. In India, the concept has gained traction only since last decade; studies regarding market and consumer aspects are scattered and limited. Considering this gap, a need for an extensive literature review encapsulating studied variables and adopted methodology was felt. This would be a first extensive literature review study consisting of academic research published for exclusive India consumer market being done. This study has been undertaken through a systematic database search to synthesise the studies done since year 2000 to 2022. The objective of this review is to uncover the research variables, find gaps and present future research opportunities. A total of 23 research papers have been considered after focussing on consumer behaviour aspects aiding or deterring acceptance of Functional food in India after careful assessment through the inclusion and exclusion criteria. It is found that factors such as socio-demographic, psychographic and product attributes play an important role in the acceptance of products. A general confusion regarding Functional food benefits, health claims, product knowledge and awareness seems to exist giving rise to credibility issues and credence. It is now even more important to conduct research in this field to determine factors of consumer acceptance of Functional food.

CROSS-SECTION OF EXPECTED STOCK RETURN: A PERSPECTIVE FROM SYSTEMATIC AND UNSYSTEMATIC RISK FACTORS IN INDIAN STOCK MARKET

Karkaria Dusmanta
Research Scholar
Pondicherry University

Abstract

This article evaluates the cross-section of expected stock return between systematic and unsystematic risk as well as re assessment of size and value effects in the Indian stock market through a Fama-French risk-capture model. The top 487 companies in the S&P BSE 500 index were studied from July 2002 to March 2021. In this article we found that small firms with higher risk give higher monthly average returns whereas large firms with higher risk give lower monthly average returns on the size-SD sorted portfolio. Size is the most prominent stock anomaly, with a monthly average mean excess return of 5.2% in the Indian context. Fama-MacBeth cross-sectional regression does not explain the one-factor, three-factor, and augment FFTF* asset pricing models, whereas the GRS model fitness test does for the Fama-French Three Factor (FF3F), and augment Fama-French pricing models. More importantly, this study discovered that stocks/portfolios with higher abnormal returns carry higher risk, in addition to size and value anomalies having a significant impact on the Indian equity market. As an investor cannot avoid size and value anomalies before investing in a stock market an emerging market like India, regardless of whatever the situation, whether it is a financial crisis, the COVID-19 pandemic, or any other natural calamity or disaster these two stock anomalies play a prominent role in the Indian equity market. This study has strong implications for financial consultants, mutual fund managers, investment strategists, individual and institutional investors, the market practitioners who want to beat the market and earn an abnormal return on their investment in the Indian equity market.

al.madhavi@gmail.com

Abstract

Industry practitioners are always in search of effective investment strategies in their endeavor to achieve portfolio optimization. Moving averages have long been coveted by many such decision -makers. In this research work, a comparison between the 'buy-hold' strategy and the quant-trading strategy using exponential moving averages' is carried out. This study examines the profitability of implementing an Exponential Moving Average (EMA) cross-over strategy in the Indian stock market over the period 2010 – 2022. To facilitate the experiments, Nifty50 (^NSEI), Nifty500 (^CRSLDX), and NiftyMidcap50 (^NSEMDCP50) indices are considered. This work contributes to the existing quantitative trading and technical analysis literature. It is a pioneering effort to implement a moving average strategy on an equal weighted portfolio constituting different indices with a universe of stocks with varied characteristics. The results indicate that there is an outperformance of the moving average strategy (average yearly returns: 10.79%) over the buy-hold strategy (average yearly returns:8.42%) for the aforesaid period and dataset. The study also finds that the moving average strategy is capable of identifying market directions and movement reasonably well, which facilitates the generation of profitable returns. The study iterates the validity of technical analysis techniques to identify trade signals effectively, however, the marginal outperformance also emphasizes choosing a trading rule that optimizes transaction costs and taxes to ensure that such profitability sustains.

CSR SPENDING AND ITS RELATIONSHIP WITH SHARE PRICES (WITH SPECIAL REFERENCE TO TOP CONSUMER FOOD COMPANIES IN LIGHT OF COMPANIES ACT 2013)

Ms. Saniya Marwah
Department of Management Studies,
Rukmini Devi Institute of Advanced Studies, Affiliated to GGSIPU, India
marwahsaniya@gmail.com

Abstract

For the purpose of making the firms accountable and responsible towards its stakeholders, Companies Act 2013 has introduced mandatory contribution of 2% of average net profit towards Corporate Social Responsibility. In the present study, the relationship between Mandatory CSR spending and Share Prices has been studied for top consumer food companies listed on NSE. The study can help us to know that whether this compulsory move by the Government is a burden on the companies or not. Share Prices have been taken as they reflect the wealth of the shareholders and also an impression of investor's confidence. The results depict positive and strong relationship between compulsory CSR Spending and share prices for all companies.

Keywords: Corporate social responsibility, CSR spending, Share Prices, Consumer Food companies, Companies Act 2013.

FORECASTING THE CRYPTOCURRENCY PRICES – A MACHINE LEARNING APPROACH

Abstract

Crypto currency is a non-centralized digital currency that is exchanged between peers without the need of a central government. Understanding the relationships among crypto currencies is important for policymakers and investors. It helps the former to come out with strong action plans to guide the financial markets and latter to take vice investment decisions which can utilize crypto currencies to be a part of portfolio construction. Crypto currency operates with block chain technology with a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. Accurate forecasting of the crypto currency prices is a major challenge for the traders and investors. This can be attributed to the high volatility and dynamism prevailing in the crypto space. Predicting the crypto currency prices and forecasting the future price movement, helps the investors to take appropriate investment decision, improves profitability and hence decrease possible losses. This research tries to forecast the prices of 20 most traded crypto currencies using Machine Learning. The price movement of these crypto currencies for the period from 1st April 2018 to 31st March 2021 is taken for the study. Secondary data is analysed to show the yearly returns, rate of growth, risk factor, average daily returns, and compound annual growth rate of prices of crypto currency during the study period and was validated. Machine learning algorithms build a mathematical model which helps to make predictions or decision of the future price movements of crypto currencies studied. This was carried out using WEKA Software.

AN EVALUATION OF INVESTMENT PATTERN OF GOVERNMENT OF KARNATAKA EMPLOYEES IN SELECT FINANCIAL SECURITIES

Premalatha K P
Assistant Professor
CMS-BS Jain University, Bangalore

Dr. S J Manjunath
BN BIMS, University of Mysore, Mysore

Abstract

The growth of a developing economy is driven by the capital market investments which are financed through domestic savings by households and institutions. Economic surveys suggest for stimulation of investment incentivising policies to recover the economic slowdown in respect of savings and investments ratio in India. An attempt is made to understand the investment pattern of government of Karnataka employees as they receive regular income which can be well utilised by routing it to an effective investment channel. The study examined the influence of demographic factors on their investment preference and their overall investment pattern. It is found out that age and experience impacts their investment pattern and large amount of their funds are routed to less risk securities like bank deposits, insurance and post office schemes and investors have shown least preference towards equity and debt instruments.

Abstract

The study aims to analyze the long-run performance of SME IPOs and investigate IPO specific, company specific, and market specific variables that influences the performance overtime. This article utilizes information of 383 listed firms at Indian SME platform from 2012 to 2020. Based on the reduced sample size, the article uses only 12 month of trading data for the computation of returns. The article uses event time methods to examine company performance through market adjusted excess returns (MAERs), cumulative abnormal returns (CARs), and buy & hold returns (BHARs) based on the equally weighted and value weighted portfolios. Furthermore, the study employs calendar time portfolios with Fama-French three factor model and Carhart four factor model to have more robust results. Similarly, the study uses the cross-sectional OLS regression to analyze numerous factors that influence the performance of SMEs IPOs. Using 12 months BHAR, result shows the IPO over performance of both equally weighted and value weighted portfolios and the positive alpha of calendar-time portfolios validates the results for the same duration. While previous research shows the IPOs underperformance at global stage, the current findings of IPO over performance are in line with those of other Asian countries including China, Malaysia, and Korea. Similarly, the result shows the significant impact of issue size, oversubscription, debt to asset ratio, profitability, hot market, listing gains, underwriter reputation and underpricing on the long run performance of Indian SME IPOs.

Abstract

Peer-To-Peer lending platforms are becoming a good investment avenue for lenders to invest their money in borrowers, who need money for a different purpose. As lending and borrowing of money is facilitated by the P2P lending platform, it becomes necessary for the platform to understand the users and accordingly fine tune the 'User Interface' (UI) and 'User Experience' (UX) of the platform. For lending and borrowing to take place through a platform it is necessary to have an 'n' number of lenders who are ready to lend money to an 'x' number of borrowers. This study is specifically done to understand lenders' motivation to use P2P lending platforms. This is a unique research work as sentiment analysis of lenders' motivation to use these platforms has not been explored earlier. The sentiment analysis technique was used to examine lenders' sentiments towards the use of P2P lending platforms. The research results show that, ~ 70 percent of lenders showed motivation to use P2P lending platforms as an investment avenue in the future. As the P2P lending platforms are relatively new more research can be carried out in future.

Keywords: P2P lending, sentiment analysis, topic modelling, motivation to use.

Abstract

Digitalization is becoming one of the essential instruments for reducing transaction costs and increasing efficiency. RBI is promoting digitalization to bring more reforms in the finance sector. 2019 Onwards, RBI has implemented an expansionary monetary policy by lowering the interest rate, increasing investment, and aggregate demand, thus leading to an increase in the equilibrium output. Financial Technology abbreviated as "FinTech" includes subdomains like Peer-To-Peer lending which is becoming increasingly popular for lending and borrowing without the active role of banks. The positive impact of this kind of platform called 'Zopa' on the money supply in the United Kingdom was observed in 2005 during the early stages of the global recession. This paper examines the relationship between changes in monetary policy and the motivation of lenders and borrowers to use P2P lending platforms. Our study consists of time series data from 2011-2022. The research findings show that the contraction in monetary policy has helped the P2P lending platforms to expand their business. An increase in repo rate (RR), Cash Reserve Ratio (CRR), and Statutory Liquidity Ratio (SLR) motivated lenders and demotivated borrowers to use P2P lending platforms. Whereas reduced reverse repo rate (RRR) demotivated lenders, and motivated borrowers to use these platforms. The paper contributes to the existing literature for analysing the linkages between P2P platforms and money supply in the economy.

Abstract

SMEs can be found in a variety of sectors in India, such as manufacturing, retail, and services. They contribute significantly to the economic growth of the nation and form the foundation of the Indian economy, contributing about 40% of its GDP and employing around 110 million people. The sector is considered the second-largest employer after agriculture. SMEs in India face many hurdles in availing of credit due to information asymmetry, limited credit history, and complex application processes. When determining whether to offer loans or other forms of credit to small and medium-sized businesses (SMEs), financial institutions may encounter several difficulties. This paper attempts to research the parameters on which the creditworthiness of SMEs in various sectors can be analyzed. The factors to be considered in the analysis of creditworthiness and the weightage to be given to each parameter. For the research two sectors have been identified: the sectors for capital goods and consumer durables. In the capital goods industry, three listed SMEs and Consumer durables two listed SMEs are identified for the study. The data for all the companies are analyzed for three financial years. The research finding helps to identify comprehensively the parameters for credit scores and the weights attached to each parameter which help in arriving at the credit scores for SMEs in each sector. Using MCDM, financial organizations can solve their difficulties (multi-criteria decision-making model). The financial industry is changing drastically. Payments, loans, insurance, and wealth management are all being changed by digital technologies.

Abstract

The study explores the impact of R&D expenses, leverage, and firm size on the managerial efficiency of the firm as reflected by its performance. We also analyze the industrywise effects of the selected factors on the firm performance of a developing country. The disaggregation analysis includes five industries: automobiles and parts, chemicals, construction and matter, industrial metals and mining, and oil and gas. Using the data set of Indian firms for ten years, our empirical analysis indicates that expenditure on research-related activities does not affect the performance of firms in the industries mentioned above. In contrast, leverage has a consistently negative effect on firm performance in all industries except the oil and gas industry. Further, we find that firm size has a differential impact on the firms' return on assets in these industries. Our results are robust to heteroskedasticity and multi-collinearity issues.

Prof. Shveta Singh Professor
Department of Management Studies,
Indian Institute of Technology Delhi, India.

Abstract

The purpose of the study is to analyse the relationship between corporate social irresponsibility (CSiR) and management efficiency as proxied by asset turnover ratio. The study examines a sample of Indian manufacturing firms from 2007-2016 with 1,113 observations using a comprehensive dataset from RepRisk and Bloomberg® to run a system generalized method of moments (GMM) estimation. We find that CSiR positively affects management efficiency and the effective utilization of assets in generating sales. For domestically focused manufacturing companies in emerging economies, where there is less demand or stakeholder expectation, corporate irresponsibility may not be as important a deciding factor, especially if the target market is highly price sensitive. However, managers should heed caution before divulging in CSiR activities for the consequences can be damaging in the long run. The study's grounding in an emerging market setting, such as India, sparks a discussion on a contextualized understanding of negative aspects of corporate behavior in evaluating management efficiency of the firm.

FINANCIAL DISTRESS PREDICTION USING ALTMAN Z SCORE AND STOCK PRICES - A CASE OF NSE-LISTED INDIAN MANUFACTURING COMPANIES

Dr Ratchana R
Assistant Professor,
International School of Management Excellence, Bangalore
Email: ratchana@isme.in

Sudindra V. R.
Assistant Professor,
International School of Management Excellence, Bangalore
Email: sudindravr@isme.in

Abstract

The Altman Z-Score Model has been employed to predict financial distress since its original conception in 1968. The model is perceived to be detailed in its methodology for assessing financial failure because it is predicated on values available in a company's financial statements as well as principles established by influences extraneous to the firm's operations. The share price of a business is viewed as a mirror image of its economic position, with its real worth being an attribute well within the framework as a whole. This study aims to investigate the internal dynamics of the Altman Z-Score model and examines its potential as a predictive factor of bankruptcy. It also examines the link between a firm's Altman Z-Score and its mean share value to establish if a causative link exists between these two factors within the Indian Manufacturing Sector and used randomly chosen 20 samples from the sector specifically mentioned for the 5-year period from 2018 to 2022. The research highlights a significant relationship between a company's share price and its Z score, and investors can evaluate these Zeta (ζ) index scores based on key financial parameters before attempting to make any well-informed investment choices in distressed businesses with incredibly low Z-scores that appear on the brink of bankruptcy or insolvency.

Abstract

The impact of Information Technology on workplaces, individuals and society as a whole has increased dramatically during the last two decades of the 21st century. This period has seen maturation in the field of digital computing, combined with the use of telecommunications technology, in order to link many computers into what a very large single network is 'virtually', the Internet. Data has become widely accessible, and readily inter-related. Implementation of new technology has led to many changes in the workplace. This paper aims to study the impact of technology on various Job-related factors. Four factors shortlisted for the study i.e. Job Performance, Well Being, Work Motivation and Person Organization Fit. Which Job factor is getting affected to maximum extent with the introduction of technology? The study was done with the help of questionnaire based on Likert scale. Data was collected from 162 employees of various organization. Convenience sampling method was used. Data was analyzed through SPSS Software and excel to find out that Work Motivation is the most impacted factor by introduction of new technology, followed by Job Performance, PO Fit and Well Being.

Abstract

The ASHA workers at the community level work for primary healthcare services of the Nation, especially in the rural areas where they are providing non-stop services. In spite they are not paid properly, neglected, not recognized are becoming invisible to the nation at large, It is their personality and the roles of an organization that influenced ASHAs to get motivated to perform their roles and responsibilities. The study's main aim is to analyze the mediation of personality in the relationship between organizational roles and motivation. The study is descriptive in research with a sample size of 140 ASHAs for 10 PHC centers in Bangalore and these are identified on the basis of the Convenience Sampling method. The study is both qualitative and quantitative in nature and the data is collected through primary sources by using a questionnaire method and focus group discussion. Data were analyzed by using SPSS and & Smart PLS. The study reveals that there is a complete mediation effect of Personality on the relationship between Organisational roles and Motivation. The findings of the study are useful for Government and PHC centers to redesign their policies and strategies to create recognition and reduce the difficulties and challenges of ASHA workers.

Abstract

Error is an inherent part of human nature. Currently, the term human error is widely used in pharmaceutical industries. It originated in the realm of quality and safety in the manufacturing process. Human error poses a challenge to Safety, Integrity, Strength, Purity, and Quality (SISPQ). Due to regulatory agencies, investigations into human error are in high demand in the pharmaceutical industry. From a quality perspective, consistent efforts are being made to control human error at every level. In this current research paper aims, we aim to explore the relevance and significance of Human Error in the pharmaceutical industries through an extensive review of the literature.

Abstract

Socialisation of newcomers in an organisation has always been a key activity. Multiple components of socialisation have been examined over time, and research into this has used a variety of approaches. Initially, it was thought to be the process by which organisations acculturate newcomers. However, much current research views it as a nurturing process, in which the role of the new player is far more essential and organisations can merely adapt the activity. The essence of socialising in the workplace cannot be overstated, because of being the most important aspects of establishing and preserving organisational culture. Newcomers with more than 18 months to less than 24 months of experience in a given company were surveyed. Results from Bengaluru's service industry were included. in the study. As an instrumentation tool, a thorough, standardised Questionnaire was adapted and 304 employees completed it, using a basic, random selection procedure. Descriptive statistics, Bivariate Correlations, and Regression were the statistical approaches used. We investigated and examined two possibilities. The findings back up the theory that corporate culture and socialisation strategies are linked.

Keywords: Socialisation; Organisational behaviour; Organisational culture; Turnover Intention; Socialisation tactics; Newcomer's adjustment

SHIFT WORK DYNAMICS AND ITS IMPACT ON EMPLOYEE WELLBEING IN THE MANUFACTURING SECTOR

Afseer Majeed PhD
Lecturer - Business Management,
Explore Educational Institute, Dubai – UAE
academic@exploreeducation.ae

Abstract

In the modern world of industrialisation, productivity is the critical variable defining the success of any organisation. Shift work is a tried and proven system to boost productivity, especially in a manufacturing environment. UAE is a country where the manufacturing sector is proliferating, and more and more employees are undergoing shift working schedules. This research analyses the effect of shift work on employees' well-being in the UAE manufacturing industry. The study is conducted between employees from various companies who are regularly doing shift work. This study is quantitative research to see how the employees perceive the shift work and how it affects their productivity in the long run. The data was collected through the questionnaire method, analysed statistically with the help of a certified statistician and derived the conclusion. Some of the larger issues that may arise for employees who work shifts are the disruptions to sleep patterns and fatigue. Working non-traditional hours can make it difficult for employees to get enough sleep, leading to fatigue and decreased productivity. This has been linked to an increased risk of certain health problems, such as heart disease, diabetes, and gastrointestinal issues. On the other side, shift work can make it difficult for employees to maintain a healthy work-life balance, as it can interfere with their ability to participate in social activities and spend time with family and friends. This study's outcome suggests that shift work has to be carried out in an organisation in conjugation with other supporting programs that can help employees balance their professional and personal needs; by doing so, companies can reap productivity for the long term while keeping the employee's well-being at optimum level.

Abstract

This paper examines the cultural orientation of IT managers in India. It looks at the cultural values, beliefs and behaviors that affect IT management in India and how these cultural orientations are shaping the development of the Indian Information Technology (IT) industry. The paper also identifies the key aspects of Indian culture and their implications for IT management in India. It further examines the challenges faced by IT managers in India when working in a culturally diverse environment, and provides recommendations to ensure successful IT management in India. Finally, the paper discusses the importance of cultural orientation for successful IT management in India to ensure that the IT industry remains competitive in the global market. The Information Technology (IT) sector in India has been growing rapidly in recent years, with many multinational companies setting up offices in the country. This has, in turn, created a requirement for IT managers to be culturally aware and sensitive to the needs of the Indian market. This paper aims to provide a comprehensive overview of the cultural orientation of IT managers in India. The paper begins by discussing the cultural differences between India and other countries, and how they impact IT management. It then looks at the various aspects of cultural orientation, such as language, religion, gender roles, and social norms. Finally, it provides practical advice and suggestions for IT managers in India, including how to effectively communicate with employees and customers, and how to create a culturally-inclusive work environment. The paper concludes by noting that cultural orientation is an essential component of successful IT management in India, and that IT managers should take the time to understand the cultural context in which they are operating.

Abstract

Managing people at workplace via the top-down approach fails to facilitate the individuals' Flourishing and work engagement. As the teams/ organisations/ institutions becomes bigger, the more generic the job description and job roles become. Hence the construct of Job Crafting plays a vital role in curating meaningful jobs aligned to an individual's core. Job Crafting facilitates a bottom-up approach where individuals relook at their job design, and make minor tweaks at cognitive, tasks and relations aspects of job. This study examined the effectiveness of job crafting intervention. The participants in the experiment group were a homogenous mix of individuals at jobs working at a same entity. The study was done using a quasi-experiment design methodology where we followed a pre-test and post-test approach to measure Job Crafting levels. The treatment here is the Job Crafting Intervention is a 3.5 hours long workshop structured session. The level of Job Crafting was measured before the start of the workshop (Timeline T1) where individuals are not informed on what is measured. Three weeks after the intervention the Job Crafting levels was measured again using the standards Job Crafting scale. The impact was intervention was analysed using a T- test on the pre and post levels. The intervention showed a significant positive effect on levels of Job Crafting. A mean difference of 4.2 to 4.8 (6-point scale) was observed after the experiment respectively on pre and post Job Crafting levels. A slight positive correlation was found after the intervention (~.3 Pearson correlation). All the results were shown significant through the statistical tests. The study proved that the developed Job Crafting intervention was effective in increasing Job Crafting levels among employees. Towards the end of the intervention, an open-ended question was asked, and the responses showed that the intervention had a positive impact among the participants and helped them to relook at their existing job with more meaning.

Keywords: Intervention, Job Crafting, Experiment methodology, meaningful work

IMPACT OF EMOTIONAL INTELLIGENCE, PERSONALITY TRAITS, RISK PERCEPTION AND BEHAVIOURAL BIASES ON INVESTMENT DECISIONS

Dr.S.Johnsi
Associate Professor,
DJ Academy for Managerial Excellence, Coimbatore
johnsi.s@djacademy.ac.in

Abstract

The main objective of this study is to analyse the impact of Emotional Intelligence, Personality Traits, Risk Perception and Behavioral Biases on Investment Decisions and to measure the mediating effect of selected variables on Investment Decisions. The study depends on primary data and a well-structured questionnaire is used for this purpose. Multi-stage sampling technique has been adopted to determine the sample for the study. A model using PLS-SEM is tested to examine the impact of personality traits, emotional intelligence, risk perception, behavioural biases and investment decision making. Structural Equation Modeling (SEM) is used to explain the relationship between multiple variables and the structure of inter relationships among various constructs is examined. The result of the mediating effect is confirmed by SOBEL's test. The current study also indicates that emotional intelligence was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Cognitive dissonance was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Herding was found to have a significant positive relationship with equity exposure. So, it is concluded from the study that emotional intelligence and behavioural biases have a major impact on the investment decisions.

Keywords: Personality Traits, Emotional Intelligence, Risk Perception, Investment Decisions, Behavioural Biases

A LEADERS' ROLE INFLUENCING THE WORK CHARACTERISTICS OF VIRTUAL TEAMS CONTRIBUTING TO EMPLOYEE PERFORMANCE – A BEHAVIORAL PRESPECTIVE

Gouri R Javali

Ramaiah University of Applied Sciences, Bengaluru

Dr. Madhu BK
Assistant Professor, Faculty of Management and Commerce
Ramaiah University of Applied Sciences, Bengaluru
madhubk.mba08@gmail.com

Abstract

Employee performance is crucial for the success of any organization and the augmenting prominence of leaders' role to enhance employee performance of virtual teams has inspired the call for this study. The study aims to analyze and propose an integrated framework justifying the leader's behavior accounting to work characteristics contributing to employee performance in virtual teams of mid-sized- IT Industries in Bengaluru. The study is empirical in nature. Web-based survey and direct interview is conducted using questionnaire resulting in 180 responses from virtual team who are software professionals from IT Industry. The gathered data is analyzed subsequently by means of both descriptive and inferential statistics with the software IBM SPSS 20. The outcomes of the study show positive and significant relationship between leadership behaviors and work characteristics resulting in enhanced employee performance of virtual teams. The study offers experiential evidence and support the theory of leadership behaviors which postulates that the employee performance can be optimized when the leaders exhibit high degrees of task and relation-oriented leader behaviors accounting work characteristics in virtual environment. The managerial implications of the study and the potential avenues for future studies are discussed at the end of the paper.

The contribution of the workforce to the outcome produced by the organisation is crucial. When a firm works in a competitive market, employee performance becomes especially important. A crucial element that contributes to the organization's ultimate existence is employee motivation. Increasing staff productivity is an issue for businesses throughout the sector. People who work in organisational research are interested in methods for improving employee performance. Improving employee productivity requires a just and fair system of rewards that can be both tangible and intangible. The main aim of the current study is to map the relationship between appraiser and appraisee in affecting employee productivity in the IT industry. Furthermore, the study analyses whether professional development moderates the impact of the appraiser-appraisee relationship on employee productivity. For this purpose, primary data is collected from various mid-level employees of a firm utilising a quantitative questionnaire technique in order to understand their opinions of the relationship between the Appraiser and Appraisee in affecting employee productivity in the IT industry. Because a quantitative technique is used, a positivist research paradigm is most suited to achieving the study's objectives. In addition, the current study used a descriptive research design and a simple random sampling technique to gather data from 200 mid-level employees. The findings of the study suggested that in highly competitive circumstances, businesses work hard to establish a fair balance between employees' job performance and the success of the firm. Aspects for employee rewards and recognition are among the most crucial elements that may guarantee that many businesses recognise the effectiveness of their workforce. Employee empowerment has therefore become a key factor in determining the range and calibre of services offered to customers, and low staff productivity has been cited as a challenge to providing services. The findings of the study also revealed that the Appraiser-appraisee relationship has a significant impact on employee productivity and professional development and moderates the association between the appraiser-appraisee relationship and employee productivity. The current study results are essential for the management, the team leaders, the administrators and the HR professionals in comprehending the behaviour of their employees and accordingly adjusting the performance appraisal strategies to enhance the motivation and professional development capabilities.

Intrapreneurship is a much sought-after strategy in developing innovativeness and new business venturing capabilities of organizations, which is termed corporate entrepreneurship. While large organizations have well-designed processes and policies to develop corporate entrepreneurship, such defined policies and procedures are rare among small and medium enterprises (SMEs). The present study is to find the influencing factors such as passion for work, entrepreneurial behaviour of managers on intrapreneurial intentions and behaviour among the employees of SMEs. Also, the negative influence of organizational cynicism on intrapreneurial intentions and behaviour is found in this study. A pilot study was conducted through unstructured interviews among a few entrepreneurs, intrapreneurial and non – intrapreneurial employees to determine the variables of the present study. A total of 301 samples were collected from 13 SMEs which are into the service sector by distributing questionnaires based on valid instruments. Passion towards work is found to have a positive influence on intrapreneurial intentions. Also, organizational cynicism has a negative influence on intrapreneurial intentions and intrapreneurial behaviour. Additionally, the entrepreneurial behaviour of managers is found to have a positive influence on intrapreneurial intentions and intrapreneurial behaviour.

Abstract

Making wiser decisions about employees to improve performance at the individual and/or organizational levels is the process of HR analytics. HR analytics is a method for determining the correlation between HR practices and organizational performance outcomes such as sales volume or customer satisfaction. Human Resource Analytics was established in 1978 by Jac Fitz-Enz, the pioneer of human capital strategic analysis and performance benchmarking. In this paper, the researcher wants to discuss the concept of HR analytics, its application, impact on talent management, branding, and challenges in its application. The researcher examines secondary data and conducts a thorough literature review to understand the concept and its application across industries and nations, as well as to identify any challenges encountered during deployment and any benefits perceived by various industry professionals. Findings: The study's findings indicate that using HR analytics can help businesses build their brand and gain a competitive edge in today's fiercely competitive business environment while also enhancing workforce and employee productivity. This study has significant implications for both literature and HR analytics. Researchers will know more about the factors that contribute to and the mechanisms by which HR analytics improve organisational performance. The author's second claim is that having access to HR technology both facilitates and precedes HR analytics. Finally, concrete data from the literature demonstrates its influence on branding and organisational success.

Keywords: Human resource (HR) analytics, People analytics, Branding, Talent Management, Organizational performance.

THE SOCLE OF HIGH PERFORMANCE ENGAGEMENT IN ORGANIZATIONAL EXCELLENCE

Dr Sindhu Shantha Nair

Abstract

Employee Engagement is a serious concern for many organizations. Performance is quintessential but it lags without engagement. The values and codes for performance and engagement demand to be pronounced and established consistently to develop high performance engagement. Engagement issues and performance lags call to be discussed with transparency to initiate a proactive approach in the lag and lead, of performance engagement. High Performance Engagement, is an amalgamation of employee engagement and performance excellence to accomplish goals and stretch goals, with commitment and passion, beyond compliance. The study aimed to establish the socle of high performance engagement for organizational excellence Using a quantitative method, this study empirically verified the essence of high performance engagement from managers (N=350) in corporate companies. The results indicate that among the dimensions of high performance engagement, the employee-centric approach was perceived as the highest socle of high performance engagement (with a mean of 81.17) and performance strategies were perceived as the lowest (with a mean of 70.01) among the rest. The results evidence that employee focused approach is the predominant dimension for the socle of high performance engagement as perceived by the managers and motivation is the preponderated determinant of high performance in organizations. The results are indicative of an employee-centered approach rather than job centered approach, for organizational performance excellence with latitude on team synergy, and autonomy on performance strategies.

THE IMPACT OF EMOTIONAL INTELLIGENCE ON WORK-LIFE BALANCE IN START-UPS IN HYDERABAD

Jyothika Vemu
Student, PGDM
International School of Management Excellence, Bangalore

Prof. Dr. Sindhu Shantha Nair
Professor
International School of Management Excellence, Bangalore

Abstract

Work–life balance is a concept that includes prioritization between work (career and goals) and lifestyle (health, pleasure, leisure, family, and spiritual development). In broader terms that include "lifestyle balance" and "lifestyle choices". Many companies strongly support their employee's work-life balance through appropriate measures in order to improve employees' loyalty towards the company which fetches the company with better work life and a chance to recruit new employees. The flexibility in working times is the measure and it also influences the employee's private lives, with this there can be an increase in job satisfaction by reducing work stress. This in return helps in employee well-being. A start-up is a new business venture that aims to solve a problem, meet a need, or create value by offering innovative products, services, and solutions. Start-ups typically have limited resources, but have a strong focus on growth and a long-term vision. They are risk-takers. This paper studies the impact of EI on WLB in start-ups in Hyderabad. the work-life balance in start-ups can vary depending on the culture and size of the company. Some start-ups may have a more relaxed approach, while others may require a lot of work hours from their employees.

Keywords: Emotional Intelligence, Work-life balance, Job satisfaction, start-ups, and employee Well-being.

HAPPINESS AT WORKPLACE AS A MEDIATOR OF THE RELATIONSHIP BETWEEN HIGH PERFORMANCE WORK SYSTEM AND TURNOVER INTENTION: EMPIRICAL EVIDENCE FROM HOSPITALITY AND TOURISM INDUSTRY

Prof Shurlly Tiwari
Assistant Professor
International School of Management Excellence, Bangalore

Dr.Ujjal Mukherjee
Professor
Jain (Deemed-to-be-University)

Abstract

This research aims to identify the influence of a high-performance work system and happiness at the workplace on turnover intention among employees in the tourism and hospitality industry. The researcher surveyed a sample of more than 450 hotel workers to test a model that relates the following variables: high-performance work system, happiness at the workplace, and turnover intention. Data were analyzed by using structural equation modeling and Amos 24 version. Research confirmed that a high-performance work system positively influences employees' turnover intention, and there is an impact of happiness at the workplace on decreasing the employees' turnover intention. This study unlocks the relationship between the three variables HPWS, HAW &. From the managerial point of view, the hospitality industry should prioritize the investment in HPWS and HAW as it directly impacts the employees' turnover intention, directly affecting the business's baseline.

Keywords: High-performance work system, happiness at the workplace, turnover intention, hospitality employees

TALENT MANAGEMENT PRACTICES, ROLE OF PERCEIVED ORGANIZATIONAL SUPPORT IMPACTING EMPLOYEE ENGAGEMENT

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence ISME, Bangalore, India
pooja.nagpaal@gmail.com

Abstract

Employees are most valued assets of any organizations paving a path to success. Talent are the ability, skill and knowledge that employee brings to the organization to effectively perform their job well to achieve the organizational goals. In the current world of "Talent War" talent management is not limited to just acquiring a right talent but rather on deployment, development, engagement and retention of its employees. This study analyzes the drivers of talent management practices and perceived organizational support impacting employee engagement. The study comprises an analysis of data of 457 respondents from IT sector companies from IT hub of Bangalore, India. The result indicates talent management practices and perceived organizational support have a direct influence on employee engagement. The findings imply on theory and practice specifically in enhancing employee engagement using various talent management practices along with perceived organizational support. The study found scope for future research in comparing various sectors using additional independent variables in a longitudinal manner.

pvpawar.raj@gmail.com

Abstract

The research paper aims to deliberate the issues and challenges leading to disruption of global supply chain with special reference to Organic foods and agri-business. The paper also summarizes the global supply chain scenario. The production and supply chain management issues & challenges of the current situation are discussed in the paper and effectively proposes strategies to be incorporated in policies making of Organic Food for strengthening the resilience and sustainability of the system at global level as the authors believe that it is important for current and future food managers and policymakers to understand the current system, structure, institutions, economic, social and environmental forces at play in each sector. The aim of this study was to clarify the ideas of Organic food supply chains and the organic production of food products to indicate some major issues and challenges and suggest their relevant recovery strategies. The paper assess methodological framework consists primarily of a systematic data collection from relevant government/ institutional databases and/or reports (i.e., APEDA, Statistica, IBEF, IFOAM and FiBL). Data were considered eligible for inclusion in the analysis if they were useful to assess in particular: (i) Organic -food demand globally, (ii) the effects on the Organic food supply chain services.The research paper discovers almost 9 recovery strategies such as support from the government, decentralisation of the distribution channels, Block chain technology, Integrated certification process etc for curbing the disruption in the organic food supply globally. In the end, the supply chain should respond and overcome the challenging situation in the organic food supply chain management.

Christ (Deemed to be University)

Dr. Sreerengan V.R.
Assistant Professor, School of Business and Management,
Christ (Deemed to be University)

Justin Joy
Department of Lean Operations and System
Christ (Deemed to be University)

Abstract

This study aims to structure an approach to optimize the distribution process in logistics operations for a Nagpur-based small-scale 3PL service provider and in the process to propose a model for companies in the logistics domain to follow. With an uncertain customer demand, the process of finding the best possible route becomes intricate. A methodology that reduces travel time, distance, transportation costs, inventory carrying costs, and administration costs had to be developed. Two generic requirements are considered in the study. Firstly, a single truck or carrying vehicle delivering to multiple customers. Secondly, a set of fleets traveling to multiple destinations with capacity constraints. For assessing logistics and supply chain difficulties, spreadsheet tools, particularly Microsoft Excel is used with Solver add-in. This study proposes a model to reduce the distance travelled, by which over utilization of resources can be considerably reduced aiming to control the carbon footprint for a sustainable logistics.

Abstract

Many large companies are trying to revamp their commercial organization and prepare themselves for the future. Technology is changing the way consumers live. It is also changing the way customers operate, presenting new opportunities and new competitors. Technology, mobility and the internet have generated empowered customers who are more demanding and move faster. They don't look for a product. Instead, they look for a reliable advisor and an experience in each service. Traditional CPG businesses have had to adapt by combining the physical, offline and the digital, creating new services that we had not previously imagined and new sales capabilities, changing the way of connecting with customers. The objective of this paper is to help you understand how to bring together all commercial services and customer contact points in an innovative, direct, efficient and close way that improves services and drives growth. It also lays emphasis on the impacts on back-office operations like Order-To-Cash, Procure-To-Pay, Logistics, etc. One can learn about the necessary tools, processes and capabilities to support mutual teams to manage business transformation from a traditional sales model to a "digitally enabled" model by ensuring process and structure consistency, standardization, and excellence, while driving customer service improvement and top-line growth.

IMPACT OF ARTIFICIAL INTELLIGENCE ON ADVERTISEMENTS WITH RESPECT TO FMCG PRODUCTS

Dr Rose Kavitha
Professor, New Horizon College of Engineering

Deepa S
New Horizon College of Engineering

Shashank M
New Horizon College of Engineering

Abstract

The advertising industries have started to use AI technology to identify the trends in the market and enables them to use it to predict the future trends in the market take decisions, make budgets and helps identify their target market. AI has a huge impact on quality of any work done as it is done in a better and effective way comparatively to humans. As seen, that AI can dig deep into all types of data simultaneously with different timelines of data hence understanding the customer ideology, mind-set and preference at the best. The advertising industry is always developing. Because of technology developments like artificial intelligence (AI), greater targeting, and dynamic creativity, the way customers connect with companies is changing. In order to interact with audiences more effectively, advertisers can use machine learning. AI enables improved audience targeting and segmentation for advertisers acquired by strata sampling with individual experiences.

The purpose of this research is to understand the implementation of artificial intelligence in the advertising industry, and what impact Artificial intelligence have on advertising industry. Examining the acquired samples from the survey demonstrates that AI is frequently employed in the marketing sector, even though the applications are at the operational level. AI has an impact on each element of the advertising mix, having an effect on both how successfully consumers are supplied and how effectively advertising is organised and managed. In addition, paper also presents the understanding the role of AI in different types of advertising of toothpaste under FMCG products.

THE IMPACT OF HYBRID WORKING ON GEN Z AND TALENT MANAGEMENT

Sindu Akilesh
Head of Department
Department of Management New Horizon College Kasturinagar
sindu.nandakumar@gmail.com

Abstract

The year 2020 will never be overlooked within the history of this world. The widespread was uncommon in ways no one seem have ever envisioned. Inside fair six months of its approach, individuals all around the globe were constrained to sit at domestic. This research article points to move forward the information on Gen Z as workers inside workforce and within the working environment, as well as on the most thematic patterns that drive the investigate on the subject. The research study focuses on HR analytics, used and how the suitable candidates in a short period are identified and better decisions are made during recruitment thereby contributing to the company's growth. The study focuses on how the hybrid work mode has affected the employee's leadership and Talents for the organization. The main core areas of research study focused around Gen z, Workplace Management, attitudes and Career Planning. The study focuses on the need of and further development in the work force on the major aspects of this generation and the labor market. The investigation has gone into rethink the culture of a work force that is no longer confined to an office full –time. The study has shown that most Gen z employees prefer Work from home despite companies calling back to office. How the employee's talents can be enhanced through remote working mode is also being analyzed.

Abstract

The current available modern technology has made possible for us to have many more volunteers to participate in the conservation of our environment and help in the sustainable development. This allows for providing opportunities to people to contribute to the society. This has brought around an expanding number of versatile phone-based citizen science ventures that are outlined to get to these gadget highlights as well as to reach diverse client bunches, over distinctive venture lengths, and with diverse points and objectives. Here by integrating machine learning and predictive analysis, we can bring to life the basic idea of having people volunteer in these programs to help the environment. The Sainik application will help in accommodating all these ideas to fulfill the desire to help preserve our environment. It also provides people especially the youth to contribute to the safekeeping of our environment. Our experiments show that number of people volunteering have reduced by 1% in last 5 years and it is our goal to help improve that statistic. The major reason for this is not the lack of willingness of people to volunteer but the lack information of events requiring such help for both the organizers and the volunteers. The main purpose of this application is to help the environment while providing opportunities to the public and building a better place.

Abstract

Cyber Defense for any organisation has become a priority these days where the world is moving towards virtual communications and business happening among organisations globally. Critical areas to focus are breach detection and breach response. Taking a proactive approach to cyber security (CS) will enable us to avoid damaging and disruptive cyber attacks. Cyber attacks target the IT resources, leading to a tarnished and irreparable organisational image, loss of valuable data added with unproductive downtime. Organisations with proper cyber defense techniques will be able to conduct continuous business while facing persistent threats and sophisticated attacks. Availability of low cost powerful handheld devices coupled with low cost high speed data has led to deeper penetration of the internet. Changes in global scenarios dictated by pandemic are acting as catalysts for work from home , flourishing e-commerce and other mobile-app based delivery systems. Aggressive promotion of digital payments led by new age fintech startups, digital push by government incentivisation of digital payments, e-governance all together have fueled the exponential growth of the internet. However, this growth has also brought a plethora of cyber, ransomware and phishing attacks etc. Global data shows exponential growth of cyber attacks in this period of pandemic. Safeguarding intellectual property and Personal Identifiable Data (PID) in an organisation is very important. This paper discusses proactive implementation of various Cyber defense tools and methodologies for safeguarding IT assets and in turn mitigate cyber risks. These methodologies help organisations improve network integrity and availability, rectify numerous flaws, including misconfiguration of the security settings, analysing security gaps and vulnerabilities and taking remedial actions. This paper discusses the various steps and implementation of frameworks, methodologies undertaken by authors to ensure the three triads of Confidentiality, Integrity and Availability of information and also brings the importance of third party audits and certifications of the organisation in the field of information security.

Abstract

For a person to be physically, psychologically, and socially healthy, having a positive outlook on life is essential. Money alone won't make your life peaceful unless you also have peace of mind. In today's competitive society, when everyone is racing to the finish line, many other considerations are being carelessly disregarded. Stress, worry, and other issues among others all harm mental health. In order to address the aforementioned issue, this research suggests early detection and assistance for problems encountered in identifying a person's mental state. The system consists of 2 modules namely - 1) Facial Emotion Detection 2) Assistance. The output of all the models is combined and by further analysis, the final outcome is given in the form of prediction of the user's state of mind and also further assistance to enhance their mood.

Abstract

Quality plays a very vital role in signifying the credibility of the service provider. Academic institutions act as educational service providers to the students. The mushrooming of management institutes in India created an issue of question of quality mark and recognition. This necessitated gaining a Quality seal for the management institutes. Accreditation for an institute paves a mark of credibility. NAAC, NBA, NRIF are the accreditation bodies in India. The quality assurance governing bodies judge certain parameters for the institutes and proceed for gradation. This gradation embarks as a quality status symbol for these institutes. There are different criteria for gradation. One of the important aspects in these parameters is the faculty contribution in research. This research paper intends to explore the research environment provided to the faculties by the management institutes. It aims to examine the support extended by the institution through different aspects.. The constraints faced by teaching fraternity in pursuing research are examined and suggestions to overcome them are provided. The data is collected by both, primary and secondary sources. Primary source includes survey schedule (Google form) and secondary includes the journals, books, and websites. The support system from institution in terms of Allowance/ (travel), registration fees, Publication fees, Conference/seminar/FDPs, leave or outstation duty is explored. The responses for attributes like, managing time for research activities with other additional responsibilities, financial and non -financial support from institution are explored. 48.19 percent of respondents are of opinion that, research activities become very stressful, as managing time with other routine academic/ official work becomes a challenging task. This is managed many a times by sacrificing family time, sleepless nights and extending work hours. The research environment in management institutes seems to be on a lower note. The fair recruitment policies, optimum staff retention and support from management institutes will definitely change the research scenario.

cbvk123@gmail.com

Abstract

It was presumed that teaching effectiveness, self-efficacy, and continuous professional development have the power to change professional commitment owing to their cumulative nature in terms of thinking, acts, and realities. These ideas were also supported by previous research which advocated continuous professional development as a classical source of professional commitment because continuous professional development has the power to change oneself with strategies that facilitate the transfer of training throughout the life of a professional. This study examines the relationship between leadership style, self-efficacy, and professional development in higher education institutes in India. The study instrument used for this research is a questionnaire which was shared through an online medium. The population for the study consisted of academicians from higher educational institutes. The study's major finding indicates that the gender of academicians does not differ in leadership practices, self-efficacy or professional development. There is a positive relationship between leadership practices and self-efficacy and professional development.

Keywords: Leadership style, self-efficacy, professional development

Abstract

The purpose of this paper is to review existing literature on the application of technology-based student assessment processes, with a particular focus on artificial intelligence-based student assessment practices. We gained a deeper understanding of the current trends in student assessment processes as a result of this. The literature reveals a number of possibilities for incorporating digital assessment into educational systems. Secondary research also demonstrated the possibility of integrating artificial intelligence (AI) into students' teaching and learning processes. However, there is a gap between theory and implementation in Indian higher education. In order to gain a better understanding of how real users perceive technology and AI-based student assessment, a qualitative study was conducted. Participants in the study were stakeholders in the Indian management education system. Faculty and students from Indian management institutions of national importance as well as affiliated and autonomous institutions was included in the study. The study revealed faculty and students' perceptions regarding the challenges and benefits of digital and artificial intelligence-based student assessment processes. Based on the findings of this research management and policy makers can address inhibitions expressed by faculty and students before considering the digitization of student assessment processes.

Dr. Sudipta Majumdar
Associate Professor
Faculty of Management Studies, ICFAI University Jharkhand
sudiptam16@iujharkhand.edu.in

Abstract

This study is to find out the effectiveness of different methods of teaching on the learning outcome of the students based on Bloom's Taxonomy. Questionnaires were used to collect data from students on their experience with the use of the Case Study method. The case study teaching method has a higher rate in both empirical and perceived effectiveness of the learning outcome based on Bloom's Taxonomy. The Socratic Method of teaching is a shared dialogue between the teacher and the students in which both are responsible for pushing the dialogue through questioning. The "teacher," or leader of the dialogue, asks probing questions in an effort to expose the values and beliefs which frame and support the thoughts and statements of the participants in the inquiry [Rob Reich, 2003]. The study conducted measures the effectiveness and its intersectionality between education and business (Business Studies) and has been widely used in higher education institutions especially the management studies to facilitate effective learning across a variety of subjects like Marketing, Human Resource Management, Organizational Behaviour, Financial Management, and Business Management, etc. The study has found that the Case Method is useful for most of the subjects in Management, especially Marketing, Human Resource Management, Finance, and Business Ethics. It is also observed that the Case Method helps in remembering the knowledge created through their actions and behaviour.

Key Words: Case Method, Socratic Method, Project Based Learning, Bloom's Taxonomy, Learning Outcome, E-pathshala, Collaborative Skills

ABOUT INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE (ISME), BANGALORE

ISME is a leading business school offering excellent education through a student-focused culture of excellence, international outlook, entrepreneurial thinking and industry alignment. It was founded in 2006 by alumni from Carnegie Mellon University, Purdue, and Wharton, USA. ISME has always been at the forefront of quality education, with the vision of nurturing holistic, socially responsible and competent professionals. ISME has been ranked as one of the top B-Schools in Bangalore and top 1% B-Schools in India.

At present ISME offers undergraduate, postgraduate and Doctoral programs in Management. Our lush green campus at Sarjapur Main Road is an ideal ambience for study and research. The Institute constantly endeavours to expose its students to various methods of learning, like industry visits, interaction with industry experts, participation in seminars, case study etc. so that they become successful in their journey as they move from campus to the next phase of their career."

ABOUT THE CONFERENCE

Contemporary management issues often trigger the need to think differently from customary and time-tested management practices. In a dynamic environment, new issues create the need to develop and enhance tools and practices to facilitate more adaptive responses to emerging issues when they surface.

Contemporary issues are particularly relevant to the present time where all organisations worldwide must embrace continuous changes in technology, economy, environment, and government policies to remain competitive.The rise in digital adoption, the economic fallout of the pandemic worldwide, the rise of China as an aggressive global force, our government policies moving towards a more nationalist agenda, and growing geo-political tensions worldwide are some recent issues which confront businesses and management.

This conference is a platform for industry practitioners, academicians, entrepreneurs, and research scholars to come together to learn, share and discuss current emerging topics in management with thought leaders, technologists, and learning experts. The conference is a great knowledge-sharing event for a diverse audience embracing international and national participants. The event has renowned keynote speakers, practitioner-led workshop sessions, and offers an excellent networking platform.

The conference includes original research papers from industry practitioners, doctoral scholars, and academicians on the impact of these contemporary issues on business sustainability and excellence.

CIM-23 Organizing Committee

MESSAGE FROM CONFERENCE CHAIR

Greetings from International School of Management Excellence (ISME), Bangalore!

On behalf of the ISME Conference Committee, I am honored and delighted to welcome you to our 11th International Conference on 'Contemporary Issues in Management - CIM-23'.

We live in a world of disruption and drastic changes with different countries in different stages of the economic cycle. This conference aims to discuss issues relevant to the present time like mass layoffs by major MNCs and penetration of AI tools in our lives. All organizations must embrace the changes in technology, economy, environment and government policies to remain productive and competitive

This conference is a platform for industry practitioners, academicians and research scholars to come together to share and discuss current and emerging topics in management. The program is rich and varied with eminent international and national keynote speakers. Industry experts are a part of the panel discussion on 'Great Resignation to Grand Layoffs: The Contemporary HR Landscape'. We are delighted to share that CIM-23 has received papers from reputed institutions like Indian Institute of Technology Delhi (IITD), Tata Institute of Social Sciences (TISS), National Institute of Industrial Engineering, Mumbai (NITIE) and Symbiosis, Pune and many more. The conference brings out the latest thoughts and deliberations to enhance management practices. The conference papers accepted for presentation will highlight the following sub themes

Track 1: Political and economic environment
Track 2: Business excellence and sustainability: manufacturing, services and agriculture sector
Track 3: Functional areas of business
Track 4: Management of technology
Track 5: Redefining management education

I am thankful to the conference organizing committee, session chairs, knowledge partners, industry partners, sponsors, faculty members, staff members, and student volunteers for supporting the conference.

Most of all, I thank you, participants, for enriching the annual conference with your presence. I hope you have a great learning experience and avail opportunities for networking.

Best Regards,
Dr Rony G Kurien
Dean and Conference Chair

mayap.isme20@gmail.com

Dr.Geetha.Rajaram
Research Guide, International School of Management Excellence,
Research Centre, Affiliated to the University of Mysore
rajaram.geetha@gmail.com

Abstract

There is a clear shift in the way companies report their performance to the stakeholders. Integrated Reporting (<IR>) is a corporate reporting reform practices followed by many big companies all over the world. They are moving from more profitable companies to more responsible companies in terms of preserving the resources for future generation. The companies are accountable for protection of natural resources, society at large apart from other capitals, like financial & manufacturing capital. The objective of this paper is to check the compliance of Integrated Reporting Framework (IRF) of select Indian companies. For this the content analysis is done to cover all the content elements and the six capitals of sample companies. Analysis is done in 2 stages. One is content element analysis according to IRF, secondly analyzing the impact of IRDI on firm value. Spss; 29 version has been used to analyze the data of six companies of 4 sectors for 3 years from 2018-2021, since IR practices were made a part of voluntary disclosure since 2017 by SEBI circular for top 500 companies. Out of 7 content elements organizational overview has maximum score of 96.33% and strategic has got good score of 95.75% in the period of pandemic. All the companies had more focus on strategy to overcome the challenges of Covid-19. Another objective is analyzed by descriptive statistics and correlation, model summary, multi co linearity. A regression model is developed for the same. Tobin's Q is taken as a proxy for firm value and is considered dependent variable. The independent variables are the IRDI score, ROE, Size by market capitalization & ROCE. A regression model is developed to estimate unknown value of dependent variable (Tobins Q) using the known values of independent variables.

Keywords: Stakeholders, Firm value, Tobin's Q, IIRC, Integrated Reporting Disclosure Index (IRDI)

HOW A CHINESE TAKEOVER OF TAIWAN WILL EFFECT FOREIGN DIRECT INVESTMENTS

Dr. Rainer Wehner
Technical University of Applied Sciences
Würzburg-Schweinfurt
rainer.wehner@thws.de

Abstract

Over the past decades, China has gradually increased its geopolitical influence. Besides the Belt and Road Initiative, that diversified Chinas economic and political relations with many countries in the western world, Beijing has vowed to bring Taiwan back under Chinese control. That could provoke a massive conflict, because the U.S. President has made clear, the U.S. stand by Taiwan and will retaliate in the case of a forced attempt. Based on this scenario the purpose of this paper is an analysis of the consequences for the inflow of Foreign Direct Investments (FDIs) into Taiwan. For that reason, the author examined the published literature of the last years and analysed the Chinese – Taiwanese political and economic relationship. Furthermore, he researched the impact of such hostile takeovers on FDIs in similar situations to draw assumptions for an eventual conflict. It became apparent that the reactions of foreign direct investors vary, depending on the intensity of the conflict. Therefore, different scenarios of a Chinese takeover need to be drawn into conclusion. Based on the available data the major findings show that at the beginning of the conflict FDIs drop dramatically because the investors withdraw their money. Depending on the extent of the conflict, the destruction of the country and the impact on future economic prospects, the money will slowly flow back after a certain period of time.

COMPETENCIES OF BOARD MEMBERS IN ANNUAL REPORTS OF STANDARD & POOR'S BOMBAY STOCK EXCHANGE SENSEX ORGANIZATIONS

Amit Kumar
Research Scholar, GITAM University

Shanmuganathan Janardhanan (Late)
GITAM University

Abstract

While the importance of the right competencies of leaders in large organizations is well understood in practice, limited research exists about competencies of board members, especially in the Indian context. With this critical need, this paper attempts to provide a competency model, framework and a competency dictionary. The competency definitions in the dictionary are based on competency descriptions of board members of S&P (Standard & Poor's) BSE (Bombay Stock Exchange) Sensex organizations. Taking advantage of government guidelines that require listed organizations to disclose competencies of board members, annual reports of 30 Sensex organizations are subjected to qualitative analysis. A total of 246 competencies are identified. These are further analyzed to determine themes amongst those competencies that have been detailed by these organizations. A competency model of eight competencies, a competency framework & dictionary are developed by providing competency definitions for generic, specific & unique competencies through thematic analysis of competency descriptions. The research provides a method for leaders in organizations, specifically NRC (Nomination & Remuneration Committee) members in boards on Indian listed organizations, to identify, define & use the right competency requirements for board members. The research method also paves the way for future study of larger organization groups.

PRACTICAL WISDOM IN DECISION MAKING OF WOMEN'S COLLECTIVES IN SRI LANKA

Professor G D V RupikaSenadheera,
Department of Business Administration,
Faculty of Management Studies and Commerce, University of Sri Jayewardenepura, Nugegoda, Sri Lanka

Abstract

The aim of this paper is to present the practical wisdom of decision making of women's collectives in rural villages in Sri Lanka. It's built on the corporative society concept and selfsufficient membership organization that is run solely by underprivileged women in Sri Lanka. With a view to get a deeper understanding of the practical wisdom in decision making of women's bank collective, a qualitative methodology was adopted. The study's objectives are accomplished via a review of the literature, a theme analysis, in-depth interviews, and observations. Primary data came from in-depth interviews with 10 leading characters of Sri Lankan Women's collectives. Findings of this study reveal that the women's thinking and their maximizing and satisficing behaviors of decision making are based on different social meanings of their day to day life experiences and mutual understanding of their group members in terms of trust, honesty, equity and equality. Further deep analysis also reveals that every decision has integrated with the utilitarian perspective of ethics that mean their decisions always concerned for greater good for greater number of people in the group. And also women's collectives would be beneficial to enhance women's decision making power in the field of financial handling, insurance services, community development initiatives, cultural events, and business networking opportunities, disaster relief initiatives, and health and educational services as well. As a result of this behavior support women's for self-motivation, self-discipline, teamwork, and leadership skills in addition to the aforementioned value-added activities. Subsequently, the women's collectives have significantly helped to improve the socio-economic situation and empower women within the household and without their isolation of them through greater social interaction. And also this study will assist readers in learning about the idea of women's collectives practice by ground level and how it benefits the growth of women's lives, their families, and the whole nation.

BUSINESS EXCELLENCE & SUSTAINABILITY: MANUFACTURING, SERVICES AND AGRICULTURAL SECTOR

DEVELOPED PARAMETERS OF MANUFACTURING CAPABILITY MATURITY MODEL INTEGRATION FOR SUSTAINABLE GROWTH IN INDUSTRIES

Dilip Kumar Gayen
Research Scholar, GD Goenka University
Head Manufacturing & BE in East West Info solutions

Abstract

The post Covid pandemic has immensely impacted the manufacturing industries globally in the sustainable performance and progressive growth. Limited studies and researches are conducted worldwide by various scholars, industry's technical experts on manufacturing techniques for the sustainable manufacturing growth and business progression through the capability maturity model with customer's satisfaction in changed & challenging circumstances. During the evolution of Industry 4.0 & 5.0 techniques in manufacturing, the process is changing in the global manufacturing techniques & technology and performance of companies on the perspective of investment in the digitally controlled production through smart factories. In this study the objectives, the sustainable growth in manufacturing companies through a capability Maturity Model on Manufacturing is formulated by identifying the parameters and sub parameters at various Levels of maturity for sustainability in system standardization & performance. The maturity parameters & elements designed as a guideline for the manufacturing and operation heads to follow and implement this maturity & sustainable model for smart manufacturing, an efficient production structure and Future of Factory.

Keywords: Capability Maturity Model Integration (CMMI), Manufacturing Capability Maturity Model Integration (M-CMMI), Future of factory (FoF), Operational Excellence (OpEx), Smart Manufacturing (SM).

RENEWABLE ENERGY IN CORPORATE AND AGRICULTURAL SECTOR

Abstract

The world is focusing on saving environment and mother earth, it is very important to create awareness among the people to go eco-friendly. As we know that the electric era is taking a great move from the past decade and has reduced the use of petrol and other fossil fuels. It is important to note that the fossil fuel and non-renewable source of energy is in the stage of being verge and the world is making efforts to reduce the use of non-renewable source of energy, since the availability of fossil fuels is limited and cannot be used in some remote areas. But, renewable source of energy has eliminated all the loopholes associated with the conventional source of energy and made it convenient and safe for use. This paper reports the use of renewable source of energy and its implementation in the field of corporate and in the agricultural sector. Virtually, the corporates are involved in promoting eco-friendly products and taking initiative for creating the awareness to plant saplings. The renewable energy has the potential to solve all the problems faced by the developing countries. This paper also explains the policies implemented in the recent decade to overcome the hurdles and ensures the enhancement of renewable energy for future.

Keywords: Non-conventional source, Transition, Corporate Social Responsibility, solar power plants, wind mills.

DISRUPTIVE STRATEGIES FOR SUPPLY CHAIN DISRUPTIONS

Dr Sridharan.A
Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sridharan.a@christuniversity.in

Dr Sunita Kumar
Associate Professor, School of Business and Management,
Christ (Deemed to be University), Bangalore
sunita.kumar@christuniversity.in

Abstract

Supply chain disruption happens when forces, both internal and external affect the business's capability to get material, produce finished goods and dispatch them to the end consumers. This breakdown in supply chain could be due to bullwhip in marketing demand or suppliers' inability to meet demand or even natural calamities like monsoon or outbreak of pandemic or even the failure of logistic providers to meet transportation demands. Whatever be the reason, it will affect the business's top line and bottom line and the image of brand due to its non-availability in the shelves of retail outlets. It will become a case of "out of sight, out of mind" of consumers. According to Concord Monitor, toilet paper ran out of retail outlets as consumers panicked and the sale went up by 213% in March, 2020 over the same period in 2019. This is a classical case of demand overruns. When the ship Ever Given ran aground on 23rd March, '2021 in the Suez Canal, a total of 367 ships were caught in this traffic jam for a period of six days. Businesses lost billions of dollars as supply chain of raw materials and even finished goods were not delivered on time.

The year was 1962 and it saw the birth two big chain stores in United States of America, the one which is very successful one, Walmart and the other K-Mart. While Walmart continues to thrive and run successful business, K Mart folded in the year 2002 and later merged with Sears Group. There were many reasons for K Mart failure, but two things stand out, one being absorption of technology like internet and the other being smart supply chain operations like cross-docking, low inventories, that are being employed by Walmart. While disruptions are always there in businesses, this research paper explores on disruptive technologies that are available and which can be employed by businesses for their successes or at least reduce the dysfunctions.

Keywords: Supply Chain, Disruptive Technology, Consumers, Raw Materials, Finished Goods, Walmart, Cross Docking, Internet

STUDY ON THE POST COVID CHALLENGE TOWARDS STARTUPS IN INDIA

Dr.A.Ravi
Professor & Director,
RJS Institute of Management Studies, Bengaluru
draravi65@gmail.com

Dr.Gokul.G
Assistant Professor,
RJS Institute of Management Studies, Bengaluru
gokul4edge@gmail.com

Abstract

The COVID-19 outbreak and the prolonged period of shutdown wreaked mayhem for the new businesses that were beginning operations in India. Restrictions on the movement of goods and people leading to an increase in both supply and demand side risk, a lack of investors willing to continue investing in the firm, and the looming threat of a global recession are all factors that have made it exceedingly difficult for Indian start-ups to remain in business. However, in addition to difficulties that pose a direct danger to the very existence of start-up businesses, the pandemic has also brought about potentially fruitful opportunities for expansion. Given the lack of certainty regarding the development of a treatment for the disease in the near future, a number of different industries have generated a significant amount of revenue, and the opportunities presented by this situation appear to be sustainable. This article is a sincere attempt to elaborately highlight the challenges that Indian start-ups are currently facing and also the opportunities that they can bank on. The pandemic has affected various industries in a variety of different ways. The start-up ecosystem, which has never seen anything like this before, has its fair share of winners and losers as a result of this unique circumstance.

A STUDY OF CONSUMERS' BEHAVIOUR IN BUYING VEGETABLES AND FRUITS DURING THE COVID PANDEMIC

Ravella Prem Sai
PGDM Student,
International School of Management Excellence, Bangalore

Soundarya Shetty
PGDM Student,
International School of Management Excellence, Bangalore

Dr. S. Shyam Prasad
Professor,
International School of Management Excellence, Bangalore

Abstract

This study aims to investigate the behavior of consumers in buying vegetables and fruits during the COVID-19 pandemic. The COVID-19 pandemic has caused a major shift in consumers' behavior and the way they purchase their daily necessities. With the increase in health concerns, the demand for healthy and fresh food, especially fruits and vegetables, has increased. The data for this research was collected during the end of the first quarter of 2022 when the pandemic was subsiding. The concept discussed in this article and the findings thereof will add value to the literature, besides its relevance to academicians, the results of this study are also important to practitioners. The findings of the study revealed that regarding vegetables and fruits, offline is the choice of purchase over online. Retail store images do not play a decisive role in purchasing vegetables and fruits. variety, freshness, and economy have become major factors for consumers. The store image does not matter.

Keywords: Consumer Behavior, Covid 19, Fruits and Vegetables, Buying Habits

Prof. Pramod Kumar Painuly
University of Petroleum & Energy Studies, Dehradun
pkpainuly@ddn.upes.ac.in

Abstract

The lifestyle changes induced to control the pandemic have impacted daily life and have brought notable difference in consumer behavior (Sheth, 2020). Everybody looks for convenience, customization, inclusion of latest trends, multi-channel engagement and alignment with the goal of healthy living. Around 80% of companies agree that customers would go online in the new normal and their new business model should be digitized to be economically viable, the businesses must examine how customer behavior is evolving, as well as identify the factors that make online shopping possible and how they interact with one another. Doing so will aid managers in developing strategies that will help them remain competitive in the new normal. Two brainstorming sessions were held; in the first, the experts were given relevant literature to help them discover the elements that encourage online shopping. With the help of expert opinion, SSIM was utilized to determine the contextual relationships between the sixteen identified online purchasing factors. To recommend the pair-wise comparison, the same 40 experts from the panel were consulted. These 16 variables were probably used to assess the and to construct a driver-dependence relationship among these drivers using interpretative structural modelling with MICMAC analysis.

Abstract

With the advent of Demonetization in Indian Economy on 8th November, 2016 there has been the upcoming of "Metamorphosing of Economy". Indian Economy is undergoing some radical changes post demonetization era as now the culture of 'Cashless Economy' is gaining much importance. With the introduction of "Digital India" program in 2015; two different concepts i.e., 'Technology' & 'Bank' finally got combined and "Digital Banking" came into existence. The objective of this paper is to show the impact of various determinants viz. ease of use, trust, security, time saving and convenience on the usage of e-wallets in city of Allahabad. The study is based upon both primary & secondary data. The primary data is collected from 209 respondents with the help of 'Structured Questionnaire' framed by following the "5 points Likert Scale" technique. This study is both analytical & descriptive in nature. The collected primary data is being analysed with the help of Microsoft Excel and SPSS. The statistical tools used to interpret the data are Regression Analysis and ANOVA technique. The present study has highlighted that between age & ease of use factor affecting e-wallet usage there has been no relationship. At the same time this study also highlights that there is significant but negative relationship between age along with trust, security & time saving & significant positive relationship between age and convenience factors affecting the e-wallet usage. This paper also shows that there has been a significant but negative relationship between diverse income groups with ease of use & security factors affecting the e-wallet usage. At the same time study also reveals that there has been significant positive relationship between diverse income groups with trust, security & time saving factors affecting the e-wallet usage.

Keywords: Demonetization, Cashless Economy, Metamorphosing of Economy, Digital Banking, E-wallet.

CHALLENGES AND STRATEGIES IN GREEN MARKETING

Dr. P. Vanishree Sah

CVR College of Engineering, Ibrahimpatnam.
pvanishree@gmail.com

Abstract

In today's environment the terms like eco-friendly and green marketing are being used widely. Environmental issues like global warming and climate changes are creating lot of threats to the society. The society has become more cautious towards harmful effects of the technological advancements. Due to this awareness, eco-friendly and green products are gaining more popularity. Green Marketing has emerged as a trending concept in sustainable development of the economy. This paper analysis the challenges and strategies involved in the process of Green Marketing.

A STUDY ON ROLE & IMPACT OF AUGUMENT REALITY (AR) ON SEARCH ENGINE OPTIMISATION (SEO)

Aparna M Joshi
Head of the Department & Associate Professor,
Department of Commerce, The National College Autonomous,
Affiliated to Bengaluru University
aparnamj.09@gmail.com

Abstract

Augmented reality (AR) mobile app advertising offers new opportunities for interactive consumer engagement to boost advertising effectiveness and elicit positive consumer responses. In this study, I investigate the role of escapism by analyzing its antecedents and consequences. We aim to shed light on how AR mobile app advertising can be used to enhance escapism experiences by considering two psychological mechanisms of mental imagery: narrative transportation (in response to ad storytelling) and spatial immersion. Search Engine Optimization(SEO) refers to the process by which search engines "crawl" content to see how effective it willbe to attract traffic. Search engines will assess a number of things in a website (such askeywords, tags, and link titles) and rank it for its capacity to attract organic traffic based on avariety of factors. The consequences of escapism experiences include positive social media sharing, purchase intentions through brand attitudes, and new brand engagement via AR mobile app advertising. Prior brand preference does not affect the relationship between escapism and consumer responses after exposure to immersive AR advertising. My findings have meaningful implications for how industry practitioners can enhance escapism in the context of AR mobile app advertising.

gagandeep.fin@gmail.com

Raghu Yadaganti
Research Scholar, Krishna University,
Assistant Professor, PES University, India
raghuy@pes.edu

Abstract

The Research focuses on understanding what factors are impacting the customer purchase intention and usage behaviour of Electric scooters in India by applying the UTAUT2 Model. The study uses a quantitative approach by using a questionnaire. The Findings show that PE, SI, HM and EC of the UTAUT2 Model are directly and positively impacting the Behaviour Intention of customers to use Electric Scooters. EE, FC, PV and TR UTAUT2 Models are directly and negatively impacting the behaviour Intention to use Electric Scooters. The study is quantitative in nature and focuses on in-depth knowledge of factors influencing customer behaviour and intention to use Electric Scooters in India. However, the study cannot be representative of an enormous country like India. Academics and Electric Scooter retailers can consider this in future research

The studies provide information on the factors necessary for promoting Electric Scooters in India. These studies can be useful for Electric Scooter retailers who are looking forward to promoting Electric Scooters in India. Earlier studies in this context of E – Scooters usage have tried to use technology adoption models. Hence, these studies have not been capable to capture the fundamental nature of the impact of Environmentally Friendly on technology adoption in the Indian context. A lot of the analyses are performed used to find the relationship between independent and dependent factors but not explored to understand the relationship between the independent factors and the combination of independent factors' impact on dependent factors. In this research, we used Structural Equation Model (SEM) by using LISREL.

Keywords: Customer behavior intention, Electric Scooters, UTAUT2 Model.

IMPACT OF DISCOVERY COMMERCE ON ACHIEVING COMPETITIVE PARITY

Abstract

Discovery Commerce is the hyper-personalisation of the point of purchase and point of sale of a product or service online. Companies may use these platforms to curate specific offerings on social platforms by essentially, guiding a customer to a product. The goal of discovery commerce is to bring the concept of window shopping to social platforms like Facebook, Instagram and YouTube. This paper attempts to evaluate the impact of discovery commerce platforms in achieving competitive parity between Direct-to-Consumer and Business-to-Consumer (B2C) brands. A secondary objective is to develop strategies for B2C brands to compete with Direct-to-Consumer (D2C) brands using discovery commerce platforms. Alejandro et al. (2020) states the point of purchase that a general population uses to acquire their goods greatly affects their consumption of goods and overall social status. The work of Bonet et al. (2005) concludes that logistical relationships across the value chain leads to vertical competition. The online nature of Direct-to-Consumer companies may provide a significant competitive advantage to them over Business-to-Consumer companies. This study is descriptive in nature. The data collected from Amazon Vendor Central consists of primary data. A Discovery Commerce campaign was launched for the 'hair care' product category of a B2C brand along with extensive SEO efforts. This was done to identify the impact of the marketing efforts followed by D2C brands which have given them an edge on e-commerce platforms. This includes changes to product titles, images and descriptions of product listings on e-commerce platforms to observe an increase/decrease in sales and visibility. Neo-marketing efforts like SEO and Discovery Commerce campaigns have a significant impact on the sales and discovery of traditional brands who have an omni-channel presence. Across all categories of the optimised products, Glance Views have increased by an average of 320%.

Keywords: Discovery commerce, search engine optimisation, glance views, e-commerce.

FACTORS INFLUENCING THE USAGE OF SMART HOME TECHNOLOGY IN INDIA

Srinath S

Manish Kumar Shrivastava
Christ University Bangalore

Abstract

This paper explores the roles of perceived risk, performance and after-sale service, and demographics in the usage of smart home technology (SHT). Despite the push for digital technologies, smart homes still face challenges related to their limited use. We adopted a mixed methods approach and collected data from 133 respondents and 1244 users' responses from secondary sources. This research adopted the perceived risk framework and thematic analysis to explain the usage barriers of smart home technology. Our research supports the perceived risk factors relationships, such as privacy, performance, financial, psychological and perceived risk role as a resister. This research explains the post-adoption challenges of individual concerns related to the performance, after-sales services, and complexity of digital technologies. The use of IoT-enabled devices is influenced by users' demographics and cost and security concerns. This research has practical implications for understanding the factors associated with using IoT-enabled smart homes in India.

Keywords: Smart Home, Internet of Things, Perceived risk factors, Demographics, Mixed methods.

DIGITALIZATION - A STRATAGEM FOR RURAL RETAILERS

Ms. Tanuja B
Research Scholar, International School of Management Excellence, Bangalore

Abstract

This study aims to bridge the gap by examining the process of digitalization in rural retailing. To reach rural consumers, rural retailers are crucial. They serve as a conduit between producers and customers. Since rural retailers contribute significantly to the GDP, it is essential to retain them. The competition from organized retail and urban counterparts is extremely difficult for rural retailers. This paper focuses on how digitalization helps Rural Retailers to retain in business. Its relationship to rural retailing was examined through the Study TOE Framework. Additionally, it intends to inform Rural Retailers about the various channels of distribution they might use as a result of digitization. Secondary data was used in this study, which used a qualitative methodology and information gathered from websites and academic articles. The study concludes on the integration of TOE model framework, rural retailer's digitalization, and the adoption of digital distribution channels.

Keywords: Digitalization, Technology, Organization, Environment, Innovative Channels.

CONTINUOUS INTENTION TO USE AND FREQUENCY OF USE – APPLICATION OF UTAUT2 AND MULTI-GROUP ANALYSIS WITH INDIAN HOME-GROWN DIGITAL WALLET

Palanisamy Ganesan,
Professor and Director,
Marketing Area, NSB Academy, Bangalore

Anita S Mane
Associate Professor,
R M Dhariwal Sinhgad Management School, Kondhapuri, Pune

The mobile wallet transaction was INR 532 billion in value and INR 1630 million in volume during FY2017 (Deloitte, 2017). During Q1-2021, the volume and value are INR 1.13 billion and INR 411.75 billion respectively (Worldline, 2021). The research questions for this paper are: (a) what are significant UTATU2 factors affect the continuous intention to use home-grown digital wallet? (b) is the prevention behaviour influence the continuous intention to use the selected home-grown digital wallet? and (c) are there significant difference between (i) two different group of age and (ii) two male and female customers in the continuous intention to use? The study provides an insight on the continuous intention to use the Indian home-grown mobile wallet. The mobile wallet users' experience on an average of more than six month that means users have learned and become a familiar of mobile wallet for their purchase through directly or ecommerce as well as transaction of money for other purposes. Thus, Habit become the important predictor for the continued intention to use Abdul-Halim et al (2022) and frequency of use of Indian home grown mobile wallet. The users feel that the simplicity in using mobile wallet for any type of transaction without hassle and assistance from any other individual that results in the positive effect of effort expectancy on continued intention to use and this finding in line with the study by Ramos (2021) with food delivery apps during Covid19. Hedonic Motivation strongly influence the continued intention to use mobile wallet, thus the users see there is hedonic value of continuous use of mobile wallet in terms of positive feeling and pleasant experience when they use mobile wallet (Ly et al 2022). Thus, the research question one is answered through the Habit, Effort Expectancy and Hedonic Motivation are the significant constructs compared to other four strongly and positively predict the user's continued intention of mobile wallet. The role of preventive behaviour with UTAUT2 constructs highlights that the preventive behaviour plays no role in predicting continuous intention to use of mobile wallet. The limitation is that all constructs of Prevention Motivation Theory employed which result high predicting power on CIU.

Keywords: UTAUT2, Continuous Intention to Use, Frequency of Use, SEM, Multi-Group Analysis

IMPACT OF SOCIO-DEMOGRAPHIC VARIABLES ON THE PURCHASE INTENTION OF ORGANIC FOOD PRODUCTS

Roopashree B R
Research Scholar, MSRIT, Bengaluru, India
roopapraveen2004@gmail.com

Dr. Rizwana
Associate Professor and Research Supervisor,
MSRIT, Bengaluru, India
rizumehar@gmail.com

An encouraging sign that people are becoming increasingly aware of the negative health effects of these highly polluted and poisoned food items. Organic food products in India are expected to develop considerably during the projected period due to a variety of factors, including the availability of organic food goods on the internet and a shift in consumer preference toward organic food. According to certain researchers, sociodemographic factors play a role in purchasing decisions There is a need to explore the influence of demographic variables on purchasing behaviour because of inconsistent findings in the literature. Research of this type is descriptive in nature and aims to evaluate the influence of socio-demographics on the purchase intentions of the target audience for organic food items. The target audience was given a well-structured questionnaire, which included six sociodemographic questions based on logical reasoning and three questions on purchase intention based on Chiew Shi Wee & et al, 2014 and Anupam Singh, Priyanka Verma,2017. A 150-target audience sample was selected with a 10% margin of error and a 95% confidence interval and 121 valid responses were chosen for the study. We utilised the snowball-sampling strategy because we invited people to fill out the survey and then pass it on to their friends and relatives. Findings of the study indicate purchase decisions are influenced by income. Thus, it is possible that the amount of organic food purchased correlates directly with a person's income (i.e., the higher the income in schooling, according to the statistics. Organic goods are more likely to be purchased by those with higher education levels. This might be because more educated clients are more health-conscious and aware of the advantages of buying organic foods, which could lead to an increase in sales of organic products. In both industrialised and developing countries, several studies have found that a wide range of factors impact people's decisions to buy organic food. Demographic variables such as gender, education, and money, independent of the country in which they take place (developed or developing) will have greater influence on purchase of organic food products.

Keywords: Socio demographic Variables, Purchase intention, Purchase decision and Organic food product

ETHICAL MARKETING IN CURRENT TIMES: SOCIAL RESPONSIBILITY IN INDIAN CONTEXT

Dr.Mohammed Farooq Pasha
Assistant Professor of Commerce and Management,
Government First Grade College Kengeri, Bangalore.
farooqpasha2OO2@gmail.com

Jayashree Urs R
Assistant Professor of Commerce and Management,
Arihant Group of Institutions Thalaghattapura Bangalore.
jay.np@rediffmail.com

Abstract

It is often said that Marketing and ethics cannot go together. Those supporting the argument always have a long list of marketing activities from various companies which make even a die-hard marketing fellow feel guilty about his/her profession. On the other hand, critics of the argument can also come up with numerous marketing activities from various companies which can make the worst critic of marketing activities doubt his/her own criticism. So where does the debate goes from here. It only intensifies as more and more companies in every category of products and services are always making efforts to increase their market share through marketing strategies which they call innovation oriented but others call unethical thereby generating arguments within them as well as in the minds and hearts of consumers as well as potential consumers. This paper looks at the consumer perception about the degree of ethics in marketing followed by companies across all categories of products and services and its impact on the society on the one hand and company growth on the other hand.

Keywords: Criticism, Ethics, Innovation, Marketing and Society

UTAUT & UTAUT2 MODEL - A DESCRIPTIVE ANALYSIS OF THEORETICAL CONCEPTS BASED ON THE LITERATURE REVIEW

Remya Nair
Research Scholar (Registered with University of Mysore).
International School of Management Excellence, Bangalore
(A recognized research center of University of Mysore), India
Email:remya.sanju.nair@gmail.com

Abstract

UTAUT or Unified theory of acceptance and Use of technology is the technology adoption model proposed by Venkat et all (2003). This is a descriptive paper analysing both UTAUT as well as UTAUT2 based on Literature review. The research papers published from 1989 to 2020 are analysed and included in this paper. The concepts of the UTAUT as well as UTAUT2 are explained in detail. The other models that contributed for the development of UTAUT model are also mentioned in this paper.. The theoretical model of UTAUT suggests that the actual use of technology is determined by behavioural intention. The apparent prospect of adopting the technology is dependent on the direct influence of four key constructs - performance expectancy, effort expectancy, social influence, and facilitating conditions. The effect of predictors are moderated by factors like age, gender, experience and voluntary willingness to use. To provide a holistic understanding of technology acceptance, the researchers can set the objective for creating a unified theory of technology acceptance by incorporating key constructs, theory enabling the model to predict behavioural intention and use. The UTAUT theory has been utilized to explore human-computer interaction. In the field of research, UTAUT has contributed immensely to the literature. The model provides insight into technology acceptance by assessing prominent technology acceptance theories, which offer distinct perspectives on the subject. UTAUT demonstrates that proposed factors account for 70 percent of the variance in use intention, offering stronger predictive power compared to the rest of the models that examine technology acceptance. The collaborative impact of constructs with personal and demographic factors establishes the complexity of the technology acceptance process, which is in turn dependent on individuals' age, gender and experience. The Practical Implications, Applications of UTAUT model, Limitations of UTAUT model are explained in detail in this paper.

Haritha S
Assistant Professor,
International School of Management Excellence, Bangalore
haritha@isme.in

Abstract

Influencer marketing is rapidly growing throughout the globe, which has led marketers to view it as a crucial component of their available marketing alternatives.The internet offers a marketplace and a channel for reaching potential customers. Utilizing influencers in the marketing campaign is one of the best strategies to do this. The aim of this study is to find out the factors affecting the perception of the consumers on influencer marketing and find out how demographic variables moderate between independent variables and consumer perception on influencer marketing. The influencing factors considered for this study are trustworthiness, knowledge, homophily, attitude and likability. Quantitative method is used, whereby a self-administered questionnaires were distributed to obtain data using convenience sampling. Statistical Package for the Social Sciences (SPSS) were used to analyze data collected. Linear regression analysis was used to assess the impact of the influencing factors on purchase intention. The findings indicate that a significant amount of relationship between all the independent variables toward purchase intention and hierarchical linear regression was used to prove that demographic variable such as household income, gender and employment moderates purchase intention in influencer marketing.

DETECTION OF SPAM TWEETS IN TWITTER

P.S.S.N.Chandra
PGDM Student,
International School of Management Excellence, Bangalore

Prof Stuti Agarwal
Assistant Professor,
International School of Management Excellence, Bangalore

Abstract

The world of Online Social Network (OSNs) like Facebook, WhatsApp, Twitter, Instagram etc has gained a lot of popular these days. These platforms not only help in sharing information, photos or videos, but also connects the world. Unfortunately, these platforms can be manipulated in various ways one of them being spam. To get a cyber-crime free world, detection of spam plays an important role. Many organizations are working towards Spam Detection to ensure cyber safety and enhance user experience. In this paper focus on one of the OSNs namely Twitter. There is a challenge in classifying the tweets (Spam/Ham) and identifying the spam tweets in twitter. Though a lot of naive methods are available, there is no major evidence from literature of enhanced methods to classify and identify them. Timely identification of spam tweets is required to enhance users experience and to thrive for spam-free environment. In this literature, an effort has been made to detect spam using the tweet metadata and tweet content by leveraging advanced machine learning algorithms. The model has been validated in couple of ways to ensure the robustness of the results.

Abstract

Digital marketing is inevitable for any form of business. It pays way to reach a mass audience at any given time. The degree of digital acceptance by organisations and the knowledge and ability of organisations to use the platform to its total capacity play a significant role in attaining competitive advantage. This study aims to understand the factors influencing the digital marketing acceptance of business schools using the technology acceptance model (TAM). The well Structures questionnaire was designed in consultation with an expert panel comprising industry experts and academicians. 143 responses were collected through personal interviews and mail surveys. Stratified random sampling was used to select the respondents for the study. Collected data were all analysed using descriptive statistics and inferential statistics. The conceptual model developed for the study was tested using structural equation modelling. Results showed that perceived ease of use had got a positive and significant impact on perceived usefulness, and perceived usefulness has got a positive influence on attitude and intention of using digital marketing. The attitude was found to have a significant positive impact on the intention to use. This study also showed that experience strengthens the positive relationship between attitude and intention to use. This study extends the technology acceptance model by adding experience as a moderator variable in the relationship between attitude and intention to use. The insight from this study would help educational institutions strategize their digital requirement.

Abstract

Globally, consumer behaviour facets of Functional food as a health food option has been widely researched since late 1980s, coined in Japan first. In India, the concept has gained traction only since last decade; studies regarding market and consumer aspects are scattered and limited. Considering this gap, a need for an extensive literature review encapsulating studied variables and adopted methodology was felt. This would be a first extensive literature review study consisting of academic research published for exclusive India consumer market being done. This study has been undertaken through a systematic database search to synthesise the studies done since year 2000 to 2022. The objective of this review is to uncover the research variables, find gaps and present future research opportunities. A total of 23 research papers have been considered after focussing on consumer behaviour aspects aiding or deterring acceptance of Functional food in India after careful assessment through the inclusion and exclusion criteria. It is found that factors such as socio-demographic, psychographic and product attributes play an important role in the acceptance of products. A general confusion regarding Functional food benefits, health claims, product knowledge and awareness seems to exist giving rise to credibility issues and credence. It is now even more important to conduct research in this field to determine factors of consumer acceptance of Functional food.

CROSS-SECTION OF EXPECTED STOCK RETURN: A PERSPECTIVE FROM SYSTEMATIC AND UNSYSTEMATIC RISK FACTORS IN INDIAN STOCK MARKET

Karkaria Dusmanta
Research Scholar
Pondicherry University

Abstract

This article evaluates the cross-section of expected stock return between systematic and unsystematic risk as well as re assessment of size and value effects in the Indian stock market through a Fama-French risk-capture model. The top 487 companies in the S&P BSE 500 index were studied from July 2002 to March 2021. In this article we found that small firms with higher risk give higher monthly average returns whereas large firms with higher risk give lower monthly average returns on the size-SD sorted portfolio. Size is the most prominent stock anomaly, with a monthly average mean excess return of 5.2% in the Indian context. Fama-MacBeth cross-sectional regression does not explain the one-factor, three-factor, and augment FFTF* asset pricing models, whereas the GRS model fitness test does for the Fama-French Three Factor (FF3F), and augment Fama-French pricing models. More importantly, this study discovered that stocks/portfolios with higher abnormal returns carry higher risk, in addition to size and value anomalies having a significant impact on the Indian equity market. As an investor cannot avoid size and value anomalies before investing in a stock market an emerging market like India, regardless of whatever the situation, whether it is a financial crisis, the COVID-19 pandemic, or any other natural calamity or disaster these two stock anomalies play a prominent role in the Indian equity market. This study has strong implications for financial consultants, mutual fund managers, investment strategists, individual and institutional investors, the market practitioners who want to beat the market and earn an abnormal return on their investment in the Indian equity market.

al.madhavi@gmail.com

Abstract

Industry practitioners are always in search of effective investment strategies in their endeavor to achieve portfolio optimization. Moving averages have long been coveted by many such decision -makers. In this research work, a comparison between the 'buy-hold' strategy and the quant-trading strategy using exponential moving averages' is carried out. This study examines the profitability of implementing an Exponential Moving Average (EMA) cross-over strategy in the Indian stock market over the period 2010 – 2022. To facilitate the experiments, Nifty50 (^NSEI), Nifty500 (^CRSLDX), and NiftyMidcap50 (^NSEMDCP50) indices are considered. This work contributes to the existing quantitative trading and technical analysis literature. It is a pioneering effort to implement a moving average strategy on an equal weighted portfolio constituting different indices with a universe of stocks with varied characteristics. The results indicate that there is an outperformance of the moving average strategy (average yearly returns: 10.79%) over the buy-hold strategy (average yearly returns:8.42%) for the aforesaid period and dataset. The study also finds that the moving average strategy is capable of identifying market directions and movement reasonably well, which facilitates the generation of profitable returns. The study iterates the validity of technical analysis techniques to identify trade signals effectively, however, the marginal outperformance also emphasizes choosing a trading rule that optimizes transaction costs and taxes to ensure that such profitability sustains.

CSR SPENDING AND ITS RELATIONSHIP WITH SHARE PRICES (WITH SPECIAL REFERENCE TO TOP CONSUMER FOOD COMPANIES IN LIGHT OF COMPANIES ACT 2013)

Ms. Saniya Marwah
Department of Management Studies,
Rukmini Devi Institute of Advanced Studies, Affiliated to GGSIPU, India
marwahsaniya@gmail.com

Abstract

For the purpose of making the firms accountable and responsible towards its stakeholders, Companies Act 2013 has introduced mandatory contribution of 2% of average net profit towards Corporate Social Responsibility. In the present study, the relationship between Mandatory CSR spending and Share Prices has been studied for top consumer food companies listed on NSE. The study can help us to know that whether this compulsory move by the Government is a burden on the companies or not. Share Prices have been taken as they reflect the wealth of the shareholders and also an impression of investor's confidence. The results depict positive and strong relationship between compulsory CSR Spending and share prices for all companies.

Keywords: Corporate social responsibility, CSR spending, Share Prices, Consumer Food companies, Companies Act 2013.

FORECASTING THE CRYPTOCURRENCY PRICES – A MACHINE LEARNING APPROACH

Abstract

Crypto currency is a non-centralized digital currency that is exchanged between peers without the need of a central government. Understanding the relationships among crypto currencies is important for policymakers and investors. It helps the former to come out with strong action plans to guide the financial markets and latter to take vice investment decisions which can utilize crypto currencies to be a part of portfolio construction. Crypto currency operates with block chain technology with a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. Accurate forecasting of the crypto currency prices is a major challenge for the traders and investors. This can be attributed to the high volatility and dynamism prevailing in the crypto space. Predicting the crypto currency prices and forecasting the future price movement, helps the investors to take appropriate investment decision, improves profitability and hence decrease possible losses. This research tries to forecast the prices of 20 most traded crypto currencies using Machine Learning. The price movement of these crypto currencies for the period from 1st April 2018 to 31st March 2021 is taken for the study. Secondary data is analysed to show the yearly returns, rate of growth, risk factor, average daily returns, and compound annual growth rate of prices of crypto currency during the study period and was validated. Machine learning algorithms build a mathematical model which helps to make predictions or decision of the future price movements of crypto currencies studied. This was carried out using WEKA Software.

AN EVALUATION OF INVESTMENT PATTERN OF GOVERNMENT OF KARNATAKA EMPLOYEES IN SELECT FINANCIAL SECURITIES

Premalatha K P
Assistant Professor
CMS-BS Jain University, Bangalore

Dr. S J Manjunath
BN BIMS, University of Mysore, Mysore

Abstract

The growth of a developing economy is driven by the capital market investments which are financed through domestic savings by households and institutions. Economic surveys suggest for stimulation of investment incentivising policies to recover the economic slowdown in respect of savings and investments ratio in India. An attempt is made to understand the investment pattern of government of Karnataka employees as they receive regular income which can be well utilised by routing it to an effective investment channel. The study examined the influence of demographic factors on their investment preference and their overall investment pattern. It is found out that age and experience impacts their investment pattern and large amount of their funds are routed to less risk securities like bank deposits, insurance and post office schemes and investors have shown least preference towards equity and debt instruments.

Abstract

The study aims to analyze the long-run performance of SME IPOs and investigate IPO specific, company specific, and market specific variables that influences the performance overtime. This article utilizes information of 383 listed firms at Indian SME platform from 2012 to 2020. Based on the reduced sample size, the article uses only 12 month of trading data for the computation of returns. The article uses event time methods to examine company performance through market adjusted excess returns (MAERs), cumulative abnormal returns (CARs), and buy & hold returns (BHARs) based on the equally weighted and value weighted portfolios. Furthermore, the study employs calendar time portfolios with Fama-French three factor model and Carhart four factor model to have more robust results. Similarly, the study uses the cross-sectional OLS regression to analyze numerous factors that influence the performance of SMEs IPOs. Using 12 months BHAR, result shows the IPO over performance of both equally weighted and value weighted portfolios and the positive alpha of calendar-time portfolios validates the results for the same duration. While previous research shows the IPOs underperformance at global stage, the current findings of IPO over performance are in line with those of other Asian countries including China, Malaysia, and Korea. Similarly, the result shows the significant impact of issue size, oversubscription, debt to asset ratio, profitability, hot market, listing gains, underwriter reputation and underpricing on the long run performance of Indian SME IPOs.

Abstract

Peer-To-Peer lending platforms are becoming a good investment avenue for lenders to invest their money in borrowers, who need money for a different purpose. As lending and borrowing of money is facilitated by the P2P lending platform, it becomes necessary for the platform to understand the users and accordingly fine tune the 'User Interface' (UI) and 'User Experience' (UX) of the platform. For lending and borrowing to take place through a platform it is necessary to have an 'n' number of lenders who are ready to lend money to an 'x' number of borrowers. This study is specifically done to understand lenders' motivation to use P2P lending platforms. This is a unique research work as sentiment analysis of lenders' motivation to use these platforms has not been explored earlier. The sentiment analysis technique was used to examine lenders' sentiments towards the use of P2P lending platforms. The research results show that, ~ 70 percent of lenders showed motivation to use P2P lending platforms as an investment avenue in the future. As the P2P lending platforms are relatively new more research can be carried out in future.

Keywords: P2P lending, sentiment analysis, topic modelling, motivation to use.

Abstract

Digitalization is becoming one of the essential instruments for reducing transaction costs and increasing efficiency. RBI is promoting digitalization to bring more reforms in the finance sector. 2019 Onwards, RBI has implemented an expansionary monetary policy by lowering the interest rate, increasing investment, and aggregate demand, thus leading to an increase in the equilibrium output. Financial Technology abbreviated as "FinTech" includes subdomains like Peer-To-Peer lending which is becoming increasingly popular for lending and borrowing without the active role of banks. The positive impact of this kind of platform called 'Zopa' on the money supply in the United Kingdom was observed in 2005 during the early stages of the global recession. This paper examines the relationship between changes in monetary policy and the motivation of lenders and borrowers to use P2P lending platforms. Our study consists of time series data from 2011-2022. The research findings show that the contraction in monetary policy has helped the P2P lending platforms to expand their business. An increase in repo rate (RR), Cash Reserve Ratio (CRR), and Statutory Liquidity Ratio (SLR) motivated lenders and demotivated borrowers to use P2P lending platforms. Whereas reduced reverse repo rate (RRR) demotivated lenders, and motivated borrowers to use these platforms. The paper contributes to the existing literature for analysing the linkages between P2P platforms and money supply in the economy.

Abstract

SMEs can be found in a variety of sectors in India, such as manufacturing, retail, and services. They contribute significantly to the economic growth of the nation and form the foundation of the Indian economy, contributing about 40% of its GDP and employing around 110 million people. The sector is considered the second-largest employer after agriculture. SMEs in India face many hurdles in availing of credit due to information asymmetry, limited credit history, and complex application processes. When determining whether to offer loans or other forms of credit to small and medium-sized businesses (SMEs), financial institutions may encounter several difficulties. This paper attempts to research the parameters on which the creditworthiness of SMEs in various sectors can be analyzed. The factors to be considered in the analysis of creditworthiness and the weightage to be given to each parameter. For the research two sectors have been identified: the sectors for capital goods and consumer durables. In the capital goods industry, three listed SMEs and Consumer durables two listed SMEs are identified for the study. The data for all the companies are analyzed for three financial years. The research finding helps to identify comprehensively the parameters for credit scores and the weights attached to each parameter which help in arriving at the credit scores for SMEs in each sector. Using MCDM, financial organizations can solve their difficulties (multi-criteria decision-making model). The financial industry is changing drastically. Payments, loans, insurance, and wealth management are all being changed by digital technologies.

Harshita Gupta
Independent researcher,
Department of Commerce and Business Studies,
Jamia Millia Islamia, New Delhi, India

Abstract

The study explores the impact of R&D expenses, leverage, and firm size on the managerial efficiency of the firm as reflected by its performance. We also analyze the industrywise effects of the selected factors on the firm performance of a developing country. The disaggregation analysis includes five industries: automobiles and parts, chemicals, construction and matter, industrial metals and mining, and oil and gas. Using the data set of Indian firms for ten years, our empirical analysis indicates that expenditure on research-related activities does not affect the performance of firms in the industries mentioned above. In contrast, leverage has a consistently negative effect on firm performance in all industries except the oil and gas industry. Further, we find that firm size has a differential impact on the firms' return on assets in these industries. Our results are robust to heteroskedasticity and multi-collinearity issues.

Prof. Shveta Singh Professor
Department of Management Studies,
Indian Institute of Technology Delhi, India.

Abstract

The purpose of the study is to analyse the relationship between corporate social irresponsibility (CSiR) and management efficiency as proxied by asset turnover ratio. The study examines a sample of Indian manufacturing firms from 2007-2016 with 1,113 observations using a comprehensive dataset from RepRisk and Bloomberg® to run a system generalized method of moments (GMM) estimation. We find that CSiR positively affects management efficiency and the effective utilization of assets in generating sales. For domestically focused manufacturing companies in emerging economies, where there is less demand or stakeholder expectation, corporate irresponsibility may not be as important a deciding factor, especially if the target market is highly price sensitive. However, managers should heed caution before divulging in CSiR activities for the consequences can be damaging in the long run. The study's grounding in an emerging market setting, such as India, sparks a discussion on a contextualized understanding of negative aspects of corporate behavior in evaluating management efficiency of the firm.

FINANCIAL DISTRESS PREDICTION USING ALTMAN Z SCORE AND STOCK PRICES - A CASE OF NSE-LISTED INDIAN MANUFACTURING COMPANIES

Dr Ratchana R
Assistant Professor,
International School of Management Excellence, Bangalore
Email: ratchana@isme.in

Sudindra V. R.
Assistant Professor,
International School of Management Excellence, Bangalore
Email: sudindravr@isme.in

Abstract

The Altman Z-Score Model has been employed to predict financial distress since its original conception in 1968. The model is perceived to be detailed in its methodology for assessing financial failure because it is predicated on values available in a company's financial statements as well as principles established by influences extraneous to the firm's operations. The share price of a business is viewed as a mirror image of its economic position, with its real worth being an attribute well within the framework as a whole. This study aims to investigate the internal dynamics of the Altman Z-Score model and examines its potential as a predictive factor of bankruptcy. It also examines the link between a firm's Altman Z-Score and its mean share value to establish if a causative link exists between these two factors within the Indian Manufacturing Sector and used randomly chosen 20 samples from the sector specifically mentioned for the 5-year period from 2018 to 2022. The research highlights a significant relationship between a company's share price and its Z score, and investors can evaluate these Zeta (ζ) index scores based on key financial parameters before attempting to make any well-informed investment choices in distressed businesses with incredibly low Z-scores that appear on the brink of bankruptcy or insolvency.

Abstract

The impact of Information Technology on workplaces, individuals and society as a whole has increased dramatically during the last two decades of the 21st century. This period has seen maturation in the field of digital computing, combined with the use of telecommunications technology, in order to link many computers into what a very large single network is 'virtually', the Internet. Data has become widely accessible, and readily inter-related. Implementation of new technology has led to many changes in the workplace. This paper aims to study the impact of technology on various Job-related factors. Four factors shortlisted for the study i.e. Job Performance, Well Being, Work Motivation and Person Organization Fit. Which Job factor is getting affected to maximum extent with the introduction of technology? The study was done with the help of questionnaire based on Likert scale. Data was collected from 162 employees of various organization. Convenience sampling method was used. Data was analyzed through SPSS Software and excel to find out that Work Motivation is the most impacted factor by introduction of new technology, followed by Job Performance, PO Fit and Well Being.

Abstract

The ASHA workers at the community level work for primary healthcare services of the Nation, especially in the rural areas where they are providing non-stop services. In spite they are not paid properly, neglected, not recognized are becoming invisible to the nation at large, It is their personality and the roles of an organization that influenced ASHAs to get motivated to perform their roles and responsibilities. The study's main aim is to analyze the mediation of personality in the relationship between organizational roles and motivation. The study is descriptive in research with a sample size of 140 ASHAs for 10 PHC centers in Bangalore and these are identified on the basis of the Convenience Sampling method. The study is both qualitative and quantitative in nature and the data is collected through primary sources by using a questionnaire method and focus group discussion. Data were analyzed by using SPSS and & Smart PLS. The study reveals that there is a complete mediation effect of Personality on the relationship between Organisational roles and Motivation. The findings of the study are useful for Government and PHC centers to redesign their policies and strategies to create recognition and reduce the difficulties and challenges of ASHA workers.

Abstract

Error is an inherent part of human nature. Currently, the term human error is widely used in pharmaceutical industries. It originated in the realm of quality and safety in the manufacturing process. Human error poses a challenge to Safety, Integrity, Strength, Purity, and Quality (SISPQ). Due to regulatory agencies, investigations into human error are in high demand in the pharmaceutical industry. From a quality perspective, consistent efforts are being made to control human error at every level. In this current research paper aims, we aim to explore the relevance and significance of Human Error in the pharmaceutical industries through an extensive review of the literature.

Abstract

Socialisation of newcomers in an organisation has always been a key activity. Multiple components of socialisation have been examined over time, and research into this has used a variety of approaches. Initially, it was thought to be the process by which organisations acculturate newcomers. However, much current research views it as a nurturing process, in which the role of the new player is far more essential and organisations can merely adapt the activity. The essence of socialising in the workplace cannot be overstated, because of being the most important aspects of establishing and preserving organisational culture. Newcomers with more than 18 months to less than 24 months of experience in a given company were surveyed. Results from Bengaluru's service industry were included. in the study. As an instrumentation tool, a thorough, standardised Questionnaire was adapted and 304 employees completed it, using a basic, random selection procedure. Descriptive statistics, Bivariate Correlations, and Regression were the statistical approaches used. We investigated and examined two possibilities. The findings back up the theory that corporate culture and socialisation strategies are linked.

SHIFT WORK DYNAMICS AND ITS IMPACT ON EMPLOYEE WELLBEING IN THE MANUFACTURING SECTOR

Afseer Majeed PhD
Lecturer - Business Management,
Explore Educational Institute, Dubai – UAE
academic@exploreeducation.ae

Abstract

In the modern world of industrialisation, productivity is the critical variable defining the success of any organisation. Shift work is a tried and proven system to boost productivity, especially in a manufacturing environment. UAE is a country where the manufacturing sector is proliferating, and more and more employees are undergoing shift working schedules. This research analyses the effect of shift work on employees' well-being in the UAE manufacturing industry. The study is conducted between employees from various companies who are regularly doing shift work. This study is quantitative research to see how the employees perceive the shift work and how it affects their productivity in the long run. The data was collected through the questionnaire method, analysed statistically with the help of a certified statistician and derived the conclusion. Some of the larger issues that may arise for employees who work shifts are the disruptions to sleep patterns and fatigue. Working non-traditional hours can make it difficult for employees to get enough sleep, leading to fatigue and decreased productivity. This has been linked to an increased risk of certain health problems, such as heart disease, diabetes, and gastrointestinal issues. On the other side, shift work can make it difficult for employees to maintain a healthy work-life balance, as it can interfere with their ability to participate in social activities and spend time with family and friends. This study's outcome suggests that shift work has to be carried out in an organisation in conjugation with other supporting programs that can help employees balance their professional and personal needs; by doing so, companies can reap productivity for the long term while keeping the employee's well-being at optimum level.

Abstract

This paper examines the cultural orientation of IT managers in India. It looks at the cultural values, beliefs and behaviors that affect IT management in India and how these cultural orientations are shaping the development of the Indian Information Technology (IT) industry. The paper also identifies the key aspects of Indian culture and their implications for IT management in India. It further examines the challenges faced by IT managers in India when working in a culturally diverse environment, and provides recommendations to ensure successful IT management in India. Finally, the paper discusses the importance of cultural orientation for successful IT management in India to ensure that the IT industry remains competitive in the global market. The Information Technology (IT) sector in India has been growing rapidly in recent years, with many multinational companies setting up offices in the country. This has, in turn, created a requirement for IT managers to be culturally aware and sensitive to the needs of the Indian market. This paper aims to provide a comprehensive overview of the cultural orientation of IT managers in India. The paper begins by discussing the cultural differences between India and other countries, and how they impact IT management. It then looks at the various aspects of cultural orientation, such as language, religion, gender roles, and social norms. Finally, it provides practical advice and suggestions for IT managers in India, including how to effectively communicate with employees and customers, and how to create a culturally-inclusive work environment. The paper concludes by noting that cultural orientation is an essential component of successful IT management in India, and that IT managers should take the time to understand the cultural context in which they are operating.

Abstract

Managing people at workplace via the top-down approach fails to facilitate the individuals' Flourishing and work engagement. As the teams/ organisations/ institutions becomes bigger, the more generic the job description and job roles become. Hence the construct of Job Crafting plays a vital role in curating meaningful jobs aligned to an individual's core. Job Crafting facilitates a bottom-up approach where individuals relook at their job design, and make minor tweaks at cognitive, tasks and relations aspects of job. This study examined the effectiveness of job crafting intervention. The participants in the experiment group were a homogenous mix of individuals at jobs working at a same entity. The study was done using a quasi-experiment design methodology where we followed a pre-test and post-test approach to measure Job Crafting levels. The treatment here is the Job Crafting Intervention is a 3.5 hours long workshop structured session. The level of Job Crafting was measured before the start of the workshop (Timeline T1) where individuals are not informed on what is measured. Three weeks after the intervention the Job Crafting levels was measured again using the standards Job Crafting scale. The impact was intervention was analysed using a T- test on the pre and post levels. The intervention showed a significant positive effect on levels of Job Crafting. A mean difference of 4.2 to 4.8 (6-point scale) was observed after the experiment respectively on pre and post Job Crafting levels. A slight positive correlation was found after the intervention (~.3 Pearson correlation). All the results were shown significant through the statistical tests. The study proved that the developed Job Crafting intervention was effective in increasing Job Crafting levels among employees. Towards the end of the intervention, an open-ended question was asked, and the responses showed that the intervention had a positive impact among the participants and helped them to relook at their existing job with more meaning.

IMPACT OF EMOTIONAL INTELLIGENCE, PERSONALITY TRAITS, RISK PERCEPTION AND BEHAVIOURAL BIASES ON INVESTMENT DECISIONS

Dr.S.Johnsi
Associate Professor,
DJ Academy for Managerial Excellence, Coimbatore
johnsi.s@djacademy.ac.in

Abstract

The main objective of this study is to analyse the impact of Emotional Intelligence, Personality Traits, Risk Perception and Behavioral Biases on Investment Decisions and to measure the mediating effect of selected variables on Investment Decisions. The study depends on primary data and a well-structured questionnaire is used for this purpose. Multi-stage sampling technique has been adopted to determine the sample for the study. A model using PLS-SEM is tested to examine the impact of personality traits, emotional intelligence, risk perception, behavioural biases and investment decision making. Structural Equation Modeling (SEM) is used to explain the relationship between multiple variables and the structure of inter relationships among various constructs is examined. The result of the mediating effect is confirmed by SOBEL's test. The current study also indicates that emotional intelligence was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Cognitive dissonance was found to have a significant positive relationship with investment decisions like portfolio size, investment tenure and equity exposure. Herding was found to have a significant positive relationship with equity exposure. So, it is concluded from the study that emotional intelligence and behavioural biases have a major impact on the investment decisions.

madhubk.mba08@gmail.com

Abstract

Employee performance is crucial for the success of any organization and the augmenting prominence of leaders' role to enhance employee performance of virtual teams has inspired the call for this study. The study aims to analyze and propose an integrated framework justifying the leader's behavior accounting to work characteristics contributing to employee performance in virtual teams of mid-sized- IT Industries in Bengaluru. The study is empirical in nature. Web-based survey and direct interview is conducted using questionnaire resulting in 180 responses from virtual team who are software professionals from IT Industry. The gathered data is analyzed subsequently by means of both descriptive and inferential statistics with the software IBM SPSS 20. The outcomes of the study show positive and significant relationship between leadership behaviors and work characteristics resulting in enhanced employee performance of virtual teams. The study offers experiential evidence and support the theory of leadership behaviors which postulates that the employee performance can be optimized when the leaders exhibit high degrees of task and relation-oriented leader behaviors accounting work characteristics in virtual environment. The managerial implications of the study and the potential avenues for future studies are discussed at the end of the paper.

MAPPING THE RELATIONSHIP BETWEEN APPRAISER AND APPRAISEE IN AFFECTING THE EMPLOYEE PRODUCTIVITY IN IT INDUSTRY: A MODERATING IMPACT OF PROFESSIONAL DEVELOPMENT

Beena. M.T
Research Scholar,
International School of Management Excellence, Bangalore
A recognized research center of University of Mysore

Dr. Irshad Nazeer
Research Supervisor,
International School of Management Excellence, Bangalore
A recognized research center of University of Mysore

The contribution of the workforce to the outcome produced by the organisation is crucial. When a firm works in a competitive market, employee performance becomes especially important. A crucial element that contributes to the organization's ultimate existence is employee motivation. Increasing staff productivity is an issue for businesses throughout the sector. People who work in organisational research are interested in methods for improving employee performance. Improving employee productivity requires a just and fair system of rewards that can be both tangible and intangible. The main aim of the current study is to map the relationship between appraiser and appraisee in affecting employee productivity in the IT industry. Furthermore, the study analyses whether professional development moderates the impact of the appraiser-appraisee relationship on employee productivity. For this purpose, primary data is collected from various mid-level employees of a firm utilising a quantitative questionnaire technique in order to understand their opinions of the relationship between the Appraiser and Appraisee in affecting employee productivity in the IT industry. Because a quantitative technique is used, a positivist research paradigm is most suited to achieving the study's objectives. In addition, the current study used a descriptive research design and a simple random sampling technique to gather data from 200 mid-level employees. The findings of the study suggested that in highly competitive circumstances, businesses work hard to establish a fair balance between employees' job performance and the success of the firm. Aspects for employee rewards and recognition are among the most crucial elements that may guarantee that many businesses recognise the effectiveness of their workforce. Employee empowerment has therefore become a key factor in determining the range and calibre of services offered to customers, and low staff productivity has been cited as a challenge to providing services. The findings of the study also revealed that the Appraiser-appraisee relationship has a significant impact on employee productivity and professional development and moderates the association between the appraiser-appraisee relationship and employee productivity. The current study results are essential for the management, the team leaders, the administrators and the HR professionals in comprehending the behaviour of their employees and accordingly adjusting the performance appraisal strategies to enhance the motivation and professional development capabilities.

Intrapreneurship is a much sought-after strategy in developing innovativeness and new business venturing capabilities of organizations, which is termed corporate entrepreneurship. While large organizations have well-designed processes and policies to develop corporate entrepreneurship, such defined policies and procedures are rare among small and medium enterprises (SMEs). The present study is to find the influencing factors such as passion for work, entrepreneurial behaviour of managers on intrapreneurial intentions and behaviour among the employees of SMEs. Also, the negative influence of organizational cynicism on intrapreneurial intentions and behaviour is found in this study. A pilot study was conducted through unstructured interviews among a few entrepreneurs, intrapreneurial and non – intrapreneurial employees to determine the variables of the present study. A total of 301 samples were collected from 13 SMEs which are into the service sector by distributing questionnaires based on valid instruments. Passion towards work is found to have a positive influence on intrapreneurial intentions. Also, organizational cynicism has a negative influence on intrapreneurial intentions and intrapreneurial behaviour. Additionally, the entrepreneurial behaviour of managers is found to have a positive influence on intrapreneurial intentions and intrapreneurial behaviour.

Abstract

Making wiser decisions about employees to improve performance at the individual and/or organizational levels is the process of HR analytics. HR analytics is a method for determining the correlation between HR practices and organizational performance outcomes such as sales volume or customer satisfaction. Human Resource Analytics was established in 1978 by Jac Fitz-Enz, the pioneer of human capital strategic analysis and performance benchmarking. In this paper, the researcher wants to discuss the concept of HR analytics, its application, impact on talent management, branding, and challenges in its application. The researcher examines secondary data and conducts a thorough literature review to understand the concept and its application across industries and nations, as well as to identify any challenges encountered during deployment and any benefits perceived by various industry professionals. Findings: The study's findings indicate that using HR analytics can help businesses build their brand and gain a competitive edge in today's fiercely competitive business environment while also enhancing workforce and employee productivity. This study has significant implications for both literature and HR analytics. Researchers will know more about the factors that contribute to and the mechanisms by which HR analytics improve organisational performance. The author's second claim is that having access to HR technology both facilitates and precedes HR analytics. Finally, concrete data from the literature demonstrates its influence on branding and organisational success.

Abstract

Employee Engagement is a serious concern for many organizations. Performance is quintessential but it lags without engagement. The values and codes for performance and engagement demand to be pronounced and established consistently to develop high performance engagement. Engagement issues and performance lags call to be discussed with transparency to initiate a proactive approach in the lag and lead, of performance engagement. High Performance Engagement, is an amalgamation of employee engagement and performance excellence to accomplish goals and stretch goals, with commitment and passion, beyond compliance. The study aimed to establish the socle of high performance engagement for organizational excellence Using a quantitative method, this study empirically verified the essence of high performance engagement from managers (N=350) in corporate companies. The results indicate that among the dimensions of high performance engagement, the employee-centric approach was perceived as the highest socle of high performance engagement (with a mean of 81.17) and performance strategies were perceived as the lowest (with a mean of 70.01) among the rest. The results evidence that employee focused approach is the predominant dimension for the socle of high performance engagement as perceived by the managers and motivation is the preponderated determinant of high performance in organizations. The results are indicative of an employee-centered approach rather than job centered approach, for organizational performance excellence with latitude on team synergy, and autonomy on performance strategies.

THE IMPACT OF EMOTIONAL INTELLIGENCE ON WORK-LIFE BALANCE IN START-UPS IN HYDERABAD

Jyothika Vemu
Student, PGDM
International School of Management Excellence, Bangalore

Prof. Dr. Sindhu Shantha Nair
Professor
International School of Management Excellence, Bangalore

Abstract

Work–life balance is a concept that includes prioritization between work (career and goals) and lifestyle (health, pleasure, leisure, family, and spiritual development). In broader terms that include "lifestyle balance" and "lifestyle choices". Many companies strongly support their employee's work-life balance through appropriate measures in order to improve employees' loyalty towards the company which fetches the company with better work life and a chance to recruit new employees. The flexibility in working times is the measure and it also influences the employee's private lives, with this there can be an increase in job satisfaction by reducing work stress. This in return helps in employee well-being. A start-up is a new business venture that aims to solve a problem, meet a need, or create value by offering innovative products, services, and solutions. Start-ups typically have limited resources, but have a strong focus on growth and a long-term vision. They are risk-takers. This paper studies the impact of EI on WLB in start-ups in Hyderabad. the work-life balance in start-ups can vary depending on the culture and size of the company. Some start-ups may have a more relaxed approach, while others may require a lot of work hours from their employees.

Keywords: Emotional Intelligence, Work-life balance, Job satisfaction, start-ups, and employee Well-being.

HAPPINESS AT WORKPLACE AS A MEDIATOR OF THE RELATIONSHIP BETWEEN HIGH PERFORMANCE WORK SYSTEM AND TURNOVER INTENTION: EMPIRICAL EVIDENCE FROM HOSPITALITY AND TOURISM INDUSTRY

Prof Shurlly Tiwari
Assistant Professor
International School of Management Excellence, Bangalore

Dr.Ujjal Mukherjee
Professor
Jain (Deemed-to-be-University)

Abstract

This research aims to identify the influence of a high-performance work system and happiness at the workplace on turnover intention among employees in the tourism and hospitality industry. The researcher surveyed a sample of more than 450 hotel workers to test a model that relates the following variables: high-performance work system, happiness at the workplace, and turnover intention. Data were analyzed by using structural equation modeling and Amos 24 version. Research confirmed that a high-performance work system positively influences employees' turnover intention, and there is an impact of happiness at the workplace on decreasing the employees' turnover intention. This study unlocks the relationship between the three variables HPWS, HAW &. From the managerial point of view, the hospitality industry should prioritize the investment in HPWS and HAW as it directly impacts the employees' turnover intention, directly affecting the business's baseline.

Keywords: High-performance work system, happiness at the workplace, turnover intention, hospitality employees

TALENT MANAGEMENT PRACTICES, ROLE OF PERCEIVED ORGANIZATIONAL SUPPORT IMPACTING EMPLOYEE ENGAGEMENT

Dr. Pooja Nagpal
Associate Professor
International School of Management Excellence ISME, Bangalore, India
pooja.nagpaal@gmail.com

Abstract

Employees are most valued assets of any organizations paving a path to success. Talent are the ability, skill and knowledge that employee brings to the organization to effectively perform their job well to achieve the organizational goals. In the current world of "Talent War" talent management is not limited to just acquiring a right talent but rather on deployment, development, engagement and retention of its employees. This study analyzes the drivers of talent management practices and perceived organizational support impacting employee engagement. The study comprises an analysis of data of 457 respondents from IT sector companies from IT hub of Bangalore, India. The result indicates talent management practices and perceived organizational support have a direct influence on employee engagement. The findings imply on theory and practice specifically in enhancing employee engagement using various talent management practices along with perceived organizational support. The study found scope for future research in comparing various sectors using additional independent variables in a longitudinal manner.

Abstract

The research paper aims to deliberate the issues and challenges leading to disruption of global supply chain with special reference to Organic foods and agri-business. The paper also summarizes the global supply chain scenario. The production and supply chain management issues & challenges of the current situation are discussed in the paper and effectively proposes strategies to be incorporated in policies making of Organic Food for strengthening the resilience and sustainability of the system at global level as the authors believe that it is important for current and future food managers and policymakers to understand the current system, structure, institutions, economic, social and environmental forces at play in each sector. The aim of this study was to clarify the ideas of Organic food supply chains and the organic production of food products to indicate some major issues and challenges and suggest their relevant recovery strategies. The paper assess methodological framework consists primarily of a systematic data collection from relevant government/ institutional databases and/or reports (i.e., APEDA, Statistica, IBEF, IFOAM and FiBL). Data were considered eligible for inclusion in the analysis if they were useful to assess in particular: (i) Organic -food demand globally, (ii) the effects on the Organic food supply chain services.The research paper discovers almost 9 recovery strategies such as support from the government, decentralisation of the distribution channels, Block chain technology, Integrated certification process etc for curbing the disruption in the organic food supply globally. In the end, the supply chain should respond and overcome the challenging situation in the organic food supply chain management.

Abstract

This study aims to structure an approach to optimize the distribution process in logistics operations for a Nagpur-based small-scale 3PL service provider and in the process to propose a model for companies in the logistics domain to follow. With an uncertain customer demand, the process of finding the best possible route becomes intricate. A methodology that reduces travel time, distance, transportation costs, inventory carrying costs, and administration costs had to be developed. Two generic requirements are considered in the study. Firstly, a single truck or carrying vehicle delivering to multiple customers. Secondly, a set of fleets traveling to multiple destinations with capacity constraints. For assessing logistics and supply chain difficulties, spreadsheet tools, particularly Microsoft Excel is used with Solver add-in. This study proposes a model to reduce the distance travelled, by which over utilization of resources can be considerably reduced aiming to control the carbon footprint for a sustainable logistics.

Abstract

Many large companies are trying to revamp their commercial organization and prepare themselves for the future. Technology is changing the way consumers live. It is also changing the way customers operate, presenting new opportunities and new competitors. Technology, mobility and the internet have generated empowered customers who are more demanding and move faster. They don't look for a product. Instead, they look for a reliable advisor and an experience in each service. Traditional CPG businesses have had to adapt by combining the physical, offline and the digital, creating new services that we had not previously imagined and new sales capabilities, changing the way of connecting with customers. The objective of this paper is to help you understand how to bring together all commercial services and customer contact points in an innovative, direct, efficient and close way that improves services and drives growth. It also lays emphasis on the impacts on back-office operations like Order-To-Cash, Procure-To-Pay, Logistics, etc. One can learn about the necessary tools, processes and capabilities to support mutual teams to manage business transformation from a traditional sales model to a "digitally enabled" model by ensuring process and structure consistency, standardization, and excellence, while driving customer service improvement and top-line growth.

IMPACT OF ARTIFICIAL INTELLIGENCE ON ADVERTISEMENTS WITH RESPECT TO FMCG PRODUCTS

Dr Rose Kavitha
Professor, New Horizon College of Engineering

Deepa S
New Horizon College of Engineering

Shashank M
New Horizon College of Engineering

Abstract

The advertising industries have started to use AI technology to identify the trends in the market and enables them to use it to predict the future trends in the market take decisions, make budgets and helps identify their target market. AI has a huge impact on quality of any work done as it is done in a better and effective way comparatively to humans. As seen, that AI can dig deep into all types of data simultaneously with different timelines of data hence understanding the customer ideology, mind-set and preference at the best. The advertising industry is always developing. Because of technology developments like artificial intelligence (AI), greater targeting, and dynamic creativity, the way customers connect with companies is changing. In order to interact with audiences more effectively, advertisers can use machine learning. AI enables improved audience targeting and segmentation for advertisers acquired by strata sampling with individual experiences.

The purpose of this research is to understand the implementation of artificial intelligence in the advertising industry, and what impact Artificial intelligence have on advertising industry. Examining the acquired samples from the survey demonstrates that AI is frequently employed in the marketing sector, even though the applications are at the operational level. AI has an impact on each element of the advertising mix, having an effect on both how successfully consumers are supplied and how effectively advertising is organised and managed. In addition, paper also presents the understanding the role of AI in different types of advertising of toothpaste under FMCG products.

THE IMPACT OF HYBRID WORKING ON GEN Z AND TALENT MANAGEMENT

Sindu Akilesh
Head of Department
Department of Management New Horizon College Kasturinagar
sindu.nandakumar@gmail.com

Abstract

The year 2020 will never be overlooked within the history of this world. The widespread was uncommon in ways no one seem have ever envisioned. Inside fair six months of its approach, individuals all around the globe were constrained to sit at domestic. This research article points to move forward the information on Gen Z as workers inside workforce and within the working environment, as well as on the most thematic patterns that drive the investigate on the subject. The research study focuses on HR analytics, used and how the suitable candidates in a short period are identified and better decisions are made during recruitment thereby contributing to the company's growth. The study focuses on how the hybrid work mode has affected the employee's leadership and Talents for the organization. The main core areas of research study focused around Gen z, Workplace Management, attitudes and Career Planning. The study focuses on the need of and further development in the work force on the major aspects of this generation and the labor market. The investigation has gone into rethink the culture of a work force that is no longer confined to an office full –time. The study has shown that most Gen z employees prefer Work from home despite companies calling back to office. How the employee's talents can be enhanced through remote working mode is also being analyzed.

Keywords: Attitude, Career Planning, Gen z , HR analytics ,Leadership, Talent Management, Workplace Management.

Abstract

The current available modern technology has made possible for us to have many more volunteers to participate in the conservation of our environment and help in the sustainable development. This allows for providing opportunities to people to contribute to the society. This has brought around an expanding number of versatile phone-based citizen science ventures that are outlined to get to these gadget highlights as well as to reach diverse client bunches, over distinctive venture lengths, and with diverse points and objectives. Here by integrating machine learning and predictive analysis, we can bring to life the basic idea of having people volunteer in these programs to help the environment. The Sainik application will help in accommodating all these ideas to fulfill the desire to help preserve our environment. It also provides people especially the youth to contribute to the safekeeping of our environment. Our experiments show that number of people volunteering have reduced by 1% in last 5 years and it is our goal to help improve that statistic. The major reason for this is not the lack of willingness of people to volunteer but the lack information of events requiring such help for both the organizers and the volunteers. The main purpose of this application is to help the environment while providing opportunities to the public and building a better place.

Abstract

Cyber Defense for any organisation has become a priority these days where the world is moving towards virtual communications and business happening among organisations globally. Critical areas to focus are breach detection and breach response. Taking a proactive approach to cyber security (CS) will enable us to avoid damaging and disruptive cyber attacks. Cyber attacks target the IT resources, leading to a tarnished and irreparable organisational image, loss of valuable data added with unproductive downtime. Organisations with proper cyber defense techniques will be able to conduct continuous business while facing persistent threats and sophisticated attacks. Availability of low cost powerful handheld devices coupled with low cost high speed data has led to deeper penetration of the internet. Changes in global scenarios dictated by pandemic are acting as catalysts for work from home , flourishing e-commerce and other mobile-app based delivery systems. Aggressive promotion of digital payments led by new age fintech startups, digital push by government incentivisation of digital payments, e-governance all together have fueled the exponential growth of the internet. However, this growth has also brought a plethora of cyber, ransomware and phishing attacks etc. Global data shows exponential growth of cyber attacks in this period of pandemic. Safeguarding intellectual property and Personal Identifiable Data (PID) in an organisation is very important. This paper discusses proactive implementation of various Cyber defense tools and methodologies for safeguarding IT assets and in turn mitigate cyber risks. These methodologies help organisations improve network integrity and availability, rectify numerous flaws, including misconfiguration of the security settings, analysing security gaps and vulnerabilities and taking remedial actions. This paper discusses the various steps and implementation of frameworks, methodologies undertaken by authors to ensure the three triads of Confidentiality, Integrity and Availability of information and also brings the importance of third party audits and certifications of the organisation in the field of information security.

Abstract

For a person to be physically, psychologically, and socially healthy, having a positive outlook on life is essential. Money alone won't make your life peaceful unless you also have peace of mind. In today's competitive society, when everyone is racing to the finish line, many other considerations are being carelessly disregarded. Stress, worry, and other issues among others all harm mental health. In order to address the aforementioned issue, this research suggests early detection and assistance for problems encountered in identifying a person's mental state. The system consists of 2 modules namely - 1) Facial Emotion Detection 2) Assistance. The output of all the models is combined and by further analysis, the final outcome is given in the form of prediction of the user's state of mind and also further assistance to enhance their mood.

REDEFINING MANAGEMENT EDUCATION

PERCEPTION OF ACADEMICIANS ABOUT RESEARCH ENVIRONMENT IN MANAGEMENT INSTITUTIONS

Dr. Vaishali Mrunal Ajotikar
Assistant Professor
IndSearch Institute of Management Studies & Research
vaishali.ajotikar@gmail.com

Dr. Mrunal Vilas Ajotikar
Assistant Professor
College of Agriculture, Pune
mrunal.ajotikar@gmail.com

Abstract

Quality plays a very vital role in signifying the credibility of the service provider. Academic institutions act as educational service providers to the students. The mushrooming of management institutes in India created an issue of question of quality mark and recognition. This necessitated gaining a Quality seal for the management institutes. Accreditation for an institute paves a mark of credibility. NAAC, NBA, NRIF are the accreditation bodies in India. The quality assurance governing bodies judge certain parameters for the institutes and proceed for gradation. This gradation embarks as a quality status symbol for these institutes. There are different criteria for gradation. One of the important aspects in these parameters is the faculty contribution in research. This research paper intends to explore the research environment provided to the faculties by the management institutes. It aims to examine the support extended by the institution through different aspects.. The constraints faced by teaching fraternity in pursuing research are examined and suggestions to overcome them are provided. The data is collected by both, primary and secondary sources. Primary source includes survey schedule (Google form) and secondary includes the journals, books, and websites. The support system from institution in terms of Allowance/ (travel), registration fees, Publication fees, Conference/seminar/FDPs, leave or outstation duty is explored. The responses for attributes like, managing time for research activities with other additional responsibilities, financial and non -financial support from institution are explored. 48.19 percent of respondents are of opinion that, research activities become very stressful, as managing time with other routine academic/ official work becomes a challenging task. This is managed many a times by sacrificing family time, sleepless nights and extending work hours. The research environment in management institutes seems to be on a lower note. The fair recruitment policies, optimum staff retention and support from management institutes will definitely change the research scenario.

cbvk123@gmail.com

Abstract

It was presumed that teaching effectiveness, self-efficacy, and continuous professional development have the power to change professional commitment owing to their cumulative nature in terms of thinking, acts, and realities. These ideas were also supported by previous research which advocated continuous professional development as a classical source of professional commitment because continuous professional development has the power to change oneself with strategies that facilitate the transfer of training throughout the life of a professional. This study examines the relationship between leadership style, self-efficacy, and professional development in higher education institutes in India. The study instrument used for this research is a questionnaire which was shared through an online medium. The population for the study consisted of academicians from higher educational institutes. The study's major finding indicates that the gender of academicians does not differ in leadership practices, self-efficacy or professional development. There is a positive relationship between leadership practices and self-efficacy and professional development.

Keywords: Leadership style, self-efficacy, professional development

THE USE OF TECHNOLOGY TO ASSESS STUDENT PERFORMANCE IN HIGHER EDUCATION INSTITUTIONS

Abstract

The purpose of this paper is to review existing literature on the application of technology-based student assessment processes, with a particular focus on artificial intelligence-based student assessment practices. We gained a deeper understanding of the current trends in student assessment processes as a result of this. The literature reveals a number of possibilities for incorporating digital assessment into educational systems. Secondary research also demonstrated the possibility of integrating artificial intelligence (AI) into students' teaching and learning processes. However, there is a gap between theory and implementation in Indian higher education. In order to gain a better understanding of how real users perceive technology and AI-based student assessment, a qualitative study was conducted. Participants in the study were stakeholders in the Indian management education system. Faculty and students from Indian management institutions of national importance as well as affiliated and autonomous institutions was included in the study. The study revealed faculty and students' perceptions regarding the challenges and benefits of digital and artificial intelligence-based student assessment processes. Based on the findings of this research management and policy makers can address inhibitions expressed by faculty and students before considering the digitization of student assessment processes.

INFLUENCE OF METHOD OF TEACHING ON THE LEARNING OUTCOME OF STUDENTS

Pious Thomas
Ph.D Scholar
Faculty of Management Studies ICFAI University, Jharkhand
dr.pious@gmail.com

Dr. Sudipta Majumdar
Associate Professor
Faculty of Management Studies, ICFAI University Jharkhand
sudiptam16@iujharkhand.edu.in

Abstract

This study is to find out the effectiveness of different methods of teaching on the learning outcome of the students based on Bloom's Taxonomy. Questionnaires were used to collect data from students on their experience with the use of the Case Study method. The case study teaching method has a higher rate in both empirical and perceived effectiveness of the learning outcome based on Bloom's Taxonomy. The Socratic Method of teaching is a shared dialogue between the teacher and the students in which both are responsible for pushing the dialogue through questioning. The "teacher," or leader of the dialogue, asks probing questions in an effort to expose the values and beliefs which frame and support the thoughts and statements of the participants in the inquiry [Rob Reich, 2003]. The study conducted measures the effectiveness and its intersectionality between education and business (Business Studies) and has been widely used in higher education institutions especially the management studies to facilitate effective learning across a variety of subjects like Marketing, Human Resource Management, Organizational Behaviour, Financial Management, and Business Management, etc. The study has found that the Case Method is useful for most of the subjects in Management, especially Marketing, Human Resource Management, Finance, and Business Ethics. It is also observed that the Case Method helps in remembering the knowledge created through their actions and behaviour.

Key Words: Case Method, Socratic Method, Project Based Learning, Bloom's Taxonomy, Learning Outcome, E-pathshala, Collaborative Skills

ABOUT INTERNATIONAL SCHOOL OF MANAGEMENT EXCELLENCE (ISME), BANGALORE

ISME is a leading business school offering excellent education through a student-focused culture of excellence, international outlook, entrepreneurial thinking and industry alignment. It was founded in 2006 by alumni from Carnegie Mellon University, Purdue, and Wharton, USA. ISME has always been at the forefront of quality education, with the vision of nurturing holistic, socially responsible and competent professionals. ISME has been ranked as one of the top B-Schools in Bangalore and top 1% B-Schools in India.

At present ISME offers undergraduate, postgraduate and Doctoral programs in Management. Our lush green campus at Sarjapur Main Road is an ideal ambience for study and research. The Institute constantly endeavours to expose its students to various methods of learning, like industry visits, interaction with industry experts, participation in seminars, case study etc. so that they become successful in their journey as they move from campus to the next phase of their career."

Practice, Progress, and Proficiency in Sustainability (PPPS) Book Series

Ayman Batisha
International Sustainability Institute, Egypt

ISSN:2330-3271
EISSN:2330-328X

Mission

In a world where traditional business practices are reconsidered and economic activity is performed in a global context, new areas of economic developments are recognized as the key enablers of wealth and income production. This knowledge of information technologies provides infrastructures, systems, and services towards sustainable development.

The **Practices, Progress, and Proficiency in Sustainability (PPPS) Book Series** focuses on the local and global challenges, business opportunities, and societal needs surrounding international collaboration and sustainable development of technology. This series brings together academics, researchers, entrepreneurs, policy makers and government officers aiming to contribute to the progress and proficiency in sustainability.

Coverage

- Global Content and Knowledge Repositories
- Global Business
- Strategic Management of IT
- Technological learning
- Knowledge clusters
- Socio-Economic
- Outsourcing
- Green Technology
- Eco-Innovation
- E-Development

IGI Global is currently accepting manuscripts for publication within this series. To submit a proposal for a volume in this series, please contact our Acquisition Editors at Acquisitions@igi-global.com or visit: http://www.igi-global.com/publish/.

Table of Contents

Preface.....xviii

Chapter 1
Assessing the Operational Effectiveness of Chemical Companies in Advancing E-Waste Management and Development..... 1
Sahini Reddy Pulla, Woxsen University, India
Prakhyath Kandula, Woxsen University, India

Chapter 2
Environmental Impacts of E-Waste: Pollution and Resource Depletion 12
Rajeev Kumar, Manav Rachna International Institute of Research and Studies, Faridabad, India
Arti Saxena, Manav Rachna International Institute of Research and Studies, Faridabad, India
Jyoti Chawla, Manav Rachna International Institute of Research and Studies, Faridabad, India
Vijay Kumar, Manav Rachna International Institute of Research and Studies, Faridabad, India

Chapter 3
E-Waste Collection and Recycling Best Practices and Innovations..... 33
Pathapati Preethi, Woxsen University, India
Thotakura Deepak, Woxsen University, India
Siddadapu Venkata Anusha, Woxsen University, India
D. Bhagya, Sapthagiri College of Engineering, India

Chapter 4
E-Waste Dilemma: Unravelling the Heath and Equity Issues..... 44
Dibya Nandan Mishra, Department of Management Studies, National Institute of Technology, Silchar, India
Bhairab Chandra Patra, Indian Institute of Management Sambalpur (IIM Sambalpur), India

Chapter 5
E-Waste Management: A Significant Solution for Green Computing 56
K. Dinesh Kumar, Amrita Vishwa Vidyapeetham, India
Dipalee Divakar Rane, D.Y. Patil College of Engineering, India
Appalaraju Muralidhar, Vellore Institute of Technology, Chennai, India
Sam Goundar, RMIT University, Australia
P. Viswanatha Reddy, Viswam Engineering College, India

Chapter 6
E-Waste Management for Sustainable Development: A Case of Private Commercial Banks in Bangladesh 74
Md. Shafiqul Islam, International University of Business Agriculture and Technology, Bangladesh
A. K. Md. Jawadul Haque, Fast Security Islami Bank Limited, Bangladesh

Chapter 7
E-Waste Management in Developing Countries: Current Practices, Challenges, Disposal, and Impact on Human Health and Environment 90
Laxmi Kant Bhardwaj, Amity University, Noida, India
Prangya Rath, Amity University, Noida, India
Rajat Tokas, Amity University, Noida, India

Chapter 8
Economic Perspectives: Opportunity and Challenges in E-Waste Management 103
Avula Jhansy, Woxsen University, India
Renuka Oladri, Woxsen University, India
Bodapatla Sindhu Priya, Woxsen University, India
Bhanu Prakash Saripalli, Woxsen University, India

Chapter 9
E-Waste Reduction Methods in Sustainable Ways 122
Deekshitha Lingareddy, Woxsen University, India
Thanmayee Isanaka, Woxsen University, India
C. Dinesh, Woxsen University, India
K. V. Rajesh Kumar, Woxsen University, India

Chapter 10
Extended Producer Responsibility (EPR) and E-Waste Management: A Roadmap for Entrepreneurs 136
Bhairab Chandra Patra, Indian Institute of Management, Sambalpur (IIM Sambalpur), India
Dibya Nandan Mishra, Department of Management Studies, National Institute of Technology, Silchar, India

Chapter 11
Equity-Driven Solutions: Harnessing IoT Technology to Mitigate Health Risks and Bridge Gaps in E-Waste Management 146
C. V. Suresh Babu, Hindustan Institute of Technolgy and Science, India
C. S. Akkash Anniyappa, Sri Sivasubramaniya Nadar College of Engineering, India
Anamanamudi Sai Karthik, Hindustan Institute of Technology and Science, India
Sekhar Babu, Hindustan Institute of Technology and Science, India
Yedlapalli Sai Durga Pavan, Hindustan Institute of Technology and Science, India
Ch Bala Brahanandam, Hindustan Institute of Technology and Science, India

Chapter 12
Fostering Sustainability: A Review on E-Waste 164
Afaq Ahmad, Woxsen University, India
P. V. Satya Prasad, Woxsen University, India

Chapter 13
From Waste to Wealth: Global Perspectives on Effective Management of Electronic Equipment Waste Towards Sustainable Development Goals (SDGs) 186
Sharuti Choudhary, Woxsen University, India

Chapter 14
Nanotechnology for Sustainability 205
Yashaswini Reddy Challa, Woxsen University, India
Nandaram Priyanka, Woxsen University, India
S. Preethi Lahari, Woxsen University, India
Elesetty Surya, Woxsen University, India

Chapter 15
Opportunities and Challenges in Solar Photovoltaic Waste Management 217
Bhanu Prakash Saripalli, Woxsen University, India
Adip Krishna Guduru, Woxsen University, India
Jayaditya Reddy Yeruva, Woxsen University, India

Chapter 16
Sustainable E-Waste Reduction Methods and Models 239
B. Swathi, G. Pulla Reddy Engineering College, Kurnool, India
G. Yamini, National College (Autonomous), Tiruchirappalli, India
R. Sasikala, National College (Autonomous), Tiruchirappalli, India
Mary Teresa, Gurunanak Institution Technical Campus, India
D. Jagadeesan, The Apollo University, Chittoor, India
Venkata Reddy Yasa, Woxsen University, India

Chapter 17
Sustainable E-Waste Management: Present Situation, Emerging Solutions, and Future Trends 254
Ishaan Dawar, DIT University, India
Sakshi Negi, DIT University, India

Chapter 1
Assessing the Operational Effectiveness of Chemical Companies in Advancing E-Waste Management and Development..... 1
Sahini Reddy Pulla, Woxsen University, India
Prakhyath Kandula, Woxsen University, India

This chapter studies Indian chemical sector efficiency and productivity from a sustainable development perspective. This study explores Indian chemical companies' innovative potential, operational efficiency, financial and human resource management techniques, and successes and challenges. The analysis focuses energy efficiency in production to reduce environmental harm. It emphasises the need for good waste management to reduce electronic waste and promote recycling. The report also emphasises the necessity of competent labour and solid financial management for corporate growth. Finally, it stresses how technology and new industrial methods boost efficiency. Using academic and empirical data, the chapter provides policymakers, industry executives, and researchers with valuable ideas to improve the sustainability and efficiency of the Indian chemical sector. It emphasises the need for collaboration to develop and implement sustainable economic and environmental solutions.

Chapter 2
Environmental Impacts of E-Waste: Pollution and Resource Depletion 12
Rajeev Kumar, Manav Rachna International Institute of Research and Studies, Faridabad, India
Arti Saxena, Manav Rachna International Institute of Research and Studies, Faridabad, India
Jyoti Chawla, Manav Rachna International Institute of Research and Studies, Faridabad, India
Vijay Kumar, Manav Rachna International Institute of Research and Studies, Faridabad, India

Electronic materials/components that have reached the end of their functional life cycle are considered electronic waste (e-waste). Electronics contain potentially hazardous or toxic elements, which many people are unaware of; thus, they must be handled with care when not required anymore. Every product created leaves harmful effects on environment. Copper, gold, silver, platinum etc. are rich resources found in e-waste that can be recovered and utilized again. Loss of these resources, however, results from incorrect disposal, which accelerates the depletion of natural resources. Landfill and burning of e-waste

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

are responsible for various types of pollution and a lot of impact on human health. New technologies have been applied to manage these wastes at low cost and sustainable ways. However, there are numerous difficulties and challenges in managing various types of waste. The aim of this chapter is to classify various types of waste and their impact on the environment. It also explores the management of waste by new technologies and challenges faced at the time of management of waste.

Chapter 3
E-Waste Collection and Recycling Best Practices and Innovations 33
Pathapati Preethi, Woxsen University, India
Thotakura Deepak, Woxsen University, India
Siddadapu Venkata Anusha, Woxsen University, India
D. Bhagya, Sapthagiri College of Engineering, India

Over the last two decades, the usage of electronic equipment in human life has been increasing dramatically and the life span of electronic products is short. E-waste is growing in the world, because they do not biodegrade easily, and most of them are not reused or recycled. In this chapter, the authors have explained the best practices and innovative approaches in e-waste collection and recycling, aiming to address environmental concerns, conserve resources, and promote sustainable waste management. The main problem is the release of toxic chemicals like lead, chromium, manganese, and polybrominated diphenyl ethers (PBDEs) from e-waste leads to many environmental and health issues as most recycling facilities are located in low-income areas. In those mainly women and children often participate in e-waste recycling as a form of income and are frequently exposed to hazardous pollutants. Some of the health effects include impaired learning and memory functions; altered thyroid, estrogen, and hormone systems; and neurotoxicity.

Chapter 4
E-Waste Dilemma: Unravelling the Heath and Equity Issues 44
Dibya Nandan Mishra, Department of Management Studies, National Institute of Technology, Silchar, India
Bhairab Chandra Patra, Indian Institute of Management Sambalpur (IIM Sambalpur), India

The proliferation of electronic devices in today's digital age, while ushering in technological advancements, has given rise to a pressing global issue: the exponential accumulation of electronic waste (e-waste). Not only is this a grave environmental concern, but its ramifications also spill over into health and equity domains. Delving into the social dimensions of e-waste, this chapter seeks to spotlight the pressing health risks associated with improper e-waste management and the equity concerns inherent in its production, disposal, and recycling. Drawing from various studies, the chapter posits that addressing the e-waste conundrum requires a multi-pronged approach, emphasizing the importance of global collaboration, regulatory frameworks, public awareness, and technological interventions.

Chapter 5
E-Waste Management: A Significant Solution for Green Computing 56
K. Dinesh Kumar, Amrita Vishwa Vidyapeetham, India
Dipalee Divakar Rane, D.Y. Patil College of Engineering, India
Appalaraju Muralidhar, Vellore Institute of Technology, Chennai, India
Sam Goundar, RMIT University, Australia
P. Viswanatha Reddy, Viswam Engineering College, India

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Green computing can be described as efficient resource management in distributed computing environments such as cloud, fog, and edge computing environments. In green computing, green refers to the eco-friendly environment with environmental responsibility to efficiently manage the computing resources. Mainly, two significant reasons are associated with global warming issues from the distributed computing perspective. They are high power consumption of cloud datacenters and high CO2 emission rate. According to many survey reports, every year, cloud datacenters alone produce nearly 90 million metric tons of CO2 into the environment, and now, this high power consumption of datacenters has become one of the primary reasons for global warming issues. Also, it stated that this CO2 emission rate would increase by 8% every year if it did not identify proper control measurements. Therefore, it is crucial to enhance e-waste management by increasing the efficiency of computing resource usage and minimizing high power consumption, high CO2 emission rate, inefficient recycling policies, etc.

Chapter 6
E-Waste Management for Sustainable Development: A Case of Private Commercial Banks in Bangladesh 74
Md. Shafiqul Islam, International University of Business Agriculture and Technology, Bangladesh
A. K. Md. Jawadul Haque, Fast Security Islami Bank Limited, Bangladesh

Continuous e-waste generation causes harms to the environment and the economy. This study aims to explore e-waste management systems in the private commercial banks in Bangladesh and ways to reduce e-waste generation and sustainable solutions of e-waste management. The rapid economic growth and establishment of commercial private banks has created a market for computers, consumer electronics, and household appliances in Bangladesh. This study looks into the generation of e-waste growth rate and remedial measures. The e-waste is harmful to human health and for the environment. Barium and lithium are examples that affect brain, heart, liver, kidneys, and skeletal system. It's critical to raise awareness about the dangers of inappropriate e-waste disposal. E-waste must be recycled properly to have a low environmental impact. It was found that banking generated 2176.30 tons of e-waste. Results showed statistically significant growth rate. Buy back guarantee and bring your own device may be options for e-waste reduction.

Chapter 7
E-Waste Management in Developing Countries: Current Practices, Challenges, Disposal, and Impact on Human Health and Environment 90
Laxmi Kant Bhardwaj, Amity University, Noida, India
Prangya Rath, Amity University, Noida, India
Rajat Tokas, Amity University, Noida, India

Information and telecommunications technology (ITT) has expanded into many aspects of modern life and has positively affected human life even in the most remote areas of developing countries. The rapid growth in ITT has led to an improvement in the capacity of computers but simultaneously to a decrease in the product's lifetime as a result of which increasingly large quantities of e-waste are generated annually. It contains hazardous components that if it is not properly managed can have adverse environmental and health effects. The management of e-waste poses significant challenges in developing countries. Due to the lack of adequate infrastructure, e-waste is burned or dumped in open areas. Informal and inefficient recycling practices are generally employed which further exacerbate pollution and health risks. So, the implementation of e-waste management, adequate recycling, and waste disposal facilities have become

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

crucial concerns. This chapter reviews the concept of e-waste generation, challenges, disposal, and its impact on human health and environment in detail.

Chapter 8
Economic Perspectives: Opportunity and Challenges in E-Waste Management 103
Avula Jhansy, Woxsen University, India
Renuka Oladri, Woxsen University, India
Bodapatla Sindhu Priya, Woxsen University, India
Bhanu Prakash Saripalli, Woxsen University, India

Managing electronic trash (or "e-waste") offers both opportunities and challenges in the modern era. There are excellent opportunities for recycling and recovering valuable resources via good management as electronic devices and technology use grow. Lowering the demand for new materials and increasing employment possibilities in the recycling and waste management sectors can result in cost savings. But controlling e-waste can be difficult. Due to the toxic compounds, including lead and mercury, that are present in electronic gadgets, the immense amount of electronic consumption has the potential to overwhelm the waste management infrastructure that is already in place, causing environmental degradation. Adequate regulatory frameworks and efficient e-waste policy enforcement are essential to addressing the issues related to e-waste management. This study explored the potential and barriers to promoting sustainable practices to analyze the economic aspects of managing e-waste.

Chapter 9
E-Waste Reduction Methods in Sustainable Ways..... 122
Deekshitha Lingareddy, Woxsen University, India
Thanmayee Isanaka, Woxsen University, India
C. Dinesh, Woxsen University, India
K. V. Rajesh Kumar, Woxsen University, India

The problem of e-waste generation is increasing day by day in India and worldwide. This rise in e-waste poses damage to public health and the environment as a whole. Toxic substances and poor disposal of e-waste significantly affects plant and animal lives. When it comes to e-waste generation, India is the fastest growing country when it comes to electronics use. Various policy measures and initiatives have been introduced over the past decades in India related to e-waste management. It is still a source of distress and unsolved matter. Sustainable development needs a lot of effort and well-organized e-waste management can be possible only with a systematic waste collection system, accurate estimations, and early forecasting. This chapter presents existing e-waste scenarios in India that are posing significant challenges to meet sustainable development goals and highlights some of the sustainable ways to reduce e-waste. This chapter serves as a basis for awareness and knowledge about the potential harms of e-waste to human health and the environment to promote glsustainabilitynable.

Chapter 10
Extended Producer Responsibility (EPR) and E-Waste Management: A Roadmap for Entrepreneurs 136
Bhairab Chandra Patra, Indian Institute of Management, Sambalpur (IIM Sambalpur), India
Dibya Nandan Mishra, Department of Management Studies, National Institute of Technology, Silchar, India

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Electronic trash (e-waste) creation has increased exponentially as a result of the widespread use of electronic devices and the quick rate of technical development, posing a serious environmental concern. Extended producer responsibility (EPR) has become a crucial tactic for addressing the negative social and environmental effects of e-waste. This chapter provides entrepreneurs with a detailed roadmap for navigating the challenges of EPR adoption in e-waste management. For entrepreneurs, the application of extended producer responsibility in the management of e-waste poses both a difficulty and an opportunity. By embracing the EPR precepts and following the recommended roadmap, entrepreneurs may significantly minimize the environmental impact of e-waste, promote resource conservation, and create a more sustainable future.

Chapter 11
Equity-Driven Solutions: Harnessing IoT Technology to Mitigate Health Risks and Bridge Gaps in E-Waste Management 146
C. V. Suresh Babu, Hindustan Institute of Technolgy and Science, India
C. S. Akkash Anniyappa, Sri Sivasubramaniya Nadar College of Engineering, India
Anamanamudi Sai Karthik, Hindustan Institute of Technology and Science, India
Sekhar Babu, Hindustan Institute of Technology and Science, India
Yedlapalli Sai Durga Pavan, Hindustan Institute of Technology and Science, India
Ch Bala Brahanandam, Hindustan Institute of Technology and Science, India

This chapter delves into the global e-waste challenge, emphasizing health risks and equity issues. Positioned within the book's theme, it justifies the relevance of IoT-driven solutions for addressing e-waste's social impacts. The discussion navigates through health risks and disparities in developing nations. IoT-enabled e-waste monitoring is explored, detailing how sensors create real-time databases for precise tracking. Analysis of IoT data assesses health risks, identifies contamination hotspots, and facilitates equitable resource allocation. The chapter highlights IoT's role in tailored awareness campaigns, particularly for underserved populations, and underscores its impact on policy development and enforcement. The conclusion summarizes vital insights, emphasizing the imperative of awareness, regulation, responsible recycling, and global collaboration in tackling e-waste's societal repercussions. This chapter serves as a crucial resource for policymakers, practitioners, and researchers engaged in the effective management of e-waste's social consequences.

Chapter 12
Fostering Sustainability: A Review on E-Waste 164
Afaq Ahmad, Woxsen University, India
P. V. Satya Prasad, Woxsen University, India

The unpredictable chemical components of e-waste pave the way to have severe impacts on ecosystems and human health. Electronic waste (e-waste) has been becoming a potential threat to live in a conducive environment for mankind. The basic cause for concern for this incessant e-waste seems to be the rapidly changing advanced technologies and low production cost. This chapter analyses to what extent e-waste is creating panic for sustainable societies and addressing sustainable development goals. To fulfil it, the researchers conducted an extensive literature review to muster frame of mind from relevant disciplines and did content analysis of the reports pertaining to e-waste and sustainability published at multiple digital platforms. To reduce the exorbitant amount of e-waste, e-waste management methods (recycling, etc.) are of utmost importance. Technically speaking, the developed countries are the main source of e-product production and e-waste generation.

Chapter 13
From Waste to Wealth: Global Perspectives on Effective Management of Electronic Equipment Waste Towards Sustainable Development Goals (SDGs) 186
Sharuti Choudhary, Woxsen University, India

The exponential surge in global e-waste has emerged as a critical social, ecosystem, and public health matter. Within this chapter, the authors delve into the multifaceted economic, social, educational, legal, and technological challenges entwined with electronic equipment waste management. It accentuates the imperativeness of devising effective strategies to overcome these hurdles. Insufficient management practices culminate in the emission of perilous substances, thus exacerbating pollution levels and health risks. Numerous nations have adopted regulations and policies to govern the people and proper disposal of electronic equipment waste. In this chapter, the authors explore the utmost significance of managing electronic equipment waste in connection with the Sustainable Development Goals (SDGs). The discourse encompasses exemplary practices and strategies. Conclusively, this chapter emphasizes the paramount importance of robust policies and continuous innovation in achieving sustainable electronic equipment waste management and making valuable contributions towards the realization of the SDGs.

Chapter 14
Nanotechnology for Sustainability 205
Yashaswini Reddy Challa, Woxsen University, India
Nandaram Priyanka, Woxsen University, India
S. Preethi Lahari, Woxsen University, India
Elesetty Surya, Woxsen University, India

Nanotechnology is one of the most relevant technical factors that have applications in different types of industrial sectors, and it seems to have a consistent scope of technical innovation that focuses on technical derivation with sustainable outcomes. In this study, the perception of nanotechnology and its prominent usage with potential outcomes in different industrial activities has been derived. In addition to this, the study has also reflected on the advantages along with some of the negative factors that come with nanotechnology and its integration. The study helps to evaluate the perception of understanding nanotechnology along with the purpose of evaluating the correlation between the social specifications and commercial attributes.

Chapter 15
Opportunities and Challenges in Solar Photovoltaic Waste Management 217
Bhanu Prakash Saripalli, Woxsen University, India
Adip Krishna Guduru, Woxsen University, India
Jayaditya Reddy Yeruva, Woxsen University, India

With the current global overexploitation and depletion of coal resources, it has become necessary to shift toward renewable energy sources to fulfil the world's energy requirements. Among these alternatives, solar energy stands out as the most promising solution. The sun, known for its life-enhancing properties, showers the Earth with an abundant amount of energy. In the case of India, for instance, the country receives an impressive 5000 trillion kWh of energy annually, with a substantial portion of the nation enjoying daily solar radiation ranging from 4 to 7 kWh per square meter. India has demonstrated worthy expertise in harnessing solar energy. Following coal extraction, solar energy developed as the most dependable and widespread energy source capable of meeting the world's energy demands. The study

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM

addresses the essential facts of solar waste management as it currently exists in India in addition to the challenges related to managerial policy. Waste management will improve as solar panel installations expand.

Chapter 16
Sustainable E-Waste Reduction Methods and Models..... 239
B. Swathi, G. Pulla Reddy Engineering College, Kurnool, India
G. Yamini, National College (Autonomous), Tiruchirappalli, India
R. Sasikala, National College (Autonomous), Tiruchirappalli, India
Mary Teresa, Gurunanak Institution Technical Campus, India
D. Jagadeesan, The Apollo University, Chittoor, India
Venkata Reddy Yasa, Woxsen University, India

This study aims to examine strategies and approaches that are designed to reduce the production of electronic waste. The primary methodologies encompass the development of electronic goods with enhanced durability and repairability, the facilitation of consumer education and awareness, the implementation of circular economy initiatives such as refurbishing and remanufacturing, the establishment of take-back and recycling programs, and the enactment of legislative and policy measures. These methods collectively contribute to the reduction of electronic waste by prolonging the lifespan of products, fostering responsible consumption, advocating for reuse and recycling, and establishing a regulatory framework that supports these efforts. Through the implementation of these strategies, it is possible to mitigate the environmental consequences associated with electronic waste, thereby fostering a more sustainable and resource-efficient electronic industry.

Chapter 17
Sustainable E-Waste Management: Present Situation, Emerging Solutions, and Future Trends..... 254
Ishaan Dawar, DIT University, India
Sakshi Negi, DIT University, India

E-waste, which is generated rapidly owing to technological advancements in information technology, has led to a significant rise in the utilization of electronic devices such as laptops, mobile phones, headphones, and tablets. As these devices become outdated and less useful, they contribute to the growing volume of electronic waste and pose significant threats to the environment and human health. To mitigate the negative impacts of increasing global electronic waste (e-waste), it is crucial to implement proper e-waste management. However, these approaches require substantial labour and resources and are not considered perfect solutions. Fortunately, technological progress has provided new opportunities for more efficient e-waste management. Many countries are now exploring advanced methods, such as the internet of things (IoT) and artificial intelligence (AI), to manage e-waste. However, they face various challenges when implementing these technologies. This study aimed to portray the current situation, emerging trends, and future of smart e-waste management.

Chapter 18
Technological Advancements in E-Waste Management and Resource Recovery 275
Jayaditya Reddy Yeruva, Woxsen University, India
Adip Krishna Guduru, Woxsen University, India
Bhanu Prakash Saripalli, Woxsen University, India

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

As the world digitizes rapidly, there has been an exponential surge in the generation of electronic waste (e-waste), and it poses a grave threat to our planet due to its hazardous components, improper disposal methods, and the sheer volume being generated. Adding to the problem, e-waste recycling is highly complex and tedious, making it difficult to keep up with the pace of generation as well as leading to wastage of various precious metals. The solution involves using advanced technology to develop and optimise a multi-step resource recovery system. This chapter emphasizes the importance of engineers in tackling e-waste and how cutting edge technology can have a significant positive impact on society without necessarily requiring on-site involvement. The research aims to explore innovative strategies and technologies which will play a vital role in revolutionizing e-waste management, with AI-driven diagnostics, repair guidance, component identification, and value assessment being the future of efficient, effective, and sustainable e-waste recycling.

Chapter 19
Technological Advancements in E-Waste Management Methods and Models 289
M. Rudra Kumar, G. Pullaiah College of Engineering and Technology, India
U. Sivaji, Institute of Aeronautical Engineering, Dundigal, India
N. Badrinath, Vellore Institute of Technology, India
B. Rupa Devi, Annamacharya Institute of Technology and Sciences, India
K. Dinesh Kumar, Amrita Vishwa Vidyapeetham University, India
V. Rajesh Kumar Korupalli, Woxsen University, India

In response to the rise of electronic trash on a worldwide scale, numerous new solutions have emerged. To recover valuable elements from electronic trash, many recycling processes have been developed, including mechanical, chemical, and biological methods. The use of artificial intelligence and machine learning algorithms in automated sorting systems has increased the operational efficacy of e-waste recycling dramatically. Urban mining has gained popularity as a potential method of obtaining precious metals from technological trash. Furthermore, the implementation of extended producer obligation (EPR) rules imposes obligation on producers for the correct management and disposal of their products. These technology advances collectively lead to more sustainable and effective electronic waste management, decreasing environmental impact and aiding the recovery of valuable materials.

Chapter 20
Transitioning Toward a Circular Economy Through E-Waste Management 311
G. Raghunandan, Department of Commerce, Christ University (deemed), Bengaluru, India
Dhanabalan Thangam, Presidency Business School, Presidency College, Bengaluru, India
Shashikala Patil, International School of Management Excellence, Bengaluru, India
B. M. Rama Murthy, Acharya Institute of Management and Sciences, Bengaluru, India
Mohammad Juned, Presidency Business School, Presidency College, Bengaluru, India
Durairaj Duraisamy, School of Management, CMR University, Bangalore, India
Ramakrishna Narasimhaiah, Department of Economics, Jain University, Bengaluru, India
Nandeeswara Rao Ponnada, Department of Economics, Jain University, Bengaluru, India
Ravi V., Department of Professional Studies, Christ University (deemed), Bengaluru, India

This chapter delves into the complexities and recommendations associated with the management of electronic waste, paving the way for a transition towards a circular economy. It underscores the significance of adopting sustainable practices, including eco-friendly product designs, extended producer responsibility, recycling, and remanufacturing. Several challenges are identified, such as the scarcity of

data regarding material concentrations in specific electronic equipment and the absence of universally applicable standard methods for evaluating elemental concentrations in e-waste. The chapter underscores the value of integrating technical support and financial incentives to bolster e-waste management efforts. Furthermore, it highlights the pivotal roles played by the private sector, non-governmental organizations, and government bodies in the effective implementation of these strategies. Collaboration between businesses, governments, and consumers is underscored as essential for establishing a robust circular economy.

Preface

In the ever-evolving landscape of technology and digital innovation, our reliance on electronic devices has reached unprecedented levels, ushering in an era of connectivity and convenience. However, this rapid surge in technological progress has given rise to a formidable environmental challenge: electronic waste, or e-waste. "Sustainable Solutions for E-Waste and Development" stands as a collective endeavor to comprehend and address the intricate interplay between sustainable development and the escalating issue of e-waste.

As editors, we embarked on this journey with a shared commitment to unravel the complexities surrounding e-waste and to present a comprehensive exploration of sustainable solutions. The authors, each a distinguished expert in their field—Rajesh Kumar K V, Hemachandran Kannan, Dmitry Spodarets, Parvez Alam Khan, and Bikash Kumar Pradhan—have brought forth their unique perspectives to create a tapestry of knowledge that transcends disciplinary boundaries.

This book navigates the multifaceted impacts of e-waste, transcending traditional boundaries to illuminate its environmental, social, and economic repercussions. It serves as a beacon, shedding light on the alarming rates of e-waste generation, the hazardous components embedded in electronic devices, and the far-reaching effects on both ecosystems and human health. Through this exploration, we emphasize the urgent imperative for innovative and practical strategies, unveiling insights into effective e-waste management, recycling initiatives, circular economy models, policy frameworks, and technological advancements.

Our intended audience spans a diverse spectrum, including environmentalists, policy makers, industry professionals, researchers, academics, and conscientious individuals interested in the intersection of sustainability and the digital world. We also envision this book as a valuable resource for educators striving to instill knowledge about e-waste and sustainability in their students.

The recommended chapters, thoughtfully curated by our esteemed authors, serve as pillars supporting the overarching theme of sustainable e-waste management. From the foundational "Introduction to E-waste and Sustainable Development" to the forward-looking "Future Trends and Emerging Solutions in Sustainable E-waste Management," each chapter is a crucial building block in understanding and addressing the e-waste challenge.

Chapter 1 initiates our exploration by scrutinizing the efficiency and productivity of the Indian chemical sector through the lens of sustainable development. The study delves into the innovative potential, operational efficiency, and management techniques of Indian chemical companies, emphasizing the need for energy-efficient production to mitigate environmental harm. It underscores the significance of waste management to reduce e-waste and promote recycling. Furthermore, the chapter highlights the essential role of competent labor and sound financial management for corporate growth. It concludes by

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

emphasizing how technology and new industrial methods can enhance efficiency, offering policymakers, industry executives, and researchers valuable insights to enhance the sustainability of the Indian chemical sector through collaborative efforts.

Chapter 2 sheds light on the crucial issue of electronic waste (e-waste) and its environmental impact. Focusing on the hazardous components present in electronic devices, it stresses the importance of proper handling and disposal to prevent environmental harm. The chapter explores the potential recovery of valuable resources from e-waste, such as copper, gold, silver, and platinum. It addresses the consequences of incorrect disposal methods, including the depletion of natural resources and various types of pollution that impact human health. The integration of new technologies for cost-effective and sustainable e-waste management is discussed, along with the challenges faced in waste management. This chapter aims to classify various types of e-waste and their environmental impact, providing a comprehensive understanding of e-waste management and its challenges.

As electronic equipment usage surges, Chapter 3 focuses on the growing issue of e-waste, emphasizing the challenges posed by non-biodegradable electronic products. It discusses the best practices and innovative approaches in e-waste collection and recycling, aiming to address environmental concerns, conserve resources, and promote sustainable waste management. The chapter highlights the release of toxic chemicals from e-waste, leading to environmental and health issues, especially in low-income areas where recycling facilities are often located. The involvement of women and children in e-waste recycling and the associated health risks are explored. This chapter provides insights into effective e-waste collection and recycling strategies to mitigate environmental and health concerns.

In the digital age, the proliferation of electronic devices has given rise to a pressing global issue – e-waste. Chapter 4 explores the social dimensions of e-waste, emphasizing the health risks associated with improper management and the equity concerns in its production, disposal, and recycling. Drawing from various studies, the chapter advocates for a multi-pronged approach to address the e-waste challenge, emphasizing global collaboration, regulatory frameworks, public awareness, and technological interventions. It serves as a call to action, urging readers to recognize the societal repercussions of e-waste and work collectively towards responsible e-waste management for a sustainable and equitable future.

Green computing, a crucial aspect of sustainable development, is explored in Chapter 5. It defines green computing as efficient resource management in distributed computing environments, such as Cloud, Fog, and Edge computing. The chapter highlights the environmental impact of high power consumption and CO2 emissions from datacenters, underscoring the need for efficient e-waste management to minimize these effects. It discusses the role of green computing in reducing the carbon footprint of electronic devices, emphasizing the importance of efficient resource usage, recycling policies, and minimizing environmental impact. This chapter offers valuable insights for industry professionals, researchers, and policymakers aiming to enhance the sustainability of computing environments.

Chapter 6 investigates the challenges posed by continuous e-waste generation in the private commercial banks of Bangladesh. It explores the rapid economic growth and the resultant increase in the generation of e-waste from computers, consumer electronics, and household appliances. The study addresses the harmful effects of e-waste on human health and the environment, focusing on elements like barium and lithium that can affect various bodily systems. The chapter emphasizes the critical need for awareness about the dangers of inappropriate e-waste disposal and advocates for proper recycling to minimize environmental impact. It concludes by highlighting the importance of sound e-waste policies for sustainable development, offering insights into potential solutions for reducing e-waste generation in the banking sector.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Information and telecommunications technology (ITT) has positively impacted modern life but has also led to a surge in e-waste. Chapter 7 delves into the challenges of managing e-waste in developing countries, where inadequate infrastructure often results in improper disposal practices. It highlights the adverse environmental and health effects of e-waste, especially due to informal and inefficient recycling methods. The chapter stresses the crucial need for e-waste management, adequate recycling facilities, and waste disposal infrastructure. By reviewing e-waste generation, challenges, disposal methods, and their impact on human health and the environment, this chapter provides valuable insights for policymakers, practitioners, and researchers involved in effective e-waste management.

Electronic trash, or e-waste, presents both opportunities and challenges in modern times. Chapter 8 explores the potential for recycling and recovering valuable resources from e-waste, leading to cost savings, reduced demand for new materials, and increased employment opportunities in the recycling and waste management sectors. However, the chapter also highlights the challenges in managing e-waste, given the toxic compounds present in electronic gadgets, such as lead and mercury. Adequate regulatory frameworks and efficient e-waste policy enforcement are deemed essential to address the environmental degradation associated with e-waste. The study analyzes the economic aspects of managing e-waste, offering insights into promoting sustainable practices.

Chapter 9 addresses the escalating problem of e-waste generation in India and worldwide. It highlights the damage to public health and the environment caused by toxic substances and improper disposal of e-waste. Despite policy measures and initiatives, e-waste management remains a significant challenge. The chapter emphasizes the need for a systematic waste collection system, accurate estimations, and early forecasting to achieve sustainable e-waste management. By presenting existing e-waste scenarios in India, the chapter aims to raise awareness about the potential harms of e-waste and promote global sustainability. It serves as a foundation for understanding the challenges of e-waste in the context of sustainable development goals.

The exponential increase in e-waste poses significant environmental concerns. Chapter 10 explores the crucial role of Extended Producer Responsibility (EPR) in addressing the negative social and environmental effects of e-waste. Entrepreneurs are provided with a detailed roadmap for navigating the challenges of EPR adoption in e-waste management. The study presents EPR as both a difficulty and an opportunity for entrepreneurs, showcasing how embracing its principles can minimize environmental impact, promote resource conservation, and contribute to a more sustainable future. By analyzing the potential of EPR in the context of e-waste management, this chapter offers valuable insights for entrepreneurs and policymakers alike.

IoT-driven solutions take center stage in Chapter 11, addressing the global e-waste challenge and emphasizing health risks and equity issues. The chapter justifies the relevance of IoT in addressing e-waste's social impacts, discussing its role in real-time data collection, precise tracking, and assessment of health risks associated with e-waste. The discussion navigates through the disparities in developing nations, highlighting the role of IoT in tailored awareness campaigns, policy development, and enforcement. The chapter concludes by emphasizing the imperative of awareness, regulation, responsible recycling, and global collaboration in tackling e-waste's societal repercussions, offering crucial insights for policymakers, practitioners, and researchers.

The unpredictable chemical components of e-waste are scrutinized in this chapter, revealing severe impacts on ecosystems and human health. Chapter 12 analyzes the potential threat posed by e-waste to sustainable societies and development goals, conducting an extensive literature review and content analysis. It emphasizes the importance of e-waste management methods, such as recycling, to reduce

Dhanabalan Thangam (ctdhanabalan@gmail.com)

IP Address: 223.231.178.10

the exorbitant amount of e-waste. By focusing on the contribution of developed countries to e-waste generation, the chapter provides insights into the challenges of sustainable development goals in the context of e-waste.

Chapter 13 explores the multifaceted economic, social, educational, legal, and technological challenges associated with electronic equipment waste management. It emphasizes the need for effective strategies to overcome these challenges, addressing the emission of perilous substances and their impact on pollution levels and health risks. The chapter discusses regulations and policies implemented by nations for the proper disposal of electronic equipment waste, providing insights into exemplary practices and strategies. Conclusively, the chapter underscores the paramount importance of robust policies and continuous innovation in achieving sustainable electronic equipment waste management and contributing to the realization of Sustainable Development Goals (SDGs).

Nanotechnology takes center stage in Chapter 14, evaluating its applications in different industrial sectors and its potential outcomes. The study reflects on the advantages and negative factors associated with nanotechnology and its integration. By evaluating the correlation between social specifications and commercial attributes, the chapter offers a comprehensive understanding of nanotechnology's role in sustainable outcomes. It explores the perception of nanotechnology and its usage, contributing valuable insights to the ongoing discourse on the sustainable application of advanced technologies.

With a focus on renewable energy sources, Chapter 15 explores the role of solar energy in meeting the world's energy requirements. It highlights the significant potential of solar energy, especially in countries like India, and addresses the essential facts of solar waste management. The chapter discusses the challenges related to managerial policy in solar waste management, emphasizing the importance of waste management as solar panel installations expand. By exploring the opportunities and challenges associated with solar waste, the chapter contributes to the broader conversation on transitioning towards sustainable energy sources.

Chapter 16 examines strategies and approaches designed to reduce the production of electronic waste. It outlines methodologies, such as developing electronic goods with enhanced durability, facilitating consumer education, implementing circular economy initiatives, establishing take-back and recycling programs, and enacting legislative measures. These methods collectively contribute to the reduction of electronic waste by prolonging product lifespan, fostering responsible consumption, advocating for reuse and recycling, and establishing a regulatory framework. The chapter emphasizes the importance of these strategies in mitigating the environmental consequences associated with electronic waste, contributing to a more sustainable and resource-efficient electronic industry.

E-waste generation has increased exponentially with the widespread use of electronic devices, posing significant threats to the environment and human health. Chapter 17 explores the current situation, emerging trends, and the future of smart e-waste management. It discusses the challenges faced by countries in implementing advanced methods, such as the Internet of Things (IoT) and artificial intelligence (AI), in e-waste management. The study aims to portray the current state of smart e-waste management, offering insights into the potential benefits and challenges of incorporating IoT and AI technologies to address the growing issue of e-waste.

Chapter 18 emphasizes the importance of engineers in revolutionizing e-waste management through cutting-edge technology. It explores innovative strategies and technologies, including AI-driven diagnostics, repair guidance, component identification, and value assessment, as the future of efficient, effective, and sustainable e-waste recycling. The research aims to explore ways in which technology can play a significant positive role in society without requiring on-site involvement. By examining advanced tech-

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

nology's role in a multi-step resource recovery system, the chapter contributes to the ongoing discourse on sustainable e-waste management.

Chapter 19 delves into the most recent technological advances in electronic waste (e-waste) management approaches and models. It explores various recycling processes, including mechanical, chemical, and biological methods, and discusses the increased operational efficacy of e-waste recycling through the use of artificial intelligence and machine learning algorithms. The study highlights the popularity of urban mining as a method of obtaining precious metals from technological trash. Additionally, the chapter explores the implementation of Extended Producer Responsibility (EPR) rules to promote correct e-waste management and disposal. These technological advances collectively contribute to more sustainable and effective e-waste management, decreasing environmental impact and aiding the recovery of valuable materials.

Chapter 20 provides a comprehensive exploration of the complexities and recommendations associated with the management of electronic waste, advocating for a transition towards a circular economy. It underscores the significance of adopting sustainable practices, including eco-friendly product designs, extended producer responsibility, recycling, and remanufacturing. The chapter identifies challenges such as the scarcity of data on material concentrations and the absence of universally applicable standard methods for evaluating elemental concentrations in e-waste. It emphasizes the value of integrating technical support and financial incentives to bolster e-waste management efforts and underscores the pivotal roles played by the private sector, non-governmental organizations, and government bodies. The collaborative efforts of businesses, governments, and consumers are highlighted as essential for establishing a robust circular economy and addressing the challenges associated with electronic waste management.

We extend our gratitude to the contributing authors for their dedication and expertise, without which this work would not have been possible. As editors, we are honored to present "Sustainable Solutions for E-Waste and Development" as a testament to the collective effort needed to pave the way for a more sustainable and responsible digital future.

May this book inspire thoughtful consideration, informed action, and a shared commitment to building a world where technological progress harmonizes with ecological responsibility.

Chapter 1
Assessing the Operational Effectiveness of Chemical Companies in Advancing E-Waste Management and Development

Sahini Reddy Pulla
Woxsen University, India

Prakhyath Kandula
Woxsen University, India

ABSTRACT

This chapter studies Indian chemical sector efficiency and productivity from a sustainable development perspective. This study explores Indian chemical companies' innovative potential, operational efficiency, financial and human resource management techniques, and successes and challenges. The analysis focuses energy efficiency in production to reduce environmental harm. It emphasises the need for good waste management to reduce electronic waste and promote recycling. The report also emphasises the necessity of competent labour and solid financial management for corporate growth. Finally, it stresses how technology and new industrial methods boost efficiency. Using academic and empirical data, the chapter provides policymakers, industry executives, and researchers with valuable ideas to improve the sustainability and efficiency of the Indian chemical sector. It emphasises the need for collaboration to develop and implement sustainable economic and environmental solutions.

INTRODUCTION

India is currently facing the growing problem of electronic trash (e-waste) because of fast industrialization and widespread adoption of technology. With its position as the second-largest mobile phone

producer and the fifth-largest user of electronic devices worldwide, the country is currently seeing an unprecedented increase in outdated gadgets, which is a major factor in the growing e-waste problem. Within this framework, the chemical industry assumes a crucial role, not only as a purchaser of electronic components, but also as a significant influencer in establishing sustainable methods for the handling of electronic waste. As per the research of Ambitionbox.com (2022), the efficiency prospect of a chemical company can be measured by the products and their relative quantities of feedstocks that consider how well it can utilize energy.

The electronic waste situation in India is characterised by its extensive magnitude and complex composition. The chemical sector, heavily involved in the industrial processes that contribute to the production of electronic waste, is at the centre of this changing problem. This chapter seeks to examine the present condition of e-waste management in the Indian chemical sector, providing insight into the existing legal frameworks, the distinct obstacles encountered, and the inventive solutions and exemplary methods being utilised.

India faces the challenge of dealing with more than 3 million metric tonnes of e-waste produced every year, highlighting the urgent requirement for a comprehensive and strategic strategy to its management. In this context, the chemical industry plays a crucial role in managing the intricate materials and processes involved in the creation of electrical devices. Our objective is to analyse the present condition of electronic waste in the Indian chemical industry, in order to understand the complexities of this issue and provide guidance on how to adopt sustainable and responsible methods.

This investigation involves an examination of the regulatory framework that governs the management of electronic waste, the difficulties faced by the chemical sector, and the creative ideas and exemplary methods that have the potential to transform the current situation. The Indian chemical industry's approach to addressing the e-waste challenge is comprehensive, encompassing adherence to current legislation, incorporation of circular economy ideas, and use of advanced technologies.

Through conducting this extensive analysis, our aim is to make a valuable contribution to the ongoing discussion on e-waste management in India. The knowledge acquired from this investigation not only provides a brief overview of the current difficulties but also lays the groundwork for well-informed suggestions and tactics targeted at promoting a sustainable, circular economy within the chemical industry. India's technological progress is accompanied by the need to address electronic waste, and the chemical industry will have a crucial role in handling this trash to create a more ecologically aware and responsible industrial environment.

As per the concentration by Edge (2020), the harmfulness of the utilization of the synthetic substances can forestall word-related diseases and advance future possibilities in labourers' well-being.

LITERATURE REVIEW

E-Waste Management in the Indian Chemical Industry

The increasing problem of electronic trash (e-waste) has led to a significant amount of written works, which demonstrate the worldwide need to tackle the environmental and health risks linked to incorrect disposal and recycling. Thiounn and Smith (2020) asserted the importance of efficiency in chemical companies lies in the process where the company can able to recycle their chemical processing in a systematic manner. In the Indian environment, where the market for electronic devices is growing rapidly,

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

it is emphasised in the literature that a systematic and comprehensive approach to managing electronic waste is crucial, especially in the chemical sector.

E-Waste Reality in India

The literature on the issue commences by vividly depicting the e-waste scenario in India. Reports continuously emphasise the country's rapid rise as a major contributor to the worldwide e-waste production. Research indicates a consistent and ongoing rise, with forecasts of a significant surge in the production of electronic waste, positioning India as the focal point of the worldwide e-waste problem.

The Role and Contribution of the Chemical Industry

The literature highlights the essential role of the chemical industry in the creation of e-waste, as it is extensively involved in the manufacturing of electronic devices. Chemical processes, which encompass the creation of semiconductor materials as well as the development of adhesives and coatings, play a substantial role in the intricate makeup of electronic waste. Samsami *et al.* (2020) asserted that chemical discharges can be negative for the environment due to poor management of resources and the lack of raw materials. Companies that deal with chemicals require a constant supply of resources and raw materials, like oil, natural gas, and minerals, to process the production of their products. Recognising this contribution is essential when formulating efficient e-waste management strategies.

Legal and Administrative Structures Governing Regulations

A significant portion of the literature review is focused on examining the regulatory frameworks that govern the management of electronic waste in India. The E-Waste (Management and Handling) Rules, 2016, play a crucial role in defining the legal duties and obligations of producers, consumers, and recyclers in the context of electronic waste. The literature examines the effectiveness of these regulations, emphasising both accomplishments and difficulties in their implementation within the chemical industry.

Obstacles Encountered by the Chemical Industry

The literature frequently explores the various difficulties encountered by the chemical industry in efficiently handling electronic waste. The wide range of materials utilised in electronic gadgets presents a substantial challenge, requiring sophisticated technology to effectively separate and recycle them. The financial obligations, particularly for smaller businesses, present a hindrance, highlighting the necessity for customised solutions that can accommodate the diverse capabilities of different participants in the chemical industry.

Novel Solutions and Optimal Practices

The literature presents a range of inventive solutions and exemplary practices implemented by chemical businesses in India. Circular economy ideas, involving the design of easily recyclable electronic components, are examined as a possible route. Collaborations between chemical businesses, electronics manufacturers, and waste management bodies are recognised as promoting holistic approaches to e-waste

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

disposal. The integration of modern technologies, such as artificial intelligence and machine learning, emerges as a revolutionary force in boosting and lowering the environmental imprint.

Community Engagement and Corporate Social Responsibility

Literature on e-waste management within the chemical industry extends beyond technology solutions to incorporate community engagement and corporate social responsibility (CSR). Initiatives aiming at raising public awareness about e-waste hazards and creating collection sites through CSR activities are regarded as essential components in building a culture of accountability and compliance.

Future Outlook and Recommendations

The literature finishes with a forward-looking viewpoint, presenting insights into the future of e-waste management in the Indian chemical sector. Recommendations range from improved regulatory enforcement to higher spending in research and development. Collaborative efforts, both within the business and between sectors, are emphasized as important to establishing comprehensive and sustainable e-waste management solutions.

In integrating the many strands of literature, it becomes obvious that e-waste management in the Indian chemical industry is a complicated challenge requiring a nuanced and coordinated response. The literature review sets the stage for our in-depth exploration of the current situation, challenges, and potential solutions in the subsequent sections of this chapter, contributing to the ongoing discourse on sustainable industrial practices in the context of e-waste.

METHODS

India is currently seeing a substantial surge in electronic garbage (e-waste) as a result of its expanding population and rapid technological advancements. The chemical industry, which is crucial for numerous industrial procedures, plays a pivotal role in addressing the challenges posed by electronic waste (e-waste). This chapter analyses the current state of e-waste management in the Indian chemical business, including its existing condition, the challenges it faces, and potential options for adopting sustainable practices.

The Current State of Electronic Trash (E-Waste) in India

India has become a significant contributor to the global e-waste issue, mostly due to rapid urbanisation and extensive technology adoption. The electronic devices market is seeing substantial expansion, leading to a proportional increase in the quantity of obsolete equipment. According to recent figures, India generated over 3 million metric tonnes of electronic waste (e-waste) in 2022, and this figure is expected to rise in the next years. The chemical industry in India is a major buyer of electronic components for its manufacturing processes. The accumulation of electronic waste poses substantial environmental and health hazards, necessitating a comprehensive approach to its management and elimination. The challenge lies not only in the substantial volume of electronic waste, but also in its complex composition, comprising multiple components that require specialised processing.

The Legal and Administrative Framework That Governs Rules

India has established regulatory frameworks to regulate the management of electronic trash, recognising the urgency of addressing this matter swiftly. The E-Waste (Management and Handling) Rules, 2016, offer guidelines for the proper disposal and recycling of electronic waste. All stakeholders, encompassing manufacturers, consumers, and recyclers, are obligated to adhere to these criteria, which emphasise the necessity of collective accountability. Complying with these laws is crucial in the chemical industry. It is incumbent upon companies to adopt environmentally sustainable practices for disposing of electronic equipment, ensuring that hazardous substances are managed with meticulous care. However, there are persistent challenges in ensuring uniform application of these standards throughout the diverse landscape of the Indian chemical industry.

Challenges in the Chemical Sector's Treatment of Electronic Waste

The chemical sector faces specific challenges in managing electrical waste in India. A significant impediment arises from the diverse array of materials employed in electrical devices, which includes both precious metals and hazardous substances. Chemical enterprises must commit substantial financial resources to invest in advanced technology that facilitates efficient segregation and recycling. A further challenge stems from the lack of standardised protocols for managing electronic waste in the chemical industry. While larger businesses have the requisite resources to implement comprehensive e-waste management plans, smaller firms may encounter challenges in meeting regulatory obligations. Addressing this gap is essential for a cohesive and effective approach to e-waste management. Furthermore, there is a dearth of general awareness among the public on the perils linked to improper disposal of electronic waste. It is crucial to educate individuals in the chemical industry and the general public in order to foster a strong sense of responsibility and compliance with e-waste laws.

Innovative Solutions and Best Practices

Multiple chemical companies in India have implemented innovative strategies and optimal approaches to address the challenges posed by electronic waste. To achieve optimal results, it is crucial to integrate circular economy concepts into industrial processes. Companies are continually researching ways to create electronic components that have improved recyclability, hence reducing the environmental impact of their products. The collaboration of chemical enterprises, electronics manufacturers, and waste management organisations is fostering an all-encompassing approach to electronic waste treatment. These partnerships aim to improve recycling technologies and minimise the release of toxic substances into the environment by sharing information and combining resources. In addition, the chemical industry is progressively adopting advanced technology, such as artificial intelligence (AI) and machine learning. These solutions enhance the efficiency of sorting and recycling electronic waste, thereby reducing the environmental impact and improving overall operational effectiveness.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Active Involvement With the Community and Dedication to Business Social Responsibility

Effective e-waste management extends beyond mere compliance with rules; it necessitates active community involvement and the practice of corporate social responsibility (CSR). Indian chemical businesses are increasingly recognising the importance of actively engaging local communities to improve awareness about the hazards of e-waste and promote proper disposal practices. CSR initiatives are being employed to establish e-waste collection centres in collaboration with local authorities. These centres serve as both collection points and central locations for public on the importance of recycling and the potential economic benefits of proper disposal of electronic waste.

RESEARCH AND DEVELOPMENT MODELS

Research and development (R&D) are essential for fostering innovation, particularly in the Indian chemical industry's efforts to manage e-waste. Strong R&D models play a critical role in developing sustainable solutions. This section examines the many research and development approaches utilised by chemical firms in India as they address the difficulties presented by electronic waste.

Technologies for the Recovery of Materials

The primary objective of R&D models is to develop cutting-edge technology for the recovery of sophisticated materials. Chemical companies conduct methodical research to develop procedures that effectively recover valuable substances from electronic waste. This encompasses the retrieval of valuable resources such as precious metals, rare earth elements, and other valuable materials that are present in abandoned electronic gadgets. Companies strive to enhance the extraction of these minerals by employing inventive chemical procedures, with the goal of reducing waste and maximising the utilisation of resources.

Principles of Eco-Design

Another notable research and development model revolves around the ideas of eco-design. Chemical corporations are allocating resources towards doing research aimed at redesigning electrical components in order to enhance their recyclability and reusability. This entails the creation of materials that are ecologically sustainable, readily separable, and harmonious with current recycling procedures. Through the incorporation of eco-design principles into the process of product development, corporations actively contribute to the production of electronic gadgets that possess a diminished ecological footprint over their entire lifespan.

Joint Endeavours

The chemical companies that face barriers and problems that contribute to their inefficiency can be caused by the presence of insufficient resources. In this context, Mallapragada *et al.* (2023) asserted that the chemical industry faces obstacles due to the increased rate of greenhouse gas emissions and extreme use of steel and cement. Collaborative research and development projects are becoming a potent approach

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

for tackling the intricate issues of e-waste management. Chemical firms are progressively establishing strategic alliances with electronics manufacturers, waste management agencies, and research institutions. These alliances enable the consolidation of resources, skills, and ideas, resulting in more comprehensive and efficient solutions for managing electronic waste. Collaborative research centres and joint projects allow for a combined and coordinated effort to address the complex problems related to electronic waste.

Integration of Circular Economy

R&D approaches in the chemical sector are shifting towards incorporating circular economy ideas. This entails conducting research and devising procedures that adhere to the principle of a closed-loop system, in which materials are consistently recycled and reused. Companies are actively seeking new methods to effectively complete their production cycles, guaranteeing that the disposal of electronic items is not an endpoint but rather a starting point for further resource utilisation.

Technological Advancement

Technological innovation is a fundamental element of research and development models when it comes to managing electronic trash. Chemical businesses are utilising advanced technologies like artificial intelligence (AI) and machine learning to improve the effectiveness of e-waste sorting and recycling procedures. AI-driven solutions are applied for the automatic identification and separation of distinct items in electronic trash, speeding recycling operations and eliminating errors.

Life Cycle Assessment (LCA) is a method used to evaluate the environmental impact of a product or process throughout its entire life cycle, from raw material extraction to disposal. As proposed by Charnes, Cooper and Rhodes (1978), in order to examine the dynamic proficiency can be created through assistance of practical viability inside the process. R&D models frequently integrate Life Cycle Assessment (LCA) approaches to thoroughly assess the ecological footprint of electronic devices. This entails evaluating the complete life cycle, encompassing the extraction of raw materials, the manufacturing process, usage, and the disposal at the end of its life. Through the implementation of Life Cycle Assessments (LCAs), chemical businesses acquire valuable knowledge regarding the specific areas where their products have the greatest negative environmental effects. This information allows them to focus their research and development endeavours on reducing these impacts, therefore promoting a comprehensive approach to sustainability.

Centres for Innovation and Business Start-Ups

Creating specialised innovation hubs and incubators focused on e-waste management functions as a proactive research and development (R&D) framework. These hubs offer a cooperative setting for researchers, scientists, and industry specialists to investigate innovative solutions. Chemical firms have a crucial role in promoting innovation and entrepreneurship, which in turn helps create a dynamic environment dedicated to the advancement and application of sustainable techniques in e-waste treatment.

DISCUSSIONS

The future of e-waste management in the Indian chemical industry hinges on the efficient enforcement of rules, the advancement of novel technologies, and the collaboration among diverse stakeholders. To ensure the establishment of a long-lasting framework, it is crucial for policymakers, industry stakeholders, and the general public to collaborate in a harmonic manner.

Regulatory authorities must first prioritise improving the effectiveness of enforcement operations and ensuring consistent compliance throughout the chemical sector. This involves meticulous monitoring of e-waste disposal techniques and penalties for non-compliance. Simultaneously, the government might offer incentives to businesses that adopt environmentally conscious practices, so encouraging a shift towards sustainable management of electronic waste.

Also, it is imperative to spend financial resources towards research and development in the chemical industry. Indian chemical firms have the potential to become global leaders in sustainable practices, particularly in the field of e-waste recycling, by developing innovative chemical processes or adopting environmentally friendly materials.

Moreover, it is crucial to foster collaboration not only within the organisation but also across diverse sectors. As indicated by the concentrate by Abanades et al. (2021), the basic audit of chemical businesses incorporates a few factors, for example, hydrogenation techniques, drug producing arising energy applications. Partnerships between the government, academic, and business sectors have the potential to expedite the development of comprehensive solutions for the management of electronic waste. Knowledge-sharing platforms and industry forums can improve the spread of exemplary methods and technological advancements.

Ultimately, it is crucial to implement a heightened level of education and awareness campaigns. Concentrating on teaching professionals in the industry and the general population about the risks associated with improper disposal of electronic waste, the benefits of recycling, and the participation of the chemical sector in sustainable practices could potentially foster a shift in culture towards responsible management of electronic waste.

CONCLUSION

In essence, efficiently handling electronic waste in the chemical industry in India is a multifaceted endeavour that necessitates a cohesive and collaborative approach. Regulations establish a foundation, but their effective implementation and enforcement are vital. The chemical industry, leveraging its technological expertise, should take the lead in developing innovative recycling methods and materials to achieve a sustainable and circular economy. In the opinion of Chen et al. (2022), various methodologies to effectively accomplish a carbon-impartial society keeping up with worldwide industrial enterprise including various negative outflows in the compound business will be given more assistance from top to bottom investigation.

In order to have an efficient e-waste management plan, it is crucial to include community participation, company social responsibility, and public awareness campaigns. India's current surge in technology is being paralleled by the chemical industry's aggressive initiatives to address the e-waste challenge. This not only fosters ecological sustainability but also positions the country as a global pioneer in conscientious and innovative industrial methods.

ABSTRACT

Electronic materials/components that have reached the end of their functional life cycle are considered electronic waste (e-waste). Electronics contain potentially hazardous or toxic elements, which many people are unaware of; thus, they must be handled with care when not required anymore. Every product created leaves harmful effects on environment. Copper, gold, silver, platinum etc. are rich resources found in e-waste that can be recovered and utilized again. Loss of these resources, however, results from incorrect disposal, which accelerates the depletion of natural resources. Landfill and burning of e-waste are responsible for various types of pollution and a lot of impact on human health. New technologies have been applied to manage these wastes at low cost and sustainable ways. However, there are numerous difficulties and challenges in managing various types of waste. The aim of this chapter is to classify various types of waste and their impact on the environment. It also explores the management of waste by new technologies and challenges faced at the time of management of waste.

1. INTRODUCTION

Electric and electronic items now play a more important role in our daily activities than any time before. Due to fast growing technological and increasing demands of new gadgets (laptop, phone, tablet, inverter, printers etc.), lot of used electric and electronic materials have been throwing without any concerned. The volume and numbers of these items are increasing day by day which is very alarming conditions for the globe. Electronic products have integral role in our routine work more than ever before. These habits increase financial burden as well as pose hazardous effects on the environment if they are not disposed/recycled in a proper manner and contribute to E-waste (Jain et al., 2023). Various hazardous elements/compounds including lead, cadmium, mercury, lithium, zinc, nickel, barium, poly-brominated compounds etc. may enter the environment from discarded electronic devices. When electronic debris is disposed of in landfills, harmful compounds leach into groundwater, harming both aquatic and terrestrial species. This may have an impact on the wellness of people in developing nations where the majority of electronic garbage is disposed. However, it is also possible to recover the elements like silver, gold, copper, aluminum etc. if the discarded products are recycled after proper disposal (Manikandan et al., 2023). If not disposed/handled properly these may have adverse effects on human, plants and animals through various exposure routes. Figure 1 depicts the different ways to handle the electronic waster and the consequences associated with each approach. Recycling, reusing or refurbishing the devices is the safest approach to reduce their impact on environment and health. Other options of electronic waste treatment pose many occupational hazards as well as release many toxins into the environment which may further lead to many health implications. To ensure the safe handling of these devices after their useful life, awareness is also required at consumer end and their disposal should be prohibited along with municipal solid waste. Moreover, E-waste disposal units for formal management of E-waste should be available and proper guidance manual should be available within the waste handling organizations for processing of E-waste. Forti et al., 2020 estimated that by 2030 E-waste generation will exceed 74 million tons globally but the recycling is being done at much lesser pace. Mor et al., 2021 in a study related to awareness of E-waste management practices. It is discussed that the users are aware that hazardous materials are present in E-waste, but not aware about their adverse on health and environment. There is a need to adopt sustainable approach for production, utilization and disposal of E-waste (Sinha, 2011; Bekabil, 2020; Yabe et al., 2010; Zeng & Li, 2016).

Since October 2019, only 71% of global population was under national E-waste policy or regulation, which was only 44% in 2014. Countries like India and China have national legislative laws in place, but only 78 of the 193 countries have an E-waste national policy. The European Union has produced guidelines for hazardous substances and waste electrical and electronic equipment (WEEE). (Murphy et al., 1998). Good policies and legal regulations can only be made when you have good E-waste data. The data includes quantity and flow of E-waste, monitoring, controlling, illegal dumping and improper treatment. Good data minimize the generation of E-waste and promote recycling and refurnishing of E-waste creates green jobs.

Ananno et al 2021 have been studied the analysis and management of E-waste in Bangladesh. A government agency ought to oversee the entire waste management system. Given its attention to environmental welfare, the Ministry of Forests and Environment appears to be the most pertinent ministry in this situation. There should be an E-waste management and regulatory board (EMRB). This board will supervise and address the nation's progress in E-waste management. Additionally, the board will finance waste management initiatives across the country, encourage widespread adoption of waste management

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

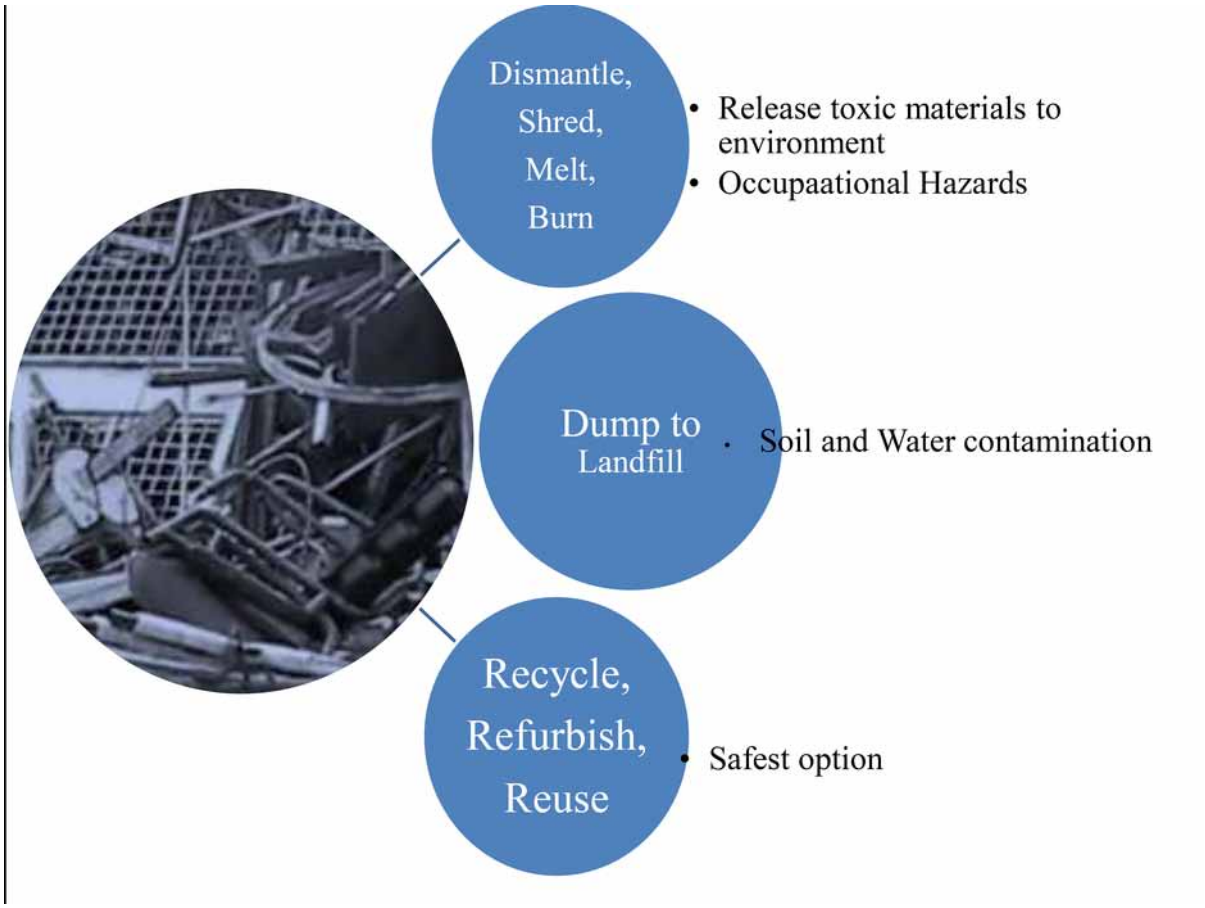
practises, apply the legislative framework established by the parliament, and have the authority to justify and certify waste management systems. The public will hear from the communication and information group about the advantages and significance of trash management. In order to raise public awareness, it will also host meetings, seminars, and campaigns. Additionally, this agency will actively promote trash management initiatives and applicable local regulations. The current waste management practices will be analyzed, improved, and modified by the technical and certification group. In order to maximize output, this department will investigate current procedures and devise fresh approaches to inject more realism and significance throughout the entire process. This team can also look at potential methods for using E-waste to produce sustainable energy.

Khatiwada et al 2023 have been studied management of E-waste in Nepal by using machine learning.

An IoT sensor-based alert system was added to a Waste Management System (WMS), which is purely manual and can notify the appropriate individuals when waste is overflowing so they may take prompt action. Several deep learning techniques are used for the picture processing, which improves classification and prediction accuracy. A CNN algorithm is used in the deep learning model to extract features, and an RBM model is used to process the extracted features for increased accuracy. The suggested system is validated against an open-source dataset, and the outcomes are contrasted with those of other methods currently in use. The comparison demonstrates that the suggested method offers higher E-waste forecast accuracy with 96% than the other.

Bagwan, 2024 has been investigated the management of E-waste using Auto Regressive Integrated Moving Average (ARIMA) models in Maharashtra, India. According to the report, the average capacity for processing E-waste between 2023 and 2030 would be 163563.15 metric tonnes. The projected numbers are expected to increase gradually over time, with 248 recyclers by 2030. Analyzing the pace of change in the ability to process E-waste from 2023 to 2030 will reveal opportunities for 6.86 percent yearly growth. This also shows the extent of entrepreneurship in the E-waste recycling sectors by indicating an average annual growth rate of 7.23 percent for recyclers.

Governments all over the world are creating national E-waste legislation but this legislation can be achieved if the disposal policy is enacted at the municipal or local level. According to certain research, the bulk of E-waste is shipped from developed countries to developing or under developed countries but the quantity flow of E-waste is hard to measure. It is brought illegally under pretence of reuse. This raises environmental burden in the destination places and poses significant health issues.



Increasing use of electrical and electronics items all around the world is only one reason of increasing E-waste. Motivation of this chapter is that how to explore various sources of E-waste, their environmental impacts, precious metals being used in electronic gadgets and their recovery and management of E-wastes. Also this chapter explores how to reduce these E-waste, how to utilize unused or dumped electrical or electronics item and how to aware public regarding E-waste and their management. Thus the aim of this chapter is to summarize the data of E-waste, their classification, and their environmental impacts, recovery of precious metals and management of these E-wastes.

2. CLASSIFICATION OF E-WASTE

There are wide range of electrical and electronics products containing circuits, electrical components with a battery. It could be a basic kitchen appliance, toy, tools to music, mobile phone, laptops, LED TV etc. Also, sensors are being deployed to the advanced devices are the part of the product. These devices

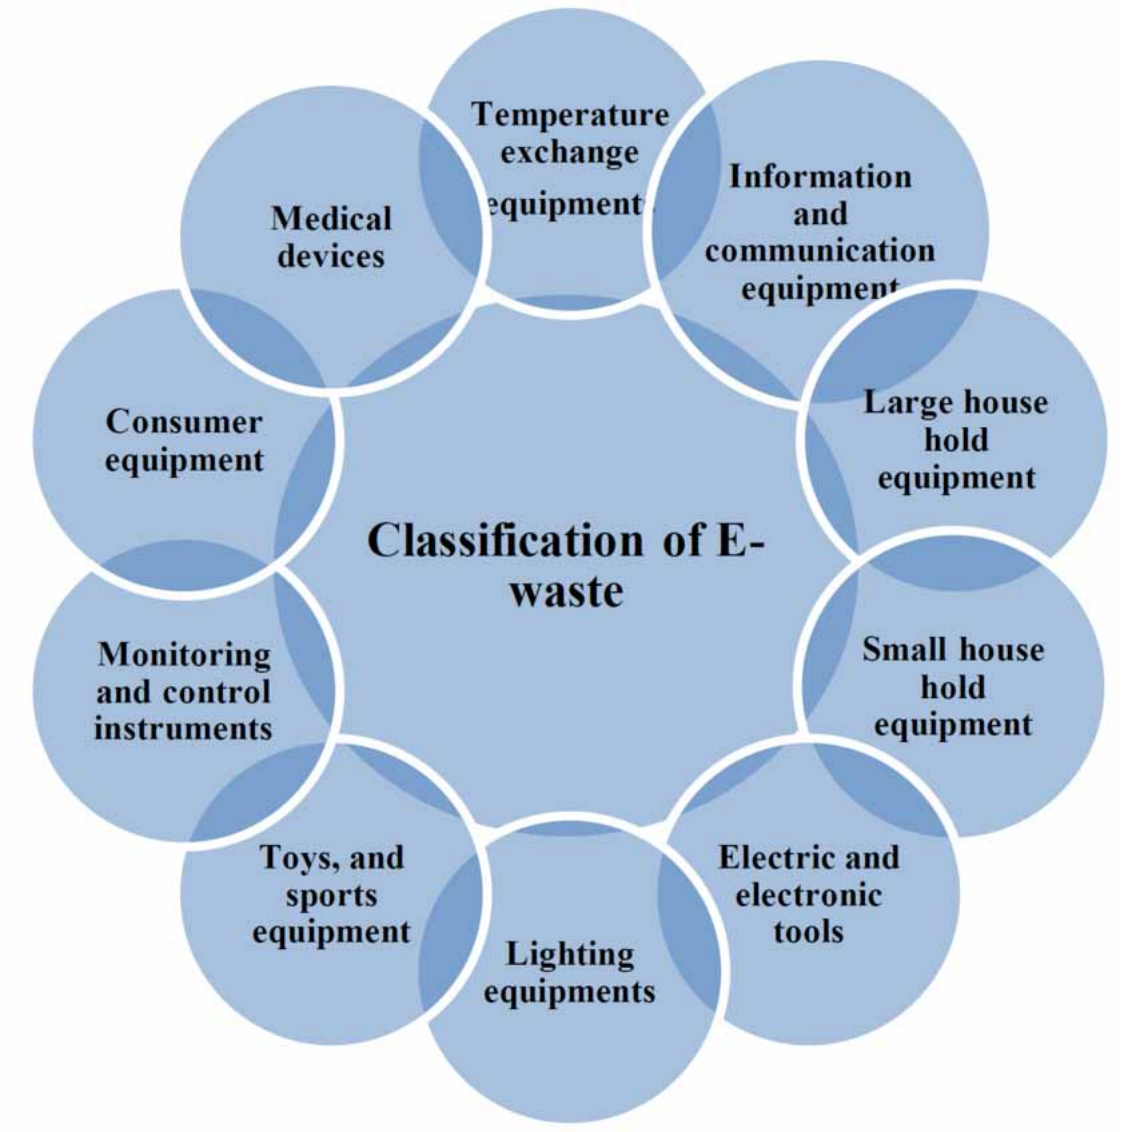
IP Address: 223.231.178.10

Figure 1. Ways to handle the electronic waster and the consequences associated with each approach



once discarded, become E-waste. Since each gadget has different material and therefore has different recycling method but their impact is harmful to the environment and human health.

There is no universal system for classifying e-waste since it differs from nation to nation. E-products can be classified according to similar functions, comparable material composition i.e. valuable/hazardous materials, and life time of the products. Furthermore, goods in the same category have to have a uniform distribution of average weight and lifespan, as this might make quantitative evaluation of related goods easier. Lastly, distinct assignments should be made for large or environmentally significant E-waste products, for which a wealth of data may be accessible. As of right now, only one classification scheme meets those requirements: the UNU's classification (Wang et al., 2012). As per UNU's mainly, electrical and electronics products are classified into 54 different types of product categories (Balde et al., 2022). Again, these 54 product categories are grouped into various general categories and are given as (Figure 2) (Forti et al., 2020):

Figure 2. Classification of e-waste

2.1. Temperature Exchange Equipment

Depending on the application, many types of temperature exchanger equipment are employed in the various industries, but their common function is to transfer heat from a hot area to a cold area. Heat energy is transferred via conduction, convection, or radiation in temperature exchanger equipment. Cooling and freezing equipment such as refrigerators, freezers, air conditioners, and heat pumps etc are the very common examples of temperature exchange equipment.

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

2.2. Information and Communication Equipment

The information and communications technology (ICT) sector is one of the fastest expanding industries globally. It is also the leading cause of the global e-waste catastrophe. ICT equipment refers to everyday electrical and electronic products for personal use, such as laptops, CPUs, monitors, mice, printers, keyboards, audio amplifiers, CDs, pen-drives, TV sets, cameras, DVDs etc

2.3. Large Household Equipment

Around 98% E-waste (household) generated by big appliances is disposed of in landfills each year. Our negligent dumping, like every other item on our list, costs not only in terms of environmental effect but also in terms of precious metals loss. This category includes major household appliances such as washing machines, freezers, dryers, refrigerators, electric stoves, printing machines, microwave and various panels etc.

2.4. Small House Hold Equipment

Most of the countries provide convenient recycling solutions for minor household equipment but it is very large in numbers and generated E-waste. Small household gadgets, commonly known as consumer electronics such as calculators, watches, toasters, electric shavers, hair dryers, radio sets, video cameras, toys, tools, vacuum cleaners, fryers, small medical devices, and control instruments etc.

2.5. Electric and Electronic Tools

This category includes tools used to prepare materials such as wood, metal, and others. They might be huge or small in size and, like other types of e-waste, are harmful to the environment. Drill and welding machines, lawn mowers, detectors, sewing machines, flash lights, and soldering irons are the best examples of this category.

2.6. Lighting Equipment

Lighting technology has become so common place in modern life that we no longer notice it. You turn on the light without thinking every time you enter in a room. Turning on the light when you wake up in the night is also typical subconscious behavior. What are the most common forms of lighting equipment that have the greatest potential for producing e-waste? Bulb, discharge lamps, tube lights, LED lamps, switches, wires, fluorescent lighting, and sodium vapor lamps are commonly used lighting equipment at everywhere.

2.7. Toys, and Sports Equipment

This category generates most rapidly increasing E-waste. The reason for this is that children and youngsters outgrow their toys rapidly or they become faulty after extensive use. Electric toys, video games, racing items are widely purchased toys by the children.

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

2.8. Monitoring and Control Instruments

Heating regulator, thermostat, and smoke detector are used in labs, industries and homes are the monitoring and control instruments. From the last one decade these devices are widely used in different areas and responsible for E-waste generation.

2.9. Consumer Equipment

Consumer equipment is one of the highly useable electronic gadgets in home. Washing machines, televisions, LED, smart TV, telephones, refrigerator, calculators, smart phones, personal computers, laptop, digital cameras and MP3 players are very few examples of consumer equipment. People are using these equipments on regular basis and lots of equipments are damage or discarded daily due to any reasons which are responsible of lot of E-waste daily.

2.10. Medical Devices

Pacemakers, hip implants, contraceptive intrauterine devices, drug releasing pumps, defibrillators, and diagnostic equipment are the few examples of electronic medical devices. Moreover, high frequency surgical equipment, therapeutic and diagnostic ultrasound equipment, medical lasers, infant incubators and warmers, and medical beds are few examples of electrical medical devices. These devices are more widely used in hospitals. The likelihood of producing a large volume of e-waste every day rises as a result of everyday use and the ongoing development of new technology.

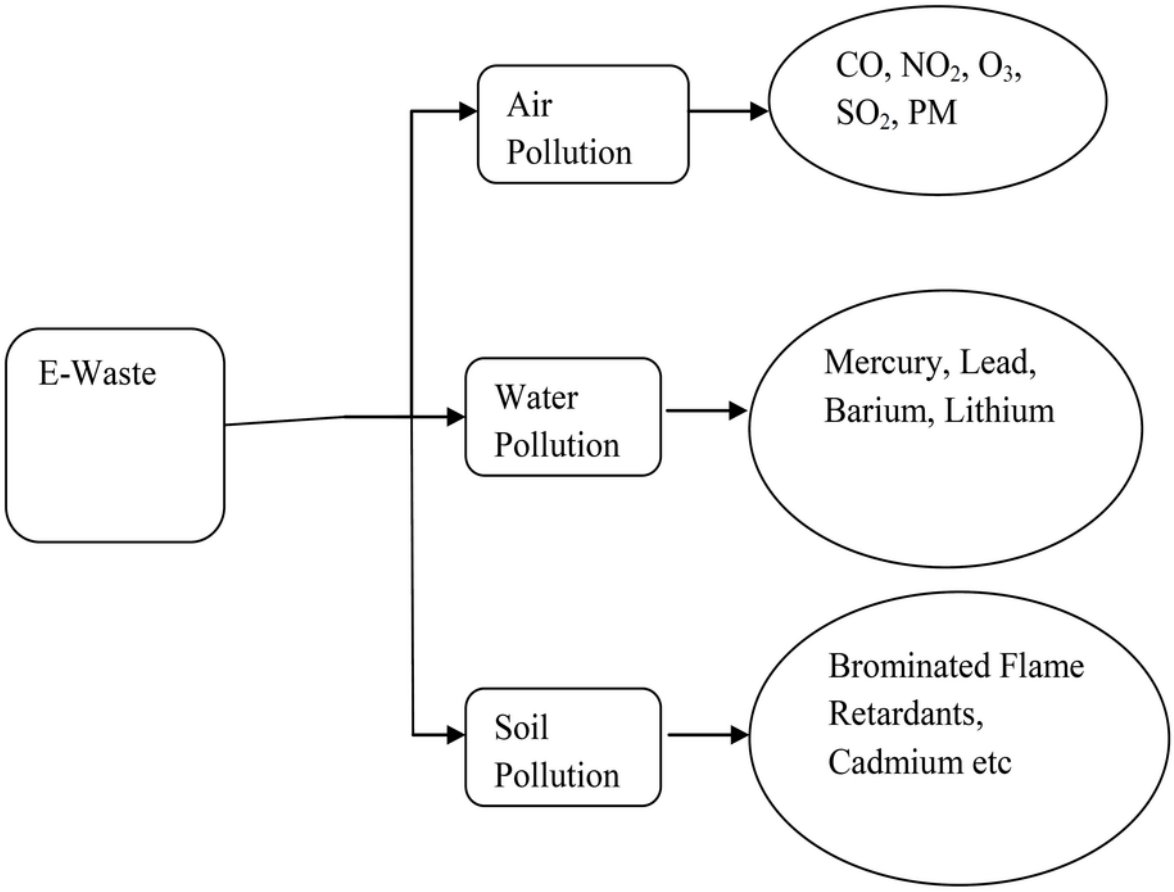
Global E-waste generation in 2019 on the basis of their categorization is given in the following table 1. The decline in the category of screen and monitors is due to the fact that screen/monitor is slighter flat screen displays have replaced CRT monitors, although no. of pieces continues to grow.

3. ENVIRONMENTAL IMPACTS AND POLLUTION BY E-WASTE

Technological advancement is the root cause of E-waste as it leads to the increased usage of available advanced electronics and tossing of old ones. When this E-waste is out in the open, toxic chemicals are released into the air that harms the environment. This is one of the biggest environmental impacts of E-waste and that is why E-waste is most dangerous specifically during summers. Those toxic substances can also seep into the soil and groundwater, affecting human health and both, land and marine animals. In this manner, E-waste is significantly contributing towards air pollution, water pollution and

Table 1. Categories of e-waste generated in 2019

Category	Small Equipment	Large Equipment	Temp. Exchange Equipment	Screens and Monitors	Small IT and Tele-communication Equipment	Lamps	Ref.
E-waste generated (in Metric ton)	17.4	13.1	10.8	6.7	4.7	0.9	Forti et al. 2020
E-waste increased since 2014 (in %)	+4	+5	+7	-1	+2	+4	Forti et al. 2020



Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

soil pollution. According to the World Health Organization, lots of harmful health effects are caused by direct or indirect exposure to E-waste i.e. breathing problem, premature birth, and metal distress. The Global E-waste monitor 2020 reported a record more than 53 million metric tons of E-waste worldwide in 2019, more than 20% in five years (Forti et al., 2020). By 2030, it will reach 74 million metric tons, virtually doubling in 16 years. The United Nations (UN) warned that because of the ongoing consumer demand for digital devices, there will be time that will lead to a "tsunami of E-waste" if E-waste is not handled efficiently. The major pollutants and hazardous materials from E-waste are shown in figure 3.

3.1. Air Pollution

Developing countries find it difficult to practice formal E-waste recycling procedures because of the costly operational expenses involved. Hence, they focus on practicing informal e-waste practices. Though informal e-waste recycling practices are successful in extracting valuable parts from e-waste, the way in which they are practiced or conducted causes harm to the workforce involved. The dismantling of electronic products release various types of toxins such as dioxins into the air and particulate matters of various sizes causing respiratory health issues to the surrounding mankind and involved workforce.

Figure 3. Major pollutants and hazardous materials from e-waste

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Also, for removing highly valuable raw materials like gold and silver, acids, de-soldering and other chemicals are used which release harmful fumes in areas resulting in severe respiratory and breathing issues (Gangwar et al., 2019, Awasthi, 2018). For example, getting copper from electronic devices, toxic e-waste materials are burned which releases fine particles that pollute the air and result in chronic diseases and cancers affecting human health badly. The chronically polluted air results in damaging the water quality, soil, animal, and plant species.

Polybrominated diphenyl ethers and polybrominated biphenyls are the principal toxic chemical substances that get released when any of the E-waste is burned (Zeng et al., 2010). PBDE and PBBs are used as flame retardants in televisions, computers, and other electronic devices. At the time of disposal of PBDE and PBBs, when it is burnt it releases CO_2 into the air. The release of CO_2 contributes to greenhouse gas emissions and changes in climatic conditions, which ultimately give rise to human-generated global warming. Even the manufacturing of electronic devices releases a large amount of CO_2 into the atmosphere.

In 2019, the E-waste reported (53.6 Mt) was found to have more than 50 tons of Hg and 70 thousand tons of hazardous brominated flame retardants (Lebbie et al., 2021). Having an elevated amount of rare-earth-element (REE), could also be among the important reason of REE pollution (Brewer et al., 2022). At the dumping sights of E-Waste, it is obvious to get heavy metal pollution as metals are being used in electrical and electronic equipments (EEE) as a must. For instance, copper is used in electric wiring and cadmium is utilized in batteries (Kumar & Fulekar, 2019). There are various important components used in EEE for example printed circuit boards and several toxic substances, hence the improper discarding and recycling of EEE can spread several dangerous substances which can inturn impact air, water, soil, food resources, and human health (Abdelbasir et al., 2018). There is always a threat to air quality from such E-waste as it contains hazardous substances and toxic additives. The recycling methods of e-waste include transportation, burning, dismantling of all materials used, in addition to the smelting of EEE for the proper recovery of important metals such as gold and copper. For these activities low- and middle-income countries are the home. In other words, these activities are performed by the countries where low and middle income population is more and that too is done within informal settings which in turn can become a serious cause of air pollution because of the smelting and burning of e-waste, as it release airborne pollutants. Volatile organic compounds are produced during the dismantling process of E-waste. According to the studies, it has been found that heterogeneous types of hazardous air pollutants can be spread during e-waste combustion as it releases polycyclic aromatic hydrocarbons, hydrogen chloride, poly-halogenated aromatic hydrocarbons, dioxins, furans and significant amounts of particulate matter (PM). For the separation of copper from wires in e-waste, open burning is used in Thailand, which can pose a threat to the employees via the inhalation of PM and other pollutants (Bungadaeng et al., 2019). According to a research, The significant source of PM was found to be the illegal e-waste recycling and this can exceed acceptable limits in near future. Unsuitable e-waste recycling can also release various inorganic and organic pollutants such as heavy metals, polycyclic aromatic hydrocarbon (PAH), polychlorinated biphenyl (PCB), brominated flame retardant (BFR), polychlorinated dibenzofuran (PCDF), polychlorinated dibenzodioxin (PCDD), perfluoroalkyl and polyfluoroalkyl substance (PFAS) (Ahirwar et al., 2021).

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

3.2. Water Pollution

70% of planet earth is water. Deposition of hazardous E-waste into the water supplies like ponds, streams and lakes results in severe acidification and toxification effects alarming biodiversity. Acidification kills marine and freshwater organisms in turn damaging the ecosystem where revitalization is not viable. Nuclear power plants and mining also releases a lot of radioactive elements in water and hence contributing into water pollution.

Unsuitable disposal of EEE items can give rise to water pollution due to the toxic metals present in it. A significant amount of water i.e. approximately 600k litres can be polluted by a single mobile phone battery. The most important compound which is found in all three forms and can pollute water is Mercury. It is a voluminous compound found in e-waste and can last for centuries. According to a recent research, uncontrolled and improper methods of E-waste recycling had a major impact on rice, fish, sea food and vegetables with heavy metals and livestock with constant air pollutants (Lin et al., 2022). The main source of E-waste, either discarding or shipping, is found to be developed countries to other developing countries in Asia such as in Guiyu, where almost seventy percent of E-waste ends up. Studies revealed that approximately 12.5 percent of this waste is recycled via prehistoric procedures, which concludes to the discharge of toxic materials into the eco-system. Apart from constant organic pollutants, there exists various other heavy metals in the groundwater and rivers of Guiyu, which causes its water incompatible for household activities like drinking and cooking (Li et al., 2020). Also, besides polluting the groundwater, E-waste also plays a significant role in producing ample amounts of waste water during the procedure of collecting copper particles, for example, during the used hydraulic shaking bed separation procedure.

3.3. Soil Pollution

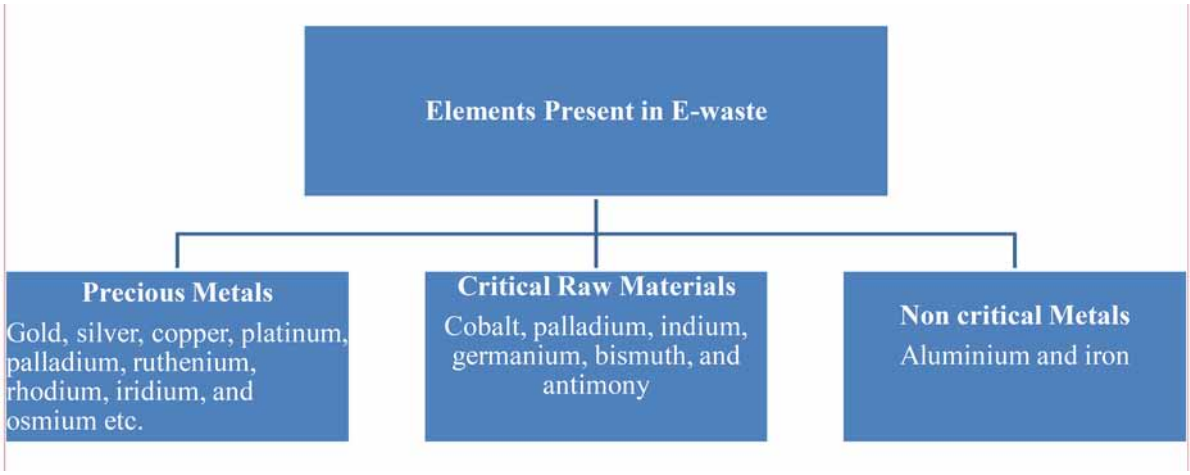
When electronic waste is improperly disposed of, it either goes into the landfills abruptly or is dumped illegally. Both of these are clearly not healthy environmental practices and cause potential harm to the underground water and soil.

Electronic waste contains heavy metals and flame retardants which end up contaminating the underground water and the crops. When the soil and water get contaminated due to the presence of toxic heavy metals such as lead, mercury, lithium, barium, and cadmium, they become vulnerable to absorbing these toxins causing dangerous health hazards to mankind. Not just this, but the release of large and heavy particles from the burning, shredding, or dismantling of electronic waste gets quickly re-deposited into the groundwater and soil. And resultantly it starts adversely impacting the soil quality, leading to reduced plant growth, production of contaminated soil and potentially harming the ecosystem.

Various air and water pollutants of E-waste also contribute significantly towards soil pollution. For example, Acid Rain etc. During weathering of certain rocks, soil gets toxic chemicals. Radioactive elements from mining and nuclear power plants also come into the soil and hence reduce soil fertility due to increase in alkalinity, salinity or pH.

E-waste also has a foremost affect on soil and its biological components. The collection of E-waste in particular sites like mountains or the outskirts of cities is affecting the microbial community present at those sites, especially in countries such as China, Pakistan and India. This impact on microbial population in turn affects the soil-ecological function. For example, the heavy metals such as mercury, lead, cadmium, nickel, arsenic, chromium, and consistent organic pollutants present in e-waste can cause a

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10



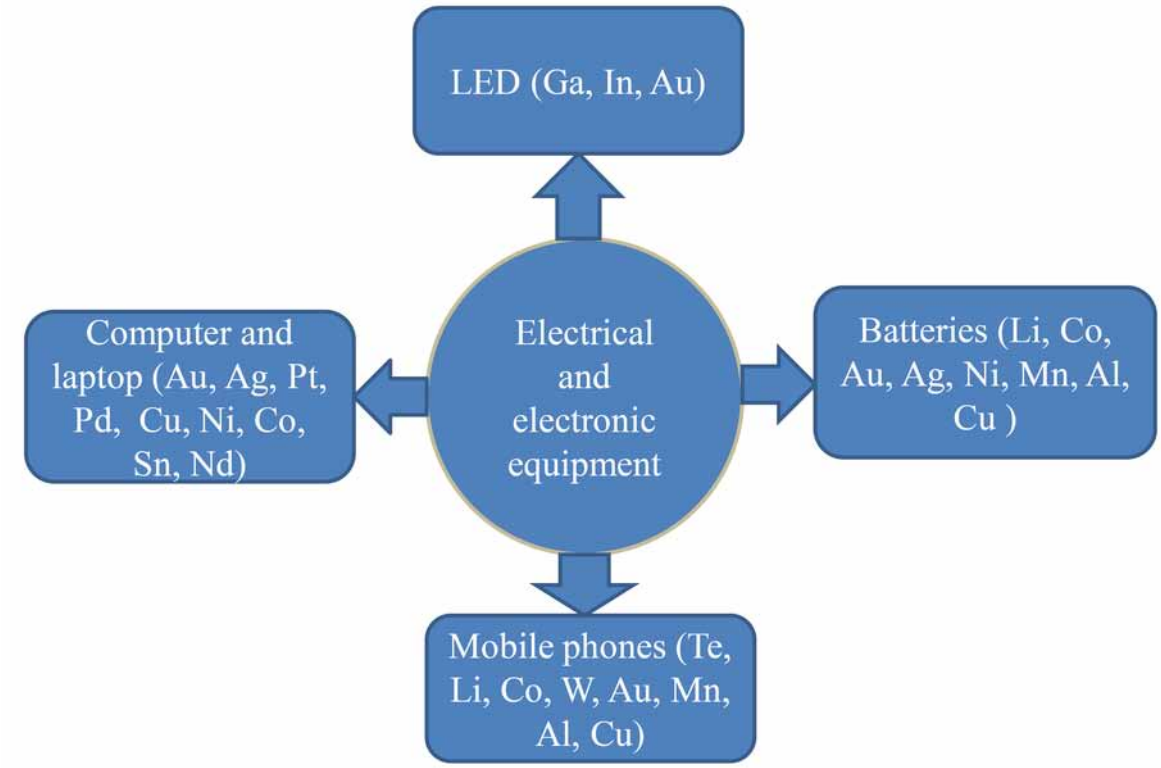
reduction in the normal soil microbial biota (Salam et al 2019). For instance, a research in southeastern China revealed that this kind of soil was badly contaminated with cadmium and copper as a consequence of improper e-waste's dismantling methods (Fang et al., 2022). The foremost cause for spreading vicious substances and heavy metals into the soil environments is open burning. The unethical and improper practices involved in discarding, recycling and dismantling of E-wastes became the foremost cause for the lethal impacts on soil ecosystems in several countries. The metal pollution is also caused by the recycling activities such as getting copper from wires, taking out gold by the use of acidic substances, plastic melting and burning of circuit. All these activities can also cause surface soil pollution because of the presence of heavy metals in e-waste (Preeti & Sayali 2021).

4. RESOURCE DEPLETION DUE TO GENERATION OF E-WASTE

In both developed and developing countries, electrical and electronic equipment has a shorter lifespan because of advancement in technology, resulting in tones of electronic waste. Natural resources are being used more and more in electric and electronic technologies, which are causing their depletion to occur at an alarming rate. Urban mining will immediately stimulate secondary production since there aren't enough metals from the core of the earth to go around. The electronic sector has been using a variety of metals, raw materials, chemicals and polymers in the manufacturing of various components and other parts of the electronics materials (Ramesh et al., 2023, Li et al., 2022). Metals including cobalt, copper, gold, nickel, aluminium, lithium, silver, and tin are among the most popular ones. Some of these materials shield the inner workings of electrical equipment, facilitate cleaning, or enhance their usability. Some are employed in laying out wiring for the gadgets because they are very conductive and perform admirably at moving electricity. There is a significant amount of copper wiring needed to make circuit boards. In the same ways many more metals have been used significantly for making important parts of the electronic gadgets. Up to 69 elements from the periodic table can be found in E-waste are shown in figure 4.

More precious metals are found in IT and communication system chips than in home products. For instance, a cell phone contains more than 40 elements, including basic metals such as copper and tin as

Figure 4. Elements present in the e-waste



Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

well as some precious metals such as gold, palladium, and silver (Gautam et al., 2022). Many valuable metals, including gold and copper, as well as dangerous substances, including lead, are present in the waste printed circuit boards (PCBs) (Priya & Hait, 2018). To create indium-tin-oxide (ITO), which is utilized in LCD screens, indium is used (Savvilotidou, et al., 2015). In lithium ion batteries, which are frequently used in portable electronic devices including mobile phones, laptops, computers, cameras, and players, Co and Li are most commonly used. LEDs contain poly-metallic materials such as gallium, indium, and gold (Zhan et al., 2015) (Figure 5).

The primary source of metals used in electrical and electronic devices is mining. Information and communication technologies (ICTs) require many natural resources extracted from vast territories, which also depletes other valuable resources like water and energy during manufacture, producing tones of CO_2 emissions. There are typically 10,000 tonnes of CO_2 emissions produced to create one ton of gold, platinum or palladium (Cayumil et al., 2016). The use of precious metals in computers ensures that digital information is transmitted quickly and accurately. More than any other metal, gold best satisfies these requirements. Therefore, there is an average yearly need of 300 tones for gold in electrical and electronic equipments. More than 5 million tones of CO_2 are produced by this extraction alone. The annual CO_2 emission level from other metals such as copper, indium, silver, platinum, ruthenium cobalt, tin

Figure 5. Precious and base metals present in e-waste

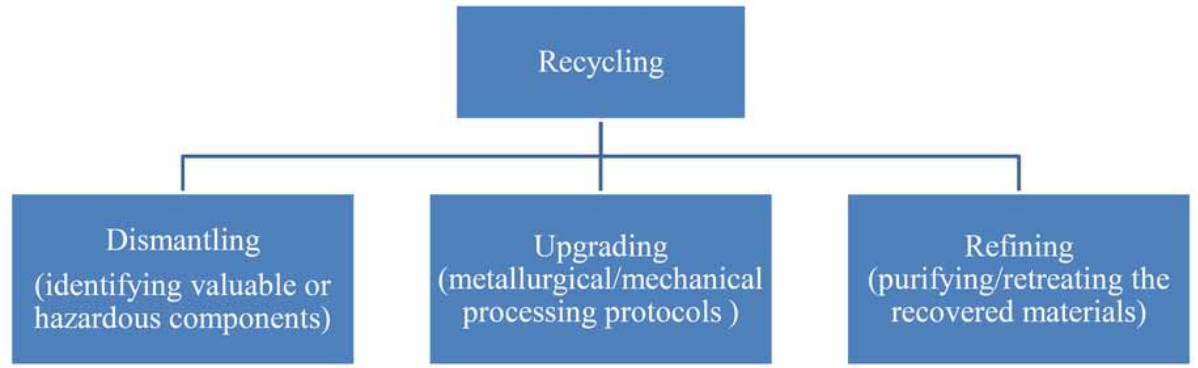
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

and palladium, used in electrical and electronic devices is more than 20 million tones, which is around 0.001 of the total CO_2 emissions worldwide (Devika, 2010).

It is urgently necessary to keep an eye on the amount and flow of E-waste and to make sure that these monitoring efforts are successful and ongoing in order to safeguard the environment and promote a sustainable society. Recycling is more cost effective than mining for precious metals from E- wastes (He et al., 2018). E-waste can be recycled formally or informally to recover important metals. Open burning to recover precious metals like copper, gold, mercury, platinum, and palladium is known as informal recycling. Recovering of precious metals from E-waste by using of various chemicals such as nitric acid, cyanide and sulfuric acid is known as formal recovery.



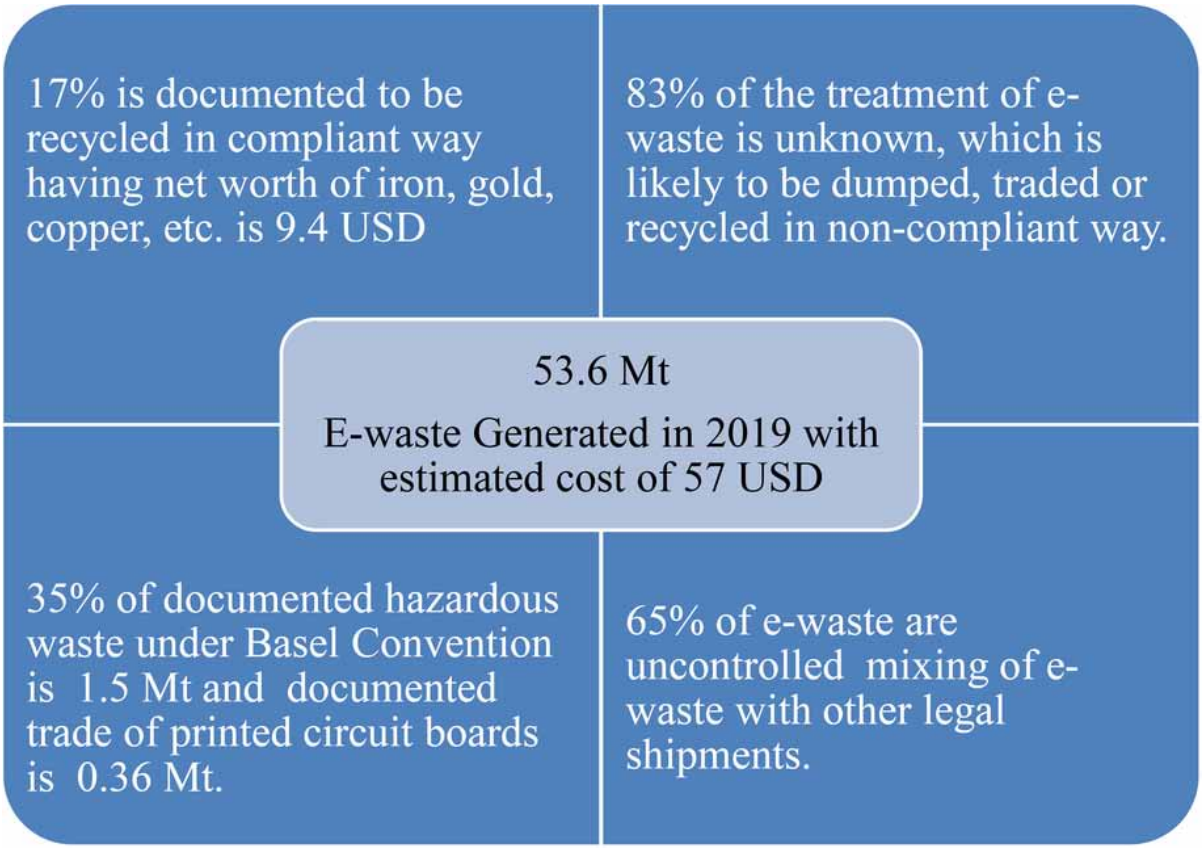
Three key phases are involved in recycling of E-waste for formal recovery. The first phase is dismantling, which focuses on locating valuable or hazardous components in the E-waste, second phase is upgrading, which focuses on metallurgical/mechanical processing protocols to get the desirable materials ready for refining, and the last phase is refining, which focuses purifying/retreating the recovered materials to make them suitable for their further use (Atia et al., 2019) (Figure 6).

After being heated, discarded PCBs produced two distinct types of solid products, carbonaceous non-metallic fractions (NMFs) and metallic products made of foils and/or droplets rich in copper, tin-lead droplets rich in copper, and some wires. Two different types of metallic phases were found to include significant amounts of Pt, Au, Pd, and Ag with only very small amounts being retained by the NMFs. Several valuable metals, including Pt, Au, Pd, and Ag were successfully concentrated in a small volume fraction using this procedure, which also resulted in volume reduction of up to 75% for additional processing or refinement (Cayumil et al., 2016).

5. E WASTE MANAGEMENT

Electrical and electronic gadgets have become the part and parcel of human life and its consumption is directly linked with the global economic development but the way in which these gadgets are disposing off is questionable, therefore creating E-waste. Moreover, the disposal is unsustainable because of the lack of practical recycling procedures. Many health as well as environmental related challenges has been faced by various countries across the globe due to the deposition of E-waste. A robust E-waste

Figure 6. Recycling methodology of e-waste



Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

management system is required to monitor the quantities and the flows of E-waste with an aim to provide sustainable disposal solution. Therefore, there is a need for the development of system which comprises of good recycling infrastructure, sound policies and implementable legal procedures for the disposal or management of E-waste.

Growing urbanization, mobility, industrialization etc. leads to the growth of E-gadgets. Globally 53.6 Mt of e-waste has been generated with an average of 7.3 kg per capita, which is projected to be 74.7 Mt by 2030 with an increase of annual average of 2 Mt (Forti et al., 2020) (Figure 7). The generated E-waste is expected to be 110 Mt by 2050, which is the fastest growing waste globally (Parajuly et al., 2019). The estimated value of raw material in e-waste generated in 2019 is 57 bn. USD contains aluminum, copper and iron as main raw material. Out of this, only 17.4% of the global E-waste is documented with a worth of 10 bn. USD and 4 Mt of raw material is available for recycling. Out of these, 8% of the e-waste stays in waste bins leads to landfills or incinerated. These discarded products can be refurnished and reused. The biggest irony is that this E-waste is illegally deported to some low or middle income countries under the guise of being reused but are dumped in big volumes ranging from 7% to 20% generation of E-waste in that country. The main causes of the growing amount of E-waste are mainly by higher consumption rate of E-gadgets, shorter life cycles and few repair options of gadgets.

In 2019, the continent in which collection and recycling of E-waste took place is given in table 2. E-waste systems do not cover batteries or electrical components of vehicles.

Figure 7. Facts about the e-waste generated in 2019

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

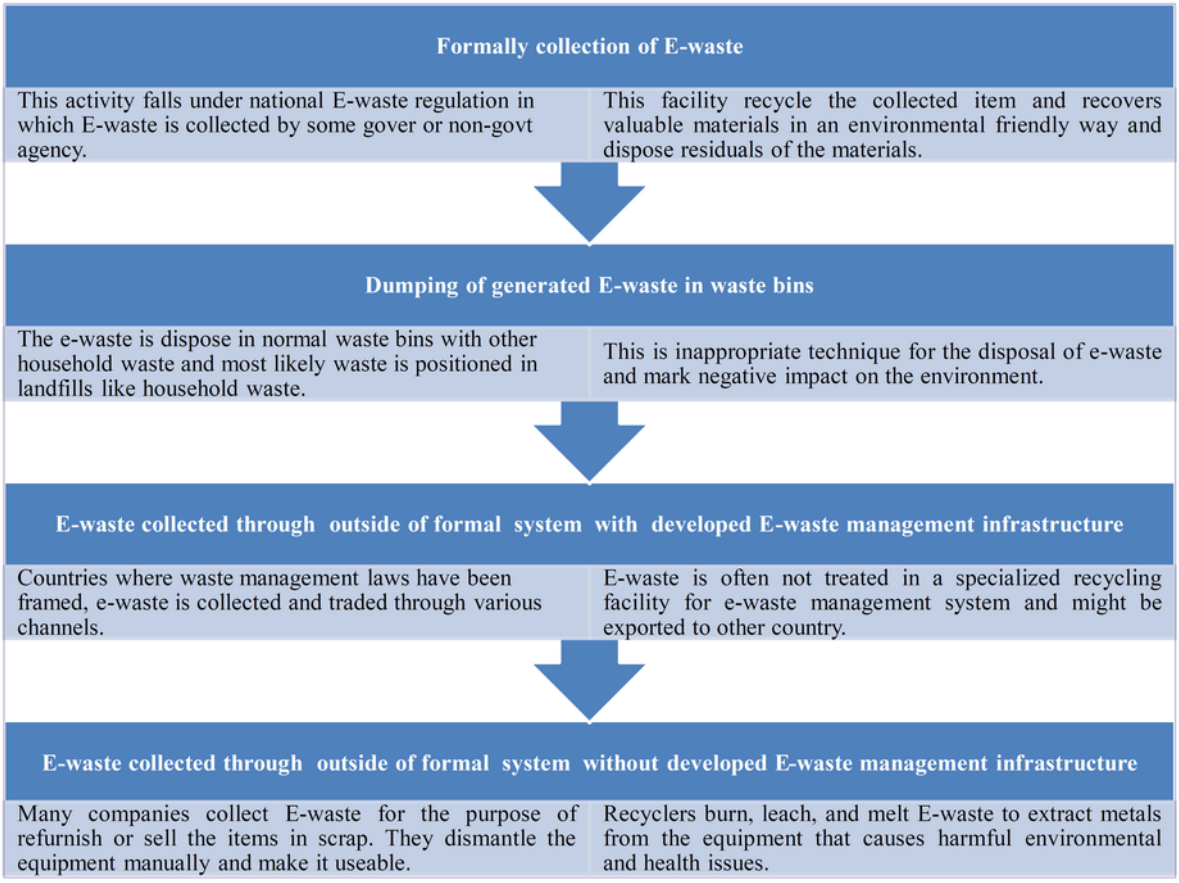


Table 2. Status of e-waste generation in continents

Continent	Europe	Asia	America	Oceania	Africa	Ref.
Generation of E-waste (in Mt)	12	24.9	13.1	0.9	2.9	Andeobu et al. 2021
Per capita generation of E-waste (in kg.)	16.2	5.6	13.3	16.1	2.5	Andeobu et al. 2021
Collection and recycling of E-waste (in %)	42.5	11.7	9.4	8.8	0.9	Andeobu et al. 2021

E-waste management involves a combination of policies and methods from start to finish. These strategic actions should be viewed through the lens of technical availability, affordability, economic, and environment friendly. A sustainable path with strategic intervention based on current management practices is crucial for management of E-waste in effective manners. Figure 8 shows the strategic plan for collection, dumping and management of E-waste in well mannered ways.

It has been studied within the European Union that high-income countries such as US, Australia, Japan, etc. have developed complaint E-waste management infrastructure for collecting E-waste locally through various municipalities and recovering good amount of recyclable components of the collected

Figure 8. Management of e-waste

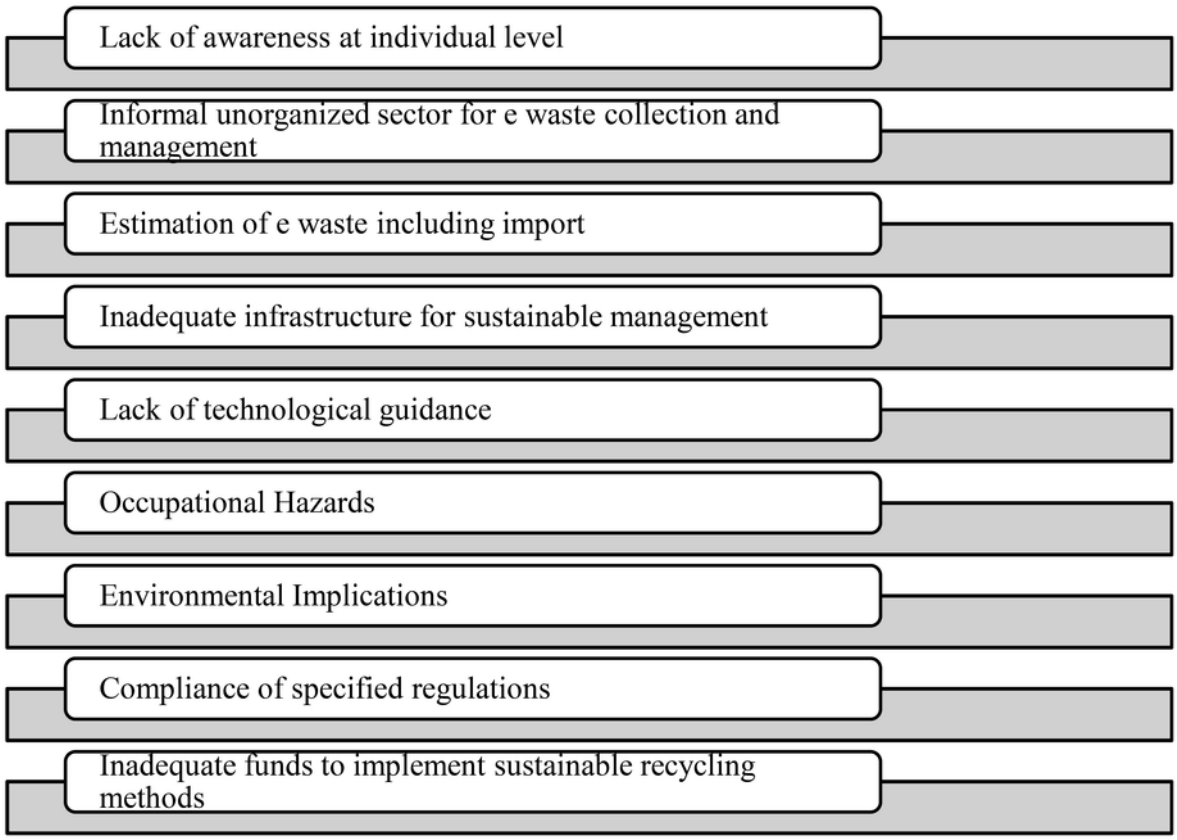
Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

E-waste and disposal of residuals in a complaint way without putting additional burden on the environment. Target studies conducted by various researchers on some countries revealed that significant amount of generated E-waste still unmanaged and disposed without following proper de-pollution steps (Magalini et al., 2019: Balde et al., 2020: Forti et al., 2020). Pello, recycling robots, pneumatic waste pipes, solar-powered trash compactors, E-waste kiosks, recycling apps are the new technologies have been applied to manage these wastes at low cost and sustainable ways. The internet of things (IOT) is implemented by many of these new, emerging debris management technologies to encourage sustainability and accelerate waste collection.

There is some highlighting which help to reduce the E-waste:

- Recycling of the waste is the best ways to reduce waste
- Educate everyone about the impact of E-waste on environment as well as on human beings
- Teach the young generation and child about the reduction of E-waste
- Store your data in the cloud to avoid storage devises
- Purchase very few electronic items and repair if possible
- Sell unused electronic items rather than discarding
- Donate your unused electronic items rather than discarding

6. CHALLENGES AND ISSUES FOR MANAGING E-WASTE



There are many challenges for effective implementation of E-waste management strategies. The amount of E-waste generation is too large to be handled with available infrastructure. Collection and process mechanism for E-waste management is not defined. Moreover, maximum people are not aware about the environmental and health implications related to improper disposal of electronic/electrical products (Liu et al., 2009). The common approach for disposal that has been followed by consumers includes the disposal of small/low-cost items like cables, chargers, batteries etc. along with household waste and selling of products like LCD, washing machine, mobile phones, laptops etc. in informal sector (Rajesh et al., 2022). There is a need for appropriate estimation of e waste generated/imported within a country in order to finalize the requirement of infrastructure for proper handling of waste. In addition to this technological guidance regarding e waste recycling should be provided to the concerned manpower working in the recycling units. Improper processes may also lead to many occupational hazards in workers. Figure 9 depicts the challenges associated with sustainable e waste management.

There are numerous difficulties and challenge in managing various types of waste. Lack of awareness, lack of technological guidance, specified regulations, environmental implications, unorganized waste collection and management, estimation of waste import, lake of infrastructure for sustainable management, occupational hazards, insufficient funds for sustainable recycling methods are the major challenges for sustainable management of E-waste. The infrastructure that is currently in place cannot handle the large volume of E-waste generated. E-waste management collection and processing mechanisms are not yet established properly. Additionally, the majority of people are unaware of the negative effects of improper disposal of electronic and electrical items.

In sustainable E-waste management, there are countless challenges and associated health risks are exponentially increasing. A holistic framework is required to fill the gaps between stakeholders and regulatory bodies in order to solve the issues related to waste management of discarded products. For

Figure 9. Challenges associated with sustainable e-waste management

appropriate handling, skilling of workers need to be ensured in order to avoid occupational health hazards and for environment protection. Awareness of consumer has also very integral role and should be taken care of with the help of media or special campaigns. Another important step that can be taken is to minimize the level of toxic materials used in electronic products.

7. CONCLUSION

This study aimed to assess the environmental impact of E-waste and valuable resource depletion. The development of various methods for recycling valuable materials for use in renewable energy systems is being pursued by scientific committee and organizations. Many precious metals that were recovered from E-waste are more valuable than those found in ore. E-waste management rules have started to be implemented by policymakers, allowing technical transfer to recover high-quality metals and other valuable materials from E-waste. Sustainable development goals would be achieved by using recent E-waste management policies. Ag, Pd, Pt, and Au among other precious metals found in waste PCBs, demonstrated a definite propensity to combine with the primary metallic components of waste PCBs, notably Cu, Pb, and Sn, to produce solutions for their recovery in heat treatment process.

ABSTRACT

Over the last two decades, the usage of electronic equipment in human life has been increasing dramatically and the life span of electronic products is short. E-waste is growing in the world, because they do not biodegrade easily, and most of them are not reused or recycled. In this chapter, the authors have explained the best practices and innovative approaches in e-waste collection and recycling, aiming to address environmental concerns, conserve resources, and promote sustainable waste management. The main problem is the release of toxic chemicals like lead, chromium, manganese, and polybrominated diphenyl ethers (PBDEs) from e-waste leads to many environmental and health issues as most recycling facilities are located in low-income areas. In those mainly women and children often participate in e-waste recycling as a form of income and are frequently exposed to hazardous pollutants. Some of the health effects include impaired learning and memory functions; altered thyroid, estrogen, and hormone systems; and neurotoxicity.

1. INTRODUCTION

The concept of E-waste collection and recycling has come to light due to the increasing use of electronic items, the amount of pollution they exposed to air, land, and soil, and the hazardous compounds they contain such as lead, chromium, mercury, polyvinyl chloride, gallium arsenide, cadmium, beryllium, and others. When these compounds eventually reach our bodies. This finally harms us. There should be suitable procedures in place to manage E-waste.

The impact of technological advancement and incorporation in day-to-day living gadgets has been seen globally in recent years, empowering individuals in the form of electronic appliances or devices. Appliances, such as refrigerators, washing machines, stoves, televisions, battery-powered toys, and mobile phones, are prevalent in houses regardless of necessity or economic level. Personal cameras, laptops, cell phones, air conditioners, computers, and security systems have become commonplace in upper-income families. All of these technologies have found an irreplaceable place in our lives and have both positive and negative impacts. The darker side of technology developments in the electronics industry referred to as the poison of the digital age, has been e-waste created from EOL electronic gadgets utilized in every household (Bhaskar & Turaga, 2018).

E-waste is detrimental to our environment. Assume you go to a mobile shop to exchange your phone. Instead of recycling the merchandise, some retailers often burn them. This allows them to extract copper, silver, and gold. When these technologies are burned, hazardous gases and chemicals are released. Hydrocarbons, brominated dioxins, and other heavy particles are among the harmful chemicals. Because these particles persist in the air, humans ultimately inhale them. Animals inhale these as well.

The Quantity of electronic trash created and reported by various organizations frequently differs. The main cause is that the estimating techniques differ and the units they use to describe themselves are not standard. The lack of adequate guidelines by ISO or any other international authority organization for the assessment of e-waste creation is another factor (Bhaskar & Turaga, 2018).

The optimum number of vehicles and the proper routing are necessary for efficient collection to minimize unnecessary collection costs and potential profit losses. A flexible and reliable communication system might also increase the amount of rubbish that is legitimately collected between the community and the garbage collection company. The field of e-waste recycling and emerging technologies have seen new trends emerge, and internet-based garbage collection services have already been investigated in China and India. Investigated the primary factors and challenges that affect Chinese individual decisions to recycle e-waste through e-commerce. The desire to recycle via e-commerce generation was shown to be favorably correlated with attitudes, personal standards, and the simplicity of e-commerce, despite the fact that residents did not all agree to use it (Nowakowski & Pamuła, 2020).

Electronic waste recycling is a gold mine from an economic standpoint since it may produce a wide range of priceless materials, including palladium, copper, iron, gold, aluminium, platinum, and silver. Technically the majority of these metals are recoverable and recyclable. Recycling of e-waste also adds to the issue of unemployment in several nations, including China, which employs around 100,000 recyclers at one of its facilities. Hazardous substances including lead, mercury, and cadmium, as well as gases and chemicals like flame retardants and chlorofluorocarbons, may all be avoided through recycling, Global e-waste is estimated by the United Nations University to be worth more than $62 billion in raw materials (Aboelmaged, 2021).

1.1 Purpose of Chapter

This chapter will also explain innovative ways of collecting E-waste which include installing reverse vending machines that collect pieces of e-waste and deliver incentives or rewards in return is a great way to encourage people to recycle their electronic devices. Mobile E-waste collection units, such as specifically constructed trucks or trailers, move to different neighborhoods or events to collect E-waste directly from the community. For example, these mobile collecting units may collect E-waste during an event in a different part of the city. Initiatives in schools and places of employment encourage students and workers to recycle their outdated electronic equipment by establishing E-waste collecting programs at schools and places of employment. E-waste drop-off kiosks in public locations such as shopping malls, libraries, and transit hubs would make it easier for individuals to dispose of their electronic trash. Platforms for the online trading of e-waste should be developed. These platforms should allow users to trade or sell their outdated electronic equipment to other people who may find such gadgets valuable, hence prolonging the usable life of these devices. Competitions or schools to see who can collect the most E-waste will develop a feeling of community engagement and responsibility.

Certainly, there are methods for recycling electronic waste that have the potential to improve sustainability, resource recovery, and environmental protection. Scientists and researchers are encouraging the use of non-harmful microorganisms like bacteria, fungi, and algae to carry out a "clean" recycling of electronic trash. The idea of "E-waste to energy" is a game-changer. It is a way to deal with the growing problem of electronic garbage and to use the promise of renewable energy production. Make machines that can take apart and sort electronic devices quickly and efficiently, sorting valuable parts from things that can't be recycled. Automation can make recycling work better and protect people from dangerous chemicals (Andeobu et al., 2021). Using the latest chemical processes to dissolve and collect metals from E-waste, with solvents that are good for the environment and less need for ways that use a lot of energy. Urban mining is the idea of getting valuable metals out of old technology that has been thrown away in cities. By taking valuable metals out of old electronics.

2. LITERATURE REVIEW

The global demand for smarter electrical and electronic equipment (EEE) is increasing every year, resulting in massive amounts of obsolete EEE ending up in landfills. Its unsustainable methods of collecting, treating, and disposing of waste E-waste, pose enormous threats to the environment. With this rising e-waste, the formal sectors lack the infrastructure, technology, manufacturing, and expertise of e-waste in an environmentally responsible manner. This article expresses the global best practices in the field of E-waste management to shed light on the importance of policy implementation, technology requirements, and social awareness to achieve it (Murthy & Ramakrishna, 2022). The research proposes strategies for establishing long-term e-waste recycling systems, including potential processing routes and scenarios that integrate the factors involved in e-waste collection, pre-treatment, and metal extraction, and mentions the alternative method of electronics to green electronics which can reduce the e-waste (Kurniawan et al., 2022). The various disposal methods for potential pollutants of lead, mercury, lead, cadmium, etc. are Landfilling, Incineration, Recycling, and Re-use of e-waste, where the article expresses the methods of informal recycling i.e., chemical recycling, mechanical and Thermal recycling methods. Any recycling process involves the dismantling, or removal of various parts of e-waste containing hazardous substances

IP Address: 223.231.178.10

such as Polychlorinated biphenyls (PCBs) and Hg, as well as the separation of plastic, removal of cathode ray tubes (CRTs), the separation of ferrous and non-ferrous metals, printed circuit boards. Strong acids are used to remove precious metals and electronics like computers, printers, and cell phones can be recycled by using filling or slight modifications, which is one of the alternative methods to reduce the e-waste generation (Annamalai, 2015). In this, the e-waste chemicals are disposed of by using the methods of selecting samples and strong chemical disposal methods to reduce the e-waste (Wong et al., 2007). Informal recyclers obtain e-waste from local waste and recover the targeted metals such as copper, aluminum, iron steel, etc. using rudimentary and primitive methods, which result from heavy environmental pollutants in the atmosphere. These metals recover through open burning and acid leaching, which are harmful to the environment, instead of these traditional methods, new innovative methods are discovered which levels of treatment are Decontamination, Dismantling, Segregation, Hammering, Shredding, Special treatment process, Pulverization, and electronic separation methods are suggested to reduce the e-waste materials (Vats & Singh, 2014). Lifecycle assessment (LCA) is now a widely used tool in e-waste management because it can estimate the impact of material consumption as well as evaluate the environmental and economic aspects. Extended Producer Responsibility (EPR), on the other way, deals with e-waste on a national scale and holds manufacturers accountable for their end-of-life products. Some developed countries like Japan and Switzerland, have adopted EPR principles, which are well supported by electronic companies. To comprehensively understand the combination of LCA and EPR principles may be the best model for managing e-waste in the future. To achieve sustainable development, electronic companies are encouraged to invest capital in establishing reverse supply chains to handle their end-of-life products (Doan et al., 2019). This article suggests when designing and implementing incentive schemes, firms consider operating transparency in e-waste management and allowing variation in collection activity and treatment process. It also suggests to manage successfully e-waste, it is vital to implement the development of eco-design equipment, proper e-waste collection, recycling of valuable materials using appropriate techniques, disposing of e-waste appropriately, preventing illegal trade of used electronic devices to developing countries and raise the awareness about the negative impacts of e-waste. By using EPR channel techniques, e-waste can be dismantled or recycled in a proper handling manner and disposed of such waste.

3. COLLECTION METHODS

3.1 E-Waste in the Residential Sector

Residential E-waste management involves the proper processing, collecting, recycling, and disposal of domestic E-waste. E-waste is a broad category of electronic and electrical products that have outlived their usefulness or are no longer needed. This category may include ancient computers, laptops, mobile phones, televisions, refrigerators, washing machines, and other electrical equipment and gadgets.

Curbside collection: In certain areas, the government schedules curbside collection days during which homeowners can deposit E-waste products, such as outdated laptops and small gadgets, alongside their usual garbage for pickup.

Drop-off locations: Many municipalities have designated drop-off locations or collecting events where citizens may bring their E-waste for appropriate disposal or recycling.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Take-back programs from electronic stores: some electronic stores provide take-back programs that allow customers to return old gadgets while purchasing new ones.

One of the most creative techniques for collecting E-waste from the residential sector is the deployment of a "Smart E-waste collection system". This approach combines technology and convenience to encourage and expedite domestic electronic waste collection. Create a mobile app that locals may use on their cell phones. The software acts as a central platform for scheduling and tracking E-waste collections. Residents may use the app to arrange a convenient time for E-waste removal from their houses. They can select a certain collection day and time. Encouraging sustainability by ensuring that collected E-waste is recycled or repaired effectively, with an emphasis on reducing environmental impact and optimizing resource recovery (Wang et al., 2016).

The smart E-waste collection system makes E-waste disposal simple and enjoyable for residents by combining technology, convenience, and data-driven insights. This strategy may considerably increase participation rates and assure responsible E-waste management by offering a user-friendly mobile app and combining contemporary and inventory management tools.

3.2 E-Waste in the Commercial and Industrial Sectors

The appropriate treatment, recycling, and disposal of electronic waste created by businesses, organizations, and industrial facilities is referred to as E-waste management in the commercial and industrial sectors. Because of the usage of electronic equipment and gadgets in different commercial and industrial processes, their sector generates a substantial amount of E-waste. Effective E-waste management in this industry is critical for environment preservation, resource conservation, regulatory compliance, and long-term business operations.

Programs for internal collection: Internal E-waste collection initiatives are frequently established within larger corporations' premises. They may have designated collection bins or spaces where staff may discard outdated gadgets.

E-waste recycling companies: To handle their E-waste, many organizations collaborate with specialist E-waste recycling companies or suppliers. These businesses offer pickup services and make certain that everything is in order.

One of the most creative approaches for collecting E-waste from the commercial and industrial sectors is the establishment of an "E-waste exchange platform". This platform uses technology and market dynamics to help companies, recyclers, and manufacturers exchange E-waste effectively and sustainably. Create an online marketplace dedicated to E-waste trades. This portal connects E-waste generators with qualified recyclers and firms in need of raw materials. Businesses publish their E-waste goods on the site, offering extensive information about the kind, amount, and condition of the equipment. They can upload images and designate the status of data sanitization or deletion. Make transparent bidding and price methods available so that purchasers may submit bids for the listed E-waste goods. Businesses can select the most appealing deals. Integrate logistics and transportation services into the platform certified recyclers and purchasers may schedule pickups directly through the website, making the collection process more efficient (Widmer et al., 2005).

The E-waste exchange platforms establish a dynamic and transparent E-waste marketplace, promoting a circular economy by encouraging enterprises to regard E-waste as a resource rather than a waste. It improves sustainability, decreases landfill waste, and encourages commercial and industrial electronic equipment recycling and reuse.

3.3 E-Waste in Educational Institutions

The appropriate treatment, recycling, and disposal of E-waste created by educational institutions such as schools, colleges, universities, and research institutes are referred to as E-waste management in the educational sector. Because they rely on electronic technology for teaching, research, and administration, educational institutions frequently generate considerable volumes of E-waste. Effective E-waste management in this industry is critical for environmental preservation, regulatory compliance, and the promotion of sustainable practices.

E-waste collection drives: E-waste collection drives are regularly organized by schools, colleges, and universities to encourage students and employees to bring in their old electronic gadgets for recycling or appropriate disposal.

Initiatives in schools and workplaces that encourage students and employees to recycle outmoded electronic equipment by establishing E-waste collecting programs are crucial for encouraging sustainability and proper e-waste disposal. The effort starts with awareness initiatives in schools and workplaces. These ads inform students and staff about the environmental effects of E-waste and advantages of proper disposal. Schools and workplaces have designated collection stations. These collection locations are often located in public places or near building entrances.

These are clear criteria in place for what sorts of electronic trash are allowed. This includes old laptops, desktop computers, displays, keyboards, mouse, mobile phones, chargers, cables, and other peripherals. Guidelines also describe the state of objects (for example, whether or not they must be in functioning order) and may exclude dangerous products. To minimize overflow and guarantee smooth operations, regular schedules for collecting and emptying the bins are created.

Collaborations with recycling companies: educational institutions may form collaborations with E-waste recycling companies to handle E-waste in an economically friendly manner.

Transportation of collected E-waste to approved recycling centers or facilities has been planned. Participant's feedback is sought to discover areas for improvement to make them more successful and engaging (Borthakur & Govind, 2017).

3.4 E-Waste in Manufacturing and Technology Companies

E-waste management in manufacturing and technology refers to the complete procedures and techniques used by these businesses to treat, recycle, and dispose of E-waste created during their operations. Due to the employment of electronic components, equipment, and gadgets in the manufacturing and product development processes, manufacturing and technology organizations frequently generate a significant amount of E-waste. E-waste is critical in various areas for environmental protection, regulatory compliance, resource conservation, and sustainability.

Inventory and Evaluation: Take a full inventory of electronic equipment gadgets, and components involved in manufacturing operations. Examine the condition, functioning, and lifetime of each item to determine which should be discarded or replaced.

Reuse and refurbishment: Consider reusing or renovating electronic equipment that is still functioning but no longer required wherever possible. This method can assist in increasing gadget lifespan and minimize E-waste creation.

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Hazardous waste management: Hazardous materials such as lead, mercury, and chemicals may be present in some electrical equipment used in production. To avoid environmental pollution, strictly follow legislation controlling the disposal of hazardous E-waste.

One of the most inventive approaches for collecting E-waste from industrial and technology organizations is the establishment of a "Reverse supply chain E-waste collection network". This network combines cutting-edge technology with sustainability principles to produce a streamlined, ecologically responsible, and effective approach to collecting electronic waste from various businesses. Implement blockchain technology to develop a transparent and secure E-waste monitoring system. On the blockchain, each electric gadget and component is issued a unique digital identification. This slows for real-time tracking of E-waste throughout its full course, from disposal to recycling or reuse. Install Internet of Things (IoT) enabled smart E-waste collecting containers. These bins can check their fill levels automatically and give alarms when they need to be emptied. IoT sensors can also detect and classify E-waste by kind, making the sorting process more efficient (Schwarzer et al., 2005).

3.5 E-Waste in Environmental Organizations

In the environmental business, E-waste management refers to the methods and tactics used by environmental organizations and agencies to handle the issues connected with E-waste. These groups are critical in encouraging ecologically appropriate E-waste disposal, recycling, and long-term practices.

Campaigns for public awareness: Environmental groups frequently organize public awareness campaigns to educate the public on the necessity of proper E-waste disposal and to offer information on various collection options.

Collaborations: They may work with other industries, such as retail or government, to help with E-waste collection and recycling.

One of the most creative techniques for collecting E-waste from the environmental business is the creation of a "smart E-waste collection network". This method makes use of cutting-edge technology and data-driven tactics to simplify the collection of E-waste from various environmental organizations and agencies. Install Internet of Things-enabled E-waste collecting bins at key places on the grounds of environmental groups, recycling facilities, and government institutions. These bins are outfitted with sensors that continuously check their fill levels. Use smart routing algorithms to improve E-waste collection routes using data from IoT devices. These algorithms may prioritize overflowing bins, guaranteeing efficient and timely collection. Using historical data, use predictive analytics to forecast E-waste creation patterns. This information aids in the proactive scheduling of collections and efficient allocation of resources. Publish sustainability indicators such as carbon footprint reduction, resource conservation, and landfill diversion to demonstrate the environmental advantages of participating in the smart E-waste collecting network (Zeng et al., 2017).

4. RECYCLING METHODS

4.1. By Using Harmful Micro-Organisms

The use of non-harmful microorganisms, like bacteria, fungi, and algae, in electronic waste recycling involves a sustainable and environmentally friendly approach to break down and recover useful materials from discarded E-waste. This process is often referred to as "bioremediation" or "biological recycling".

To begin, non-harmful microorganisms known for their capacity to metabolize or interact with E-waste components are chosen. The microorganisms used are selected based on the components in the electronic trash and the anticipated recycling outcomes.

First, the E-waste is prepared for bioremediation. Disassembling electronic equipment to reveal its components, removing hazardous items such as batteries, and ensuring that the trash is clean and free of pollutants are all examples of what it entails.

The processed E-waste is subsequently introduced to the microorganisms of choice. Bacteria, fungi, and algae are employed because they naturally degrade or interact with certain elements used in electrical equipment. Some bacteria, for example, may remove precious metals like old, silver, or copper from electronic circuit boards via a technique known as bioleaching. Plastics and organic components included in E-waste can be broken down by fungi. Heavy metals and other toxins can be absorbed by algae (Wu et al., 2019).

Microorganisms metabolize, convert, or accumulate particular components of E-waste over time. They may, for example, release enzymes or acids that break down things into simpler forms.

4.2. E-Waste to Energy

The process of transforming waste material into energy in the form of electricity or heat is known as waste to energy. This is a low-cost energy generation method. This technique is also known as a sustainable waste management chain. This method also yields numerous biofuels, including CBG and Biodiesel. CBG is a novel type of biomass fuel. NextGen Energia is one of the companies that is effectively revitalizing the energy industry by giving franchise opportunities to invest in CBG/CNG pumps as well as CBG/CNG-producing facilities or projects.

The shredded E-waste is incinerated or burned in specially built facilities known as waste-to-energy plants. High temperatures are generated during the combustion process, which breaks down the organic components of E-waste, creating heat and gases.

E-waste to Energy advantages: E-waste to energy helps remove electronic trash from landfills, lowering the environmental strain and saving valuable landfill space.

Resource recovery: After combustion, valuable metals such as copper and aluminum can be recovered, helping to resource conservation.

Renewable energy: Because it uses waste products as a fuel source, electricity generated from E-waste to energy processes is often considered a kind of renewable energy.

Environmental advantages: E-waste to energy plants that are properly managed can lessen the environmental effect of electronic trash and the emission of dangerous chemicals associated with typical waste disposal techniques (Ahirwar & Tripathi, 2021).

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

4.3. Chemical Process

The most recent chemical procedures for dissolving and collecting metals from e-waste promise to create ecological effects, efficient, and energy-efficient alternatives. These techniques make use of solvents and technologies that are intended to have a low environmental effect while optimizing metal recovery. Environmentally friendly solvents are used in these new techniques to selectively dissolve the metals found in E-waste. These solvents are carefully chosen to do as little harmful to the environment and human health as possible while still recovering target metals.

E-waste is often pre-processed before using chemical techniques to remove non-metallic and hazardous components. This guarantees that the emphasis is on obtaining precious metals while minimizing environmental hazards.

In a controlled atmosphere, the E-waste is subsequently exposed to the solvent of choice. The solvent interacts with the metals, selectively dissolving them based on their chemical characteristics. Different metals may require different solvents or extraction conditions.

The solvent-metal interaction causes chemical reactions in a solution that result in the production of metal complexes. These chemicals are then separated from the rest of the E-waste.

The dissolved metals are recovered from the metal-rich solution. Precipitation, electrolysis, or other separation processes may be used. The ultimate objective is to obtain pure complexes.

Efforts are undertaken to collect and recycle the solvent used in the process to reduce waste environmental effects. This minimizes solvent usage and the overall environmental footprint (Kaya, 2016).

4.4. Urban Mining

The process of extracting valuable resources, resources, such as metals and minerals, from E-waste, discarded electronics, and other urban waste streams is referred to as urban mining. It is an environmentally beneficial method of recycling that strives to eliminate the need for traditional mining and the environmental effects connected with it.

The process of extraction of valuable minerals from E-waste, notably metals like gold, silver, copper, and rare earth elements, is the focus of urban mining.

Electronic items like computers, cell phones, televisions, and home appliances are examples of E-waste.

Households, corporations, and electronic recycling facilities all contribute to the collection of E-waste.

The gathered E-waste is sorted and classified to identify the materials and components.

Before urban mining can begin, E-waste is generally disassembled, and non-metallic or dangerous components such as plastic, batteries, and circuit boards are removed.

Preprocessing helps to speed up the urban mining process while also lowering environmental hazards.

To recover metals from E-waste, urban mining involves a variety of metallurgic processes. Leaching, smelting, and solvent extraction are examples of this method.

The process used is determined by the individual metal and its shape in E-waste.

Chemical techniques are sometimes used to selectively dissolve and recover metals from E-waste. These procedures are intended to be both effective and ecologically beneficial.

To reduce environmental damage, environmentally friendly solvents are frequently used.

As a result, metals are extracted and subjected to purification and refining procedures. To get high-purity metals, this may entail melting and casting.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Metals recovered from urban mining may be utilized to make new electrical devices, lowering the demand for virgin resources (Zeng et al., 2018).

5. CONCLUSION

The study concludes that E-waste is determinantal to human beings and also the environment, which requires adequate treatment to gain environmental sustainability. E-waste management is made more difficult by weak management systems that lack official collection, classification, and a recycling mechanism. This will eventually influence environmental sustainability and harm health and the natural ecology. When not properly managed, E-waste poses a tremendous danger to our environment, public health, and natural resources. We can avoid these hazards and utilize the unique resources inherent in E-waste by implementing systematic collecting and recycling activities.

Recycling E-waste not only saves valuable metals, minerals, and energy, but it also minimizes the discharge of dangerous pollutants and greenhouse gases into the environment.

Furthermore, it promotes job development, economic growth, and technical innovation in the recycling and sustainable electronic sector.

To have a real impact, governments, corporations, communities, and people must work together to raise awareness, create effective recycling systems, and promote responsible electronic usage. By doing so, we can get closer to a more sustainable and environmentally friendly future (Chandrasekaran et al., 2018).

ABSTRACT

The proliferation of electronic devices in today's digital age, while ushering in technological advancements, has given rise to a pressing global issue: the exponential accumulation of electronic waste (e-waste). Not only is this a grave environmental concern, but its ramifications also spill over into health and equity domains. Delving into the social dimensions of e-waste, this chapter seeks to spotlight the pressing health risks associated with improper e-waste management and the equity concerns inherent in its production, disposal, and recycling. Drawing from various studies, the chapter posits that addressing the e-waste conundrum requires a multi-pronged approach, emphasizing the importance of global collaboration, regulatory frameworks, public awareness, and technological interventions.

1. INTRODUCTION

The rise of the digital age, underpinned by rapid technological advancements and innovations, has catalyzed the proliferation of electronic devices across the globe. With this boom, however, has come an unintended consequence: electronic waste, more commonly termed as e-waste. This mounting crisis, often shadowed by other pressing environmental issues, carries with it profound implications that ripple across ecological, socio-economic, and health spheres.

1.1 Historical Overview

The genesis of the e-waste problem can be traced back to the mid-20th century, when the first wave of electronic consumer goods began permeating households. Radios, televisions, and eventually personal

computers became symbols of modernity and progress (Wilson, J., 2009). As manufacturers produced more advanced, compact, and affordable versions of these devices, the lifespan of electronic goods started to diminish. The trend towards built-in obsolescence, spurred by rapid innovations and the consumer's desire for the latest technology, amplified the volume of discarded devices (Kang, H., & Schoenung, J. M., 2005).

1.2 Defining E-Waste

At its core, e-waste encompasses a vast array of discarded electronic devices. This includes, but is not limited to, computers, smartphones, televisions, refrigerators, and even toys embedded with electronic components. Notably, these discarded electronics are a potent mix of materials – some valuable like gold and copper, and others hazardous like mercury and lead (Kiddee, P., Naidu, R., & Wong, M. H., 2013).

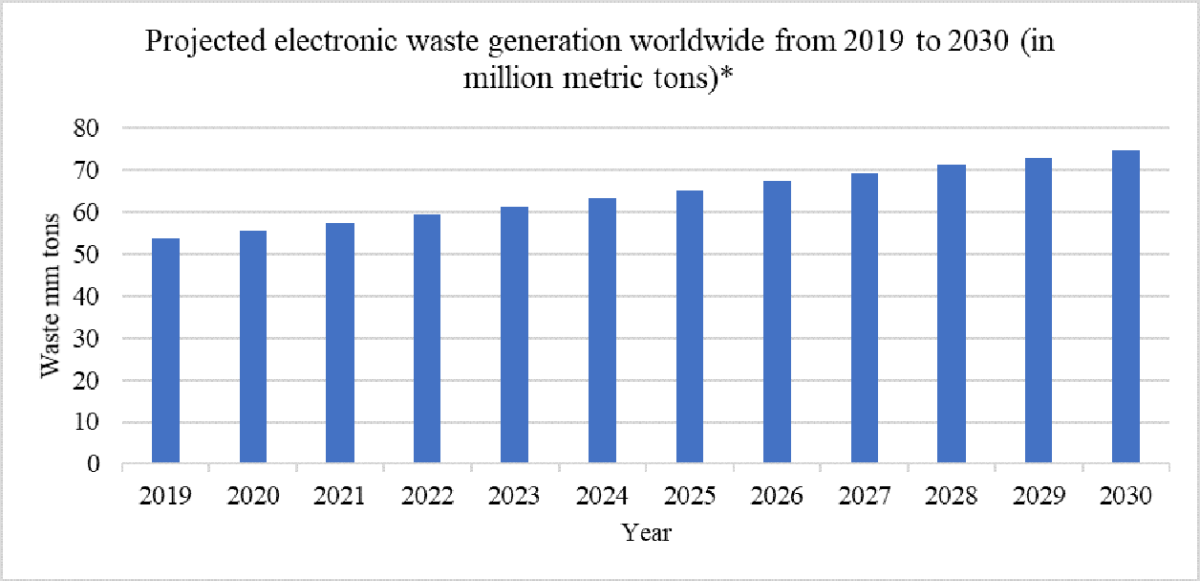
1.3 The Global Scale of the Issue

The sheer volume of e-waste generated worldwide is staggering. As of 2020, it was estimated that 53.6 million metric tons of e-waste was generated, with only a fraction being appropriately recycled (Baldé, C. P., Forti, V., & Kuehr, R., 2020). This global discrepancy in e-waste generation and its management creates hotspots, particularly in countries with lax regulations and oversight.

1.4 Environmental Ramifications

The environmental impacts of improperly managed e-waste are multifaceted. Landfills brimming with discarded electronics leach toxic substances into the soil and groundwater, resulting in long-term contamination. Moreover, informal e-waste recycling hubs, particularly prevalent in parts of Asia and Africa, employ rudimentary methods such as open burning. This releases toxic fumes laden with dioxins, furans, and heavy metal particulates into the atmosphere, which not only degrades air quality but also exacerbates the greenhouse effect (Chan, J. K., & Wong, M. H., 2013).

1.5 Socio-economic and Health Dimensions



Beyond environmental concerns, the e-waste conundrum has grave socio-economic implications. Informal recycling sectors, often devoid of health and safety standards, employ marginalized communities, including children. These workers, in their bid to extract valuable metals, are exposed to a cocktail of hazardous chemicals, leading to an array of health issues ranging from skin and respiratory ailments to more severe conditions like neurotoxicity and carcinogenic effects (Grant, K., Goldizen, F. C., Sly, P. D., et al., 2013).

Moreover, the e-waste trade has economic ramifications. While it provides a source of income for many in the informal sector, the externalized health and environmental costs far outweigh the immediate economic benefits. Furthermore, the shipment of e-waste from developed to developing countries under the guise of "second-hand goods" further complicates the issue, creating a disparity in e-waste responsibilities (Widmer, R., Oswald-Krapf, H., Sinha-Khetriwal, D., Schnellmann, M., & Böni, H., 2005).

As the curtain rises on the e-waste narrative, it's evident that the issue is not just about discarded electronics. It's a tale of rapid technological progression, societal consumption patterns, environmental

Figure 1. Outlook on global e-waste generation 2019-2030
Source: Statista 2023

degradation, and the often-overlooked human cost. Tackling this behemoth requires a multi-pronged approach, encompassing stringent regulations, technological innovations in recycling, and a shift in societal perceptions towards consumption and disposal. Figure 1 shows the global e-waste generation in million metric tons) and the forecast till 2030.

This chapter aims to solve the following research questions:

- How have historical and technological factors contributed to the global rise of e-waste and shaped current consumption and disposal patterns?
- In what ways do global disparities in e-waste generation impact the environment, socio-economic conditions, and health of diverse populations?
- What specific health risks are associated with toxic substances in e-waste, and how do these risks affect vulnerable populations across regions?
- How do equity issues manifest in e-waste management, considering global responsibilities, the exploitation of vulnerable communities, and environmental justice?

To solve the above framed research questions the objective formed for the chapter are:

1. Conduct a literature review to understand the historical and technological factors influencing the global rise of e-waste and their impact on consumption and disposal patterns.
2. Identify patterns and disparities in generation, management practices, and their effects on the environment, socioeconomics, and health.
3. Investigate the health risks associated with toxic substances in e-waste, considering demographic vulnerabilities and regional variations.

4. Develop recommendations for policymakers, industries, and communities based on findings to address the social impacts of e-waste, emphasizing strategies for more equitable and sustainable electronic waste management.

2. HEALTH RISKS OF E-WASTE

2.1 Toxic Substances in E-Waste

E-waste is composed of a myriad of materials, many of which are hazardous to human health and the environment. The disposal of e-waste, when done improperly, releases these toxic materials into our surroundings (Oteng-Ababio, 2012).

Lead is one of the most prevalent heavy metals found in e-waste, especially in soldering of printed circuit boards and in cathode ray tube (CRT) monitors. Prolonged exposure to lead can result in damage to the nervous and reproductive systems, and it can impair child development (Needhidasan, Samuel, & Chidambaram, 2014).

Mercury is another dangerous element commonly found in flat-screen monitors, thermostats, and printed circuit boards. Mercury ingestion or inhalation can lead to brain, lung, and kidney damage (Schluep et al., 2013).

Cadmium, frequently used in rechargeable batteries and semiconductors, is carcinogenic and can lead to kidney failure (Kiddee, Naidu, & Wong, 2013).

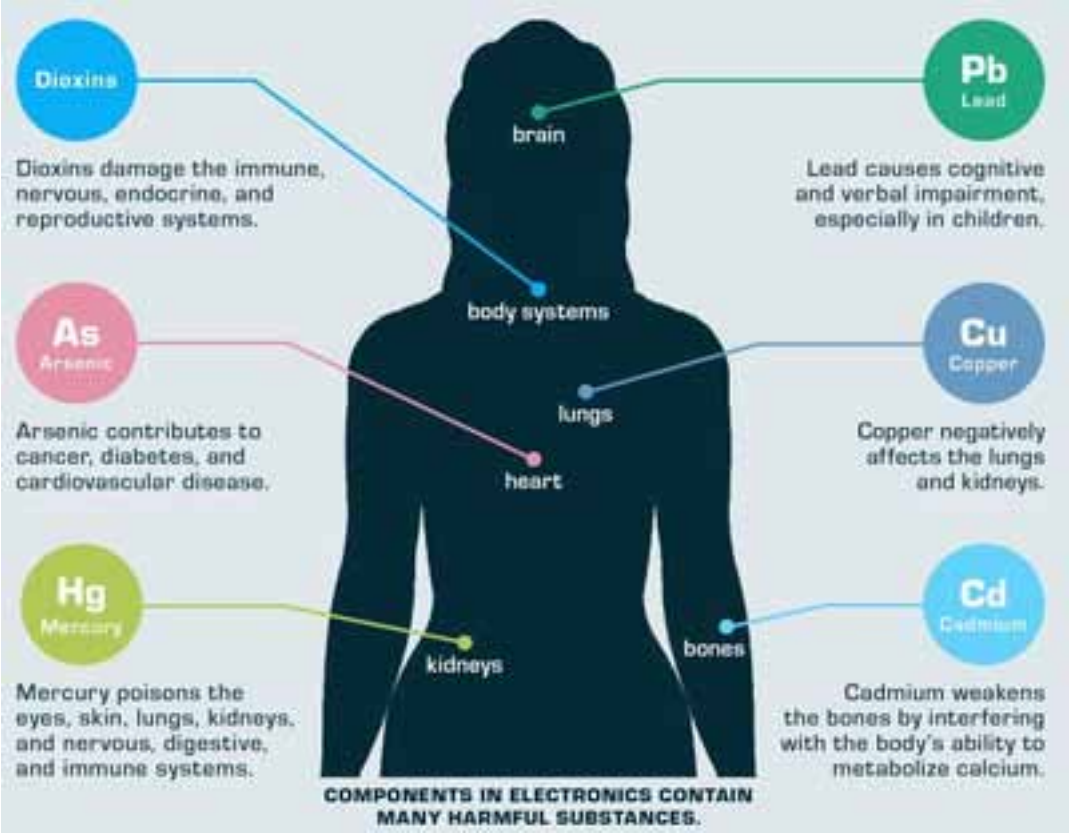
Brominated flame retardants are used to reduce the flammability of electronic products. However, they can disrupt endocrine activity, leading to neurodevelopmental disorders (Herat & Agamuthu, 2012).

2.2 Health Impacts on Communities

The communities surrounding informal e-waste recycling sites face severe health consequences. Most of these sites employ rudimentary methods such as burning cables to extract copper, releasing dioxins and furans, which are highly toxic (Sepúlveda et al., 2010).

Children in these communities often have elevated levels of toxins in their blood. A study in Guiyu, China, a major e-waste recycling hub, found that children had significantly higher levels of lead in their blood than those from a control town (Huo et al., 2007).

Pregnant women exposed to e-waste toxins risk having children with birth defects and lowered IQs (Zheng et al., 2013).



2.3 Occupational Hazards

Workers in informal e-waste sectors face a high risk of exposure to toxic chemicals. Many are unaware of the hazards associated with e-waste and lack the necessary protective equipment (Asante et al., 2012). Inhalation of toxic fumes and direct contact with hazardous materials can lead to skin rashes, nausea, headaches, and respiratory problems (Wong, Wu, & Deng, 2007).

Chronic exposure can lead to severe health complications, including lung disease, reproductive disorders, and even certain types of cancers (Ogunseitan, Schoenung, Saphores, & Shapiro, 2009).

Figure 2. E-waste components affecting human health
Source: Impacts of E-Waste on Health—Blog. (n.d.)

3. ENVIRONMENTAL IMPACTS OF E-WASTE

3.1 Soil Contamination

Improper disposal of e-waste significantly affects the soil. Heavy metals such as lead, cadmium, and mercury can leach into the soil, affecting its quality and leading to contamination of the food chain. This contamination can affect both flora and fauna, leading to a decline in crop yields and affecting the organisms that rely on the soil for survival (Liu, Tang, & Chen, 2013).

Soil contamination can also affect groundwater, which poses risks to both human and ecological health. Communities relying on such contaminated groundwater sources can suffer from various ailments and diseases (Tsydenova & Bengtsson, 2011).

3.2 Air Pollution

The informal recycling practices, especially the burning of e-waste to recover metals, release toxic fumes and chemicals into the atmosphere. Pollutants such as dioxins, furans, and polychlorinated biphenyls

Dhanabalan Thangam (ctdhanabalan@gmail.com)

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

(PCBs) are highly toxic and can cause respiratory diseases and other health complications. The release of these chemicals also contributes to global warming and climate change (Chan & Wong, 2013).

3.3 Water Pollution

E-waste dumped near water bodies or in landfills can contaminate surface and groundwater. The heavy metals and chemicals leaching from e-waste can make their way into rivers and seas, affecting marine life. Fish exposed to such pollutants can suffer from reproductive issues, and humans consuming such fish can ingest these harmful substances (Widmer et al., 2005).

3.4 Impact on Biodiversity

Biodiversity can suffer significant losses due to e-waste contamination. Species exposed to the harmful chemicals present in e-waste can face reduced reproductive rates, shortened lifespans, and even extinction in extreme cases. Moreover, the loss of one species can have a cascading effect on the ecosystem, impacting the food chain and affecting various other organisms (Manomaivibool, 2009).

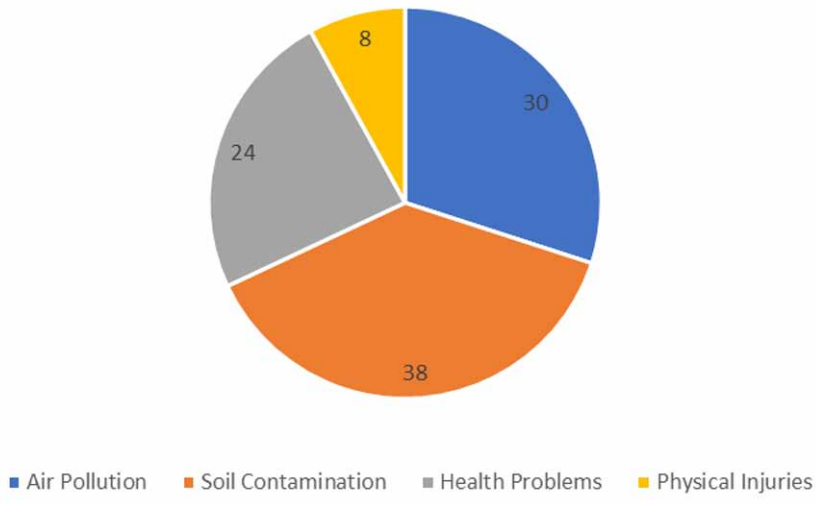

Figure 3 shows different categories of pollution because of e-waste.

4. EQUITY ISSUES IN E-WASTE MANAGEMENT

4.1 Global Disparities in E-Waste Generation and Management

Developed countries, due to their higher rates of technology usage and rapid technological turnover, generate a substantial portion of the world's e-waste. However, a concerning practice is the export of

Figure 3. Environmental and health effects

e-waste from these developed nations to developing countries under the guise of 'used electronics' or charitable donations (Schluep et al., 2013). This can create an undue burden on the receiving countries, often leading to unsafe recycling practices and environmental degradation, highlighting the disparities in e-waste management responsibilities (Ongondo, Williams, & Cherrett, 2011).

4.2 The Exploitation of Vulnerable Populations

In many developing nations, e-waste recycling has become a source of livelihood for marginalized communities. Yet, the lack of proper facilities and awareness means that these individuals often engage in risky recycling processes, endangering their health. Moreover, they may not receive fair compensation for their work, underscoring the exploitation inherent in the e-waste trade (Pickren, 2014).

4.3 Environmental Injustice and Marginalized Communities

Marginalized communities often bear the brunt of e-waste dumping and the consequent environmental degradation. Without adequate resources or political power, these communities find it challenging to resist e-waste imports or demand better recycling practices, perpetuating a cycle of environmental injustice (Lepawsky, 2015).

4.4 The Digital Divide and Its Implications

The digital divide, a term signifying the gap in access to information and communication technologies, exacerbates the e-waste problem. As affluent nations continue to update their electronic equipment, items deemed 'obsolete' in one country may still be valuable in another, less-developed nation. Addressing this divide can reduce e-waste generation and encourage a more equitable distribution of technology (Perkins, Kjellén, & Nehler, 2017).

5. ADDRESSING THE SOCIAL IMPACTS OF E-WASTE

5.1 Safe E-Waste Recycling Practices

The establishment of safe e-waste recycling facilities is crucial in mitigating the hazards associated with e-waste disposal. Governments and international organizations must establish and enforce stringent guidelines to ensure recycling processes are both safe and environmentally friendly (Grant, Goldizen, Sly, Brune, Neira, van den Berg, & Norman, 2013).

5.2 Extended Producer Responsibility (EPR)

EPR policies shift the responsibility of managing e-waste from consumers or governments to the producers. By incorporating the environmental cost of a product throughout its lifecycle, EPR promotes sustainable product design and environmentally sound recycling practices. It incentivizes manufacturers to develop products with a longer lifespan and fewer hazardous materials (Manomaivibool, 2009).

IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

5.3 Promoting Circular Economy

The circular economy model prioritizes product reuse, refurbishment, and recycling. By designing products to be repurposed at the end of their lifecycle, manufacturers can significantly reduce the generation of e-waste. Furthermore, the adoption of a circular economy would necessitate collaboration between governments, businesses, and consumers to instill environmentally friendly consumption habits (Ghisellini, Cialani, & Ulgiati, 2016).

5.4 Public Awareness and Advocacy

Educating the public about the societal and environmental impacts of e-waste is essential for fostering responsible electronic consumption. Awareness campaigns can be spearheaded by governments, NGOs, and community organizations, emphasizing the importance of recycling electronics and advocating for safer e-waste management policies (Oswald & Reller, 2010).

5.5 Policy Harmonization across Borders

Given the transboundary nature of e-waste, harmonizing policies across countries can significantly improve management. Regional agreements can foster collaboration, setting universally accepted guidelines and promoting shared technological solutions. The Basel Convention serves as a framework, guiding the transboundary movements of hazardous waste and setting criteria for its environmentally sound management (Balde, Wang, Kuehr, & Huisman, 2015).

5.6 Technological Innovations in E-Waste Management

Investing in technological advancements can lead to more efficient recycling processes. Developing technologies can separate and recover valuable materials from e-waste, reducing the environmental impact and improving economic returns. Collaboration between academia, industry, and governments can spur innovations in e-waste recycling technologies (Kellner & Goe, 2016).

5.7 Financial Mechanisms and Incentives

Government incentives can stimulate better e-waste management. Subsidies or tax breaks can be provided to companies that adopt green manufacturing processes or that establish advanced recycling facilities. Similarly, imposing penalties or taxes on products that are not environmentally friendly can act as a deterrent, pushing manufacturers towards sustainable practices (Saphores, Nixon, Ogunseitan, & Shapiro, 2006).

5.8 Stakeholder Engagement

Engaging multiple stakeholders, including manufacturers, retailers, consumers, and NGOs, can promote holistic solutions to the e-waste dilemma. Workshops, conferences, and public forums can be organized to brainstorm solutions, share knowledge, and develop collaborative strategies (Song, Yang, & Liu, 2015).

6. CONCLUSION

As the global e-waste dilemma intensifies, understanding its multifaceted nature is paramount. The management of electronic trash has evolved beyond mere environmental concerns, firmly entrenching itself in the realms of public health, social justice, and equity. The detrimental health impacts, especially in disadvantaged communities, and the deep-seated issues of social disparity underscore the urgency of robust intervention.

To begin, the crux of the matter lies in comprehending the vast health ramifications. As illustrated, toxins emanating from improperly handled e-waste pose acute and chronic health threats, with the vulnerable sections of society—like children, pregnant women, and the elderly—bearing the brunt (Puckett, Westervelt, Gutierrez, & Davis, 2002). Further exacerbating the scenario is the occupational exposure faced by workers in informal recycling sectors, where rudimentary methods and lax safety measures heighten health risks (Chi, Streicher-Porte, Wang, & Reuter, 2011).

Equity issues in e-waste management paint a similarly grim picture. Developed countries, while being prolific producers of e-waste, frequently resort to exporting their electronic trash to less developed regions. This unsavory practice not only shirks responsibility but burdens already strained systems in recipient nations, leading to environmental degradation and heightened health risks (Widmer et al., 2005). Such exportation of waste creates power imbalances and intensifies environmental injustices.

Yet, amidst this bleak setting, there's a beacon of hope. Solutions like proper recycling practices, the promotion of a circular economy, and public advocacy are already proving transformative in some regions. The key is collaboration—be it between nations via policy harmonization, industries through technological innovations, or communities rallying for change. Instruments like Extended Producer Responsibility (EPR) push the envelope, promoting eco-friendliness right from product design to its eventual disposal (Ongondo, Williams, & Cherrett, 2011).

In conclusion, e-waste, with its inherent complexities, demands a cohesive and multifaceted approach. Addressing the intertwined issues of health risks and equity is a formidable challenge, but with concerted effort and global unity, it's a challenge humanity can surmount. The path to a more equitable and sustainable future, while littered with obstacles, is navigable, and every step taken in the right direction has the potential to forge a lasting impact.

ABSTRACT

Green computing can be described as efficient resource management in distributed computing environments such as cloud, fog, and edge computing environments. In green computing, green refers to the eco-friendly environment with environmental responsibility to efficiently manage the computing resources. Mainly, two significant reasons are associated with global warming issues from the distributed computing perspective. They are high power consumption of cloud datacenters and high CO2 emission rate. According to many survey reports, every year, cloud datacenters alone produce nearly 90 million metric tons of CO2 into the environment, and now, this high power consumption of datacenters has become one of the primary reasons for global warming issues. Also, it stated that this CO2 emission rate would increase by 8% every year if it did not identify proper control measurements. Therefore, it is crucial to enhance e-waste management by increasing the efficiency of computing resource usage and minimizing high power consumption, high CO2 emission rate, inefficient recycling policies, etc.

INTRODUCTION

E-waste, often known as electronic garbage, is a rising worldwide issue in our increasingly digital and technologically oriented society. E-waste is made up of abandoned electronic equipment and gadgets, which can include everything from obsolete cellphones and laptops to smartwatches and other home appliances. In the environment, decomposition is one of the most important factors unless the substances are moved into different forms. The electronic equipment is mainly made of metal and other chemical materials. Without a proper management strategy, it's quite impossible to prevent upcoming environmental threats and disasters. The world's technological dependency is increasing daily; parallelly, e-waste is also growing 400 metric tons of CO_2 were released into the atmosphere by the (ICT) industry worldwide in 2007. Personal computers and other gadgets, such as computer displays, have had a significant negative influence on the environment Airehrour et al. (2019). The production of 41.8 million metric tons of electronic garbage was seen all over the world a few years ago Debnath, Roychoudhuri, and Ghosh (2016a). As we move forward in time, the most recent research from the United Nations University (UNU) paints a troubling picture: the volume of electronic trash is expected to rise to a staggering 52.2 million metric tons by the year 2021. This trend emphasizes the frightening rate at which our digital consumption practices are causing the ever-escalating e-waste problem Prasad et al. (2021). Electronic waste poses a significant threat to both human health and the environment due to its composition of heavy metal ions like Cadmium, Lead, Bromine, Mercury, Chromium, and various flame retardants. When humans and the environment come into direct contact with such waste, it can lead to highly hazardous situations Rautela et al. (2021). These materials have the potential to wreak havoc on human health by directly harming vital systems, including the cardiovascular, respiratory, digestive, and neurological systems Kumar, Holuszko, and Espinosa (2017) Joshi et al. (2023). So overall, E-waste creates an imbalance in the ecological system. Through its lifecycle and emitting greenhouse gases, E-waste also causes global warming. While the production of electronic devices and other gadgets requires a high amount of energy. During the manufacturing, gases like CO_2, Sulphur, and CO_2 are uncovered in the air layer.

The 20th century was revolutionary because of several technological inventions. The present and future also depend on technological advancement. Alongside the more industrial extension, there is a necessity for that. The ecosystem of this planet is becoming more unsuitable for using unguided and excessive energy. On a worldwide scale, governments and academic experts agree that carbon dioxide and other pollutants are the primary drivers of global warming and climate change. These pollutants include a variety of indicators, such as sulfur dioxide, suspended particle matter, and nitrogen oxides. This collective acknowledgment emphasizes these pollutants' crucial role in influencing the Earth's climate and the necessity for comprehensive solutions to limit their effectsAmri, Zaied, and Lahouel (2019). As it's a concerning topic in the present world, research took place in this field to find the solution. Green computing takes place by fulfilling the necessity and reducing the excessive usage of resources. Green computing involves reducing energy consumption, managing resources, and adapting to renewable energy. As it is a pressing issue in the modern world, researchers dug deep into this area to discover the answer. "Green computing" is implemented by decreasing excessive resource use while satisfying needs. Green computing involves conserving energy, managing resources, and incorporating renewable energy. Green computing promotes the responsible handling and disposal of electronic equipment, serving as a deterrent to the sneaky introduction of harmful e-waste into our delicate ecosystems. Electronic equipment's proper stewardship protects the land, water, and air from the insidious incursion of dangerous contaminants through rigorous end-of-life treatment, preventing contamination and ecological damage Panda (2013a).

To achieve our objective, we have structured the article into distinct sections. Section 2 will Discuss the challenges and current practices in managing electronic waste. Section 3 will explain the concept of Green Computing and how it can mitigate EWaste-related issues. Section 4 will explore the connection between E-Waste and global warming, highlighting the environmental issues associated with electronic waste. Section 5 presents solutions to address E-Waste from a global warming perspective. Section 6 will discuss how E-Waste management and its environmental impact are specific to India.

E-WASTE MANAGEMENT

Waste management involves organizing and systematically handling different waste materials, including solid, liquid, and hazardous. It includes processes such as collection, transportation, processing, recycling, and disposal, all of which should be carried out in an environmentally responsible manner. Appropriate waste management is essential for maintaining public health, preventing environmental pollution, preserving resources, and encouraging sustainable living.

E-waste is a growing problem in our modern world. Electronic waste, which includes discarded devices like computers, smartphones, televisions, medical and industrial equipment, refrigerators, and other appliances, can pose significant environmental and health risks if not disposed of properly. That's why e-waste management must ensure that these materials are safely and responsibly recycled and their hazardous components don't harm the environment or human health. In the context of prosperous nations, e-waste accounts for approximately 1% of the entire solid waste generated. E-waste generated from computers, flat-screen monitors, capacitors, transformers, and batteries contains harmful components like lead, cadmium, mercury, and polychlorinated biphenyls. In India alone, about 14 million PCs, 16 million mobile phones, and 80 million TVs are currently in use Panda (2013b). Countless wastes currently being used uneconomically or left unutilized are posing significant risks to the human environment Mukta and Ahmed (2020).

The following reasons highlight why e-waste is such a pressing issue:

- A remarkable amount of e-waste is constantly growing and shows no signs of slowing down.
- E-waste has significant environmental consequences that significantly impact the planet.
- A large portion of e-waste is shipped overseas, which can further harm the environment and human health.
- E-waste presents potential health hazards to those who come into contact with it.
- electronic waste disposal must be handled carefully to prevent data security breaches.

Present Situation of E-Waste Management

The present situation of E-waste management is quite complex and challenging. With the rapid growth of technology, the amount of electronic waste generated is increasing alarmingly. Unfortunately, most of it is in landfills or illegally exported to developing countries, causing severe environmental and health hazards. Many countries have implemented laws and regulations to control and manage E-waste, but the lack of proper infrastructure and resources makes it difficult to handle this problem effectively. Therefore, there is a need for a more comprehensive and sustainable approach to managing E-waste, which includes proper disposal, recycling, and recovery of valuable materials from electronic devices.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

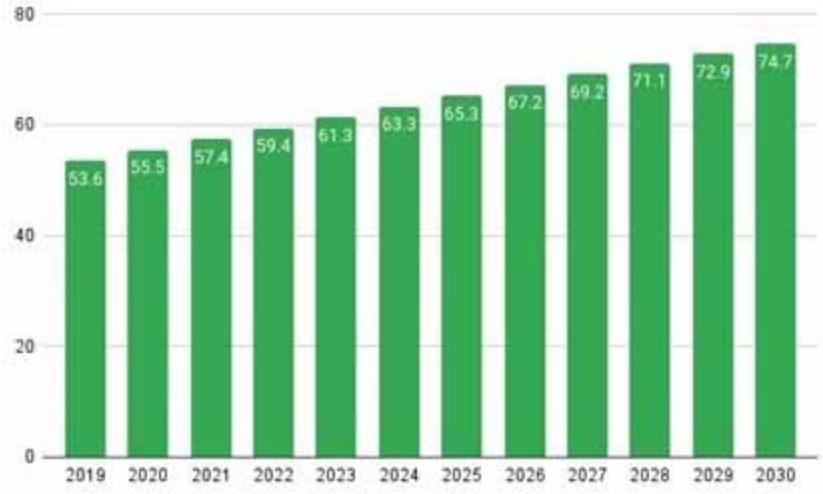

Figure 1 illustrates the Projected e-waste generation worldwide from 2019 to 2030. It's interesting to note that electronic equipment started becoming a part of our daily lives as early as the 1990s Balde et al. (2015). However, around 2005, e-waste became an emerging problem Widmer et al. (2005), and by 2014, it had already become a mini catastrophe. The current state of e-waste management is concerning, and projected trends from 2019 to 2030 based on available data paint a grim picture. The statistics speak for themselves - e-waste generation has steadily increased. In 2019, approximately 53.6 million metric tons of e-waste were generated worldwide. By 2020, this figure had already climbed to 55.5 million metric tons. The upward trajectory continued in 2021, with 57.4 million metric tons; in 2022, it reached 59.4 million. The projection for 2030 is particularly alarming a staggering 74.7 million metric tons. The reasons behind this exponential growth are multifaceted. Rapid technological advancements, shorter product lifecycles, and a culture of consumerism have all contributed to the proliferation of electronic devices. The world increasingly relies on electronics, from smartphones and laptops to household appliances and industrial machinery. However, with this dependence comes a significant environmental cost.

Lifecycle of Electronic Equipment

It's crucial to think about an electrical device's lifetime to comprehend it better. The lifetime of EEE in India is divided into three tiers, per Wath et al. (2010). We've taken a different approach and classified it into four phases Debnath, Roychoudhuri, and Ghosh (2016b). You can see a schematic lifecycle of e-waste in Figure 2.

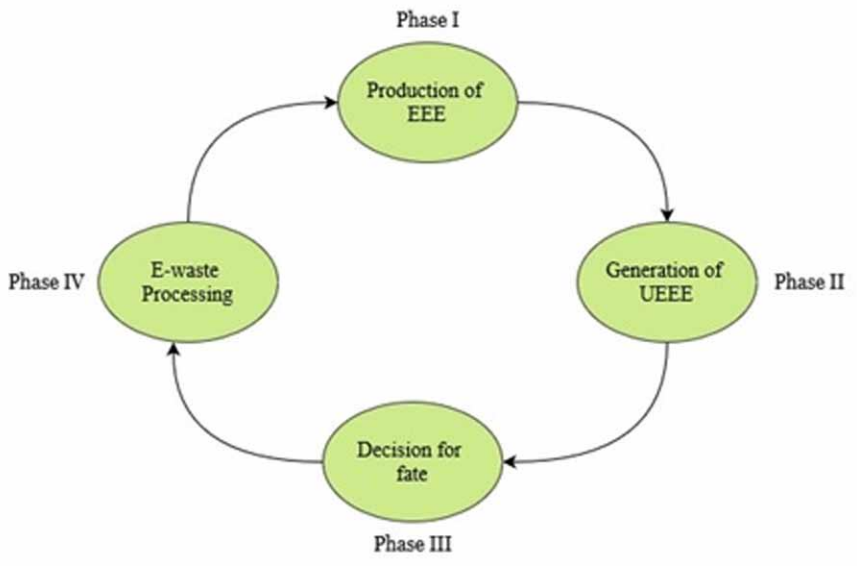
- EEE generation
- WEEE generation
- WEEE re-processing

Figure 1. Projected e-waste generation worldwide from 2019 to 2030

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Phase I – Production of EEE

Manufacturing EEE initiates its lifecycle within the EEE value chain. These products can exist as standalone units or as components of larger assembled entities that represent entirely new products. They may be produced and assembled within India or imported from various countries, including China, Europe, and Korea. Despite not being the end consumers, these products reach customers through distributors and retailers. It's worth noting that they are categorized as 'Associated Elements' rather than contributing to Waste Electrical and Electronic Equipment (WEEE) generation. However, there has been a recent shift in this practice. This change reflects evolving approaches to product lifecycle management and sustainability.



Phase II – Generation of UEEE

The subsequent phase involves the generation of Used Electronic and Electrical Equipment (UEEE). Notably, Electrical and Electronic Equipment (EEE) consumers extend beyond just offices and institutions, encompassing domestic users as well. Launching the latest electronic devices, such as smartphones or tablets, has increasingly become a highly anticipated consumer event. However, amidst the glitzy advertisements and long store queues, there's an underlying narrative: Many older devices are cast aside with each new product release. Technological advancements primarily drive UEEE. Additionally, reasons for UEEE generation include the desire to upgrade equipment and replace older items with newer ones.

Phase III – Decision for Fate

At this stage, an important decision is made regarding the end-of-life of any electronic and electrical equipment (EEE). The decision is based on whether the equipment is repairable and can be refurbished

Figure 2. Life cycle of e-waste

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

for resale in the secondhand market or should be WEEE. One of the notable characteristics of the Indian E-waste Supply Chain Management system is the presence of specialized industries dedicated to refurbishing and upgrading used personal computers. These industries have a significant role in the overall system.

Phase IV – E-waste Processing

The E-waste processing phase is categorized into three parts: Pre and post processing, and proper treatment.

Pre-processing: During the pre-processing stage of e-waste, the collected waste is sorted and dismantled. The plastics are sold to recyclers while the rest goes for e-waste treatment.

Proper Treatment: At e-waste treatment plants, different techniques and processes are utilized to extract valuable materials, like precious metals, and to recycle usable components from the e-waste.

Post Processing: As part of e-waste processing, the post-processing phase involves the responsible handling of waste materials, commonly known as "Zero Value Waste." However, in India, managing Zero Value Waste is still a challenge, and proper disposal of it remains a significant concern.

E-Waste Impact on Human and Environment

E-waste negatively affects both people and the environment. This kind of garbage consists of outdated electronics that still contain dangerous elements, including cell phones, laptops, televisions, and other electronic equipment. These materials can leach into the soil and groundwater if not disposed of properly. It is vital to emphasize the serious and widespread consequences of improper electrical waste disposal. When ewaste is improperly disposed of in landfills, it poses a significant time bomb for human and environmental health. The potential for toxic metals to seep into groundwater is a weighty problem as they can slowly infiltrate our crucial resources, posing a marked threat to all areas of life, including humans, plants, animals, and more. Sadly, ewaste is one of the ultimate contributors to the alarming expansion in air and water pollution, releasing toxic elements like copper, lead, mercury, cadmium, and others that cause comprehensive damage to our health. These substances can lead to various health problems, from heart issues to birth defects, and can affect nearly every system in the human body. The need for responsible e-waste management is extremely urgent as it is closely tied to our well-being and the maintenance of our environment. Amateurishness, restricted infrastructure, insufficient funding, and passive community involvement are challenges in handling E-waste Rautela et al. (2021).

Recycling of E-Waste

The process of e-waste recycling is a crucial and highly productive endeavor that involves several important steps. Figure 3 displays the e-waste recycling.

- The first step, picking, relies on manual labor to meticulously sort and identify items or components that should not be crushed or removed from the e-waste stream.
- After sorting, the next step is disassembly, where all components are carefully isolated and categorized into core materials. These core materials are destined for further recycling and reuse.

The third step is size reduction, where the e-waste is broken down into small fragments and refined into smaller pieces to facilitate the separation process and minimize dust and environmental impact.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- The fourth step is using an over-band magnet to release all magnetic materials, including steel and iron fragments, from the refined material. This step helps separate magnetic metals from non-magnetic ones.
- The fifth step involves separating metallic components such as aluminum, copper, and brass from non-metallic components like glass or plastic. This separation can be accomplished using magnets or optical identification techniques.
- Finally, in the last step of the recycling process, water separation is used to segregate non-metallic components, particularly the separation of plastic from glass. Water is often utilized in this process to help segregate these materials effectively. Once all components are separated, they are resold as raw materials for reuse in various manufacturing processes.

This process of extracting valuable materials from e-waste helps recover valuable resources and contributes to solving the growing problem of e-waste accumulation. By recycling e-waste systematically and environmentally friendly, we reduce the strain on natural resources and mitigate the harmful effects of improper disposal on human health and the environment.

GREEN COMPUTING

Green computing is an approach to computing that prioritizes efficient resource use and reduces power consumption to reduce the environmental impact of computing and IT-related activities. It's an important initiative promoting environmentally responsible behavior in the tech industry. The ever-growing technological advancements have increased the need for infrastructure and facilities to support it. We live

Figure 3. Recycling of electronic waste

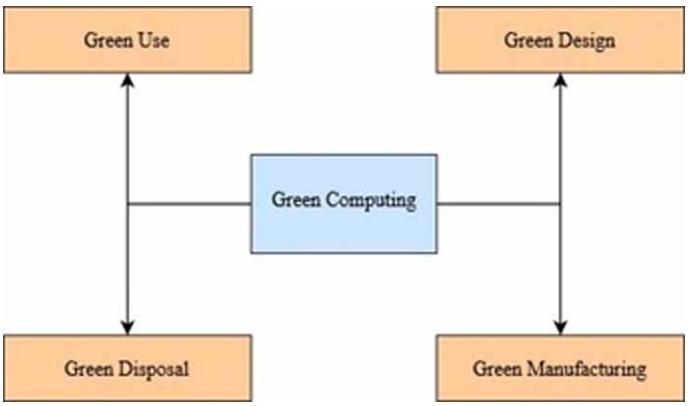
in an abundant information era, and it requires essential equipment and infrastructure to create, process, store, and utilize this data Ranbhise (2014). This is where green computing comes in, which is all about utilizing computing resources efficiently and promoting an environmentally responsible approach to computing. Its primary focus is on reducing power consumption and minimizing the associated environmental impact. Green computing is an essential step towards combating global warming and ensuring the sustainability of our planet. By adopting green computing practices, individuals and organizations can reduce their carbon footprint and contribute to environmental sustainability. This not only protects the environment but also results in tangible benefits such as reduced energy consumption and paper costs. Overall, embracing green computing is vital for a more sustainable and eco-friendly future.



In essence, green computing consists of the four core areas shown in Figure 5 and is discussed as follows Sadiku, Ampah, and Musa (2018), Srivastava and Sharma (2015). Green computing comprises four core areas: Green Use, Green Design, Green Disposal, and Green Manufacturing.

- The Green Use area involves using environmentally proper resources while reducing energy consumption.
- Green Design refers to developing energy-efficient and eco-friendly objects and services.
- Green Disposal involves recycling e-waste with the tiniest or no effect on the environment.
- Green Manufacturing involves manufacturing electronic devices with the tiniest or no effect on the environment.

The main factors causing green computing include Nazir, Majeed, and Birjais (2018):

- The consumption of a lot of electricity directly impacts natural resources and the environment. In addition, when we update our computers and dispose of outdated hardware devices and peripherals, we produce hazardous toxic waste that damages the environment.
- When we update our computers and dispose of outdated hardware devices and peripherals, we produce a hazardous toxic waste that damages the environment.

Figure 4. Key approaches to green computing for sustainable technology

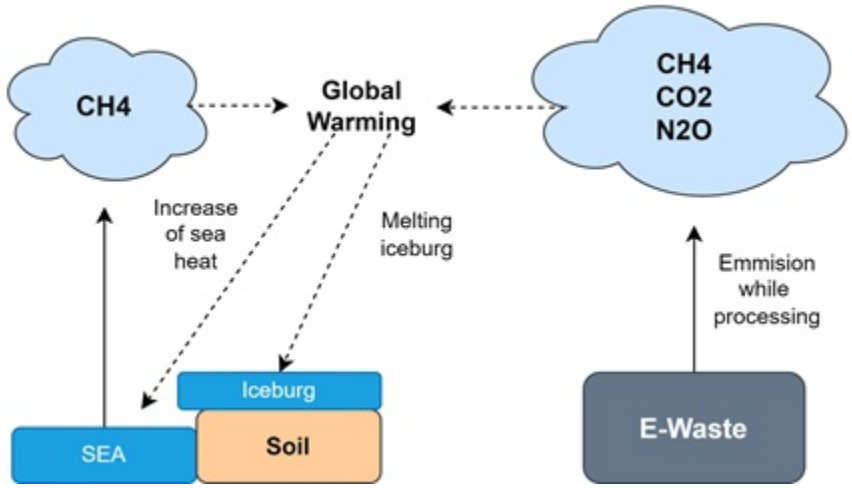
GLOBAL WARMING



The world is presently facing a significant challenge in the form of environmental and energy-related enterprises. The most burning among these issues is global warming, causing a gradational increase in the earth's average temperature over a long period. This miracle has far-reaching consequences for climate and overall environmental changes, with e-waste being the most concerning factor that plays a major part in global warming. The rising temperature is causing trouble to life on Earth, from land to ocean. The emigration of feasts like CH_4, CO_2, CO, SO_2, and other substances triggers the Greenhouse effect, leading to further temperature increases. In recent decades, worldwide energy demand has increased mainly. According to the International Energy Agency (IEA), if current trends continue, global energy demand will increase by 1.2 by 2035Khan et al. (2021). Although there has been a minor decline in conventional reactionary energies similar to coal, oil painting, and natural gas, they remain the world's primary energy sources. Oil painting, natural gas, and coal accounted for nearly 90% of electricity generation sources in 2016Norouzi and Fani (2020). It means the situation worsens, and resource management and energy reduction are necessary to neutralize the heat. In the following Figure 3 demonstrates the global warming effect.

Global Warming Issues

The effect of global warming is a multiplex challenge, and its influences are farreaching. With the incremental increase in Earth's average surface temperature, we're facing many problems. Let's take a closer look at some of the critical issues:

Raising Temperatures: The most obvious and crucial global warming situation is the rise in global temperatures. The more superheated climate is causing more frequent and severe warmth waves, making it unsupportable for humans and other animals.

Figure 5. Global warming effect from e-waste

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- **Shrinking Ice and Glaciers:** As the temperature is increasing, the ice caps and glaciers are melting at a rough rate, contributing to the rise in ocean conditions.
- **Trouble for Coastal Areas:** The melting of ice and warming of seawater are guiding to a rise in ocean situations, which could be disastrous for coastal residents, structures, and ecosystems.
- **Extreme Weather Patterns:** Global warming generates more frequent and damaging intense rainfall events, such as hurricanes, famines, cataracts, and backfires. These circumstances put millions of lives at risk and forced widespread impairment of property and structures.
- **Decline in Biodiversity:** Climate change and altered territories are making it difficult for colorful species to survive, leading to a steady decline in biodiversity. It's high time we take a step forward and address these issues before it's too late.

SOLUTION OF E-WASTE MANAGEMENT IN GLOBAL WARMING PERSPECTIVE

The management of e-waste is a crucial aspect of the fight against global warming. Effective solutions must be implemented to prevent electronic waste's hazardous environmental effects.

Proposed Solutions

Table 1 displays the analysis that indicates the usage of various methods or technologies in the existing work. In recent times, the industry of electrical waste has grown significantly, reflecting the widespread use of electronic devices in homes and businesses Parmar, Pandya, and Kumbharana (2011). The emergence of electronic waste has become increasingly complex, which demands efficient technologies and processes for proper management**?** Regrettably, inadequate disposal systems have made e-waste a significant environmental burden Jayarajan et al. (2018). However, the challenges posed by e-waste provide an exciting opportunity, as it is a combination of toxic and valuable materials, which has the potential to become a substantial business prospect Tiwari and Dhawan (2014). With various studies highlighting the potential advantages of harnessing electrical waste for green computing, managing it responsibly and sustainably is essential. With the proliferation of electronic devices, the issue of e-waste management has become increasingly pressing. Regulations such as WEEE and RoHS are positive steps towards creating a more sustainable society. It is essential to develop safer electronic devices that use eco-friendly materials. Manufacturers need to prioritize innovation towards sustainable materials and processes. Currently, electronic equipment design prioritizes energy efficiency and power consumption. Still, we must shift our focus towards developing safer electronic devices that use biodegradable, less toxic, and eco-friendly raw materials. Manufacturers play a crucial role in this transition, and innovation must be directed towards sustainable materials and manufacturing processes. To create a greener future, computer users and businesses must take responsibility and make small but effective changes to their work habits to reduce their environmental impact. Here are some practical steps that we can all take to make computing more sustainable:

- Prioritizing important printing.
- Utilizing recycled paper.
- Printing both-sided.
- Investing in high-efficiency, energy-saving equipment and top-rated energy stars is wise.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- Turning off systems instead of leaving them in standby mode.
- It's essential to acquire new equipment only when necessary, not just because a newer model is available. This helps to avoid unnecessary expenses and ensures that resources are utilized efficiently.
- Opting for smaller systems with fewer attachments.
- Unplugging unused peripherals (printer, audio system, scanner, modem, etc.).
- It is better to optimally charge UPS batteries instead of leaving them connected all day.

Various methods and tools have been developed to address this challenge. However, all these approaches share some standard requirements, such as investing in new technology and increasing awareness and knowledge.

This article will discuss an approach that prioritizes, these are the three fundamental principles of e-waste management.

- Eco-friendliness E-waste Management Approach
- Cost-effectiveness E-waste Management Approach
- Minimal impact on the environment and natural resources

Eco-Friendly E-Waste Management Approach

Ideal strategies and rules of green computing involve:

- Using power efficiently.
- Reducing paper consumption.
- Promoting eco-friendly equipment.
- Safely recycling old devices.

In Europe, several environmental regulations address waste management, recycling, and pollution control. Electronics companies are also developing a range of green computers, such as eco-friendly desktops and laptops, to reduce e-waste. They are trying to ensure that all electronic hardware adheres to the restricted use of hazardous substances, such as brominated flame-retardants, PVCs, and heavy metals like lead, cadmium, and mercury. However, the challenge lies in creating reliable green computer materials. Even the front-runner, a tin/copper/silver alloy, requires higher melting temperatures, affecting chip life. Let's break down some key points of eco-friendly e-waste management approach and elaborate on them:

- **Smart Power Usage:** Green computing is all about intelligent power consumption management, meaning devices can enter low-power states when unused. It is essential to optimize energy consumption to promote green computing.
- **Reduction of Paper Consumption:** The shift towards a paperless society is a great way to promote efficiency and environmental responsibility. By embracing digital documentation and communication, we can conserve trees and reduce the waste generated by paper production and disposal. It's a simple and effective way to impact our planet positively.

IP Address: 223.231.178.10

Table 1. Analysis on e-waste management existing work

Reference	Methods or Technologies That Have Been Utilized
Tsitomeneas, Kokkosis, and Charitopoulos (2014)	E-waste legislating, designing, and managing involves the application of various principles, theories, and practices.
Srivastava and Sharma (2015)	The Interpretive Structural Modeling (ISM) methodology is employed to evolve mutual relationships among the factors.
Jayarajan et al. (2018)	An electric device is proposed for implementing a monitoring system in e-waste dump yards.
Jian and Shanshan (2010)	Implement an ERP system to standardize the market for recycling electrical products.
Mangaonkar, Sabhani, and Sirsat (2014)	Using GIS, identifying the primary source of e-waste
Anwar et al. (2018)	Reduce electronic waste by utilizing virtualization, its feature and its role as a crucial component of green computing.
Tiwari and Dhawan (2014)	Create a time-series, multiplelifetime end-of-life model.
Mukta and Ahmed (2020)	Reuse, improve, or recycle the electronic waste. Create an electronic device that uses non-traditional energy sources for minimal power.
Debnath et al. (2015)	Quality Function Deployment (QFD) is a powerful analytical tool that can be used to identify various parameters from primary research data. These parameters can then be used to understand and improve e-waste recycling practices as a green computing approach.
Masuduzzaman, Amit, and Alauddin (2018)	Recycling e-waste as aggregate in concrete can increase the potential use of this waste material and have a positive environmental impact.

- **Recommendation of Environment-Friendly Equipment:** Energy Star-rated devices and other green certifications encourage manufacturers to design sustainable products, driving the industry towards more environmentally friendly solutions.
- **Safe Recycling of Old Machines:** Improper handling of e-waste can pose a significant environmental threat. That's why it's crucial to implement safe and efficient e-waste recycling programs. Taking responsibility for our e-waste can help protect our environment and create a more sustainable future.
- **Eco-Friendly Computers:** Electronics giants are making significant strides in producing eco-friendly computers. These devices are engineered to be free of hazardous materials, such as lead, cadmium, and mercury, commonly used in traditional computer manufacturing.
- **Challenges of Green Materials:** Replacing hazardous materials with eco-friendly alternatives is essential for environmental protection, but it's not without its challenges. One of the biggest challenges is ensuring the reliability and performance of electronic components with greener materials, such as solder. Despite the challenges, it's essential to continue pushing forward in this area to create a more sustainable and responsible future for all.
- **Energy-Efficient Manufacturing:** A critical aspect of green computing is minimizing the energy-intensive manufacturing of computer components. Manufacturers can achieve this by optimizing their processes, adopting cleaner energy sources, and reducing waste throughout production. Manufacturers must continue to prioritize eco-friendliness in their production processes to minimize the impact on our planet.

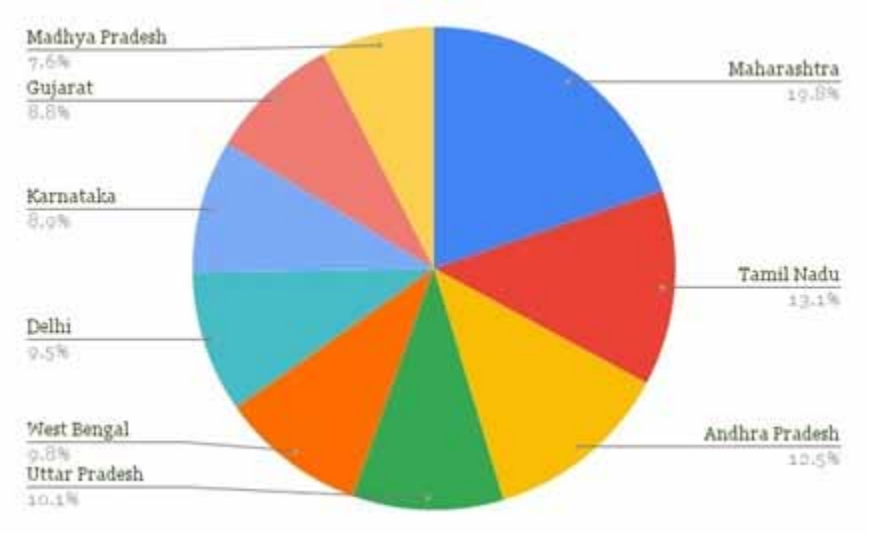
Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

- **Bio-Plastics:** Bio-plastics, derived from plant-based polymers, present an excellent opportunity to reduce our reliance on petroleum-based plastics. However, the challenge lies in maintaining the thermal stability of these materials to prevent electronics from overheating. By continuing to explore and develop these materials, we can create a more sustainable future and reduce our environmental impact.

Cost-Effective E-Waste Management Approach

While it's important to prioritize eco-friendliness, we also need to consider cost effectiveness when it comes to e-waste management solutions. To ensure sustainability, these must be economically feasible. Heightened costs can prevent individuals, businesses, and governments from adopting responsible practices. To execute cost-effectiveness, we need to discover a proportion between the cost of recycling and the possible revenue developed from salvaged materials. This may involve government subsidies, business incentives, or educating consumers about the long-term savings associated with proper e-waste disposal. We can also enable the development of innovative recycling technologies to decrease the overall cost of e-waste management.

Preserving the Environment and Natural Resources



E-waste management is essential for maintaining the environment and natural resources. It is crucial to embrace practices that decrease the depletion of raw materials, like material recovery and reuse. Recycling and repurposing electronic components can restrict the need for new resources, eventually easing the hurdle on ecosystems. It is equally important to ensure that e-waste management does not disrupt local ecosystems or harm natural resources during the collection and processing stages. Hence, it is essential to choose responsible disposal methods that prevent soil and water contamination. Proper waste disposal facilities should have the necessary infrastructure to ensure that e-waste does not become an environmental hazard.

E-WASTE PERSPECTIVE: THE INDIAN SCENARIO

India is one of the biggest producers of e-waste all over the world. It has been reported that India produces approximately 18.5 lakh metric tonnes (MT) of electronic waste annually, with Mumbai and Delhi-NCR being the biggest contributors. By 2018, this figure is predicted to rise to 30 lakh MT. Other cities that produce significant amounts of e-waste include Bangalore, Chennai, Kolkata, Ahmadabad, Hyderabad, Pune, Surat, and Nagpur. Among India's eight most populous states, Maharashtra is the biggest e-waste producer, followed by Tamil Nadu, Andhra Pradesh, Uttar Pradesh, Delhi, Gujarat, Karnataka, and West Bengal. It is worth noting that industrialized countries have established dedicated facilities for e-waste recycling. However, poorer nations like India often resort to manual recycling, which puts employees at risk of harmful exposure to e-waste materials. More than half of the e-waste generated in affluent countries is exported to underdeveloped nations, with China, India, and Pakistan being the primary destinations. In these countries, the e-waste is recycled, and metals such as copper, iron, silicon, nickel, and gold are extracted. Figure 6 illustrates India's state-wise e-waste generation.

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

Figure 6. State-wise e-waste generation in India

In the 2018 Environmental Performance Index, which included 180 countries, India came in at 177. This poor ranking can be attributed to inadequate environmental health policies and the high number of deaths caused by air pollution. India is also the fifth-largest producer of electronic waste worldwide, generating over two million tonnes of it annually. However, fewer than 2% of this e-waste is properly recycled, which raises questions about public health and groundwater pollution. E-waste management in India is predominantly controlled by the informal sector, which operates without regulation and often fails to recover the total value of materials. This informal sector also poses risks to the environment and workers' safety due to improper handling of toxins. A dismantling facility for electronic waste is located in Seelampur, Delhi, where people, including children, extract valuable components using harmful methods like open incineration and acid-leaching. Raising awareness, improving recycling infrastructure, and reforming existing policies are necessary to address these challenges. A significant portion of discarded electronics is collected by informal channels such as repair shops, used product dealers, and ecommerce vendors for reuse and part cannibalization. Enhancing these practices can contribute to better e-waste management in India.

Green Computing's Critical Role in Combating Global Warming

The issue of global warming has brought attention to the practices of the IT sector, which have been found to have implications for climate change. One way to positively contribute to global efforts in reducing greenhouse gas emissions and addressing climate change is through adopting green computing principles and developing a sustainable hardware industry in India. This serves as a reminder of the interconnectedness of economic development, technological advancement, and environmental responsibility as we strive to tackle the challenges posed by global warming. From a global warming perspective, several insights and implications exist:

- Dependence on foreign equipment involves energy-intensive manufacturing processes and long transportation distances, contributing to carbon emissions and exacerbating global warming.
- The absence of a robust indigenous hardware manufacturing industry means India needs to take advantage of opportunities to produce more energy-efficient and environmentally friendly hardware to reduce carbon footprints.
- Tax relief policies encouraging hardware imports can lead to an influx of electronic devices, resulting in more electronic waste and contributing to the growing e-waste problem, which poses environmental risks, including greenhouse gas emissions.

Moreover, the initial focus on low-cost infrastructure building neglects green computing principles, resulting in the widespread use of energy-inefficient hardware, contributing to higher energy consumption and emissions. Hence, public awareness and government legislation could be instrumental in promoting green computing, adopting more energy-efficient and eco-friendly technologies, and reducing carbon emissions associated with IT infrastructure. Effective management of electronic waste is crucial in the fight against global warming, as e-waste often contains hazardous materials. If not handled properly, it can release greenhouse gases and other pollutants, making legislation to manage e-waste responsibly vital.

Finally, emphasizing the importance of long-term sustainability in IT infrastructure development aligns with the global goal of mitigating climate change. Sustainable practices, including energy-efficient hardware and responsible e-waste management, can help reduce the ICT (Information and Communication Technology) sector's carbon footprint.

CONCLUSION

E-waste, or electronic waste, is a major concern for the well-being of both humans and animals. As the world continues to grapple with the consequences of global warming, we must prioritize effective management strategies for handling e-waste. Implementing these strategies can help mitigate the potential environmental harm caused by e-waste while promoting energy efficiency and responsible waste processing methods. Green computing is key to creating a sustainable and eco-friendly modern society. The constant development of technology has led to progress in the fields of green computing and e-waste management. Nowadays, it's more important than ever for businesses and organizations to incorporate e-waste management as an essential component of their green computing practices. Neglecting this responsibility could lead to numerous difficulties and complexities for our planet. The great news is that virtualization and reduced carbon footprint are the exclusive priorities of government and academic research. We anticipate that our study will help progress the field and open up exciting new potential for green computing.

Chapter 6
E-Waste Management for Sustainable Development: A Case of Private Commercial Banks in Bangladesh

Md. Shafiqul Islam
International University of Business Agriculture and Technology, Bangladesh

A. K. Md. Jawadul Haque
Fast Security Islami Bank Limited, Bangladesh

ABSTRACT

Continuous e-waste generation causes harms to the environment and the economy. This study aims to explore e-waste management systems in the private commercial banks in Bangladesh and ways to reduce e-waste generation and sustainable solutions of e-waste management. The rapid economic growth and establishment of commercial private banks has created a market for computers, consumer electronics, and household appliances in Bangladesh. This study looks into the generation of e-waste growth rate and remedial measures. The e-waste is harmful to human health and for the environment. Barium and lithium are examples that affect brain, heart, liver, kidneys, and skeletal system. It's critical to raise awareness about the dangers of inappropriate e-waste disposal. E-waste must be recycled properly to have a low environmental impact. It was found that banking generated 2176.30 tons of e-waste. Results showed statistically significant growth rate. Buy back guarantee and bring your own device may be options for e-waste reduction.

1. INTRODUCTION

E-waste is a growing concern as well as a significant commercial potential, considering the volume of e-waste created and the harmful and valuable components included inside. Iron, copper, aluminum, gold, and other metals account for more than 60 percent of e-waste, while contaminants account for 2.70 percent. These pollutants' produces high toxicity, particularly when burnt or recycled in uncontrolled

circumstances. The Basel Convention designated e-waste as hazardous and established a framework for regulating the Trans boundary movement of such trash (Widmer *et al.,* 2005). Electronic garbage or e-waste is one of the world's fastest increasing concerns. E-waste is composed of a variety of components, some of which include dangerous compounds that, if not properly disposed of, can have a negative influence on human health and the environment. Electronic garbage, or e-waste, is a growing environmental concern in a number of developing nations, including Bangladesh. It is one of the most recent categories of garbage to be classified as a waste material. Bangladesh, in line with worldwide trends and in response to its continued rapid expansion, is expanding its reliance on electronics-based appliances, equipment, and tools in people's homes, offices, industrial units, cars, and communication systems. This has resulted in an increase in the rate of e-waste creation (BUET, 2018). Many developing countries and countries in transition have an informal or less-organized small-scale sector that acquires discarded or obsolete computing equipment for repair and resale. Numerous informal and unskilled groups collect and recover elements such as copper, gold, and plastics from electronic and electrical garbage (e-waste), unaware of the harmful health and environmental consequences (Quinn *et al.,* 2021). E-waste defined as all types of electrical and electronic devices and their parts that have been thrown away as garbage by the owner with no intention of reuse. According to a European Union study, e-waste is growing at a rate of 5.0 percent per year, roughly three times faster than other waste streams in the solid waste sector (Schwarzer *et al.,* 2015). The use of electronic components and microchips in domestic appliances, office equipment, transportation systems, and industrial instruments and gadgets has increased exponentially during the last few decades. As these products reach the end of their useful lives, they are accumulating in ever-increasing quantities at various waste sites in practically every country on Earth. Commercial banks are no exception, and the digitalisation of the industry, as well as the emergence of e-commerce, internet banking, and cloud computing, have accelerated the trend. As a result, the amount of electronic garbage generated by commercial banks in Bangladesh has increased many folds. Electronic waste (e-waste) or waste from Electrical and Electronic Equipment (WEEE) contains a number of hazardous compounds, including lead, chromium, and plastic additives. Often containing valuable metals and other reusable materials such as plastics, e-waste has been viewed as a source of additional revenue by an increasing number of Bangladesh's low-income and unemployed residents. Recycling scrap and used electrical equipment is a lucrative business in Bangladesh, where there is little or no environmental regulation or occupational health legislation to protect workers who are directly exposed to health risks associated with waste recycling activities. In our country, the informal sector recycles a relatively tiny percentage of used electrical equipment; the remainder is dumped in landfills, rivers, ponds, sewers, lakes, channels, and open places. Improper recycling and recovery practices can have a significant negative influence on the environment. Crude methods of deconstruction frequently result in toxic emissions, which contaminate the environment and expose workers and the general public to hazardous elements. Assessment of e-waste generation is critical for addressing the difficulties of e-waste, setting targets, and identifying optimum management strategies. In this research, an attempt has been made to quantify the electronic waste generated by commercial banks in Bangladesh. Electronic trash (e-waste) management is undergoing tremendous change. Apart from a fast-growing global population, globalisation is pushing product demand, resulting in increased costs for a variety of resources. The planet is becoming more crisscrossed with used electrical items and recyclable resources. It means both opportunities and challenges of e-waste management (William *et al.,* 2008). E-waste policies and laws are emerging to address the worldwide challenge of rising e-waste. Even assessing the creation of e-waste is proving difficult in a number of nations. The primary impediments to implementing current

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

approaches for e-waste evaluation are data availability, dependability, and completeness (Kumar & Rawat 2018). All electronic e-waste include pollutants including lead, cadmium, beryllium, or brominated flame retardants. Even in developed nations, recycling and disposing of e-waste can pose major risks to workers and communities, and extreme caution must be used to minimize harmful exposure during recycling operations and leaching of material such as heavy metals from landfills and incinerator ashes (Wath *et al.,* 2011). The majority of industrialized nations have enacted legislation requiring electronic producers and importers to collect old electronic items at the end of their useful lives (EoL), based on the extended producer responsibility principle (Nnorom & Osibanjo, 2008). However, consumers and producers are generally unaware of the long-term negative consequences of improperly disposed of e-waste. As a result, users must either keep EOL equipment in their possession or hand it over to corner side *Kabaris*, as there is no curbside collection mechanism for these EEEs (Electrical and Electronic Equipment's), with informal recyclers disposing of e-waste in an unorganized manner and depositing the remainder in municipal waste bins. In India, a large amount of e-waste is accessible, and sadly, 90 percent of e-waste is processed by informal agencies such as kabaris, recyclers, and so on. They are greedy, extracting the desired materials such as copper, aluminums, and steel and leaving the remainder of the e-waste behind or allowing it to burn in the open. India had 4.64 million desktop computers, 431 thousand notebook computers, and 89 thousand servers in 2005-06 (CPCB, 2011). Mostly informal recyclers are using primary e-waste disposal methods including open burning to gather metals (copper, aluminum, and steel) and to deposit the rest of the materials (plastics, ceramics, and asbestos) all which are hazardous by nature and explode in the atmosphere during incineration/open dump burning (Vats & Singh 2014). It is feasible to recover precious metals with a high degree of efficiency using the correct procedure (Zhang *et al.,* 2011). The adverse consequences of informal e-waste recycling on the environment are most severe for workers who handle this material, although contamination may travel thousands of kilometers beyond recycling centers. E-waste has a greater impact on air pollution and animal species and also on the biodiversity. As mentioned previously, electronic trash contains hazardous components that are harmful to human health and for the environment. Additionally, it can have a significant effect on the neurological and reproductive systems of humans, resulting in sickness and birth abnormalities. To minimize these hazardous impacts of e-waste, it is critical to properly recycle, refurbish, resell, or reuse goods. The enormous stream of e-waste will only deteriorate if the public is not educated on proper disposal methods (Gaidajis *et al.,* 2010).

1.1 Problem Statement

Bangladesh demonstrates significant economic growth and a developing market for electric, electronic, and home appliance customers. These needs have resulted in an increase in the production of locally manufactured electronics and an increase in the demand for reusing these items. In the semi-formal and informal industries, equipment is typically repaired and repurposed. Nowadays, reusing or recycling equipment, as well as disposing, creates risk. These e-wastes may pose environmental and health risks. Currently, there is a lack of awareness and proper information on the danger of e-waste in Bangladesh.

1.2 Rationale of the Study

Bangladesh has over 61 commercial banks, each having a sizable network of branches, sub branches, and agent outlets. Almost all branches and outlets operate with a significant number of electronic equip-

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

ment. Over the product's life span, which is typically five years, these electronic devices are considered to have a zero/one taka value after depreciation and sold to recyclers/informal collectors via brokers, thereby entering the supply chain for recycling, dismantling, and extraction of precious materials, among other things.

1.4 Objective of the Study

The main objective of this study was to estimate e-waste generation of PCBs, growth rate, present scenarios and the remedial measures of e-waste management. The study aims the following objectives:

- Determine the volume of e-waste generated by the PCBs
- Estimate the growth rate of e-waste during 2016 -2020 of PCBs
- Explore the remedial measures in light of new enactment of Rules in June2021
- Know the present scenarios of e-waste management by the PCBs

2. LITERATURE REVIEW

Electrical and electronic devices are now a necessary commodity for a variety of daily activities, and they are growing five times faster than humans, such as mobile phones, which have grown from zero to 7.2 billion in just three decades. Improper dispose can result in environmental dangers that are harmful to human health, marine life, groundwater contamination, and soil. Bangladesh has elementary solid waste management facilities and difficult to manage this massive incursion of electrical and electronic waste. Inadequate public knowledge, policies, and funding in the field of waste management are a few of the major issues that have contributed to this dire situation. A set of sustainable E-waste management systems has been proposed, as well as the obstacles that may arise during their implementation. The successful deployment of these proposed methods would improve the quality of E-waste management in Bangladesh, boosting the present 35 percent overall E-waste recycling rate and providing tremendous energy from waste (Karim *et al.,* 2014; Khali1 *et al.,* 2014). A study mentioned that Bangladesh accounts for 7 percent of global e-waste disposal on a percentage basis (Islam, 2016). E-waste is a term that refers to large and small household appliances, information and telecommunications equipment, lighting equipment, electrical and electronic gadgets, toys, sports equipment, and medical devices (Pariatamby, 2013).

2.1 Bangladesh Perspective

Electrical and electronic devices are now a necessary commodity for a variety of daily activities, and they are growing five times faster than humans. The image of electrical and electronic waste production in Bangladesh, as well as modern E-waste management technologies, has been extensively given in this study. The e-waste management strategies and systems are conventional and disconnected from contemporary technology capability. Bangladesh proposed a set of sustainable e-waste management systems, as well as the challenges that may arise during implementation. The successful deployment of these proposed methods would improve the quality of e-waste management in Bangladesh, boosting the present 35 percent overall E-waste recycling rate and providing tremendous energy from waste (Karim *et al.,* 2014; Khali1 *et al.,* 2014). Customers utilize non-brand televisions based on their income capability,

Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

and these sets have a lifespan of no more than 3-5 years. In most cases, 60 percent of repairers work on non–brand TVs, while the remaining 20 percent work on roughly 170 brand TVs per year. As a result, non-brand TV sets are more likely to generate e-waste. About half of the waste generated by assembler businesses is sold, 30 percent is dumped, and 20 percent is held for a long time. 30 percent of repairers kept the old and damaged TV sets for repair and future use, 15 percent threw them away, and 5 percent refused to notify. Customers sold 40 percent of rejected sets to repairers, 10 percent threw them away, and 20 percent reused them after they were repaired. The results of the survey allow us to readily depict the dumping management landscape of the entire city of Dhaka. Electronic waste, or e-waste, is a term that refers to materials that are created when electronic equipment reaches the end of their useful life and are discarded due to their inability to perform their intended purpose. E-waste is a term that refers to large and small household appliances, information and telecommunications equipment, lighting equipment, electrical and electronic gadgets, toys, sports equipment, and medical devices (Pramila *et al.,* 2012).

2.2 E-Waste Recycling

The term "e-waste recycling" refers to the process of recovering and reusing these electronic wastes. It's straightforward. It is a method for recovering materials from electronic waste. This allows you to incorporate them into new technological devices. The electronic wastes derived from air conditioners, televisions, electric cookers, heaters, DVD players, fans, microwaves, and radios. They may also be found in information technology equipment such as computers, laptops, smartphones, batteries, hard drives, circuit boards, and displays. Due to the potential for reducing environmental dangers and pollution, e-waste recycling is one of the most discussed concerns in the world today. Additionally, it has the potential to defend our lives as humans and other living forms that exist in our globe. Recycling e-waste is a developing trend that was sparked by the extensive environmental contamination caused by e-waste. Additionally, millions of technological devices are used every day. When they approach the end of their useful lives, they largely decompose in landfills. What's more, just 12.5 percent of e-waste gets recycled (Zhang *et al.,* 2011). Several metals may also be recovered and recycled to create new steel and metal goods. These metals are more valuable like gold (Au) derived from printed circuit boards, Central processing Units (CPU), connectors / fingers, connector plating, pins, contacts, EPROM, ROM, RAM, integrated circuits, transistors, diodes, and switches. You can remove the glass from computer displays and televisions' CRTs (Cathode Ray Tubes). CRTS includes a number of potentially harmful chemicals, including lead and this is hazardous to human health as well as the immediate environment. Metals should be removed using over-band magnets. It helps you in removing ferrous and non-ferrous components from the glass.

2.3 Toxic Elements in E-Waste

E-waste comprises about 1000 different chemicals that are harmful, resulting in significant pollution upon disposal. Electronic garbage components, such as central processing units (CPUs) and cathode ray tubes found in televisions and computer displays, may include hazardous materials such as lead, mercury, cadmium, beryllium, and brominated flame retardants. A mobile phone/smartphone is made up of over 50 distinct components, including base metals (such as copper and tin), non-ferrous special metals (such as cobalt, indium, and antimony), and precious metals (such as silver, gold, palladium). Lead, mercury,

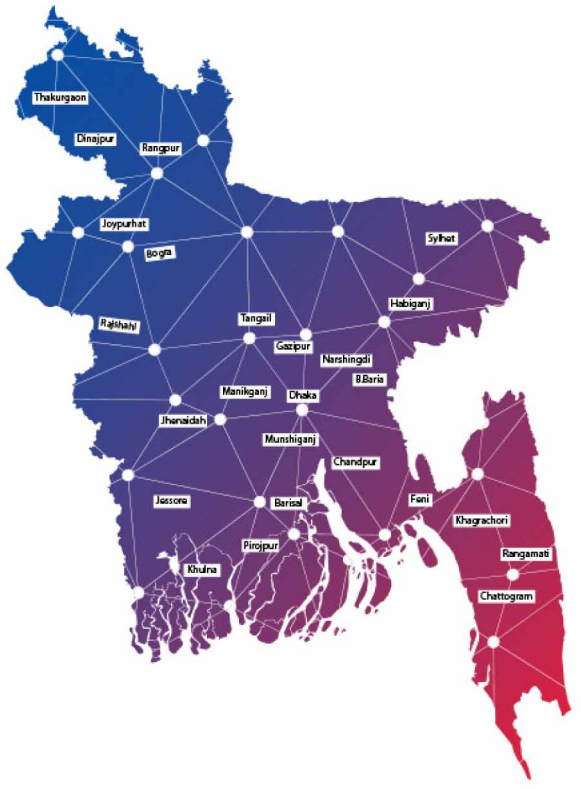
Dhanabalan Thangam (ctdhanabalan@gmail.com)
IGI Global Platform
Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

arsenic, cadmium, selenium, hexavalent chromium, and flame retardants present in excess of threshold levels render e-waste dangerous in nature (Sthiannopkao & Wang, 2013).

2.4 Environmental Impact

The consequences of e-waste are numerous. Pollutants are released into the atmosphere; they have a detrimental effect on living organism. Volumes of e-waste material and process residues are never recycled and are instead thrown in open fields, riverbanks, ponds, and wetlands, rivers, and irrigation ditches. Destruction of drinking water sources has been compounded by indiscriminate dumping and even landfills. Additionally, when waste is thrown in open areas, it pollutes the soil, crops, plants and microorganisms. After burning of e-waste several gases, fly ash, and fine particles and harmful poisons are released into the air, which have a detrimental effect on human and animal life when inhaled. Recyclable e-waste is classified as a commodity, but non-recyclable e-waste is classified as waste. Both categories of e-waste have classified in to hazardous and non-biodegradable. Land filled e-waste produces toxic leachates, which eventually affect groundwater. When acids and sludge from melted computer chips are dumped on the ground, they contribute to soil acidification. Electronic trash incineration can produce harmful fumes and gases, damaging the nearby air (Gaidajis *et al.,* 2010). It is also impacting on the air. The air pollution caused by e-waste is more detrimental to certain animal species than others, posing a hazard to both these species and the biodiversity. Over time, air pollution damages soil and water quality, as well as plant species, wreaking havoc on ecosystems (Sivaramanan, 2013). After burning, shredding, or deconstructing e-waste, massive particles are released, and the soil becomes contaminated. Soil pollution depends on a number of variables, including temperature, pH level, and soil makeup (Agbeshie *et al.,* 2020). Acidification caused by metals has the ability to harm both marine and freshwater organisms, hence disrupting biodiversity and destroying ecosystems over time. Acidification also has a detrimental effect on ecosystems, making recovery more difficult (Vasanthi *et al.,* 2008). Heavy metal and organic contaminants have been reached, the biota of neighbouring waterways; it assumes that they are causing harmful impacts. Huang *et al.,* (2014) suggested future research to assess both contamination levels in biota and deleterious impacts on biota in surrounding water bodies.

2.6 Health Impact



Many metals including mercury, cadmium, lead, barium, and lithium are all toxic components derived from electronic waste. It has detrimental health effects and affects human brain cells, the heart, the liver, the kidneys, and even the skeletal system. It causes a substantial effect on neurological and reproductive systems, and birth defects (Orisakwe *et al.,* 2019).

3. METHODOLOGY

The study's major focus is on the generation of e-waste by private commercial banks in Bangladesh and how are they managing e-waste. There are total 5085 branches of 41 private commercial banks in Bangladesh. As a consequence, each district or Upazila city in Bangladesh has been chosen as a study region for this research (Fig 1).

Figure 1. Study area map

Primary data are gathered through interviews using questionnaires, and other methods. It obtained directly from the source and is considered to be the most reliable source of information on research. Determine the research's objective and target population before deciding on a data gathering sources. The study used the survey data and qualitative information for this study. The qualitative data were collected through Focus Group Discussion (FGD) and Key Informants' Interview (KIIs). Secondary data were collected through different sources including project documents (confidential), published journal articles for literature review. The Statistical Program of Social Sciences (SPSS) was used to enter the data; analysis and interpretation. After analysis, results were presented in the tabular and graphical forms to ease the reading of the audience. This study utilized an empirical method that combines qualitative and quantitative. The data was collected in accordance with the various policies of Bangladesh Bank and other banks and their confidentiality provisions. The Focus Group Discussion and Key Informants' Interviews (KIIs) were conducted for this study. Key Informant Interviews were carried out with the Bank professionals and environment specialists. The study used genuine and reliable data, which processed and managed using statistical software. Primary data is derived from its own observation and has never been used previously. First Security Islami Bank Limited data for the years 2019 and 2020 were analysed. The bank has 197 branches, and using FSIBL as a baseline, the approximate e-waste generated has been calculated using simple arithmetic deduction, i.e. dividing the total e-waste in Kg/year by the number of FSIBL branches yields a value per branch (Y), and because all commercial banks' branches are homogeneous in nature, the other bank's values were derived by multiplying the respective number

of branches by Y. Thus, we estimated the total amount of e-waste generated by 41 commercial banks in Bangladesh in 2020. Secondary data were gathered from relevant sources. This is exploratory study that demonstrated for finding the gaps between e-waste management policy and practices in the private commercial Banks in Bangladesh. .Secondary data sources were from government censuses, journals, articles, magazines, newspapers, libraries, and the internet. SPSS (Statistical Package for the Social Sciences) used to analyze data, and Microsoft Office Excel used to exhibit data in the form of table, bar charts, pie charts, histograms, and line graphs. Pearson Correlations test and coefficient test has been carried out to look at the significance of growth rate of 41 commercial banks and First Security Islami Bank Limited.

4. RESULTS

4.1 E-Waste Production of 41 Commercial Banks (2016–2020)

The study found that 41 private commercial banks from Bangladesh discard PCs, monitors, UPS, IPS etc. as e-waste during a period of 2016 to 2020 (Table 1). These out-dated items pose a major threat to the environment. The study also found that banks release approximately 2176.30 tons of e-waste with average 400 tons during the period. The huge volume of e-waste (490.47 tons) disposed in 2021. Contrarily, this figure increased to 100 percent from 2016 to 2021. The bank used 385.26 tons of discarded devices in 2019, which is around 22% increased than the year 2018 (Figure 2). Additionally, the amount of e-waste generated in 2020 has increased. According to the study, a single bank generated an average of 5.84 tons of e-waste in 2016. In the recent five years, the single bank's maximum e-waste generation was 33.83 tons in 2019 and the lowest was 19.48 tons in 2016.

4.2 E-Waste Production Growth Rate

Figure 2 and Table 2 represent, an analysis of growth rate from 41 banks in Bangladesh reveals that growth rate percentage with the moderate growth 21.97 tons. The Pearson correlation of e-waste data from 2016 to 2020 demonstrates that the growth rate has changed significantly at the rate each year and that the correlation is significant at the 0.05 level for each year. This is highly significant with the p-value of 0.000 for all years.

Table 1. E-waste production (tons) from 2016 to 2020 of 41 commercial banks

Year	Minimum	Maximum	Mean	Std. Deviation
2016	0.19	19.48	5.84	3.74
2017	0.24	23.65	7.01	4.98
2018	0.29	26.26	8.19	5.51
2019	0.34	30.40	9.40	6.26
2020	0.39	33.83	10.67	6.93

Growth rate	-	.000	.000	.000	.000

**. Correlation is significant at the 0.01 level (2-tailed).

4.4 Product (E-Waste) Purchase Value of FSIBL

It was found that, FSIBL is one of the most popular private banks in Bangladesh. According to the bank's data from 2016 to 2020, the bank has discharged 24 different electronics as the following e-waste, with total purchase worth of BDT 100451196 in just four years. Electronics was purchased at maximum cost of BDT 5191393 in 2020 and minimum cost of BDT 1210691 in 2016 (Table 3) respectively.

4.5 Growth Rate (FSIBL)

The figure 4 describes that the e-waste production rate is in an upward trend. Where, it was 9.90 tons in the year 2016, and it was increased to 18.21 tons in 2020. The growth rate of the last 5 years is almost double and yearly almost 20 percent. Also, results from One Way ANOVA revealed that there is no statistically significant relationship between the year and the generation of e-waste, in the FSIBL with the P value of 0.132 (Table 4).

4.6 New Rules of Department of Environment (DOE) and Remedial measure

Bangladesh's Department of Environment (DOE) released the Hazardous Waste (e-waste) Management Rules, 2021 on June 10, 2021, in accordance with the 1995 Bangladesh Environmental Protection Act. The e-waste rule applies to the products listed in the Schedule (appliances, monitoring and control equipment, medical equipment, automatic machines, and information and communication technology) and imposes restrictions on the products producers, assemblers, collectors, sellers, and users. The respondents from Key Informants' Interviews mentioned that this regulation becoming effective immediately upon publication. In disobeying these rules, the offender shall be punished with imprisonment for a maximum period of two years or to a fine of up to BDT 2000, or to both, in accordance with Section 15(1) of the Bangladesh Environmental Protection Act, 1995. In case of further repeating, they shall be punished with imprisonment for a term ranging from two to ten years or a fine ranging from BDT 200,000 to BDT 1,000,000 or both. Now it will help in e-waste management in the banking sectors as well as for other sectors.

4.6.1 Remedial Public Measure and Law

In accordance to the e-waste regulation, Banks has given guarantee for the appropriate handling of e-waste in order to avoid negative health and environmental consequences and to reduce e-waste. It was mentioned by the respondents that formal recyclers are trying to manage electronic trash in accordance with the 3R (Reduce, Reuse, and Recycling) principles. Department of Environment (DOE) announced the Hazardous E-waste management Rules, 2021. According to this rule, Banks and financial organizations are thinking about their waste disposal strategies and the responsibility.

4.6.2 Present Scenarios of E-Waste Management by the PCBs

Private commercial banks in Bangladesh have some broad regulations regarding e-waste management but, they are not following appropriate management practices of such hazardous items. It was found that the banks dispose of various e-wastes in accordance with certain basic disposal regulations. It is not causing harm to the bank or any of its authorized personnel. As a consequence, collectors separate broken electrical items' batteries, circuit boards, and plastic casings. Certain pieces are melting in the fire. The workers do not utilize any safety equipment, which leads in a variety of physical difficulties. The country loses millions of mobile phones, computers, laptops, televisions, refrigerators, washing machines, air conditioners, and copying machines every year. The issue is that these electronic gadgets lack from formal environmental management system. They discarded with other household rubbish in the dustbin. Electronic equipment mostly includes lead, silicon, tin, cadmium, mercury, zinc, chromium, and nitrous oxide. These poisons are poisoning the country's soil and water. It enters the human body in a variety of ways, increasing the chance of developing numerous ailments. Pregnant women and children are particularly at danger. Premature delivery, poor birth weight, and even still birth are all caused by e-waste. Lead from e-waste causes serious harm to the neural system of newborns. Children can acquire complications of various diseases as they age, including lung, pulmonary, thyroid, cancer, and heart disease. Above all, while the bank has a disposition policy, it is limited to the bank's security. Banks must constantly assess their data policies as long as they have e-waste. According to the practices, the differ-

ent types of e-waste crushed by any means that are causing major harm to the environment and human health. In Bangladesh, there is no facility or framework for the disposal or reuse of these obsolete devices.

5. DISCUSSION

The study found that Bangladesh produces around 2.7 million metric tons of e-waste per year. Safe disposal of these products is not being undertaken, and without an understanding of the harmful effects of improper e-waste disposal, this has been dumped in open landfills, agricultural land, and bodies of water. Regrettably, the fate of millions of tons of e-waste generated in Bangladesh each year is largely unknown. A study mentioned that the amount of e-waste such as computers, phones, and televisions - discarded each year, is increasing at an alarming rate (Hossain *et al.,* 2010). Banks wasted PCs, monitors, UPS, IPS, etc as e-waste. Result found that banks generated about 1200 tons of e-waste during 2016-2020. 365 tons of e-waste disposed in 2016 and this proportion jumped to 80 percent. In 2019, the bank used 246.18 tons of discarded devices, about 15% less than in 2018. Also, e-waste production in 2020 increased slightly from 2018 and 2019, reaching approximately 262 tons. In 2016, a single bank generated an average of 8.60 tons of e-waste. The volume decreased from 2018 to 2019, but rebounded to 4.59 tons in 2020. In the last four years, the single bank generated the most e-waste (52.41) and the least (34.42). It was 7.93 from 2016 to 2020 and 6.15 from 2016 to 2020. A study is also mentioned that the generation of e-waste near to 3,1 MMT/year (Roy et al., 2022). Certain banks have made a point of boosting their usage of environmentally friendly technologies. E-waste has a recycling capacity of up to 79 percent of its entire weight, but a dangerous content of up to 63 percent. WB must have a distinct sales strategy in order to achieve success (Raharjo *et al.,* 2021). An analysis of data from banks in Bangladesh reveals that the Pearson correlation of e-waste's data from 2016 to 2020 demonstrates that the growth rate has changed significantly every year. It was reported that the world e-waste growth rate is increasing (Jain, 2008). Department of Environment (DOE) has released the hazardous e-waste management Rules, 2021, which urge banks and financial institutions to reconsider their waste management strategy. Otherwise, environmental pollution and health risks will escalate substantially. The Bangladesh Environment Conservation Act of 1995 gives authority to the Director General to undertake any activity necessary to conserve and enhance the quality of the environment and to control, prevent and assuage pollution. E-waste management policy can help achieving targets regarding sustainable production and consumption (Almulhim, 2022). In the fiscal year 2013-2014, Bangladesh created around 10 million tons of e-waste. The volume of e-waste is increasing; it is difficult to identify methods and solutions for managing the volume of e-waste (ESDO, 2010). Suitable safeguards for e-waste disposal are important, rather than it can result in harmful environmental damage. A lack of knowledge caused by a scarcity of information on the proper management and recycling of these expired items might expose people to health risks. E-waste degrades the soil composition of our farming area and reduces crop yield. The issue arises when this e-waste is illegally dumped in landfills. Three types of hazardous discharge such as i) Primary emission: hazardous chemicals found in e-waste (i.e. lead, mercury, arsenic, Poly Chlorinated Biphenyl etc.); ii) Secondary emissions: hazardous reaction products produced by improper treatment of e-waste (e.g. dioxins or furans formed during open burring or improper smelting of plastics with halogenated flame retardants; and iii) Tertiary emissions: toxic compounds or reagents discharged into the environment as a result of improper handling and treatment (e.g. cyanide or other leaching agents, mercury for gold amalgamation). In Bangladesh, electronic waste management, disassembly, and recycling are carried

Dhanabalan Thangam (ctdhanabalan@gmail.com)

Downloaded: 2/8/2024 11:31:28 PM
IP Address: 223.231.178.10

out in an extremely rudimentary way in the informal sector; no safety precautions are used. As a result, employees are directly exposed to health risks, while the general public is indirectly exposed to the danger of environmental (air, water, and soil) contamination as a result of inefficient waste management and disposal. Hazardous and toxic elements found in e-wastes due to improper handling, processing, recycling, and disposal (CERM, 2018 and Grant *et al.,* 2013). Another study reported that Bangladeshi informal e-waste recycling sectors performing all activities without protections (Parvez et al., 2022)

6. CONCLUSION AND RECOMMENDATION

6.1 Conclusion

The data and analyses in this study demonstrate unequivocally that Bangladesh lacks regulations and/or policies governing e-waste disposal. Bangladesh clearly has policies and regulations in place to safeguard the environment from pollution. However, no law particularly, addresses e-waste management, and as a result, the country is advancing without e-waste management laws. On the other hand, the growing trend of e-waste creation has emerged as one of Bangladesh's most serious environmental concerns and difficulties. Bangladesh is required to create a legal framework for the proper management of e-waste as a signatory to the Basel Convention 64. It goes without saying that Bangladesh is committed to working with the international community to implement steps to combat electronic waste within its borders. As a result, the Department of Environment under the Ministry of Environment and Forest has drafted laws such as the 2011 e-waste Management Rules and the 2009 Bangladesh Hazardous Waste Management Policy. These rules include provisions governing the handling of e-waste in Bangladesh. However, these bills have not yet been approved and enacted. Additionally, this study discovered that e-waste might be detrimental to human health and the environment if not properly managed or disposed of. Numerous nations have already implemented new policies for the handling of electronic trash in light of the destruction it has wreaked. As such, the author advises that Bangladesh should either finalize existing laws or develop a new policy on e-waste management in order to effectively manage the country's growing electronic waste while also protecting the environment.

6.2 Recommendations

At the workplace, the BOYD (Bring your own device) principle may be adopted. ICT inventory disposal policies, which are largely absent in commercial banks, should be widely implemented. Also, inventory and database of e-waste (at least for chosen goods) should be developed. The Extended Producer Responsibility (EPR) principle should be used to facilitate the manufacturer and seller's procedure. Workers' health and safety should be prioritized throughout the recycling process. Bangladesh Bank, as regulator, may provide incentives to commercial banks to develop and introduce banking products that will facilitate the establishment of recycling and recovery facilities for electronic waste, thereby promoting sustainable development. If you don't need anything, donate it so that it can be used by someone else. Donations are excellent tax deductions since the amount is generally close to the worth of the item if sold. Alternatively, a few stores offer a buyback option. Before you go out and buy a new gadget, see whether the store will buy your old camera, laptop, or other item. Best Buy offers a trade-in program where you may bring in your old electronics for Best Buy gift cards.

6.3 Implication and Future Research

The e-waste of 41 private commercial banks in Bangladesh was the subject of the study. The research findings include thorough information on the creation of e-waste by Private Commercial Banks in Bangladesh, as well as its rise over time. This research provides a comprehensive picture of banks' and government's new e-waste policy, as well as what has to be done in the future. Finally, using various methods to control e-waste might help you make the best selection.

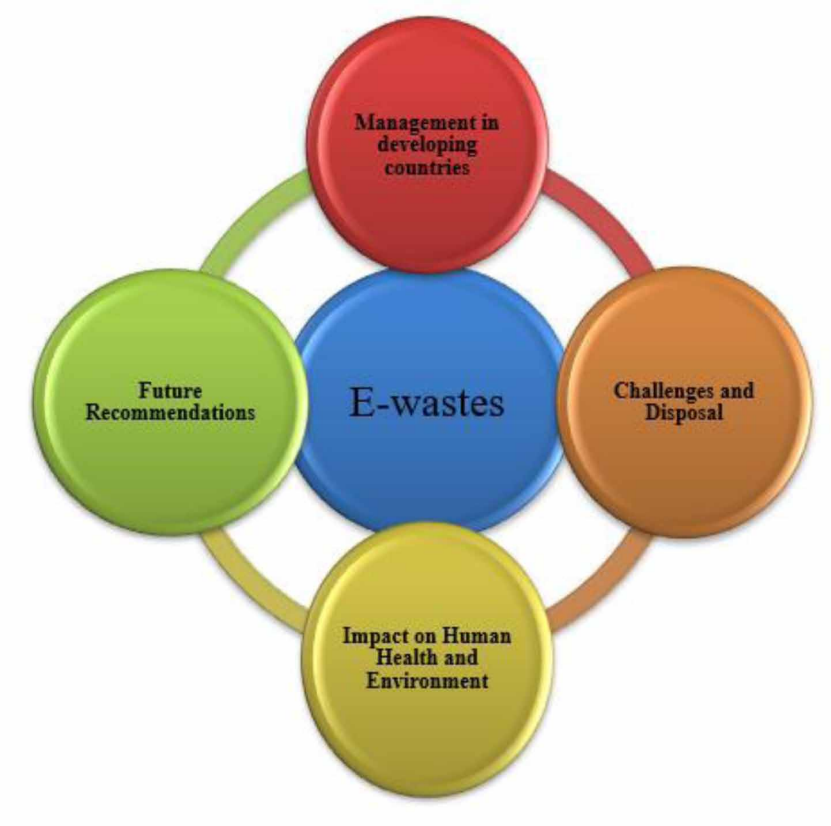
ABSTRACT



Information and telecommunications technology (ITT) has expanded into many aspects of modern life and has positively affected human life even in the most remote areas of developing countries. The rapid growth in ITT has led to an improvement in the capacity of computers but simultaneously to a decrease in the product's lifetime as a result of which increasingly large quantities of e-waste are generated annually. It contains hazardous components that if it is not properly managed can have adverse environmental and health effects. The management of e-waste poses significant challenges in developing countries. Due to the lack of adequate infrastructure, e-waste is burned or dumped in open areas. Informal and inefficient recycling practices are generally employed which further exacerbate pollution and health risks. So, the implementation of e-waste management, adequate recycling, and waste disposal facilities have become crucial concerns. This chapter reviews the concept of e-waste generation, challenges, disposal, and its impact on human health and environment in detail.

Figure 1. Graphical abstract

1. INTRODUCTION

Electrical waste (e-waste) constitutes one of the most rapidly expanding categories of solid waste globally (Bhardwaj et al. 2023a). Its growth rate stands at 3-5% per year, ~ three times quicker than other distinct waste streams (Schwarzer et al. 2005). This category encompasses ubiquitous items like mobile phones, computers, toys, televisions, iPods, printers, power tools, fluorescent lamps and various other small to large appliances prevalent in modern households and industries. E-waste, unfortunately, includes a myriad of noxious substances, containing plastics and heavy metals such as lead (Pb), nickel (Ni), chromium (Cr), cadmium (Cd), arsenic (As) and mercury (Hg). Additionally, it includes polybrominated diphenyl ethers (PBDEs) and polybrominated biphenyls (PBB), employed in cables, connectors and covers. The central processing units (CPUs) contain Cd, Pb and Hg, while printed circuit boards (PCBs) consist of antimony (Sb), silver (Ag), Cr, zinc (Zn), Pb, tin (Sn) and copper (Cu) (Herat and Agamuthu 2012). Notably, Pb finds common usage in computers, cabling, fluorescent tubes and tin-lead solders (Herat 2008). The presence of these hazardous constituents raises concerns about potential negative impacts on both the environment and human health if e-waste is not appropriately managed. Numerous studies have reported hazardous pollutants in samples collected from diverse sites of e-waste recycling, as detailed in Table 1.

Table 1. The occurrence of hazardous pollutants in the different samples collected from different e-waste recycling sites

S. No.	E-Waste Category	Examples of Electronic Products
1	Temperature exchange equipment	Appliances such as air conditioners (ACs), de-humidifying equipment, freezers, pumps with heat controllers, oil-containing radiators and other equipment with temperature exchange
2	Equipment with screens (surface >100 cm^2)	Laptops, photo frames, monitors, notebooks, televisions
3	Equipment with lamps	Compact fluorescent lamps, light emitting diode (LED), high-density discharge lamps
4	Large equipment (>50 cm)	Cookers, clothes dryers, electric stoves, copying equipment, dishwashing machines, electric hot plates, printing machines, medical devices, musical equipment, washing machines, etc.
5	Small equipment (<50 cm)	calculators, carpet sweepers, electric kettles, electric shavers, electric knives, hi-fi equipment, irons, microwaves, radio sets, scales, smoke detectors, toasters, toys, video cameras/ recorders, Vacuum cleaners, etc.
6	Small information technology as well as telecommunication equipment	Global positioning systems (GPSs), pocket calculators, telephones, mobile phones, printers, personal computers, routers

The surge in e-waste is primarily attributed to the diverse array of products, ranging from mechanical tools to highly incorporated systems and the rapid pace of technological advancements (Yla-Mella et al. 2015). The accelerated evolution of technology, coupled with economic development, results in a relatively shorter lifespan for electronic products (Hossain et al. 2015). The classification of electrical equipment into brown goods (such as computers and mobile phones) and white goods (including refrigerators and air conditioners) further contributes to the expanding volume of e-waste (Widmer et al. 2005). The escalating quantities of e-waste are closely tied to the disposal of electrical and electronic equipment (EEE). In developing countries, challenges intensify due to factors like population growth, rapid urbanization and industrial expansion, exacerbating e-waste issues. The lack of adequate infrastructure for safe waste management leads to prevalent practices of burying, open burning, or dumping e-waste into surface water bodies (Gupta et al. 2023). To categorize e-waste comprehensively, it is divided into six distinct categories, as outlined in Table 2.

2. REVIEW OF LITERATURE

The existing body of literature on e-waste management in developing nations such as India provides a comprehensive overview of the challenges, initiatives and potential solutions in handling the escalating issue of electronic waste. India, with its rapid technological advancements and increasing consumer electronics usage, has witnessed a surge in e-waste generation, necessitating effective management strategies. Studies highlight the substantial challenges faced by India in e-waste management, including inadequate infrastructure, informal recycling practices and insufficient awareness among the populace. The lack of proper disposal facilities and regulatory frameworks exacerbates the health and environmental risks associated with e-waste. Several research works delve into the environmental impact of improper e-waste disposal, emphasizing the presence of dangerous substances such as heavy metals and toxic chemicals. These studies underscore the urgent need for stringent regulations and improved recycling practices to

mitigate the adverse effects on ecosystems and public health. The literature also explores various initiatives and policies implemented by the Indian government to address the e-waste challenge. Researchers analyze the effectiveness of these policies, identifying areas for improvement and suggesting potential interventions. Case studies and empirical research contribute valuable insights into the practical aspects of e-waste management, shedding light on successful models and best practices.

Darby and Obara (2005) examined the extent of e-waste in the United Kingdom (UK), revealing that over 90% of Electrical and Electronic Equipment (EEE) is either incinerated or landfilled. The United States of America (USA) is recognized as the leading global producer of e-waste. In 2009, approximately

IP Address: 223.231.178.10

5 million tonnes of e-waste were stockpiled in the USA, with an additional 2.37 million tonnes slated for disposal (United Nations Environment Programme 2007). Within the European Union (EU), the overall production of e-waste was estimated at 9.3 million tonnes in 2005, encompassing 40 million computers and 32 million televisions (Fadaei 2022). A forecast by Computer Aid International (2010) anticipated a surge to 12 million tonnes of e-waste by 2020. In China, Veenstra et al. (2010) reported that about 83 million units of EEE were categorized as scrap in 2007, a figure expected to escalate to 227 million units by 2012. Meanwhile, in Japan, Moriguchi (2006) identified approximately 12.9 million units of EEE as scrap in 2008.

In Canada, approximately 5 million units of EEE are discarded annually (Deathe et al. 2008). Korea witnessed the end-of-life disposal of over 15 million mobile phones and 3 million computers in 2004 (Yoon and Jang 2006). Canning's study in 2006 revealed that more than 130 million phones in the USA and 105 million phones in Europe were discarded each year. The United Nations (UN) projected a substantial increase in e-waste of 200–400% in South Africa and China and a staggering 500% in India by 2020 (Secretariat 2011). Additionally, the UN anticipated a sevenfold increase in e-waste from discarded mobile phones in China and an eighteenfold increase in India. Furthermore, the UN estimates a 4–8 fold rise in e-waste from discarded personal computers by 2020 in developing countries such as Senegal and Uganda. The objective of this study is to provide a comprehensive review of e-waste, covering aspects such as its management, challenges, disposal methods and its impact on the environment and human health in developing countries.

3. E-WASTE MANAGEMENT

Addressing the challenges associated with e-waste management has become a top priority. The rising volume of e-waste generated globally is currently a significant fear for researchers. The surge in population and rapid development exacerbates the demand for efficient e-waste management in developing nations. Conventional waste management practices not only impact public health and the local environment but also extend their repercussions to neighboring countries (Murad and Siwar 2007). The substantial measures of e-waste generated, coupled with the availability of inexpensive land, further encourage the adoption of traditional approaches to e-waste disposal. Growing apprehensions revolve around the notion that a considerable portion of e-waste from developed countries is finding its way into economically challenged developing nations (Hossain et al. 2011).

Several developed nations have enacted legislation that enforces the concept of extended producer responsibility (EPR), which involves manufacturers taking back electronic products that have reached the end of their life cycle. EPR represents a strategy to incorporate principles of sustainable development into global trade, grounded in the law principle known as the "Polluter Pays Principle" (Kibert, 2004). Critical elements for the successful management of e-waste in developing nations include shifts in governmental perspectives, the enactment of specific laws addressing e-waste, regulation of e-waste disposal, the adoption of EPR measures and the handover of technology to facilitate environmentally sound e-waste recycling.

4. CHALLENGES AND DISPOSAL OF E-WASTE

There are two recycling processes: formal and informal. The informal process is widely employed, involving the burning and disassembly of e-waste in open areas to retrieve valuable components like steel, aluminum and copper (Leung et al. 2006). The recycling of e-waste is an intricate procedure, with the informal recycling sector playing a prominent role in Asian countries such as the Philippines, Pakistan, China, Vietnam and India, as well as in certain African nations like Ghana and Nigeria where e-waste disposal is prevalent (Nnorom and Osibanjo 2008). Osibanjo and Nnorom (2007) highlighted that the primary challenges faced by developing countries are centered around the increasing rate of e-waste production and its insufficient management. There are several challenges which are as follows:

(i) Greater threats are seen from inadequate handling
(ii) Lack of formal recycling systems
(iii) Weakly regulated or absence of recycling legislation
(iv) Poor or absence of inventory assessment of e-waste

Brigden et al. (2005) undertook a study in the vicinity of the sites of e-waste recycling in India and China, revealing elevated concentrations of Pb, polychlorinated dibenzodioxins (PCDDs), polychlorinated dibenzofurans (PCDFs) and polybrominated diphenyl ethers (PBDEs), as well as polybrominated dibenzodioxins (PBDDs) and polybrominated dibenzofurans (PBDFs) in freshwater, sediments, air and dust samples. A parallel investigation overseen by Brigden et al. (2008) in Ghana identified heightened levels of dibutyl phthalate (DBP), Pb and bis(2-ethylhexyl) phthalate (DEHP) in the samples collected from the sites of e-waste recycling. Several pollutants such as pesticides, heavy metals and DEHP were reported in the water/soil and sediment samples by the researchers in different studies (Bhardwaj and Jindal 2020; Bhardwaj et al. 2021; Bhardwaj et al. 2023b).

5. IMPACT ON HUMAN HEALTH AND ENVIRONMENT

The inadequate handling of e-waste poses substantial risks to both human and animal health while also negatively impacting the environment. Mismanagement of e-waste exposes the environment and human health to harmful toxic components, leading to potential harm through various routes such as skin contact, inhalation and ingestion. The harmful nature of e-waste disposal becomes a significant alarm, as improper methods elevate the risk of transferable diseases (Murad and Siwar 2007). The dumping of e-waste in open sites further exacerbates the issue, allowing harmful substances to enter the food chain through bioaccumulation, consequently contributing to the onset of various diseases (Mairaj et al. 2022; Alam et al. 2023). Researchers have extensively examined the contamination levels in PET bottled water samples, providing a detailed account of the migration of contaminants from plastic items into water bodies (Bhardwaj and Sharma 2021; Bhardwaj 2022). Wang and Xu (2015) assessed the environmental effect of handling PCBs and Song et al. (2018) investigated the environmental impact of cathode ray tube televisions in China. The toxic substances can leach into the soil, contaminating it and affecting plant growth (Bhardwaj et al. 2023c). These chemicals and heavy metals can seep into water bodies, causing water pollution. This affects aquatic life and various habitats that can ultimately impact human communities that rely on these resources. Burning or dismantling e-waste releases toxic fumes and

particles into the environment, which affects flora and fauna. People residing in the vicinity have been observed to be affected with various problems like respiratory problems (such as lung irritation, and asthma) neurological disorders, developmental delays, organ damage, skin rashes, burns, eye irritation, etc. (Bhardwaj and Vikram 2023; Bhardwaj et al. 2023d).

6. CONCLUSION AND RECOMMENDATIONS

E-waste has evolved into a significant global concern, posing both social and environmental threats to numerous developing countries. The proper handling and disposal of e-waste have emerged as major challenges for many nations worldwide. Developing nations, in particular, face multiple challenges concerning the production, cross-border transport and efficient handling of e-waste. Urgent action is required to establish comprehensive legislation aimed at efficient e-waste management in these nations. Such legislation should also stipulate that the export of e-waste is permissible only when the receiving country demonstrates sufficient capacity to govern e-waste in a manner that safeguards both health and the environment.

As per the critical review, the following recommendations might be beneficial to minimize e-waste:

- The inclusion of informal recycling practices into the official municipal waste management system should be formally endorsed by the government.
- The government should allocate adequate funds to support the collection, storage, recycling and/or disposal of e-waste.
- The authority should provide training to recycling participants as well as enhance existing recycling facilities for e-waste.
- Authorities should initiate an awareness program for workers to educate them about the effects of e-waste on both the environment and human health.
- Developing countries should create and maintain an inventory assessment of e-waste.
- Robust legislation must be established in developing countries to standardize and control the impact of e-waste.
- Alternative or new techniques should replace traditional techniques to minimize e-waste.
- EPR principles should be adopted and included in the legislation of developing countries.
- Producers, importers and retailers ought to be obligated to cover the expenses associated with the recycling, collection and disposal of e-waste.
- Establishing standards and implementing a certification system is crucial for second-hand electrical appliances, as well as for recycling and disposal enterprises, to guarantee the adoption of safe and environmentally sound practices.

7. ACKNOWLEDGMENT

The authors thank Amity University for providing the platform to do this study.
